BRUNSWICK, Me., Jan. 12.—Mr. C. H. Ames: Dear Sir—My attention has been called to your communication in the last FOREST AND STREAM on the subject of "Panthers in Maine." I think I can vouch for there having been at least one killed in this State, probably about the year 1845. This animal was killed in the town of Sebago, which is situated in Cumberland county and about thirty-five miles northwest of Portland. I was at that time a boy of some seven or eight years, and my father kept a country store in the adjoining town of Bridgton. I perfectly recollect the animal being brought to my father's store and remaining on exhibition there for a few days. It seems to me that I can see him as plainly to-day as I saw him fifty odd years ago, hanging by his hind feet from a wooden pin in a beam of the old low-posted country store, and his front paws nearly if not quite touching the floor. Since that time I have seen in menageries many animals variously labled as "panther," "cougar," "mountain lion," etc., and can recollect that this animal in respect to size, color, length of tail, and other characteristics, was apparently the same thing. Making all allowance for the exaggeration of my boyish eyes, he must have been a full-grown specimen. At that time the "lucivee" or Canada lynx was very common in that section, and the wildcat (by which, I presume, is meant the bay lynx) was not uncommon. So it is hardly probable that any one would mistake either of them for a panther. The long tail, which I recollect as being as long proportionately as that of a common cat, would settle the question of species at a glance.

Some twenty or thirty years ago I met one of the men who was in at the death of this animal, and he gave me an account of the circumstances. It seems that this man had been at work chopping wood late in the fall, and it coming on to snow he started for home in the middle of the afternoon, carrying his axe with him. On the way he fell in with a neighbor, who had been partridge hunting, having with him a small cur dog, and armed with, of course, in those days, a single-barreled gun. As they went along they came upon the track of this animal where he had crossed the road a few minutes before, and taking up the track followed it up on to the side of a mountain for half a mile or more, where they found the panther up in a scrub oak tree. The man with the gun promptly fired a charge of shot at him, on which he jumped down from the tree, and running only a few rods, took up a position under the trunks of two fallen trees which had fallen across each other but were up a matter of two feet from the ground. The gun (like most of the guns of our youthful days) had its individual peculiarity, which was that the screw holding the hammer on was missing, and parties using it were expected to hold their thumb on the hammer to keep it on. In the excitement the man forgot to properly thumb the hammer, and it was lost in the snow, disabling the armament of the party. In the meantime the small dog, with more pluck than judgment, was skirmishing round the panther, but getting a little too near was gathered in with a swipe of the paw, and was having the life mauled out of him. The man dropped his gun and rushed to the rescue of the dog. He grabbed the panther by the tail (note the long tail again) and undertook to pull him off the dog. The panther promptly changed ends, and coming out from under the logs was proceeding to mix it up pretty lively with him, when a fortunate blow with the axe by the other man put an end to the fight. The man with the "tail holt" came out of it with some bad scratches, and not many clothes to speak of, but otherwise was unhurt. Whether the dog lived to fight another dog, I do not remember. Certainly a small cur with sand enough to tackle a panther ought not to be cut off in his youth. I think the old gentleman told me that the skin of this animal was mounted, and after being shown around the country for a while was finally put in the Boston Museum. The animal was very thin, and his lips and nose were badly swollen, being full of porcupine quills. This may account for his not putting up more of a fight. So much for this panther. It may not be evidence enough to convince others, but I shall always be satisfied that the State of Maine is entitled to score one panther at least. GARDNER CRAM.

In the article "No Panthers in Maine" mention is made of panther tracks having been seen. The track of *Felis concolor* is in size and shape almost an exact counterpart of that of the Canada lynx. It often requires close scrutiny to distinguish the track of a big lynx from that of a panther. The stride is nearly the same, and owing to the fact that the ball and toes of the foot of the lynx are completely covered with fur, thus increasing the size, and the spread of the toes great, the footprints in snow are much alike.

The main difference is that the impression of the toes and ball of the foot in the lynx track are blurred and indistinct, owing to the fur, and the heel mark runs more to a point, while the footprint of the panther is clear cut and perfect, the heel mark being broad. Neither track will show any claw marks on level ground.

The big timber wolf has a track much like a panther, but the two middle toes project further ahead, making the footprint pointed instead of round, and the claw marks show. WM. WELLS.

I NOTED with interest the article by Emerson Carney—"The Fear of Wild Animals." I cannot certify to an instance where a man was attacked by a "painter," though I know a trapper who bears a number of ugly scars that were evidently inflicted by teeth and claws. The man lives in Colorado—or did when I met him—and either the wounds were inflicted by a mountain lion or the man is a liar—I am unable to determine to a certainty. When he told me the story, I did not feel disposed to express any doubt, and while I might perhaps do so with greater safety at this time, I still believe that his statement is true. While I was in Stuart, Id., in the fall of '99, a child four years of age was killed by a lion on a ranch up Maggie Creek, about four miles from the village. The killing occurred in daylight and within a few rods of the ranch house. I do not imagine that Mr. Carney had the lion in mind when he referred to panthers, though in many places they are alluded to an "painters." I have reason to believe that in both of the cases above mentioned the assault was made by a brute who mistook his prey. COUNSELOR.

Colorado Winter Bird Notes.

THE Canada jays—or, as they are known here, the camp bird—have this winter sought a lower altitude than usual for some reason.

So far several have spent the season in the valley, and one or two in particular have visited the house regularly every day for scraps thrown from the back door. Old residents say they have never seen them in the valley before.

Every hunter in the Rockies knows this bird, for he introduces himself within a few minutes after camp is made, and makes himself right at home.

In the timber, he has a variety of whistling notes that are sometimes startling in their plaintiveness; then he gives you that laugh, very human, as he peeks and pries around. A companion whistles, he answers and is away.

Who ever heard a bluejay warble? Nonsense! You don't mean to say a jay, one of those noisy, boisterous, scolding fellows, can sing! Yes, that is the very same fellow. The first time I heard one was early in January a year ago. I was at the spring house. It had snowed for several hours, and the sun was just breaking through the clouds. The side hill was all aglow, when I suddenly heard a strain which I thought came from the throat of a catbird.

I got up and looked all about for the "early arrival," but could see no signs of life save a long-crested jay that was hopping about among the scrub oaks just above me. He stopped, the throat swelled, and the song came again, and still again, and I was mightily glad to have heard it. Before the winter was over I heard the little song several times. It consists of two or three strains of perhaps a dozen or more notes, and is as soft and well modulated as that of the catbird in its most amorous mood of a May morn. I have heard the little song but twice this winter, but it's the same sweet bit of melody.

Just now, as I write, I can hear a group of these birds by the brook, chattering, scolding and laughing as they sport among the shrubbery. This bird also has another note that is mightily deceiving. It is a perfect imitation of the scream of the red-tailed hawk. Many a time I have looked high in the air upon hearing the scream, to locate the hawk in its widening circles, when, not finding it and coming back to earth, I have located the source of the scream in a long-crested jay, hopping about the oak brush.

I saw a flock of about 100 Bohemian waxwings on Jan. 29. Their flight was as erratic as that of the snowbird, but they always moved as a solid phalanx.

There are but few straggling visitors here this winter

season. A Wilson's snipe patrols the brook, a cinnamon teal feeds and swims about the little lake, while a solitary golden eagle views the valley from his lofty perch, now and then taking a sail to suit his fancy.

Very few ducks passed this way during the fall migration, although I saw some nice bunches of mallards down on White River in October.

We have had an addition to our ava fauna within a month. It is a pair of English sparrows, the first I have seen on the Western slope, although there may be others. I have declared war on them, and they must go the way all pirates should go. GEO. A. MORRISON.

EMMA, Col., Feb 1.

Discoveries in Central Africa.

IN a recent number of the London Nature is given an abridgment of interesting discoveries made by Sir Harry Johnson in the Uganda Protectorate and sent by him to the Royal Geographical Society.

The explorer succeeded in making large and interesting natural history collections in that part of the forest which stretches from the basin of the Ituri River to the neighborhood of the Semliki. Here many photographs were taken of the curious dwarfs which inhabit the region, and of their dances, implements and dwellings. Two types of these dwarfs exist—one black-skinned, with a good deal of stiff curling black hair about the body, and one red or yellow skinned, with the hair of the head reddish and that on the body yellowish gray. Some of the dwarfs, especially the younger ones, have quite hairy bodies, and not infrequently the women are more or less bearded. They are remarkable for the large size and flatness of the nose, and they also have a very long upper lip, which is scarcely, if at all, erected. In this and in many other respects they are curiously ape-like, but on the other hand they are very intelligent, and notwithstanding their extreme ugliness they are usually cheerful, winning and graceful.

Sir Harry Johnson has ascertained that in these Congo forests there exists a remarkable species of horse not hitherto known. Both gorilla and chimpanzee exist here.

Some weeks were devoted to an examination of Ruwenzori. On this mountain snow was found at an altitude of 13,000 feet, and permanent snow at 13,500 feet. Among the animals collected near here were one new monkey, a new hyrax (cony), and a new antelope, besides a number of birds, reptiles and insects not previously known.

Another Mammal Approaching Extinction.

AMONG the large mammals on the verge of extinction is the Caribbean seal—the first seal met with by the early explorers of the new world. In a paper read not long ago before the Biological Society of Washington Mr. E. W. Nelson estimates that of this form there are now living not more than 100 individuals.

Although one of the least known of North American mammals, not having been accurately described until 1884, this is an animal of considerable size, and formerly had quite a wide distribution. Mr. Nelson had an opportunity to observe it during a recent visit to certain islands in the Gulf of Campeche, to which the seals appear now to be restricted. They are unsuspicious animals, sluggish, very easy to approach, and making no defense when attacked. While on the shore they commonly lie on their backs basking in the sun for hours, although the heat was so intense that iron exposed to the sun became too hot to handle with comfort.

These seals are killed for oil, which is sold for lubricating purposes, and it is this killing that has so greatly reduced their numbers.

It will be remembered that a few years since a pair of these seals were brought to New York and for some time were on exhibition in the New York Aquarium. One of them died some years ago, but the other lived and did well and is still on exhibition there. He is notorious for his practice of occasionally spurting water from his mouth at spectators.

Winter Robin in Quebec.

SHERBROOKE, P. Q., Jan. 23.—I saw a robin to-day (migratory thrush), not a grosbeak. It was in full plumage, fat and healthy looking. About the end of March we usually expect to hear the welcome song of returning robins, but a robin in January is rare in this locality.

Coons are always rare around Sherbrooke, but one night last month a citizen heard a noise downstairs and descended, armed for burglars. He found a coon in the kitchen—a real ring-tailed coon. How it got there or from whence, none can tell. The nearest woods is a mile away, and the temperature below zero all that week.

Jos.

He Robbed Shooting Camps.

Last summer a number of camps in the Adirondacks were robbed and practically cleaned out of their supply of sporting goods, and a lot of complaints were made to the authorities by the owners of the camps, who asked that better protection be afforded them. The conviction at the last term of court in St. Lawrence county of a man named Johnson, which was secured by the authorities after a hard legal battle, will, it is believed, put an end to such depredations. The burglarly for which Johnson was convicted was that of the camp of Col. W. A. Barbour at the head of Tupper Lake on July 4. Suspicion pointed to two brothers, Elmer and Thomas Johnson, of Clinton, the former an ex-convict, and they were arrested. The detectives found that two men of their description had ridden sixty miles over the mountain road on their bicycles from Tupper Lake to Newton Falls and there expressed a package to Clinton. The detectives drover over the same road and found a man who had picked up a fishing rod dropped by the Johnsons. This was identified by Col. Barbour as his property. With this and other evidence, all of which was of necessity purely circumstantial, the men were taken to St. Lawrence county, and their trial lasted six days. Elmer Johnson, because he was an ex-convict, was tried first. His brother is still awaiting trial. With this conviction the authorities believe that the pillaging of shooting camps will be ended.—Adirondack Enterprise.

A Good Bear Story.

Editor Forest and Stream:

Having recently received a letter in which is told one of the best bear stories I ever read, and feeling it is too good to keep all to myself, I will repeat it, first referring to the manner in which I received it, going to show how strangely events will entwine themselves around each other and reveal peculiar coincidences in a way least expected.

One afternoon while seated in a train not far from Johnstown there was introduced to me a gentleman with whom I became engaged in conversation, incidentally referring to a then contemplated hunting trip to the West for big game. During our talk he told me of a friend of his from Cleveland who had had a very exciting adventure with three grizzly bears, and briefly mentioned the facts as he remembered them without stating just where it had taken place. I thought little of it at the time, not having been given sufficient details to make more than a passing impression on my mind.

During the early part of October, however, in company with a couple of friends, I arrived at the Jackson Hole country, Wyoming, and, in accordance with previously arranged plans, went into camp on Slate Creek, near the foot of Mount Leidy, some forty miles south of Yellowstone National Park, with S. N. Leak, of Jackson, as head guide. Any one who employs Mr. Leak will find he has obtained the services of one of the most gentlemanly, agreeable and competent guides to be found anywhere. We spent a most delightful two weeks there, of which much might be written, but as this is to be a bear story, and as we were not fortunate enough to see any bears, I will pass it over by saying that we thoroughly enjoyed it all, riding up and down the steep ridges, along edges of high precipices, through and over dead timber one would have thought it impossible to get over, climbing the high peaks, and last, but not the least interesting, securing our game, which in all amounted to five fine elk specimens and four antelope, besides obtaining a nice collection of very interesting views of wild game and the Western country, some seventy-five in number. Not bad, we thought, for our first trip.

One night, while "swappin' " the usual camp-fire stories, I gave the bear story, repeating the facts, as I remembered them, of the accident that had happened to the gentleman of Cleveland, and was greatly surprised to have our guide say that he knew of an exactly similar incident which happened to a hunter at a place just twenty miles west of where we were then encamped. He knew the guide's name, but did not know of the name of the hunter. I thought it a strange coincidence in case it should be the same, and on my return, after securing the name and address of the gentleman in Cleveland, I wrote him, and asked for a full description of the incident, telling him of what our guide had said, and also that he censured the other guide for having deserted him. I was pleased, and not a little surprised, to find on receiving his reply that it was the same incident, and that, while the story as I first heard it was merely given as having occurred "somewhere out West," a term known to cover a big part of the country, yet we had gone into camp within twenty miles of the exact spot where it had occurred.

No clearer or more vivid description of the incident as it actually occurred can be given than by reproducing the letter just as I received it, so here it is.

CLEVELAND, O., Jan. 6, 1901.—My Dear Mr. M.: You need never fear that a letter relating hunting experiences, however much space it may cover, will weary me.

I began my big game hunting "way back" in '64, when buffalo were plentiful. I started to cross to the Rocky Mountains with a party comprised mostly of miners. Our party was attacked by Sioux Indians, corralled for about three weeks, surrounded by Indians, and finally rescued by a United States regiment. So you see my tribulations began early. Nothing can stir me to greater enthusiasm than the contemplation of these Rocky Mountain trips, unless it is the active participation. I have been to the Rockies so many times that I feel as if I knew them by heart.

Well, to tell of the one experience I had with the three grizzlies. In the first place, I want to say that I in no way blame the guide. He had no weapon more deadly than a jackknife. We had left my other gun back by the horses—a foolish thing to do, as I have learned by experience. Then, as he says, he told me to "run for the hill." I was too slow, and he was too far along for me to catch up, and when I did start, the bears were so near that I only took a dozen steps before they were at me. Now, as some one remarked, "It was better for one man to be chewed up than for two." It was a very exciting time, I can assure you, especially for me, and it was all done so quickly that I had no time to do any thinking.

To tell in detail what you ask will have to be done at the risk of being long-winded. Our trip of six weeks would make a book, if all written up, our fishing and all. One of our party caught a seven and one-quarter pound trout near the outlet of Jackson's Lake, and three-pounders were common. I had my setter along and had fine sport after the mountain grouse.

We had been hunting elk from our camp, some twenty miles south from Jackson Lake. It was located on a small creek that ran north to the lake or river. It was a beautiful place for such a camp—good water, good feed for horses, and wood everywhere. The elk we hunted invariably went to the very tops of the mountains, to the southwest of us, so two of our party of three, I and one other, concluded to take a guide each, our blankets, and an extra pack animal, and, by making a wide circle to the southward, get around the country where these elk were daily feeding. We were prepared to be out two or three nights.

We started very early one morning and had a hard day's ride up and down places where one would hardly believe horses could go, and just about sunset were on top of the highest mountain in the range. We slept under a big pine, with a roaring fire near by. Before daylight the next morning we heard the elk bugling on every side. We had breakfast and then, as soon as we could see, we started in different directions, I, with my guide, going south from where we spent the night. We went over the very crest of the mountain, which was not over 200 yards from our camp. As we were descending, we heard a bull elk bugling. He was evidently coming up; so we hid behind a large pine near the same trail we were following, and soon saw his antlers over a small rise. He took a step or two more, and his whole head and neck were in sight. He was just 111 yards from me down hill; we paced the distance. I fired, hitting him full in the center of the neck, and he dropped dead. He had a fine head, which we cut off and prepared for the taxidermist, then started back for a horse to pack it in. I was very anxious to get a fine specimen of a spike bull's head. I had any number of chances for other shots at a five-point bull and some six-point ones, but did not care to shoot them, when my guide pointed to a small herd of seven or eight elk slowly going up a steep ridge, and said one of them was a spike bull, and he told me which one. They were among some aspen, and I did not see his head. I let go at him, and he stumbled, turned down, and rushed at a break-neck pace downward. I fired three more shots from my .45-90 Winchester at him before he disappeared over the ridge. We went to the top, and he was nearly dead, with all four balls in him, but he was a five-point bull, and I was sorry I killed him. We got our horse, brought in our head, and on the way in I shot three grouse. We spent several hours on the head cleaning it, and about 4 o'clock cooked some grouse and had our dinner. Then I suggested that we follow the crest of the mountain to its end, about one-half mile from camp, and try for a shot at a spike bull. My guide took no gun. He was whittling at a couple of elk's teeth he had taken from one I had killed. At the place where we sat down to wait there was, about 500 yards below, a plain or park. The grade down was very steep, so much care would be required to avoid slipping and tumbling the whole way. Behind us, at about the same distance, say thirty yards, was a patch of dense woods. Here we waited to try for our spike bull, should he come up from the park below to sleep in the woods.

As we sat, I several times thought I heard something in the woods back of us, but the guide did not notice it, so we paid no attention. Suddenly we heard a large dry limb snap directly behind, and we both jumped up and saw an immense grizzly, on his hind legs, looking over the bushes directly at us. It was a beautiful shot. I aimed for his throat. I could easily have hit a silver dollar where he stood. Just as I was about to pull the trigger two more stood up beside the first, like three soldiers in a row. My guide said, "Don't shoot; run for the hill." I did not hear the last part distinctly, and, still pointing my gun, I looked around, and my guide was half way to the brink of the hill. Before I had time to think, the three bears, uttering what I called a bellow—it was so like a bull, but the guides called it a roar—started for me with a rush through the low bushes. I knew it was no use to shoot, so turned to run. Before I had gone a dozen steps, the bears were near me, making a fearful noise. I concluded I was done for any way, and turned quickly to shoot one of them if I could, but they were so close that they were inside of the muzzle of my gun. It hit one on the shoulder, and the ball as I fired did not touch him. This one had me by my left leg in an instant, and fairly lifted me and turned me over so that the back of my head hit the ground. One other grabbed me by the side, getting the edge of my coat in her mouth, which so filled it she did not reach my flesh. As I went over my head must have hit one of the numerous stones that were around, for I was knocked out as clean as if McCoy had pounded my chin. This is all I know until I saw, as in a dream, the three bears quietly waddling off into the woods. I do not remember getting up or picking up my gun, but I did get it; and, as I stood in a dazed condition, I saw the head of my guide appear over the ridge. He asked me where the bears were. I told him. He asked me how badly I was hurt. I said I did not know; and as my left leg between my hip and knees felt as if torn to pieces, I did not propose to examine it until back at our temporary camp. When there, we took account of stock. My leg was bitten to the bone the first bite, the two long teeth cutting like lances. Then there were numerous places where it looked as if the bear had snapped at my leg, not getting full hold. Long, hard lumps about the size of a good-sized man's thumb were numerous. My leg from knee to hip turned black and a peculiar brown color. The doctor thought I would have some abscesses as a result, but as I was in good shape they were absorbed, and I have no trouble save a lame leg.

We slept under a pine tree that night, and got back to our permanent camp the next afternoon, but we had a very disagreeable night of it, as rain set in that turned to snow. One peculiar thing was that in the left pocket of my coat I had an aluminum match box, full of matches, and when bear No. 2 grabbed at me she bit through the coat, match box, and all, and fired all of the matches. They burned their heads off and went out. The box was all smashed out of shape. Two holes show where the long teeth went through, and prints of the small teeth ran along one side.

I was interviewed by numerous curious people afterward. One party, who was noted as a bear killed, said to me that not one link in the chain of events could have been left out and my life saved. His theory was that I being knocked out and lying perfectly still the bear supposed I was killed and left. The bears had been eating whortleberries, as we could see by stems and pieces of leaves left on my clothes, where they had bitten at me, so that they were probably not hungry. These bears do not always rush out and attack people as these did; but, according to "old bear hunters," this was their running season, and then a male accompanied by a female will attack anything alive within range. Then the third was

a cub of the female, about full-grown, but still with her. This was another *casus belli,* for "they say" whenever a female has her young with her she will attack any living thing in sight, like a hen with her chicks. So you see the conditions were against me.

Had the guide turned back when he found I was not following him, the chances are that both of us would have been killed. I think he did perfectly right.

We went in via the Park, camping two nights in the Park. It is a very pleasant route, but rather aggravating, as we saw much game, and, of course, our guns were sealed. Once before I had been in the same country, but then we went in via Bozeman, skirting the Park on its west side, via Lake Henry. Going this way we had some fine bird shooting en route. I have a three-barreled gun, 28-inch barrels, 12-gauge shot, with .40-70 rifle barrel under the shot barrels, 7¾ pounds weight, made for me by Kirkwood, of Boston, and it is a most serviceable gun for such trips. The rifle barrel is perfectly accurate. Then I carry a five-jointed fishing rod, that I strap to my saddle; so I am always ready for anything that turns up. On one trip we found a stream full of fine grayling. I did not believe any were in the West until I found this stream. On my first trip West, in 1864, I saw thousands of buffalo, and killed all I cared to, generally running them down on horseback. I have always used the .45-90 since it was made, but if I make any trips in the future I shall use the .30-30 Winchester. This year I have only had bird shooting.

I send you a pencil sketch of my match box. I am no artist, as you can readily see; but from it you may gain some idea of how it is. I have not detailed the reason why the old bear hunter told me no one part of what happened could be left out, and I come out alive, as it would take up too much space; but, as I have some left, I will give you one of them. For instance, had I continued to run, and not turned to shoot, I would have been knocked over forwards, and my hands would have protected my head, and I would not have been knocked out. I would naturally have put my hands up to save my neck, and as long as I moved they would bite and tear like a terrier with a rat. When the rat is dead, he leaves it. Even had I shot and killed a male before it started for me, he says the female would not have let up while there was anything left of me to tear up. Or, had I wounded the male I tried to shoot, and so on through the chapter—I certainly would have had the hide of the male had he been alone. It is very uncommon to run on three such specimens at once, and, as a Helena, Mont., paper put it, it takes a tenderfoot from Ohio to do in this line what half a dozen mountaineers could not expect to find in a ten-years' tramp. I have an idea that the three bears I saw were raised within the Park limits, where they were unmolested, and then they wandered outside to get at me.

W.

The gentleman who wrote the above letter is at the head of one of Cleveland's largest and best known wholesale establishments, and, while he has always had large business interests under his care, he has been one of Ohio's most enthusiastic sportsmen. He is fifty-nine years old, but says he feels only thirty, and that a man never gets any older than he feels. He still carries with him the marks of the three grizzlies, although not now sufficient to cause him any inconvenience. M.

Johnstown, Pa., January.

The Doom of the Big Game.

Editor Forest and Stream:

I have just been reading Mr. Beaman's letter on Colorado's big game.

I thoroughly agree with Mr. Beaman in all that he says, but I am afraid that the conditions are such, not only in Colorado, but in all the game country of the Rocky Mountains, that the preservation of any large proportion of the game now left is impossible.

The main cause of decrease of big game is the settlement of the game fields. For instance, fifteen years ago the winter range of the game in northwestern Colorado comprised at least 5,000 square miles, and one could count every man, woman and child living thereon and not overtax one's memory.

When I left there in 1897 the game still had at least 2,000 square miles of winter range, and was not molested to any great extent. At that time the deer were still so plentiful that two or three hundred could be seen in a day's ride, and it was impossible to stack hay anywhere out of gunshot from the ranch building or the deer would destroy the stack. Now, Mr. Beaman says, the range is restricted to about 400 square miles, and that about 1,000 hunters are after them in that small space during the open season. This tells the story.

In the effort to protect the big game of the West we are face to face with certain conditions, and these conditions must be taken into account in any laws that are passed for game protection, or these laws will be of little value.

First, the bulk of the population of the Rocky Mountains is of men with absolutely no sentiment as regards the game. These men have taken part in the settlement of the West, and big game is to them simply a cheap food supply to be used as long as it lasts, and then, when the country is settled, to be replaced by domestic cattle and sheep. Many of them believe that the sooner the big game is killed off the better for the country. They argue that as long as the big game is plentiful there will be a class of shiftless people who will live off the game, supplemented by a little horse stealing or cattle killing at odd times. As long as the game lasts, they say, this class of people will remain and, by holding ranches that would otherwise be occupied by more thrifty settlers, retard the settlement of the country.

They also say that the income to the people of the State from the game is not one-quarter what it would be were the country settled and the game ranges used to support cattle.

And in this they are right. Here in Northwestern Wyoming there are about 5,000 square miles of country that is practically unsettled; on this tract there are 50,000 or 60,000 elk and perhaps half as many sheep, deer and antelope. Perhaps 200 guides, packers and cooks are employed by sportsmen each fall, receiving on an average $150 each for six weeks' work, and $50,000 is a fair estimate of the total amount of money left in this tract of the State by sportsmen each year. This same section is capable of supporting, when settled, a population of several thousand, and of turning off several hundred thousand dollars' worth of live stock each year. Therefore, when it comes to a question of dollars and cents—and the dollar rules nowadays—the game has got to go.

Mr. Beaman would like to see the game laws enforced with the same severity as Uncle Sam enforces his revenue laws. This is an impossibility, and must be dismissed from consideration. The people of the Rocky Mountains believe that they have a right to kill game for food purposes at any time, they propose to enjoy that right, and they cannot be stopped. However much we may wish to protect what big game we have left, we here butt our heads against a solid wall. As long as violations of the game law, when such violations consist of killing game for food purposes, are tried in the local courts, it will be impossible to convict. And because of this, and of the feeling that the game is of little real benefit to the State, any laws made for the protection of game are apt to fail of their purpose. Over-protection does not protect. In 1896 Colorado put a close season on elk. The only result was to prevent the law-abiding sportsman from hunting, while the killing for food by ranchmen and settlers went on unchecked.

Here in Wyoming no one pays any attention to the close season when food is wanted. And the wardens are compelled to recognize this state of affairs. As matters are now, this does not affect the game, as the unsettled country is so great in extent, and the game so plentiful, that what game is killed in this way makes no apparent inroads on the herds.

But the time is fast coming when every acre of available land will be cultivated and every bit of grazing land in the mountains will be required for summer range for live stock. I think that ten years will see the big game of the mountains practically gone. Conditions as regards food for game are not the same here as in Maine and the Adirondacks. There the game stays on the same ground summer and winter. Here the game must come down out of the mountains in the winter, or starve, as the snowfall is such that nothing can live. And the winter ranges of the game are fast going. Every year sees new ranches opened in the valleys, and the grass on the foothills, on which the elk depend for food, is cropped closer each year by stock. Here in Wyoming it is probable that starvation will kill more elk in the next ten years than bullets. In Colorado, which has had a large increase in population in the past ten years, the bullet did the work. But in both cases the settlement of the game ranges was, and will be, responsible for the decrease of game. If the game ranges are settled and the game cut off from their feeding grounds, it makes little difference whether an animal be shot or doe from lack of food—the result is the same.

After the mountains are settled to the limit, there will still remain small tracts of rough and rugged country in which a few elk, deer and sheep will still exist. By that time the need of a food supply from the game will be over and we will always have some game with us. The overflow from the Park will help out this section. Wolves, cougar, lynx, wildcats, coyotes and bear will increase, as the domestic stock will furnish an abundance of food for the first five, and bear can never be cleaned out of a country as rough as this.

In trying to save any amount of the elk, deer or antelope we are fighting a losing battle. The United States land laws are such that it is impossible for large preserves, as in Canada, to be formed, and the formation of such preserves would be the only solution of the problem.

Wm. Wells.

Eating Muskrat.

Essex, N. Y.—*Editor Forest and Stream:* With regard to the muskrat question, some reader of Forest and Stream should suggest a receipt for removing the musky taste. Musk is one of the most powerful and penetrating not to say indestructible odors known, and its taste is almost equally persistent. We have a girl in the kitchen who has eaten skunk, but she draws the line at muskrat. Just before Christmas I shot a muskrat and had it prepared for the table. I was the only one who took more than one taste, and after the first two or three morsels I did not fancy the rat as much as I had expected. The hired girl turned up her nose at it, comparing it unfavorably with mephitis, and even the cat refused to eat it.

The members of the household saw a joke in the affair, and for the next week I got the remnants of that muskrat in all possible shapes and forms, served alone or with other meats, till I became as suspicious of my food as the Eastern potentate who knew there were designs on his life. At Christmas, when the presents were distributed from the children's tree, the muskrat turned up in one of Tiffany's silver boxes, and I should probably be having it yet at periodical intervals if I had not incinerated the remains in the stove.

In the markets in Wilmington, Del., muskrats are sold skinned as "marsh rabbits," and considerable numbers are eaten by the poorer classes. These muskrats come from the marshy shores of the salt-water creeks of the lower part of Delaware, where they are captured by wholesale by professional trappers. Owners of the marshes farm out the privilege of trapping the rats, and so may be said to conduct muskrat farms. Aside from the rats, their only other crop is salt hay. John B. Burnham.

Brewer, Me.—*Editor Forest and Stream:* By a curious coincidence your issue of Jan. 26 contains an article on the "Toothsome Muskrat," and Mr. Robinson's "Reminescences" also speaks of eating them. As some who read these articles may wish to try for themselves, I will give them a little instruction as to how the muskrat should be prepared for cooking. While I know nothing which is more cleanly fed than a muskrat, still a novice is likely to render one unfit for food in preparing it.

First, in skinning be sure not to let the fur touch the meat, as this, especially in the spring time, causes a musky taste. Indians, although not over neat in many things, are very careful when skinning muskrats for food. They usually use a "skinning stick." This is a stick some 18 inches long, with a fork at one end; one of the forks is sharpened and the stick is set upright in the ground. A slit is cut near the gambrel cord and the muskrat is suspended from the fork with its nose just clear of the ground. The operator sits flat on the ground with legs extended on each side of the muskrat, and as he turns the skin down like a stocking, there is no possibility of the hair coming in contact with the meat. While it may not always be needful to follow this method, it is positively necessary that the hair should never be allowed to touch the meat.

Next, one must remove all portions which contain musk. Many suppose that when the musk sack has been removed the work is done, but you will find that there is in the inside of each thigh, and also on the inside of the upper part of the foreleg, a small whitish substance closely resembling what is called the "treadle" in a hen's egg, which can only be reached by a deep cut. Unless all these are carefully removed, the meat will taste musky, no matter how carefully it is cooked.

If these precautions are taken, it is almost impossible to tell muskrats from ducks, whether broiled, fried or stewed. I once saw a curious proof of this.

In 1861 the Maine State Scientific Survey, a party consisting of eleven men, and of which I was a member, stopped several days at Hunt's, on the East Branch of the Penobscot, while a party consisting of Professors C. H. Hitchcock, George L. Goodale and Alpheus S. Packard and two other of our men ascended Katahdin. While they were gone, Dr. Ezekiel Holmes, who had charge of our party, remarked that when he was on a geological survey in 1837 with Dr. Charles T. Jackson, they had had a muskrat stew prepared by their Indian guide, Joe Tomah, and that he wished he could have another. As Louis Ketchem and myself had nothing in particular to do, we volunteered to procure the rats and make the stew, if Dr. Holmes could borrow some tools for us to dig with. He could not get a hoe, but he got an adze, and with this and an axe we dug out six, all fully grown. These were skinned and made into a stew in a kettle holding nearly a pailful. Just as those of us who were in camp were finishing dinner, one of the other party arrived, who reported the remainder near at hand, and extremely hungry. Some one said, "None of those fellows will eat muskrats if they know it." But it was muskrat stew or nothing, so the skins were laid out of sight and on their arrival they were bountifully helped. "What is this?" said Goodale. "Ducks," said Louis. No more questions were asked, and they all ate as only hungry men in the woods can eat. When they were nearly done, I began stretching the skins on some squaw bush (red osier) sticks I had cut for the purpose. Goodale happened to look round, and seeing what I was doing, said to Louis, "Where did you get those muskrat skins?"

"Oh, they came off from those ducks you have just been eating," was the answer. M. Hardy.

A "Wild Goose" Trapping Expedition.—I.

It was in the spring of 1882 when I formed the acquaintance of Edward Robbins. I admired and respected him. Not only could he and I discuss the heroic virtues of "Deadwood Dick," "Calamity Jane," "Old Avalanche" and many other impossible heroes and heroines of the trashy dime novel of that time (we firmly believed these characters were living people then), but Ed had seen some of the West, and he gave glowing descriptions of countless ducks and geese which had fallen to his gun on the plains of Iowa. Like my own was Ed's liking for guns, boats, rods, dogs, and the free outdoors, natural. He had hunted in the woods, and fished some of the streams of southern Canada and northern York State.

"We have been friends quite a while," said Ed, one day, "and I've a secret for you. I'm going trapping for the winter. My uncle, Cad Ives, wrote me that he's going into the Fifty-Mile Forest on a trapping expedition and invited me along. The forest is partly in Canada and partly in York State. Cad has been there before, and made it pay, too. Say, you dassen't go with us!"

This invitation-challenge came like a shot. I wanted to go badly enough, but feared my parents would not consent. I thought a while before answering. "I'll ask my folks to-night, and let you know to-morrow," said I finally.

I met Ed with a long face the next night. I had asked permission and had been refused. Ed and I talked the matter over for a long time. His parents were dead, and he did as he liked in such matters. He thought it tough not to be able to "go when and where a fellow liked." "Nobody holds me," said he, "and I'm sorry for you. You'll miss a pile of fun, and I'll think of you shut up in a greasy shop while I'm hustling around in the woods on snowshoes, and as free as a deer."

Ed watched the effect of this shot out of the corner of his eye. He had made a bullseye, and I am sure he knew it. I whistled softly a moment and my eyes were on the ground. Suddenly I looked at Ed, straight in his eyes. "They can kick or not, just as they like," I said. "I'm going, anyhow!"

"Good boy! That's what I like to hear. Shake! You'd never catch a boy like Deadwood Dick staying home just because his folks might be afraid that something might eat him up. Shake again!" We shook, and the thing was settled.

Owing to Ed's description of him, his uncle, Cad Ives, was already established in my estimation as an all-round hero. He had not only sailed every briny sea, but a number of years had been passed aboard vessels on the Great Lakes. He had trapped, hunted, fished and camped over much of southern Canada, and knew every foot of the Adirondacks. Ed wrote him that we would join him at Chateaugay, N. Y., in the early part of September.

"Now," said Ed, "it costs too much for steel traps, and I've decided on a trap that we can make ourselves, and it will cost very little. Besides, it will help pass the time until we're ready to start."

"That's all right," said I, "but where, and how are we going to make these traps? You know I'll have to lay pretty low until we are ready to start. It won't do to have my parents suspect—that might kill the whole business."

"Don't let that worry you. We'll make the traps in

my Uncle Martin's cellar. I'd already planned that before I asked you to go. There'll be no need to let him know you're going. So far as he's concerned, he'll think you're only helping me for the fun of it."

The next five weeks were very busy ones for us. I knew little of the art of trapping, so Ed had it all his own way in designing our outfit. We bought over 2,000 feet of thin boards, and made the parts for 400 traps. They were about 18 inches long and 6 inches square. One end was closed tight, and a comb-like contrivance with strong darning neeedles for teeth guarded the entrance. The needles slanted down and inward, and their points rested on the floor of the trap. The theory was this: Any animal forcing an entrance into the trap would be compelled to swing this needle gate up. Once started, there could be no returning, for the animal would be compeled to back out, and this would force the needles into its spine. So much for the theory of the thing. The success? Well—that's a part of our yarn we haven't reached yet.

Night after night we worked by lamplight. The boards were a foot wide, and all had to be sawed through the center lengthwise. The sawing act was performed by me, and the memory of the way I toiled pushing that old ripsaw will always remain vividly emerald. Finally all the parts were made and packed tightly in a monster dry goods box. Along with the traps we stored an assortment of old clothes which I managed to sneak from the house piece by piece.

A few days before we were ready to start an exceedingly inquisitive neighborhood was thrown into spasms of wonderment by seeing a heavy express wagon back up to Ed's uncle's house. Then, lo and behold! a box as large as some of the palatial chicken coops thereabouts was bundled out of the cellar, and it took four men and fully 200 hard words to get it to the sidewalk and on to the wagon. It was then transported to the depot and shipped to Chateaugay, N. Y.

Outside of expenses for lumber, needles, etc., I managed to accumulate $35 by the time we were ready to start. Ed assured me time and again that it would be inconvenient to burden ourselves with capital.

"We won't need much money," said he, "for there'll be no chance to spend any, away off there in the woods. Besides, we'll be so loaded down with valuable hides in the spring we won't have pockets to hold the cash we'll get for them. All we need now is just money enough to buy ammunition, flour, sugar, tea, coffee, and pay our fare. Then we'll have to hire some chap to drive us and our outfit about twenty miles into the woods, but that won't cost much. There'll be no one to boss us after that; nothing but freedom then."

I painted things just as rosy as Ed did, and believed in them just as firmly. These were simply air castles of youth—and what youthful mind has not framed like misty pictures of hope? What a joyous, happy world it might be could all such dreams materialize! How few come true? alas! how many fade, melt and vanish like the delicate, dying rainbow against the darkling heavens of an approaching summer night!

At last the long-looked-for day arrived. Why we had selected that particular time, I do not remember. I do remember, however, my feelings that morning. In the excitement of preparation I had not dreamed of experiencing the least pang at leaving home, without the consent of my parents. But now that the actual time for departure had come, a feeling of remorse stole over me. How could I leave without one word of farewell to the family? The longer I considered the matter the stronger grew my determination to let my mother know, at least. This resolve was formed that morning.

I was unwell that day, had no appetite, and this broke the way for half a day at home. After dinner, when father had gone, and my brothers and sisters had disappeared, I told mother the whole business—how I was tired of the city and had decided to live in the woods; how I had decided to run away, but couldn't go without bidding her good-by. She felt badly, but finally gave her consent. I will not dwell on the memories of that afternoon. It is enough to say that there was a meeting in my room that evening, attended by all the family—a sort of farewell affair. I had the consent of my parents, and there was no longer need of running away.

Good-bys were said, and we started. I staggered under a large valise, which held, among other things, a 12-pound can of powder, 200 loaded shells of 12 gauge, 200 .45 caliber cartridges and 50 pounds of chilled shot. Besides, I carried a double breech-loading James gun and a Shelton auxiliary rifle barrel in one of the barrels of the James, which added to its weight. Ed's valise was quite heavy, but he carried no gun. We were unaware that we laid ourselves liable to law in taking explosives on the train, among the passengers—and there was explosive enough in those valises to blow the whole outfit off the track.

Chateaugay was reached in due time, and we delayed the train considerably while we unloaded our ammunition. Everything was finally piled on the platform, and with a toot of the whistle and clanging bell the train pulled out and disappeared in the distance.

Now that we had arrived at our destination, I waited for the next move on the programme. Ed started out to find his uncle and returned with his grandfather, a little weasened old gentleman, and we loaded our things in the buggy. The old gentleman drove off and we struck out across the fields.

"I've something to tell you," said Ed. "Grandfather don't know where Cad is, but thinks he has gone to Quebec and shipped. He disappeared a week ago, and nobody around here has seen him since. If he don't show up, then we can't go to the Fifty-Mile Forest, for I don't know anything about the place. What are we going to do?"

"Well, I told grandfather about our plans, and he thinks we can set our traps on the streams around here and catch mink. Besides, he says he has steel traps which we can use for skunks and foxes. I've caught a good many mink around here myself."

"That part of the business sounds all right, but where'll we live?"

"Grandfather says we can stay with him until we put up a slab shanty. He says we can put the shanty on his land, and the slabs wont' cost over three dollars."

I breathed more freely. Every one at home had prophesied our return inside of a week. I knew if this should prove true we would be the laughing stock of the neighborhood, and I felt greatly relieved when Ed had unfolded his new plans.

The soft beams of a candle fell through the panes of a little old-fashioned log house. This was our destination. We were very cordially welcomed by Ed's grandfather and grandmother. Each had passed the fourscore mark. Their faces beamed with kindness as they invited us to lay aside our belongings and partake of a hot supper which was steaming on the table. The candle in the center of the small table cast a dim, mellow light over our group, and the rays struggled valiantly, though unsuccessfully, to penetrate the corners of the quaint little room.

Though Ed and I hadn't slept a wink for over thirty-six hours, we stayed up until a late hour that night. Ed had family news for the old folks, and they had news for him. Then his grandfather spun a few yarns connected with the old-fashioned fancy-stocked long rifle which rested in a pair of antlers over the door. The old man sighed again and again as he said: "Ed, my boy, age has nearly laid the old man low. She's a good old rifle, but I'll never use her again. The last time I fired her she tumbled over a deer right from the back door of this very house, and those are the antlers on which she rests." The old man's chin dropped to the back of his hands, which were folded over the head of his cane; then silence reigned a while.

"Come, father, we are all tired. Come, we must go to bed. Ed, you know your room? It's the one you always use, and Harry is to sleep with you." The kind voice of the old lady had broken the spell.

Our room was small, neat and clean; the bed was soft and my rest unbroken, for my conscience was clear. I had not run away from home, and my dreams were restful—for they were sweet dreams of home.

William H. Avis.

Talks to Boys.—XII.

In teaching the dog to come to heel, get a stick two and a half or three feet long and have fastened to the end of it an ordinary snap. Call the dog to you, snap the hook into the ring on his collar, say to him, "Heel," and then walk off. Of course, he will try to run ahead of you, but you must hold the stick firmly, so as to keep the dog's head just behind your right leg. Then, as you walk along, frequently repeat to him the word "heel." At first he will struggle and twist, and try to dart off to one side, and may even pull back, but you must keep the stick in its proper position and walk off, dragging the puppy behind you and frequently saying to him, "Heel! Heel!" It will not be very long before he will follow contentedly at your heels, and you may imagine you have done great things, but when you free his collar and let him run again, and after he has played about for some time, again call him to heel, you will find that he has no memory of his former lesson, which must now be repeated. After he has had half a dozen parades at the end of the stick, he may very likely begin to comprehend what is required of him, and when you think that he has reached this point it will be well for you to call him up, and having given the order, to walk off without fastening him by the stick. In a moment or two he is almost certain to forget, and to try to push ahead, but you must curb him by frequently repeating the order, and you may also tap him on the nose with a light switch which you should carry in your right hand, or may even give him a sharp cut with it on the body, so that he may realize that when you say "heel" it means "heel." Even after he has been taught that at the command "heel," he must walk behind you, he may not walk in the place that he ought to occupy. Sometimes he may lag yards behind, and sometimes he may run off on either side. It will be well, therefore, for you to give him frequent lessons at the end of the stick, which, of course, gives absolute control over him, and obliges him to heed the command.

Before you have taught him any of these other things, however, he should learn to come promptly at the word. This you may begin to teach him when he is a very little puppy, and it is well, when you are going to him with his food, to salute him always with the words, "Come here," or "Here." Some men, instead of using any spoken words, teach the puppy to come at a peculiar blast of the whistle. Whatever sign, vocal or otherwise, you adopt when you want your dog to come in, see that you never change it. Instill in him if you can the belief that whenever this sound is made, he is going to receive from you some good thing, and to the puppy this means something that he will like to eat. When you take him out to walk, make this sound often, and whenever he comes to you, as he is very likely to do, give him some little piece of food, a bit of cracker or a morsel of meat. Of course puppies are heedless; they see a thousand things in their walk that they are very anxious to investigate, and perhaps yours may be so much taken up with his new surroundings that at times, especially if he is not very hungry, he may neglect the signal. If he does this he is probably so much occupied by some matter, which to him is of great importance, that he will permit you to walk up close to him; put your hand on him, then shake him a little, not hard nor roughly, but enough to make him attend for a moment to you instead of his own important matter, then offer him the food, letting him smell it, but do not give it to him until you have retreated to the place where you first called him. Entice him along by frequently allowing him to smell the food until he has followed you back to this place, and then give him what you have been offering him and keep him there for a moment or two. After he gets a little older, say when he is six or eight months old, you may take him out with a long, stout string to his collar, and holding one end of the string in your hand, let him wander to its full length. Then call him to you, and if he does not instantly respond, haul in on the rope as fast as you can, making him come on foot or on his side or on his back, but at all events make him come. When you have dragged him close to your feet, pat him and give him a bit of food. A combination of these two methods, of coaxing and forcing, is likely to be very effective with the average young dog.

When your dog has pretty well gotten his growth, the time varying somewhat with his age and with the season of the year, you will probably want to have him instructed by a regular trainer. Of course, if you have had the experience and have the time, it will be much better for you to train him yourself, but this requires a great deal of patience, and a very complete understanding of how to make the dog do his work. There are many excellent volumes on dog training, written by men of long experience, who have striven hard to make plain the various methods they have pursued to teach the dog how to do his work. If you have the time, it will be interesting for you to train your puppy yourself, and if you determine to do this, you should get some of these books on dog training and study the methods adopted by the various authorities. No two men employ quite the same methods, just as perhaps no two school teachers train the children under their care in the same way, but by reading over all the different books you will perhaps be able to select from each one what is best in his system and also what method you think would be the best adapted to your own particular dog. Remember, as I have told you before, that your dog is quite as eager to work for you, and to do the work as you want it done, as you yourself are to have him work efficiently. But remember also that all this that he is now about to undertake is absolutely new to him, and that he can only learn what it is that is required of him after you have pointed it out. I have very grave doubts whether the average boy or young man of from fifteen to twenty years of age has sufficient patience to train a dog; but if he has, and has the time to do the work, he may be very sure that his dog, well trained by himself, will do more efficient work for him in the field than if he were trained by any other person. At the same time, since most of us have no time to give to such a pursuit as this, the majority of men and boys will have their dogs handled by a professional trainer.

Even if you do this, however, it will be well for you to purchase some of the books on dog training and to familiarize yourself with the methods that trainers employ. You will find that almost all of them insist on the importance of patience and kind treatment, and of making the dog comprehend the words, signs and signals made to him. They all agree also that a dog's spirit must not be broken by harsh treatment, and that it is far easier to take courage out of a dog than to put it into one that has been, through any misfortune, cowed. You will find the reading of these books very profitable, and I hope that they will help you to handle your dog wisely and well.

Of course, you will wish to have your dog well educated, and to have him refrain from doing things that he ought not to do, and to have him mind quickly and cheerfully. But there is one thing that you must avoid, and yet which you will be constantly tempted to do; beware then of perpetually finding fault with your dog, telling him not to do that, and to do the other thing. Avoid nagging him and worrying him with unnecessary orders. Give him all the liberty that you can; let him play and romp and have a good time. If you are perpetually finding fault with him, you will see that after a time he will either become heedless, paying little regard to your admonitions, or else he will become timid, lose his spirit and be afraid to do anything for fear that you will reprimand him. The result of this may well be, that you will either have a dog that has lost all energy and initiative, or else a headstrong beast that does not heed the words that you speak to him. It is much better to have a dog that is full of courage and always eager to do things and needs restraint, rather than one that has lost his snap and go.

After you have sent your dog off to the trainer, and he has received his education, and you have been told that he is now ready to be sent home, it will be well for you to arrange to go out several times with the man who has trained the dog, and observe how he works him. Each individual who handles a dog, of course, has his own particular method of doing it, and the dog becomes accustomed to these methods and understands them, while, of course, he would not understand new and different ones. When you go out to see the dog worked, I advise you not to think very much about securing the birds that may be started, but rather to keep close to the trainer and to carefully notice everything that he says and does while he is handling your dog. Attend especially to the way in which he uses the whistle, to the tones in which he speaks to the dog, and to the gestures which he makes with his hand. If, by this close observation, you can teach yourself to act toward the dog as the trainer does, your labor in handling the animal after you have brought him home will be made much easier than it otherwise would, and the work done for you by the dog will be a great deal better from the beginning. This merely means what I have told you before, that a dog fails to obey his owner in a satisfactory manner chiefly because he does not understand what his owner requires of him.

By this time your dog is grown up and is probably a year and a half or two years old. He is old enough, therefore, to have some sense; but he is not old enough to have gotten beyond the young dog's desire to wander, to play and to do certain particularly bad things like chasing fowls or sheep that tempt him by running away from him. At this period of his life the dog should be kept much of the time in the high walled pen in which he may be turned loose, but from which he cannot escape. If you have no pen for him, you must keep him on chain. You should have a good kennel for him, with plenty of straw in it for winter weather, and it should be placed in a sheltered spot where it will be measurably protected from the cold wind and the storm. Of course, if it is convenient, it is better to keep the dog in the house at night, and if he is a house dog as well as a hunting dog he must be taught not to make himself at home on the lounge or in the chairs, but must have his place in the corner of the room where he is to lie. But if you keep him out of doors through the winter—and there is really no hardship about this, because he will readily grow accustomed to the cold—see that he is made as comfortable as possible; plenty of straw for his bed which should be frequently changed, and perhaps a bit of carpet tacked over the door of the kennel and hanging down loose before it, which he can easily push away with his head when he desires to go in or out.

Although he should be kept confined for the most part, you must see that each day he has abundant exercise. Take him for a walk if you can, or let him follow you when you go out on your wheel, or if you have to drive to the village let him follow the wagon. It will be well

for you to teach him to travel beneath the wagon, pretty well forward, about under the front seat. Nothing is more disagreeable than to have a dog following a wagon and ranging far and wide about it, chasing the farmers' fowls, getting into fights with all the dogs along the road and very likely barking at wagons that you may meet. None of these things happen if you can teach him to travel under the wagon.

Unless you give him plenty of exercise he will not be healthy, but if you give him this he will always be hard and in good condition against the time when you wish to use him. You must be careful not to overfeed him, because if you give him too much to eat he will grow fat and lazy and it will be a hard matter for you to run the fat off him as the season for using him approaches, and besides this, if he is fat at the beginning of the season, he will not work with half the energy that he should, and may very likely become tired out before the day is over.

If you have only one dog in the house, it is probable that the fragments left on the plates at the end of a meal will be all that he will need to eat; bits of bread and vegetables and pieces of meat afford a very excellent diet for a dog when he is not working. He should be fed, as a rule, only once a day, having his dinner in the evening. When he is working, however, he is entitled to stronger food than this, and many men of great experience recommend that a worthy dog should be fed during the shooting season wholly on meat. At this time when your dog is doing an enormous amount of the hardest kind of physical work, he must be well nourished if he is to do good service. To whatever he is fed, give him all he will eat, but only feed once a day. Few dogs have vigor and staying power enough to work more than three or four days in the week, but if possible you would like to have your dog in such shape that he will hunt as long as you wish him to.

Many years ago I had a native setter that would work six days in the week without giving up. Sometimes toward evening he would be very, very tired, but so long as daylight lasted he was willing to go wherever he was sent, and to work hard for birds. Yet many a time in the evening as we were walking home, I have seen him trot thirty or forty yards ahead of us along the road, curl himself up and lie there in a red ball until we had passed thirty or forty yards beyond him, when he would once more trot to the front and again lie down to rest.

I am sure that the longer you have your dog, assuming that he is a good one, the more you and he will be in sympathy with one another, and the better work you will do together. But I am extremely anxious to have you both start right, to have the dog fond of you and yet soon understanding that you are the master; to have you kind to the dog, firm, but not constantly teasing him and worrying him by unnecessary commands. If he develops well, you will be proud of him and will get to love him better and better, until finally you will be convinced that he is the best dog in the world, and however you may treat him, he will certainly believe that you are the best person in the world. I hope that you will deserve his faith in you.

W. G. DE GROOT.

The Maine September License.

BOSTON, Feb. 11.—From the best reports to be had I learn that there is already a hot fight in the Maine Legislature over the proposition to repeal the September license deer shooting law. Before the Committee on Fisheries and Game the law was on the rack on Thursday, and it got a pretty severe airing. The timber land owners are evidently thoroughly down on the September law, and they have sent in numerous petitions for its repeal. The Hon. J. P. Bass, of Bangor, himself an owner of very extensive timber lands, appeared before the committee, and his denunciations of the law were forceful, to say the least. He accused the Commissioners of unfair treatment of the timber land owners, in urging the retention of a law that has been found to greatly endanger their property. He declared that he had understood the introduction of the September shooting law to have been an experiment, but now that the experiment had been found to be decidedly detrimental and dangerous to the owners of the forests, the Commissioners were trying to cover these facts, solely for the purpose of securing the paltry sum of $3,000 received for the sale of licenses. The timber land owners would much rather be taxed for many times that amount—they would rather pay it themselves than to have the horde of hunters let loose upon their property with all the danger from fires thus engendered. He recalled the terrible Miramichi fire, and said that if hunters were to be let loose into the forests during the most dangerous of all months—September—most disastrous conflagration was likely to be repeated in the valuable timber lands of Maine. Every possible safeguard that the Legislature could put around the forests should be provided. "If there wasn't any danger of forest fires last September, why," he asked, "did the Forest Commissioner, who is also one of the Fish and Game Commissioners, after he had sold licenses, and the weather was dry, send out an appeal to the sportsmen, saying, 'For God's safe don't use them!'" "This," he added, "may not have been the exact language of the Commissioner, but it meant the same."

He continued: "They say that the sportsmen don't set fires, but when men go into the woods who are fools enough or drunk enough to shoot each other, is it not likely that they will set fires in the same careless way? We timber land owners don't want men who can't tell a deer from a man roaming over our lands. We have great fear that they will set fires, spite of all the Commissioners say. The timber lands should not be made a pasture for careless cranks who come down to Maine to 'shoot something.' Every one knows that some of the hunters who come here are half fools, who are sent off into the woods to get them out of the way at home. Will any one say that these men are not liable to set fires? It is wrong, it is abusing the land owners, to let these cranks have an opportunity to destroy what it has taken hundreds of years to produce, and what timber land owners have served a lifetime to be able to purchase. The greatest menace to forestry and forest protection to-day is the irresponsible hunter and his guide."

Mr. Bass said that he would like to see all fishing and hunting in unorganized townships stopped. Here Commissioner Carleton interposed with the idea that the gentleman was "hitting the nail on the head."

Mr. Bass was followed by several other timber land owners, in the same vein. They objected to the law and wanted it repealed, for the reason that it let loose irresponsible persons to roam at will over their valuable lands during a most dangerous month for fires. The idea was freely expressed that timber lands had depreciated in value, under the September license law. The timber land owners unanimously ask for the repeal of that law, and that is one good reason why it should be done, since it was only passed as an experiment. Mr. C. A. Marston, an extensive owner of timber lands, thought the matter a most important one to the timber land owners. When the law was passed he thought it was wrong, and it should be repealed. He believed that there is more danger of shooting persons in September than in the other fall months, for the foliage is still dense. He believed that September was the worst month in all the year for forest fires. If the land owners were to be taxed more, they should have more to say concerning the laws that propose to permit persons to enter upon their lands.

Commissioner Carleton was the first to reply to the timber land owners. With much they had said he was heartily in accord. He believed in the absolute importance of greater protection to the forests. He said: "I go further and say that if the owners of timber lands feel and really believe that their interests are jeopardized by the September hunting law, even though they are mistaken, as I believe they are, the law had better go. It has always been the aim of the Fish and Game Commission to do nothing which would antagonize the interests of the great timber estates of the State. But I believe that they are mistaken, and instead of the law being a menace and a danger to the forests, it is an absolute protection, and I think that we can demonstrate this position. But that is neither here nor there. We dont' want a law that is a menace and a danger, and we don't want the timber land owners worried. But don't make a scapegoat of the September law. Meet the issue candidly and squarely. Don't charge to this law all the vast numbers that went into the woods last September. Not an additional man went into the woods of Maine last September because of the license law. Repeal that law and you will not have advanced an inch. Before the law was passed any one could go where he pleased, with or without a guide. The fact that now there is a guide license law and a record is a guarantee of safety from fires to the owners of timber lands. Do not lay all of your troubles to the September law. Stop men carrying rifles into the woods in September. Make a law that they shall not carry firearms into the woods in August and September. We all know that every man who goes into the woods to fish has his Winchester with him. I will go as far as any man in the State to protect your forests, but go at it intelligently. Don't take off the little twig of a September law, but go at the roots of the tree of your troubles. Stop the taking of firearms into the woods in the dangerous season. I am with you in that direction. Stop the taking of those long trips down the Alleguash and the West Branch, on which every man carries his rifle. Until you put a stop to the carrying of firearms into the woods in September crowds will continue to go there."

Mr. Carleton was replied to by one or two of the timber land owners, who had no confidence in the guides nor the guide license law. That law should also be repealed. It legalized the guides in trespassing on lands that they did not own, and allowed them to take others with them. Mr. G. F. Bradstreet, of Gardiner, a timber land owner, did not take any stock in this registered guide business. "Gentlemen like you," addressing Senator Vickery, of the Fish and Game Committee, "will put out fires when leaving them, but the average guide will not do it." The Hon. Don A. H. Powers, of Houlton, brother of ex-Gov. Powers, who is also a heavy owner of timber lands, was against the September law, and wanted it repealed. Commissioner C. E. Oak, who spoke in favor of the September law, asked if a majority of the fires had not been set by careless woodsmen, rather than sportsmen. get together and decide upon other measures for forest protection.

Mr. Vickery, of the committee, asked if the timber land owners would get together and draft a bill to prevent the carrying of firearms into the woods in the summer months. If they would draft what they wanted in that direction, he thought that the committee would report such a bill and recommend its passage. Mr. Bass replied that he first wanted the September law repealed, and then they would get together and decide upon other measures for forest protection.

The hearing was adjourned, the committee taking the matter under advisement for consideration in executive session.

SPECIAL.

CHICAGO AND THE WEST.

Ultra Protection in Illinois.

CHICAGO, Ill., Feb. 7.—The attention of sportsmen of the West is called to a game bill which has been introduced both in the House and Senate of the present session of the Illinois Legislature. This is House bill No. 57, introduced by Mr. Lyon on Jan. 22, printed and referred to the Committee on Fish and Game. The Senate number of this bill is 37, and it was introduced by Mr. Begole on Jan. 23, read the first time, ordered printed and referred to the same committee.

In brief this bill proposes to protect game with a vengeance, and in what to any well-posted man seems an unnecessary and undesirable extent. It proposes to establish a close season of five years on all the imported pheasants, and also on quail, prairie chicken and fox squirrel. It proposes to charge every resident of this State a gun license of $1.25 before he can go out hunting within the limits of this State, the non-resident license footing up $10.50. This latter idea is the result of the recent ill-advised agitation which has sought to "raise a fund for game protection."

The bill includes in its sweeping measures the prohibition of killing wild fowl between Jan. 1 and Sept. 1. This is an excellent feature and it should be passed. Indeed, the bill itself includes many wise propositions, which show that its framer, whoever he may be, has given the matter a certain amount of thought.

It is the idea of a sportsman to stop spring shooting of wild fowl in this State. It would be the idea of a sportsman, perhaps, also to establish a close season of two or three years on prairie chickens. It is not the idea of a well-posted sportsman, however, to set up a close season of five years on quail, when we are just closing the most fruitful season this State ever knew in the matter of a quail supply. To tell the sportsmen of this State that they cannot go out to shoot quail for the next five years, but must leave these quail to be trapped and shot and smuggled into market, is to ask of the sportsmen of this State far more than their intelligence will indorse.

It is going yet further beyond the patience of any thinking sportsman to ask him to go down into his pocket for the purpose of raising a salary for some political appointee, chosen for political reasons pure and simple, and that without consultation with the sportsmen as to the fitness of the appointee, or his ability in executing a law whose executive side is notoriously all too weak. Thus far we have had no assurance that the Governor of this State was ever more than human in his selection of game wardens, and it remains still to be proved whether the sportsmen ought to pay the salary of a man whom they do not elect and do not appoint.

There are both good and bad features in the bill in question, but if we were to choose between the present game law as it is and the new law proposed by this bill, one would need at least to hesitate before indorsing the new measure. It is too sweeping, too radical, too visionary, and too obviously the product of politics combined with cheap generalizations as to game protection. What we need is a plain and simple game law, one which will not permit spring shooting, one which will break wide open the illicit traffic in game on South Water street, which remains a continual temptation to law breaking in every Western State, and, above all, one which will put in office a man who will execute the law. Such a man should be provided with proper machinery for that execution.

In all this experimenting and tinkering, all this catering to sectional prejudice and all this scheming for individual and political gain, it is impossible to avoid losing interest in the matter of intelligent protection. This is the latest theory as to protection in Illinois, and it still remains one's privilege to say that it is not yet a law and that it may not get much further than it is. The last portion of the proposition is the pleasantest part to contemplate.

Other Bills.

An amendment to establish a five-years' close season on prairie chicken and quail was introduced in the House by Mr. Neese on Jan. 23.

A bill introduced by Mr. Frizzell in the House on Jan. 31 is House No. 166, and is evidently intended to represent the interest of those who wish spring shooting. It indorses the five-years' close season on prairie chicken and quail, and makes the close season on wildfowl extend from April 15 to Sept. 1.

Local Pressure.

A strong movement against spring shooting is on foot among the sportsmen of the upper portion of Illinois, adjoining the Mississippi River, more especially in the neighborhood of Mt. Carroll and Savanna. Mr. E. K. Stedman has taken up the matter in the local papers in the form of a strong plea for abolishing the spring shooting, and backing this up with a petition signed by a large number of sportsmen and other citizens. Representative Middlekauff is the direct point of application of this petition, and he must be a strong politician if he shall not listen to the argument or feel the pressure that is being brought upon him. I notice that a local paper gravely states, in connection with its comment on this petition, that the stealing of duck eggs in the far North is responsible for decrease of our wildfowl, and it says that "This stealing should be made a misdemeanor and enforced." [Sic.] One would think that we have enough to do in tending to our own game laws without going so far across the borders to enact laws for the British Government.

The Fate of the Minnesota Park.

There is no use trying to print any news about the state of affairs regarding the Minnesota National Park. It is simply a case of seesaw, up and down, over the proposed Eddy bill, which has been submitted to Secretary Hitchcock, and which looks to the cutting of the pine on those Indian reservations and the establishing of mills within their confines. The sole hope of the friends of the park rests in the fact that there is a split in the Minnesota delegation to Congress. Mr. Eddy's associates do not all agree with him in his sweeping propositions.

If we can keep the Minnesota House divided against itself, there may something turn up later on. A prominent member of the Minnesota delegation states that the outlook for the National Park is still bright, albeit the House Committee on Military Affairs this week passed a resolution determining to give no more hearing or favorable reports on national park projects. The Secretary of the Interior is not satisfied with the Eddy bill, but singularly enough the Secretary wants mills erected on the reservations. Mr. Eddy does not want this latter provision made compulsory. The Secretary evidently wants the Indians to do the work, and Mr. Eddy just as evidently wants his friends to get the jobs. It is now established without a doubt that the Indian officials, and more especially Capt. Mercer, of the Leech Lake reservation, have come out flatfooted against the park. This is bad news, as Capt. Mercer was considered to be a friend of the park. There is a tremendous pressure being brought against the appointment of a joint commission of both Houses, the only logical way of getting at the facts in this case. Once get the facts before the public, and the park would be a certainty. Our only hope is that the lumber lobby will not be strong enough to keep the facts from coming out

Chicago Fly-Casting Club

The annual meeting and dinner o
ing Club will be held Monday ever
nual election of officers for the cur

Movements of Western

Mr. Harvey McMurchy, the polis
Hunter Arms Company, is in Chica

way to the Coast, making Duluth his next stopping point after Chicago. Mr. McMurchy seems to have rediscovered the great truth that paradise lies all about us if we only know how to break off a section of it. At the first of November, when the dull season in the trade begins, Mr. McMurchy takes his family and hies himself for the southern coast of California, where he has a cottage, and an extensive ranch acquaintance, which assures him the best kind of sport. Here he enjoys himself out of doors until Jan. 1, when, leaving his family at the cottage in California, he works east across the Southern country, takes in New York and then starts west. He is this far west on the circuit, and will be on the Coast again before very long. About April 1, when the climate of Fulton, N. Y., is beginning to get more Christian-like, he takes his family back to the home city of the gun firm, and spends his summer and early fall at that point. This gives members of the firm a chance to take their own vacations, which, after all, is a very desirable thing for members of a firm to do now and then, if they do not make a habit of it. Thus the arrangement is perfect, as above suggested. Mr. McMurchy says the Hunter Arms Company never had so much to do as they have this year, and that prospects for a continued good trade were never better.

Mr. F. K. Dunn, of the Board of Trade, and his brother-in-law, Mr. William Wright, have gone to Florida for tarpon. They will be gone about six weeks.

Hon. James R. B. Van Cleave, president of the Illinois Sportsmen's Association, and Superintendent of the Insurance Department of the State of Illinois, leaves this week for Pass Christian, to join his family at Lynne Castle. After a rest of a day or so in the mild climate of the Gulf Coast, he will return to Springfield and resume his same place in his several harnesses.

Storms in the West.

The thermometer touched zero this week in Chicago for the first time this winter, and we have a foot and a half of snow. This heavy snow fall came in a big storm, and the snow was very wet and heavy. I seized the occasion to get out and do a little snowshoeing, and found that the twelve-mile walk from Whiting, Ind., to the city, was something of a task, as the snow balled on the shoes fearfully. I have never been out in a much worse storm, and in fact experienced the singular sensation of being lost in Chicago. The limits of this city run down into the edge of Indiana, but I have discovered to my own satisfaction that there are vast open spaces below here in which, after night, and in a driving snow, it is hard to tell which way is north and which east.

This big storm is general over Illinois, Wisconsin and Indiana, and the great fear is entertained that it may prove injurious to the quail crop, which, up to this time, has done so splendidly.

Mr. Marvin Hughitt, Jr., and his friend, Mr. R. C. Cox, have taken this opportunity to get away for a snowshoe trip north of here. These gentlemen had snowshoes made by an artist of their own selection, but upon seeing the pair of long Alaska shoes which I secured a while ago, they promptly telegraphed for duplicates of the Alaska model, and I may add with pride that they had straps put on them after the Blackfoot design, which my friend McChesney and myself discovered some years ago at the Blackfoot agency in Montana. With these shoes and these straps, snowshoeing is not a terror, but a delight. I have been doing a few miles every night in the wilderness of lower Chicago, and it is good as the drowsy poppy for sleep.

Chicago Sportsmen's Exposition.

Matters are getting pretty busy down at the office of the International Forest, Fish and Game Association, for the time is getting short and the crowd of detail begins to multiply. The show looks like a winner, and it will not only be big but good.

Mr. C. W. Norris, the same being my old friend, Charlie Norris, of Peace River and Klondike fame, blew in the other day, and seeing in him a very good woodsman, the management of the show promptly engaged him to go up into Wisconsin and bring down a hundred Norway pines, 50 feet in height. These pines will be used as columns to face the arches of the roofs, and their bushy tops, meeting high in the air, will make green arches of their own along the sides of the big hall. The oak woods south of Chicago will be called upon to furnish the material for the connecting garlands. There will be abundant use made of autumn leaves as a floor covering, and the whole interior decoration will be not only suggestive of out of doors, but indicative of a well composed color scheme. The decorations will not be made up of actual heads and trophies, as these, placed at so great a heieght as the balcony face, would seem small and out of proportion. Hence the artists have decided to use colossal heads made up of staff, the same material which was employed so successfully in reproducing the big animals at the World's Fair. In this way the whole scheme can be brought down to one consistent treatment. The idea of the decorations is the product of the Art Committee, Mr. W. L. Wells, Mr. Geo. Schrieber and H. G. Maratta. The management may feel proud of the decorations, which will be harmonious and inviting, and free of all crude and bizaare effect.

Mr. Maratta is well advanced with his work on the panorama of the Grand Cañon of the Colorado. The Southern Pacific is getting together the big outfit for its display. The big Craine collection of Alaskan trophies, costumes, products, etc., handled by the Alaska Geographical Society, is to be put up here by the White Pass & Yukon R. R., and will itself be a great educational exhibit. We are beginning to hear now from the different guides who have promised to be here. Among these is a Mickmac Indian, who brings his family along from Quebec. Dr. Heber Bishop, of Boston, has sent on his big record moose, the ex-champion of New Brunswick, the famous Tim Lynch, which, in his time, used to chase everybody up a tree. This big moose will have a prominent place on the main floor of the show. Billy Hofer is expected here about the middle of this month, to take charge of some of the animal work in all likelihood. Most of the animals are already waiting. There are several hundred ducks, as many gaudy pheasants and a large stock of game fishes of every variety, all in hand and ready for installation. The athletic programme is arranged, and in fact the whole show is a success as it stands to-day. It is not likely that Chicago will fail to patronize it understandingly and generously.

E. Hough.

Hartford Building, Chicago, Ill.

Moose Back of Trousers Lake.

Editor Forest and Stream:

Having noticed during the past few months articles from different men who have been hunting in New Brunswick, and having particularly noticed that many of them have returned unsatisfied both with the amount of game found and with the country generally, it gives me pleasure to state that a trip which I had the pleasure of enjoying last September in the northern part of this Province of Canada was one of the most enjoyable of my life.

The only unpleasant feature of the whole trip was that a guide named Perry Jenkins, whose home is about ten miles from Plaster Rock, disappointed us at the last moment. He had been employed by us eight months before, and had been promised his money, no matter whether we went upon the hunt or not. There were two of us, Mr. N., of Chicago, and myself. I had employed David Ogilvy, of South Tilley, Victoria county, and to any man wishing to hunt in the northern part of New Brunswick, especially in the Tobique country, I would certainly recommend him. Ogilvy had secured the services of Jenkins, who was to meet us twenty miles from the railroad, but upon our arrival there we found he had gone off with another party the day before, and for this reason my friend did not go on with the trip, but turned back and left the woods without having shot anything. After getting out of the woods I took the matter up with Mr. L. B. Knight, Chief Game Commissioner of New Brunswick, St. John, N. B., and it gives me great pleasure to give him credit for the way he treated us. He not only refunded the money which Mr. N. had paid for a hunting license (which amounted to $30), but he has also assured us that Mr. Jenkins will in all probability never have the opportunity to similiarly disappoint any hunting party from the States, as guides are compelled to secure licenses from the Province, and he will meet with some trouble in securing a license in the future. Mr. Knight further says, "At the next sitting of the Legislature I will take such steps as will protect sportsmen from a repetition of Mr. N.'s case."

Our guide had during the summer built a log cabin about six miles south of Trousers Lake, and this cabin was to be our headquarters during the hunt. We left the railroad at Plaster Rock on the Tobique River and drove from there to the ford of the Tobique, about eight miles. Our plunder was taken over on a wagon, but the road was so extremely rough that riding was out of the question. There is just one bad place in this road, and that extends from Plaster Rock to Trousers Lake, the bad place being a mixture of rocks and mud most of the way.

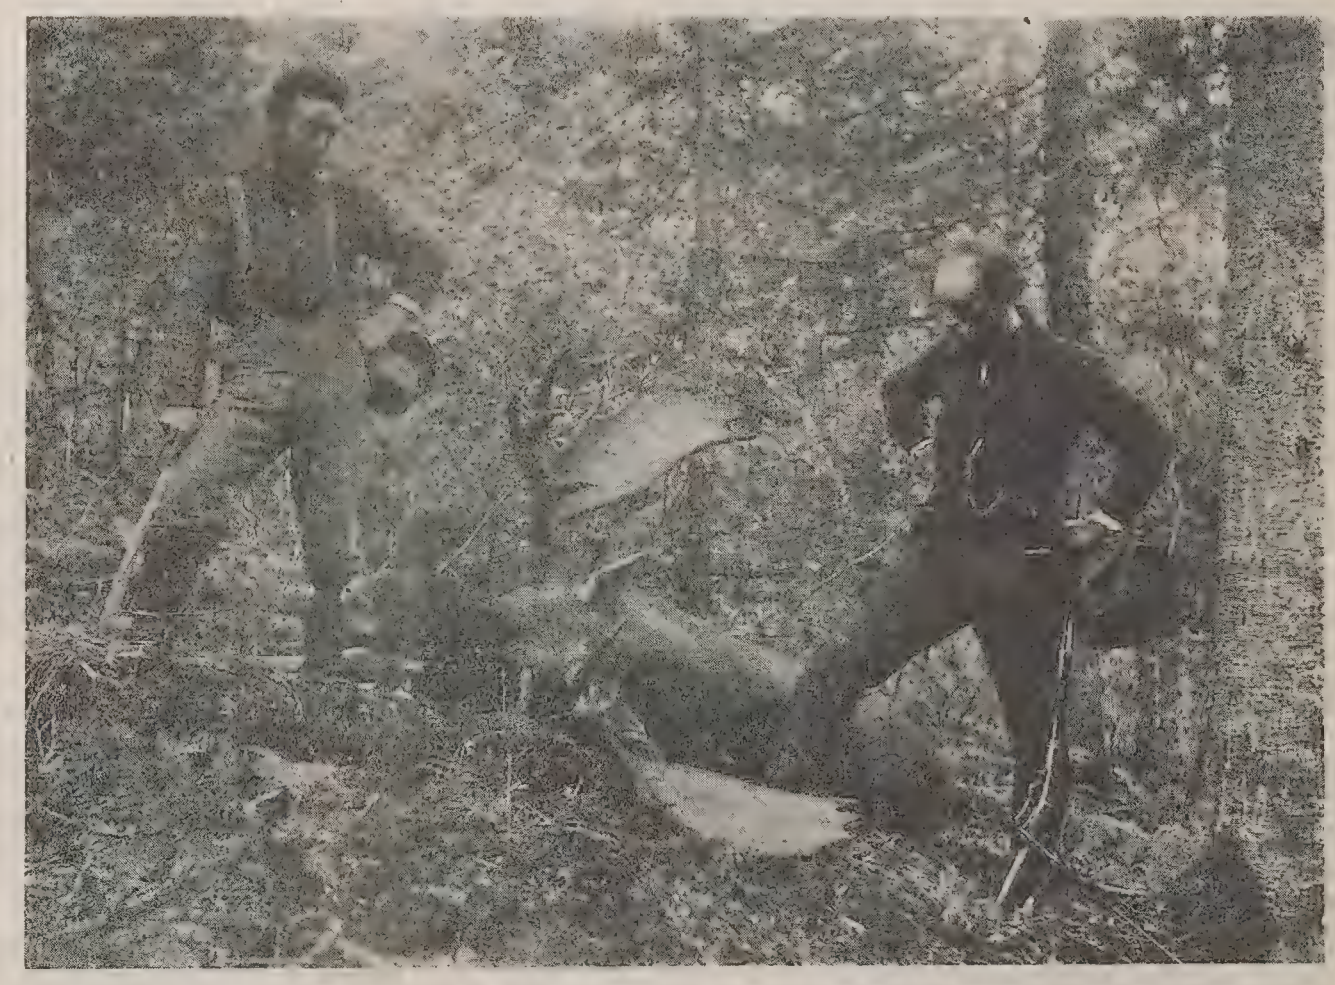
We crossed Trousers Lake in birch canoes, made several carries, crossing several smaller lakes and streams, and arrived at our cabin on Sept. 15, the day upon which the hunting season opens.

The country at this point is entirely covered with woods, while numerous small lakes are found everywhere. These lakes, generally being about two or three feet deep, have been formed by the beaver building shallow dams across what has heretofore been marshes. The lakes are more or less surrounded by marsh and bog, while the underbrush and woodland proper are extremely dense and thick. We remained at this camp until Sept. 28, and during that time saw altogether twenty-nine moose, six of which were bulls. We could many times have shot cows and calves at a distance of not over fifty or a hundred feet, and had several close shots at young bulls, but inasmuch as we were out for a head we let all these alone and awaited our chances.

The bull moose, the picture of which I inclose, was killed about five miles from our main camp on the top of one of the hardwood ridges. This bull was killed by still-hunting, but I am free to admit that the still-hunting was not one of preference on my part. My guide had several times called out young bulls, and upon one occasion called out an immense old bull, but he did not show himself in the open until after dark, and then he was about sixty yards away, across a small inlet of the lake, and we could not shoot, because we were unable to see the sights of our rifles. We tried for days, following the banks of the lakes in the early morning and late at night; we lay out in the woods on the banks of the lakes night after night; we tried calling; we followed streams, and we tried by every method, manner or means to come within shooting distance of a bull with a good pair of horns, but did not do so until we took the hardwood ridges and stalked him down.

C. P. A. N. O.
IN CAMP IN THE TOBIQUE COUNTRY.

I also secured on this trip two caribou, neither of which, however, was a remarkable head. The measurements of the bull shown in the picture are as follows: Across horns, 57 inches; around neck, 24 inches; back from horns, 56 inches; ears, tip to tip, 28½ inches; nose at angle of mouth, 25 inches; length of head between horns, 27 inches; between eyes, 9 inches; length of bell, 22 inches; circumference of neck at point scalp taken, 84 inches; length of animal, nose to hind foot, 162 inches; girth, 84 inches; height to shoulder center, 77½ inches.



MOOSE KILLED BY DR. C. P. AMBLER IN NEW BRUNSWICK. MEASURE ACROSS HORNS 56½ INCHES.

We encountered considerable rainy weather on this trip, but on the whole had a very delightful time, this being due particularly to the kind forethought of our guide, Mr. David Ogilvy.

Notwithstanding that many hunters have reported that big game was scarce in New Brunswick, I must say that it was certainly not our experience.

We counted at one time nine camps on the shore of Trousers Lake, and these campers were patrolling the shores of Trousers Lake morning and night, with an idea of killing moose. It only remains to be said that not one in ten came out with a good head, while those hunters who left Trousers Lake and went back into the woods, out of sight and sound of others, invariably got what they were after.

It seems to be the impression among a certain number of hunters in the States that if they go to Trousers Lake they are in the best part of the country. They unquestionably are in the center of it, but Trousers Lake is no place to camp permanently, as the lake is the stopping place of almost every crowd that enters the Tobique section.

If one is prepared to canoe and carry for the best part of a week after arriving at Trousers Lake, and will not

strike camp short of that distance from Trousers Lake, he is almost sure to get moose, as the country, when one gets back four or five miles from the lake, shows signs —hoof tracks, barked trees, and yards—in almost every direction one goes.

We saw many beaver upon this trip, but these are protected—and very rightly so. Caribou are scarce, but ducks are plentiful. Enough fish for cooking purposes could always be got with one hook and line in twenty minutes.

In closing, I would say that if we were again going back to New Brunswick we certainly would insist upon being taken five or six days further into the woods than where the crowd stops, and nothing would please me better than to go again with David Ogilvy, of South Tilley.

C. P. AMBLER.

ASHEVILLE, N. C.

Pennsylvania Game Bills.

OFFICE OF THE BOARD OF GAME COMMISSIONERS, Harrisburg, Feb. 6.—*Editor Forest and Stream:* A special meeting of the Game Commission was held at their office in this city yesterday. Mr. Kennedy, the president of the board, called the meeting for the purpose of ascertaining if possible where each member of the Commission stood regarding what is known as our general game bill and otther bills connected therewith, that will be presented to the present Legislature. Each member present, with one exception, stated that he was for the measures as they had been agreed upon at former meetings by this body. Mr. Sober said that he was not in favor of the measures, was opposed to the clause that reduced the number of pheasants allowed to be killed in one day from ten to five, that it was a measure aimed at him, and he would fight it. He was then asked if he was not also opposed to other features of the game measures, if he had not written letters against these bills and had not put in circulation petitions against numerous other features of these proposed laws. He replied, "I have not, and will not do so." One of the Commissioners then presented to the chair and had read a newspaper clipping from a paper printed in the home town of Mr. Sober, stating among other things that men in the employ of Mr. Sober, or men who claimed to be in the employ of Mr. Sober, were circulating petitions against the game bills, and stating at the close "the sportsmen of this community are very indignant, and say that if such is the mission of the Game Commission of Pennsylvania, it should be abolished." Mr. Sober said this was spite work.

The attention of the Commission was then called to the fact that a petition had been filed in the Executive Department of Harrisburg, asking among other things that the game season be extended at both ends, that all game be allowed to be killed without limit, that the sale of all game be allowed in this State, and that all appropriations be refused the present Game Commission. Mr. Sober was asked if he had not filed this paper, to which he replied, "Is my name attached to that petition?" The reply was made that his name was not attached to this petition, but was attached to the letter conveying the petition to the Governor. Mr. Sober then said he had filed the paper, by request of friends, and presented a similar paper, accompanied by a letter directed to him, asking him to see to it that it reached the proper authorities. One of the Commissioners then asked him if he knew or could guess who had drafted this paper or could say where it came from, to which he said "That letter shows where it came from." After considerable cross-fire, he said it had issued from one Dr. Warren (late Zoologist of this State). One of the Commissioners then said he had met a gentleman in this city a few days before, who had said to him, "I just had a talk with Mr. Sober, of your Game Commission, and he is dead against your bill. He told me he was in touch with the game dealers of the State; that they had raised a fund to fight these measures, and that he was then waiting to meet a member of the Legislature from Philadelphia (naming him) who had been selected by these people to down all bills you might introduce." Mr. Sober said, "That is not so. Is that sworn to?" to which Mr. Worden replied, "It is not sworn to at present, but if you deny it, I can have it sworn to in ten minutes." Mr. Sober made no reply.

A paper was here filed, secured from a taxidermist of the State, who said it had come from Dr. Warren, asking him to sign and forward at once to his representative.

This paper was a protest from taxidermists, stating that if the present bill of the game people became a law they (the taxidermists) would be driven out of business. This paper devotes fully half a page to the crow and loon, in the attempt to create feeling against the bill with the farmers. It points out the great wrong of protecting these birds, etc., when both birds are named in the new bill as birds that are not included in the list protected. Dr. Warren then goes on with a lengthy list of birds that this iniquitous board is attempting to protect. This list includes the screech owl, barn owl, snowy owl, tern and gulls, also a number of harmless hawks, forgetting that only a few years ago he published at the public expense a book known as "The Birds of Pennsylvania," in which he says among other things:

> They have received answers from Dr. C. Hart Merriam, Ornithologist of the United States Department of Agriculture; Dr. Elliot Coues, vice-president American Ornithologists' Union; Robert Ridgway, Curator Department of Birds, United States Museum; Dr. Leonard Stejneger,, Assistant Curator of the same department; H. W. Henshaw, of the Bureau of Ethnology, also collector of birds for the Smithsonian Institution and connected with the late Wheeler Survey of the Territories, and Lucien M. Turner, collector of birds for the Smithsonian Institution for the last twelve years. These answers, which are attached to this report, all bear testimony that the hawks and owls are of great benefit to the farmer, and render him far greater service than injury, and that it is unwise to select any of them for destruction.

He attempts to create the impression that this proposed bill takes away inherent right of self-defense and renders the farmer liable to fine or imprisonment if he should kill an eagle or crow found destroying his property. The words "or any wild bird other than a game bird," which the doctor attempts to warp into the creation of feeling against this measure, were introduced at the instance of and by request of Dr. T. S. Palmer, Assistant Chief of the Biological Survey the Department at Washington, to whose care Congress has intrusted the care of the game and birds of our nation. This gentleman is the companion and associate of the very gentlemen Dr. Warren quotes as authority in his book on the birds of Pennsylvania, and voices the ideas of these gentlemen to-day as the doctor claimed to do some years ago. Dr. Palmer is making special effort to have these words made a part of the game law of every State of the Union, and especially asked this Commission to name gulls and terns in their bill. Surely Dr. Warren must have some other motive than the protection of our birds, and there is perhaps more in the statement made by Mr. Sober (that the game dealer has raised a fund to down these bills) than would at first sight appear. Dr. Palmer writes that the song and insectivorous bird is rapidly being wiped off the face of the earth, saying the decrease averages from ten to seventy-seven per cent. in different States, ten per cent. in Nebraska and seventy-seven per cent. in Florida. The Pennsylvania Game Commission consider it their duty to stand by the experts of the nation and to listen to their advice in matters pertaining to game and bird protection. We feel as Dr. Penrose, of the Commission, said at our last meeting, "I think it my duty to preserve the game and birds of this State, even though it be necessary to absolutely forbid the killing of quail, the sport I most enjoy." The game bills now before the Legislature are necessary measures if our birds and our game are to be perpetuated, and the time is now here when those interested in this matter should rise in their place and speak in terms that will not be misunderstood.

JOSEPH KALBFUS,
Secretary of the Game Commission.

American Wildfowl and How to Take Them.—XXIII.

BY GEORGE BIRD GRINNELL.

[*Continued from page* 109.]

American Scoter.

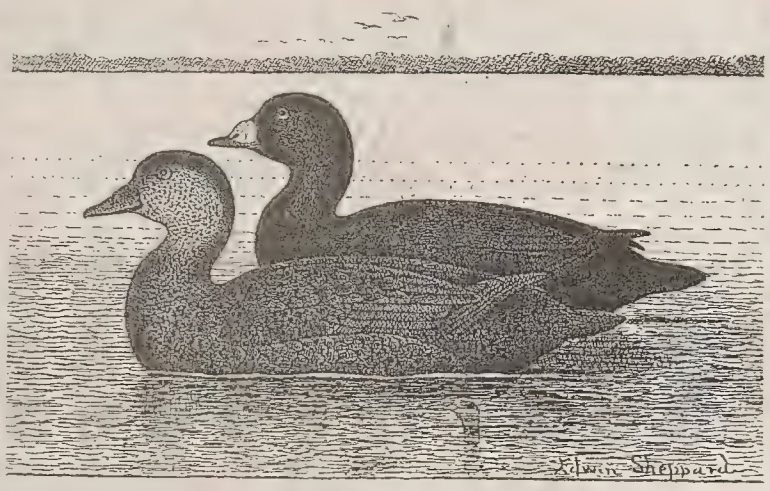
Oidemia americana (Sw. and Rich.).

IN the adult male the entire plumage is deep black; the neck shows faint purplish reflections; the fore part of the bill and a line running back to the feathers, along the cutting edge, black; the remainder of bill, from before the nostrils, much swollen, and bright orange in color; the legs and feet are black.

The adult female has the bill entirely black. Above the plumage is dark grayish-brown; the feathers of the cheeks, back and scapulars often tipped with paler; the lower parts are more nearly gray. The length is about 18 inches.

The scoter is a bird of very wide distribution, being found on both coasts of North America, as well as on many inland lakes. On the Pacific coast it ranges from the Arctic to southern California and on the Atlantic at least as far south as the Chesapeake Bay. Mr. Audubon, on the other hand, says that the scoter ranges along the entire southern coast and that it is found as far south as the Mississippi River.

On its southward migration the scoter reaches southern New England late in September, and often in open winters remains there through the whole season, taking its departure for the North in May. When, however, the weather is cold, and the shore blocked with ice, it moves further southward to open feeding grounds, returning northward as the ice disappears.



AMERICAN SCOTER.

Alaskan travelers have found this species as far north as Norton Sound, where it breeds as well as in Labrador, on the east coast. This species, with other scoters, also breeds in some of our inland lakes, nests of these birds having been found on some of the larger lakes in Dakota and the birds having been seen in abundance on the Yellowstone Lake, in Wyoming, all through the summer.

The scoter on the New England coast is usually found associated with the white-winged and the surf scoters, which commonly outnumber it in the flocks.

All these scoters are characterized by curiously swollen and more or less hollow bills, which are highly colored. All of them are known along the Eastern seaboard as "coots."

Ticonderoga Gun Club.

NEW YORK, Feb. 7.—*Editor Forest and Stream:* The annual meeting and dinner of the Ticonderoga Gun Club will be held on the evening of March 8 at 7 o'?clock at the Yale Club, 17 East Twenty-sixth street, one-half block from the Madison Square Garden, during the first week of the Sportsmen's Show.

The object of this meeting is to bring together the members of our club, discuss any business that may be necessary, to elect officers for the ensuing year and to hear from out of town members.

It is requested that those who will attend will kindly notify Mr. Peter Flint, Secretary, 150 Nassau street, this city, to that effect by Feb. 15, and inclose with their acceptance check for $1.25 to pay for dinner.

Very truly, W. Bradford Smith, George Ketchum, Paris S. Russell, Committee.

Lumber Camps and Game.

A WRITER in our issue of Jan. 26 wrote of Maine lumber camps and game and game wardens as follows:

> We discuss on the subject of Maine game laws. We "sports" consider ourselves very much wronged, and so do the guides. We spend much money in the State, and all the laws seem directed against us. The Game Commissioners and lumbermen seem to be the only ones satisfied—the Commissioners because they made the laws, and the lumbermen because they pay no attention to them. The wardens avoid a lumber camp as they would a plague. It is not healthy ground for wardens. I know of one case where the lumbermen from a camp caught through the ice two bushels of trout from a couple of trout ponds on Sunday. Why are all the game laws leveled against outsiders?

In comment upon this a Bangor correspondent writes:

BANGOR, Me., Feb. 4.—*Editor Forest and Stream:* I wish to draw your attention to an article in your paper of Jan. 26, entitled "A Month on Millinockett," and, as I presume you are a fair-minded man, to ask if you think it just to print such a slander against lumbermen as this contains without, probably, an iota of proof?

I have read your paper for many years, and have been sorry to see great numbers of similar articles or worse, none of which have been accompanied by proof, nor even given names; but simply have slandered the land owners or lumbermen, as a whole, as breaking the game laws wholesale, even to the extent of feeding their crews largely upon moose and deer killed in close time.

Now, if you are a man possessed of a fair amount of horse sense, and will consider these matters freely, after corresponding, and getting full opinons and information, from, say, such a good authority (as to the doings of land owners in their logging operations) as Game Commissioner Oak, I think you will decide that a large proportion of your articles in the past, regarding lumbermen breaking the game laws so extensively, have been untrue. I do not believe there is a foreman of a logging camp on the Penobscot to-day who would dare kill, or buy, or allow his men to kill and bring into camp, moose or deer during close time. If any wished to do it, they know the jealousies of men in a logging camp, likelihood of disagreements between them and some of their men before spring, and, in fact, the almost absolute certainty of its coming to a game warden's ears sooner or later.

Most of the articles I have referred to ostensibly have been written by so-called visiting sports, men who come into the State, coolly camp down upon the land of the man they slander, burn up his valuable timber for their camp fires, hunt over his land, and in very many cases set fires that destroy large areas of timber; and I have yet to hear of a case in which they offered to pay for the privilege of hunting, or for the wood they burned or, in fact, ever even asked for these privileges without pay, simply taking possession as if they owned them.

Now, I do not own one acre of land on the river, but I do object to see the men who have made eastern Maine what it is so basely slandered, and I should like to see land owners as a body post their lands and allow no hunting or fishing without their permission, and grant said permission very sparingly to visiting sports. Should the lumbermen as a whole in the State allow absolutely no hunting or fishing on their lands, I believe it would be greatly in the interest of the people and State, for more timber, and what would make timber in value, has been destroyed by fires set by and through visiting sportsmen than all the money they ever have or will bring into the State.

JAMES WEBBER.

Human Hounds Dog Deer.

MANCHESTER, N. Y., Feb. 4.—*Editor Forest and Stream:* The report of the Forest, Fish and Game Commission, published in FOREST AND STREAM, Feb. 2, shows that more deer are now killed by still-hunting than in years when the use of hounds and jacklights was allowed. I think that I can explain why this is so. I have spent considerable time in the woods in different sections of the Adirondacks during the open season for deer, and know something about how they are killed. It is done by dogging. Human dogs do the work. Here is the way in which the hunt is conducted: A party of hunters, composed of five or six men (the more the better) and a guide (I never saw a party hunting in this manner unless they had a guide; the guide being employed because it is strictly necessary that one of the party be perfectly familiar with the country) will go out together. The guide will station three or four of the party out around some swamp or along the side of a mountain, usually in some old lumber trail, and then, taking a man with him, will work in from the opposite side toward the shooters, all the time howling to imitate hounds; and they have got the howl down so fine that old hunters are fooled, thinking that parties are out in the woods using hounds to dog the deer.

At the first howl, if there is a deer within half a mile of the drivers, they will get out as if scared to death. I myself have seen deer get up at that distance, and in the manner described.

I have seen parties of as high as fifteen men out hunting in this way. It is needless to say that this method of hunting is very destructive to the deeer. Skill is not required, a fair shot and a strong voice being all that is needed. In the sections with which I am familiar in the Adirondacks, I believe that fully two-thirds of the deer killed are killed by this way of hunting.

The Michigan still-hunter does not stoop to use such despicable tricks to get his deer. He gets them in the good old way, prowling quietly through the woods, until getting his eye on them, he drops the deer with a well-directed bullet. Such hunting requires skill and patience.

The majority of the hunters that I have met in the Adirondacks know nothing about still-hunting. I have met them when they seemed to be amazed when told that it was not necessary to dog the game to get the lawful number of deer allowed.

Prohibit dogging, whether by human dogs or others, and jacking, and provide more game wardens, and the supply of deer in the Adirondacks will never grow less.

EZRA G. SMITH.

Mr. Edmund H. Osthaus writes: "My friends like the picture very much; it is a splendid reproduction."

On a Ledge.

Wells, Wyo.—*Editor Forest and Stream:* I have just been reading Mr. Ireland's letter in Forest and Stream of Jan. 12, and it is very plain to be seen that Mr. Ireland has been there himself several times. Really, though, there are some hair-raising trails in the Book Cliffs, and once in a while a pony goes over when the trails are slippery and bad. And when one does go over he is pretty well demoralized when he hits bottom, as the drop off is several hundred feet. There is one place especially that I never went across that I didn't think, "Suppose this fool bronc should take a notion to pitch," and sometimes when no one was along I got off and walked, just to ease my mind. However, Col. Roosevelt does not happen to be going to the Book mesa to hunt, therefore he will be spared that trial to his nerves. Of course I don't know just when the hunt will take place, but as his guide happens to be an old hunting partner of mine I'll bet two bits that I could find the outfit without much trouble. I only wish I could be there to yell a few times when the dogs string out on a fresh lion track, or to help poke a big cougar out of a tree and see the fun when the pack takes hold and dogs and lion roll over and over down the hill—and the racket can be heard for a mile.

I know the dogs well, for John Goff's dogs and mine are blood relations, and lots of times we have doubled up packs for a big hunt.

Once we treed a big cougar, and when we got him out he got among a lot of rocks right on top of a cliff. For several seconds no dog could get hold, but at last Brig got a shoulder grip, the lion got Brig by the cheek, the rest of the pack piled in, and the whole works went over the cliff. Luckily, there was a bridge about three feet wide down about ten feet, and on this part of the outfit stopped, but the lion and Hector went on over, falling nearly seventy feet. Hector must have lit on top, as he was all right, while the cougar was dead. Brig ran along the ledge to where the cliff had a little slope and took a header, landing head first in a deep snow drift. Three or four of the puppies started to follow, but landed on a narrow ledge a foot wide half-way down, and after the row was over we had to let a rope down from above, drop a noose over their heads and draw them up that way.

When we got down Brig had lost so much blood from the hole in his cheek that he couldn't stand, but a quid of tobacco in the wound stopped the flow, and he came out all right. It was always a wonder to me that more sportsmen don't come out for cougar hunting. It is more fun than any other sport we have. But as it must be done when the weather is cold and snow on the ground, I suppose it seems rather hard work.

Wm. Wells.

Cutting Hay in the Yellowstone Park.

Asheville, N. C.—*Editor Forest and Stream:* I was pleased to see (Forest and Stream, Dec. 12, 1900) in the recommendation of the acting superintendent of the Yellowstone National Park, that he recommends "That no individual nor business concern be allowed to cut hay within the limits of the National Park."

One year ago last October while returning from a hunting trip in the Jackson Hole country, we went out through the Park, traversing it from the Snake River Landing on the south to Ft. Yellowstone on the north. Our observation, of course, only embraced that territory which could be seen from the road (via the Thumb and Norris Basin). From the Thumb north every meadow, large and small, which presented suitable ground, had been gone over with the mowing machine; and in conversation with guides, residents and soldiers, it was developed that the same was true in the more remote parts of the Park. The guides claimed that many elk were driven south out of the Park by this short-sighted policy. The best grazing was yearly removed, and as the elk depended upon the grazing in these meadows for their winter foragee, it meant destruction by starvation and freezing for the weaker. The guides claim, in fact, that a great per cent. of the elk which migrate south have been compelled to do so each year since the hay cutting commenced.

It is the intention of the Government to protect and foster the game. The cavalry horses are fed baled hay, shipped in. Why allow transportation companies to thus embarrass game already in the Park?

I trust that Capt. Goode will secure the passage of all his recommendations, and particularly this one concerning the cutting of hay in the Park.

To keep an animal at home, feed him well—at least don't steal that which he recognizes as rightly his own.

C. P. Ambler.

West Virginia Deer.

Morgantown, W. Va.—*Editor Forest and Stream:* It seems high time that some active steps were taken to improve the game laws of West Virginia by limiting the lawful number of deer killed by one person. John Burner arrived at Parkersburg on Dec. 25 with fourteen deer, which he had killed in Pocahontas county within a few days. One was a big buck which weighed 275 pounds. Mr. Burner has killed during the season thirty-five deer and three bears, besides other smaller game, all in the mountains of Pocahontas county.

Just how long game can last in these mountains depends on how many such hunters we have, unless we follow the example of other States and put a limit to the number one may kill. If the limit was made one instead of two, it would mean a saving of hundreds of deer each year in each State which contains any quantity of deer, and would surely lessen the income of such States from non-resident sportsmen but a very little, since the true sportsman would feel justified in making his regular hunting trip for the privilege of securing one deer. Some might figure that where they are at an expense of a hundred dollars or more, the killing of one deer would not justify making the trip. Neither would the killing of two or three, from the financial point of view. For the present, however, we would be thankful for a law in West Virginia making the limit two.

Emerson Carney.

Moose in Quebec.

Aylmer, Que.—*Editor Forest and Stream:* You will find inclosed herewith a letter I have received a few days ago from Mr. Isaac C. Bates Dana, of Worcester, Mass., which speaks for itself. This moose was shot on the Kippewa.

N. E. Cormier,
Provincial Game Warden and Fishery Overseer.

I drop you line from home to thank you most heartily for all your kindness to me in regard to my late moose hunt in the Province of Quebec. Coming to you an entire stranger, you literally took me in and fed and clothed me with all the requisites necessary to bring my trip to a most successful conclusion.

As you may have already learned from some other source, I shot an unusually large moose. The horns have been measured by many interested sportsmen, not all agreeing by any means. The smallest measurement made was 61 inches; the largest 63½ inches. Our local taxidermist gives them 63 inches. Certainly they have both the widest and deepest spread of any set of horns hereabouts. I had a mighty pleasant sojourn in your country. I reach out my hand to you in the spirit, as from one sportsman to another, of one who considers himself most deeply indebted to you for administering to one of the most enjoyable hunting trips of a life time.

Sincerely yours, J. C. Bates Dana.

Live Game at the Sportsmen's Show.

Two splendid specimens of moose—a bull and cow—have been secured for the coming Sportsmen's Show at Madison Square Garden. Arrangements made for exhibiting the animals at this year's show will enable visitors to get a much better view of them in studying their proportions and habits. Instead of one large park, there will be a series of smaller inclosures in which the various species will be confined. At no past show has the number and variety of both birds and animals been so large as that decided upon for next month's exhibit. Moose, elk, caribou, half a dozen varieties of deer, antelope, mountain sheep and buffalo, together with mountain lion, lynx, wildcat, black and cinnamon bear, wolves, foxes and other carnivorous species, all of them extraordinarily fine specimens, will be shown. A colony of beaver, as well as otters and muskrats, will establish their residences on the shore of the lake, while a dozen fat raccoons, half a hundred red and gray squirrels and as many hares and rabbits will occupy cages of wire mesh.

The game bird exhibit, in charge of Verner de Guise, will be an extensive one, embracing specimens of pheasant, partridge, quail, turkey and all varieties of wild duck common to Atlantic coast waters. In fact, the exhibit of animal and bird life at the Garden this year promises to be one of the most interesting features of the show.

Stop Spring Shooting.

Watertown, N. Y.—*Editor Forest and Stream:* There are two bills that we ought to, can and will succeed in passing this winter if every sportsman who is interested will work for their passage. It is of the utmost importance that you bring all the pressure possible to bear upon the representatives of your own county. Don't expect some one else to do it. Do it yourself. Always have a few postals with you, ask each of your friends to write, see that they are properly addressed, and mail them yourself. You will be surprised at the number of votes you can get.

Start a petition in your town and get all the names you can. Your representative is no mind reader, and if you fail to tell him what you want, don't kick if he votes against you. If it is not worth asking for, it is not worth having. If you want it, vote, and vote often, and you'll get it. Stop the spring shooting of wildfowl. Stop the sale of ruffed grouse, woodcock and quail at any time of the year in New York State.

Have you voted? I have. W. H. Tallett.

The Eastern Adirondack Winter.

Editor Forest and Stream:

The winter in the Adirondacks and along Lake Champlain has been one of considerable severity and unfavorable for game. In November there was an unprecedented fall of snow in the Au Sable Valley, which was reported to have broken down the roofs of a hundred buildings, large and small, from Keene Valley to Au Sable Forks. At that time the snow was upward of four feet deep on a level, and since then it has been steadily gaining in depth.

The broad part of Lake Champlain closed Jan. 30, nearly three weeks earlier than last year, so suddenly that at Westport and Essex a number of wild ducks were frozen in and perished. A dozen or more were found at points along the shore, caught in the ice, and two days later one was captured alive, but partly frozen, flopping along the ice, by a boy skating on Whallon's Bay.

The great depth of snow makes it very difficult getting around in the woods at present, but so far no crust has formed, and deer are probably doing as well as could be expected. J. B. B.

Mountain Lion Hunting in Colorado.

Dr. E. L. Burnham, of Sanford, Me., and Mr. Everet C. Burnham, of Boston, his brother, have just returned from Colorado, whither they went some weeks ago to enjoy a lion hunt.

They started off without the least idea of where to go, but inquiry in Denver led them to go to De Beque, Colo., a little station not very far west of Rifle, where Hon. Theo. Roosevelt has also been hunting lions. Here they secured the services of the Crandall boys, who were said to have good dogs. Unfortunately, just before the hunters reached De Beque the Crandalls lost their dogs, and a number of days were wasted trying to hunt lions with untrained dogs. However, at the very last of their stay they succeeded in getting hold of a couple of good dogs, and in three days killed two lions. Of these, the larger was 7 feet long and weighed 150 pounds; an animal very heavy for its length. We are promised further particulars of the hunt.

Sea and River Fishing.

Notice.

All communications intended for Forest and Stream should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Proprietors of fishing resorts will find it profitable to advertise them in Forest and Stream.

Fishing Up and Down the Potomac.

The Relation of Mendacity to Angling.

This subject might well be treated as the celebrated chapter on the snakes in Iceland. No reptiles have been discovered in Iceland. But recalling a sentence around which Mayne Reid wrote one of his books, "Every truth is overshadowed by a sophism more like truth than truth itself," and that more terse and homely saying that a "lie well stuck to is as strong as the truth," it would seem that some effort should be made to set the public right on this important question. Of course "our withers are unwrung," and

> "The sting of falsehood loses half its pain,
> If our own souls bear witness—we are true."

The task will not be easy, for once the world has got hold of the wrong story it is marvelous "how hard it is to get it out." The harder in this, that many are so earnest and indifferent honest in making the charge of unreliability against the angler;

> "Like one
> Who having unto truth, by telling of it,
> Made such a sinner of his memory,
> To credit his own lie."

But we must with proper scorn repel the base insinuations of a jealous world; expose the conspiracy which has so long existed to saddle on the innocent angler a vicarious atonement for which he gets no credit.

Is it fair that the hands extended should be a reproach to generations of honest anglers? That no distinction should be made between the sheep and the goats? Let us throw off the hated yoke, assert our independence and denounce our detractors and our imitators; these counterfeit presentments with simulated garments and weapons, whose unvarnished and unshamed tales of "men in buckram" and of sea serpents have brought disgrace unmerited upon a noble profession.

It will no doubt come as a surprise to some, that this badge of reckless and false statement belongs to all the world, save only those who have been so long condemned to wear it.

> "How false are men, both in their heads and hearts,
> And there is falsehood in all trades and arts;
> Lawyers deceive their clients by false law,
> Priests by false gods keep all the world in awe."

It is the old story repeated of the man in the asylum, who, when asked for an explanation of his presence behind the bars, said: "Owing to a difference of opinion; I said all the world was crazy, the world said I was; the majority ruled and here I am."

The world says that anglers exaggerate and the truth is not in them; their wonderful stories are received with wagging heads, and with shouts of ribald laughter that sound "like the crackling of thorns under a pot," and no one thinks of confining his incredulity to the "quip modest"; they go jump to the seventh times removed, beyond which no man dares go without an if; but "see how plain a tale shall put them down."

"All men are liars," said the prophet, but the qualification afterward made to the sweeping statement was evidently intended to except anglers. The legendary home of truth, as all know, is at the bottom of a well. Few are really aware that its symbol is a fish. In the Catacombs of ancient Rome the fish is found frequently recurring in inscriptions and outline, and antiquarians finding in its Greek name the anagram of the Saviour, assumed that it was used only as a monogram, and only recently determined that it stood also for the synonym truth. If truth is a fish and at the bottom of a well, certainly nobody has any show of securing it but your expert angler.

"All men are liars," said the prophet. Lest the miscalled weaker sex who have been putting up so manly a fight for recognition should feel, as they so often must in reading the prophets, that they have been ignored, or should claim exemption under this form of expression, they are warned not to lay that "flattering unction" to their souls. So surely as every Darby has his Joan, so every Ananias hath his Sapphira, his equal in invention, in nerve, yea, in atonement. The Germans and Italians have both a proverb which says, "Take an eel by the tail and a woman at her word, and hold how you may, you have nothing at last."

But what the prophet really wrote was, "I said in my haste all men are liars." He who has confessed haste has already confessed error, and anglers can afford to be magnanimous, but it is a pity that he did not except fishermen by name, as there can be no doubt was intended; their case would have been something stronger.

It will be easy enough to show that all the rest of the world is included in the original hasty expression, and but for anglers there had never been occasion to modify it.

Our history and our philosophy have been crystallized into so-called proverbs, that, handed down from remote ages, have found confirmation in the coincidences which prove that history repeats itself, and if a liberal appeal to old saws is made, it is because there is no better testimony, and that way even safety lies.

A saying so old that its origin is lost has it that "Poets and painters have liberty to lie," and little liberty in this world goes begging.

Another wise saw tells us, "The official who cannot lie may as well be out of the world," and you catch in this net a good part of Washington.

"To lie like a trooper" is as old as the trooper, and would seem to make prevarication an accomplishment inseparable from the vocation.

"As a nail sticketh fast between the stones of a well, so

doth sin stick close between buying and selling," and the great mercantile world stands convicted on high authority.

The lawyer, the weather prophet, the diplomat—these need only to be mentioned, you can guess the rest.

The bench—but let that pass, with the story of Betty and the sovereign, with the greenback and the income tax.

And who can forget Bobby's lines?—

"Some books are lies from end to end,
And some great lies were never penned;
E'en ministers, they ha'e been kenned,
In holy rapture,
A rousin' whid at times to vend,
And nail 't wi' scripture."

The newspapers—it is only necessary to read what Jefferson said of them. He never looked at one except through orange goggles; papers were all yellow to him.

Adam's first offense in speech was a taradiddle, and nine-tenths of youth's first castigations since have been vain efforts to whip the offending Adam out of him.

"Every liar has another for a witness," says the modern Greek, so only half the world need be charged with invention; they alone are carried along by a motive, the rest are trailers.

But what need to pursue; every class and all peoples stand convicted except anglers, and there you are.

The Spanish have a proverb and a good one; one can but wonder where they got it, "The man who catches fish does not need to lie." Your angler catches fish and is above suspicion.

But on the heels of every army is a great body of stragglers and suspicious characters, camp followers, who, taking advantage of confusion, embarrass and disgrace by proximity and deportment the uniforms they dare not wear and are not fit to touch.

So the great army of noble anglers is constantly harassed and embarrassed by a following of pseudo sports who assume the honors and claim the prize money of admiration to which they are not entitled. If they had their deserts the population would be reduced. But since anybody may wear the uniform, it may take close inquiry, not always desirable, to distinguish, though sometimes a word, a sign may be enough to brand them. For example, if he lies he is no angler, even if he says he is.

If he is not a gentle man, unselfish, temperate, patient, truthful, skillful, saturated with a love for nature and his fellow man, he is no angler. If he is all these and catches fish, no matter for his coat he may not have one, no matter for his speech, he may not read, but you may trust him with your life, and wish no better company for your day in the woods, and when you quit at night, though his basket outweigh yours, find that you have made the greater catch.

Swift and Sterne and Johnson have each been credited with a stupid saying, supposed to be descriptive of fishing, to the effect that it was a string and a pole, with a worm at the end of one and a fool at the end of the other. When angling came in, all this was changed. The worm and the string and the pole and the fool all disappeared. Angling is now a line and a rod, with a fish at the end of one, and at the end of the other a man, and one who would not change places with the kings of the earth for a minute, nor lend his rod to a brother, and the lying is done by the envious lookers on and imitators.

The elegant Chesterfield said in one of his famous letters to his son, "You may always observe that the greatest fools are always the greatest liars; for my part, I judge of every man's truth by his degree of understanding."

Is anything more needed to establish the veracity of the angler? I trow not.

HENRY TALBOTT.

ANGLING NOTES.

Red Trout of Canada.

My friend, Commodore W. H. Parker, managing director of the Laurentian Club, writes me from Lac la Peche, Province of Quebec, a personal letter, which I think he will not object to my quoting from, as it will be of general interest particularly at this time, when an effort is being made to identify a red trout found in Canadian waters:

"It goes without saying that the first thing I do on receiving a copy of FOREST AND STREAM is to look for an article from your pen.

"Re red trout. Last January I called at Mr. Simpson's while passing on a hunting expedition after caribou, and while there he remarked that he had a species of fish which he would like to have me identify. When I was shown the fish I was surprised, especially as he told me it was from one of the lakes of La Chaine des Trois Lacs, south of Saccocommie, the biggest lake on the Riviere du Loup, now leased by the St. Bernard Club, of which U. S. Consul W. H. Henry, of Quebec, is president.

"There was a time when my father owned in fee simple and as lessee from the Government for lumbering purposes nearly all waters drained by the Riviere du Loup. As the specimen shown for identification was from a lake I had fished many a time when a boy and had caught nothing but speckled trout, and those of small size, I was very much surprised and puzzled, too, and thought friend Simpson was trying to play a joke on me and had planted these fish (saibling I called them) from his own hatchery, which was not far distant. I send you a specimen, at least the skin of one, of the fish given to me by Mr. Simpson. When I received the fish, in a frozen state, the belly was very red, but after exposure the deep coloring disappeared. I used common wood varnish, hoping to preserve the color, and used the same varnish on speckled trout, and the colors remained fast. You will notice that the specimen I send has a decidedly forked tail and in shape more like the lesser lake trout.

"I have been told by one of our foremen of old lumbering days that there is a lake on the Spaulding Brook (Ruesseau de Spaulding), the east fork of the East Branch of the Riviere du Loup, containing a species of trout very red, unlike anything else in any of the 300 lakes of Riviere du Loup.

"This last fall, while on a hunting expedition north of the Mattawin River, I came to a small lake, say in size about a quarter of a mile in diameter, which many years ago had been flowed by beaver; the water had killed the vegetation surrounding the lake, leaving a sandy beach, so that being free from overhanging vegetation objects could be freely seen from the shore. As moose tracks were plentiful about the lake, I had sent one of my guides to hunt for a piece of birch bark from which to make a cornet for calling, and while waiting for his return I heard a splash in the water near by. Upon investigating I found the cause. It was made by a trout on a spawning bed in very shallow water. Whether it was owing to the clear white sand and clear water reflecting the colors of the fish, it seemed to me they were the reddest trout I have ever seen—and I have seen many a spawning ground in the lakes of the Laurentides. Thinking this a good opportunity to secure a new species (though I could see that they were speckled, but possibly a new variety), I luckily had a hook and line, but no flies. You know yourself what a fellow will do in an emergency when fish are in sight, and I improvised a fly our of a corner of a red handkerchief I had. While doing this I sent the men to get bark to make a caseau to hold the spawn I expected to take.

"The fish had almost finished spawning, but I succeeded in securing enough eggs to experiment with, and brought them home and planted them in a brook, and am awaiting results. The fish, both males and females, had very red bellies; whether the deep coloring will remain after the spawning season is over, deponent knoweth not.

"I know this from observation, that in some lakes speckled trout are highly colored, and in others the coloring is very light, and in most cases this is accounted for by the color of the water, but not always. In about a month I expect to get some specimens of the fish, and if they are as red as when I saw them I will send you specimens."

The fish skin has not come to hand as I write this note—at least I have not received it, though it is probably at the FOREST AND STREAM office in New York—but from the mention of the forked tail I imagine it to be similar to the fish that Commissioner Titcomb has already sent to me and to Prof. Garman.

I imagine one reason why these red trout have not been more generally observed is that they are a deep-water fish, spawning late, long after the open fishing has closed, and being lake spawners, have not been noticed on the shoals in the lakes by other than lumbermen and trappers, who have simply called them trout without caring specially whether they were red or pink, square tails or forked tails.

Commodore Parker says different water will account for difference in color of trout, but not always. I have about concluded that we know little about the cause of the varying color in breeding trout. Only this fall I have been struck with the difference in the coloring of breeding males in the same pond, one individual being highly colored and others shading down to a pink blush, and all fed on the same food and confined in a small pond at a breeding station. There is nothing uniform about them so far as coloring is concerned. There will be light trout and trout almost black, the vermiculation pronounced and the vermiculation obscured, and so on to the end of the chapter of colors in breeding fish. I am now having an experiment in feeding tried to determine if possible one matter, but it must be continued for months to settle the matter even if it is settled then.

A. N. CHENEY.

The Log of a Bicycle Fishing Trip.—IV.

Through the Mountains of Virginia and West Virginia; Edited from the Diary of Mr. George N. Beall by the Commodore, F. R. Webb.

(*Concluded from page* 111.)

The next day was Sunday, but I packed up, ready for a start, but the patter of rain on the shingled porch roof indicated a rainy morning, so I wisely made up my mind to stop where I was for the present. All of the family soon gathered on the porch—two girls and four boys, besides the heads of the house. These latter found ample occupation in trying to keep the youngest hope and pride of the house from drowning himself in a puddle of water close to the doorstep, and his little Sunday outfit was soon ready for the wash. After dinner the clouds broke away, and as there was promise of a clear afternoon, I said good-by, and, crossing the long foot bridge over the river, with my machine under my arm, I was soon spinning away down the road again. I was a little too brash with my speed, for on nearing the little village of Brandywine my machine took a gigantic slide on the greasy surface of the road and came within an ace of spilling me into the river, to the great amusement of a crowd of young rustics out for a Sunday afternoon constitutional. Mailing a letter at the store and postoffice in the village, I continued on my way.

The promise of fair weather proved delusive, for muttered thunder across the mountains warned me of approaching rain, and I was fortunate in finding shelter as the first big drops began to fall. After the shower I again pushed on, but the mud was thick, and I spent more time cleaning out my clogged gearings than I did in advancing, and I had a generally sticky time of it. The thunder continued to groumble around among the mountain gorges, and I began to feel blue and lonesome as I walked beside my mud-clogged wheel, while vivid flashes of lightning to right and left of me made a house under the hill at a turn of the road a welcome sight. I ran up against quite a little crowd of Sunday visitors here, and was kept quite busy for a while showing my machine and answering a host of questions, for it goes without saying that a bicycle is an unusual sight in these regions—indeed, many of my audience had but vaguely heard of the machine.

A half mile further on I reached Miller's, on the site of old Fort Sibert, and put up for the night. I found a young man of my own age here, who has evidently been well informed on many subjects, and he entertained me well. My spirits began to rise again, and with the aid of a good supper and my host's entertaining qualities I felt quite myself once more. The house stands on a prominent point of the hill, overlooking the little valley, and is built on the site of the old Colonial blockhouse called Fort Sibert, where the early pioneers took refuge from the Indians. The sketch which Mr. Miller gave me was simply a tradition, for the historical record of the massacre which took place here is very brief and incomplete.

The subject was very interesting as told in the old man's quaint, old-fashioned way, as he pointed out the half-obliterated landmarks here and there. The old man soon excused himself on the plea of age and tired eyes, and retired for the night, and left me and the son to carry on the confab. We did justice to all sorts of sporting subjects, and found many things of kindred interest to talk about.

On Monday morning early I was off for "The Corner," where the river reaches "The Notch" in the mountains and goes tumbling down through an impassable gorge for three or four miles. I had heard much of the fine fishing there, and had it on my programme to stop there. I got specific directions from Mr. Miller before starting. At the first ford the pools looked so inviting that I stood my machine in a fence corner and, getting out my rod and flies, had eight fine bass hung behind my saddle in less than an hour. By much walking along a by-road and over the river jacks, I finally reached my destination—the last house in the valley. I introduced myself and poured forth my usual tale of woe to the madame, whom I found down by the spring house, doing the usual Monday morning laundry tasks. The head of the house came along while negotiations were pending, and the matter was soon arranged on a satisfactory basis. In these isolated mountain regions a stranger can readily secure accommodations at any farm house. The people live in a plain and humble manner, but such as they have the wayfarer is welcome to.

A hard shower made fishing impracticable until about 3 o'clock, and when I did get on the stream I found that the inflow from the meadow drains had smoked the river until it was beyond fishing condition, at least with the fly. I met the whole neighborhood out with poles and tackle, and I was not long in discovering that in the so-called isolated parts of the stream is not always to be found the best fishing. If I had cherished any hope to have it all to myself, so to speak, I was soon relieved of the delusion; for I found that, down here at least, the natives take advantage of a rainy day to go a-fishing, and turn out, small and great, to search the stream with a fine-toothed comb, so to speak. I worked along in a desultory sort of fashion, and went far down the wild, picturesque gorge, climbing over the gigantic boulders and enjoying the wild plunge of the river down between the towering cliffs; and, although it was but a modest string of fish I carried in with me, I felt amply repaid for my afternoon's outing.

We had breakfast bright and early next morning, and as the sun peeped over the shoulder of the mountain in front of the house, I sallied forth for an up-stream fish, and faithfully whipped the river for two miles, but the smoky water gave but poor returns. I enjoyed the morning, however, and reached home to a late dinner, after which I had a long afternoon nap and a good rest. A schoolmarm of uncertain age was visiting these, her relatives, and her lingual abilities were such as to fairly burn the gearings in my conversational cyclometer. Just outside my window a large crack in the weatherboarding gave access to a roomy crevice between the logs, and here I discovered a colony of bats which had been domiciled here for years. As dusk gathered I counted sixty or more, as they swung out into the evening air in search of food. As I crept into bed I could hear the swish of the wings of the returning prowlers. One fellow missed the doorway to his house and plunged headlong through the open window and banged against the head of my bed. I lay quiet, and presently he made good his retreat, after which I thought best to close the window and open one on the lee side of the storm of wings and fur.

Next morning I was directed by a narrow footpath across the mountain to the east, where I can reach the main Moorefield road north, at a saving of eight miles of rocky river road. It was a push and climb of a solid mile up the steep mountain side. I don't think the mountain was quite perpendicular, but it certainly looked to me like it might be, as I dug my toes into its steep sides for a foothold, and frequent stops were necessary. A gentle descent on the other side soon brought me into the main road, and I went spinning along it until I reached Dasher's mill. Upon inquiry might I leave my machine in the mill and do a little fishing, I was invited by the young miller to stop and stay at his home, a mile beyond, and have a fish with him in the evening. He shared his noonday lunch with me, washed down, by way of dessert, with an old-fashioned apple pie, baked on a cabbage leaf; all of which I enjoyed hugely. A hard shower coming up suddenly caught us out on the river, whither we had repaired to initiate my new friend into the mysteries of fly casting. The shower over, he joined me on his wheel, and we sped away down the road to his little cottage, where he gathered his tackle and bait, and with good-natured hopes and predictions that each would excel in his own method of fishing, we sallied down the road. I was informed that "old man Taylor," who owns the land on which we are to fish "is a mean old cuss," and we slipped through his corn rows to the river with great circumspection, lest he appear and drive us off his territory. The gauntlet was safely run, however, and we were soon in the river, where it was not long until we were chilled through by a cold north wind which had sprung up, and which I felt quite keenly, having been in the water more or less all day; so we soon abandoned the river and hurried home to seek comfort in the capacious and cozy chimney corner. We voted our contest a draw, as clearly no self-respecting bass would leave his lair on such a day.

I had a good supper, a clean, comfortable bed and sound sleep. The air was cool and all was still until early morning, when I was awakened by the same cheery, good-natured voice that had bade me good-night.

I felt that I couldn't leave the neighborhood until I had had one more try at the bass. So early next morning we rode back up to the mill again, and I walked two miles up the river and fished down. I had a very pleasant morning's sport this time, and felt well repaid for my perseverance.

After another meal with my kind friend, I mounted my machine for a continuous run to Moorefield, twenty miles to the north—for I am now headed homeward. I passed over a good deal of rough road, but through some

of the most beautiful woodland stretches it has ever been my good fortune to see. Four miles from Moorefield I came upon good roads, and sailed along at a high rate of speed ahead of a shower which I could see to the south slowly coming up the valley. I arrived safely ahead of the shower, and, after getting my mail, I continued on out to the home of a cousin, who lives a mile from here, where I received a hearty welcome. I was much amused to discover, during the recital of my travels and adventures which naturally followed my arrival, that the "mean old cuss," "old man Taylor," spoken of by my friend Dasher, is a relative of mine; and we all had a good laugh over the incident.

Well! The rest of my story is soon told. My fishing trip, as such, had about reached a conclusion, and the next four or five days were spent in dawdling along the road from Moorefield to Romney, twenty-seven miles further on, and thence home to Frostburg, stopping a few days at Romney and intervening points to visit relatives and renew my acquaintance with old friends in this region. My total showing for my four weeks' trip was eighty-one trout and fifty bass, and I unhesitatingly voted my combination bicycling-fishing cruise among the mountains one of the pleasantest and most successful outings I had ever enjoyed.

Florida Black Bass.

TALLAHASSEE, Fla., Feb. 4.—Mr. M. P. Riley, of Chicago, fishing on Lake Jackson, nine miles north of this city, on Feb. 2, with light Western bait-casting rod, quadruple reel and light silk line, hooked and landed an 8-pound big-mouth black bass. He was casting a live frog, which he brought from Chicago, and used weedless hook. He sent this fish to his address in Chicago to be mounted, where it can be seen. Mr. T. B. Byrd, a prominent merchant here, verified this weight.

Hydrophobia in Spitz, Eskimo and Pomeranian Dogs.

THESE canines are all of the same race. Dr. Robt. Bell, of the Dominion Geological Survey, who has spent a great deal of time in the Arctic Zone during the past thirty years, and has just completed a survey of the Great Slave Lake, writes as follows in regard to the Eskimo draft dogs which are so serviceable to the Hudson Bay Company: "It seems to me these dogs are afflicted with disease more than any other breed. Nearly all of them die off, first in one district, then in another, leaving hardly enough to breed for the next year. Hydrophobia is the great trouble. It is of a mild form, as far as danger to others is concerned. My Ottawa friend's fine specimen died. His hindquarters became paralyzed."

This statement covers the past year. A reference to "Hallock's Dog Fanciers' Directory," page 111 (1880), discovers the following remarks on this subject:

"Notwithstanding his sprightly, intelligent look and beautiful snowy coat, the Spitz is gradually falling into disfavor, owing to his snappish disposition and his liability, in common with all Arctic dogs, to a disease which, in some of its phases, resembles hydrophobia. Sir George Nares, the Arctic explorer, referring to the prevalence of the malady in the polar regions, says: 'Apparently healthy dogs are suddenly seized with this strange disorder, generally falling down in fits not unlike epilepsy. * * * There is no recorded instance in Greenland of human beings who have been bitten having suffered from hydrophobia, and the recovery of the animals in some instances is entirely opposed to the recorded experiences of true rabies.'

"The Huntington Long Islander is responsible for the statement that a large Spitz dog named Jack, belonging to Capt. Bunce, of the Leonida, was picked up in the middle of Long Island Sound some years ago, having swum forty miles in pursuit of his master's vessel, which had left him behind. This would seem to be evidence that the Spitz dogs are not only good swimmers, but not averse to water, which Dr. Kane says the true Esquimaux dog is. Spitz is a contraction for Spitzbergen."

C. HALLOCK.

Sherbrooke Gun Club.

THE fox hunters reported a poor season so far, owing to the depth of light snow. They do very little before December, as the partridges, ducks and deer have to be attended to. New Year's day Fred Loomis and Joe Walton each got a fox within an hour, the second being killed within a hundred yards of the first. Joe's fox was the largest killed for a long time. The widow Green's fox still lives. He has had two narrow escapes, and praise be, he has been seen since he got his last dose of BB's, apparently none the worse. Long may he live. He has been the hero of many a run during the past six years, and many is the good story told by his faithful followers. One of them saw him cut in between the hounds and a little vixen, and lead off the dogs while the lady hid in a clump of spruces.

JOS. G. WALTON, Ass't Sec'y.

Farmer Slater's Unique Dog.

"THERE are some odd characters among the rural population of West Virginia," said Col. J. D. Butt, of that State. "A short while ago an engine on the Norfolk & Western line ran down a small, yellow cur dog that belonged to an old farmer named Slater, with fatal results to the cur. Now, the deceased had been Farmer Slater's most cherished companion for years; it had followed him in all his wanderings, and he was as greatly attached to it as though it had been a human being. He grieved sorely over his loss, and in his endeavor to find solace went to one of the officials of the railroad that made a premature end of the canine and demanded that another dog as nearly like the departed in every respect as possible should be given him.

"To humor him, compliance was promised, and forthwith a dog to match the lost one was brought to the bereaved owner. This was only a beginning, for one cur after another was tendered until the number got into three figures. Every brute in the lot was rejected, for in the whole list not one was identical in form, color and size with the slain. If one was just right in color, he was a trifle too heavy or too light, and if his weight was satisfactory the color was not quite right.

"Under these circumstances there was no use of the railway men trying to do more, and Slater brooded over his wrongs. The suspicion grew that he meant to get revenge and he was closely watched. As a result, he was arrested on a charge that implicated him in an attempt at train wrecking, and he was sentenced to jail for one year."—Washington Post.

A Fox Stratagem.

Editor Forest and Stream:

I have just returned from North Carolina, where I spent two weeks with the quail, or partridge, as they are called there, with very satisfactory results. In the place where I was, a lot of fox hounds are kept, and they usually have a run every week, and often succeed in bagging their game. One sly fox, however, was apparently too cunning for them, and for fifteen runs got away safely. Much to the hunters' surprise and bewilderment, the hounds always lost the scent at a sheep pasture, and could not strike it again.

Finally the hunters persuaded the owner of the sheep to shut them up in his barn and then they gave Reynard another run. This time he went for the sheep pasture as usual, but no sheep being there, the dogs kept his trail, till finally they caught and killed him. It is now confidently believed that it was his habit on reaching this pasture to jump on a sheep's back and ride around until the hounds had passed, when he would walk home at his leisure. If this is not the proper explanation of this remarkable occurrence, perhaps you can suggest a better one.

J. T. S.

"Fox Hunting Reminiscences."

Jos. W. Shurter, who wrote "Fox Hunting Reminiscences" in issue of Jan. 26, is a man that I should like to hear more from. He has both insight and knowledge. The description of the killing of his first fox made a distinct impression on me. It is a boiled down epitome of first experiences the world over where the human has the true hunting instinct that leads to success—a similar but superior instinct to that of the wild animal he is pitted against.

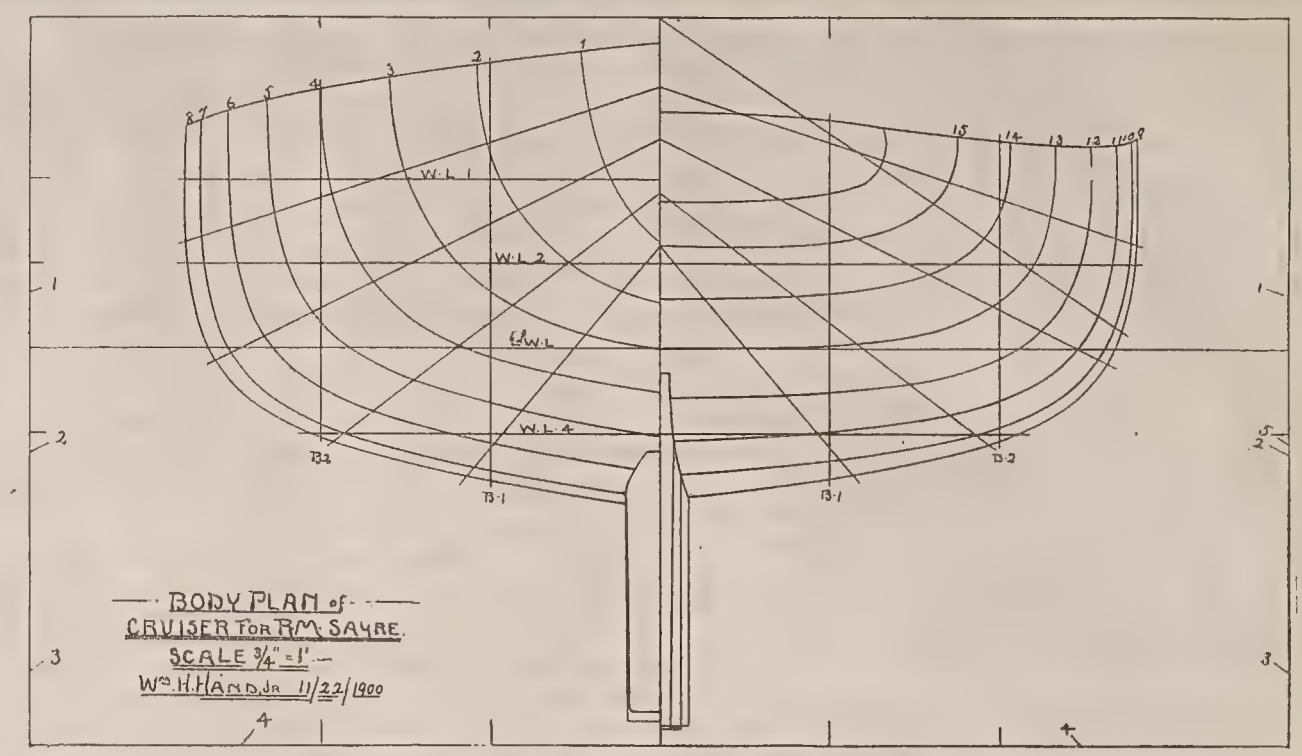
25ft. Cruising Sloop.



25-FOOT CRUISING SLOOP—BODY PLAN.

THE large number of boats of about 25ft. waterline length that have been ordered this season shows how great the demand there is for boats of this size. The modern boat of about 25ft. waterline length, unless designed solely for racing, whether keel or centerboard, is about the smallest boat on which any degree of comfort may be had for cruising and still is not large enough to make it necessary to carry a paid hand. The 25-footer, plans of which appear in this issue, was designed and built by Mr. William H. Hand, Jr., of New Bedford, Mass., for Mr. Robert W. Sayre, of New York city, and will be used for cruising on the western end of Long Island Sound. She is of a type that offers the greatest amount of comfort combined with very good speed that it is possible to secure in a boat of this size. Mr. Hand has experimented carefully with this class of boats, and has found them seaworthy in the extreme and able to go anywhere along our coast in ordinary summer weather. The headroom in the cabin is excellent, there being some 5ft. 7in.

Her dimensions are as follows:

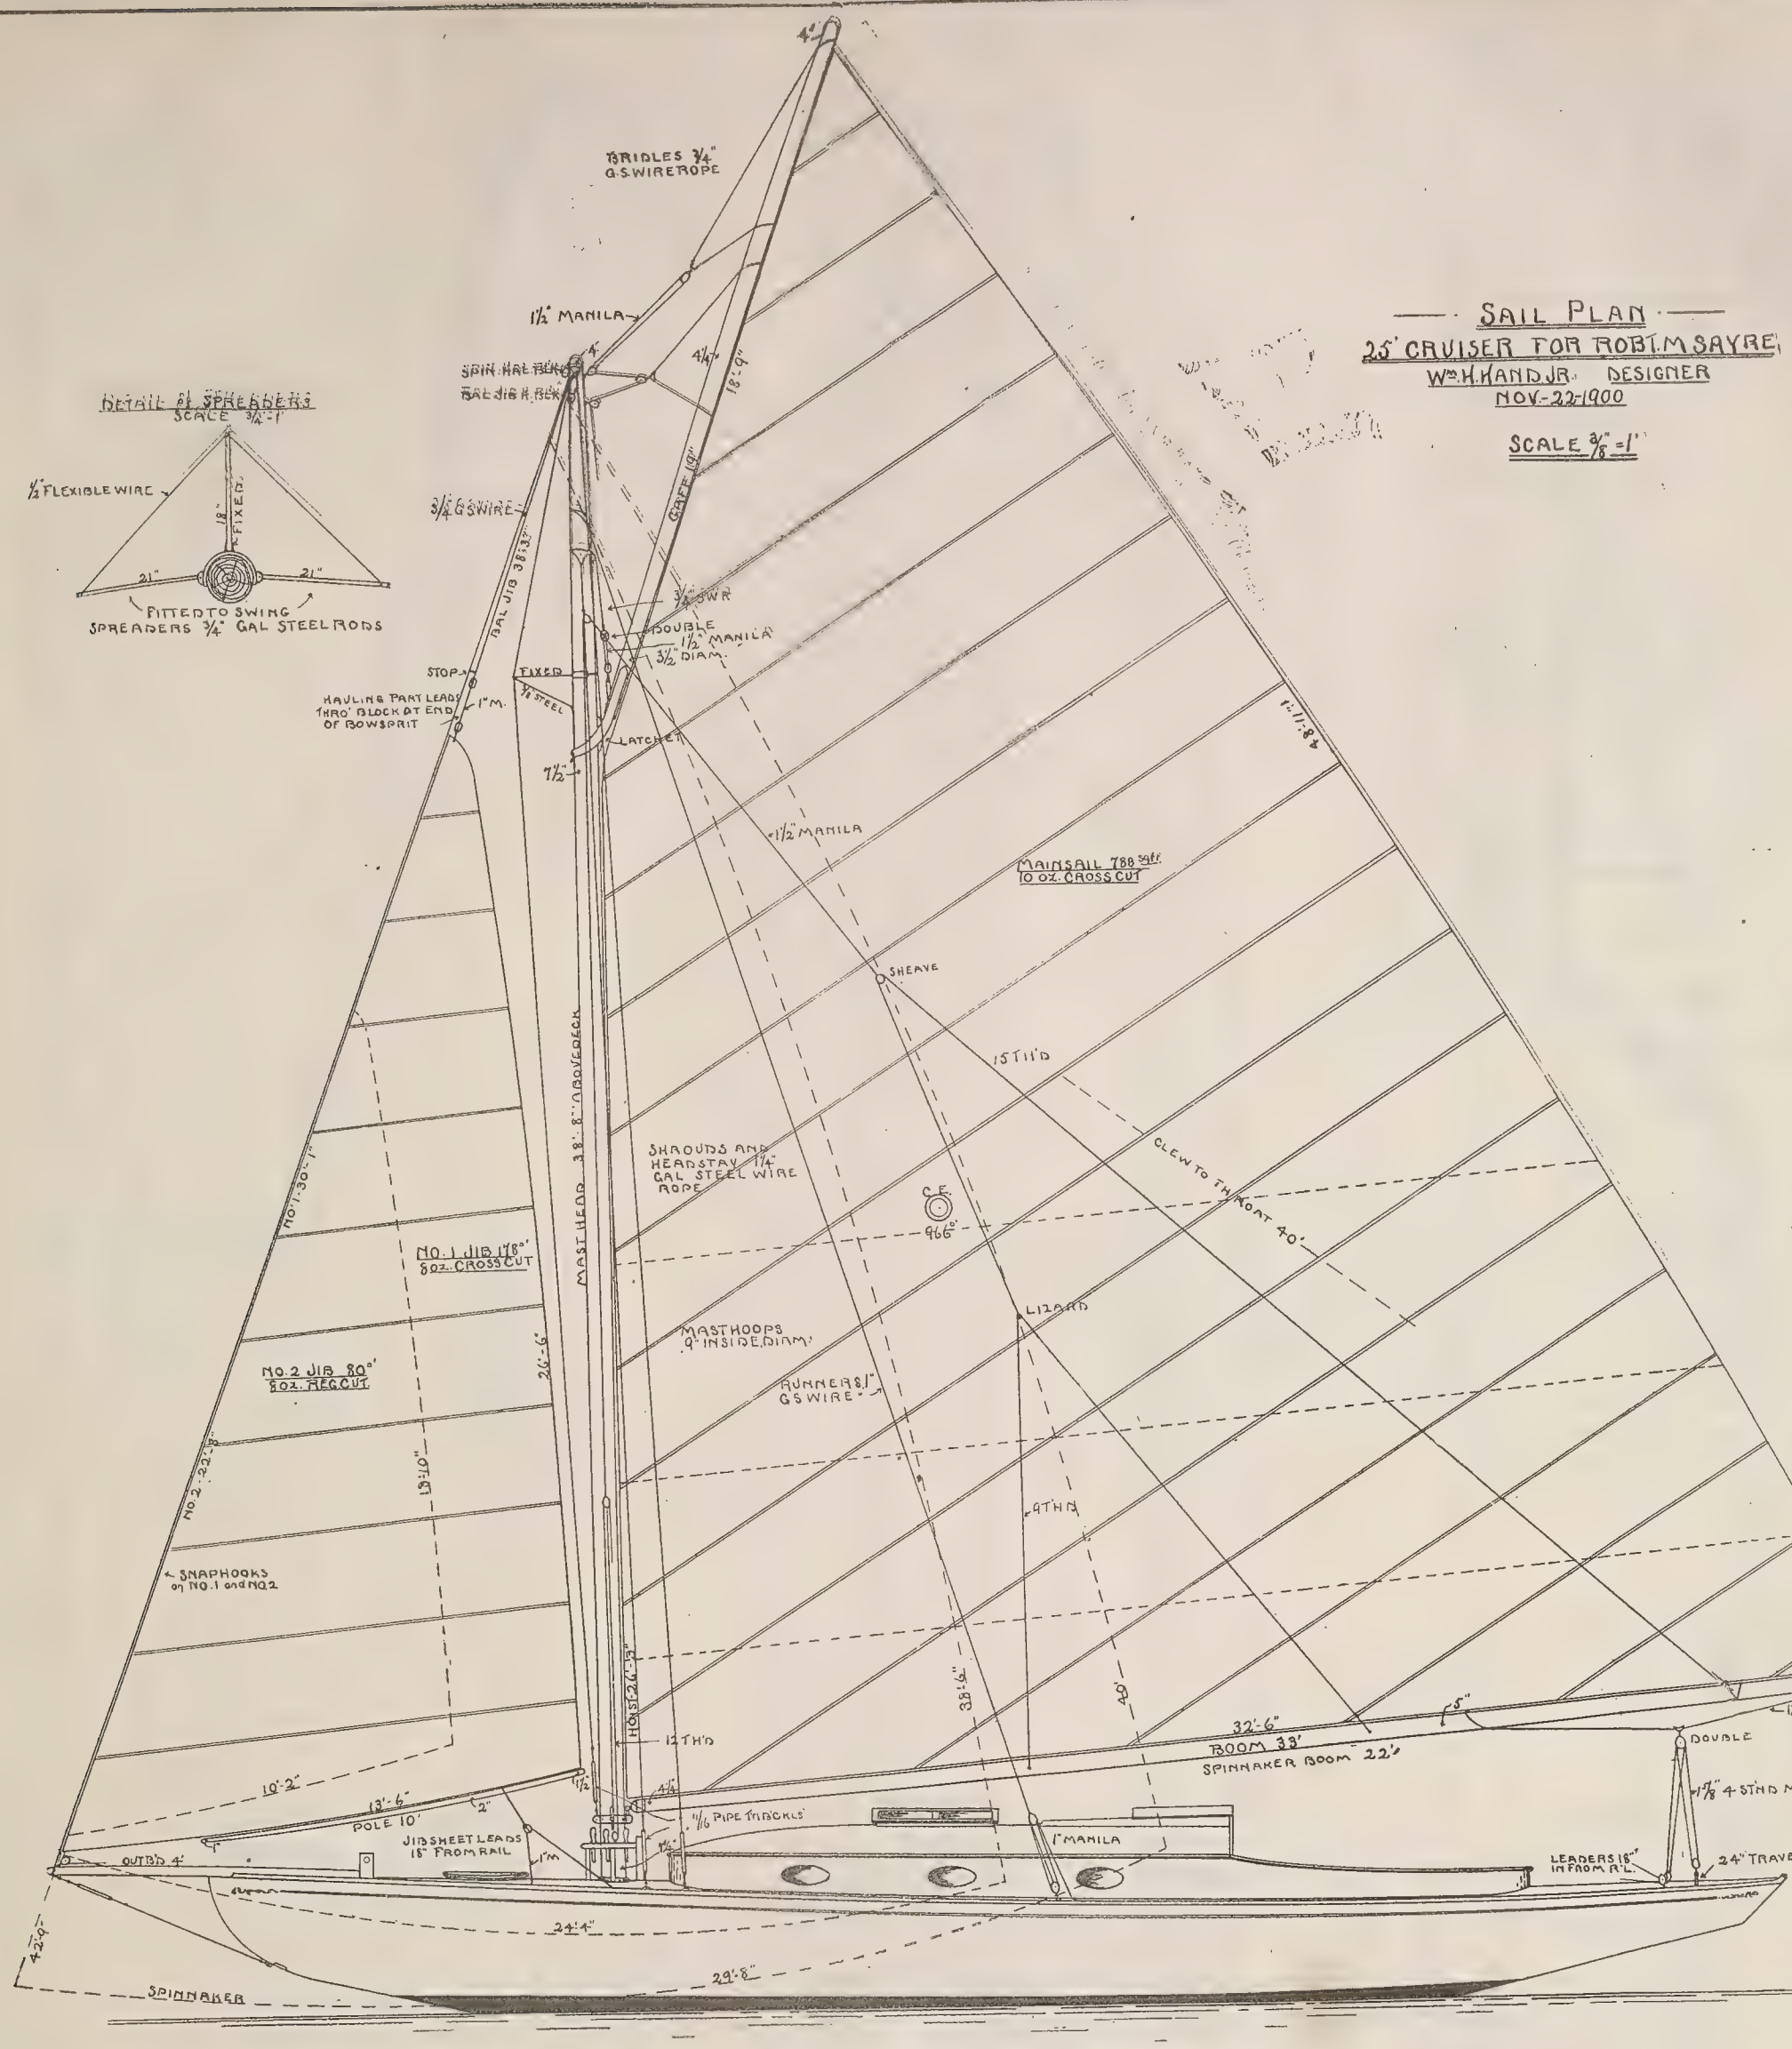
Length—		
Over all	40ft.	1½in.
L.W.L.	25ft.	
Overhang—		
Bow	6ft.	9 in.
Stern	8ft.	4½in.
Beam—		
Extreme	11ft.	3 in.
L.W.L.	10ft.	9 in.
Draft—		
To rabbet	1ft.	10 in.
Extreme	4ft.	6 in.
Board down	8ft.	10 in.
Freeboard—		
Bow	3ft.	7 in.
Taffrail	2ft.	7 in.
Least	2ft.	4½in.
Sail Area—		
Mainsail	788 sq. ft.	
Jib.	178 sq. ft.	
Total sail area	966 sq. ft.	
Displacement	13 300lbs.	
Outside ballast	4,500lbs.	

The keel is of oak sided 14in. and moulded 3½in. amidships, tapering at the ends. The deadwood is of yellow pine. Timbers of oak bent to form 1½ by 1½in. spaced 10in. on centers. Double timbers at chainplates. Beam clamps are of oak sided 2in. and moulded 3in. amidships, tapering to 2in. by 2in. at the ends. Bilge stringers are of yellow pine, two on each side, 2½in. by 2½in. from end to end. Planking is of yellow pine to finish full 1in. Deck is of white pine, 2in. by 1⅛in. Covering board is of oak. Cabin house top, 3in. by ¾in. white pine covered with canvas. Cockpit staving, caprail, wheel box, companion slide, skylight and fore hatch of mahogany. Cabin is finished in cypress and varnished oak. Hull to be painted white with gold stripe and small scroll on bow and stern. Toilet room fitted with Sand's W. C. and folding wash basin. The arrangement of the cabin is wholly the owner's idea, the transoms being extended under the cockpit floor to gain full 12ft. in length, so that two men can sleep on a side without overlapping.

A Plucky Crew and a Win.

EASTON, Md., Feb. 2.—*Editor Forest and Stream:* At the annual meeting of the Chesapeake Bay Y. C. the following officers were elected for the ensuing year: Com., Col. F. Carroll Goldsborough; Vice-Com., Dr. Edward R. Trippe; Rear-Com., Col. Oswald Tilghman; Sec'y, Col. Jacob G. Morris; Treas., Mr. Alfred L. Sharp; Board of Governors, Col. Edward Lloyd, Mr. Zenas Burns and Mr. B. Harrington.

I find that no report of our fourteenth open annual regatta was sent to you, and as an unusual circumstance happened during that race, it may be of interest to your readers even at this late date. Date of race, Aug. 19, 1900; open to Chesapeake canoes of champion class (boats between 30ft. and 36ft. water line); boats entered, J. B. Harrison, sailed by H. A. Hinnaman; Wm. V. Wilson, sailed by O. Hartge; Island Blossom, sailed by John Gibson; Ma Belle, sailed by Capt. Mansfield; Columbia, sailer unknown; time allowance, two seconds per inch in twenty miles on waterline; distance, sixteen and one-half nautical miles; wind light N.N.W., dying out and coming out from S.W. and S. Weather fair, no sea. Elapsed time, 6:51:43. Start flying, with three minutes to cross the line. Reach to first buoy, thence to windward to second buoy; thence, owing to wind shifting, to windward to third bouy; off the wind to fourth bouy, and a reach to the line. The event to which I allude was as follows: Boats got off in following order: Island Blossom, Wilson, Harrison, Ma Belle and Columbia. The three leading boats turned the first buoy almost together; there the wind grew very light and baffling. The Ma Belle and Columbia withdrew. The Island Blossom, one of the fastest of her class, seemed, from bad luck in catching the light puffs going, to be out of it. The Harrison and Wilson were afraid to leave each other, and finally sailed into a calm streak under the lee of a woods.



25-FOOT CRUISING SLOOP—SAIL PLAN.

In the meantime the Blossom went to look for luck and found it, getting into a streak of wind that she held to the upper buoy and turned it with a lead of sixteen and one-half minutes. Off the wind these boats carry immense square topsails, and soon after turning the above buoy a little puff caught these sails and, owing to carelessness in not having her outriggers out (which these boats all carry), she upset. Instead of giving up, her crew pulled her masts out (foremast about 45ft. long and mainmast 35ft.), righted the boat, and, with the assistance of some buckets furnished by a passing craft, bailed out the water, rigged up and started again, only losing eighteen minutes in doing so. They were then behind the Harrison and Wilson, which were close together, one minute and thirty seconds, with a beat to windward of some six miles. In this distance the Blossom caught and passed the other boats, and finally won the race by three minutes and twenty-one seconds, without her allowance. Of course, it could only have been done under the peculiar circumstances of the weather, but it was thought very plucky in the Blossom's crew not to give up after being upset.

J. G. MORRIS, Sec'y C. B. Y. C.

Yacht Club Notes.

The annual meeting of the New Rochelle Y. C. was held on Feb. 4 at the Yachtsmen's Club, 47 West Forty-third street. The election follows: Com., Edward Kelly, steamer Barracouta; Vice-Com., W. N. Bavier, yawl Possum; Rear-Com., Daniel Bacon, sloop Senta; Sec'y, O. W. Meyrowitz; Treas., C. M. Fletcher; Meas., F. R. Farrington; Trustees, three years, Charles Pryer, Thomas D. Scoble and Conrad E. Young; Law Committee, J. F. Lambden and J. Q. Underhill; Regatta Committee, Charles P. Tower, William E. Moore, Oscar Chelborg, C. A. Beeker and R. N. Bavier.

The sixth annual meeting of the Huguenot Y. C. will be held at the Arena on Saturday, Feb. 16, at which the officers for the year will be elected. The following nominations have been made: Com., William B. Greelel; Vice-Com., George C. Allen; Rear-Com., T. E. Kitching; Sec'y, J. Nelson Gould; Treas., L. C. Ketchum; Trustees, to serve two years, F. D. Pagan and William L. Searles.

The first annual dinner of the Point o' Woods Y. C., of Fire Island, was held at the Union League Club, Brooklyn, on Saturday evening, Feb. 2. Speeches were made by Com. N. Clay Ferris, Vice-Com. John C. Dempsey, Rear-Com. Harry M. Brewster and others. Most of the members hail from Brooklyn, Bayshore and places in New Jersey. The club's season is from June to September.

The Morrisania Y. C. has elected the following officers: Com, George J. Oakes; Vice-Com., George Steltz: Rear-Com., Frederick Daum; Fleet Capt., Charles J. Locke; Fin. Sec'y, Thomas F. Dooley; Rec. Sec'y, Arthur Haire; Treas., George Charleton; Meas., Wade Hixon; Board of Directors, George H. Ollweller, Louis Jackson, W. H. Hansen, Thomas J. Deckert and J. H. Schmitt; Regatta Committee, J. H. Curtis, W. H. Dixon, J. W. Steffens, Louis G. Englert and H. J. Barto.

YACHTING NEWS NOTES.

The old yacht Madeline, defender of America's Cup in two international contests, has just gone on the ways at Tampa for extensive repairs, and in another month she will be regularly engaged in the fruit trade between Honduras and Florida ports. It was in 1876 that the British challenger Countess of Dufferin first met the Madeline and returned defeated at the hands of the American defender. The Madeline has had a remarkable career since that time, but for the first time since she was the most famous and popular racing vessel in the world repairs are being made. The Madeline arrived at Tampa Thursday, Capt. Lord, the owner, in command, with a cargo or cocoanuts from Honduras. After her repairs, which will include new decks and cabin and new canvas, she will make a regular schedule between Honduras and Port Tampa.—N. Y. Times.

The Yachtsman says:

Our good friends on the other side of the Atlantic seem determined to make us start a column headed "Sales of the Week to American Yachtsmen." This week's sale is that of Zinita, the celebrated Clyde 20-rater. She has been purchased by an American gentleman, who long ago imported the old crack plank-on-edge 10-tonner Ulidia, which Ben Parker sailed for him in American waters. Zinita, as most of our readers are aware, was designed by Mr. W. Fife, Jr. (as was Ulidia), and built at Fairlie in 1893 for Messrs. Connell, who won a large number of prizes with her. She has three times changed hands, but has always had Clyde owners. Mr. Inglis, who has just parted with Zinita, took her in part payment for Carina at the end of last summer, so she has never had a chance of carrying his popular flag.

Zinita's full record:

Year.	Starts.	1st Prizes.	Other Prizes.	Total Prizes.	Value.
1893	24	16	2	18	£230
1894	36	13	7	20	280
1895	27	10	4	14	165
1896	17	7	1	8	85
1897	22	4	3	7	90
1898	19	4	9	13	100
1899	19	6	5	11	110
1900	19	12	2	14	200
	183	72	33	105	£1,260

25-FOOT CRUISING SLOOP—CONSTRUCTION PLAN.

sioned Messrs. Gardner & Cox to design and build for him a large steel steam yacht. She will be 260ft. over all and finished in the best possible manner.

Vencedor, which sailed against Canada in 1896 for the Toledo Cup, is to go back to Chicago waters. She has been lying on the beach at Hawkins' Yard, City Island, for the past several years. Mr. H. M. Gillig, former Commodore of the Larchmont Y. C., has sold her through the agency of Mr. F. Bowne Jones to Mr. F. A. Price, of the Chicago Y. C.

The American marine exhibit sent to the Paris Exposition in charge of Mr. Jahn Rutherford Buchan, N. Y. Y. C., was returned to this country a few days ago and the models have been sent to their owners. There were forty full-rigged and sixty-one half models in the collection. The New York Y. C. and its members loaned the larger number of them. Of all the full-rigged models were all the America's Cup defenders from Magic to Columbia. Then there were the steam yachts Corsair and Kanawha auxiliary Intrepid, the schooners Intrepid, Sachem, Mohegan, Norseman and Yampa; the electric launch Utopia and several other fast launches.

Mrs. N. B. Wright, of Philadelphia, has accepted the challenge of Howard Crosby, of Gloucester, Mass., to race across the Atlantic this coming summer from Cape Ann to Lisbon, Portugal, in a boat not to exceed 30ft. over all length.

The Yachting World asserts that Sir Thomas Lipton wished to withdraw his challenge for the America's Cup after the death of Queen Victoria and to postpone the contest for a year, but that, on consideration of the injustice toward the United States, and after consulting the highest authorities, he decided to adhere to the original plans.

One of the most artistic calendars that has been issued this year is being sent out to his friends and customers by Mr. F. Bowne Jones. A spirited marine view and very clear and distinct numerals make it both ornamental and useful.

25-FOOT CRUISING SLOOP—CABIN PLAN.

The new 7-shot Colt pistol is a marvel of force and mechanical ingenuity. It works automatically, the recoil of one discharge adjusting the load for the next instantaneously. The whole magazine can be discharged in a fraction over a second.

The Union Metallic Cartridge Company has just perfected a new 22cal. smokeless cartridge for short range target shooting in rifle or pistol. This cartridge is said to be effective up to a distance of 75ft.

Trapshooting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for a quarter-century.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Feb. 13-15.—Indianapolis, Ind.—Grand Central Handicap tournament of the Limited Gun Club. Bert. B. Adams, Sec'y.

Feb. 14.—Holmesburg, Junction, Pa.—Third of the team series of shoots, Baltimore Shooting Association vs. Keystone Shooting League.

Feb. 15-16.—New Orleans, La.—First annual Mardi Gras tournament of the City Park Gun Club, under the auspices of the Peters Cartridge Co. Percy S. Benedict, Sec'y, Denegree Building.

Feb. 18-23.—Hot Springs, Ark.—Tournament of the Hot Springs Gun Club; four days targets, two days live pigeons; $1,000 added. C. E. De Long, Sec'y.

Feb. 19-22.—Holmesburg Junction, Pa.—Keystone Shooting League.

Feb. 20.—Carlstadt, N. J.—Match at 25 live birds between J. H. Outwater and Chris Wright, at Outwater's Riverside shooting grounds, Rutherford road and Hackensack River Bridge. Sweepstake shooting.

Feb. 21-22.—Garden City, L. I.—Amateur championship of the Carteret Gun Club. Walter H. Mead, Sec'y.

Feb. 22.—Harrisburg, Pa.—Washington's Birthday live bird and target shoot of the Harrisburg Shooting Association.

Feb. 22.—Sing Sing, N. Y.—Target and live bird shoot of the Ossining Gun Club; live bird match at 9 o'clock; live-bird programme at 10 o'clock.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

At a special meeting of the New Jersey State Sportsmen's Association, held in Newark, N. J., Feb. 6, the Bloomfield Game and Fish Association, of Bloomfield, and the Midway Gun Club, of Matawan, N. J., were admitted to membership. Mr. C. W. Feigenspan was appointed to act as a committee on grounds, and Mr. F. E. Sinnock a committee on badges. There will be a badge respectively for the winning teams in the live-bird and the target events, and for the winning shooters in the individual events. There also will be medals for the highest averages made during the tournament in the live-bird and target events. The old live-bird medal, which has heretofore been shot for every year only, will be subject to challenge during the year, the conditions to be 15 birds, $10 forfeit, winner to take all, loser to pay for birds. Treasurer Terrill's report showed a balance of several hundred dollars on hand. Programme and tournament committees had respectively the same membership—Messrs. Hobart, Stevens and Herrington. Five per cent. of all purses net will be deducted and devoted to the purchase of prizes. Mr. Stevens spoke of the good work done by the State Fish and Game Commissioners of New Jersey, and there was a sum of money appropriated to carry on the good work of game and fish protection.

Mr. Ed O. Bower, secretary-treasurer of the W. Va. S. A., Sistersville, W. Va., under date of Feb. 5, writes us as follows: "At a recent meeting of the West Virginia State Sportsmen's Association, June 11 and 12 were decided upon as dates for their fifth annual tournament, which is to be held under the auspices of the West Virginia Gun Club at St. Marys, W. Va. The tournament will be under the personal management of the famous Mallory brothers, which is ample guarantee that everything possible will be done to make the affair a success in every way. We will have the usual amount of added money, together with merchandise prizes, etc. Programmes telling all about it will be ready for the mail in due time, and can be had for the asking by making application to Ed O. Bower, secretary-treasurer."

Those who contemplate attending the Carteret Gun Club's amateur championship contest, at Garden City, L. I., Feb. 21 and 22, are referred to the train schedule issued by the Carteret Gun Club, as follows: Trains leave foot of East Thirty-fourth street at 6:30, 7:50, 8:30, 8:50, 9:20, 10:50 A. M., and 12:20, 1:50 and 3:20 P. M. Returning, leave Garden City at 10:38 A. M. and 12:01, 1:34, 3:13, 4:41, 5:04, 5:29, 6:44 and 8:35 P. M. The club grounds can be reached either from Mineola or Garden City. Shooting commences at 9:30.

The New Haven Gun Club will give a shoot on Washington's **Birthday, Feb. 22,** commencing at 9 o'clock. There are eleven events on the programme, 10, 15 and 20 targets, 135 in all, with a total entrance of $11.20. Moneys divided 40, 30, 20 and 10 per cent., if twelve entries or more; if less, then three moneys, divided 50, 30 and 20 per cent. Visitors welcome to shoot for targets only. Take Schuetzen Park Cars to reach the grounds. J. E. Bassett, Sec'y.

The Highland Shooting Club and the Hillside Gun Club engaged in a team shoot, nine men on a side, at Gorgas Station, Pa., on Feb. 8, with the following results: Highland—Burn 18, Dedier 17, Miller 15, Meehan 15, M. Wentz 14, C. Dreakley 13, Lutz 12, Davis 11, E. Wentz 11; total 126. Hillside—Reid 16, B. Bisbing 15, W. Haywood 14, J. B. Haywood 13, J. Unruh 13, Aiman 13, W. Bisbing 11, Burton 9, Clark 8; total 112.

Uncle Jim Laird, of Freehold, N. J., called on Mr. Carl Von Lengerke, of New York, and invited him and his friends to an all-day shoot to be given by the Freehold Gun Club on Feb. 22. Three sets of traps will throw the targets. Carl says a shoot of the Freehold Gun Club is synonymous with a good time, because he knows about it, having been there before.

At Morristown, Pa., on Feb. 7, Mr. F. B. McCoy, of Philadelphia, shot a match with Mr. Frank Gross, of Jeffersonville, and won by one bird. The conditions were 30 live birds, $25 a side. The scores were McCoy 27, Gross 26. The match originally called for 50 birds, but as there were only 30 birds on hand the conditions were modified accordingly.

The South Broad Street Gun Club, of Philadelphia, at is annual meeting on Feb. 7, elected a list of officers as follows: President, James Bunting; Vice-President, William Allen; Secretary, William H. Bore; Treasurer, E. E. Teter; Field Captain, C. H. Burt; Board of Directors, A. W. Farrell, H. R. Burt, William Warren, Fred Mears and D. A. Farrell.

On Feb. 22, on the grounds of the Intercity Shooting Park, Minneapolis, Minn., there will be a challenge shoot for the H. C. Hirschy trophy, emblematic of the championship of the Northwest. Entries may be made with Mr. W. P. Brown, Minneapolis, Minn. The conditions governing this trophy were published in full in FOREST AND STREAM of Feb. 9.

The Oceanic Rod and Gun Club will hold its next shoot on Feb. 18, on its grounds at Rockaway Park, L. I.

Mr. L. C. Schortemeier, of 201 Pearl street, New York, informs us that on Feb. 20 there will be a match at 25 live birds between Messrs. J. H. Outwater and Chris Wright, at Outwater's shooting grounds, Rutherford road and Hackensack River Bridge, N. J. Handicap sweepstakes will be shot after the match.

Programmes of the Grand American Handicap will be ready for distribution on Feb. 20. Write to Mr. Elmer E. Shaner, manager Interstate Association, 122 Diamond Market, Pittsburg, for them. Make your entries with Mr. Edward Banks, secretary Interstate Association, 318 Broadway, New York.

The Peters Cartridge Co., of Cincinnati, O., will be in evidence at the Sportsmen's Show in Madison Square Garden next month and will occupy spaces 26 and 27 and will endeavor to make a comfortable headquarters for their friends rather than make an elaborate display of goods.

Mr. Elmer E. Shaner, manager of the Interstate Association, under date of Feb. 9 informs us "that the Interstate Association will give a tournament at Jacksonville, Fla., April 17 and 18, and one at Auburn, Me., Aug. 21 and 22. This completes our circuit for the season of 1901."

The Marlin Fire Arms Company, of New Haven, Conn., are sending out a "Court Document," in which is related their experience with Mr. G. O. Shields. It is interesting reading. A copy of the document will be sent free to him who applies for it.

Mr. C. F. Kramlich, corresponding secretary of the Pennsylvania State Sportsmen's Association, informs us that Mr. Elmer E. Shaner, manager of the Interstate Association, will manage the Pennsylvania State shoot at Allentown, Pa., May 14 to 17.

The referees for the Grand American Handicap of 1901 are Messrs. Harold Wallack, of Long Branch, N. J.; Charles North, of Cleveland, O.; J. Frank Kleinz, of Philadelphia, and George S. Mott, of Babylon, L. I.

The Oakley Thorne cup, which has afforded keen competition for its possession in many months past, was won finally by Mr. George S. McAlpin, at the Carteret Club's shoot on Saturday of last week, from the 31yd. mark.

Mr. F. H. Eachus, secretary of the West Chester Gun Club, West Chester, Pa., informs us that his club will hold its eighth annual live-bird shoot on Feb. 28th. The programme will be issued soon.

New conditions governing the Dewar trophy are published elsewhere in our trap columns. Mr. W. H. Sanders has challenged Dr. A. A. Webber to shoot for it at Interstate Park, Feb. 26.

The third match of the series between teams of the Keystone Shooting League and the Baltimore Shooting Association is fixed to take place at Holmesburg Junction on Feb. 14.

The programme of the Grand American Handicap is published in full in our trap columns this week..

BERNARD WATERS.

Pennsylvania State Sportsmen's Association.

HARRISBURG, Pa., Feb. 9.—It is with profound personal sorrow that I advise you of the death of our esteemed friend Moses H. Brensinger, which occurred at his home on Thursday morning, Feb. 7. Mose, whose shooting cognomen was "Sullivan," had a very wide and extended acquaintance among the shooting fraternity of this and other States. He took great interest and enjoyment in shooting, both at the traps and in the field, and when his business would permit he was always to be counted present at all of the leading events in the State and county. His record at the traps was as enviable as was his business record—and by that I mean the best. He was a man of genial spirit, whose companionship was as inviting as it was warm and lasting. His last meeting with the boys of the State was at Chambersburg in May, 1900, and though in delicate health at the time he entered into the full enjoyment of the programme, and apparently gleaned from the emulation to be gathered upon such occasions very much pleasure. Shortly after that he contracted a cold, which developed into consumption, and all efforts made to obtain relief proved futile.

The Association remembered him in a beautiful sunset floral design, surmounted by two white doves, and will have the resolutions handsomely engrossed, framed and presented to his family as a final tribute to his memory. Thus we are again reminded of the trthfulness of the song of the old sexton—"One by one I gather them home."

He was a charter member of the Harrisburg Shooting Association, and was among its most energetic workers. At a special meeting of that Association held last evening the following preamble and resolutions were adopted:

Whereas, In the providence of Almighty God, Moses H. Brensinger, for many years an active member of the Harrisburg Shooting Association, has been called to his eternal rest; therefore, be it

Resolved, That the members of this Association have learned with profound regret of the decease of M. H. Brensinger, and that the sympathy and condolence of the members of this Association are hereby tendered to the family of the deceased.

Resolved, That in his death this Association has sustained the loss of an active, efficient and worthy member, whose memory will always be cherished by the members of this Association.

J. H. W.

Florists' Gun Club.

WISSINOMING, Pa., Feb. 6.—The Florists' Gun Club's monthly contest resulted in a number of ties. The conditions were 50 targets per man, 25 known and 25 unknown angles, handicaps added to the scores. This is the third contest of the four in this race for the club trophies. The scores:

Twenty-five targets, known angles: Burton 20, Parsons 18, Barrett 18, McKaraher 17, Coleman 16, Anderson 15, Dorp 15, Westcott 14, Massey 13, Sheeler 11, Eisenlohr 10, Cloud 8, Umholtz 7, Reichard 5.

Twenty-five targets, unknown angles: Parsons 24, Sheeler 21, Barrett 20, Burton 20, Anderson 19, Eisenlohr 18, Massey 18, McKaraher 17, Dorp 16, Cloud 12, Westcott 9, Reichard 6, Umholtz 6.

Total scores, with the handicap added: Parsons 55, McKaraher 54, Burton 53, Barrett 52, Sheeler 52, Dorp 45, Massey 45, Westcott 43, Coleman 42, Eisenlohr 40, Anderson 39.

Individual championship match, 50 targets: Parsons 42, Burton 40, Barrett 38, Coleman 34, Anderson 34, McKaraher 34, Dorp 34, Sheeler 32, Massey 31, Eisenlohr 28, Westcott 23.

Points won to date: Burton 7, Massey 5, Dorp 5, Coleman 3, Parsons 3, McKaraher 3, Barrett 3, Westcott 3, Sheeler 3, Anderson 2, Clark 1.

Team match, 25 targets per man, known angles: McKaraher 13, Barrett 17, Burton 20, Sheeler 17, Massey 13, Brown 19; total 99. Dorp 12, Eisenlohr 14, Anderson 17, Westcott 16, Reichard 18, Umholtz 12; total 89.

Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., Feb. 9.—The snow and glare of light made difficult shooting. The birds were good. The scores were low. A 7-bird sweepstake was shot, in which Van Loon, Russell, Painter and Davis divided first honors with clean scores. The conditions of the club handicap were 10 birds per man, handicap rise, sweepstake, entrance $2.50. The scores:

Stevenson, 30	2222222222—10	Geikler, 29	20*2222222— 8
Henry, 30	2212222022— 9	Johann, 30	1001211121— 8
Davis, 29	1221121220— 9	Brewer, 29	22022*222*— 7
Anderson, 30	2222202222— 9	Fitzgerald, 30	0002211112— 7

Sweepstake event, 7 birds, $3 entrance, 30yds. rise: Van Loon 7, Russell 7, Painter 7, Davis 7, Bucknell 6, Brewer 6, Anderson 6, Geikler 5, Henry 5, Baltz 5, Johann 5, Smith 4.

ON LONG ISLAND.

Crescent Athletic Club.

Bay Ridge, L. I., Feb. 9.—Mr. W. W. Marshall scored 48 in the contest for the February cup, and led all the contestants therefor in the club shoot to-day. Only six members contested in this cup event. The conditions were 25 targets, expert, and 25 magautrap; allowances are added. The scores:

	—Expert.—		—Magautrap.—		Grand
	Hdcp.	Total.	Hdcp.	Total.	Total.
W W Marshall	6	24	5	24	48
Dr J J Keyes	5	22	4	24	46
C A Sykes	3	20	3	25	45
H B Martin	2	23	2	22	45
L C Hopkins	6	20	5	24	44
C J McDermott	3	13	2	19	32

Shoot for trophy, 15 targets, expert traps: H. B. Martin (1) 14, Dr. J. J. Keyes (2) 14, W. W. Marshall (3) 13, L. C. Hopkins (3) 12, C. J. McDermott (1) 10, W. Townsend (2) 8.

Shoot-off, same conditions: H. B. Martin (1) 15, Dr. J. J. Keyes (2) 15, W. W. Marshall 14, C. J. McDermott 11.

Shoot-off, same conditions: Dr. J. J. Keyes (2) 15, H. B. Martin (1) 14, W. W. Marshall 10, L. C. Hopkins 10, C. J. McDermott 8.

Sweepstake, 10 targets, expert traps: Sykes 8, Marshall 7, Martin 5, Keyes 5, McDermott 4, Hopkins 4.

Sweepstake, same conditions: Marshall 8, Hopkins 8, Martin 7, Keyes 6, Sykes 6.

Sweepstake, 15 targets, magautrap: Keyes 12, Martin 11, Marshall 10, Sykes 10.

Sweepstake, 15 targets, magautrap: Martin 12, Marshall 10, Townsend 7.

Match, 15 targets, magautrap: Marshall 13, Hopkins 9.

The Parkway Gun Club.

Brooklyn, L. I., Feb. 9.—At Dexter Park to-day the Parkway Gun Club's shoot resulted as follows:

Club shoot, 10 live birds:

New Utrecht Gun Club.

Interstate Park, L. I., Feb. 9.—The New Utrecht Gun Club held a well attended shoot to-day. In the club shoot for the February cup three killed straight. Five tied in the 7-bird event for the club prize, namely, Messrs. Lincoln, Sykes, Losse, Morfey and Jack. Morfey won alone in a 7-bird event, L. I. rules, excepting that the use of both barrels was allowed:

	Club Prize.	Club Prize.
C M Lincoln, 28	1112121—7	2122111—7
W F Sykes, 29	1222221—7	.....

Distance Handicap Shooting.

PALMER, Mass.—Since the Massachusetts Amateur Shooting Association voted to conduct its sweep shooting under the distance handicap system there has been much talk by trapshooters in Massachusetts as to its success. Most of the shooters of the Association think it will meet with favor. A few, however, both hope and think it will prove a failure.

The question arises, "Why is trapshooting not more popular?" My answer is: "Because beginners and the poorer shooters are not given encouragement.

The 55 and 60 per cent. men stand the same distance, pay the same entrance fee as the 75, 80 and 90 per cent. men. What show do the 55 and 60 per cent. men have? Their scores are such that they get no encouragement or even small return of the entrance money.

So the outcome is, the men who cannot break better than 60 to 65 per cent. in most cases keep out of the contests, and watch, as they claim, "the wolves chew each other."

As secretary of the Association, I had the chance during the year of 1900 to watch the scores of the shooters. One-tenth of the members shot 80 per cent. or better; two-fifths of the members shot from 70 to 80 per cent., and 50 per cent. of the members shot less than 70 per cent.

Upon closer figuring, one-half of the 50 per cent. members did not average over 61 per cent., and in most cases did not enter into more than two or three sweeps in each tournament.

I had a talk with some of the low average men, and found they did not win during the days of the shoots one cent. They say it is like racing a horse which cannot go better than 2:40 with a horse which can go in 2.10.

I then took some of the poorer shots and beginners and gave them a distance handicap. Some shot from the 10yd. line, some at 12yds., etc. Then a marked improvement was seen in the scores. The men were encouraged. They took new courage, as they were given a chance.

If the distance handicap system proves as much of a success as I think during the year of 1901 we will see many new faces at our shoots and our poorer shooters will have advanced, and with pleasure tell their friends that they have been put back by the handicapper from the 10 and 12yd. lines to the 16yd. line. The Massachusetts Amateur Shooting Association intends to give the system a fair trial.

Each club has a club handicapper, and the Association has one handicapper, who will have charge of the Association handicapping at each tournament. The shooters will be allowed to advance and be set back as the handicapper sees fit. The team shoots will, however, be conducted under the same system as last year, everybody shooting from the 16yd. line.

During the week the Springfield Gun Club has joined the Association, and will probably enter the team race in place of the Amherst Club.

DR. S. B. KEITH, Sec'y M. A. S. A.

Boston Gun Club.

BOSTON, Feb. 6.—Very few shooters braved the elements of a chilly northwest wind at the Boston Gun Club's fourth prize shoot on their grounds at Wellington to-day. Good scores were not a possibility, as the strong wind played havoc with both the targets and shooter. The only ones that it did not affect were the trapper and scorer, the latter seeming to delight in putting down a great big 0 against some poor unfortunate. The 21yd. shooter did not seem to mind it any more than the rest of his less expert companions, as shooting from his long-distance mark in all but one event he secured high average. for the prize match. Baker was high in the prize match, breaking 20 birds of the 30. Scores below, all shooting handicap except event 9. All events unknown:

Events:	1	2	3	4	5	6	7	8	9	10	11
Baker, 17	6	5	4	9	6	6	6	8	6	5	5

Mississippi Valley Notes.

TRAPSHOOTING matters have been exceedingly quiet in the Mississippi Valley region during the past two months. This, however, is nothing out of the ordinary, as secretaries of gun clubs invariably eschew these months on account of the probable unfriendliness of the weather. And even though the ground hog did not see his shadow on Feb. 2 there is a general feeling that much winter is yet to come, and little will be done by the smaller shooting organizations until after the first of March. The coming season, though, promises to break all records in the matter of shooting at the trap, and the writer has advice of no less than twenty tournaments that will probably be held in Illinois alone before the first of June.

The St. Louis shooting fraternity are about the only ones who have kept up practice work with little interruption. Perhaps the fact that the State shoot is to be held there again is responsible for some of this activity and interest, but the boys are prone to ascribe it mostly to the indefatigable energy of David Elliott, the hustling lessee of the Dupont Shooting Park. Semi-weekly meets have been held on the grounds since the first of the year, and the attendance is uniformly good. Usually there is a short target programme, and a short race at live birds.

Mr. C. E. De Long writes that there is every prospect of a record attendance at the fourth annual tournament of the Hot Springs Gun Club, Feb. 18 to 24. The management has indeed spared no effort to provide an attractive programme, hanging up a cold $1,000 in added cash money. There will be ten events, totaling 165 targets, on the programme each of the three days devoted to that sport, and in each event the club adds $25. The big live-bird handicap will have $200 added. The amateurs are well taken care of, each expert being charged 25 cents an event extra as soon as he attains a daily average of 80 per cent. or better, this to be divided among those below who stay through the game. In addition, $50 is given for high average, this competition being open to all but trade representatives.

The Farmer City Gun Club gave a good shot last week, with an attractive target and live-bird programme. Weather was unfavorable, but a good attendance came out just the same, and this wide-awake club has again widened its circle of friends, and its influence in the promotion of the sport.

The Markle target works at Granite City, the home of the St. Louis blackbird, which were destroyed by fire late in the fall, have been rebuilt on a much larger scale than formerly, and manufacture will shortly be resumed.

The Piasa Gun Club, of Alton, will resume weekly competitive shoots March 1 for the two medals donated last year by President Schweppe and the Western Cartridge Co. This is one of the oldest shooting organizations in the West, its members having practiced regularly for fifteen years.

President J. R. B. Van Cleave writes me that everything looks promising for the annual meet of the Illinois State Sportsmen's Association, which is scheduled for the third week in May, at Springfield. The directors will convene shortly to decide upon the programme, and details of the tournament, which is to last all week.

A number of the boys who are at Indianapolis this week have arranged for special railroad accommodations thence to Hot Springs; the crowd will leave for the South Friday evening or Saturday morning. This will give Sunday in which to rest up for the work of the following week.

The Dewar Trophy.

WE have received the following communication concerning the Dewar trophy:

"Last June the firm of John Dewar & Sons presented to the shooters of New York, New Jersey, Pennsylvania and Connecticut a handsome silver cup to be shot for once a month and become the property of whoever should win the same the greatest number of times until June, 1902, the contests to take place at Interstate Park, Queens, L. I. Though the conditions were in the main satisfactory the trophy has only been shot for three times, so the management thought best to make some change, and the following has been decided upon: The contests shall take place at Interstate Park. Previous winners to this date shall be credited with their performances, and the trophy shall be open to challenge on two weeks' notice, the challenger to deposit $10 with the manager of the partk, the winner to take the cup and money, and the loser to pay for the birds. The contestants shall be handicapped by a committee appointed by the management, the distances being from 26 to 33yds. ,and no one shall be eligible who is a manufacturer's agent or considered a professional by the committee.

"Each contestant shall shoot at 25 pigeons, and the referee shall be appointed by the committee or by the park manager. The rules shall be those of the Interstate Association. In case the challenged party fails to put in an appearance the cup shall go to the challenger, and in case the latter is absent the holder of the cup shall take the money. The challenger has the privilege of naming the date of the match.

"W. H. Sanders has challenged the holder, Dr. A. A. Webber, and names Feb. 26 as the date on the arrival of the 12:20 train from New York."

Interstate Association Events.

The programme of the Grand American Handicap, issued by the Interstate Association, is as follows:

The Interstate Association's Ninth Annual Grand American Handicap at Live Birds, April 1, 2, 3, 4, 5, Interstate Park, Queens, L. I., N. Y.; $1,500 guaranteed.

Notice.—All entries for the Grand American Handicap must be made on application blanks, a copy of which will be found in this programme. Additional application blanks can be secured by addressing Edward Banks, secretary-treasurer, 318 Broadway, New York.

The Interstate Association for the encouragement of trapshooting.

One thousand dollars added to the purses week of July 22.

The Interstate Association's Second Annual Grand American Handicap at Targets will be held at Interstate Park, Queens, L. I., N. Y., July 23, 24, 25 and 26. Manufacturers' agents, paid representatives, etc., barred from participating in a division of the purses. $1,000 added money.

Interstate Park, Queens, L. I., N. Y. Programme issued June 20.

Interstate Tournaments for the Season of 1901.—The Interstate Association has made arrangements to give tournaments as follows: Grand American Handicap at Live Birds, April 1-5, under auspices of Interstate Association; Jacksonville, Fla., April 17 and 18. under auspices of Jacksonville Gun Club; Memphis, Tenn., May 8, 9 and 10, under auspices of Memphis Gun Club; Cleveland, O., June 19, 20 and 21, under auspices of Cleveland Gun Club; Sherbrooke, P. Q., Canada, July 1 and 2, under auspices of Sherbrooke Gun Club; Jamestown, N. Y., July 10 and 11, under auspices of Jamestown Gun Club; Grand American Handicap at Targets, July 23 to 26, under auspices of Interstate Association; Providence, R. I., Aug. 7, 8 and 9, under auspices of Providence Gun Club; Auburn, Me., Aug. 21 and 22, under auspices of Auburn Gun Club. Communications relating to target tournaments should be sent to the manager's home address: Elmer E. Shaner, 122 Diamond Market, Pittsburg, Pa.

Introductory.

It has been customary, when presenting programmes for past Grand American Handicaps, to say something in regard to the origin and history of this annual great live bird trapshooting event. At the risk, therefore, of being considered tedious, a short review of comparatively ancient history must be accorded a place in this the programme for the Interstate Association's Ninth Annual Grand American Handicap at Live Birds, April 1-5, 1901.

The first Grand American Handicap was held eight years ago, in March, 1893. The conditions were severe, and the event did not receive the support that its promoters had looked for. Only twenty-one shooters took part in the event, the small number being probably due to the fact that the conditions called for $25 entrance, birds extra, three high guns, a pigeon to be scored dead to fall within 21yds. of the trap from which it came. With the exception of the last-named condition, the only other change has been to increase the number of high guns in proportion to the number of entries.

There were fifty-four entries for the Grand American Handicap in 1894, and sixty-one in 1895. From that year until 1899 the number of entries increased very rapidly, the actual figures being as follows: 1896, 109; 1897, 146; 1898, 207; and in 1899, 278. Of the latter number 262 actually took part in the contest.

Last year (1900) there was a slight reaction, the entries numbering just 224, of which 211 shot in the event, there being 13 forfeits. This reaction was not unexpected, and may be traced to several causes—not, however, to any lack of interest on the part of the trapshooting world in this wonderfully popular event. In 1899 there were so many shooters and only three sets of traps that the wait between rounds was trying in the extreme. It took two days and a half before the final shot was fired which decided who was the winner of the cup donated by the Interstate Association to the man who took first place and first money in the Grand American Handicap of 1899.

When it came to arranging for the Grand American Handicap of 1900, the Interstate Association looked carefully over the situation, and decided that the new grounds at Interstate Park, with its four sets of traps and commodious Casino, was the only place at which such an event could be held. The wisdom of such a choice was plainly shown when the main event was decided, ties shot off and the winner of the trophy declared before the afternoon of the second day of the competition was half gone.

For that reason the Interstate Association has once more fixed upon Interstate Park for 1901.

Interstate Park.

Although Interstate Park, its grounds, its accommodations for shooters in large numbers, and its accessibility by steam cars or trolley cars from any part of Greater New York, are by this time well known to the majority of trapshooters throughout the country, a few words on the above points are not out of place.

First, as to the grounds. There are four sets of traps, placed in a straight line, neither set interfering with the others. Located on a level plot of grass land, forty acres in extent, they make an ideal place on which to bring off any large trapshooting event.

Second, as to the accommodations for large numbers of shooters. Last April Interstate Park had been in existence less than six months. During part of the preceding October the place where Interstate Park and its Casino, together with its four sets of traps, etc., now stands was nothing but a truck farm. Every month and every week since last April the management of the Park Association has been expending money on improvements, until now it may with truth be said that the shooter who is not satisfied with the accommodations offered him must indeed be hard to please.

Third, as to its accessibility from any part of Greater New York. In this respect attention is called to that portion of this programme in which is set forth at length the train service from New York and Brooklyn.

High Guns Win.

No change in the method of dividing the moneys in any of the events in this programme will be made from that which has prevailed at all Grand American Handicap meetings during the past few years. It will again be a case of "high guns win" in all events conducted under the auspices of the Interstate Association.

This system has proved so eminently satisfactory in the past, as evidenced by the phenomenal success that has attended the efforts of the Interstate Association, that the members of that Association see no reason why any change should be made.

A Cup to the Winner.

As in 1898., in 1899, and again last year, the winner of the Grand American Handicap will carry away with him some souvenir commemorating his victory, the Interstate Association having decided to donate a solid silver trophy to the man who proves himself to be the best shot under the conditions governing the Grand American Handicap of 1901.

The Management and Office Force.

It is scarcely necessary to remark that the sole management of the shoot has once more been intrusted to Mr. Elmer E. Shaner, the Association's manager, who has planned, and carried out to a successful issue, every previous Grand American Handicap.

Associated with Mr. Shaner will be found practically the same office force as that which aided him in 1898, 1899 and 1900.

As for the Handicap Committee, the names of the gentlemen who have courteously and kindly consented to act as such committee are given elsewhere. The Association feels that it owes to these gentlemen more in the way of thanks than can be expressed in cold type. The task before them, to be performed on Wednesday, March 27, is one that demands much.

Ever since the Grand American Handicap of 1898, each entry in the Grand American Handicap has been supplied with a "tag" showing in plain figures his shooting number, as well as the handicap awarded him. This system has worked so well during the past three years that it will be adopted again for the Grand American Handicap of 1901. The "tag" tells the scorer and the spectators who is at the score, while the referee can see at a glance whether the shooter is at his right mark or not.

Official Score.

Last year an attempt was made to show the official score during the Grand American Handicap, in order that each shooter might be able to see that his score was recorded correctly. While the system used worked fairly well, a new method has been adopted, making it possible for both shooter and spectators to see the result of each individual shot immediately after it has been fired.

Sets of Traps Reunmbered.

Since the Grand American Handicap last year, the four sets of traps have been renumbered for convenience sake. What was then called No. 2 set is now known as No. 1; what were Nos. 3 and 4 are now respectively Nos. 2 and 3, while that which was No. 1, the set of traps to the extreme left of the Casino and board walk, is now known as No. 4.

Taking advantage of this change, each round of 4 birds will be started in front of the entrance to the Casino at No. 1 set of traps. The shooter will then pass on to Nos. 2 and 3 in turn, and will then go down to No. 4 for his last round in each series. This method will be productive of much saving of time in getting men from the Casino to the score, and will cause them to walk no further in each round than under the old system.

More Perfect Than Ever.

The experience gained from each preceding Grand American Handicap has invariably resulted in improved methods for the smoother running of its successor. Last year's tournament was no exception to the rule, and for that reason the Interstate Association feels confident that each participant in the Ninth Annual Grand American Handicap will find every arrangement more perfect than ever.

Conditions.

The conditions governing the Grand American Handicap of 1901 are 25 live birds, handicaps ranging from 25 to 33yds., 50yds. boundary, with dead line at the 33yd. mark, $1,500 divided among the three highest guns—$600 to first, $500 to second, and $400 to third. All money in the purse in excess of $1,500 will be divided among high guns other than the three first. The number of parts into which the surplus money will be divided will be determined by the number of entries received. Entrance money $25; $1,500 guaranteed by the Interstate Association, and all surplus added. In addition to first money the winner will receive a sterling silver trophy, presented by the Interstate Association. Regular entries must be made on or before March 23, and must be accompanied by $10 forfeit. The remaining $15 may be paid up to the time the last man fires at his second bird. Entries mailed in envelopes bearing postmarks dated March 23 will be accepted as regular entries Penalty entries may be made after March 23, up to the time the last man fires at his second bird, by paying $35. All entries must be made on application blanks, and they will be received at the New York office, Edward Banks, secretary-treasurer, 318 Broadway, New York.

The Handicap Committee.

The committee appointed to award handicaps for the contestants in the Grand American Handicap of 1901 is somewhat different in its make-up from that which served in a similar capacity for that event in 1900. The death of Mr. Jacob Pentz and the enforced absence of Col. J. T. Anthony, of Charlotte, N. C., which is due to the effects of a severe attack of grip, will both be felt with considerable force by the other members of the Handicap Committee of 1900.

Two new names appear on the list for 1901—T. A. Divine, Memphis, Tenn., and J. L. Head, Peru, Ind. Mr. Divine was asked to act as one of the Handicap Committee in 1899, and accepted, but was prevented by pressure of business from leaving the South in time to act with that committee. Mr. Head, the second new member, is too well known by the trapshooters of the country to need any special introduction. His knowledge of the skill of the men who shoot pigeons out West will prove of much assistance to the committee in its deliberations, when coupled with the testimony of Mr. C. W. Budd, of Des Moines, Ia.

The committee stands as follows: T. A. Divine, Memphis, Tenn.; C. W. Budd, Des Moines, Ia.; J. L. Head, Peru, Ind.; Barnard Waters, New York City; W. R. Hobart, Newark, N. J.; Will K. Park, Philadelphia, Pa.; Elmer E. Shaner, Pittsburg, Pa.

The Handicap Committee will meet at the Astor House, New York city, at 10:30 A. M., Wednesday, March 27, four days after the closing of regular entries (Saturday, March 23), but handicaps will not be announced until March 31.

First Day, April 1.

Monday, 9 o'clock sharp, Interstate Park Introductory, 8 birds, $5 entrance, birds extra; 30yds. rise; four moneys, 40, 30, 20 and 10 per cent.; high guns, not class shooting. Ties in this event will not be shot off, and they must divide. Borough of Queens Sweepstakes, 12 birds, $7 entrance, birds extra; 30yds. rise. The number of moneys into which the purse will be divided will be determined by the number of entries received, as is fully explained elsewhere in this programme. High guns, not class shooting. Ties in this event will not be shot off, and they must divide.

Second Day, April 2.

Tuesday, 9 o'clock sharp, Nitro Powder Handicap, 16 birds, $10 entrance, birds extra; handicaps 25 to 33yds. The number of moneys into which the purse will be divided will be determined by the number of entries received, as is fully explained elsewhere in this programme. The handicaps contestants receive for the Grand American Handicap will govern in this event. High guns, not class shooting. This event cannot be carried over, and it must be finishel the same day; therefore should the entries be so numerous that it will be impossible to finish by adhering to the "3 misses out," the Association reserves the right to change the rule for this event at any time it may be deemed necessary to do so, and drop all who have missed one or more birds. Miss-and-out events will be arranged to suit the shooters, time permitting.

Third Day, April 3.

Wednesday, 9 o'clock sharp, the Grand American Handicap, 25 birds, $25 entrance, birds extra; not class shooting; handicaps 25 to 33yds; $1,500 guaranteed by the Interstate Association, and all surplus added. Sterling silver trophy and $600 to first high gun, $500 to second high gun, and $400 to third high gun. All money in the purse in excess of the $1,500 will be divided in accordance with the number of entries received. Regular entries close Saturday, March 23, and must be accompanied by $10 forfeit.

Fourth Day, April 4.

Thursday, 9 o'clock, the Gand American Handicap continued.

Fifth Day, April 5.

Friday, 9 o'clock sharp, the Grand American Handicap, if not finished the previous day. Consolation Handicap, 16 birds, $10 entrance, birds extra; handicaps 25 to 33yds. The number of moneys into which the purse will be divided will be determined by the number of entries received, as is fully explained elsewhere in this programme. Winners of money in the Grand American Handicap will have 1yd. added to their handicap. High guns, not class shooting. Auld Lang Syne Sweepstakes, 12 birds, $7 entrance, birds extra, 30yds. rise. The number of moneys into which the purse will be divided will be determined by the number of entries received, as is fully explained elsewhere in this programme. High guns, not class shooting. Miss-and-out events will be arranged to suit the shooters.

A Full Week of Shooting.

Saturday, April 6.—On Saturday, April 6, the Interstate Park Association will have charge of affairs, and the events as arranged below will be carried on under its auspices. Through the kindness of Mr. John Parker, of Detroit, Mich., the Gillman-Barnes International trophy will be placed in competition, the conditions of which are 25 birds, $15 entrance, birds extra; handicaps 25 to 33yds.; four moneys, 40, 30, 20 and 10 per cent.; class shooting. This trophy must be won three times by one contestant (not necessarily in succession) to become the property of the winner. The winner at this tournament must return the trophy to Mr. Parker in time for his annual tournament at Detroit. Mr. H. D. Bates has scored two wins for the trophy, and each of the following named gentlemen has one win to his credit: L. T. Duryea, R. O. Heikes, A. H. King, Richard Merrill, Clarence Lane, J. H. Bortle, Jacob Klein, Thomas W. Latham, W. R. Elliston and Jas. Coffey. Sportsmen's Association trophy, 25 birds, $15 entrance, birds extra; handicaps, 25 to 33yds.; four moneys, 40, 30, 20 and 10 per cent. Class shooting. In addition to first money the winner will receive a trophy presented by the National Sportsmen's Association. Extra events, time permitting, will be arranged to suit the shooters.

Division of Money.

Grand American Handicap of 1901.—The Interstate Association guarantees $1,500 in the main event—the Grand American Handicap—which will be divided among the three highest scores, as follows: $600 to first high gun, $500 to second high gun, and $400 to third high gun. In addition to first money the winner of same will receive a sterling silver trophy, commemorative of the win, presented by the Interstate Association.

Should there be more than 60 and not exceeding 70 entries, all money in the purse in excess of the $1,500 will be divided 34, 33 and 33 per cent. to the 4th, 5th and 6th highest guns.

Should there be more than 70 and not exceeding 80 entries, all money in the purse in excess of the $1,500 will be divided 18, 17, 17, 17, 16 and 15 per cent. to the 4th, 5th, 6th, 7th, 8th and 9th highest guns.

Should there be more than 80 and not exceeding 90 entries, all money in the purse in excess of the $1,500 will be divided 13, 12, 12, 12, 11, 10, 10, 10 and 10 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th 11th and 12th highest guns.

Should there be more than 90 and not exceeding 100 entries, all money in the purse in excess of the $1,500 will be divided 10, 9, 9, 9, 9. 8, 8, 8, 8, 8, 7 and 7 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th and 15th highest guns.

Should there be more than 100 and not exceeding 110 entries, all money in the purse in excess of the $1,500 will be divided 8, 7, 7, 7, 7, 7, 7, 7, 7, 6, 6, 6, 6, 6 and 6 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th and 18th highest guns.

Should there be more than 110 and not exceeding 120 entries, all money in the purse in excess of the $1,500 will be divided 7, 6, 6, 6, 6, 6, 6, 6, 5, 5, 5, 5, 5, 5, 5, 5 and 5 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th and 21st highest guns.

Should there be more than 120 and not exceeding 130 entries, all money in the purse in excess of the $1,500 will be divided 7, 6, 5, 5, 5, 5, 5, 5, 5, 5, 5, 5, 5, 4, 4, 4, 4, 4, 4, 4 and 4 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22d, 23 and 24th highest guns.

Should there be more than 130 and not exceeding 140 entries, all money in the purse in excess of the $1,500 will be divided 7,6,5,4,4,4, 4, 4, 4, 4, 4, 4, 4, 4, 4, 4, 4, 4, 4, 4, 4, 4, 3 and 3 per cent to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22d, 23d, 24th, 25th, 26th and 27th highest guns.

Should there be more than 140 and not exceeding 150 entries, all moneys in the purse in excess of the $1,500 will be divided 7, 6, 5, 4, 4, 4, 4, 4, 4, 4, 4, 4, 4, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3 and 3 per cent. to the 4th, 5th, 6th, 7th, 8th, 9,th 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22d, 23d, 24th, 25th, 26th, 27th, 28th, 29th and 30th highest guns.

Should there be more than 150 and not exceeding 160 entries, all money in the purse in excess of the $1,500 will be divided 7, 6, 5, 4, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3 and 3 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22d, 23d, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32d and 33d highest guns.

Should there be more than 160 and not exceeding 170 entries, all money in the purse in excess of the $1,500 will be divided, 7, 6, 5, 4, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2 and 2 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22d, 23d, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32d, 33d, 34th, 35th and 36th highest guns.

Should there be more than 170 and not exceeding 180 entries, all money in the purse in excess of the $1,500 will be divided 7, 6, 5, 4, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2 and 2 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22d, 23d, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32d, 33d, 34th, 35th, 36th, 37th, 38th and 39th highest guns.

Should there be more than 180 and not exceeding 190 entries, all money in the purse in excess of the $1.500 will be divided 7, 6, 5, 4, 3, 3, 3, 3, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, and 2 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22d, 23d, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32d, 33d, 34th, 35th, 36th, 37th, 38th, 39th, 40th, 41st, and 42d highest guns.

Should there be more than 190 and not exceeding 200 entries, all money in the purse in excess of the $1,500 will be divided 7, 6, 5, 4, 3, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1 and 1 per cent. to the 4th, 5th, 6th, 7th, 8th, 9,th 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22d, 23d, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32d, 33d, 34th, 35th, 36th, 37th, 38th, 39th, 40th, 41st, 42d, 43, 44 and 45 highest guns.

Should there be more than 200 and not exceeding 210 entries, all money in the purse in excess of the $1,500 shall be divided 7, 6, 5, 4, 3, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1, 1, 1, 1 and 1 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22d, 23d, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32d, 33d, 34th, 35th, 36th, 37th, 38th, 39th, 40th, 41st, 42d, 43d, 44th, 45th, 46th, 47th and 48 highest guns.

Should there be more than 210 and not exceeding 220 entries, all money in the purse in excess of the $1,500 shall be divided 7, 6, 5, 4, 3, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 and 1 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22d, 23d, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32d, 33d, 34th, 35th, 36th, 37th, 38th, 39th, 40th, 41st, 42d, 43d. 44th, 45th, 46th, 47th, 48th, 49th, 50th and 51st highest guns.

Should there be more than 220 and not exceeding 230 entries, all money in the purse in excess of the $1,500 will be divided 7, 6, 5, 4, 3, 3, 3, 3, 3. 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2. 2. 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 and 1 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22d, 23d, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32d, 33d, 34th, 35th, 36th, 37th, 38th, 39th, 40th, 41st, 42d, 43d, 44th, 45th, 46th, 47th, 48th, 49th, 50th, 51st, 52d, 53 54th highest guns.

Should there be more than 230 and not exceeding 240 entries, all 5, 4, 3, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 and 1 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22d, 23d, 24th, 25th, 26th, 27th, 28th, 1, 1, 1, 1. 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 and 1 per cent. to 29th, 30th, 31st, 32d, 33d, 34th, 35th, 36th, 37th, 38th, 39th, 40th, 41st, 42d, 43d, 44th, 45th, 46th, 47th, 48th, 49th, 50th, 51st, 52d, 53d, 54th, 55th, 56 and 57th highest guns.

Should there be more than 240 and not exceeding 250 entries, all 5, 4, 3, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 and 1 per cent. to the 4th, 5th, 6th, 7th, 8th, 9,th 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22d, 23d, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32d, 33d, 34th, 35th, 36th, 37th, 38th, 39th, 40th, 41st, 42d, 43d, 44th, 45th, 46th, 47th, 48th, 49th, 50th, 51st, 52d, 53d, 54th, 55th, 56th, 57th, 58th, 59th and 60th highest guns.

Should there be more than 250 and not exceeding 260 entries, all money in the purse in excess of the $1,500 will be divided 7, 6, 5, 4, 3, 3, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1, 1 and 1 per cent. to the 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22d, 23d, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32d, 33d, 34th, 35th, 36th, 37th, 38th, 39th, 40th, 41st, 42d, 43d, 44th, 45th, 46th, 47th, 48th, 49th, 50th, 51st, 52d, 53d, 54th, 55th, 56th, 57th, 58th, 59th, 60th, 61st, 62d and 63d highest guns.

Should there be more than 260 entries, all money in excess of $6,500—that is, 260 entries at $25 each—will be divided into sixty-three equal parts and added to the different amounts due the sixty-three high guns.

Briefly summarizing the foregoing, it will be noted that the purse will be divided in accordance with the number of entries received; the three high guns receiving respectively $600, $500 and $400. By this division three places are created for every ten entries over sixty. It is not possible for fourth money to exceed third, and the moneys would seem divided in such manner as to be just to all. For instance, if there are seventy entries fourth high gun would be entitled to $85, while sixth high gun would receive $82.50. If 100 entries, fourth high gun would receive $100, and the fifteenth high gun $70. If 224 entries (the number last year) fourth high gun would receive $287, and the fifty-fourth high gun $41.

It should be remembered that the Grand American Handicap is not class shooting, and high guns will win.

The Interstate Association, being familiar with the requirements of such an event as the Grand American Handicap tournament, has deemed it best to make all events high guns. This method of dividing the purses has given such general satisfaction in the past that we feel confident the decision to again adopt it this year will meet with the hearty approval of a great majority of those who contemplate taking part in the tournament.

A careful perusal of the conditions governing each event will show that everything has been prepared with great care.

DIVISION OF MONEYS IN 12 AND 16 BIRD EVENTS.

In the 12 and 16 bird events a system will prevail somewhat similar to that adopted for the Grand American Handicap—the total amount of the purse being divided in accordance with the number of entries received, as follows: 1 to 10 entries, two moneys—60 and 40 per cent.; 11 to 20 entries, four moneys—40, 30, 20 and 10 per cent.; 21 to 30 entries, six moneys—30, 20, 15, 13, 12 and 10 per cent.; 31 to 40 entries, eight moneys—25, 20, 15, 12, 10, 8, 5 and 5 per cent.; 41 to 50 entries, ten moneys—22, 18, 14, 11, 10,

8, 5, 5, 4 and 3 per cent.; 51 to 60 entries, twelve moneys—20, 16, 13, 10, 9, 7, 6, 5, 5, 4, 3 and 2 per cent.; 61 to 70 entries, fourteen moneys—18, 15, 12, 10, 9, 7, 6, 5, 5, 4, 3, 2, 2, and 2 per cent.; 71 to 80 entries, sixteen moneys—16, 14, 11, 9, 8, 7, 6, 5, 5, 4, 3, 3, 3, 2, 2 and 2 per cent.; 81 to 90 entries, eighteen moneys—15, 13, 10, 8, 8, 7, 6, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2 and 2 per cent.; 91 to 100 entries, twenty moneys—14, 12, 9, 8, 7½, 6½, 6, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2, 2 and 2 per cent; 101 to 110 entries, twenty-two moneys—13, 11, 9, 7½, 7, 6, 5½, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2 and 2 per cent.; 111 to 120 entries, twenty-four moneys—12, 10½, 8½, 7, 6½, 6, 5½, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1½ and 1½ per cent.; 121 to 130 entries, twenty-six moneys—11½, 10, 8, 6½, 6, 6, 5½, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1½, 1½, 1½ and 1 per cent.; 131 to 140 entries, twenty-eight moneys—11, 9½, 7½, 6½, 6, 5½, 5½, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1½, 1½, 1½, 1, 1, and 1 per cent.; 141 to 150 entries and over, thirty moneys—10½, 9, 7, 6, 6, 5½, 5½, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 1½, 1½, 1½, 1, 1, 1, 1 and 1 per cent.

Briefly summarizing the foregoing it will be noted that two places are created for each ten entries or fraction thereof up to 150.

DIVISION OF MONEYS IN 8-BIRD EVENTS.

In the 8-bird events it will be high guns pure and simple, the total amount of the purse being divided into four moneys—40, 30, 20 and 10 per cent.

To reach Interstate Park from New York city take Thirty-fourth Street Ferry, East River, to Long Island City; thence by Long Island Railroad to Interstate Park station direct; or Brooklyn Bridge to Long Island Railroad—Flatbush avenue station, Brooklyn—thence by train to Interstate Park station.

TRAIN SCHEDULE.

From Thirty-fourth Street, East River—Week Days.—6:30 7:50, 9:20, 11 A. M.; 12:20, 1:50, 4:30, 8, 10 P. M. Sundays—8:50, 9:50 A. M.; 1:50, 4:10, 5:20 P. M.

From Flatbush Avenue, Brooklyn—Week Days.—6:37, 7:56, 9,25, 11:04 A. M.; 12:24, 1:54, 4:27, 8:07, 10:07 P. M. Sundays—8:53, 9:53 A. M.; 1:54, 4:13, 5:25 P. M.

Leave Park for Thirty-fourth Street, New York, or Flatbush Avenue, Brooklyn—Week Days.—7:43, 10:18 A. M.; 12:16, 1:54, 3:26, 5:11, 5:52 (Wednesday and Saturday only), 6:54, 8:58 10:56 P. M. Sundays—10:40 A. M.; 3:24, 5:41 P. M.

Announcement.

Shooting will commence at 9 A. M. sharp each day.

Rules.

The Interstate Association's rules will govern all points not otherwise provided for. Special attention is called to Rule 23, which does not permit a shooter to open his gun in case of a misfire.

No guns larger than 12-gauge allowed. Weight of guns limited to 8 pounds. The standard bore of the gun is No. 12, and all contestants will be handicapped on that basis. Shooters using guns of smaller caliber must stand on the mark allotted to them.

In order to expedite the shooting, a contestant missing three birds in any event, except the Grand American Handicap, will be dropped out, but will be called up to shoot in case he has a chance to win any portion of the purse. In the Grand American Handicap it will be five misses out, with the same condition.

Shooters calling "No bird" before seven balls have been thrown at birds slow to start will be charged for same; after seven balls have been thrown it is "No bird" at the expense of the management.

Shooters must supply themselves with "No bird" tickets, which can be obtained at the cashier's office. These tickets are also good for "byes" or tie birds. Unused "no bird" tickets are redeemable for cash at the cashier's office.

Winners of money in any event must apply to the compiler of scores for orders on the cashier for the money due them. No money will be paid out by the cashier except on receipt of such an order.

Shooters who have rebates coming to them for birds not shot at must apply to the compiler of scores for rebate tickets, which will be redeemed for cash at the cashier's office.

Rule 9 of the Interstate Association rules, relating to the time limit for gathering a bird, and which permits a man to gather his own bird, or to send a man for it, will not apply at this tournament. All birds will be retrieved in a manner designated by the Association the moment the bird touches the ground.

Rule 19, relating to caliber and weight of gun, is not in force at this tournament. No guns larger than 12-gauge allowed; weight of guns limited to 8 pounds.

Rule 28, relating to tie shooting, will not apply. All ties that are shot off will be miss-and-out, and the original distances contestants stand at will govern.

Birds Extra.

Birds will be extra in all events. When entering for any event the shooter must pay for all birds called for in that event, in addition to the entrance fee. Money will be refunded for all birds not shot at on application to the compiler of scores, who will furnish rebate tickets that will be redeemed for cash at the cashier's office.

The Grand American Handicap.

The manner of shooting the Grand American Handicap this year (and in fact all events scheduled for the tournament) is as follows: Shooters will be called to the score in turn, shooting their first bird at No. 1 set of traps; as soon as a shooter has shot at his first bird he passes on to No. 2 set and shoots at his second bird on that set; he then passes on to No. 3 set and shoots at his third on that set; he then shoots at another bird on No. 4 set, and retires until it is time for him to go out and shoot at his fifth, sixth, seventh and eighth birds; and so on.

The official score will be kept on a score board in plain view of the shooter. After shooting at a bird it will be the duty of the shooter to watch the score board and see to it that the right result is recorded. In case of error it must be corrected at once, as no appeal will be allowed after the shooter has left and passed on to the next set of traps.

A contestant missing five birds will be dropped out, but will be called up to shoot in case he has a chance to win any portion of the purse.

To facilitate shooting and to prevent delays at Nos. 2, 3 and 4 sets of traps, a shooter who happens to score his fifth miss on either No. 1, No. 2 or No. 3 set of traps must finish that round of four birds, irrespective of the fact of his having five misses to his credit.

Every shooter will be numbered, each entry being known by his number when called to the score. A small tag will be affixed to each shooter's back, giving his number on the shooting list, and also his handicap in yards. This will enable the referee to see at a glance if the shooter is at his right mark; and will also enable shooters, spectators and scorers to tell who is at the score by merely referring to the list of entries numbered in shooting order.

Each contestant must supply himself with five "no bird" tickets

In case the Grand American Handicap entries are so numerous that it is impossible to finish in good light on April 3, the referees shall stop the shooting at any time they may deem it necessary; in this case the shooting will commence at 9 o'clock sharp Thursday, April 4.

Positively no entry will be taken, nor shooting up allowed, after the last man has shot at his second bird.

The Interstate Association reserves the right to refuse any entry.

Admittance to Interstate Park.

An admission fee of 50 cents will be charged each day. All contestants in the Grand American Handicap will receive a badge, which will admit them to the park free during the entire tournament. Any shooter who is not a contestant in the Grand American Handicap will have the 50 cents paid for admission refunded at the cashier's office upon his making entry in any sweepstake event.

The comfort and convenience of the contestants as well as the spectator has been looked after carefully inasmuch as the entire Casino is closed and heated throughout.

Compiler of Scores.

The office of compiler of scores will be filled by Mr. John D. Regan. His services the last four seasons as assistant compiler of scores are a sufficient guarantee of excellent results on this occasion.

Luncheon.

A warm and substantial lunch will be served each day in the club house for the sum of 50 cents.

Guns Weighed.

Contestants are requested to make sure that their guns are not over 8 pounds in weight, as all guns will be weighed at the score. Guns will be weighed without hand hold, and without recoil pad that can be readily detached from the gun. Silver's recoil pad and pads of that nature are considered part of the gun.

Official Record.

An official record will be made of the make of gun, kind of powder, shot and shell used by each contestant. This record will be compiled by an official appointed for the purpose, and contestants will be required to furnish such information as is necessary.

The Association reserves the right to select two cartridges from each contestant (to test the same for proper loading), the selection to be made at any time from those of a shooter at the score.

Referees.

The corps of referees has been selected with much care. Messrs. Harold Wallack, of Long Branch, N. J., and Charles North, of Cleveland, O., who filled the positions of referees last year at Nos. 2 and 4 sets of traps respectively, will again be found on duty when the first gun cracks on the morning of April 1 next.

It has been a source of regret that Mr. B. Waters and Mr. Ed Taylor have both felt themselves obliged to refuse the requests of the Interstate Association that they once more fill the positions they have occupied so satisfactorily since the Grand American Handicaps of 1898 and 1897 respectively. The Association has been extremely lucky, however, in being able to fill the vacancies so caused by securing the services of Messrs. J. Frank Kleinz, of Philadelphia, Pa., and George S. Mott, manager of the shooting grounds of the Westminster Kennel Club, Babylon, L. I., N. Y., as referees for the Grand American Handicap of 1901.

In this connection it may be noted that Messrs. B. Waters and T. H. Keller have both kindly signified their willingness to act as assistant referees for the purpose of relieving the regular referees whenever their services may be so needed.

Important.

Bank checks, drafts or bills of exchange will not be received at the cashier's office in payment for balance due on entries, nor will any check, draft or bill of exchange be cashed during the tournament. This rule will be strictly enforced.

Lockers.

Every shooter knows the extra comfort to be derived from an abundant supply of locker accommodation. At Interstate Park there are lockers enough for everybody, each one large enough to contain overcoats and other wraps, a case of shells or two, together with the gun case and the gun when it has been put together.

Each locker will be rented at the rate of $2 for the entire week, $1 being refunded upon the vacation of the locker and the return of the key to the cashier's office.

It will save both shooters and the office force much trouble if parties, when making their entry for the Grand American Handicap, will signify their desire to have lockers reserved for their use, remitting the $2 for each locker, together with the forfeit fee for entry in the Grand American Handicap.

The advantage of reserving lockers in advance is that guns and shells shipped to Interstate Park will be placed at once in their proper lockers, and will be found there on the arrival of their owners at the Park. It will also avoid much unnecessary crowding at the cashier's office at a time when most of those present are desirous of making their entries for the different events on the programme.

Special Notice.

It is requested that entries for the Grand American Handicap be made in ample time to permit the sending of receipt and admission badge, and for same to reach the maker of the entry prior to his departure for Interstate Park. Should entries be received so late that it will be impossible to reach the maker of the entry by mail until after Saturday, March 30, receipt and admission badge will not be sent. Therefore, shooters who make late entry and do not receive receipt and admission badge will be required to pay 50 cents admission to Interstate Park, which will be refunded on calling at the cashier's office and applying for receipt, admission badge and rebate ticket covering the amount paid at the gate.

All entries made must be accompanied by the maker's name and address, which will be withheld from publication if desired, and "shooting name" only will be used.

Remittances.

When making an entry by mail, remitances covering amount of forfeit ($10) should be made by bank check, draft, post office money order, express money order or registered letter.

Shipping Instructions.

Guns, ammunition, etc., forwarded by express must be prepaid and sent to Interstate Park, Queens, L. I., N. Y.

Entries.

Regular entries must be made on or before March 23. Entries mailed in envelopes bearing post marks dated March 23 will be accepted as regular entries. All entries must be made on application blanks, and they will be received at the New York office. Edward Banks, secretary-treasurer, 318 Broadway, New York.

A Few Statistics.

Below, in a condensed table, will be found a few interesting statistics in connection with the Grand American Handicaps of past years:

Date.	Place.	Shooter's Name and Handicap.	Tl. Entries.	Tl. Shooters.	No of Straights.	Tl. Kills in Shoot-off.
1893.	Dexter Park	1st, R A Welch, 28. 2d, N E Money, 28.	21	21	None.	*
1894.	Dexter Park	1st, T W Morfey, 28. 2d, Capt Money, 30.	54	54	Two.	10 ex 12.
1895.	Willard Park	1st, J G Messner, 25. 2d, J A R Elliott, 33.	61	58	Three.	10 straight.
1896.	Elkwood Park	1st, O R Dickey, 29. 2d, S Glover, 30.	109	105	None.	†
1597.	Elkwood Park	1st, T A Marshall, 28.	146	135	One.	‡
1898.	Elkwood Park	1st, E D Fulford, 29. 2d, G W Loomis, 28.	207	187	Nine.	23 straight.
1899.	Elkwood Park	1st, T A Marshall, 29. 2d, C M Grimm, 29.	278	262	Six.	33 straight.
1900.	Interstate Park	1st, H D Bates, 28. 2d, J R Malone, 28	224	211	Eight.	34 straight.

*In 1893 a bird to be scored dead had to fall within 21yds. of the trap from which it came. There were four ties on 23.

†In 1896 there were eight ties on 24; Dickey won by killing five straight in the ties.

‡In 1897 there were nine 24s, but no shoot-off for second place.

WESTERN TRAPS.

Trap at Minneapolis.

Chicago, Ill., Feb. 7.—On Jan. 24 the following sweeps were shot at the Intercity Shooting Park, Minneapolis, Minn.:

Event 1:
French .....1121221222—10 Parker 212121w
Hirschy 2*210w

H. C. Hirschy Live-Bird Challenge Trophy.

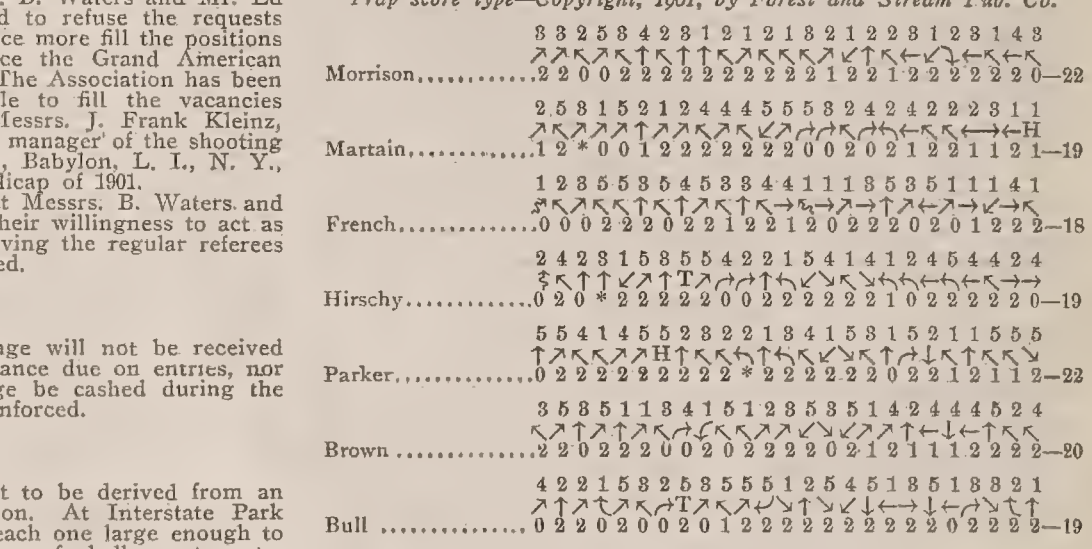
On Tuesday, Jan. 29, six shooters entered the race for the H. C. Hirschy live-bird trophy, emblematic of the championship of Wisconsin, Iowa, North and South Dakota and Minnesota. This number of contestants were enabled to save their entries under the new rules governing this trophy. Morrison, of St. Paul, was the holder, and was challenged in January by Parker, of Minneapolis. In the race on Jan. 19 they both tied on 21 and decided to shoot off on the 29th under the new rules, these rules being adopted in the hope of creating more interest in live-bird shooting in the Northwest.

The afternoon of Jan. 29 was an ideal day, but the sun was shining strongly and made the light very bad. The scores were very good, considering the class of birds that the management had on hand, the first 100 being exceptionally good. The genial Fred Quimby, of New York, was on hand, and refereed the race.

Parker, of Minneapolis, has the honor of being called very lucky, and I guess we will have to let it pass at that. His good kills were on his 4th, 10th, 15th and 19th birds. The 19th bird performed a number of acrobatic feats after being shot at and slightly hit with the second load. The bird made the entire circuit within the bounds, and finally started for the house. Here its strength gave out, and the boundary wire is the only thing that saved Parker from losing the bird. Morrison was not in good form, but made good kills on his 6th, 10th, 11th and 17th birds.

In the shoot-off of the tie Morrison went into a trance, and when the percentage of the 5 birds was taken Morrison had lost the trophy. Scores:

Trap score type—Copyright, 1901, by Forest and Stream Pub. Co.



Shoot-off:
Parker .....2222 Morrison 020

Challenge Shoot for the Hirschy Trophy.

The above Minneapolis emblem seems to be a warm one, and is diligently pursued of shooterdom of the Northwest. There will be a challenge shoot for it on Feb. 22, at the grounds of the Intercity Shooting Park, midway between St. Paul and Minneapolis, and it is very likely there will be a good turnout.

Hartford Building, Chicago, Ill.

Garden City Gun Club

Watson's Park, Burnside Crossing, Ill., Feb. 9.—The shoot of the Garden City Gun Club was well attended. The club event, for the club medals and loving cup, had twenty-seven entries. Messrs. Barto, Amberg, Day, Young, Carson, Mack, Bowlegs and Walters did not finish their scores on account of darkness. The figures after each name denote the handicap allowance of extra birds to shoot at. The scores:

PUBLISHERS' DEPARTMENT.

Florida.

TWO WEEKS' TOUR VIA PENNSYLVANIA RAILROAD.

The second Pennsylvania Railroad tour of the season to Jacksonville, allowing two weeks in Florida, will leave New York and Philadelphia Feb. 19.

Excursion tickets, including railway transportation, Pullman accommodations (one berth), and meals en route in both directions while traveling on the special train, will be sold at the following rates: New York, $50; Philadelphia, Harrisburg, Baltimore and Washington, $48; Pittsburg, $53, and at proportionate rates from other points.

For tickets, itineraries and other information, apply to ticket agents, Tourist Agent at 1196 Broadway, New York; 4 Court street, Brooklyn; 789 Broad street, Newark, N. J.; B. Courlaender, Jr., Passenger Agent Baltimore District, Baltimore, Md.; Colin Studds, Passenger Agent Southeastern District, Washington, D. C.; Thos. E. Watt, Passenger Agent Western District, Pittsburg, Pa., or to Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—*Adv.*

A folder, containing maps, and profusely illustrated, just issued by the New York Central, devotes a large amount of space to the Pan-American Exposition. It gives a map containing a 500-mile circle, with Buffalo as its center, which shows that within said circle is contained more than one-half of the entire population of the United States, and more than three-fourths of the entire population of Canada. A copy will be sent free, postpaid, to any address on receipt of a postage stamp, by George H. Daniels, General Passenger Agent, Grand Central Station, New York.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, FEBRUARY 23, 1901.

VOL. LVI.—No. 8. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

SPRING SHOOTING.

THE letter in opposition to the abolishment of spring duck shooting, printed in another column, is written by a man who owns a shooting resort on Long Island, and who feels that if the spring shooting of wildfowl is abolished a certain amount of trade will be taken from him and that his annual receipts will be less than they would be if the season were longer. With him the question is one of money—a condition, not a theory, confronts him. He is only one of a considerable class who feel deeply on the subject, and whose objections to a change in the law are entitled to careful consideration and to respectful answers. He makes certain statements with regard to the law concerning spring shooting in general, some of which we shall endeavor to answer.

The species of marsh ducks likely to nest within the State if spring shooting were abolished are practically all the marsh ducks, and especially mallards, black ducks, sprigtails, the two teal and shovelers, together with the bird commonly known as broadbill and perhaps the redhead. The marsh lands referred to in the editorial are located in the northern, central and western parts of New York State, chiefly in what is known as the lake region. In former years—thirty-five, thirty and even twenty years ago—many ducks nested there, but with the reduction in numbers of the fowl and their more constant pursuit it may be that these breeding grounds are now deserted.

It is probably true that a certain portion of the talk about spring shooting is made by men who go south and have their shooting there, and then return to New York, but, of course, this has nothing to do with the case. Neither has the fact that the law against spring snipe shooting is violated on certain places on Long Island. The enactment of a law and its enforcement are two entirely different things. That one good law is not enforced is no reason for not passing another good law. Many excellent laws are constantly broken, as we see every day, and as we shall see until human nature has vastly changed for the better. One of these disregarded laws is night shooting on Long Island, but the fact that burglars sometimes break into houses and carry off property is no reason for not passing laws to make the property constantly safer.

It is not supposed that spring shooting is the only cause of the increased scarcity of ducks. There are many such causes. Some of these are the improvement and cheapening of firearms; their much wider use than formerly; the ease with which distant localities frequented by fowl are reached; the settling up of the country, which enormously contracts the breeding grounds of the fowl; the shooting of the birds for eight months in the year. The two chief causes for this reduction are the facts that the open season for fowl is far too long, and that the settlement of the country has made the area which the ducks could breed in so much less than it was formerly.

It is a well established principle that the protection of game is something which lies within the police powers of the several States, and that the Federal Government has no power to interfere in a matter of this kind. Our correspondent is in error in stating as a general proposition that as soon as the wildfowl leave the waters of New York State—for the north—they are gunned. This is not everywhere true, for Ontario, Nova Scotia (as to some species) and Newfoundland have laws forbidding spring duck shooting, and a movement is on foot to enact such a law in the Province of Quebec.

Reasons for doing away with spring shooting have many times been given in FOREST AND STREAM, but the logical and fundamental reason is that in the present open season too many birds are killed, and that season should be shortened in order that the destruction may be lessened. As things are at present, more birds probably are killed every season than are bred during the summer, and the number of wildfowl is constantly decreasing. This decrease can be checked and the stock preserved by lessening the killing. This fact is recognized by the States which have done away with spring shooting. It is recognized also by other States, which are making the season for upland game constantly shorter. It is not very long since Connecticut cut off thirty days from the open season for quail and ruffed grouse. To-day in the State of Illinois the open season for prairie chickens and ruffed grouse lasts but thirty days. On the other hand over much of the United States wildfowl have practically no protection, being shot from the date of the arrival of the first birds in late summer or early autumn to the departure of the last bird in late spring or early summer. This is an anomaly, what our correspondent calls a "mere farce." Shall it continue for the State of New York? When Michigan, Wisconsin, Minnesota and North and South Dakota are in the van in shooting reforms, shall New York continue to bring up the rear of the procession?

NAMES.

A CORRESPONDENT recently wrote us expressing the opinion that we were in error in calling a certain animal a panther. He maintained that its true name was something else, and his letter thus brings up again the matter of popular names so frequently the cause of misunderstanding between writers. It is the shield about which the knights so fiercely quarreled.

It is well understood that in different countries and in different localities the same name may be applied to animals which are widely different. A very large number of the common names used for American animals are importations brought to this country by the early English colonists. The American migratory thrush was called the robin, for no better reason than because he had a russet breast, as has the very different bird of England, known as the robin redbreast. Over much of northern North America we have the gallinaceous bird, known in different localities as partridge or pheasant, yet which is neither, but a grouse. The red deer of Britain is widely different from the red deer of America, and in turn the animal which gave its name to one of the branches of the Saskatchewan River is different from either. The list might be indefinitely extended.

More than that, within a comparatively limited area different names are often applied to the same creature, and a single species may have a multitude of common names. To overcome the confusion and misunderstanding resulting from this multiplicity of titles, persons who wish to define precisely what species they mean, commonly use the Latin name of the species—the term by which it is known in science—and when this is done there is never any question as to what is meant.

Many of these local names are unknown out of the limited district where they are used, and are apparently meaningless, their etymology and the reason for their application having been lost. How many persons are there, for example, who know what a wamp is, or a blatherskite, or a sleepy brother, or a weaser, or a gray-back, or a cow-frog, or a smee, or a poacher, or a bustard, or a white flesher, or a shrups? Yet these are all names of birds commonly sought for by gunners and regularly reaching the provision markets. What each term means can readily be determined by a reference to Mr. Trumbull's admirable "Names and Portraits of Birds Interesting to Gunners." It is well enough known that our common golden-winged woodpecker rejoices in thirty or forty names, while the little ruddy duck, better known as booby or stifftail, has, if we recollect aright, about eighty different vernacular names.

All of this is sufficient to indicate that nothing very decisive is to be said about the right or wrong of using a common English name. If, in the county of Richmond, State of New York, the public decided to call a horse a moose, then in the vernacular of that particular community a horse is a moose. If in Maine they call a cougar a catamount, a catamount the cougar is for Maine, although the same name may be applied to one or both the lynxes in other parts of the country. Therefore it is hardly worth while for people to fall foul of each other and dispute acrimoniously as to the correctness of one vernacular name over another. Thirty years ago such discussions were common, and the little Bob White—quail of the North and partridge of the South—furnished a frequent subject for heated arguments. In a matter such as this common usage rules—and often leads to endless confusion. Even to-day we read frequently of the capture of silver-gray foxes, and notices of such captures are frequently accompanied by dissertations on the great value of the silver-gray foxes' fur. Yet the term silver-gray is frequently applied to the common gray fox (*Urocyon*), whose pelt is of little worth, while the real black fox or silver fox is, as the price which its fur brings shows, exceedingly rare.

The panther, cougar, puma, catamount or mountain lion has a very wide distribution, and so a good many names, each of which may fairly be called the correct and proper name in the locality where it is employed, for after all, words—and names are words—are only the tools which we employ to convey our thoughts to others. A man who in the Rocky Mountains speaks of a panther as a catamount, is certain to be misunderstood; if he speaks of it as a puma, people will not know of what animal he is talking.

The time is not likely ever to come when there will be a universal agreement as to the vernacular name to be applied to each one of our different species of mammals, birds, reptiles and fishes. But the time may come when all people who wish to define with certainty the species about which they are speaking or writing will use its scientific name, which will make sure what is meant. That this is not now done is to be explained by the general ignorance of the public on scientific matters. Always to give a scientific name has an appearance of pedantry on the part of the writer, while on the other hand it is likely to frighten off the reader, or at least to interrupt the current of his thought.

We believe that the preponderant sentiment of the sportsmen of New York is that the spring shooting of wildfowl must be foregone if we are to retain our wild ducks and geese as a permanent possession. This conviction is given expression in the bill now before the Legislative Assembly, No. 353, to close the shooting season from March 1 to Aug. 31, and we print in another column the appeal made by the Fish, Game and Forest League in support of the measure. The other measures advocated by the League are excellent. More protectors and better paid protectors are essential to an effective enforcement of the law. If we had an efficient executive force the Long Island night shooters of ducks and spring shooters of snipe would not enjoy the immunity now accorded to them. The bill to forbid the sale of woodcock, grouse and quail is a most salutary measure. The time has come for the practical application of a principle, which has through a campaign of education come to have very general acceptance as a theory, that the sale of game should be forbidden at all seasons. If we cannot stop the sale of all game at all times, let us at least stop the sale of those species whose diminishing stock stands most in need of protection from the market-hunter. Let New New York follow the wise lead of Massachusetts and stop the sale at least of woodcock, grouse and quail.

Mr. Henry Talbott's paper on "Little Hunting Creek" is a timely contribution for the week of Washington's Birthday, and the extracts he gives from Washington's daily journal give an exceedingly interesting picture of the proprietor of Mt. Vernon as a fisherman. In connection with what Mr. Talbott has here written may be read the late George H. Moore's essay on "Washington as an Angler," which was printed in the *Woodcraft Magazine* of April, 1900. "I am content," concludes Dr. Moore, "to have been the first to claim for George Washington his rightful place as an angler—a genuine disciple of Izaak Walton."

A large circle of angling friends has been grieved by the news of the death of George F. Mills, who passed away at his home in Brooklyn on Feb. 9 at the age of forty. Mr. Mills was for many years associated with the firm of Wm. Mills & Son. He was widely known in the fishing tackle trade and among anglers, and his personal traits were such that acquaintance with him soon developed into friendship. His untimely death is sincerely lamented.

The Sportsman Tourist.

The Stag at Grief.

He pawed in the valley,
He paused on the hill—
Not a sound but the tamarack's sighing;
Not a taint in the gale,
So he bounded at will,
Nor a foeman, nor danger, descrying.

But the huntsman stands true
At his post in the glade,
While the embers of the day are slow dying—
Hark! the crack of his gun!
Mark the gleam of his blade!
As he bends o'er the quarry, low lying.

THEODORE F. C. DEMAREST.

Frozen in on Barnegat.

HUNT and I had been talking guns for over two years, until, to justify their boasted merits, we voted to take a shooting trip.

Various places were suggested and looked up, from a goose pond on Cape Cod to floating batteries in the Great South Bay, all of which met with greater or less objection, until it was finally decided upon Barnegat.

We left comfortable firesides on Nov. 25 with Government Bureau predictions of fair, pleasant weather, telegraphing ahead for boat and decoys.

As we left the railroad depot it was suggested that as we were embarking upon a hazardous journey it would be prudent to invest in casualty policies for the benefit of our families, and we each accordingly purchased one good for forty-eight hours. After getting in the train and reading over the printed conditions on the back, we learned the policies did not cover gunshot wounds or drowning.

Forked River was reached early in the evening, where we found our boat, a 35-foot cabin cat, with captain and mate awaiting us. Getting a late supper at the hotel and quickly changing into our hunting togs, leaving our watches, cash and return tickets in our host's safe, we got on board and started for the shooting grounds, some seven or eight miles distant.

Not having felt well for some days previous, I had stipulated before leaving home that we should not spend the night in the boat unless the conditions were favorable. The weather, however, was perfect, with a gentle start sheet breeze from the southwest and a glorious full moon, which, if it did not promise well for a flight, at least left us no excuse for a comfortable sleep on shore.

Arriving upon the grounds, we came to anchor midway between the blinds, the outer beach and the inlet from the ocean, a mile or so from each, and stowed ourselves away snugly for the night.

Next morning at 4 we were called, and bolting a hasty breakfast, tossing for choice, put out for the blinds in sinks, each taking along an extra sink with man and thirty decoys. Early as we were, we found that both the blinds had been pre-empted, and in one of them there was considerable grumbling over getting out, but as Capt. George had built the blinds, the occupants reluctantly saw the justice of our claims and pulled elsewhere. Hunt's blind was off shore near the middle of the bay, while mine was near the inlet.

Tying my sink inside, my man proceeded to set his decoys, and as it was hardly yet light I leisurely waited for him to finish and get back into the blind before loading and getting ready for the fray. He had hardly turned his back after casting off the stools when, looking up, three broadbills appeared hovering over them. Nervously shoving in a couple of shells, I fired twice and scored two clean misses. Capt. George seeing what was up, loaded and fired once as they wheeled, and likewise missed; and then noticed for the first time by both of us, after three shots, a solitary broadbill got up out of the decoys, where he had lit without our knowing it, and had sat during the fusillade. Taking quick aim, the Captain fired his remaining shot and again missed. The score was even, and I suspect the secret joy upon my face stood out as the chagrin on his. The outlook, however, was encouraging, and after mutual explanations we settled ourselves for more serious work.

But that was not to be, for those four birds were the only ones that came to our decoys during the entire morning. We got some passing shots flying by, bringing down two old wives, and saw what seemed enormous flights going over Hunt's blind, with a bunch of geese and another of brant, whereupon we cursed the luck which had sent us to the inlet blind.

At noon a soft, gentle rain began, and we put back to the boat. The others shortly afterward appeared, with one broadbill, a butterball and a diver, which had cost them exactly three cartridges, and they wondered why we had not gotten those geese and brant, so near to us had they seemed. We decided to lunch and then go out for some afternoon shooting on the beach, where we hoped for a rabbit or two in the scrub oak or anything that promised not to travel faster than our shot.

By the time we arrived on the beach the rain had turned to snow, with increasing wind and a decided fall in temperature. Here we wandered for some hours, until thoroughly chilled by what had then become a blinding snow storm with freshening wind from the northeast, and at 4 P. M., when almost dark, after seeing nothing larger than snowbirds, we put back for the boat to spend the night and try the blinds again in the morning.

As we were about to get into our sinks, pulling off from the beach, one of the men from the life saving station came down to look after a small boat moored at that point, and I asked him what he made of the weather. He replied. "We are in for a no'easter, and the barometer has dropped an inch." This seemed startling, but as no one else said anything, I concluded to hold my peace.

Reaching the boat with difficulty, the wind continuing to freshen, and lashing everything down for the night and casting over the spare anchor, we made ourselves as cozy as possible inside, festooning the cabin with ropes, upon which we hung our outer coats in hopes of getting them dry, and proceeded to a supper of most excellent broiled diver.

All through the night it blew hard, and the boat swung and pounded heavily. In the morning a strong gale was raging from the northwest, which made the outer beach and inlet from the sea our lee. The decks, mast and sail were covered with frozen spray and snow, the weight of which sunk the boat some 6 inches lower in the water and made her top heavy.

Shooting from the blinds was out of the question, for no sink boat could have lived in the sea to get them, and one did not dare move out of the cockpit of the boat for fear of being washed overboard. There was nothing to do but to sit quietly, watching for a let up in the wind, which would give a chance to reef and beat back to Forked River. But the gale continued to increase, with falling thermometer and heavy snow.

Toward noon the atmosphere cleared, and the men, holding on to a life line with one hand, chopped the ice off the decks and cabin top, which made riding easier, but the sail was frozen stiff, making it impossible to reef, and the mast covered with ice its entire height to twice its natural thickness, over which the hoops could not be hoisted. The sink boats towing at the stern with covers over their holes were now covered with frozen spray, which sealed them up like air chambers. It was bitter cold; all my coats and three pair of socks could not keep me warm.

This was not what we had bargained for. Nightfall came with no abatement, but rather increase in the gale, and on taking stock of provisions, finding we were running short, we dispensed with supper with the certainty of another night before us. This left a little bread and our four remaining ducks. Meats, coffee and milk were gone, and while we were in no immediate danger of starvation, the prospect was not the most cheering—lying in a bay between thirty and forty miles long by eight or nine miles broad, seven miles out from the base of supplies, with ice forming off the shore, and unable to get there until the wind should die down and the sun come out and thaw the sail.

At dusk the ice began to form as slush on the crest of the waves, preventing them from breaking, and as the cold was still intense, realizing we were in danger of freezing in, the Captain and all hands made a desperate effort to reef sail and make a beat for the shore at the river mouth; but try as we would, we could not get the reef points to meet under the sail, so swollen and stiff had it become. In despair, we gave it up and resigned ourserves for another night.

After an hour or more of violent tossing, the boat began to ride easier, until there was little or no movement, and we imagined the wind had at last gone down. It was very dark, and going out of the cabin to investigate, the Captain found the gale still raging with the same persistence; what caused our easier riding was that the sea was now all covered with freshly formed ice, which gave it a gentle, undulating motion, keeping the waves down, but not yet hard enough to be stiff. Another hour and we should be frozen in solid, and we decided, if we were going to freeze, to hoist anchors and head the boat for the outer beach, running her as much inside the inlet as possible. A small piece of the peak was run up and the vessel was driven before the wind through the young ice, until she came to a dead stop on account of its thickness. Here we dropped anchors and spent the night.

On getting up in the morning we found we were frozen in solidly in 3 inches of ice. The wind still blew. To get the boat out of the ice was impossible. The danger now was that a slight shift of the wind might carry the boat with the ice out to sea. The Captain suggested that we might try to get on the outer beach and seek shelter at the life saving station, while he and the Mate stood by for possible change of wind. We accordingly got the sinks cleared, and piled our luggage in and the retreat began.

At first the ice was not strong enough to bear, being salt and fresh formed from slush, but by dint of rocking and chopping we got along until it became strong enough for us to get out and haul the boats over the top to shore, where we shouldered our traps and made our way through the snow to the station. Here we were warmly received, and after thawing out were told that we could get a train late in the afternoon at a point eight miles up the beach, and that, at six miles up, a horse and wagon could probably be gotten to come down and get our traps.

We decided to walk to the railway, after negotiating a loan with the men to carry us home. Those who have walked along yielding sandy shores can form some idea of the difference between eight miles of crumbling sand under foot coupled with a foot or more of soft snow, and an equal distance on hard sidewalk or macadam road. At three miles up we struck another life saving station, where we rested and warmed up. At six miles we found the first house, and to our joy they did have a horse and would go back for our bags and guns. Proceeding again, we finally approached the railway station, and when within 200 feet of it saw a train pull in. It was nearly two hours before our train would be due, and this one did not interest us. As we got to the platform it drew out. After it had gone I went to the station master and asked where that train was bound for. He replied, "New York!"—our destination. On remonstrating it could not be possible, as there was still nearly two hours before the evening train was due, he said, "Oh, that was the morning train just getting through." This was heartbreaking, after a weary tramp against a strong wind, through heavy drifts and soft sand in great hip boots. If the morning train was five or six hours late on account of blockades, when would the evening train be along?

We found the telegraph station and attempted to send messages, but the wires were down. The telephones between each life saving station had also been down. Finally our train came, behind time, but not so far behind as the morning train, and carried us over to the mainland, where we got into sleighs and were driven to Toms River. Here we got papers and began to learn the news of the world, and realized the terrific force of the storm, which had wrecked numerous ships from Cape Cod to Cape Charles, with loss of many lives; the railroads between Philadelphia and Boston were chocked with snow, and from many places no telegraphic communication could be had.

And then it dawned on us, that if our outing had not been just the kind we had counted on, we had gone through an experience which happened to but few this side of the frozen north.

The boatmen stayed there imprisoned in the ice for two days after we left, when, suddenly in the night—in the twinkling of an eye—a soft east wind with rain sprang up, and in the morning the boat had motion again. The ice on the frozen sail was rained out—not thawed by the much longed for sun—and they hastened to reef and sail home.

FRANCIS H. BERGEN.

Memories.

"I remember, I remember."—Hood.

TIME evens matters pretty fairly. If the young fellow of twenty has much to look forward to, we old fellows have more to look back upon. I'm inclined to think we have the advantage, especially those of us whose impulses led us with ready gun across the game fields of our generation, or, rod in hand, along the streams and beside the lakes before the necessity of pisciculture other than by the "old-fashioned" method had ever been dreamed of.

The young fellow has a better balanced, better looking, handier and more powerful gun than we had in those elder days; his shiny, supple split bamboo, with the glittering reel, is a far cry from the cane pole and chalk line of our boyhood; the nitro load he uses in his handsome hammerless is the apotheosis of projectile skill, and in the evolution of gunnery all his appliances for the pursuit and capture of game would have been marvelous to us. But, my dear boy, we had the game. And in support of Rochefoucauld's maxims we are not wholly displeased at your misfortune in this regard.

One of my first memories is of a wonderful flight of pigeons—the last of such incursions ever made into the Rock River Valley of Illionis, where my parents were residents. I can close my eyes to-day and the marshalled lines of the interminable flocks flit across the retina as they did that day more than a third of a century ago; flock following flock throughout the day, each stretching beyond the rim of the horizon, the migratory millions swept on their way, whither? You will never see them, my dear boy. They are gone like the day and the lad that watched their flight, and neither the birds, the day nor the boy will ever return. Countless thousands were trapped and shot. In fact, I presume that I could find a bed or two of pigeon feathers in the old neighborhood, souvenirs of the time when a hundred dozen pigeons were taken with one cast of the net. I remember a local superstitution that the departing soul lingered longest on a pigeon feather bed, and a tale that received considerable credence was of an old lady of the community who found death impossible, and to relieve her suffering was removed to a bed of goose or hen feathers with the result that her spirit passed quietly and easily.

Of course the pigeons did not disappear at once. They came back for several years after the big flight that I remember, and offered considerable sport of a pot shooting kind. Dead trees in the grove would be covered with them, and marvelous stories were told of the numbers slain at a shot. Old "Saut" Deyo told a tale of 147 gathered after one discharge of a Potsdam musket loaded to the danger line with black powder and No. 4 shot, and a number of good people backed up "Saut's" assertion. Just what he might have done with an 8 gauge and No. 7½ must be left to the imagination. You'll very likely never see a wild pigeon, young man.

Oh, but we old uns "have heard the chimes at midnight!" There were ducks then and long after. Green-headed glorious mallards quacked in the ponds and bayous, and teal and wood duck thronged the bends and reaches of the creeks.

The memory of long tramps along Eagle Creek and up the Elkhorn rises up as I write. Times when the mallards sprang from every boggy stretch, and low flying teal scudded around the bent banks. The old muzzle-loader and I made connection with them only rarely, but a single tramp netted more ducks than a week of hard hunting and straight holding is likely to do nowadays. A quarter's worth of powder, the same of shot, a few percussion caps, a muzzleloading gun and a boy in blue overalls were the necessaries that grouped themselves about a big bag of ducks then. It takes more now, my boy.

I remember, I remember, a boy in blue denim overalls, and how he begged that day to accompany father and Jip Shoemaker on a chicken hunt. An old musket that had survived the stricken battlefields of centuries was his only available gun. Its mighty hammer swung in a 6-inch arc and was driven by a mightier spring to land with crushing force upon a cap the size and shape of a rough rider's hat. It roared like the crash of a cataclysm when it went off, and kicked like a traveling man. But to the boy it contained infinite possibilities of life and death. Under the circumstances it was good enough for him. He wanted to go; and after a demurrer that he argued down they let him. There was a dog in the party. To the boy he seemed the ultimate perfection of the canine genus, and the man looking back doesn't see many dogs—on the back track that had a license to show old Boney the way to a covey. How he raced and turned and quartered, head in air, an eye to the guns, and every sense alert and anxious; and then, oh, marvelous moment! he found them. There he stood the bounding, racing figure of the previous moment turned to marble. The saliva dripped from his slowly moving under jaw, and as we approached he took a step forward and froze again rigid and statuesque. But his eye, lit with the fire of conquest and expectation, blazed like a beacon. Good old Boney! He met an ignominious death at the hands of a fat fool whose unwise parents made him a terror to the neighborhood by gratifying his desire for firearms.

The men walked up behind the dog quiet and smiling. The boy didn't feel that way. He pried the infinite hammer of that musket past two notches of the ratchet with eager haste, and prayed for strength of arm and forefinger to pull it loose again. He was excited. He could have given the dog cards, spades and little casino in a game of excitement, and still have won with ridiculous ease. He had never killed a chicken, but he wanted to, he wanted to bad, and right away. He'd kill that chicken if it was the last—b-r-r-r Jehosophat! there they go. With his heart in his mouth the boy leveled the musket on a feathered cannon ball speeding past. A determined clutch of his forefinger on the trigger was followed by the jarring crash of the discharge and dimly through

tears and powder smoke he saw the bird pitch downward into the bright oats stubble, where it lay beating feebly with its wings. "I killed it! I killed it!" he shouted, filled with the crowning joy of the moment. "I killed mine. Oh, say, I killed one right over there."

Old Jip, who was as great a hunter as Nimrod, but who had neglected to cultivate that connection with the Lord reputed to the biblical personage, turned round on him with an expletive for emphasis: "Shut up that noise," said he, "you may some day accidentally kill another, and if you lose your voice over this one how will you holler then."

The boy subsided. The remainder of the day he loaded and fired very much after the manner of Mr. Tupman, but no more birds fell to his musket. Still, he didn't care much. In the back of the buggy lay the victim of his one successful shot, and he was satisfied.

MOSCRIP.

MARSHALLTOWN, Ia.

Buck Ranch.

MR. PARKER was ready at Tutwiler with the spring wagon when the south-bound train reached there, and we got off with guns and baggage. Two venturesome Dianas, Miss Breckinridge and Miss Dabney, had come with me, upon the invitation of Captain Bradford, to share the generous hospitality of Buck Ranch and the glories of the chase. The Captain was already at the ranch, and Parker handed me a note from him, mainly about how bad the roads were. We found them so.

The wagon would only hold baggage and guns, but fortunately there were saddle horses ready. After some tightening of girths for the bad roads, the mount was made, and we were soon well into the mysteries of that seven-mile road. It passed right by where the big rattlesnake was caught last spring, that dressed into such excellent "veal chops," thence through McKee's place (the poor fellow is now dead) and over the bridge to Buck Ranch.

Then there were greetings with Captain Bradford and Mrs. Parker, and admiring of the fine deer that the Captain had brought in during the day, "just to encourage the newcomers." It hung in the big, open hallway, and later, when all was dark and one of the newcomers was passing that way who had forgotten about the deer, there was a collision. None of the others knew about this.

Well, there were hot Scotches for the ladies to overcome the fatigue of the ride and different sorts of things for the gentlemen that would overcome any kind of a fatigue, then a short chat by the big wood fire and then—oh, that Buck Ranch supper! Mrs. Parker was surely responsible for that! And the young ladies were presented with the big cake that Mrs. Bradford had sent them from New Orleans.

Some mysterious things happened at that supper table, but it was to be expected, for Miss Mary and Miss Frances had come to have a good time. For instance, one cup of coffee got sweetened wrong somehow, and tasted more like mackerel gravy. Half of that coffee was swallowed with apparent unconcern, but only half.

A pipe was resorted to as soon as supper was over, and for two days after that the pipe always seemed to have a mackerel flavor. All of this only one member of the party knew about.

Well, after supper there were some more things that Horatio hadn't heard about. A large graphophone was brought to bear on the audience that began to gather from nobody knew where, and rendered a series of dissertations by the authorities of the day, mostly by one Uncle Ezra about parrots, dogs, monkeys and "reflection soup," and a sermon by somebody about "Nicredemus." There followed music by bands and orchestras, and the Captain's favorite banjo song, "Turkey in the Straw." Right where that versatile machine stood the Captain and I had made our bed of straw four years ago, when Buck Ranch was in its infancy. Now there is every comfort for the hunter, and the change is noticeable, yet with only a straw bed on the floor one can be happy at Buck Ranch.

Early next morning the sky was threatening, and it was doubtful if we would get into camp that day, but in the middle of the forenoon it cleared up, and we were soon on the march again, out into the wilderness. A farm wagon had been exchanged for the smaller one, and was loaded with the camp outfit, and escorted by the party of five hunters (the two ladies, Captain Bradford, Parker and myself), together with Leonard, the Creole mulatto cook, and Tom, the woodchopper.

The route lay along a blazed trail through light cane, then down a shallow slough for several miles into the heart of the Buck Ranch forests. Here the two tents were pitched and the camp set to rights generally, while Leonard did some things that we afterward found out about. His venison gumbo is a whole feast in itself.

In the afternoon the Captain took us regularly in hand. We were piloted up a narrow slough, between thick cane ridges, our horses splashing through water knee deep for about half a mile, when we turned through an opening in the cane and dismounted on dry ground. Leaving the horses, we walked some distance to where sign began to appear, and here the Captain stationed the ladies on favorable logs, just out of sight of each other, and he and I took diverging courses further on. Toward nightfall a shot was heard in Miss Frances' direction, but I had all the treetops in my part of the woods full of turkeys and couldn't go. The sight on my rifle wouldn't come to a head up against the bright sky, from down in the dark woods, and after missing three I quit, as the others were all gone. When we came together for the return to camp, Miss Frances showed us where the big buck stood when she shot at him, but he had walked off while she tried to reload her single shot Maynard .38, and as it was too dark to look for blood on his trail no pursuit was attempted. Some turkeys had walked by the end of the log that Miss Mary sat on, but she composed herself and let them pass, because she wanted to kill a deer and was unwilling to take chances on frightening one by firing at small game. The Captain had seen some turkeys.

Leonard was again ready for us when we reached camp. We didn't disappoint him—but first came the hot Scotches (I was about to forget)—for hunters and huntresses had been walking in water ankle deep with light moccasins on, and it was a cold November evening. Those Buck Ranch woods were very wet—all of the best feeding grounds were in slashy open woods, and one had to be reconciled to wet feet, for the still-hunter cannot well use boots or heavy shoes.

After supper we gathered round the log fire, backed against a big elm tree in front of the ladies' tent, and talked about what we would kill to-morrow. Miss Mary told a little story about some oysters (which didn't worry us much, as Leonard's gumbo "stock" was still holding out well), and Captain Bradford told of adventures during the time that the sixty-six notches grew on the long old Ballard and the twenty-six on the Maynard, and about four hundred others had grown on other gun stocks that were not here now.

The wind was making a very soft kind of music in the elm tops, the moon shone through the branches from a very deep blue sky that a fleecy cloud scurried across now and then, and off in the dark woods some wolves were howling dolefully. All of this we soon took to dreamland with us—the dreamland of the hunters' camp.

After daylight, coffee and gumbo or something, we went to the feeding grounds again, the Captain going to the southward while the two ladies and I went back for another trial where we were the previous evening. It may be mentioned here that not even the Dianas were exempt from the rule that no water should be applied to the face before the morning's hunt, as it was supposed to make the eyesight less strong and clear. If any sleep was left in their eyes after a cup of Buck Ranch coffee, it was rubbed out with the dry knuckles. Oh, the superfluities of civilization!

We went pretty much the route of the previous evening, through thickets and openings, wet and dry places, and finally left the horses secured in the edge of the cane and took favorable looking stands in the open woods. But the morning passed away serenely and no deer that morning was any the wiser of our invasion of his territory.

Then came a task—to pilot two ladies the dryest way out from the middle of a very wet slash. We walked twice the straight distance, trying to find a route with less than 6 inches of water on it, and finally found ourselves in the deepest water that the slash afforded, when my party "mutinied" and waited there for the horses to be brought.

Back at camp there was something to show for the shot we had heard in the Captain's quarter of the woods. When the ladies entered their tent they found a fair specimen of a fawn lying just within. That evening we all went with the Captain back to where the fawn was killed. He and Miss Mary took a stand together, while Miss Frances and I went a little further away from camp and selected a fallen top with plenty of sign all round it. In vain we waited for a buck. One ran by through a slash near by, but too far away to be seen. Finally I began work with the turkey caller, and soon had several turkeys approaching. By this time it was rapidly getting dark, and Miss Frances had to try a long and unfavorable shot, which she missed.

A shot had been heard from the other stand, and when we rejoined the others there was a big gobbler that Miss Mary had killed.

"It was a hard shot to make," said the Captain, "but I placed my arm for her to rest the gun on, and when they all had their heads down in the leaves and grass, she got the gun in position and fired. I thought she had missed and told her so, for I could see no dead bird from where I was. Later on, when I went over to look anyhow, there it lay, where it had fallen so dead that it didn't flutter."

Miss Mary was shooting a .32-40 Marlin. The honors of the day were hers. After the turkey had been examined and admired, she told us that it had caused her to lose the buck that we had heard running.

"I had been watching the turkeys for a chance to shoot," she said, "when I happened to look behind me, and there stood that great big buck looking at me with a very amused expression. Before I could turn to a position to shoot from, off he ran, looking back at me triumphantly."

There were only three horses for the four hunters, and when the slough was reached, just within sight of the camp-fires, the pedestrian would wait at the water's edge, blinking at the inviting fire across the water, until a horse could be led back across for him. Then there was changing of wet shoes and then supper. That evening Parker came out from the lodge and spent the night.

"Leonard, this cup of coffee has wern out. Give me another," said the Captain, and when the other was worn also, we again gathered round the fire and had more stories.

Saturday we hunted unsuccessfully, and Sunday we took a long ride to Cyndy's Band. This is a negro religious sect of the locality, the following of an old woman named Cyndy, who teaches a very commendable code of morals, but a ritual that is several steps back toward African savagery—bell-ringing, pan-beating, dancing, etc.

Returning to Mrs. Parker's, we dined and then rode out to the camp before night.

When the hunters left camp next morning for the south side of Beaver Run, a light rain was falling. It grew heavier as the morning advanced, and all were well drenched when camp was again reached. The Captain had killed a turkey.

To-day dinner was served under cover, and afterward there was gun cleaning, napping and chatting under the canvas on which the rain drops pattered the music that artists don't play. In the late afternoon the Captain said we must all go to the house, as it might rain for several days, so the camp was left in the care of Leonard and Tom, and that night found us again enjoying one of Mrs. Parker's suppers, carefully watching our coffee cups the while.

There was the graphophone again that night, with the speeches and "Fra Diavolo" and "Carmen," then "Turkey in the Straw" and some lively dance music, to which some lancers and Highland flings were stepped off at a lively rate.

In the morning it was wet and everybody slept late. Then there were canoe rides on the bayou. Later in the day an excursion was made into Beaver Run from the north side. One of the ladies found a hollow log that purported to have a wildcat inside, and was surprised that no volunteer arose to go in after it. Any man that could crawl ought to do that!

Another evening around the great open fireplace and its big wood fire at the lodge! The graphophone played and the young ladies danced again. No care enters Buck Lodge.

Wednesday only Captain Bradford and myself went for the morning's hunt. On the homeward march I suddenly found myself in the presence of four of the enemy, but was not quick enough for them. During the morning I had wandered, unexpectedly, very near the camp, and made a stalk into it. Tom was importuning Leonard for a toddy, and the latter, having 'spied me, was replying, "What you talk 'bout, Tom? You know I don' boder de Cap'n's liquor!" Then Tom saw me and grinned guiltily.

Camp was moved that afternoon to nearer the best hunting grounds, the Captain and myself occupying it that night and the ladies remaining at the lodge till next day. While hunting Thursday morning, Captain Bradford got one shot and I got two, but no meat was brought in. In the afternoon the whole party was out in the same locality.

A shot was heard, then Parker called. This meant a wounded deer, and I started to him. Nearing the stand where Miss Mary was, I saw that she was aiming, and stopped just in time. A large buck was almost immediately in front of me, and walking broadside to her. All was in plain view from where I stood—she coolly steadying the .32-40 in position, with an elbow rested on her knee, as she sat on the log and waited for him to come into clearer view, while he, apparently suspecting something, was walking along stealthily, nearly toward where I stood. Thinking she had forgotten to bleat at him, I did so, and he stopped. (I was afterward taken to task. She was going to bleat when the right time came, and I had stopped him behind a tree.)

After an instant he started on, took several steps and stopped again, when she fired, and a puff of the skin on the far side of him, which I could distinctly see, showed where the bullet came out about the middle of his side. He tucked his tail and gave a jump forward, then wheeled and ran across my front. We had both fired several times, when, as he was about to disappear, I got in a bullet somewhere near the shoulder which brought him down broadside.

The worst is to be told. As I ran toward that perforated deer, calling to Miss Mary in a tone too loud for discretion, that he was hers, up he climbed and floundered off, and I—had an empty gun!

Off he went, his strength growing to meet his necessities. The Captain had heard the noise and come with Jack, who gave chase, but soon returned, and could not be persuaded to take the trail again. It was now night and we went to camp with heavy tread. Next morning the trail was taken up and plenty of blood found until it entered a slash, where we lost it, and with it that magnificent set of antlers.

One more score for Miss Mary. A 'possum was looking down through a fork high up in a tall tree, and she put a bullet in his head.

It was with a regret that we saw the graphophone put away after the last tune that night, and a touch of sadness was in the handshaking with Mr. and Mrs. Parker and with Captain Bradford as we rode on to the long bridge which reaches between Buck Ranch and the other world beyond Cassidy Bayou.

Ten days later the Captain, who had tarried longer, wrote that he and Parker had killed nine more deer, the season just having opened when we left, and that it took seventeen shots to down one that was wounded—and it was he that had once said to a fellow sportsman, "Was all that shooting at one deer?"

TRIPOD.

MISSISSIPPI.

The Dog-Ribbed Woman.

Editor Forest and Stream:

The other day my little daughter, Helen, age six years, was shown a little picture book which had once been a great favorite with her, but which had been in some way mislaid and not seen by her for a year. The sight of the long forgotten book and of the dear old pictures caused in the little girl emotions of the liveliest satisfaction.

She hugged the little treasure to her heart and almost wept for joy to be actually possessed of it again.

We all know something of this feeling of pathetic pleasure in the rediscovery of something once dear and for a long time lost, or in hearing a story not thought of for years, but which, if one which once the imagination had clothed with pleasant interest, opens up vistas of the past, enabling us to relive for the moment the fresh life of childhood.

Such a surprise and experience was given me by Mr. C. P. Williams by his quotation in your last issue from that old story, Hearne's "Journey from Prince of Wales Fort in Hudson's Bay to the Northern Ocean."

I am much indebted to Mr. Williams for quoting the story and giving us the exact title and source of it. The pathetic story of that dog-ribbed Indian woman and her wonderful resourcefulness while alone for months in that wintry wilderness of the far North has a wonderful Crusoe quality to it, and was very familiar to me in my boyhood. I would give a good deal to know in what book or magazine I read it. But that I read it often and pondered on it much I know. I seem to associate the name of Mark Morrow with the story, and as its narrator. Can any one tell me who or what Mark Morrow was, or in what other publication than Hearne's "Journey" the story is given? In my story I am confident that the marauding Indians who killed the hermit woman's child were called "Athapascows" instead of "Athapuscows," as Mr. Williams has the name.

I heartily second Mr. Williams' suggestion for a reprint of Hearne's journal, and shall be glad to enroll myself as a subscriber.

C. H. AMES.

The police of Springfield, Mass., have been called on several times recently to take charge of a dog that causes trouble by his frequent visits to W. D. Kinsman's store to see the cash system operate. The animal seems to be fascinated by the carriers, and chases them whenever they are started. He rushes about, running against people and knocking over goods in his mad race after the carriers. He was recently given away to a firm doing business outside the center of the city, but managed to escape, and Monday went back to the store and the fascinating carriers at the first opportunity.

Natural History.

King Snake and Coral Snake.

Daytona, Fla., Jan. 29.—*Editor Forest and Stream:* We have here wha. we call the king snake. I do not know if that is the proper name for it or not. The coloring is yellow, black and red in bands around it, and in some cases the colors are in blocks. It is a small snake—I have never seen one over three feet long; has a small head and pointed tail. Will you kindly tell me whether the thing is venomous or not? There seems to be a difference of opinion on the subject here. H. P.

[From the above description it is, of course, impossible absolutely to identify the snake, but it seems probable that it is what is commonly known as the king snake, or milk snake, an entirely inoffensive species, or rather group of species, found throughout the South, and, as to certain species, as far north even as New Jersey. The genus is *Ophibolus*, and a closely related species, also black, red and yellow, is *Osceola*. One or more of the species belonging to the genus *Ophibolus* are said to be enemies and devourers of other snakes, and especially to prey upon the venomous snakes belonging to the attlesnake group (*Crotulidæ*)—whence the name king snake. The name milk snake comes from their supposed fondness for milk, and the late Prof. Cope speaks of the fact that his daughter, when a girl of six or eight years, had several individuals as pets, which drank milk readily from a cup which she held in her hand.

In an interesting paper on the "Batrachians and Reptiles of Indiana," Prof. O. P. Hayes says of *O. getulus:*

"It is extremely active and strong. Holbrook says of it that it is found abundantly in moist and shady places, although it never takes to water or to trees. It feeds on moles, small birds or such reptiles as lizards, salamanders, toads and the like, that fall in its way. He further says that it is commonly believed that it is the great enemy of rattlesnakes, but there is no great evidence of this. He, however, tells of one that had as a fellow prisoner a *Crotalophorus miliarus*, or Southern ground rattlesnake, and swallowed him. I found that in Mississippi this snake had the reputation of destroying rattlesnakes, and it received protection on this account. Dr. Elliott Coues says that the black snake (*Zamenis constrictor*) and *Ophibolus getulus sayi* wage a constant warfare against rattlesnakes and moccasins. They are said to be uniformly victorious and to eat their victims. It is on account of their prowess in thus destroying poisonous serpents that they have received the name of king snake. Mr. J. T. Humphreys, Burke county, North Carolina, gives an interesting account of a conflict in a cage between a king snake, *Sayi*, and a water moccasin. The former was 42 inches long, the latter 34, but with a considerably larger body. The moccasin was killed, its bones crushed, and, beginning at the head, the king snake swallowed 16 inches of the moccasin's body. Chloroform was then administered and both snakes preserved. The king snake had previously, while in captivity, eaten seven snakes. Dr. Yarrow describes a specimen of *getulus* in the National Museum that has two perfect heads. One head is a little larger than the other. The two gullets unite to pass into the one stomach."

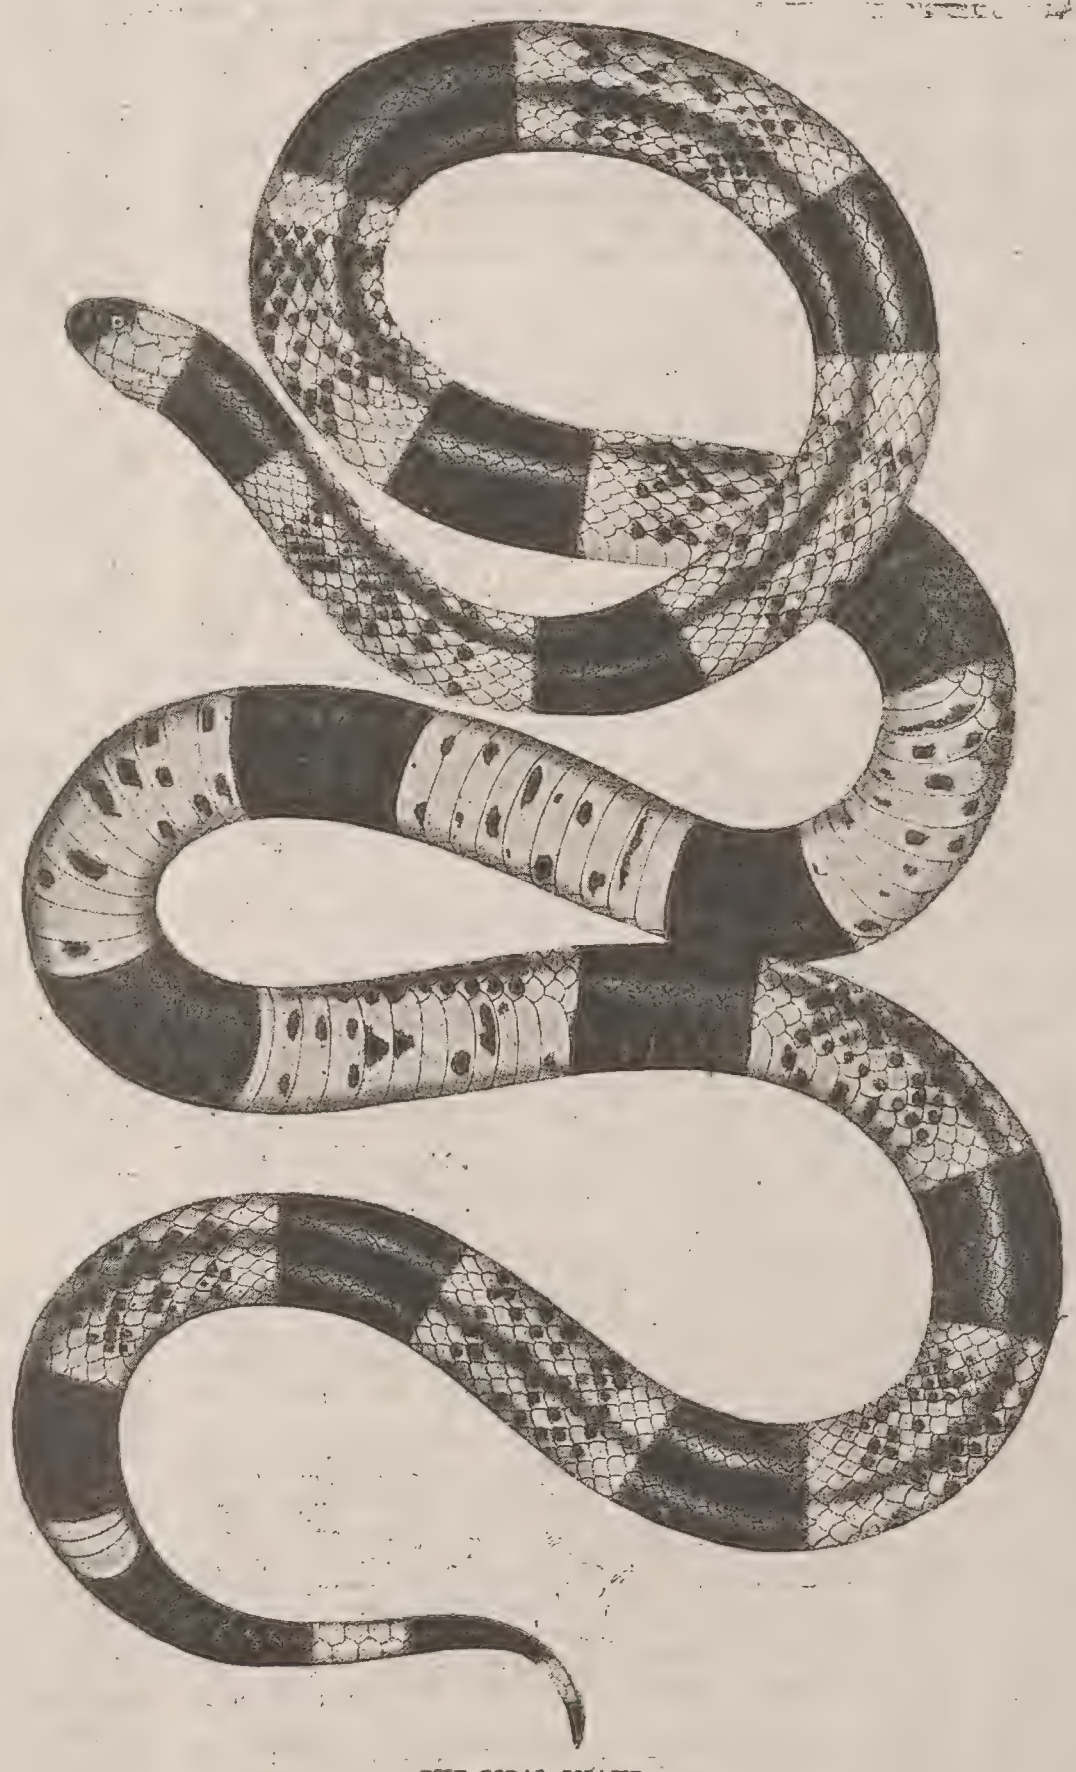
As stated, we presume that all that is said above applies to the snake inquired about by our correspondent, but on the other hand it must be remembered that in Florida there is another snake, also colored red, black and yellow in rings, which is by no means innocuous. This is the coral snake (*Elaps fulvius*), a small snake which measures from 18 inches to somewhat over 2 feet, and which is not very often seen. It is found from Georgia, south and west, down into Mexico as far as the State of Vera Cruz. Owing to its not being a species very commonly seen, and above all to its good nature, people are seldom bitten by it. The late Prof. Cope in writing of the family says that the bite of some of the larger species as *E. surinamensis* and *E. marcgravii* is said to be dangerous, but that of the smaller ones is innocuous to man and the larger animals. This was written a number of years ago, and since then there has been offered good evidence that the bite of the coral snake is very dangerous. This is furnished in part by a paper contributed by Dr. Einar Lœnnberg to the Proceedings of the U. S. National Museum for 1894, who says:

"This is the only species of Elaps I have found in south Florida, where it is rather common. It is known under several names, as "coral snake," "American cobra," "gartar snake" and "candy stick." It is perhaps the most dangerous snake in Florida, because it is not so much dreaded as the big rattlesnake or moccasin, though being quite as poisonous. As the last mentioned names show, it is regarded as a "pretty little snake." Few people know or believe that it is poisonous, it looks so harmless, and as a consequence they catch it and handle it rather roughly; the snake gets angry, bites and a human life is endangered. I know personally of such a case. A Swede at Oakland, Orange county, found an Elaps, and because of its beautiful color he caught it and tried to put it into a bottle of alcohol. The snake bit him, but the wound was not large, and as it did not swell he did not care much about it at first. After a while he was taken very sick, went to bed, asked for a physician and drank whisky; but it was too late. He died the next morning, about twelve hours after the snake had bitten him. During the last hours he was unconscious, but before that he suffered most excruciating pains. I have heard of several other cases of boys dying from an Elaps' bite.

"In other cases people have been bitten by an *Elaps fulvius* without suffering from it in any way, but I suppose that in such cases the Elaps had not been able to inject any poison into the wound, as it has rather a small mouth. However that may be, I cannot agree with Cope that the bite of the smaller ones (meaning smaller species of Elaps is innocuous to man and the larger animals). It is to be observed that the Elaps bites differently from the Crotalids and Viperids. The latter snake throws its head forward in striking and draws it back again immediately. The *Elaps fulvius* I have seen and heard about have acted in an entirely different manner. The poor Swede above mentioned had to pull the snake from the wound, and another specimen that I had induced to bite into sticks kept the sticks in the mouth for a good while. This habit probably signifies an intention to press as much poison as possible into the wound, which makes the snake the more dangerous. *Elaps fulvius* is, however, a good-natured snake, and it does not bite unless it is very much provoked. If not handled too roughly, an Elaps may be allowed to crawl on one's hands from one to the other. I have allowed it myself once, but I hardly think I would do it over again, and would not advise anybody else to try it.

"I have found *Elaps fulvius* under logs, and digging in the ground, as well as crawling about on the surface, but I think it prefers dry land.

"The largest specimen I have seen was from Oakland, Orange county, and measured exactly 1 m. from the tip of the nose to the anus, and the tail was 90 mm. This big specimen had fourteen black rings on the body and three on the tail. Other specimens have but twelve black rings on the body and three on the tail, but one of these has four on the tail. The yellow rings cover from one to two rows of scales." The total length of this largest specimen of the coral snake would then be about 43 inches—nearly twice the ordinary length.]



THE CORAL SNAKE.
From the Report of the Smithsonian Institution.

Dangerous Wild Animals.

Oakmont, Pa., Feb. 7.—*Editor Forest and Stream:* The most dangerous animal I know of, and one that is always dangerous, penned or at large, is the whelp with an old rifle in the outskirts of a small country town, and there is no excuse for his existence, he being utterly useless and thorough vermin. After having a rifle ball pass near enough over my head to hear the "whiz," and another go through the windows of my daughter's residence, I wish that either all game were utterly destroyed, that there might be no such whelps, or that a breed of "dangerous wild animals" might be found who would live exclusively on them. W. Wade.

Zoological Society's Guide Book.

The third edition of the popular Official Guide to the New York Zoological Park, bearing date Dec. 1, 1900, has just been issued by the New York Zoological Society. It is rather an imposing volume of over 100 pages, with many beautiful illustrations. It is a description of the Park, its buildings and its collections, and is copiously illustrated with photographs, maps and plans. The photographs are all of great beauty, and add very much to the attractiveness of the volume.

It is well known that the New York Zoological Society's park is by far the largest park of the kind in the world. The Society assumed charge of its grounds and work was begun about two and a half years ago. Its collections are free to the public eye for five days in each week, Monday and Thursday being the only pay days. The park is located in the Borough of the Bronx, and may be reached from down town by trolley lines to West Farms, by any of the elevated roads in connection with surface lines, or by the Harlem R. R., leaving the railway at Fordham station.

The park is diversified with hills and valleys, lakes and streams, woodland and open park-like glades. It has one interesting natural curiosity known as the rocking stone, a huge erratic, standing on a smooth face of granite, and so nicely balanced that the pressure of a child's hand causes it to move north and south about two inches.

When the park was first started its managers announced their intention of striving first to exhibit characteristic North American species of birds, mammals and reptiles, and this purpose has been well carried out. Here may be seen in the ranges for hoofed animals a herd of fourteen buffalo, of which six are cows and two male calves. They have a large range and are doing well. Here also are elk, antelope, mule deer, whitetail and blacktail deer, moose and caribou, together with such foreign species as the fallow deer, axis, forms of the red deer and others. An exceedingly interesting collection and one with special attractions for the big-game hunter.

The park is especially strong on bears. It has two large and beautiful polar bears, admirably housed; a pair of cubs now twenty months old, which are thought to be specimens of the huge Kadiak bear, but which may be one of the other great brown bears of Alaska (*U. dalli* or *U. sitkensis*), a large and growing grizzly from the Rocky Mountains, several black bears and a cinnamon and a Japanese black bear.

Wolves and coyotes and foxes are plenty here, and it will be remembered that last summer a litter of coyote pups was born, which, however, did not reach maturity.

Of sea lions and seal, both the eared and earless seals are represented, the one by the California sea lion from Santa Barbara, Cal., the other by the common harbor seal of our coast.

To tell at length of the birds, of the ducks' aviary, the aquatic bird house, the birds of prey, which are housed out of doors, and the wild turkey's inclosure, would take more space than can be given; but a word must be said about the flying cage, an inclosure of wire netting 152 feet long, 55 feet in height and 72 feet wide. It contains a stream, a pond and two or three large forest trees, besides shrubbery and other vegetation. It is the summer home of many birds, especially ibises, storks, herons and flamingoes. There is nothing quite like it in all the world.

While as yet little has been done toward getting together foreign collections, or even preparing quarters for them, there are some foreign mammals from the tropics housed in a temporary structure, called the small mammal house. Among these is a fine orang.

In certain ways and to certain people the collections found in the reptile house are the most interesting and beautiful in the park. Here are the alligators and crocodiles, lizards, turtles, serpents and amphibians. Except the alligators, all these interesting creatures, whether they dwell in the air or beneath the surface of the water, are seen through glass, and the case which contains each is fitted up with the accessories among which the animal would be found to live in a state of nature. As many of the species are tropical, luxuriant tropical vegetation is found throughout the reptile house, and the warm damp atmosphere, the fragrant odors of the vegetation and the green that everywhere meets the eye might lead one to imagine that he was really in the forest. Each case and the whole building has been fitted up not only with the greatest fidelity to nature, but with the nicest taste. It is a beautiful exhibit.

Membership in the Zoological Society is open to all who are interested in the objects of the organization, and who are endorsed by two members of the Society. The cost of annual membership is $10 a year, entitling the member to certain special advantages. Applications for membership should be forwarded to Madison Grant, Secretary, 11 Wall street, New York. The price of the guide book is 25 cents.

Game Introduction in Vancouver Island.

Cumberland, B. C., Jan. 23.—*Editor Forest and Stream:* The Cumberland Game Bird Importing and Protecting Association met and organized last Thursday evening, Mr. E. Barrett in the chair. The business of the evening was merely preliminary to another meeting, to be held later. A resolution was adopted that a subscription of $2 from each member be applied at once to purchasing and importing Virginia—Bob White—quail, to be-

set free near Cumberland to breed. Each member bound himself to obey and enforce the law in regard to the preservation of the birds.

A collecting committee was appointed to consist of Messrs. F. Jaynes, E. Barrett, O. H. Fechner and W. B. Anderson. Mr. S. H. Riggs, treasurer. The next meeting will be held on Thursday, Jan. 31, at O. H. Fechner's, to report progress, by which time it is expected letters will be here advising prices of birds, etc. Mr. Cross, of the Western Life Assurance Company, will obtain data in Victoria re experience with the quail there, for the benefit of the Association.

More About the Panther.

Editor Forest and Stream:

Several recent issues of your valued paper have contained articles about panthers and the danger from wild animals, which have stirred me up to reply, but the busy cares of professional life have prevented. But the call for facts opposed to the opinions of some of your correspondents in the issue of Feb. 9 is an appeal not to be denied. Before proceeding, however, let me most strongly approve your statement on the first page, as to gqeneralizing from personal experience. This is a common fault in the reasoning of many who mean to be perfectly fair in their argument. Because certain things have not occurred in their experience, it seems to them impossible that such things should ever take place, and they argue accordingly.

This faulty logic is not confined to those who claim to speak from experience, whether great or small, but is often observed in others and along many lines. And this very common fault in reasoning may be characterized as broad generalization from insufficient data. In other words, the premises not being reliable, the conclusion is not. This, of course, does not mean that the experience of your correspondents in Feb. 9 is not reliable so far as it goes, but that it does not go far enough to justify their conclusion.

Now for some facts:

The first instance I have before referred to in your columns, but will now give more fully.

Many years ago in Vermont a man on horseback was returning home at evening, and was chased by a panther. The horse ran at its best speed, for it had an unusual spur. The panther repeatedly jumped for the man, but was not able to reach him. He wore a long overcoat, the skirts of which spread over the horse's rump in the rapid flight. Those coat skirts were torn to shreds and the horse's flesh badly lacerated by the panther's claws as he would jump for the man but succeed only in striking his forepaws on the horse's hips. At least that panther meant business, and only the speed of the horse saved the man. My grandmother, who lived in the adjoining town, knew the man, and that the incident was genuine. My father has often heard her tell the story.

My father knew a man in our native town who was followed about two miles one evening by a panther, which evidently meant mischief, but was thwarted by the man riding close to a log house, and shouting "Open the door." In the large fireplace was a blazing fire, and as its light suddenly shone out through the opened door, the panther screamed and ran away. The man was an old soldier, a captain in rank, and a man who knew what he was about, whether dealing with men or animals.

Panthers were formerly plentiful in Vermont, and many stories of their boldness and ferocity were in circulation, but I give only the above, knowing them to be true.

As late as 1866 or '67 I saw a panther, in Vermont, which had been killed by a heavy charge of shot in the eye. This animal had been killing stock, was hunted to its den, the hole blocked up, then a rock pried up exposing the panther's eye, and the one discharge killed him. He was "spring poor," but weighed 120 pounds, was 7½ feet long and 2½ feet high at the shoulder. His tail was 2½ feet. These measurements were "in the flesh," and correspond to those given by Mr. Wells. My father once saw a panther's track on his farm in Vermont, and the beast must have been immense. Father then weighed about 135 pounds and could run on the snow crust anywhere without breaking it. But the panther broke through at every step, and when he jumped to the top of a rail fence (about one-quarter inch of fresh snow being on the broad, flat top rail), he left a track 6 inches across.

I have no knowledge as to the presence or absence of panthers in Maine. But knowing of their former abundance in Vermont and Canada, I cannot understand why they should not also have been in Maine, especially as their favorite food, venison, is there so plentiful. In 1881 I met in Florida a professor from Maine, who, with some of his students, had been hunting birds for the museum of his school. He told me that all the wild animals he saw in Florida appeared very different from the same species North. The Southern animals seemed as if enervated by the climate. E. g., he saw a panther sneaking by at short range, and fired at him with bird shot, trusting to climatic influence to prevent the brute from avenging the insult. The result proved the accuracy of the calculation in that instance. The panther kept on his way.

Some seventy years ago an uncle of my father, with a brother, was driving just at night in the Chateaugay section of the Adirondacks. A wolf howled, then another, and another, and soon a pack was gathered and in full pursuit. The men were unarmed, but had a very fleet horse. The horse ran at top speed, with the wolves close behind till a clearing was reached and welcome lights. The men always thought the horse saved them, and I think they were right.

Looking over the matter generally, it appears to me that something can be truthfully said on both sides of the question of the danger of wild animals, and that the advocates of neither side should ridicule or question the statements of known facts by the others. It also appears clear that long contact with man has greatly modified the attitude toward man, if not the nature, of our larger and more dangerous game; that climate and other local causes have a powerful modifying influence; and that among animals, as among men, there is great variation between individuals of the same class. In dealing both with biped and quadruped it is still true that "you can't most always tell who's going to do what." JUVENAL.

The Wood Buffalo.

MR. J. A. MACRAE, Inspector of Indian Agencies and Reserves for the Dominion of Canada, has recently returned from a tour of inspection to the far North—the mouth of the Mackenzie River. He brings some information concerning the wood buffalo which is of very great interest to naturalists and all interested in big game. Mr. Macrae writes:

"At Fort Chippewyan, Fort Smith and Fort Resolution I made close inquiries into the number of wood buffalo remaining, having an opportunity—owing to meeting so many Indians fresh from their grounds—such as I think no one else has enjoyed, to do this. Some of the Indians who were to meet me at each place had lately been near the buffalo, and had counted the different herds, which are generally speaking three in number—one ranging from Salt River to Peace Point, on Peace River; one from Salt River north to Great Slave Lake, and one from Salt River east and west. They number, I conclude, from 500 to 575. I understand that there has been an increase of perhaps a couple of hundred, and it would appear only to be necessary to continue vigorous protective measures in order to perpetuate the herd. It is noticeable that the fur of the wood buffalo, owing, no doubt, to climatic conditions, is longer and thicker than that of its brother of the plains, and it has that straightness and thickness which characterized the muskox robe."

The Canadian Government has forbidden the destruction of buffalo at any time, and the existence of this law has been made known to traders, trappers and Indians alike, so that there is now a general and well defined sentiment among travelers and residents in the country where these buffalo range in favor of their protection. If Mr. Macrae's estimate of their numbers is anywhere near the fact, there are many times more wild buffalo in Canada than there are in the United States.

Albino Hawks.

As Mr. Ruthven Deane in his note on "Albinism in the Red-tailed Hawk" wishes a record given of such captures, I will add a few to his list. About two years ago Mr. Charles A. Allen, of San Geronimo, Cal., wrote me that a pure white red-tail was shot by a ranchman who lived near him, but was not preserved, and also that he had several times seen another where the first was taken, which he thought he could secure for me. Some months after he wrote that the hawk had left the vicinity.

About a year ago I was written to of the capture of a pure white red-tail in western Missouri. This one was mounted, but the price asked was so extremely high, I did not purchase. This fall a friend in Galesburgh, Ill., wrote me that one of a shooting club of which he was a member had shot a pure white "chicken hawk," which had been mounted by the keeper of the club house. I wrote and tried to purchase it, but it was not for sale. What was meant by "chicken hawk" I do not know, but think that in all probability this was a red-tail, as the only other kind of hawk showing any trace of albinism of which I have ever heard is a Krider's buzzard, which has the whole tail pure white except the central feathers are slightly reddish. As the Krider's hawk (*B. borealis krideri*) is a very closely related variety of the common red-tail, it would seem that so far as now known albinism in hawks is largely confined to the red-tailed species. I have lately obtained a godwit, which is all white except a slight buffy shade, and I hear of a white sharp-tailed grouse having been taken.

M. HARDY.

BREWER, Me.

Squirrels in Confinement.

DEEPDENE, Surrey, England.—*Editor Forest and Stream:* Owing to my illegible handwriting (which has exhausted the patience of many printers), I am made to say in my letter to you on the black squirrels not quite what I meant to. I meant to say, "unless the large, jet black squirrel he writes of is the same species as the melanic variety of the gray squirrel," and have said "when the large, jet black," etc. And again I wrote "unless the upper tooth is broken the lower will never grow unduly long," and the types make me say "when the upper tooth is broken, the lower will never grow unduly long," which is exactly the oposite of what I meant to say. The squirrels in the London Zoological Gardens are never given nuts harder than peanuts, but they have sunflower seed, carrots, etc., and they used to be quite wild with delight when I brought them a few hazel nuts. There was an albino gray squirrel which used to chuckle over the nuts in a steady stream of glee and gather them all up to her with her paws as if she couldn't be sure of them unless they were under her. The teeth grind each other down and sharp. One of my pets used to sleep on my pillow beside my head, and I could hear him in the night grinding his teeth together. He insisted on my cracking his nuts for him, and I always did so, and his teeth were perfectly regular when he died.

W. J. STILLMAN.

Like Picking Up Money.

In every city, town and village in the United States where there is shooting or fishing or yachting we want agents to canvass for subscriptions for FOREST AND STREAM. Every sportsman is deeply interested in its subjects, and every sportsman is glad to discuss his doings afield and to hear of the adventures of other sportsmen.

Money is to be made by canvassers for FOREST AND STREAM, and those who wish to take advantage of the opportunity we offer should send for premium list and circular.—Forest and Stream Publishing Company, 346 Broadway, New York.

A party of Chicago sportsmen have purchased Chambers Island, Mich., from the Wisconsin Chair Company. The island is in Green Bay, about eighteen miles east of this city. The wealthy Chicagoans intend to convert the island into a game reserve, and expect to expend $35,000 or more in the construction of a club house and otherwise improving the property. The island comprises several thousand acres of land, mostly timbered, and deer are very numerous. The present owners have men employed the year round to keep hunters away. A strict surveillance has been maintained for several years, and as a result it is regarded as a fine game reserve.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

The Change in Washington.

KELLER, Washington, Jan. 28.—*Editor Forest and Stream:* For the last two years I have been feasting on the many good things that have been set before the readers of your valuable paper, without contributing anything toward supplying the larder. I am still living on the reservation, which a few years ago was one of the best stocked game preserves in the West, but to-day there is, comparatively speaking, no game at all.

In December Arthur Snyder and Henry Yake started out for a few days' hunt. They left Keller and went up to the nine-mile meadows, some fifteen miles distant, where they expected to find some deer, but no deer was to be found there, and as the mountains were covered with snow they did not even find any tracks. Then they went over on to the headwaters of Wilmot Creek, a once famous game range; there they found a few tracks, but did not see any game. Then they followed down the creek to near the mouth, and came back to camp through the nine-mile service thickets. Here they saw several tracks, but no game.

They were out five days and killed one squirrel.

A few years ago in going that round I am certain they would have seen over a hundred deer.

This winter two panthers were killed near Republic. A short time ago Mr. Eichinauer was coming from Bridge Creek, and after walking eight miles he met three cougars, and he claimed that they showed fight, and he ran back to camp. The next day Roll Clayton and a brother of the returned miner went down to where the cougars had been seen, took the tracks and followed them up in among the cliffs of rocks near the river San Poil. They found where the cougars had stopped, and they saw them. The boys fired and killed two at the first shot. The other cougar ran off a short distance, stopped and looked back. The boys both fired at it, and both shots took effect, not two inches apart, and the cougar rolled over dead.

Last week a farmer on the south side of the Columbia, near here, was riding along and he saw a cougar along the bluff. He gave chase, and as he was on horseback he soon treed the cougar, then went to a neighbor's house a short distance, got a rifle, and returned and killed the varmint.

It has seemed strange to me that though I have been on the reservation for sixteen years, I have never got to see a live one; and six are all that I remember having been killed.

There are a few beaver and otter, and this winter the boys down town killed a few coons. While the coons here are very much smaller than those we used to kill along the Missouri bottoms, they are marked the same. Grouse are disappearing very fast, especially the ruffed; there are a few sharptail here, and on this side of the river they seem to be more plentiful than a few years ago.

I have heard but one big wolf howl this winter, and that was in the early part. Coyotes seem to hold their own. I rather think they will increase, as there are getting to be more sheep in the country. They thrive on sheep. Ducks and geese are still to be found along the Columbia River, as we have not had any severe weather yet this winter.

LEW WILMOT.

A Hunt for Grub.

I have just received a letter from my cousin, Amos Cameron, whose love of nature's wilds led him to settle in northern Washington a few years ago. I inclose extracts.—EMERSON CARNEY.

LAST Monday morning I shouldered my old faithful .45-70 and at daybreak hit the trail for some meat, as we were getting below par as to grub. I reached snow line in about one and one-half hours, and soon struck a fresh deer track, and immediately set about to try my stalking abilities. I judged it a goodly sized buck. First he led off to my left on the steep mountain side in an old deadening. After zigzagging around feeding, I found a bed and saw it was a night bed. He then led off to the right and kept a straight course for a mile or more, then he began feeding, and I knew he was close. While maneuvering around, I found that he was up and a-going, first up one way, then slanting back the other, always keeping above on the steep slope back and forth. Well, I saw his scheme, and I believe he saw me more than once, but I left his trail and went straight up, hand over hand, for several hundred yards. Of course I was looking, and I saw him—or her, as it proved to be an immense doe. She was looking down her slanting trail from her lofty perch to see that man with the rifle come along. Well, I looked at her and tried to get a sight on her, but I was so worked out with my climb that I had a fair buckague. I could not hold a bead on a whole mountain peak, so I sat still a minute and rested. She kept a sharp eye down the track, then moved a few steps and stopped, with her body behind a tree, peeping around, which left me the rear end only in view, but I was pretty close—probably 100 yards or a little less—so I crawled up along a log and gave her one high up on the hip point. It ranged a little crosswise, passing through the back bone. A jump and a few slides and tumbles and she was mine—the largest deer I have ever shot.

Now my work had only begun. All at once it began snowing, as it only can on mountain peaks. Then while trying to bleed my game, there came a little cyclone or something else. I dodged behind a tree, and the air was literally full of snow and dead treetops. One top came down kerthump almost at my feet. As soon as the first squall was past I grabbed my deer by the ear and started down the steep slope, for a fairer clime below, over and under fallen trees, rocks and brush. Once I

lost my footing and there was a mix up. The snow was about 8 inches deep, and the deer slid like a toboggan; over me she went, I rolling and grabbing; finally I anchored and the deer went on for a long way. So we kept going till we reached almost snow line and also the edge of green timber, full a mile below, and in a very few minutes. Bruised and sweating, I called a halt for repairs, but not long. The storm was raging all around me, and the timber was crashing and booming. I hurriedly skinned out the hams, slipped into my pack harness and lit out for home as fast as the roughness of the place would permit, stopping occasionally behind some secure looking tree to let an unusually hard blast pass by. By 2 o'clock I was home, tired, bruised, sore and scared, but happy.

The next day it rained and stormed, but Wednesday morning I returned and brought home the remainder of my deer, and had all I could tote. We are now enjoying venison steaks, roasts, boils, stews, etc., and I am willing to try again.

CHICAGO AND THE WEST.

Illinois Game Laws.

CHICAGO, Ill., Feb. 14.—Last week I mentioned something about proposed changes in the Illinois game law, and it would seem that the fight at Springfield on these matters is waxing hotter as the months go by. There seems to be a general feeling of dissatisfaction with the Lyon bill both among the strict protectionists and among those who wish to see spring shooting abolished.

In all this fight to secure intelligent legislature for the protection of our wildfowl the Monmouth Gun Club has time out of mind led the legions who have been in favor of keeping up the ruinous policy of spring shooting. Fred Allen, one of the best known shooters of lower Illinois and the prince among good fellows, has been the leader of the Monmouth Gun Club. I wish that he might have a change of heart and might see that this attitude of himself and friends is a sectional and selfish one. In order to secure a little shooting for themselves in the spring, they wish to hold this State to a policy which is damaging to the great majority of the shooters. Now, Fred Allen and his friends are all old enough to say they have had their share of fun. Let us have rotation in office and give the other fellows a chance.

Spring Shooting in Nebraska.

Mr. Henry Mayer, of Grand Island, Neb., writes the following letter about matters in his part of the world: "Our lawmakers in Lincoln endeavor to introduce and pass a law against spring shooting, to which our sportsmen are opposed, for the simple reason that in spring, when the geese and ducks pass over our country, we have the only chance to shoot the birds, as in the fall they never stop with us here, but pass over us, generally of nights, and a mile high, going south. Twenty years ago we had fine fall shooting here, but *tempora mutantur*, and also the tactics of the geese and ducks."

This Nebraska attitude on spring shooting is precisely that of our friends in the Monmouth Gun Club and of our Michigan friends who are standing out for the deep-water shooting on Lake St. Clair and other waters. It is sectional and, I regret to say, selfish. Now if all our Western States should abolish spring shooting it would be as fair to one man as another. We would certainly have more ducks at one place or another in the fall, and I am sure that some of these ducks would stop within reach of our friends in Nebraska, in Michigan, or in Illinois. The time when we can have shooting in our own dooryard is passing away. We all of us, whether of Illinois, Michigan or Nebraska, have got to count on traveling a little bit to get to those less settled regions which remain fit for feeding grounds for the fowl. It seems to me that, since non-resident shooting is to be a necessity for much of our population, a non-resident license law will some day come to sit pretty heavily on the average American shooter, yet he must simply accept this as a part of a greater expense, which is inevitable in securing sport in these days, and charge up his license just as he does his railroad fare. Every man in Nebraska votes for his local mayor, or constable, or coroner, officers who have to do with his immediate vicinity. Very good. But does he not also vote for a President of the United States, and is not the latter officer supposed to be useful to all the people of the whole country? It is the same way in these matters of game protection. We ought to look further than our own dooryard in finding the application of a protective measure. For the men of Nebraska, Monmouth or Michigan to say that they want spring shooting in their localities because otherwise they will not get any shooting, is simply to say they think the constable is a big enough officer for them, that they do not need a President of the United States, and that their neck of the woods is the whole country. Now, this argument about spring shooting sometimes gets very bitter. I should not like to add anything to its bitterness, but I do submit to any old sportsman, such as I am sure Mr. Mayer is, that under our present code of game laws our game is disappearing just about as fast as it can. The only way to restore it is to mitigate the unceasing relentlessness with which it is pursued. It is thought by very many that the best way to do some of this mitigating is to stop killing ducks in the mating season.

A Carload of Quail.

Nebraska and Missouri remain the only two States which allow game to be shipped, yet it is pleasant to be able to say for Nebraska that she now and then takes a fall out of the game dealer. Mr. Mayer incloses the following description of the way a big Chicago provision house got into trouble:

LINCOLN, Feb. 7.—Through B. C. Eldridge, of South Omaha, the Armour Packing Company yesterday pleaded guilty in Justice Green's court to the charge of violating the State game laws. A carload of quail was found in the company's possession last week, and proceedings were begun by local members of the Fish and Game Protection Association. On the plea of guilty the company was fined $500, which was paid promptly.

The Reporter and the Lions.

Mr. M. S. Taliaferro, of Watseka, Ill., has the following to say about some of the newspaper stories which have been coming out of Colorado in regard to Governor Roosevelt and party:

"To one who has lived in the West these reports are amusing. In all my eleven years as a resident of New Mexico I never knew of a sportsman hunting the mountain lion. Occasionally you hear of one being killed, but only because it happens to be in the way. They never hunt for them. The so-called mountain lion is the worst kind of a coward, and I have known them to make no resistance even when cornered. I know of one case, near White Oaks, Lincoln county, N. M., where John Owens and his son, a boy about twelve, were hunting horses and came across a mountain lion, which they treed. They had no gun or other weapon with them—nothing but a lariat, which they intended to rope their horses with. After the lion ran up the tree, Owens, Sr., climbed up after it, roped it, threw the rope over a limb, pulled the lion out and hanged him. Not very much fight in that lion, was there?"

Prairie Chickens in Illinois.

Mr. A. W. Russell, of Wheaton, Ill., sends the following note regarding a bunch of Illinois chickens, which he has discovered within twenty miles of Chicago: "While riding yesterday two miles south of Wheaton, I met a bunch of eighty-one prairie chickens back of a barnyard. They were tame and in fine condition, and I was told by the farmer that they came over every morning, and had their roost in a small grove half a mile from his barn."

San Francisco Fly-Casting Club Expels Mr. Lovett.

The end of a very bitter and unpleasant factional fight in the San Francisco Fly-Casting Club is announced in the following dispatch, which is printed in the Record of this city:

SAN FRANCISCO, Cal., Feb. 13.—For "conduct unbecoming a gentleman and clubman" Alvah E. Lovett was expelled last night from the San Francisco Fly-Casting Club. The trouble grew out of the national fly-casting tournament in Chicago last August, when Lovett was a representative of the San Francisco Club. He was accused of tampering with the lines of W. D. Mansfield, president of the club, who was thereby rendered unable to enter the contests. Lovett was his rival.

Unpleasantness developed between these two gentlemen during their presence at the tournament of the Chicago Fly-Casting Club here last summer, and since then each gentleman has applied to members of the Chicago Fly-Casting Club with letters asking for evidence on the one side or the other.

Chicago Fly-Casting Club.

The annual meeting of the Chicago Fly-Casting Club was held at the Monroe restaurant on the evening of Feb. 11, following the annual banquet. The following officers were elected for the ensuing year: President, W. T. Church; Vice-President, H. G. Hascall; Secretary-Treasurer, N. C. Heston; Captain, A. C. Smith; member of Executive Committee, H. Wheeler Perce. There were thirty members present, and the usual enjoyable time was experienced. Dr. Armstrong told his usual merry stories, Mr. B. H. Bradley described his bass fishing trips on the Kankakee, Mr. Leonard Goodwin pulled off a series of fish stories and the new president, Mr. Church, made a general talk in very agreeable fashion.

Illinois Fish Exhibit.

Dr. S. P. Bartlett, of the Illinois State Fish Commission, is in Chicago for the purpose of arranging the aquaria for the exposition of the International Forest, Fish and Game Association, which begins on Feb. 27. Dr. Bartlett is as hale and hearty as he was fifty years ago, and is as much to-day a friend to the carp as he ever was. I asked him if he intended giving a generous exhibit of carp at the show, and he said he knew no reason why that noble creature should not have a full representation.

"The trouble with you fellows is, you don't understand the carp," said Dr. Bartlett. "He is just as good a fish to eat as any other fish, if you know how to cook him. Of course, you can't broil or fry or bake or boil a carp. You have got to know how to cook him right. Now, you don't like to eat a raw cucumber, do you? Yet if you take the same cucumber and make it a vehicle for certain sauces and condiments, you find that the cucumber is very good indeed. It is the same way with the carp."

I suggested to Dr. Bartlett that perhaps the time of the Illinois State Fish Commission might be very well spent in planting cucumbers and not carp, but he seemed to think that this work was not germane to the purposes of the Commission.

"You newspaper men are all alike," said he. "I remember once taking this thing up with Gene Field while he was alive. Gene used to come out with a column or so every once in a while on "How to Plant Carp." He said that some people thought they were better planted in hills, but he himself held they should be planted in rows."

With this latter opinion I think the sportsmen of the country would be very apt to agree.

Dr. Bartlett, none the less, will have a splendid exhibit of Illinois fish at the exposition, and indeed the entire fish exhibit will be a great feature. Matters are beginning to hum here now, and a number of exhibits are headed for Chicago, which will reach here early in the week, including a number of the trout and ouananiche from the Canadian Provinces.

Notes of the Show.

Joe Kipp, of the Blackfoot reservation, one of the best known characters of Montana, writes that he will be on hand for the exposition with a collection of Indian material, which he will put up in the form of an Indian camp. He will probably be accompanied by Hart Schultz, of the same reservation. Mr. Kipp is an old-time man, who saw the West before the railroads, and his experiences in the Indian trading days would fill a big and interesting book. There may be people at the show who will say more than Joe Kipp about wild life, but there won't be anybody here who knows more.

Jack Monroe, in a letter at hand this week, stated that he had his camps all pitched in the mountains near the Blackfoot reservation, and had employed the best snowshoers of that country. He thought he could get some goats, and his only anxiety was about getting them through alive under the provisions of the Lacey act. The Secretary of War and the Secretary of the Interior have been approached for the necessary permission, which will no doubt be given.

The Premier of Canada wires from Quebec that he is using every effort to secure a live wild caribou for this exposition, and he believes the matter will be accomplished.

The proposal to decorate the interior of the Coliseum with pines has proved a tremendous undertaking, though since it has been started it will be completed. Two enormous Norway pines will be erected outside the door of the Coliseum, and odd enough they will seem on the street of the busy city, where never a tree has stood for a generation. The artists needed a large number of Norway pines for the columns to face the interior arches, and they chose this tree on account of its orange colored bark and its wide and bushy top. Charlie Norris, boss of the woods crew, who has started in early this week at State Line, Wis., to get these trees, is meeting with a great deal of difficulty. Each tree of the dimensions specified weighs over six tons. Each tree has to be let down with a block and tackle, for at this season the branches are as brittle as icicles. The tops have to be sawn off and brought in separately. It will take a train of twelve cars to bring the trunks of the trees, and there will be vast quantities of spruce, balsam, pine and oak trees used as well.

While Cy DeVry, animal keeper, was down at the Caton deer park, at Ottawa, to take charge of some of the deer which the Caton estate has been good enough to lend this exposition, he was unfortunate enough to allow three of the ten deer to escape, and the probability is that they will never be recaptured.

Mr. Evans, who will have charge of the several hundred pheasants which will be shown at the show, also had a misfortune this week. There was one beautiful imported hen for which $70 had been paid, but which broke a wing in the crate. The wing was amputated, but the hied three days after.

The Dough Bird Again.

Mr. John G. Smith, of Algona, Ia., long time president of the Iowa State Sportsmen's Association, and a sportsman of experience, adds to the information regarding the dough bird in a recent letter, which reads as below: "I notice in the FOREST AND STREAM of Jan. 26 an article "All About the Dough Bird." Years ago I went to Eastham, on Cape Cod, shooting almost every year. I generally arrived at Eastham about Aug. 24. Between that time and Sept. 1 the golden plover and Esquimaux curlew were likely to come on from the north. Ten of us rented about 400 acres of old pasture land and burned it over, as the birds liked the burnt ground. We dug holes in the sandy ground and put out about fifty decoys. We often had fine shooting, both at the golden plover and dough birds. Both came to the decoys very nicely, and many times I have had them come in flocks of a hundred or more. The dough birds were always very fat and were considered the best table bird sold in the Boston markets. They seldom sold at less than one dollar each. At that time I could contract, if I wished, every dough bird I could kill at one dollar each. At that time I supposed that they were a seashore bird, and not to be found inland.

"In the spring of 1866 I discovered my mistake. I saw more dough birds in May of that year in northwestern Iowa than I had ever seen before in all my life. They were on their way north. Thousands of them were to be found on the burnt prairie with the golden plover. I shot a few, but none of them were in good order. The plover were in fine condition. I have never seen a dough bird in the West except in the spring, and never yet killed one here that was fat enough to be good eating. I think very few if any pass through Iowa on their way south. I have reached the conclusion that most of the dough birds go south via the sea shore. They will decoy here very nicely to golden plover decoys. Their habits seem to be much the same as the golden plover, but I do not think they can fly as fast. I recollect one morning on Cape Cod. A large flock of dough birds came to the field. They went to the decoys of a gentleman by the name of Curtis, from Quincy, Mass., and he killed fifteen with his first barrel. He caught them on the turn over the decoys, and I think it was the finest shot I ever saw. I think fifty were killed before they left the field. There must have been two or three hundred in the flock."

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

New York Game Bills.

THE NEW YORK STATE FISH, GAME AND FOREST LEAGUE.—To all Clubs, Associations and Members of the New York State Fish, Game and Forest League: In compliance with the recommendations of the League, adopted at its annual meeting on Dec. 6, 1900, the Legislative and Law Committee has prepared and had introduced in the Assembly, through Hon. J. L. Burnett, the following measures:

Bills Nos. 351 and 356 provide for an increase of the number of the protectors from thirty-eight to fifty and for an increase in their salaries. The number of protectors authorized by law is inadequate to the work of efficiently enforcing the forest, fish and game laws of the State, composed of sixty-one counties, and the character or their work is such that they are poorly rewarded.

Bill No. 352 amends the present section in regard to explosives by requiring all persons selling dynamite or other explosives to keep a record of all sales thereof, showing the name and address of the persons to whom sold, together with the date of such sale, and also makes the penalty for the use of dynamite or other explosives for the taking of fish a misdemeanor and takes away the right to impose any other or alternative penalty for such use.

Bill No. 353 makes the close season for wildfowl from

March 1 to Aug. 31, both inclusive. Similar measures have been introduced in previous Legislatures, but have failed of passage. Many States have passed laws prohibiting "spring shooting," and it is high time that such a blot upon our fairly good game laws be stricken out. The Forest, Fish and Game Commission recommend that spring duck shooting be forbidden. The present law allows the shooting of wildfowl up to April 30. This covers a period of time when they are breeding and should be unmolested. It is earnestly believed that if these birds are better protected they would make the different sections of the State habitual breeding grounds and multiply very fast.

Bill No. 354 provides for a new section to the game laws by prohibiting the sale of woodcock, grouse and quail throughout the State. These birds are disappearing very rapidly, and unless some stringent law is passed stopping their wholesale slaughter it is only a question of a very short time before they will be entirely exterminated. It is believed if the shooting for market is stopped it will have a great tendency to increase the number of the birds.

Bill No. 355 provides for an appropriation for fishways in the Oswego and Seneca rivers. The construction of such fishways would soon add vastly to the supply of food and game fish in the lakes and rivers of central New York, as their construction would enable the fish to return to their natural spawning beds.

Bill No. 357 relates to the pollution of streams. On page 6 of the last annual report of the Forest, Fish and Game Commission to the Legislature is found the following in reference to the subject matter of the above bill: "Above all we would especially call your attention to the difficulty of enforcing the law in regard to the pollution of streams. This is a matter of vital importance and not to be dismissed as affecting only the lives of some fishes, the pleasures of some anglers or the dividends of some pulp mills. We are a water drinking people, and we are allowing every brook to be defiled. Nature provides that they should be kept pure by animals feeding on the dead matters which fall into them, but the chemicals with which they are polluted can destroy all forms of life, so that every beast which dies in the mountains will soon roll down into our reservoirs, pickled in acids which no fish or bacteria can touch and live. It is not necessary to destroy or hamper any industry in order to prevent the pollution of water courses. What is really needed is to check the criminal selfishness of those who would rather poison their fellow citizens with their offal than to spend a few dollars to take care of it."

Believing these bills to be meritorious and worthy of legislative enactment, we earnestly urge uopn each club and organization of the State League to at once interest Senators and members of the Legislature representing the different localities to support and work for the passage of the League bills or similar measures that may be pending before their respective houses, to the end that we may have better fish and game protection in the future than in the past.

Dated, Feb. 9, 1901.

Spring Shooting.

EAST QUOGUE, Long Island, N. Y.—*Editor Forest and Stream:* In your issue of Feb. 16 I notice an editorial advocating the abolition of spring shooting. In it is said that the ducks are pursued by spring shooters and are driven north and do not remain in any numbers to nest in New York territory, but under other conditions, if given security, several species would tarry within the State and nest there. I wish to ask what the species this article refers to are, and what part of the State they would stay and nest there. You say New York has extensive stretches of marsh lands adapted to become again the breeding grounds of vast numbers of wildfowl. Where is this land or marsh located, and what year or years have ducks or wildfowl bred in numbers in New York State?

Again you say, A game law should be framed on the principle of the greatest good to the greatest number. Are the greatest good and the greatest number club men that go South and shoot all winter and as soon as the ducks leave or migrate to the North come back to New York State and cry "Stop spring shooting"?

There is a law in New York State that stops the shooting of bay birds, or snipe, as we call them. Now, Mr. Editor, does the spring law stop the shooting of bay birds? It does not, and there are localities on Long Island where bay birds are shot just as much as they were before the spring law abolishing bay bird shooting was passed. It was stated when that law was made that snipe would breed in New York State and that there would be an increase of snipe. Where have, since the spring law was passed, any birds nested in New York State, and have they increased in numbers?

What benefit will it be to New York to forbid spring shooting, when as soon as the fowl pass beyond our borders they are gunned? AN OLD BAY MAN.

On the Florida Gulf Coast.

A CORRESPONDENT writes from Panacea, Fla.: Running along for several miles in front of this hotel is Dixon's Bay, a beautiful little sheet of water, very shallow, landlocked from the gulf and alive with ducks and geese, and on evey windy day the shooting is fine. The fishing for redfish, trout and sheepshead is good. The quail shooting is fully equal to any in Florida, and the best part of it is that the accommodations are such that the ladies are made comfortable and do not have to be left at home. Those that are fond of fishing can have it to their hearts' content, or if more ambitious can follow the dogs or take to the bay for ducks. I am not going to mention the bags of game brought in. Twenty-five quail per gun is the limit by law per day; I regard it a good law. It is no trouble to make it here by driving a few miles to the large plantations. You can hunt from the wagon if you like. I hunt afoot from choice, as I use the all-round dog.

Sea and River Fishing.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Fishing Up and Down the Potomac.

Little Hunting Creek.

THIS short little tidewater run is the upper boundary of the Mt. Vernon estate, and separates it from the River Farm, conveyed by Washington's will to George Fayette and Lawrence Augustine Washington, located, as described therein, as east of Little Hunting Creek, and on the Potomac River, including "360 acres leased to Tobias Lear," and containing in all 2,027 acres, to be equally divided between the two legatees.

The run is of no great depth now, and at very low tide with a bateau one must have a care for the channel, to avoid grounding, but in the upper reaches are a few pools where bass are taken in the fall in considerable quantities.

One may imagine, with an effort, the immortal George having a little boat house on the shore and sometimes coming down here to while away an hour or two. If he had any amiable weakness for this recreation, historians have not made much of it; but then bass have only been planted here within the last decade; that is the big-mouth bass, which has so wonderfully thriven and multiplied in this Potomac estuary. The little-mouth bass, which has been plenty in the upper river since the early sixties, must have occasionally washed down here, but the muddy bottoms and sluggish currents were not congenial for them, as for their congeners more recently arrived, and they made no such record.

It is doubtful if the stream was considerable enough, even in the olden days, to attract anything but the perches. While rockfish or striped bass no doubt came up the river from the sea, as they continued to do for a century later, and often of great size, open river bait fishing has been ever a monotonous business. The shad, and more especially the herring, were the river harvest then as now, and were of necessity taken with nets. The fishing shores were more valuable than at the present time, for they were the open markets for interior plantations where winter stocks of whitefish or shad and herrings or Potomac robins were laid in.

It is probable the Colonial gentry seldom sought recreation with a rod and line. There was the less need, since a wilder country furnished more attractive out of door pursuits denied the modern urbanite. The fox chase and racing and cock fighting were commoner sports, with social features and excitement, fishing could never supply, and far more attractive to a scattered population, whose recreation, unlike that of the dwellers in cities, has for its first requisite the necessity to "get together."

But while the father of his country probably was sometimes guilty of fishing for sport, he never confesses as much, although his entries of September, 1770, sound suspiciously like it.

In Captain Snowden's "Histroic Landmarks of Virginia and Maryland," in a sketch on Broad Creek, Md., is found, "There Washington often went, as he tells us in his diary, with his friend and neighbor Diggs, of Warburton Manor, to throw his line for the finny denizens of the still waters," and quoting some extracts from the Diaryy (p. 61) appears: 1773, May 1. Went fishing in Broad Creek. April 13, 1774, in company with Colonel Bassett, went fishing in Broad Creek."

In trying to verify these extracts the only entries found for those dates in the diary read as follows: "May 1, 1773. Went to the different fishing landings on both sides of the river and found that few fish had been catched," and "April 13, 1774, roaed (rowed) to the different fishing landings as high as Broad Creek." It is not impossible there may be other entries for the same dates, as sometimes happens, but no entry the writer has found tells of actually casting a line. In his Western tour of inspection of his lands beyond the mountains, made for the purpose of ousting the squatters, under date Sept. 22, 1784, he has the following, "Note—In my equipage trunk and the canteens were Madeira and port wine, cherry bounce, Oyl, mustard, vinegar and spices of all sorts. Tea and sugar in the camp kettles (a whole loaf of white sugar broke up about seven pounds weight), the camp kettles are under a lock, as the canteens and trunks also are. My fishing lines are in the canteens." There stands his credentials for admission to the gentle craft. Of course, he uses canteen in the sense of an officer's chest. The other has done duty for bait, but never for tackle.

But he did fish regularly, and in his voluminous diary, yet unpublished, are many records in quaintly spelled and recklessly capitalized language, of his observations on the wandering denizens of the river. In an effort to establish for him a reputation for charitable works, entirely superfluous, since his life was full of them, his eulogists are at some pains to tell of his keeping a net and bateau, at some point on the shore, always in good order for the deserving poor, the widows and orphans, and when they were unable to draw it, of his sending slaves to assist in the operation. This is probably like the little hatchet story of Weems, whom Lodge in his history of Washington discusses in a most delicate manner. Lodge says, emphatically, that Weems "was not a cold-blooded liar," but that he was a "myth-maker," and as to certain of his familiar anecdotes, that there was not "a scintilla of evidence that they had any foundation." Weems seems to have made his great hits by taking current events and dating them back fifty years to get them into Washington's childhood. The modern method is to take antique stories and date them forward to give them current interest. But we have Washington's own testimony that he run fish nets, and did it intelligently. He was ever a busy man, and much in public demand; in his diary he tells of scores of rides after the hounds, and as he heads each month in the later years with "Where, how and with whom my time is pent," we learn much of the company he kept. He trees foxes, captures them, turns them loose next day for another run; often loses them; many times draws blanks; sometimes starts a deer, and even as late as 1772 starts a bear near Mt. Vernon. In March, 1768, he says, "Catchd a fox with a bobbd tail and cut ears, after seven hours chase, in which most of the dogs were worsted." In October, 1768, "Went into the Neck and up the Creek (Little Hunting) after Blew Wings," and he tells often of ducking. In December, 1768, "Went a Pheasant hunting, carried Hounds and they strated and followed a Deer." If anybody else went pheasant hunting and carried Hounds it would be "food for laughter." He attended a purse race at Accotink, and the races at Manassas and Annapolis; he apparently never missed a chance to see a play, whether at night or matinee, and in that regard was much like that other famous diarist, Pepys. He attended balls when he could, and tells of one which in derision he called the Bread and Butter Ball at Alexandria, because there were no other refreshments, and handkerchiefs did duty for napkins and table linen. The neighborhood organized a dancing class, and when it met at Mt. Vernon, all parties remained over night, and sometimes two or three days. In September, 1773, "Went to a Barbicue of my own giving at Accatinck," and there were others.

Owning ten miles of river front with three fishing shores, it is not strange he should have been interested in the fishing, as his diary abundantly proves.

This daily journal has never been printed, and is now in manuscript, bound in about forty volumes, in the Congressional Library; that is a verbatim transcript, with sixteen volumes annotated by Dr. Toner.

The following extracts exhibit his methods of observation and record, and show his interest and activity in the rôle of fisherman. Later he leased the shores or their catch, and had apparently no further responsibility, though he continues to make frequent visits to the various "fishing landings."

"1760:

Jan. 3.—Hauld the Sein and got some Fish, but was near being disappointed of my Boat by means of an Oyster Man, who had lain at my landing and plagud me a good deal by his disorderly behavior.

April 4.—Apprehending the Herrings were come, Hauled the Sein, but catchd only a few of them, tho' a good many of other sorts.

April 5.—Hauld the Sein again, catchd 2 or 3 White fish, more Herring than yesterday & a great number of Cats.

1761:

April 10.—Employed the hands in making two or three hauls of the Sein & found that the Herring had come.

April 11.—Abt. 11 Oclock set the People to Hauling the Sein, and by Night, and in the Night catchd and dressed Barrels of Herrings and 60 White Fish. Observed that the Flood tide was infinitely the best for these Fish.

April 12.—Hauld the Sein, but without Success, some said it was owing to the Wind setting of the Shore, which seems in some Measure confirmed by the quantity we catchd yesterday, when the Wind blew on upon it.

April 13.—(Sunday.) My Negroes asked the lent of the Sein today, but catchd little or no Fish. Note—Ye wind blew upon the Shore today.

April 14.—No Fish were to be catchd today neither.

April 22.—The Herrings run in great abundance.

1768:

April 12.—White fish began to run, catching 60 or 70 at a Haul, with some Her'g.

April 18.—Began fishing for Herrings with Carpenters, etc.

May 10.—Went a dragging for Sturgeon.

May 16.—Fishing for Sturgeon from Breakfast to Dinner, but catchd none.

May 30.—Went fishing and dined under Mr. L. Washington's Shore.

Aug. 25.—Hauling the Sein upon the Bar of Cedar Point for Sheepsheads, but catchd none. Run down below the Mouth of Machadock.

Aug. 27.—Hauling the Sein upon Hollis's Marsh Bar & elsewhere for Sheepsheads, but catchd none.

Aug. 29.—Went into Machadock Cr'k fishing and dined with the Rev'd Mr. Smith.

Aug. 30.—Hauling the Sein on the Bars near Hollis's Marsh & other places. (Nomini Creek.)

1770:

Feb. 3.—Agreed with Mr. Robt. Adam for the fish catchd at the Fishing Landing, I bought of Posey on following terms towit. He is obliged to take all I catch at that place, provided the quantity does not exceed 500 Bar'ls and will take more than this qt'y if he can get Cask to put them in. He is to take them as fast as they are catchd, without giving any interruption to my people, and is to have the use of the Fish house for his Salt, Fish, &c., taking care to have the House clear at least before the next Fishing season. In consideration of which he is to pay me ten Pounds for the use of the House; give 3 shillings a thous'd for the Herrings (Virg. Money) and 8 shillings 4 pence a hundred (Maryland Curr'y) for the White Fish. Mr. Piper & Lund Washington present.

(This was the lowest of his three shores. 14 pounds Maryland Currency equaled 11 pounds Virginia.)

April 13.—Began my Fishery at Posey's for Mr. Robt. Adam.

Sept. 3.—Went in the vening a fishing with my Brothers Sam'l & Charles.

Sept. 7.—Went a fishing into the mouth of Doeg's Creek.

Sept. 8.—A fishing along towards Sheridan's Point. Dined upon the Point.

1771:

April 10.—Began to Haul the Sein, tho few Fish were catchd, & those of the Shad kind, owing to the coolness of the weather. Many Shad had been catchd on the Maryland Shore.

April 25.—The Herring began to run in large Shoals, but were checked again by cool Weather.

1772:

Feb. 21.—Rid to the Ferry Plantation and to the Fishing Landing, where a few Fish were catchd in the Sein.

1773:

April 29.—Rid into the Neck (River Farm), & from there went to Sheridene's Point attempting to clear it for the Sein.

April 30.—Went to the Point again, and made one or two pretty good Hauls.

May 1.—Went to the different Fishing Landings on both sides the river and found that few fish had been catchd.

July 17.—Went down to Col. Fairfax's White House to haul the Sein; returned to dinner."

After the Revolution his home diary was resumed, and the accounts of the conduct of the fisheries, and contracts for sale of fish, etc., continue to read much like those already given.

The present landing pier for Mt. Vernon, built on or near the site of the original, only reaches now far enough to permit a boat to get in and out, with churning up the mud at low tide, is used nearly every summer's day by fishermen. It rarely furnishes better than sunfish, or the perches, about the piles; sometimes a school of little rockfish dart about till frightened, and in the fall, bass on lucky days furnish first-rate sport. It is reported, but not very well authenicated, that a wandering school of small bluefish from the bay afforded unepected delight to some anglers here, taking ravenously both minnows and fly.

On the river shore, north of the creek's mouth, a fisherman named Harper has a fishing station. Last summer, in his absence, river pirates fired his shed, burning nets and paraphernalia, perhaps to hide evidences of theft. He has replaced the net, and is making hauls every night, taking regularly a few fine bass, but principally coarse fish. Still higher up the river is old Fort Sheridan, now Fort Hunt. The United States wharf here reaches far across the shallows, towards the channel on the Maryland shore, and from this pier soldiers off duty and civilians took last fall great quantities of large bass.

The last trip of last season was to this creek to find the bass, which were said to be furnishing grand sport as they came in from the river, presumably hunting winter quarters. It was already too late for the fly, and as the Mt. Vernon electric road crosses the stream on a trestle just before reaching the gates, an early train was taken on this line, and word having been sent the night before, to Four Mile Run, a bucket of beautiful pike smelt were put on at this place. The station at the trestle is Riverside Park, the road being interested in a summer resort here, which has as yet been not much improved. A ravine, called Carney's Gut in the old records, lies between this point and the river, so it is necessary if one desires to enter the creek from the Potomac, to get off at Hunter's, a mile above, and drive over to the Point.

On getting off here, the expected team was not in sight. It was a mile and a half to the boat; the minnows were heavy; the sky lowering, and there seemed nothing to do but wait a dozen minutes for the car to return from Mt. Vernon, and go back home. Just as its shrill air whistle piped, along came my young friend driving a colt to a sulky, with a seat the size of a dining plate. He had made up his mind the weather was not fit, was on his way to the blacksmith shop, and apologized for the vehicle. We both climbed on the seat, and the colt tried to climb a tree; with the minnow bucket swinging behind, rattling and splashing, and the bundles clasped in front, we started. The fix was flimsy, the filly was frisky, the country road scandalous with fall rains, and in anguish, one of us climbed dow.. and carried the minnows the rest of the way; but relieved of the tackle bag and rod case, it was delightful to such a ride.

Arriving at the river we found the boat had not been launched, because the sky was threatening; the tide was low, which meant a hundred feet of mud, but my young friend went up to the fisherman's cottage, and he kindly rigged us out with a heavy bateau comfortable enough for bob fishing. After an hour's delays we started and pulled around into the mouth of the creek, and up above the trestle, trying the likely places all the way up, but finding only a few fairly good yellow perch, which we promptly returned; general results much like Washington's frequent entry of "catchd nothing." We got to the fishing ground at last, and it had grown very dark; the wind was rising and shifting from the east northerly. Caught one bass, and then all Dame Julianna Berners' list of impossibles broke on us at once. Without trying to follow her spelling, she puts it thus: "Now shall ye wyte that there been twelve manere impediments, which cause a man to take no fish without other comyn that may casually happen.

1. If your harness be not meet nor neatly made.
2. If your baits be not good nor fine.
3. If that ye angle not in bytynge time.
4. If that the fish be frightened with the sight of man.
5. If that the water be thick, white or red, of any flood late fallen.
6. If the fish stir not for cold.
7. If that the weather be hot.
8. If it rain.
9. If hail or snow fall.
10. If it be a tempeste.
11. If it be a great wind.
12. If the wind lie in the east, and that is worst, for commonly neither winter nor summer ye fish will not bite then."

So far as concerned the first and second "ifs" we were all right; the harness was meet, and the baits were fine, but it was evidently not "bytynge time." When the prospective purchaser told an earlier David Harum he had 13 reasons for not buying, the first being he had no money, he was informed he need not mind enumerating the other dozen. So it would seem any further explanation superfluous, but we had all the other ifs, save No. 7, against us. The rain which came like the "quality of mercy" for a few minutes soon fell in sheets, the wind became a gale; we shivered with the cold; a hurried row to the trestle, minnows overboard, a scramble up the hill, and the brightest bit of luck of the day appeared; a car was in view coming round the bend, and in two minutes the episode was closed. One of those nice cheerful days, one recalls as he might a broken leg, not from choice but because he can't help it. HENRY TALBOTT.

A California Tuna in New York.

MR. THOMAS J. CONROY, of 28 John street, New York, has on exhibition in his store window a handsomely mounted specimen of the tuna. The fish was caught last June at Santa Catalina, Cal., by Mr. C. C. Paine, weighs 124 pounds and fought for two and one-half hours before being landed. It is a splendid specimen and attracts considerable attention.

Salmon Rivers.

Editor Forest and Stream:

In a recent article on salmon rivers, replying to inquiries of a correspondent, you say:

"If Newfoundland becomes a Canadian possession there will probably be no free fishing, and no salmon rivers to be bought, as the Canadian Government is cognizant of the value of such properties, and its policy is to lease rather than to sell."

The inference to be drawn from the foregoing is that when any Province enters the Dominion confederation the Canadian Government acquires the power to dispose of the river fisheries therein. This idea is erroneous. The Canadian Government has power only to regulate—that is, prescribe what are the legal modes of fishing, etc. The property right in rivers is vested in the Governments of the Provinces in which they are respectively situated. It is the Government of the Province of New Brunswick, for instance, that leases the Ristigouche (save the side in the Province of Quebec from Matapedia to the Patapedia), the Jacquet, the Nepisguit, Tracadie, Tabusintac, Northwest Miramichi, etc.

It may interest a number of your salmon and sea trout angling readers to know that all the leases of New Brunswick rivers now running will expire on March 1, 1902. These rivers and their present lessees and rentals paid are as follows:

	Annual Rental.
Ristigouche River from I. C. R. Bridge to Upsalquitch, Ristigouche Salmon Club	$350.00
Ristigouche River from Upsalquitch to Toad Brook, Harry B. Hollins	300.00
Ristigouche River from Toad Brook to Tom's Brook, Ristigouche Salmon Club	1,500.00
Ristigouche River from Tom's Brook to Patapedia, Ristigouche Salmon Club	800.00
Ristigouche River from Patapedia to Red Bank Pool, Ristigouche Salmon Club	800.00
Ristigouche River from Red Bank Pool to Tracy's Brook, Ristigouche Salmon Club	800.00
Ristigouche River from Tracy's Brook to Little Cross Point, Archibald Rogers	1,000.00
Ristigouche Rriver from Little Cross Point to Kedgwick, Archibald Rogers	1,000.00
Ristigouche River, Rafting Ground Reserve and Lot 78, Harry Holbrooke	60.00
Upsalquitch River from mouth to forks, F. Stancliffe	250.00
Upsalquitch River from forks to sources, A. E. Alexander	55.00
Patapedia River, on western bank, from mouth to Quebec Line, Geo. Cyprian Jarvis	100.00
Quatawamkedgwick River, Henry P. King	175.00
Tobique River and branches, Tobique Salmon Club	50.00
Jacquet River and branches, Thos. Murphy	100.00
Tabusintac River and branches, John Connell	60.00
Tracadie River and branches, J. B. Snowball	50.00
Nepisguit River from mouth to 11-Mile Tree, Henry Bishop	165.00
Nepisguit River from 11-Mile Tree to Gt. Falls, Frank Todd	525.00
Nepisguit above Gt. Falls, —. Armstrong	50.00
Little Southwest Miramichi and branches, Wm. F. Ladd	150.00
Northwest Miramichi and branches, above mouth Big Sevogle, R. H. Armstrong	50.00
Big and Little Sevogle, J. Weidmann	150.00
Bartibog River and branches, John Connell	5.00
Dungarvon and its branches, J. S. Neill	50.00
South Oromocto Lake, etc., W. H. Barnaby	200.00
Indian and Popelogan lakes, A. E. Alexander	100.00

The mode of disposing of these leases for periods of, in some cases five, and in others ten years, from March, 1902, will be by public auction at the Crown Land Office, Fredericton. They always go to the highest bidder.

D. G. SMITH,
Fishery Commissioner for New Brunswick.

CHATHAM, N. B., Feb. 11.

The Remembered Event.

Editor Forest and Stream:

The ordinary January thaw, which this year was postponed to February, turns my mind to thoughts of fishing; and while I am not tempted to repeat John Danforth's famous experiment of drawing a fly across the smooth upper surface of the ice to see the eager trout below rush to bump their noses against the under surface in the delusion that spring has jumped upon the lap of winter, yet there comes up in recollection an experience which may have occurred to a number of anglers, but which stands out distinctly on my memory's background as the most delightful of my sporting reminiscences, and the relation of which may not only lead other sportsmen to recount in your columns their one pre-eminently remembered event, but which may serve incidentally to tend to a settlement of that much vexed question, "imitation or non-imitation of nature in artificial trout flies."

When I say that this recollection surpasses in pleasure even that of my first struggle with a salmon, anglers will appreciate my feeling.

One morning in May a number of years ago I had been fishing down the Neversink with more or less success, and had arrived at a point where the stream divides into a fork made by a wide gravel bar. The main stream passed off to my left and a very small branch, scarcely 10 feet wide, flowed to the right. It was so small that I gave it no attention, and was fishing the main stream.

But every once and a while I heard a splash, above the sound of the rippling waters, that attracted my attention, until finally I paused and listened intently. The sound came from the small branch of the stream behind me, and upon walking over the gravel bar to investigate, I found that there was a large fish—large for that stream before the brown trout (*Salmo fario*) were mistakenly placed therein—regularly rising under an overhanging red willow and feeding on the fly that was on the water. I knelt down, as there was no shelter, and cast a coachman, a beaverkill and a cahill over him, above him, and even a little below where he rose.

He was not frightened, but deliberately refused my offer, for he came up with the same regularity and engulfed the natural fly with a flip of his tail that seemed to even hit my coachman in derision. I finally moved back, laid down my rod and walked some distance up the stream until I succeeded in catching in my handkerchief, laid within my landing net, one of the natural flies, and found that it was a red spinner. I then substituted for my coachman the smallest red spinner that I had in my book (I tie them of a more delicate build than those usually sold) and crawled on my hands and knees to the place where the trout was still rising, being careful that no shadow was cast on the stream.

With my heart in my mouth for fear of a bungle, I made an underhand cast under the bush, about 6 inches above the last "break," and, presto! I had him. I sprang to my feet and then commenced a soliloquy by that trout that I "received" over the electric circuit of my rod and line, and accompanied by gestures that I could occasionally see. That fish plainly told me that he thought that he was an old fool, that he had repeatedly warned youngsters against silk and feathers, that, notwithstanding the warning, they had gone to destruction, but that they were young and heedless. But that he, a graybeard, should have been deceived, was too much, and he showed his anger and disgust violently. Finally he told me that he deserved it, and that there was no use resisting fate, and though the skies looked bluer and the sunshine brighter when I passed the net under him, I actually felt sorry for the fish, although elated that I had outwitted him. J. E. HINDON HYDE.

NEW YORK, Feb. 16.

ANGLING NOTES.

Salmon in Canada.

MR. ALEXANDER MOWAT writes me that the upper waters of the Canadian salmon rivers, Ristigouche, etc., were teeming with breeding fish last fall, and that about 2,000,000 salmon eggs had been secured for the new hatchery on the Ristigouche, and that next year there would be a retaining pond for the breeding fish. When I was on the river in June the fish were chiefly passing up streams without any halting in the pools, and this argued well for the future stock of fish in the stream, and Mr. Mowat confirms the opinion formed in the spring.

Newfoundland Fishing.

A friend wrote me last spring to ask what I knew about trout and salmon fishing in Newfoundland. I was not at home, and so did not answer his letter until he had started to find out what he wished to know on the spot. He wrote me lately: "I did go up on the west coast of Newfoundland, and when I went to see you and found you were in Canada, I wished to get a few points about salmon fishing, as I had never seen a salmon until it was dead. I was late for this sport, but I saw barrels of salmon lying in the pools, though they were not interested in artificial flies. The trout, the beautiful sea trout were, however, in full bloom. I could have taken 100 pounds a day had I been so inclined, but I had no use for so many. The first day two of us caught 36 pounds in an hour and a half. They would take anything offered and acted as though they were crazy. I consider them much better than brook trout for the table. That is the greatest sporting country I ever saw, both for rod and gun, and it must be a great place or resort for sportsmen when they get better accommodations. It is hard getting along there now, unless you camp and take everything with you. Some time I will tell you more about it."

Trout and Pike.

It is generally understood, I believe, that when a person desires to obtain fish for planting from the Forest, Fish and Game Commision of New York, particularly if the fish wanted are trout, an application must be made out, filling in answers to certain questions, one of which is to declare whether or not the water is natural trout water, and another is to state the kinds of fish, other than trout, that are in the water in which it is desired that the trout be planted.

More and more, apparently, the answer to the last mentioned question is "pickerel." This may mean the common pond pickerel or it may mean the pike commonly called pickerel. Brook trout and pickerel do not, as a rule, thrive in the same water, aside from the fact that pickerel will prey upon trout, but occasionally pickerel will make their way into and establish themselves in the cool waters natural to trout, and generally the Commission declines to furnish trout to be planted in waters that pickerel have invaded and become a fixture. One man wrote that to reject trout applications for waters that contained pickerel "would be to remove the greater part of the streams in that region from the list of trout streams." Another applicant who had declared that pickerel were found in the stream for which he wished the trout mentioned in his application, made a personal call upon the Commission after his application had been rejected, and argued that he should have the trout he asked for because he had been frank enough to admit that the stream contained once in a while a small pickerel, for he thought no one else would have made the admission. He was somewhat surprised when there was shown to him a report made by one of the State game protectors that the stream was unsuitable for trout not only because it contained pickerel, but because it was used by a large vilage as the outlet for its sewage. In one week two men asked for trout to be planted in waters infested with pike, or pickerel, rock bass, sunfish and yellow perch, and both admitted when questioned that the water was not suitable for trout, but they thought if trout were planted this act would stop winter fishing through the ice under Section 58 of the game law, and they were inclined to be indignant because their applications were rejected. One man thought if large trout were planted they could protect themselves from the pickerel. The Commission tries to inform itself about any water in which there is the least doubt as to its fitness for members of the salmon family, and so when the applicant's answers to the queries in the application are not conclusive the State game protector of the district in which the water is situated is asked to report on it. There are plenty of streams and ponds that have been improperly planted with fish, and in some instances there is a remedy for the mistake and in others not. If there is a remedy the applicant generally wishes the State to apply it, for it means an expenditure of time and money. It is much easier to put fish into a pond or stream than it is to get them out after it is discovered that the putting of them in is a blunder.

Again and again I have advised correspondents to remove pickerel from trout waters and try and restore it to its original condition instead of putting in other fish, generally black bass, that cannot be removed. The law provides for the condition of things in Section 47 of the Game Law: "The Commisison may permit the taking or

destruction of pickerel at any time in waters inhabited by trout."

Over and over I have written about Loch Leven in Scotland as an example of how pickerel may be kept down and trout made to thrive in the same water, if a determined effort is made to keep the stock of pickerel down and the stock of trout up, but this will not be accomplished by inaction, or by writing to some fish commission for more and more trout after it is discovered that an error has been made.

I always quote from the operations at Loch Leven, because the records kept of the fish and the fishing are so complete, and figures are presented instead of speculation or guesswork. The last season, 1900, at Loch Leven shows that 23,431 trout were taken with rod and reel, and for purposes of comparison I give the number of trout taken in the two years preceding 1899, 20,431, and in 1898, 19,733. The report says of the pike: "The netting of pike during their spawning season keeps them well under. The largest taken in the net weighed 25 pounds. The heaviest caught with the rod weighed 17 pounds. The want of sunshine was against perch fishing, though some good catches were made." In spite of the pike (our pickerel in New York) and the perch, 698 more trout were caught in 1899 than in 1898, and 3,000 more in 1900 than in 1899. Is it not worth trying to take the pickerel out of a pond that contains trout, rather than put other fish in and so make a bad matter worse?

In this country the people get fish so easily that they do not in all cases value them at their proper value, and they do not make a proper effort to foster what they have. The sole remedy for all waters, when fishing is poor, no matter what the conditions may be, is to ask for more fish to be delivered promptly. If brook trout cannot be furnished then send pike (such a letter is before me as I write, but pike in this instance means pike-perch), and send plenty of them. I have seen very many applications asking for brook, brown and rainbow trout fry and brook, brown and rainbow trout fingerlings, all on the same application and all desired for the same stream or pond. The eternal fitness of things is not in the least considered. A man is advised not to plant brown trout in waters already containing the native brook trout, and he replies that he has already done so. I think I can point to fifty cases of this sort. There will come a time when some one must answer for the indiscriminate stocking that has been done. That a man asks for a certain kind of fish for certain waters that are entirely unsuitable for the fish, it is no reason why the man should have them because he is a citizen and a taxpayer and the fish are free. A chemist would not sell a man active poison simply because the man was ignorant of the results from using it and had been impressed with the name and so fancied it for his system, but an honest chemist would recommend hoarhound candy instead of the prussic acid the man thought he wanted.

The Commission has a letter on file from a man whose application was not filled. He said he was entitled to the fish and he would have them or know the reason why, with other intemperate language. He was told the reason why—that no man was entitled to fish until his application had been passed upon by the Commission, and then if the waters were suitable for the fish and the State had them for distribution, the fish were sent, not to the individual, but for the benefit of the general public who fished the water. If the Commission propagated trout and fed them to pickerel there would, in all probability, be a demand for a change in the personnel of the Commission.

New Publications.

The Curious Case of Gen. Delaney Smythe. By Lt.-Col. W. H. Gardner, U. S. A., retired. The Abbey Press, publisher, 114 Fifth avenue, New York.

Among the many books of the period, Col. (Dr.) Gardner's "Curious Case" stands out quite *sui generis*. No other novel that has appeared is constructed on similar lines. It will interest sportsmen in particular, for not only is the principal of the *dramatis personæ*, Gen. Smythe, a veteran of the Asian and African jungles, but the author himself is a sportsman by instinct and training. It is quite natural, therefore, as one may believe, that after forty-five years of life in the wild and woolly West, of which thirty-seven were passed as a surgeon in the regular army, the Doctor's book should be threaded with reminiscent passages of the field and chase. But beyond this, a dog is the *point d'appui* of the narrative. The blood of a pointer makes the incalculable distress of an innocent man. By it he is spotted as a murderer and condemned to die by a Dakota court. Indeed, all the threads and cues to the solution of this "Curious Case" radiate from the hunting field. Never were canine vacillations more intimately woven into a dramatic plot. But for the unexpected and fortuitous revelations of clairvoyance the dog the General and his faithful servant would all have been dead, hypothetically, if not in fact. Though three times wounded to death, there was at last vouchsafed to the General a modicum of earthly joy in company with a devoted and charming wife; which is very proper. The "Curious Case" is a tentative one all through. The situations are for the most part painful from the first chapter on, but are relieved here and there by sunny aspects.

CHARLES HALLOCK.

The deepening of the St. Lawrence Canal system has had other results than to allow the passage of ocean-going freightage. Following in the wake of the vessels sea herrings have made their appearance in Lake Ontario and are being eagerly captured by the fishermen.

Like Picking Up Money.

In every city, town and village in the United States where there is shooting or fishing or yachting we want agents to canvass for subscriptions for FOREST AND STREAM. Every sportsman is deeply interested in its subjects, and every sportsman is glad to discuss his doings afield and to hear of the adventures of other sportsmen.

Money is to be made by canvassers for FOREST AND STREAM, and those who wish to take advantage of the opportunity we offer should send for premium list and circular.—Forest and Stream Publishing Company, 346 Broadway, New York.

BENCH SHOWS.

Feb. 19-22.—New York.—Westminster Kennel Club's twenty-fifth annual show. James Mortimer, Supt.

March 6-9.—Pittsburg, Pa.—Duquesne Kennel Club's annual bench show. F. S. Stedman, Sec'y.

March 13-16.—Chicago.—Mascoutah Kennel Club's eleventh annual show. John L. Lincoln, Sec'y.

One Cure for a Cold.

I AM not going to advise any reader of the FOREST AND STREAM to adopt the following cure; for using our old family physician's words, "It might go the other way."

Seventeen years ago this winter I was a boy on a farm in Canada, with no special endowment except the love of nature and a good constitution. As sometimes happens to the best of us, I was about laid on the shelf with a very severe cold, and as it grew rapidly worse my mother became alarmed and insisted on an interview with our family physician. The good man shook his head, looked wise, said I was on the verge of lung fever and told me to remain in bed for a couple of weeks and take a large quantity of flaxseed tea very often, with some other "dope" he put up that tasted like warm varnish or melted glue.

I very dutifully gulped down two doses of the medicine and a liberal allowance of flaxseed tea for twenty-four hours. When the morning of the second day dawned there was about one foot of beautiful light snow, and it was perfectly calm and very cold, an ideal day for a fox run through the heavy growth of pine timber which abounded in our neighborhood. My sporting proclivites rose with the sun—in fact I rather think they had old Sol beaten by a few minutes. At any rate, about 8 o'clock A. M. I retired up stairs to bed, as the family supposed. But suddenly there came to me a long dismal howl from the direction of the drive house. Old Drive evidently shared my feelings, and gave vent to them in long howls. Old Drive was a spotted foxhound of the ordinary type, somewhat larger than the average and with a head and eyes that would have won many laurels in a bench show of modern times. But in the forest or swamp he had no superior, and the sly old fox that could play funny business with him was a marvel. He had a lope that was considerable, too fast for comfort for a fox, and his power of endurance was certainly wonderful even for a hound. He was as true a friend as a man ever had; he could not talk, but in the timber his voice was more inspiring than a brass band is to a small boy.

I listened to his howl once more, hesitated and was lost. Carefully and silently I donned a heavy suit, warm and heavy leather walking boots, and was ready. I quietly lowered the old muzzle loader out of the window, and more rapidly lowered myself into a four-foot snowdrift in the rear of the house after balancing myself on the window sill till I closed the window. I landed on all fours, right side up, grabbed my trusty old single barrel, and headed for the barn. I escaped observation and patted old Drive very affectionately to keep his heavy bass from arousing the neighbors for a few miles around. We passed out through the barnyard and struck a bee line for the timber a half mile away, which we reached via a neighbor's, where I got a companion and a cur dog. Misery loves company—the other boy had the chicken pox. On reaching the woodland I loosened the leash and with a roar of delight old Drive was off.

The early settlers or Indians perhaps, in clearing the country which runs along a large river, cleared the land at the front of the farm near the river, leaving the woodland at the extreme end of the land, which is the regulation length of 100 acres. Every farm being so cleared leaves a strip of timber for miles at a distance of about one-half mile from the river, and varying in width from 300 to 400 yards of very heavy pine and oak, thickly grown up with small underbrush—an ideal runway for a fox. The strip of timber connects two marshes of from one thousand to fifteen hundred acres each. The marshes were also connected by another strip of woods further back, and by the frozen river in front, making three complete runways, and it kept a hunter running and guessing where he would come down. I have watched all day without a shot, and have seen the old dog make many trips between these marshes only to lose his game at nightfall when we brought him home if, like the Irishman's flea, we could catch him.

On this particular day, soon after reaching the heavy timber, we started a cottontail, which we got on his first trip around the circle. This was only a warm up for the dogs after a few days' idleness, and made them doubly keen, and away they went. For half an hour all was still; we saw the cur occasionally, but old Drive kept working ahead and still until he was a good half mile to westward, and in a swamp of small size, when there was a long howl followed by several shorter barks, and we knew the fun had started. The fox had started west going toward the larger marsh, and he was losing no time, as it was a fresh start and a fresh dog. The music became fainter and fainter, and finally was lost entirely; and we put in the next half-hour bagging two rabbits. Then we heard the old boy coming; the fox had doubled and was coming down the same way he had gone. George and the cur took the south side and I the north edge of the timber. We had been waiting for about ten minutes, and the dog was close, when I heard the report of a gun which was an old army musket and was harmless except from the rear. George's cur, which was a fine fox dog, for about ten minutes began to yelp and head east. Then I knew the game had passed us. I found George loading his old musket. He had a fine shot at about thirty yards, but we found marks in the snow for 20 feet, except where the fox had been. There was not a hair or a sign of a shot having struck him. Knowing we had a good hour to wait, we sat on a log and ate our cold lunch. In about twenty minutes the cur came back with a sad expression. We soon lost sound of the dog, as the wind was against us now. Twice did the fox give us the go-by with a clean pair of heels during the afternoon, but he was getting very tired, and the end came about 4 o'clock in a very peculiar manner. I was standing in a clump of hazel bushes beside a log; the dog was close and coming straight for me. I leaned back to get a look around some bushes, missed my footing and fell over the log in the soft snow. I made no noise, and as I got my gun over the log preparing to rise, I saw Reynard coming straight toward me about one hundred yards off. He was very much worn and was getting careless. I lay in the snow, in fact covered with it, scarcely breathing. He came on till when he was about twenty-five yards away. I took careful aim and fired. The cur came at the sound of the gun. The fox was not dead, but he ran about fifty yards, when he was overtaken and killed by the cur.

I reached home at 5 o'clock, very tired and happy. My mother almost went wild, having missed me at 2 o'clock. She also missed the gun and dog. She told the good old doctor all about it, and he said, "It's all right; but if it had gone the other way it would have killed him."

My cold was all right and I lived to kill many more foxes before old Drive became superannuated and I left the farm.

TERB.

The Celebrated Drum Case.

From the Kansas City Star.

THOMAS T. CRITTENDEN, former Governor of Missouri, tells a story about a famous lawsuit that grew out of the killing of a foxhound. The case was in Johnson county, Mo., and its legal title was Charles Burden vs. Leonidas Hornsby, but it was known as the Drum case, because that was the dog's name. The case became known to nearly all the lawyers of the State. In a reminiscent mood yesterday, Gov. Crittenden related his recollections of it.

"It was first commenced before a justice of the peace and was then appealed to the Common Pleas Court," said Gov. Crittenden. "On the abolition of that court, it was passed to the Circuit Court, and from the Circuit Court it was appealed to the Supreme Court of the State. When residing at Warrensburg, Senator Cockrell and I were law partners. We had a large general practice, covering all classes of cases, from murder to dog cases. Among the cases that filled our court docket was the Drum case. Drum was a noted foxhound, owned by Charles Burden, living in the western part of Johnson county. The dog was known far and near in that part of Missouri as one of the fastest, best-nosed, least uncertain, having the most singularly musical and regular bark, and the most tireless foxhound in the pursuit. No hunt of any importance was had in Johnson, Cass or Henry counties for that wily animal, in which Drum was not a prominent figure. He seldom opened on the trail that he did not run down the game and modestly presented 'the brush' to his owner, making no difference whether it was a gray or red fox.

"The political feeling in Johnson county ran quite high at that time, entailing much bitterness between neighbor and neighbor, the remnant of the unfortunate war. Burden and Hornsby had been on different sides of the war and had differed widely on that and every other question. They seemed to be naturally antagonistic to each other, almost being hatred on both sides at first sight. Hornsby, for some cause useless now to discuss, was charged with having shot and killed Drum. There was much evidence tending in that direction. This increased the bitterness, not only between these two men, but also throughout the neighborhood, as both had friends, and as men, as well as boys, have fought and died about dogs since the world began. Burden sued Hornsby before George Norman, a justice of the peace, Nov. 9, 1869, there being a hung jury; it was tried soon thereafter, with a like hung jury, and it was retried Jan. 1, 1870, and a verdict was had for $25. The case was then appealed to the Common Pleas Court, a trial had, and a judgment was there given for the defendant. A motion for a new trial was filed May 2, 1870, and for some cause it was granted, and on the 23d day of September, 1870, a trial was had before a jury in the Circuit Court, the Common Pleas Court having been abolished, and a verdict was rendered in behalf of the plaintiff for $50, the amount asked for in the suit.

"The case had been before the people so long it had become celebrated and of intense interest. Crittenden & Cockrell appeared for the defendant when the case first appeared in the Common Pleas Court. Elliott & Blodgett made their first appearance in the case at the same time. Both firms followed the case to its close. Col. Blodgett was then residing at Warrensburg, and soon after this trial removed to St. Louis, becoming the general solicitor of the North Missouri Railroad; now the Wabash. He was then one of the ablest of the Missouri bar, and has since become one of the most distinguished corporation lawyers of the United States, possessing all of the elements of a great lawyer and an admirable gentleman.

"At this stage of the case Philips & Vest were employed by the plaintiff, on Drum's side. It may be well to here state that by this time both the plaintiff and the defendant had almost passed out of sight and Drum became the important figure of the whole trial. Philips & Vest, Elliott & Blodgett appeared for the plaintiff on the jury trial of the case, Sept. 23, 1870, and Crittenden & Cockrell for the defendant. As both sides recognized it as a famous case, with large costs pending, Greek being arrayed against Greek, they went into the trial well prepared, with blood in their eyes, asking no favors, granting none. I do not now remember all the grounds of the defense, the most important one being that even if the defendant did kill the dog, which was not confessed, it had no market value and no suit should be based upon it. After the evidence was presented and the instructions given by the court, Judge Foster P. Wright, then presiding, allowed two speeches on a side, covering four hours, saying: 'I want this dog case to be fully tried and ended; it has already exhausted too much time.' I think Col. Blodgett made the opening speech for Drum. I followed next and then Cockrell followed me. Cockrell and I thought we had the jury on our side, politically and sympathetically, and the verdict was sure to be against Drum. Blodgett had made a great speech, he

being always an accomplished trial lawyer, but naturally I thought Cockrell had made a greater one. Half of the jurors were our clients, who had never failed us on previous trials when we had half a chance for a verdict. The court adjourned after Cockrell's speech, which we then thought was a favorable omen, as he had made such a speech as the jury could retire on, as the more it was weighed the more strong points there were to be considered by the jurors.

"We little thought, then, what was to follow. We little knew where Vest would strike and how he would strike us. Those of us who knew Vest well always considered him dangerous in a court-house, in any kind of a trial, even when appearing most listless, as behind his smiles, his jokes and apparent indifference there was then a gathering of the lightning, a gathering of the forces, which would when ready strike down and sweep everything before it. He was always naturally prepared for any kind of a case, and if there were any case in which he would be better prepared than any other, in feeling and passion, it would be a dog case. No lawyer was ever at himself more in a court-house than Vest in any kind of a trial. There never was a crisis in the trial of a case for which he was not prepared, with the law, with the facts, with coolness and eloquence, turning almost certain defeat into complete victory. Vest was in a hard contested trial in a court-house, as was Luxemburg, the great French general, on a battlefield, striking with the greatest force just at the right spot, at the right time, when least expected, and when defeat seemed most apparent and victory the least probable. He was a great lawyer in all kinds of cases, winning judges and jurors by his generalship and unsurpassed eloquence. In those days Vest had a deep blue eye that was irresistible, that was winning, that was fascinating, and a voice as musical as a chime from cathedral bells and as sweet as distant murmurs of flowing waters. I have often heard Vest, but never have I heard from his lips, nor from those of any other man, as graceful, as impetuous and as eloquent a speech as that before the jury on that beautiful September morn, after he had the night in which to digest the facts, to weave his thoughts into the most wonderful bouquets of musical words, and to recall from history all the instances when and where dogs had displayed intelligence and fidelity to man, quoting more lines of history and poetry about them than I had ever supposed had been written, capping the monument he had erected of splendid words in brilliant sentences as lulling as the hum of bees in apple blossoms, by quotations from the Bible, of dogs soothing the sores of Lazarus, from Byron: ''Tis sweet to hear the watch dog's honest bark;' from Scott: 'The hound's deep hate and huntsman ire,' and from Motley's graphic description of how the fidelity of a dog had prevented the capture of William of Orange by the Duke of Alva.

"It was as perfect and grand a piece of oratory as was ever heard from pulpit or bar. Court, jury, bar and audience were entranced, were lost, were won. I looked at the jury and saw all were in tears, especially W. O. Ming, the foreman, who wept copiously, as one who had lost his last and best friend. I said to Cockrell we were defeated; Drum had won, though dead, and we had better get out of the court-house with our client, else all would be hung. The victory was complete on this trial, as we thought, but our client urged an appeal to the Supreme Court, which was taken, and that court said, in the opinion written by Judge Bliss, 50th Mo., page 228, 'The case should have stopped there.'

"I presume," added Gov. Crittenden, "that distant court must have felt the vibrations of that wonderful speech when being made by one of Missouri's greatest orators. Drum has been canonized by that speech in that part of Missouri, and when Vest left the court-house even the dogs of the village seemed to have gathered around him in their love, and followed him as their friend to the hotel. Some of the greatest speeches ever made in Missouri have been made in Warrensburg by Benton, by Green, by Doniphan, by Brown, by Blair, by Henderson, by Peyton, by Phillips, but never was a greater one heard by those people than that from Vest on Drum."

Deeds, Not Words.

Ovid, N. Y., Feb. 12.—*Editor Forest and Stream:* I own a beagle, Jack, black, white and tan, three years old, closely related to King Bannerman on his father's side, and on his mother's side to Dinah, an animal with human eyes. After carefully considering his faults—for he has a few—and eliminating from the judgment as much as possible the affection which a faithful servant is wont to inspire, I hold the opinion that "he is a good dog," and, what is usually denied in dogs, that he thinks a bit.

Don't we often judge a man's reasoning ability by what he does when anything occurs to which he is unaccustomed? Why not apply the practice to dogs?

This dog is an unusual coward. But he fought, strenuously, with another dog simply because this other dog tried to secure praise and petting to which he was not entitled. Here was robbery. It could only be stopped by actions which entailed suffering. He suffered in defense of a principle. Most men won't do it.

He usually hunts alone with me. Recently he ran a rabbit in company with two fox hounds. These two dogs soon lost the trail, but Jack followed it, overtook the game, exhausted by running in soft snow, killed it far from my sight and hearing, and then carried it a quarter-mile to the place where he last saw me. Was this done that his master and partner should share the victory to the exclusion of the others, or was it to show what he had done that seemed praiseworthy?

Ordinarily his first work when the rabbit is killed is to secure a hot lunch. Did he think?

His regular business, needless to say, is rabbits. When they are scarce we hunt ducks, stalk them along shore, running when they dive to feed, dropping in concealment when they come to the surface. My dog will run when I run, stop with me and come to my place of hiding. Frequently I crawl several rods on my stomach. Then he follows stealthily behind, coming to me when I motion toward the ground. When I run to the shore to shoot, he rushes to the water's edge and barks joyously. No need to repress emotions longer. One January day a year ago he swam out and retrieved a duck, and has done so many times since, once being washed ashore by a rolling wave. This is not regular beagle work.

The work instinct will hardly explain these actions, and there has been no training. In these three instances this animal was placed among circumstances new to him and did what plainly ought to be done. He doesn't always do it, but neither do men. He thinks a little sometimes.

B. C. Birge.

Gordon Setter Club.

The annual meeting of the Gordon Setter Club of America will be held at Madison Square Garden, New York Dog Show, on Feb. 22, 1901, at 8 P. M., for the election of officers, and such other business as may come up.

L. A. Van Zandt, Sec'y.

Points and Flushes.

Mr. H. H. Hunnewell, Jr., Secretary of the American Fox Terrier Club, has issued a notice to the club members as follows:

You are hereby notified that the annual meeting of the American Fox Terrier Club has been postponed and will be held at the Madison Square Garden (Westerminster Kennel Club Bench Show), on Wednesday, Feb. 20, at 4 o'clock.

A meeting of the Executive Board of the club will be held at the same place and immediately following the meeting of the club.

The Westminster Kennel Club's twenty-fifth annual Dog Show has 2,125 entries, divided among the different breeds as follows: St. Bernards 113, Newfoundlands 5, Great Danes 88, mastiffs 11, bloodhounds 22, Russian wolf hounds 41, deerhounds 14, greyhounds 29, fox hounds 14, pointers 108, English setters 111, Irish setters 39, Gordon setters 21, Griffons 4, Irish, water, Clumber and field spaniels 57, cocker spaniels 171, collies 116, old English sheep dogs 7, Dalmatians 4, poodles 37, bull dogs 67, bull terriers 99, Airedale terriers 29, Boston terriers 167, French bull dogs 67, Basset hounds 2, beagles 116, dachshunde 46, fox terriers 148, Irish terriers 78, Scottish terriers 48, Black and Tan terriers 23, Welsh terriers 15, Skye terriers 6, Bedlington terriers 4, Yorkshire and toy terriers 43, pugs 8, Pomerians 41, toy spaniels 79, miscellaneous 15; total 2,125.

Yachting.

Our Boston Letter.

Boston, Feb. 17.—Mr. Geo. M. Pynchon, head of the syndicate which was formed to build the Canada cup defender, Illinois, last week gave permission to the press to publish the facts concerning his boat. It was not through any fixed principle of secrecy that Mr. Pynchon was desirous of withholding this information until now, for he does not believe in secrecy. It was simply that the Canadian challengers were in process of construction, and he did not want any information given out which would prove injurious to the interests of the Chicago boat.

The fact that Crowninshield was given the order to design this yacht is a further evidence that his designs which have been sent to the lakes have found favor among the yachtsmen there. It is more than likely that the success of his 25-footer Flirt in Massachusetts waters last season and the successful trip of his raceabout, Jolly Roger, to the waters of Long Island Sound had much to do with his getting this order. In turning out Illinois he had to figure his racing length under the girth rule and its many handicaps. He studied the rules of measurement very carefully before drawing a line, and has expressed the opinion that the rules were very good all around, and were absolutely fair to all.

In the new boat he has embodied all the principles which have been found to be of advantage in producing speed in keel boats, but there is nothing radical in any of her dimensions. She has the flat floor, but there is not nearly as much dead rise as in his 90-footer. She has long, but not excessive, overhangs, and will steer with the balance rudder, which has been found to be of such great value in other racers in smaller classes.

Her principal dimensions are as follows; Length over all, 45ft. 3in.; length on the waterline, 28ft.; extreme beam, 9ft. 5½in.; draft, 6ft. 9in. Her least freeboard is 2ft., and her girth, under the rule, is 18.8ft. Her frames are 1½x1⅝in., spaced 9in. on centers amidships and 10in. at the ends. She will have 6,000lbs. of lead on her keel. She will have a sail spread of 1,348 sq. ft., four-fifths of which will be in the mainsail, so that she will be practically an enlarged raceabout. She has double planking of mahogany, the inner skin ⅜in. and the outer ⅝in. Between the two skins there is a thick coating of white lead. She will be practically flush decked, although there will be two hatches, which will form a kind of covering. One of these is of pine, covered with canvas, and will be used when racing. The other is mahogany and will be used when she is cruising. Both are fastened to the deck with clamps.

The construction of Illinois is now well along at Lawley's. She is all planked and her deck is about laid. Last week workmen were busy smoothing up her planking, preparatory to giving her the priming coat. She is a very slippery looking boat as she lays in the shop, and looks as though it would take a lot of hustling to beat her.

Capt. Haff, B. B. Crowninshield and Geo. F. Lawley had rather a disappointing trip to New York last week. They went to City Island, where they hoped to find Defender in such condition that it would be practicable to fit her out as a trial horse for the Boston Cup defender. The result of their visit was that there will be no such trial horse, for the yacht was in such poor condition that Mr. Crowninshield said that they would not take her as a gift, and Capt. Haff said that he would not risk towing her around to Boston, as he thought she would sink before she had gone half the distance.

Mr. Crowninshield said that her aluminum plating was so corroded that he could brush it away with his hand like so much wood ashes, and her stringer plates were so bad that the decayed metal could be turned up with the toe of the boot like common earth. When inside of her, he said, one could look through several holes in her topsides and see daylight. Her lower plating appeared all right, as did everything composed of bronze and steel about her, but where aluminum was used the metal had become rotten. He figured that it would cost at least $10,000 to put her hull in condition. He said that all she was good for now was to be broken up for junk.

Work on the Boston boat should progress rapidly from now on. The casting for the sternpost arrived at the Atlantic Works Friday. Saturday night it had been fitted to the casting of the bottom of the keel, and several of the holes for the rivets had been bored. The stem casting has been fitted and almost all of the rivet holes bored. It is expected that by Tuesday the keel will be set up in the shop and the actual work of construction started.

The latest phase in the Cup defender business has been developed by the statement alleged to have been made by Nat Herreshoff that if Billman should rig the Boston boat he would not get the contract to rig the Belmont syndicate defender, now building at Bristol. This is but one of the many little annoying conditions which have confronted the Boston yachtsmen at different times since the yacht was started.

To the majority of New England yachtsmen, such a proceeding seems small, to say the least. Those who have expressed an opinion have generally called it childish. Geo. F. Lawley is alleged to have said that if Billman did not rig the Boston defender he would never rig another boat at Lawley's yard. If this statement is true it has a great significance to Mr. Billman, as it is well known that Lawley supplies him with more rigging than Herreshoff or any other yacht building concern in this country. Lawley turns out many more boats than Herreshoff during the winter months, and Billman has always had the preference in rigging the largest of these.

It seems really too bad that conservatism should be carried to such an extent that it becomes more properly known by another name. If Herreshoff wishes to maintain the u most secrecy, the yachtsmen in New England have no objections, but when it is stated that a man doing a general rigging business will lose his contract on one boat if he should take a like contract on another, the spirit of fair play, which is dear to every American sportsman, seems to be getting peculiarly twisted. The Boston people are not desirous of driving Herreshoff out of the Cup defender business, but they do think that their designers and builders should have representation.

Billman is credited with being one of the best, if not the best, riggers of large racing yachts in this country, and his work is much desired by those connected with the Boston boat. But notwithstanding these facts, if Billman shows a tendency to be browbeaten by Herreshoff, they will find some one else to do the work. There are plenty of riggers around Boston who would be glad of the opportunity of showing what they can do in the line of fitting out a racing 90-footer. So, at the present time, it is up to Billman. From a business point of view, it looks as though he would be better off in sticking to the Boston boat, if it should be a question of losing one contract by taking another.

When the boat was first started Billman was called in by B. B. Crowninshield and asked to take the contract for rigging the boat, which he said he would do. He was also asked to make arrangements to be in her during the races. This he also agreed to. When it was absolutely decided to build, the whole contract was given to Geo. F. Lawley, with the condition that Billman was to do the rigging. Mr. Billman was dissatisfied with this arrangement, and frequently complained to Crowninshield about it.

Last Saturday Mr. Billman visited Mr. Crowninshield's office and said that he had just been called up on the telephone by John B. Herreshoff. He said that Herreshoff had offered him a good consideration for rigging the Bristol boat, but added the condition that if Billman was to serve the Belmont syndicate he could not do work on the Boston boat. Billman wanted to know what the Boston people were going to do about it. Mr. Crowninshield told him that Geo. F. Lawley had been given orders to pay him liberally for his work at rigging, and it was also desired by the owner and the designer of the Boston boat that he should be on her deck during the races. For this he was also to receive a generous compensation. What Billman will do about the matter has not yet been announced, but it is expected that he will decide within a few days.

The Burgess Y. C. at Marblehead is taking active steps to make next season's racing the most successful in the annals of the club. This club has always been very active in racing matters, and for its size, probably offers more prizes than any other club in Massachusetts Bay. All money that can be possibly spared from the treasury is always used for racing, and if there is any shortage the members go into their pockets to produce the wherewith to give races. The present regatta committee is a very active one, and is doing all that can be done to make the Burgess Y. C. foremost in racing matters.

It is intended that a championship prize will be offered for the boat in any class making the best season's record. This will be either a cup or a cash prize. In the case of the latter, a championship pennant will be given the winner in addition to the money. The individual racing members of the club are working heartily with the regatta committee. It is quite likely that cups will be offered by these men for 16-footers, 21ft. knockabouts, 21ft. raceabouts and Y. R. A. 25-footers and 21-footers.

The list of racing dates which has thus far been made up by the committee is as follows: May 30, June 15, 17 and 29; July 4, 6 and 20. Two open races will be held July 29 and 30, which will just precede the Manchester Y. C. series and the Corinthian midsummer series. The last regular race will be held on Labor Day. If a good fleet of raceabouts comes to Marblehead to compete for

the cup offered by the Knockabout Association, the Burgess Y. C. will offer either a cup or cash prize, or both, for these boats.

The Eastern Y. C. has elected the following officers for 1901: Com., Albert S. Bigelow; Vice-Com., Walter Abbott; Rear-Com., F. L. Atlles; Sec'y, George Atkinson, Jr.; Treas., Patrick T. Jackson; Meas., Henry Taggard; Members of Council at Large, G. A. Goddard and F. B. McQuesten; Regatta Committee, H. H. Buck, Henry Howard, Isaac R. Thomas, Henry D. Bennett and Odin B. Roberts; Committee on Admissions, Gordon Dexter, Theophilus Parsons, Robert Saltonstall, C. S. Rackemann and Geo. Atkinson, Jr.; House Committee, George Atkinson, Jr., H. K. White, John A. Jennings, Frank Brewster and F. O. North.

W. Starling Burgess, the young designer who is to take his father's place in the yachting world, was recently burned out, and has removed his quarters to 15 Exchange street, where he has offices with his uncle, Vice-Com. Walter Burgess. He has already received a number of orders for boats of various sizes, and bids fair to have a very successful career. His work shows much care and study, and is very clean cut throughout.

Smith, of Quincy, has the 26-footer, of Crowninshield design, in frame. The Y. R. A. 25-footer, designed by Mills for W. D. Turner, is partly planked.

It is said that there will be two more boats for the 18ft. knockabout class, one of which will be designed by Starling Burgess. Humphreys and Lauriat are having their knockabout built by Hanley. She will be a centerboard and will carry no outside ballast.

It has been rumored about here that Lawley has received orders to put Jubilee in commission, to be used as a trial horse for the Boston Cup defender. Mr. Crowninshield says that Gen. Paine has said nothing about it to him, and that he has not heard of any such order given. It would be very nice to have the old boat in commission, and if she should sail during the season with the Crowninshield 90-footer it would do much to enliven yachting in this section, but as a trial horse it is not likely that she would be of great value. While she is like the Boston boat in many respects, she is so radically different on others that any comparison between the two would be of no great value in determining the relative speed of the Boston Cup defender as regards that of the Belmont syndicate boat now building at Bristol.

It is with great pleasure that your correspondent can announce that the committee appointed by the South Boston Y. C. to consider withdrawing from the Massachusetts Y. R. A. has, after holding a joint conference with a committee of the Association, voted unanimously to report to their club that it would not be advisable to make such a withdrawal. It is much to the credit of the committee of the South Boston Y. C. that it agreed to hold this conference and not make any rash arbitrary reports without having first thoroughly investigated the question in hand. If more of the disgruntled clubs were to adopt these methods there would be a better understanding between the clubs and the Association and yacht racing in Massachusetts waters would be benefited.

At Lawley's the 85ft. auxiliary schooner for W. T. Sloane, of the New York Y. C., is partly in frame. The keel of the 120ft. steel steamer for W. T. Eno has been set up and the 86ft. steamer from Binney's design, for C. B. Borland, is in frame. The Curtis 35ft. schooner has been finished and hauled out of the shop, and the King 35-footer is all ready for launching. The 25-footer designed by F. D. Lawley for Judge F. C. Lowell has been laid down. The 46-footer for Theophilus Parsons and the 25-footer for F. E. Peabody are being planked. The firm has just received an order for an 85ft. steamer from lines by C. H. Crane. She will have a speed of twenty knots.

The 50ft. steam yacht which was designed by T. S. Poekel, of Lawley's, for Mr. Gray, to be used in South America, and which was to be shipped from New York early in the month, is back again in the west shop. When she was taken out by Capt. W. F. Kirby it was found that she was very much by the head, and that the defect could not be remedied without altering the boat. She has been cut in two and will be lengthened out amidships and her counter will also be carried out further. It is expected that these changes will make her all right. It may be possible that the boat, when finished, will proceed under her own steam to Dutch Guiana.

Another one-design class has been started in Dorchester Bay, the latest by the Savin Hill Y. C. The members of this club are expert small boat sailers, and the new class is to be for sailing tenders, 12ft. over all. They will be 10ft. on the waterline and will all carry the same amount of sail. Fifteen of these boats have been ordered from a Scituate builder.

Crowninshield has an order for a 21ft. launch for W. C. Allison, to be used at Bar Harbor. This launch will probably be used as a tender for Mr. Allison's 32-footer, which has recently been completed at Lawley's.

Howland, of Monument Beach, has cast the keel for the Wightman 18ft. knockabout. The De Ver H. Warner 38-footer has been set up. The same builder has three catboats in frame.

JOHN B. KILLEEN.

Meemer and Ashumet.

MEEMER, the champion of the Massachusetts Y. R. A. 30ft. class last season, is a shoal draft, beamy, centerboard boat designed and built by Hanley in 1898 for her present owner, Com. R. C. Nickerson. Her dimensions are as follows: 44ft. 4in. over all, 29ft. 10in. on the waterline, 13ft. 10in. beam and 2ft. 8in. draft. She carries 1,800 sq. ft. of sail and about 3,000lbs. of ballast.

Ashumet was designed and built by Hanley in 1895. She is 45ft. 4in. over all, 30ft. on the waterline, 14ft. 10in. beam and 3ft. draft.

Big Season for Chicago Yacht Club.

CHICAGO, Ill., Feb. 9.—Five boats will contend for the honor of defending the Canada cup against the challenger of the Royal Canadian Y. C., of Toronto, Ont. The Pynchon syndicate will enter Illinois. There will be a new boat from Milwaukee, not yet named, and another Davis boat, entered by the George Lytton syndicate. Com. Charles Thorne will offer Brier, altered to main sail and jib rig, and tuned up anew. Messrs. J. Meyer and Edward Rosing have still another boat, of their own design, which will be built by yet another Chicago syndicate; nor is this the end of the possible list. It is a toss up as to the honors at this stage, of course.

MEEMER.
Designed by C. C. Hanley for R. C. Nickerson. Photo by Jackson, Marblehead.

The growth of the Chicago Y. C. is properly within the class described as phenomenal. The club took in 103 members in the month of January of this year. The work on the beautiful new club house is beginning this week and will probably be completed by June. The programme of the regatta committee shows a race for every Saturday of the coming season and a regatta for Fourth of July and Labor Day. The old sailing course around the northern cribs has been abandoned and a new course laid out to the southward, entirely free of the ordinary routes of the commercial craft. There will be plenty of sailing and of a satisfactory sort.

Vencedor, bought by Mr. Fred Price this past week, will be in commission in Chicago this summer, and likewise Siren and Vanenna, so that we shall have a fine showing of the 65-footers. This year is the most important one in the history of the Chicago Y. C., and it is considered as making the club a distinguished success and putting a stamp upon the sport of yachting on the Great Lakes such as it has never yet attained.

E. HOUGH.

ASHUMET.
Designed by C. C. Hanley. Photo by Jackson, Marblehead.

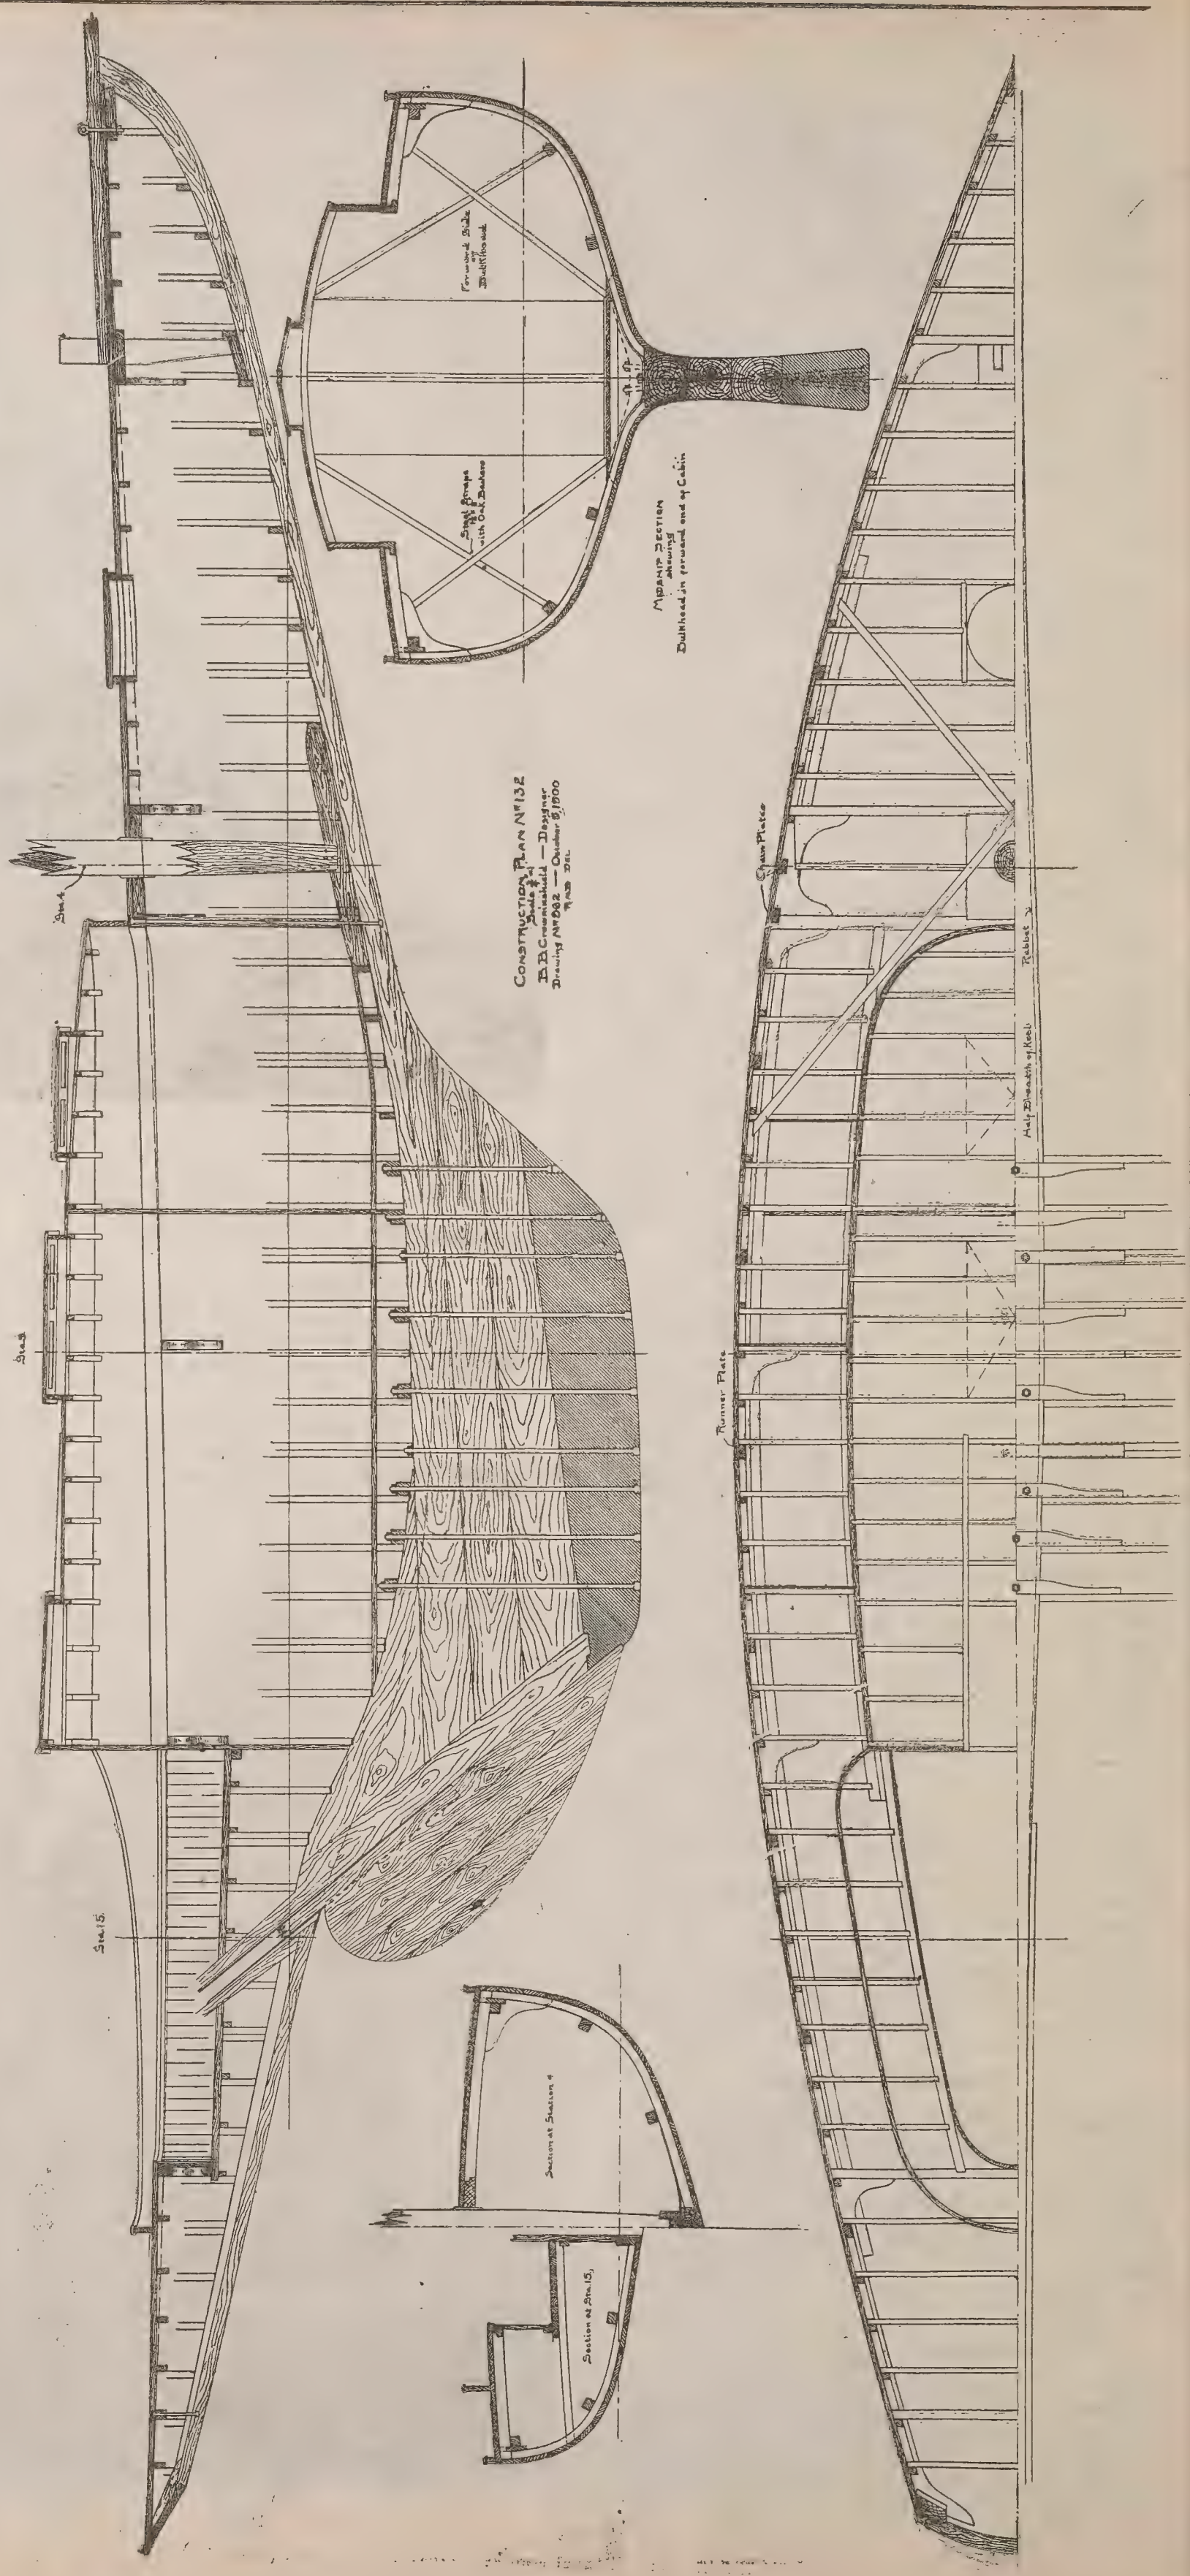
A Fast Cruiser.

Geo. Lawley & Sons Corp., of Sou h Boston, have recently completed the 32-footer, plans of which appear in this issue. The boat was designed by Mr. B. B. Crowninshield for Mr. W. C. Allison, of Philadelphia, who will use her at Bar Harbor and vicinity. She is well fitted below, and although her accommodations are not large, they are extremely comfortable. The space usually given to a stateroom on boats of this size and type has been utilized by a large dressing room and lavatory; on the port side opposite is a good sized galley. On boats of these dimensions the polemast rig is preferable to that of the topmast rig, as it makes less tophamper and simplifies the gear generally. The Allison boat with her short bowsprit and boom that does not project far over the counter gives a compact rig that should be easily handled in all weathers, as it is well inboard. She is practically an enlarged and improved Spalpeen, a very successful 30ft. waterline cruiser that Mr. Crowninshield turned out last year.

Her dimensions are as follows:

Length—	
Over all	51ft.
L.W.L.	32ft.
Overhang—	
Bow	8ft. 6 in.
Stern	10ft. 6 in.
Beam—	
Extreme.	11ft. 9 in.
L.W.L.	11ft.
Freeboard—	
Bow	3ft. 11 in.
Taffrail	2ft. 10¼in.
Least	2ft. 6 in.
Draft	7ft. 3 in.
Displacement.	23,030lbs.
Ballast (outside)	8,940lbs.
Ratio of ballast to displacement	.388
Midship section, area	22.83 sq. ft.
Lateral Plane—	
Area rudder	14.8 sq. ft.
Area hull	114.4 sq. ft.
Sail area—	
Mainsail	1,065 sq. ft.
Staysail	208 sq. ft.
Jib	224 sq. ft.
Total sail area	1,497 sq. ft.

Mr. Crowninshield is designing a 21ft. launch for Mr. Allison that will probably be used as a tender to the 32-footer.



FAST CRUISER—CONSTRUCTION PLAN.

Yacht Club Notes.

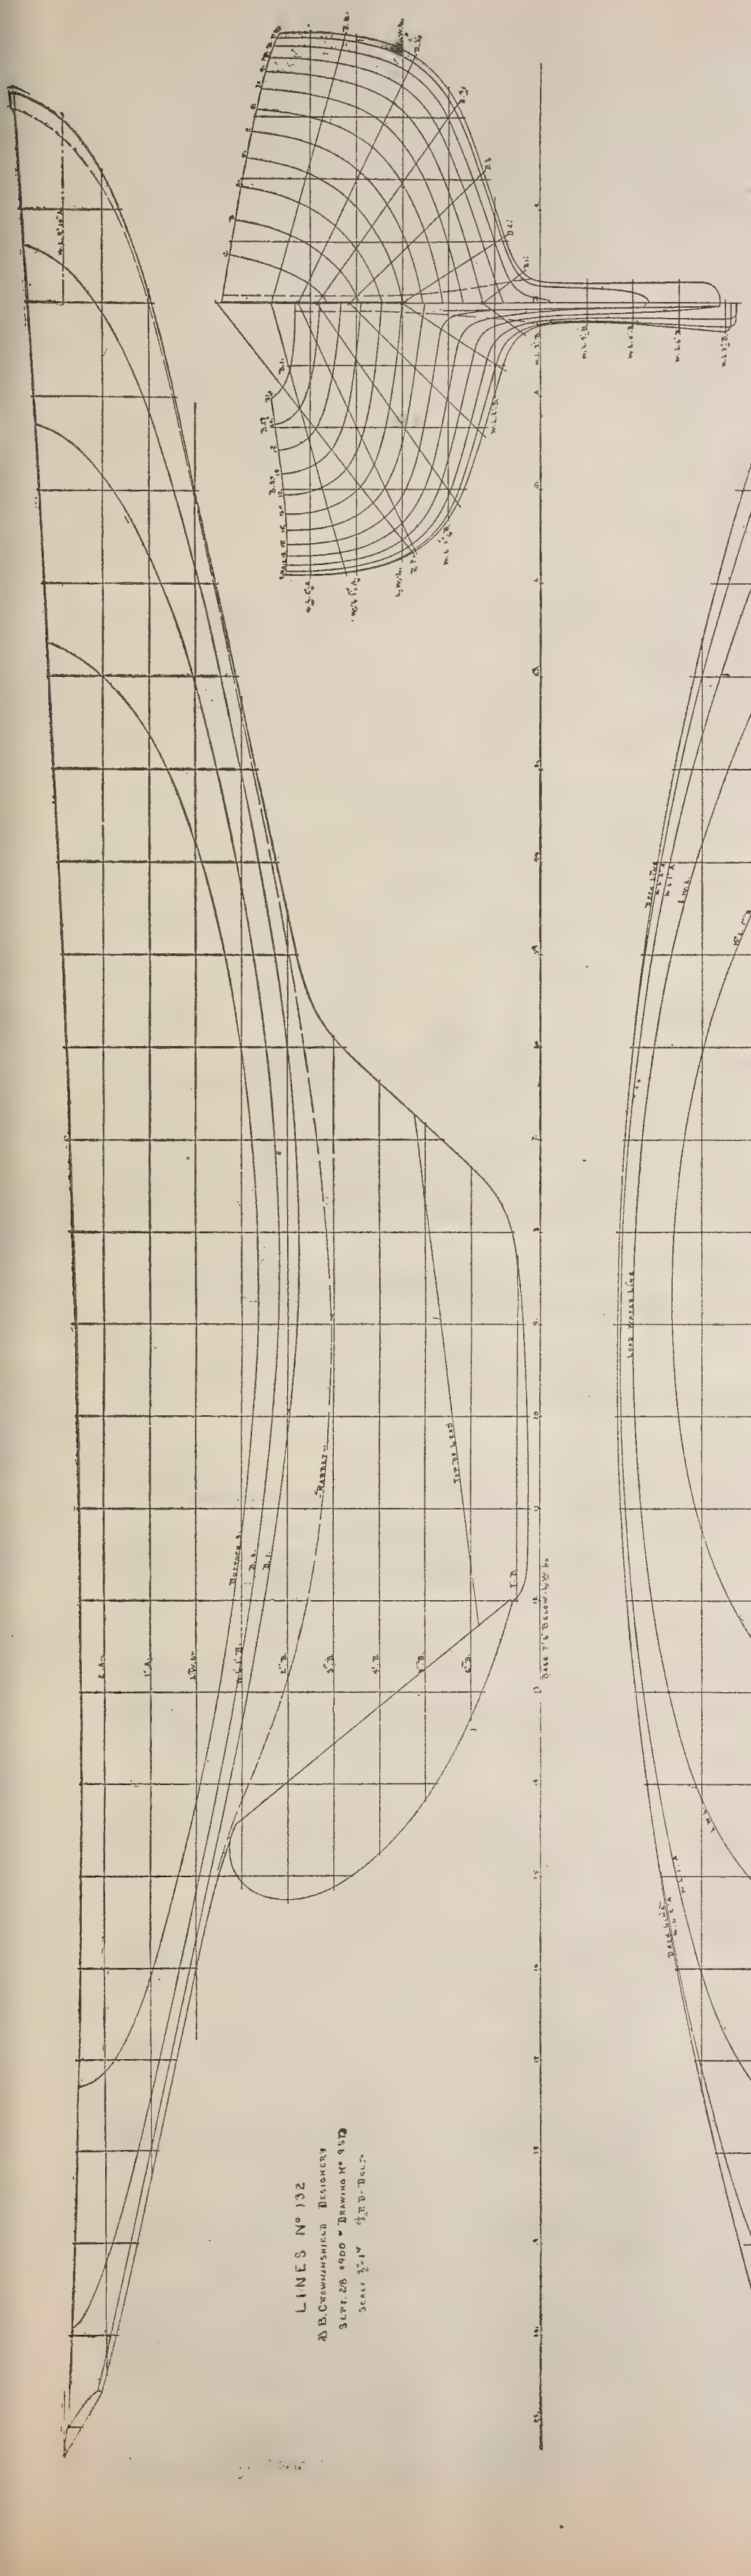
The annual meeting of the Philadelphia Y. C. was held Feb. 6, at the river home of the organization, at Tinicum. The meeting was preceded by the annual dinner. Before the meeting adjourned the following officers were elected: Com., Abraham L. English; Vice-Com., Warren Webster; Rear-Com., William H. Bromley; Sec'y, C. Carroll Cook; Fleet Surgeon, W. Joseph Hearn, M. D.; Harbor Master, Charles Warfield; Meas., Philip H. Johnson; Regatta Committee, Capt. John S. Muckle, Robert Clarkson, C. Carroll Cook; Trustees, J. Lewis Good, Robert P. Thompson, Sylvester W. Bookhammer, J. Horace Cook. Three new members were elected—Lewis Burke, Charles Burke and Harry Moseback. During the year 20 new members were taken in.

The Atlantic City Y. C. at their last meeting elected the following officers for the ensuing year: Com., Louis Kuehnle; Vice-Com., E. D. Ireland; Rear-Com., H. G. Mulock; Fleet Capt., David Barrett; Fleet Engineer, John Manz; Sec'y, E. D. Ireland; Treas., E. A. Parker; Fleet Surgeon, Dr. A. D. Cuskaden; Trustees, John Donnelly, David Holland, Charles S. Lackey, Lewis P. Scott, Charles C. Fortner; House Committee, Charles H. Cramer, Harry J. Mulock, William Muhlrad, Harry Richman, William McLoughlin; Representative, Clarence M. Busch. The club has adopted a club signal, and the building committee has been instructed to buy the property of Councilman David R. Barrett, 100x160ft., on Gardner's Basin. A large and modern club house will be built there, and bonds for its payment have been subscribed.

The anual meeting of the Brooklyn Y. C. was held Feb. 13, at the Clarendon Hotel, Brooklyn. Cornelius Ferguson presided. The following officers were elected: Com., Cornelius Ferguson; Vice-Com., C. H. Humphries; Rear-Com., J. E. Haviland; Meas., Robert C. Hopkins; Treas., Willard Graham; Sec'y, C. H. Parsons. Members of Board of Trustees, Class of 1904, E. H. Avery, H. R. M. Cook, Sidney Grant; Class of 1903, Charles A. Kelley; Class of 1902, Edward Salt. Regatta Committee, P. H. Jeannott, Chairman; W. A. Sandsbury and R. C. Hopkins. Membership Committee, Nathaniel T. Corey, Chairman; A. S. Rischoffer and Joseph M. Gans. Nominating Committee, E. H. Converse, Chairman; James Mathias and J. E. Haviland. The annual regatta of the organization will be held in all probability this year on Monday, June 3, in the waters of the upper bay.

The election of officers of the Canarsie Y. C. for 1901 was held Feb. 11, at the club house, Sands Point, Canarsie, L. I. Com. Charles J. Neilson, of the flagship Arrow, was re-elected for the third successive term. The other officers chosen were: Vice-Com., Daniel J. Brinsley, Jr.; Recording Sec'y, John C. Heinmann; Financial Sec'y, George E. Winters; Treas., J. K. Alexander; Fleet Capt., Frank Mapes; Members Board of Trustees, 1902, Daniel J. Brinsley, Sr., C. A. Martin, W. Herx, G. S. Calkoff and Thomas W. Manning.

At the annual meeting of the Atlantic Y. C., held at the Waldorf-Astoria, Feb. 11, the following officers were unanimously elected for the coming year: Com., David Banks; Vice-Com., Robert P. Doremus; Rear-Com.,



FAST CRUISER—DESIGNED BY B. B. CROWNINSHIELD FOR W. C. ALLISON.

Henry J. Robert; Sec'y, Louis F. Jackson; Treas., Charles T. Pierce; Meas., George Hill; Board of Trustees, J. Rogers Maxwell, J. Fred, Ackerman, Philip G. Sanford, Harrison B. Moore, Spencer Swain, Edwin B. Havens. The reports of officers and committees showed the club to be in a highly satisfactory condition in every respect. The present membership was reported as 566, a loss of 43 from last year. It was voted to hold the next annual regatta of the club on Saturday, June 15. An amendment uniting the offices of Secretary and Treasurer was approved, but will have to be favorably acted upon at a second meeting before it can be put in force. For the first time in years, if ever before, the Atlantic Y. C. has selected a Saturday on which to hold its annual regatta. Heretofore the regattas have taken place on the Tuesday in June preceding that of the New York Yacht Club's, but the change is made with the hope of having a better attendance than has marked the club's annual races for some seasons.

* * *

The annual meeting of the New York Y. C. was held in the new club house, 37 West Forty-fourth street, on the evening of Feb. 14. The following officers were elected: Com., Lewis Cass Ledyard, schooner Corona; Vice-Com., August Belmont, sloop Mineola, Rear-Com., C. L. F. Robinson, sloop Hester; Sec'y, J. V. S. Oddie; Treas., Tarrant Putnam; Meas., John Hyslop; Fleet Surgeon, Morris J. Asch, M. D. Regatta Committee—S. Nicholson Kane, Chester Griswold, Newbury D. Lawton. Committee on Admission—Henry C. Ward, James C. Bergen, Frederick Gallatin, James A. Wright, G. F. Dominick. House Committee—Harrison B. Moore, Thomas A. Bronson, William H. Osgood. Library Committee—Theodore C. Zerega, Paul Eve Stevenson, Arnold Wood. Committee on Club Stations—William H. Thomas, Frederick G. Bourne, F. Augustus Schermerhorn, L. Vaughan Clark, Charles Lane Poor, Frederick P. Sands, Harrison B. Moore, John P. Duncan, Amzi L. Barber, Edward R. Ladew. The fleet of the club now consists of 424 vessels, divided as follows: Schooners, 79; schooners with auxiliary motors, 6; sloops, 116; sloops with auxiliary motors, 6; steamers, 194; naphthas, 4, and launches over 40ft., 19. This is an increase of thirty-six vessels over last year.

Several amendments to the racing rules were discussed and a long time was taken up on this question. They were finally adopted, but will have to be passed at another meeting before they become operative. The changes are as follows:

Rule I., Section 7, Page 180—After "halyard block," in line 13, add "if in the judgment of the measurer there is any question as to the location of the hounds, the lower point of measurement for the topmast will be the upper side of the sheave in the upper throat halyard block."

Page 181—Insert after first paragraph, a new paragraph, to read: "In pole-masted yachts, and those not carrying topmasts, the distance between the underside of the sheave in the throat halyard block, and the underside of the sheave in the uppermost halyard block or sheave in the mast shall be used for determining the length of the base line, in the same way as in the topmast, when one is carried.

Page 181—Strike out last paragraph and substitute "When in any case owing to peculiarity of rig, the sail area of a yacht cannot, in the judgment of the measurer, be fairly measured in the customary way, he may, with the sanction of the Regatta Committee, take such measurements as will enable him to compute the actual area of sail carired, or that may be carried on the spars used."

Rule XVII., Sec. 3, page 193—Alter the present section to read: "Should a yacht, after having been officially measured, take on board any dead weight as ballas., or make alterations in her sail plan by lengthening any of the dimensions which have been measured, and start in a race without a remeasurement, or without notifying the Regatta Committee, in writing, that such changes have been made, together with a request for remeasurement, she shall be disqualified."

The following amendment to the constitution regarding life members was passed:

Article 8—Life Members—Any member whose name shall have been upon the roll of the club and who shall have paid annual dues for fifteen consecutive years, shall be entitled to become a life member on the payment of $500, which shall be in lieu of any further annual dues.

This amendment must be aproved at another meeting to become valid.

Numerous gifts of models were accepted with the thanks of the club. Among these were models of the Corsair II., presented by J. Pierpont Morgan; the Knawha, by J. P. Duncan; the old frigate Sovereign of the Seas, built in 1637, by J. Pierpont Morgan, and the schooner Sachem, by Mrs. William Arnold. A portrait of Mr. George Steers was also presented to the club by his nephew, Mr. Henry Steers.

* * *

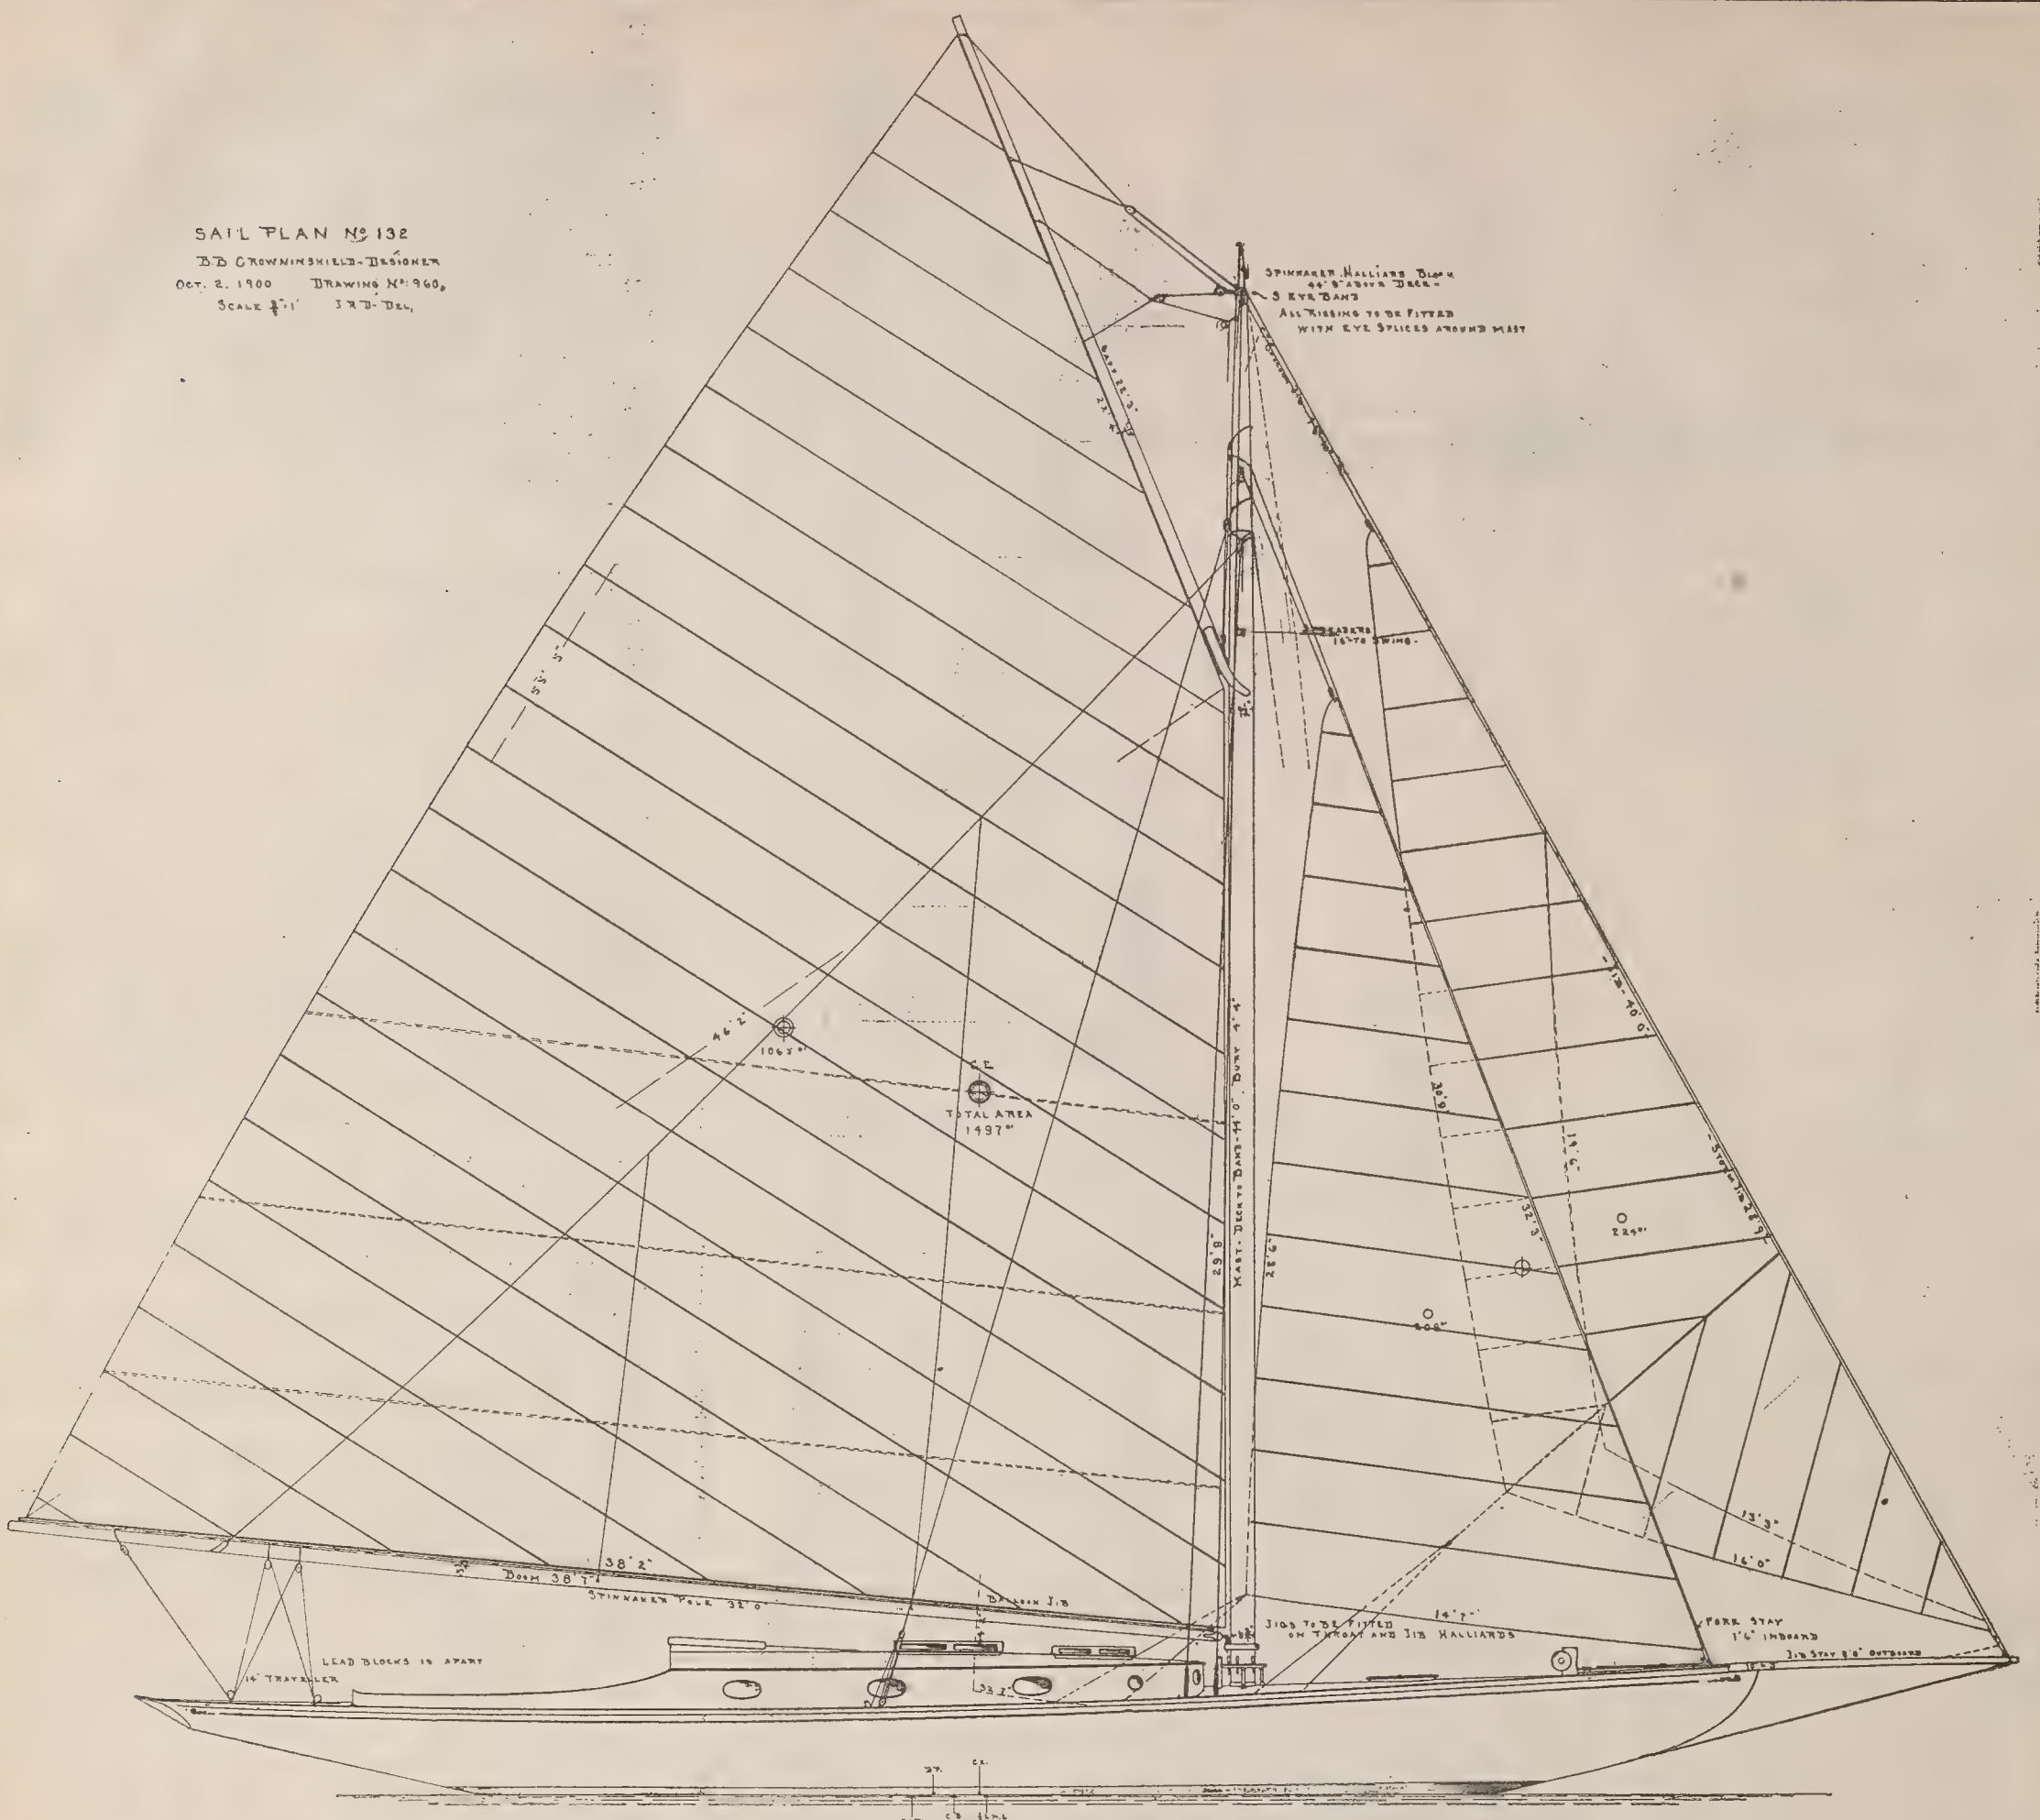
At a meeting of the Harvard Y. C., held Feb. 11, the subject of the proposed intercollegiate race was discussed, and it was voted to instruct the committee, consisting of J. S. Lawrence (1901), W. S. Burgess (1901) and F. A. Eustis (1901), to take further steps to arrange such a race. The Harvard Y. C. was founded in 1894, and has 46 active and 210 graduate members.

* * *

At the annual meeting of the Huguenot Y. C., of New Rochelle, held at the Arena in this city Feb. 16, the officers for the coming year were elected, as follows: Com., William B. Greeley; Vice-Com., George C. Allen; Rear-Com., T. E. Kitching; Sec'y, J. Nelson Gould; Treas., L. C. Ketchum; Trustees (for two years), F. T. Pagan and William L. Searles. About sixty members attended the meeting and the dinner which preceded it, and much enthusiasm was manifested. The reports of the officers showed the club to be in a highly satisfactory condition.

* * *

The Northport Y. C. held its first annual dinner Feb. 14 at the Manhattan Hotel, New York city. There were very pretty menu cards, and the tables were tastefully



FAST CRUISER—SAIL PLAN.

decorated. About twenty-two covers were laid. Among those participating were the following: Com. J. B. Morrell, J. L. Kerrigan, E. J. Kaltenback, H. C. Brown, N. S. Ackerly, Edward Thompson, John H. Ireland, C. A. Van Iderstien, J. A. Berrian, John W. Arthur, John J. Burton, S. Le Roy Ackerly, James F. Bendernagel, Edward Pidgeon, Chas. Pidgeon, John J. Robinson, W. P. M. Van Iderstien, H. M. Holfree, M.D.; Carl S. Burr, Jr.; Benj. W. Carll, A. H. Ostrom and H. Davis Ackerly. This club, though of but two years' existence, gives promise of being one of the best conducted on the Sound, there seeming to be a harmonious spirit among its members which speaks well for its future.

YACHTING NEWS NOTES.

Mr. Charles G. Davis, who sailed Genesee, the boat that successfully defended the Canada cup last year, has been commissioned by a Chicago syndicate to design a boat for the trial races for the defense of the Canada cup this year. Mr. Davis will turn out a centerboard boat of the Genesee type. In sailing Genesee Mr. Davis found out the boat's weak points, and these will be corected in his new boat. The Davis boat will be slightly narrower than Genesee, but gets equal stability through heavier displacement by 3in. more draft; she will displace about a thousand pounds more than Genesee. The boat will have a flush deck, and will carry about sixteen hundred square feet of sail. Her hull will be constructed by a Western builder, and the sails and rigging will be furnished by Mr. George B. Carpenter. All standing and running rigging will be of steel, and she will be fitted with hollow spars. The wide experience that Mr. Davis has had in designing and sailing this type of boat will enable him to produce a formidable competitor.

* * *

While running into the harbor of Marseilles after a race on Feb. 10, Mr. Edward Hore's 20-ton cutter Laurea struck some blocks of stone on the end of the breakwater, and is a total loss. All of her crew were saved. Two years ago at Ryde she successfully defended the Coupe de France, easily defeating the challenger, Comte Boni Castellane's boat Anna, and last year she defeated the Quand Meme, at Ramsgate, which was built especially by Duc Decazes for the purpose of bringing back the cup to France.

* * *

It is reported that Sir Thomas Lipton has chartered, through his representative, Mr. David Barrie, the steam yacht Golden Rod. She will be used as a transfer boat to ply between the Battery and Sandy Hook, where Erin will lie. Golden Rod is 151ft. over all, 122ft. on the waterline, 22ft. beam and 11ft. draft.

* * *

Mr. Harry Payne Whitney has chartered the steam yacht Sheelah from her owner, Mr. W. A. Donaldson, for use during the next three months. Sheelah is a schooner-rigged steel vessel, 194ft. long, 26.6ft. beam and 13.6ft. depth, measuring 630 tons, Thames measurement. She is a single screw vessel, the motive power of which is a triple expansion engine.

* * *

Advices from St. Paul state that Mr. James J. Hill will leave New York shortly for Bermuda, on his yacht Wacouta, with a party of ten guests. After stopping at Bermuda the yacht will proceed to Naples, and afterward visit other Mediterranean ports. Wacouta is the new name for the celebrated Eleanor, in which the Slaters, of Connecticut, went around the world. She was afterward chartered for a season by Col. Oliver H. Payne, who went to the North Cape and Baltic in her. Wacouta will be fitted for a five months' trip.

* * *

The Yale-Corinthian Y. C. have voted to order 21 dories of the type known as the Swampscott Club dory. The class of dories selected have the following dimensions: Length over all, 21ft.; length on the waterline, 14ft. 6in.; extreme beam, 5ft. 7in. They will have leg-of-mutton sails.

* * *

Mr. Isaac Emerson, N. Y. Y. C., who recently purchased the steam yacht Marjorie and renamed her the Margaret, has commissioned her designers, Messrs. Gardner & Cox, to turn her into an auxiliary, with a brigantine rig. Other alterations and additions will be made, the most important of which is a new after deck house, to be built of teak and finished inside with white mahogany. A refrigerating plant is also being installed, and a search light will be placed on the bridge. The vessel was built in 1899, at Chester, Pa., and is 176ft. over all, 145ft. on the waterline, 21ft. beam and 11ft. draft. Mr. Emerson intends to cross the ocean in her and make an extended cruise in the Mediterranean.

* * *

The steam yacht Surf, owned by Mr. C. K. Billings, N. Y. Y. C., will go on Downing & Lawrence's ways, South Brooklyn, this week. Extensive alterations have been made on her at the Morse Iron Works, and it is Mr. Billings' intention to make a southern cruise.

* * *

Mr. Leonard Lewisohn's twin screw steel steam yacht, now building at the works of the Gas Engine and Power Co. and Chas. Seabury & Co., Morris Heights, will be named Irene.

* * *

The Duke of Cornwall will be present at the America Cup races, which begin off Sandy Hook on Aug. 20. It was part of his programme to come here from Canada on his way from Australia, and it has been officially announced that the Queen's death will not alter his previous plans.

* * *

Mr. John H. Hanan, N. Y. Y. C., who recently purchased the steam yacht Consuelo abroad and changed her name to Hanania, has now abandoned the latter name, and the boat will be known as the Taurus, her original name.

* * *

The steam yacht Elsa, owned by Mr. Evans R. Dick, N. Y. Y. C., is at the Morse Iron Works, South Brooklyn, and will have changes and improvements made below decks.

* * *

Mr. Frederick G. Bourne, N. Y. Y. C., has ordered that his steam yacht Colonia be fitted out for an extended southern cruise.

* * *

Mr. Charles F. Coulter, of New York, has purchased the steam yacht Forget-Me-Not from the Butler Brothers.

* * *

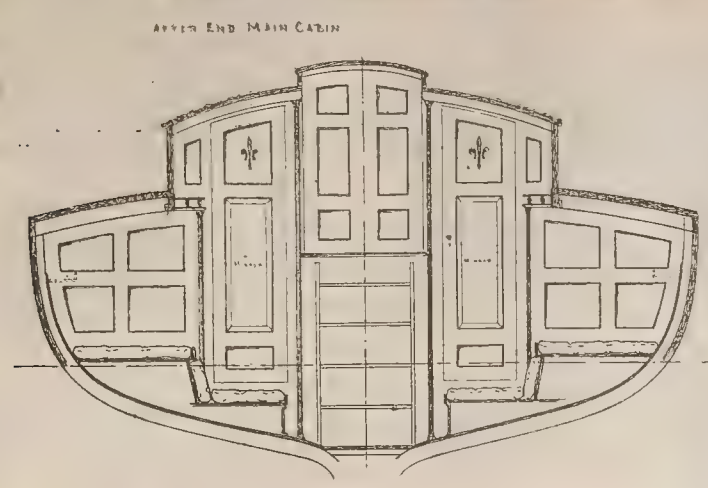
Mr. Prescott Hall Butler, N. Y. Y. C., has purchased schooner Marguerite. She was owned by the late Suydam Palmer.

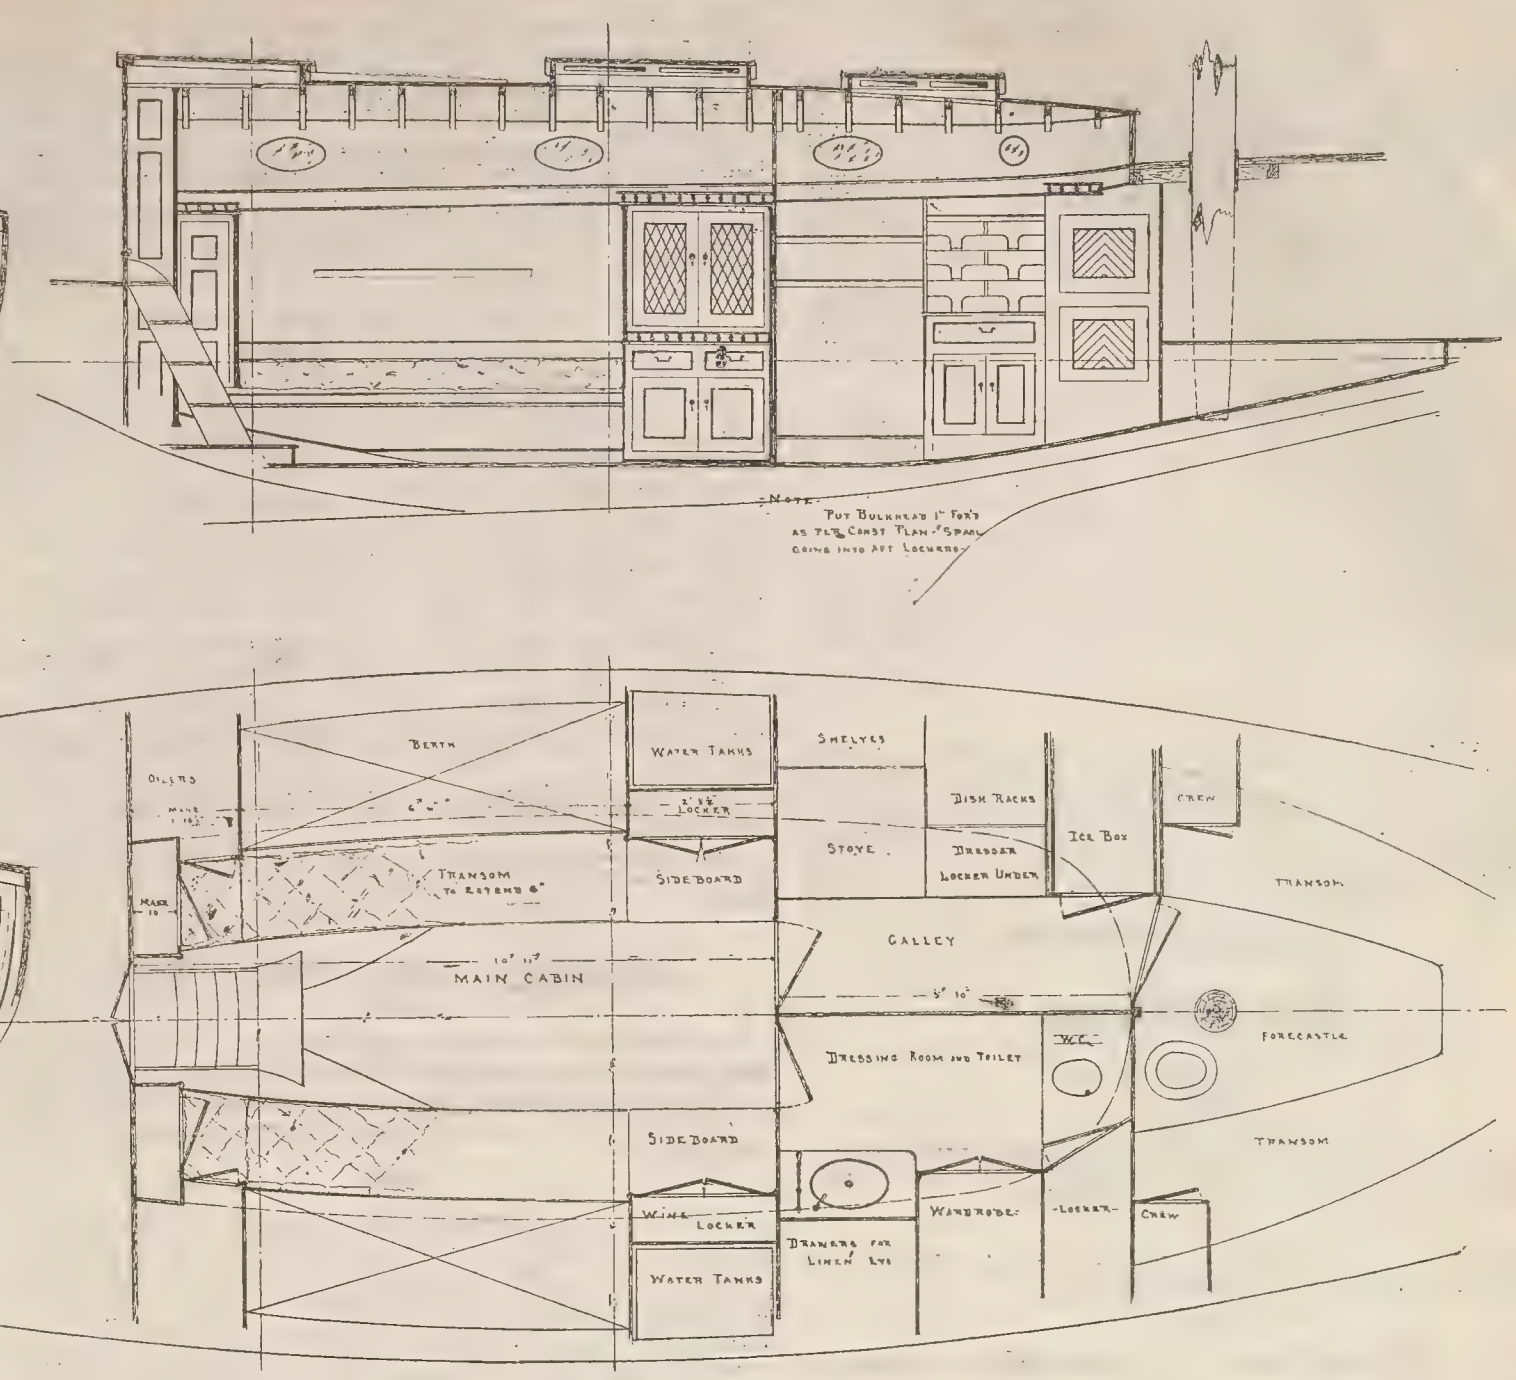
* * *

The Field says that the Dennys have increased the gangs working on the Shamrock II., but it is doubtful if the yacht will be ready to launch as soon as was originally intended. It is hoped that it will be possible to put her into the water by the end of March.

* * *

The Yachtsman's Clyde correspondent says "that the report that Mr. James Coates is about to fit out the Valkyrie III. is not correct. It is open, as it has always





CABIN PLAN No 132

FAST CRUISER—CABIN PLAN.

been, for some good sportsman to fit out this interesting vessel, but Mr. Coates has no intention of so doing."

The Clyde correspondent of the Yachting World, Jan. 31, says: "The refitting of Mrs. Goelet's steam yacht Nahma is now nearly completed, and she is expected to leave here for Japan in the course of a week or two."

"The fact that Messrs. Henderson have discontinued building the first-class cutter of Mr. Watson's design, which was intended either for the King or the German Emperor," says the Yachtsman, Jan. 31, "is now explained by the knowledge that the late Queen was known to be in failing health for some considerable time. Obviously the matter had no more connection with the Y. R. A. fiasco than the absurdly suggested visit of the King to New York."

Of the Fife designed and built 65-foot rater, the Senta, which Mr. Howard Hinkle, of Cincinnati, purchased some time ago through Messrs. Gardner & Cox, of this city, the Field (Jan. 26) says:

"The Senta left Southampton on Jan. 22 for New York. She fitted out at the yard of White Brothers, Itchen Ferry, who have given her weather boards about three feet high, supported by iron stanchions, and running from the stemhead to the sternpost, while there is an awning for the skylights, so that these may be kept open even in bad weather. The Senta goes out with her racing mast stepped, with a gaff trysail, jib and staysail, and large square sail for running. Her racing sails and gear have been sent by steamer Bermuda, but her spars still remain with White Brothers, the order to ship them having been countermanded. The crew—eight or nine all told—are Dutch and Scandinavian. The skipper, Essen, stated that he intended to go south until he fell in with fine weather, and was confident of making a quick passage. When the Senta left Southampton the weather was fine, and, the wind afterward coming easterly, it was anticipated that she would have a good run down Channel; but in going down the Solent she got aground on Pennington Spit, near Lymington, and had to return to Southampton to be docked for a survey before again porceeding on her journey across the Atlantic. It is rumored that there is something wrong with her rudder."

Messrs. Gardner & Cox have been informed that the survey alluded to has been made, and the yacht was found to be uninjured.

The prospective defender for the Canada cup, now being built by the Milwaukee Construction Co., after designs by N. H. McGregor, will be launched about May 1, and will be known as the Nordberg boat. Her dimensions are: Length over all, 43ft.; waterline length, 27ft.; beam, 9ft. 6in.; draft, 6ft. 9in. The sail spread will be about 1,225ft., of which 950ft. will be in the mainsail and 270 in the jib. The spinaker will contain 540ft., and the balloon jib 475ft. There will be no topsails. The framing will be of white oak and the planking of cedar. She will carry outside ballast in the form of a bulb weighing 5,700 pounds. It is probable that the sails will be made by Carpenter, in Chicago. Of the five yachts now in sight for the trial races, three will be classified as keel boats and the remaining two as centerboards.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

American Canoe Association, 1900-1901.

Commodore, C. E. Britton, Gananoque, Can.
Secretary-Treasurer, Herb Begg, 24 King street, West Toronto, Canada.
Librarian, W. P. Stephens, Thirty-second street and Avenue A, Bayonne, N. J.

Division Officers.

ATLANTIC DIVISION.

Vice-Com., Henry M. Dater, Brooklyn, N. Y.
Rear-Com., H. D. Hewitt, Burlington, N. J.
Purser, Joseph F. Eastmond, 199 Madison street, Brooklyn, N. Y.

CENTRAL DIVISION.

Vice-Com., C. P. Forbush, Buffalo, N. Y.
Rear-Com., Dr. C. R. Henry, Perry, N. Y.
Purser, Lyman P. Hubbell, Buffalo, N. Y.

EASTERN DIVISION.

Vice-Com., Louis A. Hall, Newton, Mass.
Rear-Com., C. M. Lamprey, Lawrence, Mass.
Purser, A. E. Kimberly, Lawrence Experimental Station, Lawrence, Mass.

NORTHERN DIVISION.

Vice-Com., G. A. Howell, Toronto, Can.
Rear-Com., R. Easton Burns, Kingston, Ontario, Can.
Purser, R. Norman Brown, Toronto, Can.

WESTERN DIVISION.

Vice-Com., Wm. C. Jupp, Detroit, Mich.
Rear-Com., F. B. Huntington, Milwaukee, Wis.
Purser, Fred T. Barcroft, 408 Ferguson Building, Detroit, Mich.

Official organ, FOREST AND STREAM.

A. C. A. Amendments.

Editor Forest and Stream:

Will you kindly publish the following additional signatures from the Eastern Division to the petition for amendments to sailing rules of the A. C. A., printed in FOREST AND STREAM of Feb. 9: A. V. Coulson, ex-Com. Eastern Division; Frank A. Smith, P. W. Grout, F. M. Clark, Jr., A. C. Scott, Jack Coulson, W. C. Pierce, W. E. Bartiss, P. G. Smith, A. A. Pritchard, Dr. C. A. Lakin, James Thompson, Howard Frost, A. H. Lange, Stephen Sawyer, H. Y. Simpson, C. E. Jogger, H. H. Ames, L. W. Gates, C. M. Lamprey, Rear-Com., Eastern Division; A. Elliot Kimberley, Purser, Eastern Division; F. H. French, ex-Com., Eastern Division; L. D. Sherman, Marcus Butter, H. P. Poore, F. A. Weiss, Howard Gray.

H. D. MURPHY.

WINCHESTER, Mass., Feb. 18.

A. C. A. Membership.

THE following names have been porposed for membership to the Eastern Division of the A. C. A.: F. F. Dorsey, Charles E. Prendergast, Maurice P. Ginn, T. Price Wilson, Geo. Adams Woods, David N. Skillings.

Rifle Range and Gallery.

Fixtures.

Feb. 3, 10, 12, 17 and 24.—New York.—Prize shoot, West Side Rifle Club range, 523 West Fifty-seventh street.
Feb. 22.—Marion Place, Jersey City, N. J.—Hudson Rifle Club's annual team match; open to all rifle clubs.
July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Offhand, 200yds.
Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

The Sportsmen's Show.

TEH programme of the revolver and pistol shooting tournament to be held at the Sportsmen's Show, March 2 to 16 (Sundays excepted), at Madison Square Garden, given by the Colt's Patent Fire Arms Mfg. Co., is as follows:

No. 1—100-Shot Indoor Record Revolver Match.—Conditions: 100 consecutive shots with any revolver; distance 20yds., standard American target with bullseye (count 8, 9, 10) 2¾in. in diameter. To be shot in series of 5 shots on a target, the 20 targets counted in order to constitute a score. Entrance $5, re-entries permitted. Prizes: 1. The competitor scoring the highest count, if breaking the present 100-shot record of 905 points, will receive a handsome gold medal, suitably inscribed, to be held permanently; or, if preferred, a Colt New Service target revolver, suitably engraved and handsomely mounted. 2. A Colt New Service target revolver, adjustable sights, checked stocks, etc., value $25. In case the record is not broken the medal will not be awarded, but the revolver becomes the first prize, and is awarded to the competitor making the highest score. In case of ties, each to receive the prize above designated.

No. 2—Revolver Re-entry Match.—Conditions: Revolver, target and distance as in Match 1. Entrance 35 cents a target, 3 targets for $1. Strings of 5 shots each; the best 5 strings to count. Entries unlimited; all ties divide. Prizes: First, $40; second, $30; third, $20; fourth, $15; fifth, $10; sixth, $8; seventh, $7; eighth, $6; ninth, $5; tenth, $4; eleventh, $3; twelfth, $2.

No. 3—Revolver Pool Shooting.—Conditions: Any revolver; distance 20yds.; target standard American; entrance 35 cents a target, at which 5 shots may be fired. A 10 counts as a bullseye. Division of money every three days. Pool shooting not allowed when ranges are occupied by championship events.

No. 4—Revolver or Pistol Re-entry Match.—Conditions: Any pistol or revolver within the rules; distance 20yds.; Columbia target (reduced); bullseye (count 1, 2, 3) 3in. in diameter; entrance 35 cents a target, at which 5 shots may be fired, three targets for $1; five targets to count as a score, not necessarily consecutive; re-entries permitted. Prizes: First, Colt New Service target revolver or Colt automatic pistol, handsomely and suitably engraved, value $35; second, Colt New Service target revolver, value $25; third, Colt New Police target revolver, value $15.

Indoor championship matches of the United States Revolver Association, under auspices of committee of this organization.

No. 5—Indoor Revolver Championship, 1901.—Conditions: Any revolver; 50 consecutive shots in series of 5 shots at a target; distance 20yds., standard American target, with a 2¾in. bullseye; entrance $5. Prizes: First, the championship and a championship cup to be shot for annually and a gold medal for the winner, to be held permanently; second, a silver medal; third, a bronze medal; also bronze medals for fourth and fifth prizes if sufficient entries are received. Time limit one hour.

No. 6—Indoor Pistol Championship, 1901.—Conditions: 50 consecutive shots with any pistol, in series of 5 shots at a target; distance, 20yds.; standard American target with 2¾in. bullseye; entrance $5. Prizes; First, the championship and a championship cup to be shot for annually and a gold medal for the winner, to be held permanently; second, a silver medal; third, a bronze medal. Time limit one hour.

The shooting gallery will be open from 10 A. M. until 11 P. M., and shooting allowed during that time so far as practicable.

The minimum trigger pull allowed on revolver and pistol shall be 2½lbs.

Contestants in the tournament will please note that arms and ammunition they use must be suitable for indoor shooting.

To be announced later: A special series of prizes for perfect scores; trophy shooting and other events.

Address all communications to the Forest and Stream Publishing Company.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Cal., Feb. 3.—Columbia Pistol and Rifle Club shoot to-day had a crowded range, despite the rain, which came like April showers in Maine. A. H. Pape got a fine score with rifle, and Young led with pistol, with Barley and Washburn close second and third men. Dorrell did good work at 50yds. with his .22cal. center-fire, and Becker led with revolver. Page is picking up marvelously with the revolver, as is Brannigan. Dr. Twist shot 100 shots with pistol and made a 57 average, which is nearly equal to his shooting of 1900 for ten best scores. Mannel and Young had a 50-shot match with rifles, against C. M. Daiss and G. W. Hoff. The former team won the dinner, but the shooting was away off, much of it being experimental. Scores, Columbia target:

Rifle, 200yds.: A. H. Pape, 40, 48; G. Mannel, 65, 70, 76, 85, 85, 95; Capt. Kuhnle, 66, 70, 79, 84, 84; W. G. Hoff, 71, 89, 123, 129; C. M. Daiss 91, 92, 84; P. A. Becker (carbine), 96; A. J. Brannigan, 82; E. A. Allen, 136, 145; Dr. Twist (Krag), 185.

Revolver, 50yds.: P. A. Becker, 55, 60, 65, 70; F. W. Page, 63, 75, 75, 79, 83, 90; C. M. Daiss, 64; F. O. Young, 63; O. Fendner, 68, 78, 77, 83; A. J. Brannigan, 68, 90; J. R. Trego, 67, 85, 93.

Pistol, 50yds.: F. O. Young, 36, 42, 49; G. M. Barley, 38, 46, 52, 53; F. S. Washburn, 40, 40, 47; Dr. J. F. Twist, 47, 47, 49; Mrs. G. Mannel, 57, 65, 66, 68; Mrs. C. F. Waltham, 64. 72, 91; G. W. Hoadley, 68, 79, 85; O. Fendner, 71, 80; W. G. Hoff, 73; G. Mannel, 78, 85.

.22cal. rifle, 50yds.: A. B. Dorrell, 18, 19, 19, 20; Mrs. C. F. Waltham, 37; J. Wall, 41, 67; Mr. Mahoney, 40, 69; N. G. Jewell, 41.

Young shot Peters long rifle cartridges. Pape shot Kings semi-smokeless powder. Mannel won the first place in the 50-shot match.

F. O. YOUNG, Rec. Sec'y.

On Monday night of last week at Capt. James Conlin's gallery, 513 Sixth avenue, at a meeting of the Metropolitan Shooting Club, W. C. Southwick was elected President; George Herrman, Vice-President; Capt. James C. Summers, Secretary-Treasurer, and Sergt. W. E. Petty, Captain. These officers form the Executive Committee of the club. A schedule of matches for the members and matches with teams of other clubs was contemplated as soon as preliminaries could be arranged. Several new members were elected.

Trapshooting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for a quarter-century.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Feb. 20.—Carlstadt, N. J.—Match at 25 live birds between J. H. Outwater and Chris Wright, at Outwater's Riverside shooting grounds, Rutherford road and Hackensack River Bridge. Sweepstake shooting.

Feb. 21-22.—Garden City, L. I.—Amateur championship of the Carteret Gun Club. Walter H. Mead, Sec'y.

Feb. 22.—Harrisburg, Pa.—Washington's Birthday live bird and target shoot of the Harrisburg Shooting Association.

Feb. 22.—Sing Sing, N. Y.—Target and live bird shoot of the Ossining Gun Club; live bird match at 9 o'clock; live-bird programme at 10 o'clock.

Feb. 22.—Albany, N. Y.—Annual midwinter target tournament the Forester Gun Club. H. H. Valentine, Mgr.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns; also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Sun of Feb. 13 published the following: "At a meeting of the executive committee of the Carteret Gun Club, held on Monday night, George S. McAlpin, former amateur champion wing shot, was called before the committee and received an opportunity to resign from the organization, with the alternative of being expelled if he declined. McAlpin promptly handed in his resignation. This action on the part of the club is due to the alleged assault by McAlpin on Capt. Money about six weeks ago in the office of the latter. The matter of the assault will come up in the City Court on Monday, but in the meantime McAlpin is no longer desired as a member of the exclusive Carteret organization. McAlpin until recently was a member of a number of s[illegible]ng and other sporting clubs, but is now only a member of the Westminster Kennel Club."

Mr. G. R. Plumer, of Newport, R. I., writes us as follows: "Trapshooting promises to become very popular in Newport. For some years there has been more or less shooting, but of late quite an interest in the sport has been aroused, and on the evening of Jan. 29 a number of enthusiasts met and organized under the name of the Aquidneck Gun Club, the following officers being elected: President, Geo. R. Plumer; Vice-President, Wm. Dring; Secretary-Treasurer, J. S. Coggeshall, 2d; Executive Committee, Hon. W. P. Clarke, Jr., Wm. Dring and A. Russell Manchester. The club starts out with twenty-seven members, a club house has been contracted for on the line of the electrics, and it is expected that the grounds will be formally opened early in March. It is expected that the club will figure prominently in trapshooting in New England."

Mr. Paul North arrived in New York on Wednesday of last week chiefly on business whose purpose was the promotion of the International team trapshooting contest. His trip resulted in a most gratifying success. He returned to Cleveland last Saturday. During a few idle moments on Thursday he was inveigled into a bowling contest by some of the shooters who had a good opinion of themselves as bowlers. Strikes and spares were to him as corn to a turkey gobbler. In a calm yet assured kind of manner he scored 205 in the first game, thereby doing much to prove that the East is really effete. The New York bowlers were in their u. g. f., so there are no excuses to make. Matter concerning the international race will be found in our trap columns.

Mr. Carl Von Lengerke informs us that the programme of the grand all-day shoot of the Freehold, N. J. Gun Club on Feb. 22, has eight events, 10, 15 and 20 targets, entrance 50 cents, 75 cents and $1. The third is a merchandise event for a Winchester gun, gun case, shell box and fishing rod; entrance 50 cents, privilege of re-entry. The Rose system will govern. Refreshments on grounds. Shooting commences at 9 o'clock. The leaving time of trains is 5 o'clock P. M.

The first shoot of the Michigan State Trapshooters' League will be held under the auspices of the East Side Gun Club, of Saginaw, Mich., on May 28, 29 and 30. Live birds and targets; $300 added; open to all; handicaps on both targets and live birds. John Parker, manager. Address, John Popp, Saginaw, Mich., for further particulars.

At Dupont Park, St. Louis, Messrs. C. Spencer and D. Cabanne shot a race at 25 live birds for the Mermod trophy on Feb. 13. Each stood at 31yds. The scores were 23 to 22 in favor of Mr. Cabanne. On Feb. 17, for the same trophy, Mr. C. M. Rock being the challenger and contestant, Mr. Cabanne was defeated by the score of 23 to 20.

The winning of first by Mr. J. D. Keenan at the holiday shoot at Interstate Park on Feb. 12 deserves more than passing praise and notice. The conditions of weather and competition were most trying, the former being in every way unfavorable, and the latter being of the highest. The particulars are more fully set forth elsewhere in our trap columns.

The shoots of the New Utrecht Gun Club, under the skillful management of Mr. W. F. Sykes, the club's president, held at Interstate Park on Saturday of each week, are well attended, and are marked by good fellowship and kindly emulation of the contestants.

The third contest of the live-bird series of contests between teams of the Baltimore Shooting Association and Keystone Shooting League took place at Holmsburg Junction, Pa., on the grounds of the latter organization, on Thursday of last week. Baltimore won by a score of 322 to 301. Each team had sixteen men, and each man shot at 25 live birds. In the two previous contests each team had scored a win.

On Feb. 13, at the tournament of the Limited Gun Club, Indianapolis, Ind., Mr. W. R. Crosby broke 207 out of 210 targets and was high man for the day, his percentage being a trifle better than .985. He ran straight in eight 15-bluerock events. On the second day he seemed to be out of his u. g. f., for he lost 6 out of 210, yet was high at that, though his percentage was only a trifle better than .966.

The programme of the West Chester Gun Club's annual live-bird shoot at West Chester, Pa., on Feb. 28, announces three prizes: First, a chance in the Grand American Handicap; second, a Winchester gun; third, a pair of hunting shoes. Entrance $1, miss-and-out, re-entry unlimited. Three men to win. Shooting commences at 10 o'clock. Birds 15 cents. F. H. Eachus is the secretary.

In the Grand Central Handicap at Indianapolis, Ind., on Feb. 15, there were twenty-nine contestants. Of these, Heikes, Gilbert, Crosby and Marshall killed 25 straight. In the shoot-off Gilbert won in the 38th round, Crosby and Marshall each losing a bird in that round. The scores are presented in full in another column.

Mr. Henry G. Hall, of Newell, Ia., informs us that the date of the annual tournament of the Newell Gun Club has been changed from May 15 and 17 to May 1, 2 and 3, as the former dates conflicted with those of the Iowa State Association.

On Feb. 18, in the Tombs Police Court, New York, before Magistrate Hogan, the case against Mr. George S. McAlpin for the assault on Capt. A. W. Money was dismissed, as the matter had been satisfactorily settled out of court.

Mr. Elmer E. Shaner's address is No. 111 Fourth avenue, Pittsburg, Pa., instead of 122 Diamond Market, the business at the latter place being sold recently by Mr. Shaner, pere, after being run by him upward of thirty-one years.

In the match between Messrs. Geo. E. Leoble and Chas. Steffens, 50 live birds each, at Dexter Park, Brooklyn, Feb. 15, Mr. Leoble won by a score of 39 to 38. He stood at 28yds., while Steffens stood at 30.

Mr. T. Haze Keller, son of Mr. T. H. Keller, has made a gratifying success in his capacity as traveling agent for the Peters Cartridge Co. He has displayed an aptitude for the business which forecasts a lasting success.

Mr. C. W. Phellis, secretary, writes us as follows: "The Mechanicsburg, O., Gun Club wish to claim May 22 and 23 as dates for their ninth annual tournament."

The Forester Gun Club, of Newark, N. J., announces that the programme of its two-day tournament, April 12 and 13, will be ready for distribution on March 10.

The championship of the Carteret Gun Club, held on Thursday and Friday of this week, promised to be well contested both in respect to the number of entries and the quality of the competition.

Mr. John Wright announces that he will hold a live-bird shoot at Interstate Park, Queens, on March 13.

BERNARD WATERS.

Trap at Dupont Park.

ST. LOUIS, Mo., Feb. 10.—The fourth shoot here to-day for the Dupont Park medal brought out the large entry of forty enthusiasts, and the result was another victory for Fred Fink, who won the medal at the last shoot, two weeks ago.

The weather was bright and crisp—ideal for the sport—but the birds were largely mixed with poor ones, and the consequence was a large number of straight scores. On the shoot-off Fink killed 17 more straight. The full scores were:

Dr Gaines, 31	2111112122—10	Heiligenstein, 30	212*222222— 9
Spencer, 31	2221222222—10	Prendergast, 31	2222*2?220— 7
Walker, 28	2211122111—10	J Cabanne, 30	1112222222—10
Dr Bond, 28	*0*1211010— 5	Selzer, 29	2222222122—10

Rock, 30	211*112211— 9	Scott, 28	1222112220— 9

At 2:30 Chris Heiligenstein, the flying Dutchman from Freeberg, Ill., took a turn at his invincible highness, Mr. Champion Cabanne, but it was of no avail. Heiligenstein shot brilliantly at times, making many fine kills, while at other times his work grew unsteady, and he ended with the rather poor score of 19. And Cabanne—well, he just kept on killing them, and while he had the best of the draw, it wasn't luck but his good shooting that won him the race. The birds were selected, and strictly first-class. Cabanne was at 31yds., Heiligenstein 30. The scores:

Heiligenstein, 30	2202221020212*2*21*11222—19
Cabanne, 31	11*1122021122220122112222—22

St. Louis, Mo., Feb. 13.—Charley Spencer to-day made his third attempt to get possession of the Mermod trophy, this time challenging Dute Cabanne. But there seems to be a hoodoo for Charley attached to this trophy, for he lost again to-day after making a strong race for it. The birds were exceptionally fast, and were aided by a good wind. This was the mist interesting race for the St. Louis championship that has yet been shot. Both men stood at 31yds. The scores were:

Spencer	22*121122022222221202222—22
Cabanne	1220212*21121212122221222—23

Chas. M. Rock, of O'Fallon, Ill., immediately challenged Cabanne, and the race was shot at Dupont Park Feb. 17 at 10:30 o'clock. The birds were not an ordinary lot in this race, with now and then a screamer. Cabanne did not shoot up to his usual form, while Rock's work was clean and steady throughout. They both shot from the 31yds. mark. The scores were:

Cabanne	2121212121221*20*2*202122—20
Rock	12111121012111221*1121212—23

Following this was a 7-bird sweep, $3 entrance, scores resulting as follows:

Gaines	1112211—7	Mason	1112212—7
Hill	1110211—6	Wilkinson	0110020—3
Barker	2211122—7	Scudder	1122111—7
Karser	1222112—7	Bond	1121201—6
Campbell	2212122—7	Cabanne	2122212—7
Williams	0222200—4	Spencer	2111120—6
Herbert	1012111—6	Rock	1111110—6

In the afternoon of Feb. 7 J. M. Selzer and John Cabanne indulged in a little 25-bird race for price of birds, and tied on 22. Owing to the lateness of the hour they decided to call it a draw and fight it out some other time. The scores:

Selzer	2221111201120122012211112—22
Cabanne	222*2222222222202*2222112—22

Ten birds, practice:

Craig	2222211110— 9	Page	2111200101— 7
Johnson	2222222220— 9	Barker	0212112222— 9

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

WESTERN TRAPS.

Intercity Shoot.

Feb. 9.—The last live-bird shoots of the Intercity Gun Club, of Minneapolis, have been successful. On Feb. 2 there was a strong wind, which made the birds lively. Hirschy won with 15 straight. Three new men came out, of whom McNamee promises to be a whirlwind. His second barrel is a corker.

On Feb. 3 Parker handed too warm a game to the boys on the high gun basis. The day was finished at targets, at which Hirschy took most of the coin.

Garden City, of Chicago.

Garden City Gun Club, of Chicago, is holding its regular shoot this afternoon at Watson's.

The club divides $5 between those winning the handicap medal. The best straight score carries the high average medal. This will be the first shoot for the Great Northern silver loving cup, at 25 birds, with extra handicap birds to shoot at. The birds in regular club event will be scored on the cup event.

J. L. Van Uxem, 101 Randolph street, has presented us with a chamois skin shooting shirt, which will go to second high man during the year, with handicap. Birds 15 cents in club event; optional sweep with and without handicap.

Intercity Race Postponed.

Garden City Gun Club, Mr. H. Levi, secretary, has just received notice from the National Gun Club, Milwaukee, that the race between that club and some of Garden City Club men will be postponed indefinitely, on account of the serious illness of Col. F. C. Brand, a member of that club, and owner of the park where they shoot.

Chicago Notes.

Eureka Gun Club, of Lyons, holds an all day live-bird and target shoot to-morrow on its grounds in Lyons suburb.

The Universal Gun Club holds a live-bird and target shoot to-morrow at Archer avenue and Forty-sixth street.

A little race between M. Greener and H. Smith at Watson's ground this week resulted with Greener 42, Smith 41.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Minneapolis Shooters.

On the 11th of this month weather conditions were not very good for live birds at the Intercity Park, for birds were strong and so was the wind. Morrison seems to be handling his new gun in good shape, and made top score at live birds and targets. Scores:

Live birds:

Morrison	22222222222222222011*222—23
Kribbs	2J22202021212002211222112—20
Wilkinson	10012211*11221212*2021112—20
McNamee	222002222*22222w
Brown	220222222222222w

Targets:

Morrison	111111111111111111111011—24
Wilkinson	111110101111101101111111—21
Kribbs	111011111000111111011110111—19
Brown	111111110111111101111111—23
Mac	000001110011111000111111—14

On Lincoln's Birthday a fair number faced the traps. There was a large number that had hard luck stories to tell. This was particularly true in the cases of Mark, Kribbs and Brown. Mark drew mostly hard ones, as did Kribbs, and Brown had the misfortune to have 3 good kills all out of bounds. This was particularly true of his ninth bird, which was killed, but struck the walk and bounded out. Morrison is back on his old-time mettle, and turned a neat trick for the crowd. In the target races Mark made some of the regular shooters look tired. There was a bright sun on the snow, and the light was bad for all kinds of shooting. Scores:

Morrison	112212122222222—15	Brown	21*2211*222*0w
Hirschy	2.2*22222222*12—13	Barker	212110211112222—14
French	222*22222222222—14	Capt	112111121121212—15
Mark	*1102221*222222—12	Spratly	2222222222w
Kribbs	220*021101*2222—13	King	11111000w

The above race was at 15 birds, $7 entrance, three moneys, 5, 3, 2, Rose system. Capt. shot for birds only. Spratly retired to catch a train:

McGraw	1001101111001111111111110—19
Brown	0111111111111110001111011—20
Hirschy	1111111101111111111110111—23
Morrison	1111111111111111111111011—24

Fifteen targets:

Morrison	111101111111100—12	Brown	011111111111111—14
Hirschy	111111111111111—15	Spratly	001000111011011— 8
Mark	111111111011111—14		

Fifteen targets:

Morrison	111111101111110—13	Hirschy	110111111111110—13
Mark	111111111111101—14	Brown	111111101111110—13
Spratly	110011011111011—11		

W. P. Brown has challenged L. E. Parker, of Minneapolis, for the Hirschy live-bird trophy, the race to take place on the grounds of the Intercity Park, Minneapolis, on Friday, Feb. 22, at 10 A. M.

DR. BILL.

Garfield Gun Club.

Chicago, Feb. 16.—The appended scores were made on our grounds to-day on the occasion of the tenth trophy shoot of the season. Dr. Meek, from the 31yd. mark, carried off the honors of the day, being the only one to go straight in the main event.

The day was cloudy, and while not very cold was very chilling owing to the great amount of moisture in the air. The birds were an unusually fast lot, largely outgoing screamers.

Attendance was small, owing to the deep snow and our grounds being located out on the prairie, necessitating considerable deep wading to reach it:

Tenth trophy event:

E Eaton, 28	212021*112— 8	Dorman, 28	1111222011— 9
Barnard, 30	222010202*— 6	Delano, 27	02*2210111— 7

RAVELRIGG.

IN NEW JERSEY.

Trenton Shooting Association.

Trenton, N. J.—With the wind trying to blow the hair off one's head, and the thermometer at zero, the February badge shoot was anything but a comfortable function. In the first place none but an "hostenostious" dead game sport would take chances in facing the traps in such weather, and the little band of heroes that fought out the programme are worthy the sublime respect of their fellow members. They will be known in the future as the "Never-Fail Brigade."

In the badge contest Mickel and Thomas were the only two that qualified for the gold medal, and the Professor also made the best individual score for the day, 11 out of 15. Some of the visitor's work was fair in spots, but the scores of all were away below the average.

In the merchandise event the boys tried a trifle harder, and the scores were slightly improved. Taylor and Mickel had an exciting finish for the sleeve buttons, Mickel emerging from the fray the winner by 1 target. Mickel also made the best general average for the day.

If the weather proves good, the indications are that Washington's Birthday shoot will be a hummer. The programme provided contains some novel features that will prove of interest even as an experiment.

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	10	10	15	15	10	10	10
Thomas	5	1	5	3	11	7	9	..	..
White	5	3	4	4	6	5	..	..	..
Mickel	4	8	3	7	10	10	10	8	8
*Johnson	4	5	3	4	7	9	..	..	..
J R Taylor	3	4	5	5	4	9	10	8	7
Frank Thropp	3	4	4	3	2	8	10	7	..
Howard	3	3	5	4	8	8	..	..	..
C Maddock, Jr	2	4	6	2	6	1	8	..	..
Reid	2	3	2	5	8	6	..	..	..
Williams	1	3	4	3	9	7	..	..	..
Ripley	1	4	3	3	6	6	..	..	..
*Jackson	0	2	3	2	5	6	..	..	..
Massey	0	1	4	3	5	5	..	..	..

*Non-members; not eligible to contest for medals.

Events 1, 2, 3, and 4 were optional sweeps. Events 5 and 6 were badge shoots, first 15 targets to qualify for place; 10 or better shoots for the gold and less than that number shooting for the silver badge. Events 8 and 9 were shoot-off of ties.

Forester Gun Club.

Newark, N. J., Feb. 12.—Great interest and hard work is being manifested by the committee for the Forester Gun Club's second annual two-day tournament, which will be held on April 12 and 13, at targets. This club has just begun to be popular, as the club's motto is "Give every one a good time for as little money as possible." All we kindly ask is that every shooter will help to make this one of the most successful shoots the Forester Gun Club has ever held. The club was organized in 1882, and at present is in good financial standing. Last year the club came near disbanding, owing to one of its officers trying his ideas to the detriment of the club, but the members at its annual meeting put an end to him by appointing a more noted trap man in his place.

Committee: J. J. Fleming, D. L. Sinnock and H. E. Winans.

The programmes will be ready by about March 10. H. E. Winans will be kindly mentioned for his good management of our club and making so many good friends.

The club shoot of to-day resulted in the following scores:

Handicap, 50yds. boundary, two moneys:

Ferguson, 28	2111111122—10	D Fleming, 27	0111111022— 8
Weller, 26	0202212211— 8	Aff, 28	0101122211— 8
Beatty, 27	0211221011— 8	Winans, 28	1210012102— 7
Ripley, 26	1112221*01— 8		

Event No. 2, 5 birds, one money:

Ferguson, 28	11222—5	Backus, 28	22102—4
Beatty, 27	21111—5	Aff, 28	20022—3

Country Club of Lakewood.

Lakewood, N. J., Feb. 12.—Visitors from the Carteret and New Utrecht gun clubs were present at the shoot of the Country Club to-day, one of whom was Col. T. Martin, of Bluffton, S. C. There was an exceedingly high wind, and the birds were an extra good lot. A 15-bird handicap with $5 entrance fee was the first event, money being divided for first and second guns. Miss-and-outs completed the programme. The scores in the handicap follow:

Col. Martin, 30	222221222222220—14
K P Thomas, 27	121101112011212—13
Capt Money, 30	212222202110111—13
S S Remsen, 30	222222222220022—13
W E Feigenspan, 30	220222222222220—13
Lockwood, 27	211210011221110—12
A Hegeman, 28	222021212120 — 9
Lozee, 28	011220111110 — 9
J H Hallock, 29	012222221200 — 9
George, 28	220012022 — 6
C Lincoln, 28	202222000 — 5
C W Rodman, 28	011001011 — 5
W S Cannon, 27	020100010 — 3
F A Potts, 25	01000 — 1
W Sykes, 28	020 — 1

The tie for second money was carried over into a miss-and-out event, in which there were ten entries, $5 entrance, and after the fourth bird the contest was between Martin, Thomas and Feigenspan. Thomas 8, Feigenspan 8, and divided the money and also that of second money of the handicap.

In another miss-and-out Martin and Money divided in the eighth round.

In addition to the above there were several side matches.

Belvidere Gun Club.

Belvidere, N. J., Feb. 13.—The two-men team match was for $40 a side. Creveling and Pitenger won by 3 birds. The scores:

Creveling	0222002222—7	Flin	0021220202—6
Pitenger	1122121002—8—15	Pearson	2002020112—6—12

Second event, 5 birds, $2 entrance, two moneys:

Rasener	21112—5	Dapkey	00121—3
Knowles	00200—1	Cole	11121—5
Reed	21222—5	Boardman	21110—4

WM. RASENER.

Hudson Gun Club

Newark, N. J., Feb. 11.—All were 10-target events on account of high, cold wind and weather, which accounts for poor scores, except for the old-timers and always topnotchers in any kind of weather.

Next regular shoot and club shoot on Feb. 24. We all adjourned to start at Rockaway Park, Feb. 17:

Events:	1	2	3	4	5	6	7	8	9	10	11	Shot at.	Broke.
Targets:	10	10	10	10	10	10	10	10	10	10	10

A. A. SCHOVERLING, Ass't Sec'y.

Richmond Pigeon Club.

RICHMOND, Va., Feb. 13.—At the second monthly shoot of the Richmond Pigeon Club, to-day, fourteen members had courage enough to face the traps at Broad Street Ball Park to take part. The wind was blowing a gale, and when the pigeons were released from the traps they did not stay long enough to become acquainted with the surroundings.

Mr. Tignor did not shoot in his usual form. He is considered the best one-barrel shot in the State, but yesterday he seemed to be a little off, shooting at times very slowly.

Messrs. Stearns and Hammond were able to catch the birds quickly, and many of their kills were loudly applauded.

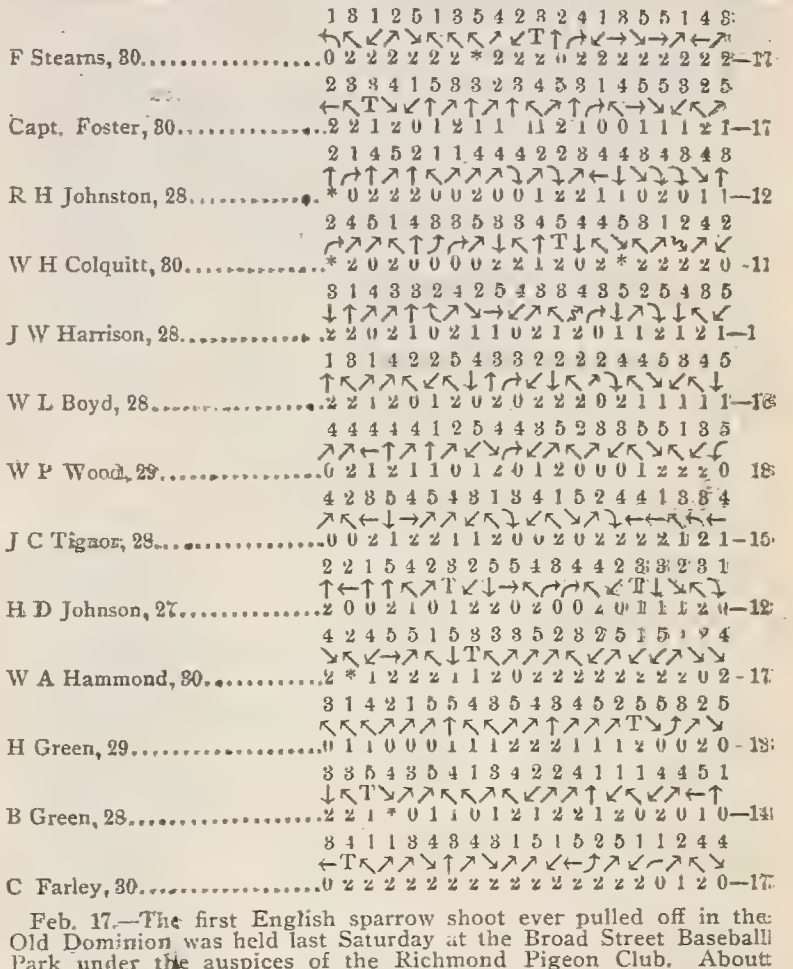
The birds were handled and trapped for Mr. L. C. Lynham, and were a picked lot, intended for the match between Messrs. F. Stearns and A. H. Fox, which was postponed.

The retrieving was done by Mr. Elyson's Dash, Mr. Vaughan's Leo and Mr. Young's Mack.

The English sparrow shoot, which is scheduled for Saturday, is creating a great deal of interest among the local shooters. They are all anxious to give the little oat-eater a trial, none having ever shot at them.

Handicap, 20-pigeon race:

Trap score type—Copyright, 1901, by Forest and Stream Pub. Co.



Feb. 17.—The first English sparrow shoot ever pulled off in the Old Dominion was held last Saturday at the Broad Street Baseball Park under the auspices of the Richmond Pigeon Club. About 400 sparrows were furnished and trapped by Mr. W. C. Lynham before an audience numbering fully 300, among whom were nearly all the trapshooters of Richmond. The sport commenced at 1:30 P. M. with Franklin Stearns first at the traps in a 20-sparrow match with J. W. Harison, and from then until dark it was "hot times in the old town" for both sparrows and pigeons, of which latter about 170 were trapped, after the sparrows were exhausted. The boys were "tickled to death" over the new sport, and if satisfactory methods of catching and keeping the little pests can be perfected sparrow shooting has come to Richmond to stay.

The next shoot at the little darters will be held at the ball park on March 2, and the boys would be glad to have visiting shooters join them in exterminating the little devils. Following are the scores at both sparrows and pigeons:

Event No. 1, 20 English sparrows, 21yds. rise:

Harrison	10222010122122010120—14
Stearns	11111102021112111122—18

Event No. 2, 10 sparrows:

Hammond	2222220210— 8	Stearns	2202222222— 9

Event No. 3, 10 sporrows:

Dean	2110012111— 8	Blair	2110120011— 7
Stearns	2222222022— 9	Wood	0101201110— 6
Hammond	1211010121— 8	Vaughan	0010022220— 5
Harrison	0111122100— 7	Dickerson	0100000101— 2
J C Tignor	1102202020— 6	Young	1121112111—10
Buckner	2200212202— 7		

Event No. 4, 10 sparrows:

Hammond	1111111001— 8	J C Tignor	0111011011— 7
Stearns	2121211101— 9	Blair	0220110011— 6

SECRETARY.

Horace Silsby.

THE recent death of Horace Silsby, of Seneca Falls, N. Y., removes one of the best known and most highly esteemed of the circle of sportsmen who were long prominent in connection with the New York Association for the Protection of Game and Fish. Mr. Silsby was an ex-president of the Association and was widely known as a trapshooter. Of him the Seneca Falls Reveille says in appreciation of his life and character:

"He was a man of attractive personality and very successful in making friends and in retaining their friendship. His clear insight and great good sense were manifested in all that he did. In addition to a uniformly good mental equipment for business, he was an enthusiastic lover of nature, with a true and fine sense of beauty in all its forms. The rod, the gun and the yacht afforded him a pleasant and congenial relief from business cares and responsibilities, and his boat house at Cayuga Lake was one of his most restful and enjoyable places of resort. He was fond of his friends, and his agreeable manners and a presence both graceful and manly made him a creator of friendship and affection for himself in all to whom he was known. The evidences of his many kindly words and deeds and of sympathy and condolence for those directly bereaved are many, affecting and in keeping with the character of the man, whose death is a source of extreme regret."

ON LONG ISLAND.

John Wright's Shoot.

Interstate Park, L. I., Feb. 12.—There was a great gathering of shooters to compete for the Francotte gun offered as a prize by John Wright. There was also a large number of spectators present to witness the competition. Among the contestants were several whose fame as skillful shooters is world wide.

It was a day to try out the skill of the best. The forenoon was clear, with a stiff 7 o'clock wind, which gradually increased in force till in the last half of the main event it was about a half gale. The sky became overcast, and a fierce snow squall added to the hard conditions in the concluding round. The birds were a good lot, and with the fierce wind there were a number of the kind classed as unkillable, which is a kind of bird the shooter fails to hit correctly or to hit at all. In the main event two sets of traps, Nos. 1 and 2, were used, so that the event was carried through quite expeditiously. There was the keenest interest in the competition manifested by the shooters and their many friends who were lookers on. The redoubtable Mr. J. A. R. Elliott, standing at the 32yd. mark, was a strong competitor and promising one in respect to killing straight and winning, as also were Messrs. Van Allen, Keenan and Gildersleeve, but each missed 1 bird, and thus the four tied on 14. It was decided among them that the money would be divided between the four, and that a miss-and-out between them would determine the ownership of the gun. Gildersleeve went out on his first bird, Elliott on his fourth, Van Allen on his fifth. Keenan killed 5, and the rest then being shot out he was the winner of the gun. It was a popular win. The amateur victor was warmly congratulated by all. The conditions were 15 birds, $12.50 entrance, birds included; handicaps 25 to 33yds. There were forty-five entries, of which two were shooting for birds. Deducting the cost of birds, $3.75, from each entrance, left $8.75 net for each entrance, or a total of $366.25. Deducting the value of the gun, $150, left $216.25 to be divided between the four high guns.

The guns and powders used were as follows: B. H. Norton used a Parker gun, Hazard powder; G. H. Piercy, Smith, E C; B. W. Leroy, Remington, Hazard; S. M. Van Allen, Daly, Walsrode; J. Von Lengerke, Francotte, Schultze; H. C. Koegel, Smith gun; J. W. Hoffman, Francotte, Schultze; W. W. Hassinger, Smith gun; J. H. Martin, Greener, Schultze; Capt. Jack, Greener, Schultze; C. W. Goldstein, Remington, E C; E. C. Griffith, Parker, E C; C. H. Criss, Parker, E C; H. S. Folsom, Francotte, Schultze; J. R. Hull, Parker, E C; L. Howard, Smith, E C; Ira McKane, Francotte, E C; G. Greiff, Francotte, Schultze; M. Mackay, Francotte, E C; Dr. Miller, Parker gun; Dr. Casey, Parker, Schultze; J. W. Thompson, Parker, Schultze; C. W. Schanck, Parker, Schultze; Annie Oakley, Parker, Schultze; A. W. Hawes, Daly, Schultze; R. James, Scott, Walsrode; Frank Ashton, Francotte, Schultze; L. C. Cornell, Francotte, Schultze; Dr. McManus, Smith, Schultze; L. W. Colquitt, Daly, Schultze; J. A. R. Elliott, Winchester, Hazard; H. Schummel, Francotte, Schultze; W. H. Sanders, Greener, E C; J. P. Keenan, Daly, Dupont; Dr. Stillman, Smith, Schultze; Ed Banks, Winchester, E C; C. Steffens, Parker, Schultze; F. Hyde, Greener, Schultze; F. G. Gildersleeve, Smith, Schultze; G. L. Schoemacher, Francotte, E C; A. Christy, Francotte, Schultze; C. E. Langdon, Parker, Schultze.

The scores in the main event, which was the third one shot, are as follows:

B. H. Norton, 27....222222222202220—13
G H Piercy, 29....2222*2222002212—12

A Nation of Amateurs.

A prominent politician, seeking to lay his finger upon a weak spot in our national character, sought some little time ago to prove that we were a nation of amateurs. Indictments have been drawn against us before. Within the memory of man we have been called a nation of shopkeepers, but now it seems that we are only amateur shopkeepers after all, and that our heart is not in our business. Do we not hear complaints almost daily in the public press of our reprehensible lack of enterprise, of our failure to adopt continental or American methods, of the eclipse of British commerce behind the rising sun of Germany? Our critic contended that it was much the same in nearly every profession that we take up. With the exception of the Royal Navy and gardening—a curiously assorted pair—whatever calling we adopt we discharge our duty as amateurs, "to the detriment alike of public business and private enterprise." The soldier, the clergyman, the farmer, the statesman—not one of these but bungles his business sadly for want of interest in his profession.

It is easy enough, once a plausible thing is started, to find facts in support of it. No doubt several professions would be none the worse for a serious attention to detail. No doubt, too, there are men in most professions who are blindly conservative, who cling to old traditions and look with contempt on modern scientific methods. But it is certain that they grow fewer year by year. They die out; the stress of competition will not permit them to live and carry on their business on the old lines. It may be a question whether we are not lagging behind other nations, but there can be no two words about our advancing. If we are amateurs now, we were much more so in the past, and shall be much less so in the future—in the serious business of life. Are competitive examinations decreasing in number, and county council lectures, and training colleges for the engineer? To us, at any rate, the danger does not seem to lie in this direction. The tendency is rather to suppose that cultivation of the mind is all-sufficient, and that the physical side of man is a matter of the smallest importance. But enough has been said recently upon this point. Let us confine ourselves at present to the consideration of the amateur.

When, with reproachful intention, a man is termed an amateur, the word may commonly be taken to mean that he is not a serious worker. In literature or art—and the expression is used in these connections in its most damaging sense—to be an amateur is, in the eye of the critic and the professional, to be nothing at all. To call a man even by so pleasant-sounding a name as "a brilliant amateur" is to damn him with faint praise. It was this view of the matter, presumably, that animated the politician who has recently risen to high office in the formidable accusation he brought against the British race. He took occasion to define an amateur as "a man who is not braced up to a high standard of effort and proficiency by a knowledge that failure may mean ruin." The definition sounds at first hearing reasonable enough, and it is tolerably well expressed. No doubt, too, the attitude it describes is hardly one that a great nation would wish to adopt, but on reflection the definition seems to be something of a libel on the unfortunate amateur, who must by this time, however, be growing accustomed to hard words from the jealous professional. Etymology alone would suggest that an amateur is one who takes up a profession or a sport because he likes it, and not as a mere means of making money. It might be argued that some professions —the Church, for example—are better approached in this spirit; it has often been argued that no sports should be approached in any other. And as to the quality of the work—it is not in games alone that the amateur has somethimes the better of the contest. Men do not always do their best when they know that failure may mean ruin. As often as not they break down from no other cause. In effect, the border line, in most professions, between the amateur and the professional is one that is very easily passed; and it is not always on the further side of the boundary that we find the best work. And we certainly cannot agree that the amateur shows any lack of seriousness in fitting himself for the task that he undertakes. The true amateur has nothing of the dilettante spirit about him; he is far more likely to suffer from excess of zeal than from carelessness. He has not been through an adequate training, allege his detractors, and therefore his work must suffer through not being conducted on the most scientific principles. But in all probability the man who has his work at heart will train himself far more satisfactorily than the ordinary pupil at a training college. The advocates of an early specialized education are apt to forget that the fact of its early commencement militates strongly against the probability of the pupil choosing his profession aright. In how many cases is a boy of twelve likely to know his mind on this all-important subject? Common sense would urge us to give him a fair chance—to let him have a good general education first, and superimpose upon that sound foundation what he wishes afterward. As things stand, there are not a few who enter the navy and find too late that they have mistaken their vocation, and that much of the knowledge they have acquired at such a cost of time and money is useless for any other profession. And in commercial matters, at any rate, we venture to think that very little good is done to the boy, or to the sacred cause of business, by restricting a pupil's education solely to the mathematics of the counting house.

The essential of success in a profession, one might almost say, is to be an amateur—in the best sense of the word. It is rather remarkable that while some are thus accusing us of a lack of seriousness in matters of vital import, we should have raised our voice more than once in these columns in gentle raillery at the gravity with which we pursue our games. But it is hardly necessary to point out that, in the world of sport, the amateur is a word bearing a somewhat different meaning. An artificial line of demarcation separates him from the professional; it is here purely a question of trade, and the principles prompting the man are not, and cannot be, too curiously considered. In all essential points the professional cricketer or football player may be more of an amateur at heart than the gentleman who bears that honored name. Indeed, in most cases he has, doubtless, taken up the game at which he makes his livelihood, primarily because he liked it. That he earns money by its practice is neither here nor there. But it is worth while considering the behavior, let us say, of certain league teams in the light of the definition we have quoted above. The components of these teams are, one and all, men who are "braced up to a high standard of effort and proficiency by a knowledge that failure may mean ruin." It is interesting to notice that not infrequently responsibility becomes too heavy for them to bear, and the play suffers considerably in consequence. It was, not so long ago, matter for comment that certain teams, who perhaps started the season rather unfortunately, preferred to play anywhere rather than on their own ground. The knowledge that failure may mean ruin is not conducive to accurate and spirited football. We doubt whether it is conducive to enterprise in any profession. There are professions, no doubt, where the thought has to be faced. In the two services an officer knows well enough that he has to take his chances, and that he may be broken through the slightest miscalculation or error of judgment. But if he is a wise man he does not allow the thought to obtrude itself unnecessarily. There are some who would be happier if the young officer were always thinking of such matters, and always discussing the nice points of his profession. In our opinion it is not an unhealthy sign that he should be reluctant to talk "shop" before strangers. Let him be trained as much and as thoroughly as possible, but it is even more important that his nerves should be in good condition.—London Field.

Concerning its holiday tournament, Feb. 22, the Trenton Shooting Association, of Trenton, N. J., in its programme presents the following information: "Shooting will commence at 9 A. M. sharp. Interstate rules will govern all shooting, in conjunction with the 'House Rules' of the Trenton Shooting Association. Targets thrown from magautrap, at 1½ cents, included in entries Nos. 1 to 5. Re-entries unlimited. Trolley cars marked 'Yardville' direct to the grounds. Club house heated by hot air. Loaded shells for sale. Sandwiches and hot coffee. Come early and bring your money with you. Event No. 1, at 10 bluerocks, class shooting; entrance 50 cents, targets included. First prize, Colt's automatic pistol, .38cal. —the latest production in high-power small arms—value, $35. The second prize is $5 in gold. Third prize, $2.50 in gold. A pair of gold cuff buttons will be awarded the lowest score in this event. Events Nos. 2, 3, 4 and 5, at 10 bluerocks, class shooting; entrance 50 cents, targets included. In these events the prizes will be a dressed capon for each first, second and third best score. Events Nos. 6, 7, 8, 9 and 10, at 10 bluerocks; entrance $1, targets deducted at 1 cent each; Jack Rabbit system of division. This is the only system that admits all the contestants for a share in the purse. Address all inquiries to the secretary, George N. Thomas, 1100 Chestnut avenue, Trenton, N. J."

America vs. England.

ELSEWHERE in our trap columns is published an interesting and gratifying letter from Mr. Paul North on a subject of lively interest to all trapshooters, and incidentally within the United States to all Americans. It goes without saying that a shooting contest engaged in by the best picked men of America against the best that England can produce is a national event. It should evoke the heartiest indorsement and support from the whole American people. There is no doubt but what it will do so. The great international events of the past—the great rifle, sculling, yachting and general athletic contests—were more than international events in the interest evoked; they were world-wide in that respect.

While Mr. North's letter modestly presents the main features of the matter, there is already a strong and substantial support of it.

As a result of Mr. North's energetic efforts concerning the international trapshooting contest, and at his instance, a meeting of gentlemen eminent in the realm of business and wholesome sport was held in New York on Wednesday of last week to take authoritative action in this matter. A brief discussion developed the fact that much important preliminary work had already been accomplished. It had already been determined that the personnel of the team would be eminent as to skill and good standing; that the prospective members had signified their willingness to join it, and on inquiry, that such men as were on salaries found that they could prearrange their business affairs readily to cover the time that they would be absent; that each member of the team would serve on it in his personal capacity—that is to say, he would not be a representative of any business interests whatever in his capacity as a member of the team.

It was further decided that the team would be strictly representative of American skill and competitive ability; that it would be more truly representative of America if sent to England by the American people, rather than by any American organization, hence it was decided that the funds should be raised by popular subscription.

Mr. North has been corresponding with the leading English sportsmen who are influential in trapshooting matters, and negotiations are so far advanced that a match is practically assured.

In short, all the preliminaries, excepting the money for expenses, have been almost definitely arranged.

In the great international competitions the representatives of America have often been victorious, and always admirable competitors. Such is a matter of sporting history. But in promoting the success of the team by furnishing the sinews of war, the venture has more than a team significance. It will promote a general national interest in acquiring skill with the gun—and how essential is such skill in times of national stress is embodied in the saying, "The man behind the gun," the import of which is known to every American and others.

Grand Central Handicap Tournament.

INDIANAPOLIS, Ind.—This is the fourth time the shooters of this country have assembled for the purpose of holding a contest upon the beautiful and well equipped grounds of the Limited Gun Club. This shoot has become a fixture at this city, and is known and established as the Grand Central Handicap. The handicap refers to the 25-pigeon race, $25 entrance, and is shot the last day, there being usually one day of target shooting and one of sparrow shooting and another of live-bird shooting. This year the management decided to use two days for targets and one for live birds.

Opening Day, Feb. 13.

Wednesday opened rather hazy, with a slight wind, and yet by the time the first gun had been fired the fleecy clouds were drifting away, and the shining sun was welcomed during the remainder of the day. The targets were thrown from a magautrap, and owing to having a new head not properly adjusted and the pull being defective caused some provoking delays. Yet in E. H. Tripp and Bert Adams we found such excellent managers that there were very few if any murmurs of complaint.

The tribe known as Indians were out in fairly good numbers, as no less than ten of them were seen to deposit funds with the cashier sufficient to shoot through the day. These first owners of the Indiana woods were somewhat crestfallen on account of the absent chiefs—Chas. W. Budd and Rolla Heikes—but it did not affect their shooting materially, as the scores will show.

The visitors present were enrolled as follows: W. R. Crosby, O'Fallon, Ill.; Jack Fanning, New York; Harvey Sconce, Sidell, Ill.; A. B. Conner, Pekin, Ill.; Fred Gilbert, Spirit Lake, Ia.; Col. A. G. Courtney, New York; Eddie Bingham, Chicago; Guy Burnside, Knoxville, Ill.; E. D. Fulford, Utica, N. Y.; Hon. Tom Marshall, Keithsburg, Ill.; Ed Rike, Dayton, O.; W. T. (Tramp) Irwin, Chicago; E. E. Apperson, Kokomo; E. C. Meredith, Muncie, Ind.; J. L. Head, Peru; Mr. Fort, Fostoria, O.

Add to this list the members of the club here, such as E. H. Tripp, T. H. Parry, Dr. O. F. Britton, J. W. Cooper, Paul Beck, Geo. Marott, Bert Adams and others, and you have a combination hard to beat. The almost continuous popping of guns was heard until near sundown, and when the last gun was fired some very wonderful scores were shown to have been made.

Billy Crosby has not been at every shoot held lately, and some of the regulars were wondering what said Billy could be up to by stealing away, but they found out to-day, as after missing one each in the first two events he ran out straight, with the exception of the twelfth event, where one more, by some sudden movement, evaded his unerring aim. This showed that Billy had been "practicing in his backyard." The boys speak of him as being in a trance, but, call it what you may, the "saucers" were not only "cracked," but they were "smashed," and then the few remaining pieces were ground into dust.

I turn now to the amateurs. Look at the figures opposite Mr. Sconce's name; total missed, 6. Here is a farmer boy from Illinois who has a local reputation for "crockery" smashing that few can excel. Fanning made nine straight scores and had a "bad half hour" in two events that cut him down in the average. Gilbert, "the evil spirit of the lake," made four 15s and six 14s and four 13s, and thus fell below his former record made on these grounds.

You have often read reports of shoots in which odd names were given to squads. Well, here is a new one. The first squad was designated by some one as the "Bald-faced" squad, as they were selected because they were smooth-faced, even to absence of mustache. They were good shooters, but not nearly so handsome as the second squad, each being adorned with a flowing mustache, being no less than the well-known Courtney, Bingham, Burnside, Fulford and Marshall. You should see the ladies press forward when this squad was called to the score, and when a miss was scored there was often heard a sigh and an "Oh, too bad!" "So sorry," etc.

The scores as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Crosby	14	14	15	15	15	15	15	15	15	15	14	15	15	15

Second Day, Thursday, Feb. 14.

Morning dawned lovely, and the day was an ideal one for target shooting. There was just enough wind to blow the smoke away.

There were several new faces seen to-day, but one was absent—that of Harvey Sconce, who was suddenly called home by the unexpected death of his uncle. The new men were such well-known personages as Ed Voris and Mac Stillwell, of Crawfordsville; Joe Bristain, of Lafayette; C. Stevens, of Moline, Ill.; J. Hillis and F. Hillis, of Washington, and Rolla Heikes, of Dayton.

Everything passed off in a way to be a lasting benefit to the Limited Gun Club. The scores made were not quite so good as yesterday. Crosby, though having made some wonderful scores in his, almost defeated himself, as out of 210 shots to-day only 6 were not scored dead. Jack Fanning came second, losing 11, closely followed by Conner, of Pekin, Ill., who let but 14 get away. Gilbert was not up to form, and he let 17 hit the ground, lost. Then there was Ed Rike and J. L. Head next, closely followed by the Hon. Tom Marshall.

The home members and friends came out to-day, and altogether there were thirty-eight entries. To-night others are coming in, and to-morrow more live-bird shooters are expected. The total scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Crosby	15	15	15	15	15	13	15	14	13	15	15	15	14	15

Following the regular programme a miss-and-out pigeon event was shot. There were eighteen entries, and seven men were tied on 5 kills when darkness fell and caused a postponement. The contest will be finished this morning prior to the regular programme. The entrance was $2.

Pigeon Day, Friday, Feb. 15.

This being the great event from which the shoot takes its name, and as there are quite a few shooters who shoot pigeons only this way, the day brought together the old and the new shooters, and the number of entries ran up to twenty-nine.

The day was a repetition of the past two, with the exception of a good breeze behind the birds that made many of them fast outgoing.

The new arrivals were H. J. Lyons and one of the Louisville surgeons who shot under the name of Culp. Then Elmer Neal came down from Chicago, where he was detained by a law suit. These, with nine members of the home club participating, made up a very large entry for such an event.

The shoot was advertised as usual to start at 9 o'clock sharp, but as the shooters do not get out early the first gun was not fired until about 10 o'clock, and then all were not present.

The shooters were handicapped on a scale running from 26 to 31yds., the committee being E. H. Tripp and Rolla Heikes; and as is customary with those on the committee they generally place themselves at the limit, so Heikes stood at 31, along with Fanning, Gilbert and Crosby, while Tripp took the 30yd. peg. There were five at 27, eight at 28, five at 29, and six at 30, and the above-named at 31.

As Tom Marshall was known to have not fully recovered from his lame arm, he was put on the 30yd. line, and he, Heikes, Gilbert and Crosby went out with clean scores.

This is the first time in my knowledge of handicap shooting that the scratch men were all the winners. It was discovered before the match was over that Crosby was shooting the pigeons much as he did targets, while Heikes was shooting much better, and so was Gilbert and Marshall.

On the first round all killed except Voris, Parry and Fanning, and thus two good men were shy. The second round Burnside and Bingham each lost out of bounds. The total column will show some startling results—some poor and some excellent scores. Take that of E. H. Tripp, who shot out of the money after killing 9 straight; but he had plenty of company, for in his hole landed four others, viz., Theodore, Comstock, Burnside and the Tramp.

I fancy some of the best shooting was done by Harry Lyons, of Louisville, though he lost 2; yet he showed the best of judgment in waiting on those birds that made twisting movements.

Another very excellent score was that of Mr. Lilly. He made some wonderful second barrel kills.

Then Heikes, Gilbert and Crosby grassed their birds in such short order as to cause the retrieving dogs little trouble, as most all of them fell within a few feet of the traps, and had not Bingham's bird carried out his well placed load of shot he would have been with the push. Mr. Head, who won here last year, and has now the record of losing but 1 out of 70 shot at on these grounds, had a fast towering bird go beyond the flags, but that was the only one that was not put in the game bag.

Paul Beck had everything going smoothly up to the twentieth round, when he failed on this, and the twenty-first, then killed out straight.

One of the new shooters, and the last man to enter, was C. Fort, of Fostoria, O., and he showed that he is no novice, and by using the gun that twice won the Grand American Handicap accounted for all but 1 of the 25.

Thus it will be seen that the moneys were about evenly divided, and never in the history of these shoots have the scores been so large. First year only one straight, that of Jack Fanning, was made. Second year there was only McMurchy able to account for all of them, and only Heikes in 24 place, while last year only Neal and Head went straight, and Gilbert was alone with 24.

The birds trapped to-day were rather on the mixed order. Some were extremely fast, some slow, and others medium. There were few "no birds." Altogether they were a good lot of cooped birds.

I may mention that Tramp Irwin shot in hard luck. Three dead out is unfortunate for any one. He made more one barrel kills than any one of the shooters, yet fell by the wayside, and out of the money, but he had company. Tramp is too old in the business to get discouraged, and last seen of him here he was pacing up getting ready to go to Hot Springs to "boil out."

Tramp Irwin reports having a grudge against one of the best-known shooters of this city. He says it was all Dr. Britton's fault that he has been a shooter and followed it up, as about twenty-eight years ago the doctor sold him his first breechloading shotgun, a Parker hammerless. Tramp says that cost him much money, but he has had a lot of fun.

The conditions were 25 pigeons, $25 entrance; no additional charge for birds. Purse divided 40, 30, 20 and 10 per cent. American Association rules to govern. Distance handicap, rise 26 to 31yds. Entries to close with firing of first gun on second round, unless unanimously extended. The scores:

The shoot-off:

Heikes	0	Crosby	222222222121*
Gilbert	2121111122111	Marshall	2222222222210

As a medal event, with the race to the winner of first, the ties were shot off miss-and-out, so Rolla Heikes was called up, and the fun commenced. All the spectators pushed to the front, and now the interest was intense. Crosby was early the choice, as his great shooting had indicated.

Heikes got a fast bird that was unkillable, and he says it could not be stopped with shot and powder and the best gun on earth, and Roll knows, as he has seen a pigeon or two fly in his time.

Gilbert and the Hon. Tom and Crosby started off and killed and killed until it began to look like a case of tenting for the night. Gilbert shot a careful, one-barrel race, only using the second barrel when absolutely necessary—he was shy on shells, and so was Crosby. All went along lovely up to the thirteenth bird, and when he killed his thirteenth he pulled his jackrabbit foot and yelled, "Thirteen!", when Crosby and Marshall went up in the air, as they were then and there "hoodooed." And didn't Gilbert laugh! Oh, how Fred will enjoy telling that young Tom Marshall Gilbert at home how he come it over the Hon. Tom Marshall and Billy Crosby.

Following this was a miss-and-out for $5 each. Seventeen men had entered for a 7-bird race, but as the sun was then down only a miss-and-out could be shot. It was ten chances to one that it would be a miss-and-out, as a dark bird could not be seen. When it came to the seventh round, there being but Gilbert, Tripp and Fanning in, it was divided, and there was a scamper and hurried packing of guns to get away for the cars and hotel.

Thus closed the most successful shoot of the kind ever held here.

Feb. 12.—The Lincoln's Birthday clay-bird shoot of the Ossining Gun Club came off as sceduled. While the attendance was not large, considerable fun was on tap, as some spirited sweeps were shot. Tallman, of South Millbrook, carried off most of the firsts, in which there was more honor than cash. We intend to make a special effort to make the holiday shoot of the 22d inst.—live birds and clay pigeons—of especial interest:

C. G. B., Capt. O. G. Club.

Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., Feb. 16.—The contest for the championship of Philadelphia was thrown open to competition, Mr. H. Henry, the holder of the trophy emblematic of it, not being present to defend it.

The conditions were 10 birds per man, 30yds. rise, 50yds. boundary, sweepstake, entrance $2.50. There were two straight scores, Steven Hothersall and John Brewer. In the shoot-off for the trophy at 3 birds Hothersall killed 3 straight, Brewer missing his second. The scores:

Hothersall	2111212221—10	Fitzgerald	1020112112— 8
Brewer	2221222222—10	Anderson	2*2222*022— 7
F B McCoy	2222222022— 9	F W Van Loon	1022222*01— 7
Hallowell	222222*222— 9	Smith	0202002222— 6
Budd	2220222221— 9	Russell	*02001*11*— 4
Bailey	2222220222— 9	Harrison	12**121222— 8
Hobbs	22*2202222— 8		

The regular club handicap was the second event. It was at 10 live birds, 50yds. boundary, sweepstakes, entrance $2.50. The scores:

McCoy, 30	2222222222—10	Budd, 30	*112012112— 8
Van Loon, 29	1222120012— 8	Hallowell, 30	1111121110— 9
Smith, 28	22222*2222— 9	Hobbs, 30	2*22022222— 8
Anderson, 29	2122022222— 9	Harrison, 29	20111121*1— 8
Jones, 30	222*222222— 9	Brewer, 29	2222201012— 8
Fitzgerald, 29	2211012122— 9	Hothersall, 29	2121121002— 8
Bailey, 29	2202212222— 9	Grigg, 27	2010000220— 4
Russell, 29	1111101111— 9	Schenck, 27	10002002*— 4

Sweepstake event, 6 birds, 30yds. rise, $2.50 entrance: Bailey 6, Russell 6, Fitzgerald 6, Hothersall 6, McCoy 6, Hobbs 6, Anderson 6, Roney 5, Budd 5, Hallowell 5, Smith 4, Van Loon 4, Brewer 3, Schenck 2.

Feb. 12.—The Lincoln's Birthday shoot of the Keystone Shooting League had a 25-bird contest for the main event. The scores were: H. Henry, 30yds., 20; W. H. Morris, 30yds., 21; A. Anderson, 29yds., 17; I. W. Budd, 30yds., 18; C. E. Geikler, 28yds., 16; J. W. Fees, 28yds., 14; W. Harrison, 30yds., 20; D. Sanford, 29yds., 22; F. M. Hobbs, 29yds., 17; W. F. Van Loon, 29yds., 19; F. B. McCoy, 30yds., 20.

Ambler Gun Club.

AMBLER, Pa., Feb. 12.—The Ambler Gun Club is making considerable preparation to hold an all-day merchandise shoot on Washington's Birthday at Ambler, when about $100 worth of prizes will be shot for. The conditions of to-day's shoot were 25 targets to each man, twelve men to a side, Ambler Gun Club against the Highland Gun Club, of Germantown. The summaries:

Ambler Club: Godfrey 13, Mink 20, Yerkes 10, Thomas 17, Pfleger 19, Duke 14, Bisbing 17, Seifert 15, Dillon 13, Conway 12, Broadfield 13, Haywood 14; total 177.

Highland Club: Jay 15, Meehan 13, Burns 13, E. Dreakley 13, M. Wentz 13, Miller 16, C. Dreakley 20, E. Wentz 11, Davis 12, Fertsch 13, Slaw 14, Lutz 16; total 169.

Monte Carlo.

The Grand Prix du Casino.

Friday, Jan. 25.—The contest for the thirtieth Grand Prix that has been shot for since Mr. Lorillard secured the first and last victory gained by an American will be memorable from the fact that not a single Englishman or American took part in it, out of respect to the memory of Queen Victoria. When the news of her serious illness reached Monte Carlo on Monday the English and the Australians present, to the number of something like thirty, spontaneously declared that they would not shoot if the end came during the week of the Grand Prix. This determination was all the more praiseworthy on the part of the Australians, like Mr. Mackintosh, Mr. W. Eales, Mr. Walford and Mr. Hill, who had come all the way to shoot, and whose chances of success, to judge by the way in which they had acquitted themselves in the preliminary contests, were very good. But they did not hesitate for a moment to act in unison with shooters from England, while a still higher meed of praise is due to Mr. Crittenden Robinson, for although as an American he owes no allegiance to the monarchy, he declared that in remembrance of the great courtesy that he had received at the Gun Club and at Hurlingham, he would take no part in the contest, probable as it seemed that he would be nearly, if not quite, at the top. The withdrawal of the English speaking contingent was of course much regretted, but the authorities are not to be blamed for not having postponed the shooting, as all the arrangements had been made several weeks ago, and it must be remembered that, if there were some thirty English entries, they formed little more than a fourth of the whole. As a rule, the Grand Prix attracts something like 120 competitors, and this would have been about the total on the present occasion had nothing occurred to keep the English away; but, as it was, the actual competitors stopped short at eighty-three, the Italians forming as nearly as possible one-half of the whole, with twenty-eight French, half a dozen Belgians and a few Germans, Spanish and Russians. Previous winners of the prize were represented by Signor Guidicini, Count Gayoli, Signor Benvenute, M. Journu, M. Moncorgé and Count O'Brien, but it was to be noted that there was not a single Austrian or Hungarian, although the prize has been won three times by competitors from the dual kingdom. The weather was very fine when the shooting began, and so it remained. The birds were so good and so difficult that when the first four rounds had been completed only nine had a clean sheet, while twenty-four killed three. Previous winners, like M. Journu, Signor Guidicini and Signor Benvenute, had practically been put out of court by 2 misses, but still they entered the lists again, when sixty-three of the eighty-three original entries were called up. When the eighth round had been completed Signor Della Torre, who had never shot here before, and M. Moncorgé were the only two who had not missed. The ninth round began with two clever kills by Baron de Langen and Signor Catenacci, the latter of whom was shooting in fine form; but Signor Della Torre was most unfortunate, as he accepted a very difficult bird that dwelt on the trap and got clean away. Twenty-two kills to seven misses were scored in this round. In the tenth round twenty-eight were still left in, and only 7 misses were made to 21 kills, but among the seven who went out was M. Moncorgé. He had what looked to be a very easy bird, but he let it go. In the twelfth round Signor Catenacci led off with a clever kill, followed by Signor Della Torre and Signor Gallardo, who did the same; but then came three misses in succession, Signor Polleri and Señor Del Camino both being beaten by birds that did not seem quite so good as that which put last year's winner, Count O'Brien, out. M. Guyot, M. Moncorgé and Count de Robiano all killed in succession, and the five who had accounted for 11 birds out of 12 (MM. Catenacci, Della Torre, Guyot, Moncorgé and Robiano) then agreed to put aside out of the prize a sum of £80 for the fifth, there being only four prizes allotted. In the thirteenth round this unofficial prize was soon disposed of, as Signor Della Torre let go a very difficult bird, but the four others all killed. In the next round Signor Catenacci made a good second from the fourth trap, while M. Guyot, who had been shooting very steadily and had shown no nervousness, also effected a good second from the second trap. M. Moncorgé was favored with a very easy bird from the second trap, but Count de Robiano's chance was extinguished by missing a rising bird from the center trap. The fifteenth round saw the end of the contest, for of the three left in, M. Guyot, who put in a good second barrel for a fast bird from the second trap, alone killed, and, having disposed of 14 out of 15, he became entitled to first prize. M. Moncorgé, who missed a twisting bird from the left trap, and Signor Catenacci, who was beaten by a bird from the center trap, divided second and third moneys. This was the first time that M. Guyot, who is a resident of Lyons, and who had shot at Vichy last summer, had been at Monte Carlo, and he was as cool and collected at the finish as he had been in the earlier stages of the contest. Scores:

Grand Prix du Casino, a piece of plate and £800, added to a sweepstakes of £8 each; second received £160 and 25 per cent. of the entries; third £80 and 25 per cent.; the fourth £40 and 15 per cent. of the entries; 12 birds, 3 at 26 meters and 9 at 27 meters; the winner in 1900 to stand back 2 meters, other winners 1 meter; three misses to put out; 83 subs.:

Missed 3 out of 6: Signor C. Del Camino, Signor Lancia, Signor Lanfranchi, Count d'Eloi.

Missed 2 out of 5: Prince de San Donato, Signor Paganini, Marquis de Gresy, M. Journu, Signor Berselli, Signor de Paratico, Signor Queirolo, Signor Crespi, M. Roth, Signor Guidicini, Signor Luzzani, Herr Hans Marsch, M. Vogel.

Missed 3 out of 4: Signor Perego, Signor Fortunio, Count Delfino, M. de Tiele, Count Voss, M. Paul Gervais, Count Noghera, Prince Poniatowski, Capt. Dancourt, Count R. Delfino, M. Maieur, M. Spetchinski, Signor Donegani.

Missed 3 in succession: M. du Pavillon, M. Decauville, Signor Anselmi, Signor Cavaleri, M. Faure, M. Rondeoux, Signor Pareti.

Winners of the Grand Prix du Casino:

1872, Mr. Lorillard, American.
1873, Mr. J. Jee, English.
1874, Sir Wm. Call, English.
1875, Capt. Aubrey Patton, English.
1876, Capt. Aubrey Patton, English.
1877, Mr. W. Arundell Yeo, English.
1878, Mr. H. C. Pennell, English.
1879, Mr. E. R. G. Hopwood, English.
1880, Count M. Esterhazy, Austrian.
1881, M. Camauer, Belgian.
1882, Count de St. Quentin, French.
1883, Mr. J. Roberts, English.
1884, Count de Caserta, Italian.
1885, M. L. de Dorlodot, Belgian.
1886, Signor Guidicini, Italian.
1887, Count Salina, Italian.
1888, Mr. C. Seaton, English.
1889, Mr. V. Dicks, English.
1890, Signor Guidicini, Italian.
1891, Count Gayoli, Italian.
1892, Count Trauttmansdorff, Austrian.
1893, Signor Guidicini, Italian.
1894, Count C. Zichy, Austrian.
1895, Signor Benvenuti, Italian.
1896, M. H. Journu, French.
1897, Signor G. Grasseli, Italian.
1898, Mr. Curling, English.
1899, M. Moncorgé, French.
1900, Count O'Brien, Spanish.
1901, M. Guyot, French.

It will be seen that the prize has been won eleven times by Englishmen, eight times by Italians, four times by Frenchmen, three times by Austro-Hungarians, twice by Belgians, and once each by an American and by a Spaniard.—London Field.

Baltimores vs. Keystones.

Philadelphia, Pa., Feb. 14.—The third of the series of contests between teams of the Baltimore Shooting Association and the Keystone Shooting League, for the intercity championship, took place on the grounds of the latter The Baltimore team won on the somewhat wide margin of 21 birds. Each had scored a win in the prior contests, so that the third decided the victor.

The birds were a good lot, and a stiff wind, blowing from the west, materially aided their flight, and thereby added to the difficulty of the competition. The Keystone shooters were unable to use some of their best men, who were not at the time available.

The conditions in this contest were teams of sixteen men, 25 birds per man, 30yds. rise, sweepstake, entrance $10. The men were divided into two squads of sixteen, each squad having eight men from each club, the squads headed by Hicks and Wolstencroft starting on the old grounds and shooting 13 birds, the squad led by Rex and Whitaker starting on the new grounds and shooting 12 birds. As each squad finished their allowance on one ground they changed over to the other. The scores:

Baltimore Shooting Association.

Sherbrooke, Que., Gun Club.

The annual meeting of the above-named club was held at the residence of the vice-president, Mr. W. E. Loomis, Friday evening, Feb. 1. The secretary's report was most encouraging and the financial condition of the club satisfactory.

Letters from Manager Shaner, of the Interstate Association, giving the club dates July 1 and 2, as asked for, for the Interstate tournament to be held at Sherbrooke, were read and discussed with pleasure.

The club is unanimous in adopting the system of distance handicapping both for tournaments and club practice, and will arrange trap house and scores as soon as the season opens.

The officers for the year are: President, W. E. Loomis; Vice-President, T. M. Craig; Captain, C. G. Thompson; Directors, W. B. Vail and V. G. Bray; Secretary, C. H. Foss; Assistant Secretary, Jos. G. Walton.

After the business of the meeting was disposed of a bountiful repast of delicious refreshments was served by Mrs. Loomis, and several hours were delightfully spent in talking over prospects and recounting succeses and failures afloat and afield during the past season. Most of the members had got their deer, the vice-president having a deer and two bull caribou to his credit, and while some had only funny misses to report, only two had failed to get a shot.

Secretary Foss' big cock of the woods was a funny bird, which he knocked off a high tree twice. Each time he struck the ground with a thump and a squeak, and returning to the exact spot on the tree, attacked the worm hole as though he thought its occupant had hurt him. The third shot collected him for the museum.

All the members agree to do earnest missionary work for the Interstate tournament, and will unite to make it a success. We believe that the dates selected, July 1 and 2, will insure a large attendance of Canadians, and that the handicap of distance will encourage the more indifferent shots to come back to us as of yore.

Jos. G. Walton, Ass't Sec'y.

Col. F. C. G. Brand.

Milwaukee, Feb. 11.—*Editor Forest and Stream:* It is with regret that I, as secretary of the National Gun Club, of Milwaukee, Wis., am compelled to write you informing you of the death of one of our members, Col. F. C. G. Brand, of National Park Hotel, who passed away Friday afternoon.

Mr. Brand was the father of the National Gun Club. It was at his suggestion and at his place in 1895 that the birth of this club took place, a club in which he took a great pride and interest, and always attended its shoots, not always as a participant, but always as an interested spectator.

The president of the National Gun Club, Ed Silverman, called a special meeting of its officers Saturday afternoon, at which time a committee was appointed to select a floral design to be sent to the house, said committee consisting of the board of directors, Theo. Thomas, E. E. Rogers and Harry Reed.

Also a committee was appointed, consisting of Dr. J. L. Williamson, E. E. Rogers and L. Collins, to draft suitable resolutions on the death of our member, a copy of which shall be sent to the family of the deceased, and copies to the sporting papers in the country.

The following named persons were selected by the president to represent the club at the funeral of said deceased, to take place on the 11th inst.: Theo. Thomas, Harry Reed, Ed Silverman and L. Collins.

Lindley Collins.

Limeport Gun Club.

Limeport, Pa., Feb. 9.—Twenty-five targets, American Association rules:

Boston Gun Club.

Boston, Mass., Feb. 13.—Fine weather, but just a little chilly and cool for the real sport of trapshooting, greeted the eight shooters that faced the trap at the Boston Gun Club's fifth prize shoot to-day. It was one of those days that would test the skill of the back-mark man to the utmost and also make him wish that he had a gun with a charge of dynamite in it to get there good and quick. Our longest distance man to-day was Howe, who had come with his "Gatling gun" all prepared for business, and though the wind played tag with the targets he calculated just right for the greater majority. Baker easily secured top position in the prize match, breaking 26 out of the 30, which is the highest score yet made in the present series. Howe was second with 22, standing on 19yd. mark. Scores, all events 10 unknown, except event 3, which was at 5 pairs:

Events:	1	2	3	4	5	6	7	8	9	10
Baker, 17	7	4	5	8	8	9	9	5	8	..
Howe, 19	7	5	7	7	8	6	8	7	..	..

Secretary.

The International Team Contest.

Cleveland, O., Feb. 16.—*Editor Forest and Stream:* Information having been received from London that the sportsmen of England are getting up a popular subscription to back an English team against one from America in a match at targets, that over half of the money has been raised, and that there is little or no doubt of the balance being forthcoming, it is time now to consider ways and means for sending an American team to London.

The expense of sending a team of ten men and one or two substitutes will be about $3,500 to $4,000.

I am informed that the men mentioned below are at liberty to make the trip, and would certainly make the nucleus of a strong and representative American team. They are all willing to back themselves for their proportionate share of the stake, which will be from $2,500 to $5,000, a matter yet to be decided upon, but they do not feel able to stand the expense of the trip in addition.

The men in question are Heikes, Elliott, Fanning, Gilbert, Crosby, Budd, Parmelee and Marshall, and there are dozens of others from whom to select the remaining members of the team and substitutes, as may be determined by their ability to make the trip.

Prominent among these canditdates for place on the team might be mentioned McMurchy, Banks, Powers, Merrill, Tucker, Fulford, Leroy, Upson, Trimble, Kirkwood, Rike, Young, Squiers, Burnside and many others, too numerous to mention.

Tom A. Marshall, of Keithsburg, Ill., has been mentioned as a suitable man to act as captain and manager, and I therefore suggest that he receive subscriptions for this fund from the trapshooters of the United States who desire this great match to come off.

Any one desiring to subscribe can do so in any amount, either direct to Mr. Marshall, or they could send their subscriptions to the editor of Forest and Stream, who could forward same to Mr. Marshall.

All subscriptions would be duly acknowledged in the leading sporting papers, and I have no doubt but what the necessary amount will be readily forthcoming.

It is very essential that the amount be in hand not later than the middle of March or the first of April, and any one desiring to be a subscriber will please attend to the matter at once.

Special rates will be obtained for the trip, and it is the desire of all concerned that as large a party of American trapshooters as possible make the trip.

Hoping you will aid and push the success of this popular subscription to the full extent of your well-known ability, I remain, yours truly,

Paul North.

Highland Land Association.

Germantown, Pa., Feb. 16.—At Highland Park, Gorgas Lane station on the Chestnut Hill branch of the Reading Railway, the annual shoot of the Highland Land Association took place. The first team of the Frankford Club carried off the honors for largest score and won the handsome gold medal in the team match offered by the Highland Park Association, the conditions of which were 35 targets, 20 known and 15 unknown angles, entrance $1.50. George Myers was the judge of the unknown angle contests and R. Dunleevy of the known angle contests. The scores:

Frankford, first team: W. H. Wolstencroft 32, H. Ridge 30, W. Parks 27, W. Bourne 25, E. Betson 24, H. George 23; total 161.

Frankford, second team: W. Dalton 29, D. Myers 28, W. Johnson 26, R. King 25, R. Krier 24, J. Morris 22; total 154.

Clearview: H. Fisher 30, S. Sanford 32, G. Anderson 30, L. Lawrence 24, H. Urian 25, J. Freed 13; total 154.

Silver Lake: J. Edwards 31, F. Apker 27, H. Reed 26, J. McAfee 23, F. Woodslager 23, H. Weilant 23; total 153.

Penn: H. Newton 29, W. Hagey 27, T. B. Smith 27, J. Johnson 24, F. Gross 21, J. Yost 19; total 147.

Highland, first team: J. Fertsch 28, H. Miller 28, J. Burns 27, J. Everett 23, H. Lutz 21, W. Jay 19; total 146.

Highland, second team: J. Hammill 28, J. M. Meehan 27, E. Wentz 26, B. Schaeffer 23, Dr. Wentz 21, R. Dunleevy 16; total 141.

Ambler: C. Minck 29, C. W. Haywood 27, J. Duke 27, B. Bisbing 25, J. Seyfert 22, J. Bradfield 15; total 145.

Morris vs. Brewer.

Gloucester City, Pa., Feb. 12.—John Brewer, of the Keystone Shooting League, and John Morris, of the Frankford Gun Club, shot a race here to-day, for $100 a side. The conditions were unfavorable. A strong northeast wind caused both men to make many misses. After the ninety-fifth bird the score stood 72 to 65 in favor of Morris, and the men agreed not to shoot at the remaining 5 birds. The scores:

Morris	02010212220202222022200	—16
	22222202220202202222222	—21
	22222220222202222220222202	—21
	02022200222202221202	—14—72
Brewer	20222222222000002002222221	—16
	*20212022222222002222022	—19
	012202*2220*2*20022220012	—15
	02212211222010222200	—15—65

Second event, sweepstakes, miss-and-out, same rules: Russell 4, Landman 4, Hyland 4, Kleinz 3, Miller 2, Cummings 2.

Westmount Gun Club.

Montreal, Feb. 9.—The Westmount Gun Club is the one gun club of this city that has kept up its regular weekly shoots during the winter. To-day there was a contest for the club's trophy. Below it is given as the first event, with the handicaps. The extreme cold weather, with other conditions, kept the scores down. Next Saturday, the 16th, N. P. L. has a shy at Elliott, to-day's winner:

Events:	1	2	3
Targets:	20	25	20
Elliott, 18	17	12	..
Galbraith, 20	15	23	18
Elliott, Jr., 16	..	12	..

THE RUIN OF A RIVER.

THE Dennys River in Maine was one of the three rivers of that State which until very recently afforded capital salmon fishing, the others being the Penobscot and the St. Croix. Of these the Dennys was the most famous, and the proud claim was made for it by the residents of Dennysville that it was the first American river where (in 1832) salmon were killed with a fly. In its pools have fished some of the best known salmon anglers of this country—Rev. Dr. Bethune, Walter M. Brackett, Marimer A. Wilder and Charles Hallock. In addition to the salmon fishing, the river yielded of its abundant resources a large contribution to the support of the people dwelling on the banks. The weir owners derived a legitimate income from the salmon in the estuary; the inhabitants for miles along the river depended upon the annual run of alewives for a good supply of winter food, salted, smoked and pickled; and the river made a most entrancing picture in the landscape of the beautiful village of Dennysville, and did its share to attract and retain the summer visitor.

Writing in 1899 in the FOREST AND STREAM, Mr. Charles Hallock gave an enticing picture of the river as he knew it—its clear water at low tide scurrying over the rocks with rapid flow, showing whiteness and flecks of foam; and at the full tide flowing in an even, almost majestic, volume, hiding the boulders and forming a delectable plunge bath and swimming pool for the sportive salmon.

Lured by Mr. Hallock's description, Dr. Robert T. Morris, of this city, in the following summer of 1900 repaired to Dennysville for the salmon fishing, and this is the condition of things he found there, as he described it in the FOREST AND STREAM:

> As a salmon stream the name of the river is Dennys. *Sæwmilla fecit.* Until very recently the river was full of salmon. There are half a dozen fine pools within the first two miles, and the salmon took the fly freely. They tell of Mr. Prime and Mr. Brackett taking eight or ten salmon a day. Shad came up the river in June in large schools, and furnished an abundance of toothsome fare for the people. Alewives crowded the ripples, and the poorer people laid up barrels of them against a snowy day. But these things are all spoken of in the past tense, because the lumber company has a sawmill at the head of tide water, and the artificial fishway will not allow breeding fish to pass. The natural fishway, a narrow channel running around the dam, has been closed because it allowed too much mill water to escape. Everything has been turned to utility for a few men, and the rest of the people are most naturally left out. In addition to barring the river against anadromous fish, the mill runs night and day, and fills the river with such a pudding of sawdust and shavings that few fish can even get up to the chief obstructions.
>
> The salmon and shad and alewives still attempt to get past the dam, but in constantly diminishing numbers, and in two or three years more the mill will have accomplished in a free country what is not permitted in any old despotic civilization. Canada, with the effete ideas of European experience, requires mill owners to dispose of mill rubbish in a harmless way, and derives a great income from salmon properties.

The two or three years have not elapsed, but the ruin of the river has already practically been wrought. No more salmon, nor alewives, run up the stream, because the dam and the slabs and the sawdust drive all fish back. The banks of the river once so beautiful and attractive in the village are now so covered with sawdust and slabs that the stream has become an eyesore, and the summer visitor is driven away. Even the bass and perch that flourished in Meddybembs Lake, some sixteen miles up the river, are deprived of their food supply of young alewives.

And all of this wicked destruction has been wrought by a handful of capitalists, who are too greedy and too brutally indifferent to the rights of others to expend the insignificant amount required to put in a proper fishway and to provide for the burning of the sawdust and the slabs. The Dennys River is an example of those streams, of which the name is legion in America, whose valuable food resources and scenic attractiveness have been as shamelessly as needlessly destroyed by mill owners. These men who have built up and are to-day maintaining this public nuisance in the Dennys River belong to a class which has cursed the continent from one shore to the other, of individuals and corporations whose profit from the waters has been gained at the public expense. They have ignored or defied and have deliberately destroyed the public's rights in the rivers and streams. They have poisoned the waters, destroyed the fish and made the banks a forbidding desolation. The Dennys River is a fresh and timely example of this ruination, but it is not the latest; read in another column Mr. Brady's letter, telling of the impending destruction of the South Branch of the Potomac; the same callous disregard of popular rights and public interests in the waterways shown in the Maine case marks the West Virginia outrage.

This system has been the rule so long in the United States that it is extremely late in the day to agitate for any general reform. In scores and hundreds and thousands of cases the ruin has already been wrought past any possible hope of restoration. All the more reason then for seeking to save what may yet be rescued and preserved from destruction. The evil work wrought by the Dennys River sawmill has not been carried so far that intervention by the authorities might not even now avail to stop the destruction and in time restore the stream, if not wholly at least in part, to its old-time condition of usefulness and value to the people. If the Maine Fish Commissioners have authority under the existing laws to compel these mill owners to put in an adequate fishway and to dispose of their rubbish in some other way than by throwing it into the river, the Commission should act without delay. If no such authority exists for abating the Dennys River public nuisance, the Legislature should without delay make provision for this. It is an outrage that the conditions now existing should go on unchecked.

SPRING SHOOTING AGAIN.

THE bill to abolish spring shooting in the State of New York, now before the Legislature, seems to have a reasonable prospect of passing. Should it become law, its proper enforcement will undoubtedly cause a very great improvement in the autumn and winter duck shooting in this State and in other localities far away. We believe that not for many years has the prospect of having such a law passed been so good as it is at present Besides the many considerations which influence sportsmen and all who care for the bettering of game conditions in this country to work in favor of such a law, there is one which has not yet been brought up, but which should carry weight in the minds of thoughtful people. The Province of Ontario recently enacted a law prohibiting the shooting of wildfowl in the spring, and the observance of that law gives residents of New York—and others—during the season when ducks may be shot a greater abundance of birds than would be had if the fowl were shot in spring in Ontario, instead of being allowed to rear their young there unmolested, as is now the case. We are thus the direct beneficiaries of Ontario in this respect, and it would seem that good faith and good fellowship demand that we should protect the birds as Ontario is doing, in order that she may receive from us some measure of the benefit which she gives to us.

What is true of New York in this regard is just as true of Connecticut, Masaschusetts and Maine. Those States also should bestir themselves about spring shooting. It would be a great step forward for game protection, and for sportsmanship generally, if this winter these three New England States were to enact laws prohibiting the shooting of wildfowl in spring. This would come very near making the north Atlantic coast solid in favor of legitimate shooting for wildfowl, and would have an effect on the country at large which can hardly be overestimated. To-day, of all the New England States, with their wealth, their intelligence and their culture, Rhode Island alone of those possessing any considerable seaboard prohibits spring shooting; although New Hampshire and Vermont, as has been said before, have been on the right side of this question for years.

Is it not practicable for the sportsmen of Maine, Massachusetts and Connecticut to carry through this season an anti-spring shooting law? The same reasons which appeal to the New York gunners appeal to those of New England; and while it is hard to imagine the members of the branting clubs of Cape Cod being willing to give up their shooting, yet it is conceivable that, for the general advantage, they might consent even to do this. The opportunity for concerted action in this matter is one which should be taken advantage of, and there seems a reasonable probability that a strong effort in each of these three States might be crowned with success.

The good work done for general game protection in Maine is well known; Massachusetts' success last year in passing the bill forbidding the sale of ruffed grouse and woodcock reflected the greatest credit on the energy and self-denial of her sportsmen, while it is but a few years since Connecticut, in order to preserve her waning supply of quail, ruffed grouse and woodcock, cut thirty days off the open season. Is it not worth while for these States now to follow the example set them by those newer States of the Northwest which have abolished spring shooting?

BREEDING OF WILD DUCKS IN NEW YORK.

AMONG the arguments advanced by the advocates of Senator Brown's bill to prohibit spring shooting is one on which it is desirable that more light should be thrown, and evidence on the point is desired from ornithologists and older readers of FOREST AND STREAM.

It is of course a well understood fact that in the days before the settlement of the country, and above all before the great increase in gunners, wild ducks bred all through the northern portion of the United States, and, as has been said, all the country from the Atlantic to the Pacific and north of the latitude of the Ohio River was their breeding grounds. Many persons can remember when the prairie lakes of Minnesota, North and South Dakota, Wyoming, Montana and Idaho swarmed in summer with breeding fowl. We have visited wild swans' nests in Nebraska and wild goose nests in many States and Territories, while twenty-five or thirty years ago it seemed as if every pool in the Northwest held one or more broods of birds, as some of them, in more unfrequented localities, still do.

To come down to more local matters, since the question of the birds breeding within the United States has been brought up in connection with the proposition to abolish spring shooting in New York, it is well known that over much of New York State wild ducks formerly bred in great numbers, and within the memory of men still living they were abundant in the great marshes of the northern and western central portion of the State. Major Pond tells us that ducks bred abundantly thirty or forty years ago in the Adirondacks, the Montezuma marshes and in the lake region in the central portion of the State, and years ago we have seen boats come from excursion trips into the marshes of Cayuga Lake containing fifteen, twenty or thirty flappers, which had been taken with a gun and a push pole.

At the hearing last week before the Fish and Game Committee of the New York Legislature, statements to the effect that wild ducks used to breed on Long Island did not appear to be credited by the gentlemen who appeared in opposition to the bill. Nevertheless we have the printed testimony of the older ornithologists that black ducks and bluewinged teal bred there. Moreover, it is well known to ornithologists that the wood duck still breeds in the vicinity of Sayville, L. I., and probably all through the wild portion of the center of the island. The black duck still breeds regularly on Montauk and Gardiner's Island, and the individuals composing the group of black ducks in the American Museum of Natural History, showing a pair of old birds with their young, were actually taken on Gardiner's Island only a few years since.

It is not doubted that if spring shooting were put an end to more birds of these species would breed on Long Island, while other species would breed throughout the State.

It would be gratifying to receive from correspondents who possess any knowledge on the question of ducks breeding within the borders of the United States, detailed accounts of such occurrences.

THE report by Secretary Wilson, commending the proposal to set apart an area of the Southern Appalachians as a national forest reserve, and the message of President McKinley, recommending the Secretary's report to the favorable consideration of Congress, had encouraged the members of the Association and the friends of the movement to indulge the hope that the bill to establish the reserve might become law at this session of Congress. But this hope is now shown to have been without good foundation. The measure has come to such a point in the proceedings of Congress that it could go further only by the unanimous consent of the Senate. To this unanimous consent Senator Teller is opposed. This means that the Appalachian forest reserve project must go over to another Congress. We believe that this is simply a postponement, not a defeat, of the scheme. The reserve, there is abundant confidence for believing, will ultimately be established.

The Sportsman Tourist.

Through the Parsonage Window.

X.

A SNOW STORM is on, and as I look out through the protecting screen of glass my vision falls on a bewildering swirl of falling flakes. As fancy wings its way out through the twisting, falling mass of ghostly white it seems in danger of losing its way and becoming lost entirely. Yet away it whirls on fearless wing, far, far over hill and level, mountain and plain; over the green woods and purling brooks of summer, and over bleak plains and ice-bound streams of winter. This way and that, circling hither and yon, now hovering over some inviting scene as if about to alight, then towering away again like some wary old mallard, it finally settles among the reeds of St. Peter's marsh of twenty years ago.

We had been corresponding nearly all winter concerning this trip—Lewis and I—and Jim having been my companion on several previous trips was of course included.

Early in March, when the ice first began to break, Lewis had come from his home several hundred miles away to be ready for the start; but spring had suffered a relapse which caused a delay of a couple of weeks, and when the ice finally did give way we were quite impatient for the start.

Loading our effects in two boats, and with Jim in one and Lewis and myself in the other, we had started for a twenty-five mile paddle against the current, to storied St. Peter's. The evening of the first day found us with about two-thirds of the distance behind us, and early in the afternoon we went into camp on the only bit of ground that rose above the flood for many miles along the river. From bluff to bluff the bottom lands were under water all the way from two inches to four feet.

Already enough birds had arrived from the South to fleck the horizon in all directions with their varying flight. So far a solitary sawbill, brought down by Lewis, was our only trophy, and we had halted early to try for a few birds for immediate use. The shooting was difficult, the cover having all been beaten down by the drifting snows of winter. This forced us to lie flat on the bog, without so much as moving an eyelid, until the birds were within reach, and then spring into shooting posture and deliver our fire before they could get out of range again. Yet, difficult as it was, fourteen fine fellows who had weathered a four months' storm of lead sent after them by winter shooters along the Gulf coast, withered before the thunder of our 10-gauges before darkness closed the scene.

Five miles further up we entered the outlet of St. Peter's marsh at 10 o'clock next morning, and at 1 went into camp among the scattered oaks at the foot of the sand bluff on the west side of the marsh, and there it is that a flutter of white canvas through the dead leaves that still clung to the live oak boughs catches the eye of fancy and causes it to hover and veer above the dead reeds of the marsh, even as the wildfowl hovered and veered above them in days of yore.

We were not out to see how much hard work we could do, and during the afternoon only fixed ourselves snugly in camp and took a few shots at high flyers from the top of the sandhill.

Under the prevailing conditions it required a breeze to make the shooting good, a breeze to start a more general flight among the ducks, and to bring such as were flying closer to the ground, a breeze to set the tall canes and reeds to nodding, that their movements might in turn conceal the movements of the shooters crouching among them, and to set them rustling, that it might in turn drown the noise made by forcing a canoe through them. The first day it was calm, and we skirmished in whatever way suggested itself to us, with indifferent success, but by the afternoon of the second day a grand gale was coming from the south.

Lewis and I took our stand at the lower end of the marsh, where the flight from the down river country was crossing. Forcing our boat into the tallest of the reeds, where we had perfect cover, and standing in either end of the boat, we took our chances with the flight, without call or decoys. The force of the wind brought the ducks in veering, erratic course, low over the tall tules as they worked their way against it.

We would see a flock coming low and straight at us, and feel sure of a shot, when a stronger gust would send them a hundred yards to right or left, and they would pass out of range. But this operated more often in our favor than against us, as their veering flight caused them to cover much more ground, and few flocks got by without getting touched up at some point.

At one time a peculiarly tempting offer caused us both to fire at the same instant. The two recoils, coming at the same time and from the same direction, broke our anchorage and threw us both out of balance. As I fell a towering mallard came temptingly in the line of my vision, and I threw up my gun and fired the second barrel. I folded that mallard as neatly as a lady clerk folds a package of dry goods, but the second recoil sent me completely down and out, to the extent of thrusting one arm into the water up to my shoulder at least.

Had not the boat been strongly supported by the stiff reeds a complete upset would have resulted.

During the afternoon a flock of fourteen white swans crossed the marsh and kept us in a fever of excitement for about five minutes, as they came straight at us, just topping the canes, but at the critical moment a stronger gust of wind swept them aside and they passed a hundred to the left, and dropped into the water just out of reach. It was a disappointing experience, yet all in all the afternoon was a glorious one, and still throws a gilded line on memory's spectroscope through all the intervening years.

One feature of our hunt, which it was proposed to extend into the jacksnipe season, was a periodical trip down river for mail, supplies and so forth. Jim and I were the first to go on one of these trips, leaving Lewis to watch the decoys, which were bobbing in an open reach of marsh. The run down stream was expected to and did yield the best of the shooting, but coming up it was a long, hard and profitless day of steady paddling.

The population of the overflowed meadows and marshes had greatly increased since our upstream pull. Great swarms of sprigtails, widgeon and mallard sat in the shallow water back from the river, but as the cover was all beaten down and the river up level with and overflowing the meadows, we seldom got a shot at these. One pair of sprigs did sit on a tuft of meadow that rose above the flood until we drifted within 60 yards of them on the swift current, and then, as they sprang into the air, a single shot tumbled both back into the water.

Five miles below St. Peter's, Coal Creek Flats open out on the left, where a thousand acres of ducks, geese, brant and swan was no uncommon sight at almost any time during the spring freshets. Just opposite and a little below is an infinitely larger marsh, where the Winnebago swamps open out on Green River bottom. There were thousands of wildfowl in St. Peter's and Mineral marshes, another thousand on Coal Creek Flats, yet these were only small fragments of swarms that hovered over the far-reaching Winnebago swamps. I have seen a solid mass of white-fronted geese, extending as far as the eye could make them out, over the meadows that reached a trifle above, or were covered by only a few inches of water, and I have known hunters, too, who chased them round two or three weeks at a time and never gather a single specimen. It was a maximum of sport with a minimum of slaughter, and were it not for the immense amount of scratch shooting it induces nothing could be urged against it.

At that time I think there had been at least a ton of shot sown on every acre of the main marshes. It was literally casting their lead upon the waters to be returned after many days in the shape of gilded reminiscences.

With ducks swarming all about us, we got very few offers, and those few were mostly from the isolated willow groves along the upper stream, but after we got below the main marshes to where the valley narrows and tall fringes of willow lines the stream most of the way, then our sport began in earnest, as out from the thickets fluttered bluebills, redheads, greenwing and mallard. Sprigs, like the wild goose, is an open country bird, and rarely enters timber.

When we started on the upstream pull next morning the sky in the northwest had a peculiar look, which betokened wind, and soon after we started it commenced to blow and rapidly rose to a gale. With the wind at our backs and two paddles rapidly plying we made good speed against the current, and were soon at the head of timber. Here all shelter from the gale was removed, and we had five miles of open, tossing sea to cross. It had grown cold very fast, too, and the spray was beginning to freeze wherever it touched. As we looked out over the wind-tossed waste of whitecaps we were in some doubt, but the wind was in our favor, and we soon pushed off.

We went much faster now, as we had the full sweep of the wind, while the current was much lessened by the broadening of the waters. We found that by regulating our speed by the speed of the waves there was no danger of the spray flying over us. Sometimes we would bury the bow of our canoe in a great wave and keep it there for half a mile. While running thus our bark ran as smoothly as though no winds had vexed the face of the flood. We made three miles quicker than we had ever made it before, and then disaster came. In attempting to keep a straight course we ran into shallow water and grounded. The instant the boat struck, the spray began to sweep over us, and we were obliged to get out and wade, leading the boat behind for some distance. In a short time we were walking icicles, and there was no more comfort for us, for with everything sheeted with ice there was no pleasure in sitting down, and great danger in standing up. When still a mile below the narrows, just above Coal Creek Flats, we sighted a lone tent in a thick clump of willows in the bend of the river.

At sight of it Jim said, "If it was only ours." We had both been thinking of the same thing. Our minds had been working in unison on the more desperate struggle to come, when we rounded the bend of the river and met the stronger current of the narrows, with the wind quartering against us, though nothing had been said. The grove which sheltered the tent was on a slight elevation, which still had six inches of dry land to spare above the flood. We thought it courtesy to call on the lone camper, and landing, walked up to the tent and found it ours.

Lewis had thought the upstream pull would be too much for us to make in one day, and had shortened it by moving down four miles to meet us. He had everything snug and tight, and a good fire going, and our relief from further hardships fully paid for what we had endured.

The wind increased in strength until night, and its roar through the leafless trees became majestic in its fury. The tent was completely sheltered by a low, dense thicket of young willows, and the turmoil only added to our comfort as we sat beside the fire and thawed the ice from our canvas clothes and hip boots.

When thoroughly dried and warmed, I proposed we go out and see what the ducks were doing, but Lewis and Jim both demurred, and I sallied out alone. Out near the river side the grove was more open, and the wind nearly swept me off my feet as I stepped out of the denser shelter. "The thin disguise of roses" which had promised spring had indeed fallen off, and had left only the naked blades of the hosts of Boreas.

The clash of bending branches was as the clash of the steel of battling armies. The writhing and hissing of the tortured flood added a charm. It was wild, majestic and inspiring. Every wildfowl was awing and being tossed about like dead leaves in the grasp of a whirlwind, but the shooting was most erratic. A miss by 10 feet would be followed by a clean kill, but it was impossible to gather any birds. I stayed out until dark, trying to drop a bird on the island, but the wind invariably caught and hurled them far out of reach, though they were sure to drift into a piece of tall sedge across the river, where I could easily get them after the storm. When darkness drove me in I was loth to leave the scene, for I knew it had been one of those great days that are landmarks of the past.

In the morning river and marshes were one vast field of ice. I walked across the river on it and chopped my ducks out with the camp axe. There was a railroad station seven miles away. Lewis and Jim sledding a boat to the main land that they might have it on their return, walked over and took the train for home. I determined to stay a while and enjoy the novelty of living along on an island.

There were some few ducks still lingering about, and a short distance from camp there was a small airhole. Setting some decoys near it, I spent quite an enjoyable afternoon.

During the afternoon I noticed the water rising rapidly. The ice retarded its flow, and it was threatening my island. At night it was within a few feet of the tent. Drawing one end of my boat inside the tent I slept in that.

Next morning I had to raise the camp stove out of the water before I could build a fire. Outside, it was snowing. That settled it, and making everything secure as possible, I too started across the field of ice for home.

THE PARSON.

In the Faroe Islands.—I.

"Some high rocks arising out of the Wild Sea; high Hills or hard Stone, strangely divided from each other by deep and rapid Streams of Water. * * * It cannot well be expressed with a Pen how fierce the Sea is, nor to what a height it raiseth itself." (Lucas Debes, 1670.)

WHEN we left Scotland for the Faroe Islands we sailed into a nor'easter, a three days' storm, which was still blowing in fitful gusts when the islands came in sight. On the left we could see dimly through the driving mists black crags with surf dashing high, long sweeps of barren fjelds, the bold promontories of Suderoe, Sandoe, Skuo, Vaagoe, the two Dimuns and Stromoe—seven out of the twenty-two islands which form the Faroe group. Then came Naalsae on the right, giving shelter from the northeast winds, and we cast anchor in the open fjord (it could hardly be called a harbor) before Thorshaon.

I knew and loved of old this little capital of 1,200 souls, but it was looking its worst that morning, and I felt sorry for a bran new English consul and his family as they saw for the first time their future home. Snow and sleet were whirling down from the fjelds, and the only really green places were the sodded house roofs where the grass turns first in the spring, owing to the warmth below. Then came the pale green of the home patches or "infields" and then the wild "outfields," gray and seared as in wid-winter. As I looked over the water I saw the head schoolmaster of all the Faroes waving his hand from a high-prowed Faroe boat, and shouting, "Velkommen!" and soon I was with old friends in his comfortable cottage.

One must expect changes in a metropolis after almost five years' time, and I notice with regret that the city fathers have blasted some reefs and boulders out of the principal lane, have trimmed the grass, and a few cottages and fish houses have been erected. But the ducks still sleep peacefully in the middle of the lanes (there are no horses in Thorshaon) and the hens hop from roof to roof, scratching among the long grasses. The city lamps have all been unhooked and sent to the "blikkenslagers" for repairs, there to remain until darkness returns with autumn nights. We are in latitude 62 degrees 40 minutes, and all night long I can hear the titlarks trilling and the curlews skirling in the outfields.

Small as it is, Thorshaon is by far the largest settlement in the Faroes. Here live governor, judge, sheriff, head schoolmaster and head doctor. Here in the summer is the local parliament; British and Danish gunboats visit these waters to look after troublesome trawlers, and many tourists come on shore when the Iceland-bound steamers pause here for a few hours. Iceland is fast becoming popular for summer outings, but the Faroes, fortunately, are not yet considered "worth while," the tourists judging of their attractions by the surroundings of Thorshaon, which are comparatively monotonous.

Since my last visit a tiny steamer, the Smyril, has begun to ply among the islands. Its goings and comings are most erratic; its time tables more distracting than a British A. B. C. railway guide, but for many excursions it is safer and cheaper than the usual mode of Faroe traveling—eight men and a boat. After three weeks in Thorshaon I left one stormy morning for Midoag, on Vaagoe, one of the western islands. The schoolmaster borrowed two large Normal school pupils and a codfish boat; the codfish were taken out and I was put in, and we started for the little Smyril, which was plunging out in the fjord. Only desperation made it possible for me to swing myself out of our tossing boat and up the loosely swinging ladder. There is not a wharf or quay in all the islands. I reflected that they were twenty-two in number—eighteen inhabited—and my ambition to see them all oozed rapidly away.

It was too stormy to remain on deck, but from time to time I put my head above the stairs. There was little to be seen; only flying scud, vague giant shapes looming up in the mist with cloud wreaths streaming from their rocky summits, all bleak and desolate, no sign of human life but at one place, where a long strip of green hillside and a tiny stone church marked the site of Kirkuboe. So we went on for three hours; then suddenly we felt happier down below, and found we had turned into Midvag harbor, and already boats were putting out from shore for passengers and freight.

The head schoolmaster had previously sent a letter of introduction to a certain "Konge-Bonder," or king's peasant, known among his friends as Hans Kristoffer. But no one came forward when I landed to greet me, though one-half the population surveyed me from doorways and behind stone walls and around corners. So I asked to see a shop keeper who I knew spoke excellent English, and he arriving, promptly dragged forth Hans Kristoffer from a group of men near by. He had been watching me all the time, knew who it was and had been expecting me for a week. These are Faroe manners, and do not denote unfriendliness. The stranger is expected to make all advances. Herr Hans Kristoffer now intimated that I was welcome to his house, and we started off at once, he paddling along lightly and silently in his Faroe moccasins.

My host is a type of the best class of Faroe peasant. His family have held crown lands (paying a small an-

nual rent) for many generations. The house is a story and a half cottage, grass sodded and painted with tar. At the "but" end, as it would be called in Scotland, are the living rooms, an outer kitchen with earth floor, where the cooking is done and where cats, dogs and chickens wander in and out; then a general family room, where they sit, eat and spin; small bedrooms open out of this and others are in the loft above. In the "ben" end is a guest sitting room, rarely used, and a tiny guest lord room. The floor is bare, with unpainted boards, there is a sofa, table, cupboard, chairs, a queer old stove bearing the date 1724 and decorated in raised iron work with crowns, garlands, warriors and portraits of Frederick II. and his Queen. This is built into the wall, and the fuel is put in by a door out in the entry. There are many photographs of family and friends, a lithograph of Martin Luther and two from Rembrandt's etchings, bright flowers in the windows and Nottingham curtains. In the bedroom is a narrow, short box bed, with feathers to lie upon and a large feather puff above.

In these two rooms a foreign guest is expected to live. It is a mark of especial friendliness if he is invited to the "but." Here kind Fru Hans waits upon the guest, serving sweet soup for dinner, probably "fricadella" of fresh pounded codfish and whipped cream and sago. One must not expect to fare so well in all Faroe hamlets. The good living here is due to a combination of generous hospitality and a knowledge of Danish cookery, acquired from several wives of Danish pastors.

A Faroe village is not a model of hygiene. There is a superfluity of cods' heads, whales' vertebræ and birds' wings; there are piles of manure and garbage, and pools of stagnant water close to the houses, and unpleasant strips of last year's whale meat hanging from the eaves. One is glad to hurry through, breathing as little as possible, to the sweet grass and sea-scented air beyond. But here Hans Kristoffer's guest room looks out on the prettiest little garden in the Faroes, and here he fights frosts in summer and gales at all times of the year. He has fortified his garden as best he may with earth dikes and double rows of currant bushes, and within these precincts grow big primroses, daffodils, iris, sweetbrier, larkspurs, pinks, sweet Williams, phlox, lupine and big poppies. It is a triumph of a little garden for the same latitude as Julianhaab, in Greenland, but with what pains and disappointments has it been achieved! Indeed, Herr Hans reminded me of his own little trees, which he displayed with gentle pride; small, brown and brave, with budding hopes cut down each winter by the cruel blasts, and sprouting up again in the spring. There was a baby spruce, some elms, poplars, maples, a mountain ash and some slips of hawthorn, enough to make quite a rustle in the sea breeze. But one feels (though one is not unkind enough to say so) that they will never be any bigger—any taller—though with succeeding years they may learn to bow to the storms and curve low their boughs within the shelter of the dike.

Hans Kristoffer asks me many questions in a wistful way about the big trees in America—"the largest in the world"—and drinks in eagerly what I tell him of the redwoods of California, and the yellow spruce of southern Alaska. "And that is far north, too—Alaska," he says; "but no, they would never grow like that here—not if they lived a thousand years!"

Aside from the few small trees which have been planted in gardens, there is not one in all the Faroes; not even a bush breaks the outline of the hills. The climate must have changed since the exiled Vikings first came to the Faroes in the tenth century, for many fragments of birch and juniper, of good size, are found in peat bogs. The great changes of temperature and the fierce gales, and not the severity of the cold in winter, destroy the trees. Fortunately the supply of peat is abundant and good, and the cutting and drying of it is the all-important work of the early summer months.

A Faroe peasant must of necessity be an all-round man—a farmer in a small way, a peat worker, fisherman, sailor, oarsman, mountain climber, a shepherd occasionally, a carpenter and odd jobber. In all these ways combined he ekes out a simple living, sometimes doing little for days at a time, then working steadily all day and far into the night, the weather determining his activity. The uncertainty of his work and his isolation from the outside world has made the Faroe man the least punctual of mortals, and this trait the foreign traveler finds at times most trying. But no one can be quicker, braver, more resolute than he in time of danger. Think what it means to be a "flink fjeld-mand"—a clever cliff man, going down with the line after sea fowl, suspended in mid-air, crawling along ledges hundreds of feet above the sea, ledges that crumble, with rocks above that fall. I heard here of a father and son who went to the northern cliffs of Vaagoe for guillemots' eggs. They descended to a narrow ledge just wide enough for a man to stand, except in one place, where it jutted out, forming a shelf about five feet wide. As the men gathered eggs they piled them up here, until a large quantity had been collected. Just then some small stones, always a signal of danger, began to fall from the cliffs above. The father succeeded in climbing up a little way to a point where he could command a view of the fjelds. Suddenly he called out sharply, "Throw yourself on the eggs!" Like a flash the boy flung himself forward, and an instant later a great boulder crashed down, breaking away in its fall the ledge on which he had been standing.

This island Vaagoe, does not rank among the best of the bird islands. There are some fine cliffs for auks and guillemots, but as a rule the highest rocks face northward, an unfavorable exposure for bird colonies. Myggenoes, the most western of the Faroe group, has especial advantages from its isolation and its precipitous coast. One can go there only in a kind of weather requiring such a combination of smiling circumstances and promise of future blessings that visitors to Myggenoes are few and far between. One makes no important engagements for the future when one goes to Myggenoes.

Since beginning this letter I have left Midvag and am now at Bo, the nearest hamlet to Myggenoes, on the western coast of Vaagoe. The morning I started was so beautiful that it was hard to find a guide and bearers for my luggage. We have few warm, dry, sunny days in Faroes, and when one does come every man, woman and child is seized with a preternatural activity, and falls to work codfishing, bird catching, peat cutting and piling, weeding, washing the new wool, dyeing, spinning yarn, churning, washing the family pattens, clothes and milk pans in the brook, all in addition to the usual farm and house work. The No. 3 babies are tending the No. 1 babies, while the No. 2 babies are marching up and down in the sun, dragging by a string their "horses"—a small whale's vertebra.

Under such busy circumstances it is customary for the would-be traveler to go to the "Skydskaffer," an official whose business it is to secure guides or oarsmen. In the Faroes every man is required to serve in this way in lieu of military service in Denmark. There is a fixed tariff of wages, and the men serve in turn. No one officially summoned by the Skydskaffer can refuse to go under penalty of a fine. But why ask the Skydskaffer to drag a stout young man whose labor is of value from his work in the peat fields when a Faroe grandfather thinks nothing of taking 40 pounds on his back, supported by a broad woolen band around the forehead, and trotting off with it across the fjelds? So these matters are often arranged privately, and those who can best be spared go with the traveler. In this case Hans Kristoffer succeeded in securing an old man and two boys, and we started for Bo.

It was not a difficult journey—one mile by land to Sorvags Lake or "vatn," two by boat to the northern end, two over the hills to Sorvags village and two by fjord to Bo. The trail was what is called here "a good way"—that is, it was not over high hills or watery marshes. Such trifles as stones, boggy spots and hillocks are not considered worthy of mention.

We passed quickly through Sorvag village and made no calls. A scourge of typhus, brought in a ship from Iceland, had ravaged the little place and there had been many deaths. The few people we saw looked wan and haggard. But the stagnant pools and piles of refuse near the houses still remained.

I waited on a grassy hillside while a boat was brought from the other side of the fjord. It stranded, being low tide, some distance from shore. But the grandfather was not at all put out. He took off his moccasins, rolled up his knee breeches, waded ashore, picked me up without a word and marched with me through the waves, carried all my traps to the boat and soon we were on our way to Bo.

I had pictured Bo as quite a village, and find only half a dozen houses huddled together between the fjord and the fjeld. There is nothing to do but watch the beautiful view and the eider ducks and talk with the men of Bo about the chances of my going to Myggenoes. That island is only nine miles out, but the seas are big, the currents exceptionally strong, and there are sudden surprises of fog, surf and squalls. There is but one place where the island can be reached, and that is possible only under certain conditions. When the tide is favorable, sea calm, no surf barometer high and rising, air clear and a tendency to light northeast breezes, that is true "Myggenoes six man weather." It had been gently intimated to me that when eight men are thought necessary, such a coward as I had better stay "to hum." I am sure I do not wish to go in "eight man weather." "One small boy weather," if there was such a thing, would suit me best. So here I wait at Bo, seeing across the sea the misty cliff walls of my "desired haven."

ELIZABETH TAYLOR.

Natural History.

In Vermont.

Editor Forest and Stream:

During the months of January and February of a recent year it was my fortune to drive three or four hundred miles through the valleys and over the hills of Vermont, and I am tempted to send you a few notes of observation and experience. I was glad of this opportunity to revisit the Green Mountain State, well known to me in earlier years, and to have fresh experience of many an old sensation and impression, to meet again many of its good people, to enjoy their hospitality, to study anew their unique civilization and grow strong by breathing the wonderful air of those hills.

I kept a keen lookout for game or, indeed, any signs of animal life, but was in this respect rather disappointed. My tally consisted of two or three dozen crows, a few downy or hairy woodpeckers, a half dozen bluejays, wary and sharp as usual, but quite at home and comfortable even on the coldest days, a very few flocks of snow buntings, a chickadee or two, three or four red squirrels and two ruffed grouse.

In Windham county I heard stories of two or three bears killed last fall in the hill towns in the western part of the county, and one man told me of a bear which one day crossed the road in Bennington county in front of a friend of his a few days before. A gratifying sentiment in favor of protecting game seemed to prevail. But in general the woods and fields seemed silent and tenantless. I looked carefully for tracks of the fox or other night prowlers, but was only three or four times successful.

Nevertheless in many towns I heard of very successful trapping, one man being credited with 55 foxes already, and I heard of several who had captured twenty-five or thirty apiece. Amazed at such records of fox trapping, I inquired more carefully, and found that in each case the trapper was said to possess some secret of a scent, which either in itself was very attractive to the fox—overcoming all his natural fear of a trap—or which, at any rate, effectually neutralized the dreaded scent of man, which renders ordinary attempts at this mode of capture so fruitless. In one case a hunter was said to have brought the secret from "the West," and to have sold it to others for $5 per man and under pledge of secrecy.

One day in skirting the base of a mountain I heard the melodious note of the fox hounds upon the mountain side, as they followed the trail, and every minute or two gave tongue. Such music—so familiar of old—had not fallen on my ears for 20 years, and I stopped my horse and listened with delight as long as I could hear a note.

Talking with a man who came to the door of a neighboring house, I learned that he had dug out a litter of young foxes the spring before and had given one of the cubs to a boy in the neighborhood, who had brought it up and had succeeded in thoroughly taming it. Determined to see for myself, I drove to the house of the boy and saw a yearling fox which was as tame as could be wished to the members of the family, though a trifle shy of strangers. Reynard was usually kept chained in a pen because of his tendency to cultivate too intimate relations with the farmers' chickens, but I was told that he was often let loose to go with the boys over the hills, and that he would come back with them as readily as a dog. His master told me that the famous scent used by the trappers was nothing more nor less than the musk of the skunk, and that its effect was merely to dispel the scent of man, and that three or four drops scattered on and near the trap were sufficient. He told me in detail the proper localities for setting a trap for a fox, the south side of a bare hill in a pasture, or in or near a spring in a swamp, and never in a deep wood. He thought no fox was ever trapped in the last situation, but I told him of having once myself caught a fox in a bear trap in the depths of a Maine forest. He thought this unusual and a mere "accident." I should be glad to know if readers of FOREST AND STREAM know anything about the scent of which I have spoken, and if it is merely the musk of the skunk as this man said.

Occasionally where the road skirted a bush-covered swamp or passed through a deep wood I saw the tracks of the northern hare, but not half so abundant as I expected to find them. In short, Vermont seemed, to the winter visitant, nearly swept bare of wild life of all kinds. But I found much to interest the lover of out-door things.

The old men told me stories of the old times, and I heard many and many an expression so happily embalmed in that New England classic and dialect study, "Uncle Lisha's Shop." I found no "Antwine," but Uncle Lisha himself and Sam Lovel "and 'mungst 'em" more than once appeared, and I listened with greatest enjoyment to their speech. But this, too, is passing away, and I remarked how almost invariably, even in the parts most remote from the railway, and no matter on how high and bleak a hill or lonely cross-road, when I called at a door to inquire the way, some sweet-voiced woman of refined manner and pure speech answered me.

Surely the New England yeomanry had never its equal in this world. Nowhere else under such circumstances could people of such intelligence and absolute independence be found. When one tries to find anything like a parallel, the Scottish people is the only one which comes to mind. Not Bismarck himself had more independence of spirit or was more unconscious of amenability to any class or rank than these men, or discussed affairs of state with any more confidence in his own judgment or his right to judge of them. And great good comes of this—a good inestimable in the history of the world. It has set the type for American citizenship. From it has sprung a giant race which does not know, and never can be made to know, "the dignity that doth hedge a king." This is the pivot, amply strong and sufficient, on which, in time, to swing the world from the old path into the new. Therefore all hail to the Yankee! The home-spun world regenerator!

The Vermont boys still emigrate to "the 'Hio," as Uncle Lisha did, and for similar reasons in reality. The sadness of the "deserted farm" was forced upon me in many a place. The abandoned "bildin's," the orchard growing scrubby and unkempt, the fences uncared for, and miles of stone wall so carefully and toilsomely laid to rid of stones the land which no one now cares to till, and to mark boundaries which no one any longer cares to maintain—all tell the story of the strong and patient and faithful life which was once lived there, and pathetically plead for its rehabilitation. But it is not, in my judgment, best. "The old order changeth, giving place to new," and a new order which, all things considered, I must think to be an advance upon the old. To maintain the old by artificial means and efforts not spontaneous and natural will be a waste of strength.

Many of the old pastures and hillsides are growing up to trees, and I rejoiced to see it. Especially do I rejoice to see the sandy knolls and intervals growing up to pines. I mourn the giant pines—the "old growth"—sacrificed so long ago to no profit, and only, in many cases, to uncover a thin and sandy soil to the plow. Of what vast value would they not be now if they had been preserved! The pine is the proper growth and ornament and crop of much Vermont, New Hampshire and Maine land, and I rejoice to see the second-growths—rising straight in crowded ranks—thick at the tops and ever aspiring in the rivalry for sunlight, shaded and dark below and trimming themselves as they grow. And it does not take so very long for pine to grow. Before I had seen my thirty-fifth year I had seen pines which would furnish fair "saw-logs," growing on ground which I had also in early boyhood seen bare and sown to grain.

The timber slaughterer is equally with the game destroyer the object of my maledictions. Many readers of FOREST AND STREAM will remember the giant growth of black walnut which covered hundreds of thousands of acres in Indiana and Michigan, and which were cleared by axe and fire to make room for cultivation, when only one State further on were millions of treeless acres only waiting for the plow. A friend tells me that on his farm near Terre Haute, the fences are all made of straight, split rails of black walnut, and the barns and outbuildings are made of black walnut boards two feet in width.

But I wanted to speak of the rock maples. Vermont is their paradise and home. The "sugar-bush," as the maple grove is called, stands on every hillside, usually with the neat "sugar-house," at the lower edge of it, well fitted with patent evaporating pans (which have replaced the primitive "arch-kittle"), a steam escape in the roof, and pile of "sugar-wood" at the door.

The farmer here speaks of "getting up his sugar-wood" as naturally as he does of sheep-shearing or haying or "banking up" his house in the fall. O the delights of the "sugar-bush" in "sap-time!" Involuntarily I smacked my lips and sniffed the air as I thought of them. To my palate maple syrup—from the first run of sap, and which has never been crystallized—is the finest sweet in all the world. Honey suggests, perhaps, a more poetic thought, but it is too cloying. The maple flavor is honest and not overpowering, and yet, to one whose youthful tooth was trained upon it, suggestive of a thousand delights that are unspeakably subtle and fine. But the early training must be there or maple sweet has no special charm. Having described maple sugar and the joys of its making to some English friends, I once took over to them some cakes of the genuine article, but to my chagrin found

that to them it was only "sugar" and not maple sugar after all. Then many people in this country—in the cities and in the South—affect to dislike maple sugar, the fact being that they have never tasted any but only the wretched mixtures sold as maple on street corners, and which often have not a trace of maple in them. Even in Boston I one day broke open a cake of the yellow stuff exposed on Winter street—looking for all the world like beeswax, and labeled maple sugar—and found inside it tell-tale sugared cherry of the confectioner who compounded the stuff. But the boys and girls of Vermont and New Hampshire are experts in such matters and not to be deceived, and wherever they go they are wont to send back to some trusted neighbor or friend for their yearly can of syrup and box of sugar.

The maple grows grandly all over Vermont. May my blessing fall on all the good citizens who for years have set out the maple trees in rows along the highways! Sometimes for half a mile, not only through a village street, but past some lonely hill farm, the rows of maples stand, superb in their strength and symmetry and shade giving power. In summer foliage they are wonderful, but in autumn their glory is simply indescribable.

If you have on your hands a particularly "cockney" Englishman, whose conceit of the superiority of everything English you want to break down and whose assumption of unimpressionability you want to break up, take him to Vermont or New Hampshire in the "moon of falling leaves." You will capture him—horse, foot and dragoons. There will be no help for him. No mortal made of "penetrable stuff" can withstand it, for there is nothing like it on earth, and I am not going to attempt the impossible by trying to picture it.

But my illustration reminds me of a good story which Professor Niles, the geologist, tells. He once, in the early days, when Crawford Pond, in the Crawford Notch of the White Mountain, was swarming with trout and free to all comers, took an Englishman there to give him a good sample day of American trout fishing. They were out on a raft, and had begun to cast, the trout biting voraciously, when, glancing up at the mountains, Professor Niles saw one of the sudden mountain showers swooping down upon them. He shouted to his friend that there was not a moment to lose if they wished to reach shelter. But the Englishman's sporting blood was up, and he scorned all showers or other trifles so long as he could take trout in that fashion. "All right," said Professor Niles, "I can stand it if you can." So he shrugged his shoulders, turned up his coat collar, and landed another trout. Just then the cloud-burst struck them. They were drenched to the skin in a moment; the thunder crashed, the water boiled and hissed under the falling torrents; and amid the din was heard the voice of the Englishman: "Here, Niles, take my rod. I'm going to get under this raft—where there ain't so much water!"

The forest trees afford infinite opportunity for study, and in ways utilitarian or scientific or æsthetic as one chooses. Each species has its own general characteristics, each individual its style and peculiarity. Many a time I wished for a camera that I might preserve the picture of some particularly fine old maple or elm or oak. In one valley I found a good deal of cedar and ground juniper. Why only in that valley? Had this to do with the geology of the valley and the soil derived from certain underlying rocks?

Certain geological phenomena can here be studied to better advantage than anywhere else in New England, better than in any other place I have ever seen save in Montana. I mean the river terraces. Rank on rank they rise from the rivers, the same terrace often traceable for miles, sometimes transversely cut and notched by ravines and gullies till all that is left is a series of saw teeth, again the level bench of sand stretches away unbroken. It is all water-washed and water-deposited sand, powdered mountain, ground off from the higher peaks and packed in these level layers against the sides of the valley. Altogether it was a strange and very pleasant experience and one which I hope I may some day repeat.

C. H. AMES.

Albino Hawks.

I AM glad to see that my suggestion in your paper regarding the recording of such facts as come to sportsmen's notice of birds in unusual plumage has brought out the notes of so excellent an observer as Manly Hardy, and his remark that albinism in hawks is more largely confined to the red-tailed than other species is very true.

Since my records of this species in your issue of Feb. 9, I am enabled to give one more instance. In a letter from Arthur T. Wayne, dated Mt. Pleasant, S. C., Jan. 22, 1901, he writes: "Last Saturday I saw on Dewee's Island, a coast island, near my house, a beautiful albino red-tailed hawk, but could not get a shot at it. The bird was in company with two black vultures, and I saw it closely while sailing. The tail was red, but the rest of the plumage was white. I am going to-morrow after it, and if I secure it you shall hear from me."

The only records of albinism which I have among the smaller hawks is that of the broad-winged (*Buteo latissimus*), a pure white example of which was in the collection of Otho C. Poling, Quincy, Ill., in September, 1888, and in a list of albinos in the collection of the late Geo. W. Lawrence, which he sent me in January, 1875, there was included a specimen of Cooper's hawk (*Accipiter cooperii*). There are, no doubt, other species unrecorded in public and private colections.

RUTHVEN DEANE.

CHICAGO, Feb. 22.

Game Warden Smith, of Pittsfield, Mass., has recently received several complaints regarding the use of ferrets for rabbits in the southeastern part of that city, and he is making a vigorous investigation of the violations of the game laws. Alarmed at the reckless slaughter of pickerel, Mr. Smith has written the Massachusetts Fish and Game Commissioners recommending the passage of a law to allow a fisherman to set only three lines at a time. One day recently Mr. Smith counted no less than 540 lines set on Pontoosuc Lake, and some present had as many as thirty tip-ups. So great was the net work that Mr. Smith says it would have been practically impossible for a pickerel to cross the lake without being ensnared.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

American Wildfowl and How to Take Them.—XXIV.

BY GEORGE BIRD GRINNELL.

[*Continued from page* 129.]

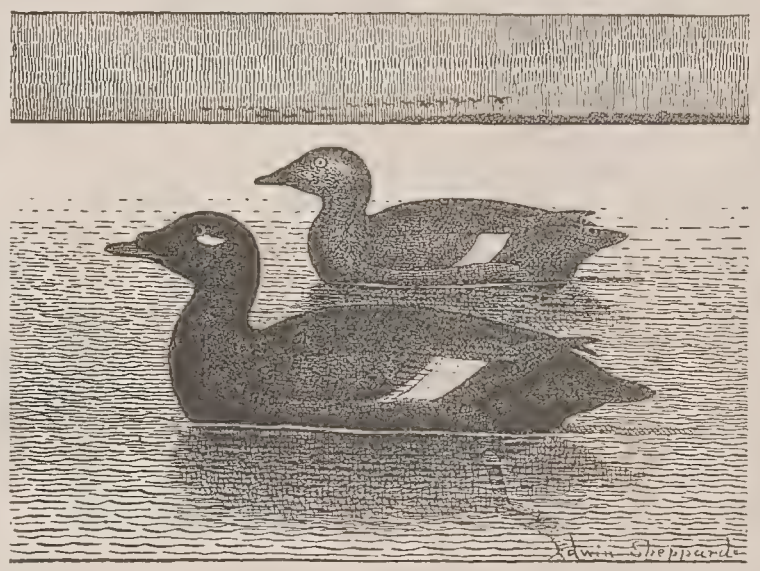
The American Velvet Scoter.

Oidemia deglandi (Bonap.).

THE adult male has the bill expanded into a prominent knob at the base on the top. At the sides the bill is sunken, as if hollowed out. This knob, with the base of the bill and its margin, is black. The sides of the bill in front are red, changing to orange and then to white near the tip. The plumage is uniform black, often very deep or often brownish throughout. There is a small white spot behind the eye and the secondaries are white.

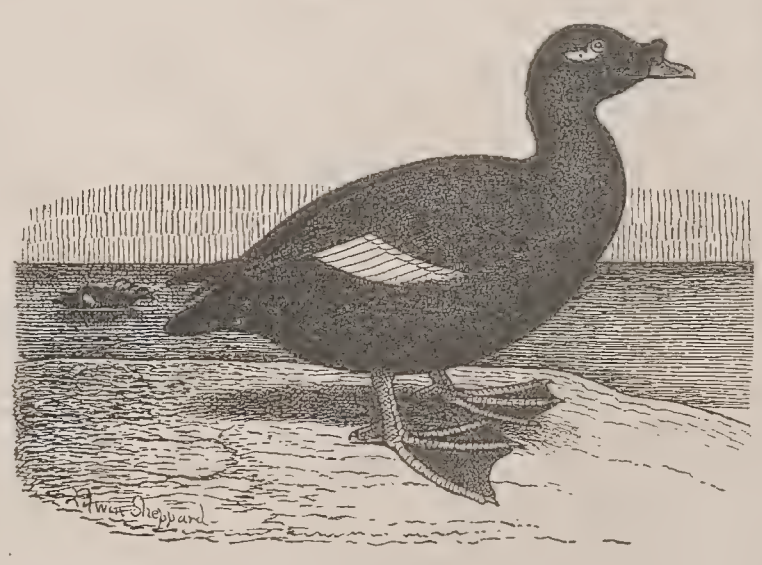
The female is uniform dirty gray, the wings darker than the body. The secondaries are white, as in the male. The length is about 21 inches.

One of the commonest of the winter sea ducks is the velvet duck, more often called the white-winged coot. It is found on both coasts and also on the Great Lakes



AMERICAN VELVET SCOTER.

and some of the inland rivers in winter. It comes down to the New England coast late in September and spends the winter there in company with the other coots and the eider ducks. It is exceedingly abundant and is shot by the various methods described in the chapter on sea shooting. While migrating, or while taking long flights, it flies high above the water, often out of gunshot, but from such heights I have sometimes seen it brought down, either by the expedient of shooting or shouting at it, or sometimes I have seen a gunner scale his hat high into the air, when the whole flock would dart 20 or 30 or 40 yards directly downward toward the water and then continue their flight. Usually



VELVET SCOTER.

the birds, when flying from their roosting to their feeding grounds, pass but a few feet above the water, moving along with a strong, steady flight.

The white-winged coot feeds almost exclusively on small shellfish, which it brings up from the bottom, and the flesh is very far from palatable. The gunner on the New England coast who kills them usually parboils them for a time, and then bakes them, the result being a dish that is eatable, but is thought by many to lack character.

The velvet ducks breed in Labrador and to the northward as far as the Barren Grounds. The nest, often made among underbrush or low woods, is a hollow in the moss, lined with down, and contains seven or eight eggs. This species, like the old squaw and the other coots, spends much of its time, late in the spring in preparing for the long flight that it must make to its summer home. The hours from 3 o'clock in the afternoon until dark are spent chiefly on the wing, and often it is not much before the first of June when the last of the coots leave the New England shores.

On the Pacific coast this species is found in winter as far south as southern California and in summer to the Bering Sea. In the month of July I have seen them on the Gulf of Georgia in vast numbers, the birds being, no doubt, chiefly males, and the females incubating somewhere in the vicinity.

The coots are regarded as exceedingly tough and hard to kill, and the gunners along the New England coast who shoot them commonly use very large shot, often 3's, and sometimes 2's. Birds that are only wounded dive and skulk with great skill, and if there is any sea on the water are likely to escape notice and not to be recovered. Often they dive, and apparently never come to the surface again, and it is believed that they cling to weeds at the bottom and remain there until dead.

Some of the names given for this species by Mr. Trumbull are May white-wing or great May white-wing, pied-winged coot, bell-tongue coot, Uncle Sam coot, bull coot, brant coot, sea brant, assemblyman, channel duck.

The Velvet Scoter.

Oidemia fusca (Linn.).

In the adult male the bill is much swollen near the gap, but is not much elevated at the base. The general color is orange or reddish, crossed on each side by a diagonal black line, running from above the nostril obliquely to the side of the nail. The plumage is brownish-black, with a small patch behind the eyes, and a white speculum on the wing.

The female is sooty-gray, paler beneath, and with a white speculum.

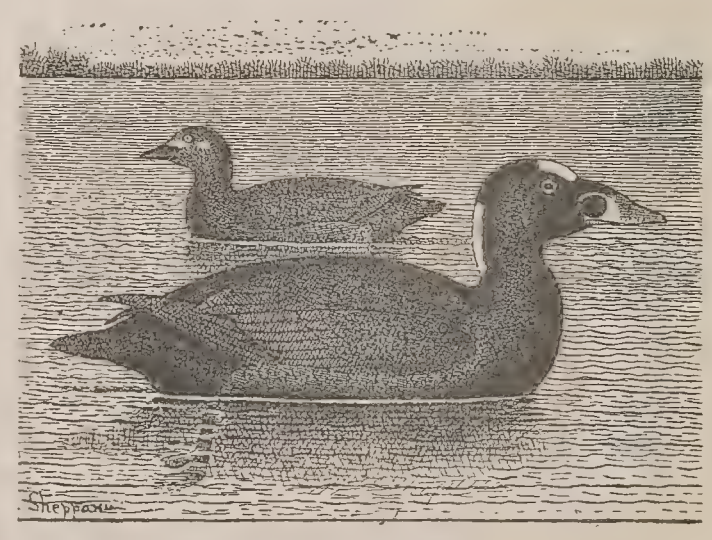
The velvet scoter is scarcely to be considered an American bird, being only an accidental visitor to our shores. It is an Old World species, which has, however, been taken in Greenland. It is not a bird to be considered by the sportsmen, who will never meet with it.

Surf Scoter, Skunk-Head.

Oidemia perspicillata (Linn.).

The adult male is deep black above, changing on the lower parts to a very dark brownish-black. There is a white patch on the forehead, cut off squarely behind the eyes, and running out to a point a little beyond the gap of the bill. On the back of the head and neck there is another white patch, cut off squarely in front and running down to a semi-circular ending on the back of the neck. The bill is swollen at the base, white and red in color, with a squarish patch of black on either side near the base. The nail is horn-color. The feet are orange, with dusky webs.

The adult female is brownish-black everywhere, becoming sooty or almost lead color below, and sometimes almost white on the abdomen. The bill is black, but little swollen, and, of course, the black spot shown in the male is not apparent. The bird's length is about



SURF SCOTER.

20 inches. Mr. Ridgway states that sometimes in the adult male there are other white marks than those described, and sometimes one or the other of the white patches on top of the head are wanting, but these conditions are very unusual.

This species, which is known as surf duck in the books, is commonly called by gunners coot, sea duck, skunk-head and also sometimes hollow-billed coot. It is peculiar to America and in habits and distribution does not differ markedly from our other coots. It is said to breed on the Arctic coast and to proceed southward as far as Bermuda. It is also commonly found on the Great Lakes and is not infrequently killed by gunners on the marshes to the south of them. Mr. Audubon found it breeding as far south as Labrador, in fresh-water marshes, and the nest was rather more substantial than that of many of the sea ducks, being well built and lined with down. It contained five eggs of a cream color. Nests found by Mr. MacFarlane on the Anderson River contained eight eggs.

While vast numbers of coots winter on the New England coast, and seem to thrive there, equally great numbers apparently proceed further south, wintering in the mouth of the Delaware River and in Chesapeake Bay and out at sea. In these regions, however, where there are so many better ducks, they are not much pursud, and, on the whole, it may be said of these coots, and of the old squaws, that they are by no means growing fewer in numbers.

Besides the names already given, Mr. Trumbull tells us that this duck is called horse-head and bald-pate, off the coast of Maine; patch-head, patch-polled coot and white-scop, at other points on the New England coast; muscle-bill, pictured-bill and plaster-bill, snuff-taker, spectacled-bill coot and spectacle coot, blossom-bill and blossom-head, butter-boat-billed coot; while the femaes and young are called, at various points, pishaug, gray coot and brown coot.

The Last Vermont Panther.

ST. JOHNSBURY, Vt., Feb. 22.—It may interest Juvenal and your readers to know that the last panther killed in Vermont was killed on Thanksgiving Day in 1881 by Alexander Crowell, a veteran of the Civil War. The creature measured 7 feet from tip to tip, girth 3 feet 8 inches, forearm 22 inches, height 3 feet 8 inches and weight 182 pounds. It was killed by a shotgun in a dense thicket of spruces in the town of Barnard. "The painter" had killed two sheep the night previous to his taking off. This Vermont "painter" we also call catamount, and it is identical with the mountain lions recently killed by our sportsman Vice-President and with the puma of South America.

JNO. W. TITCOMB.

Lumber Camps and Game.

Editor Forest and Stream:

In FOREST AND STREAM for Feb. 16 you publish a rather severe answer by Mr. James Webber, of Bangor, to my article, "A Month on Millinockett." He wants to know "if you think it just to print such a slander against lumbermen as this contains without probably an iota of proof?"

Mr. Webber's idea of slander in this case and mine are evidently very different.

From my point of view I said nothing against Maine lumbermen. I have a great admiration for the woodsmen of Maine. Taking them as a whole, whether lumbermen, trappers or guides, there are no men that I have ever met in any walk in life who have more qualities to be admired. They may be a little rough in some ways, perhaps, but they lead a rough life. As to their killing game out of season, however, in spite of what Mr. Webber says, there is not the slightest doubt of it. My proof is from the lips of the men themselves. Lumbermen have a habit of saying what they think. I have been going into the Maine woods every season for the past ten years, and in that time have met many lumbermen and have had a number of different guides, all of whom have worked in lumbering camps. I never heard one complain of not having enough game during the winter. Moose I think they are more careful of. But it is probably not from any fear of game wardens. If I were working in a lumber camp all winter, I would want fresh meat once in a while myself, and probably would have it. What I object to are the game laws and the way they are carried out.

The Commissioners certainly do not consult the guides very much in regard to them. They are too plainly in the interests of Bangor and Portland sportsmen. The idea of making non-residents of the State pay more for a license than a native! It is almost as un-American as the tax New Jersey once tried to put on non-residents passing through the State. There is no doubt that the non-resident sportsmen spend more money in proportion than the residents do.

In another article in the same number of FOREST AND STREAM there is a great powwow about sportsmen and guides setting fire to the forests.

Some inexperienced sportsmen without guides certainly do, but not so the guides. I have never seen a guide leave a fire during a dry time without thoroughly putting it out with water. They often go to considerable time and trouble to do so. Perhaps I have been particularly fortunate in guides, but I think in this respect they are all alike.

I own a few acres of land on the West Branch myself, and am constantly in dread of fire.

I judge from Mr. Webber's letter that his own knowledge of life in the lumber camps is limited. But it is nice to see any good word for the lumbermen themselves!

POCKWAKEMUS.

A Bear Hunt by Moonlight.

YPSILANTI, Mich., Feb. 4.—This is my first offense, but I can contain myself no longer. I have been a constant reader of FOREST AND STREAM for a number of years and have read with intense interest all the accounts of the various contributors, and I feel that I should at least attempt to describe the most exciting event of my life in way of a small recompense for all the pleasure I have received from the reading of your most valauble weekly. I shall not go into details as explicitly as I would were I a good writer, but shall plunge right in and expect a deal of charity from my readers.

This event took place in the North Bruce Peninsula of Canada upon the premises of Wm. MacVicar, lumber dealer and all-round sportsman. Mac is a true type of a sportsman, genial and generous to a fault. He is known and admired by all the deer hunters in Ontario, a number of whom enjoy their annual outing upon the MacVicar limits.

After the season closed in '99 five of us, upon Mac's invitation, remained in our shanty a few weeks hunting small game, fishing, trapping and incidentally taking out some timber to lighten our expenses. We were located on the edge of a "burn," six miles from MacVicar, the nearest post-office, where Mac resided, and about a mile from the shores of old Lake Huron.

One night about 12 o'clock, while all were asleep but myself, I heard Dinah, our Irish fox hound, and Otto, our pointer, growling and whining in the stable, a small log structure about 20 yards distant from the shanty, where we kept old Jim, our horse, and the dogs. Thinking that they might have got their chains twisted, as sometimes occurred, I got up and slipping on my larrigans went out to adjust the matter. Well, upon opening the door the first thing I noticed (conspicuous for its absence) was that we had been touched for half a deer which had been slung on a pole just outside the door. The night was a perfect one, as lihgt as day, and as I stood there wondering at the disappearance of our venison, I caught sight of a moving object about 60 yards away on a small hill.

I watched and presently saw Mr. Bruin move over the hill. Well, I wish you could have seen the interior of that shanty when I told the boys of my discovery. It did not take more than half a minute for three of us to get some clothes on, grab a rifle apiece, some cartridges and get on the warpath. When we got to the hill we could see the bear about 100 yards distant, and upon seeing us he turned at right angles and made for some small balsams about 300 yards away. I immediately started to head him off, and Harry and Bill opened fire on him, the first shot striking him I knew, for he wheeled and hit himself several times. The ground was as hard as a rock, but I did not feel it nor did I mind the falls I had as I fairly flew over the fallen timber. When he saw me between him and the balsams he turned and made directly from me for the open country, and I now opened fire on him also. I shall never forget as long as I live the music of that night.

The deep baying of Dinah, eager for the chase, the short angry barks of Otto, the shorter, more wicked, snaps of Harry's .30, the boom of Bill's big .44 and the thumping of my heart, which I could plainly hear as I pumped shot after shot at the retreating form which had caused all this excitement, is embedded in my memory for life.

Light as it may be, we hunters all know how difficult it is to find the sights by moonlight, and I think about fifteen shots were fired before Bruin stopped. He turned short, and I think through sheer bewilderment rather than vengeful motives went straight for Bill and Harry. He had got to within 50 yards of the boys when a well directed shot from Harry brought him down, and he never moved. When we reached him he was quite dead, and upon examination we found five wounds on him—two in the left fore leg, two through the body and the one which stopped him in the forehead. We took him to the shanty, skinned him and examined the wounds to see the effects of the different rifles. Bill's .44 and my .38 had done about equal damage, but the .30 bullet which struck him between the eyes telescoped the skull and vertebræ clear back to the foreshoulders. This was rather late in the fall to find a bear out, but I guess the exceptionally fine weather was the cause of his late wanderings.

I know that this, as it is worded, will not prove very interesting to some of our old hunters, but as for myself I never expect again to have as much excitement and genuine sport as I had that moonlight night in the fall of '99.

PEN.

New York Game Law Committee Hearing.

THE joint game law committee of the New York Legislature gave a hearing on the afternoon of Wednesday, Feb. 20, to persons desiring to advance arguments for and against Senator Brown's bill making the close time for web-footed wildfowl from Feb. 1 to Aug. 31.

There were present a delegation of Long Islanders, one representative from New York city and two or three others from Saratoga and Oswego. Much interest was manifested, which on one or two occasions almost reached the point of strong feeling.

The opposition to the bill was heard first. Its forces were marshaled by Dr. Robinson, member of Assembly from Suffolk county, Sayville, L. I., and the questions asked were put chiefly by Senator McKinney and Mr. Doughty, member of Assembly for Queens. The reasons advanced for making no change in the law were these: For the last two years there have been more birds in Great South Bay and Shinnecock Bay than for many years. Birds do not breed on Long Island and are not mated in spring when they pass there. A large amount of money has been invested in battery rigs which would be useless in spring if this law should pass. Many men make their living in part by taking out gunners from a distance. Brant visit the bay only in spring, and there would be no brant shooting there if spring shooting was abolished. The questions put to the various speakers tended to bring out and amplify these various points. They tended to show also that but few birds were killed in spring by comparison with those killed in fall. All the witnesses declared that they had never dressed any birds with eggs in them. A gentleman from the south shore, who said that he had made much inquiry with regard to the number of rigs owned in the various towns and the revenue they brought in to their owners, read a table of these sums, by which it appeared that $29,000 was earned during the last shooting season, one-half of which would be cut off if spring shooting were put an end to.

Mr. A. N. Cheney, of the New York Fish, Forest and Game Commission, first addressed the committee in favor of the bill, stating that he appeared merely as a representative of the Commission. He cited their recent report and the fact that the members of the Commission had unanimously voted for the abolition of spring shooting. He then introduced a representative of the Boone and Crockett Club, who spoke of the constantly decreasing numbers of wildfowl, and declared that if the stock is to be preserved it is necessary to take such steps that fewer birds will be killed each year. This can only be done by shortening the season for shooting. The birds are now shot constantly for eight or nine months of the year, and the close time covers only the period when they were not within our territory, but were in the north breeding. It has become a recognized principle of protection in the various States that the season must be shortened in order to limit the killing. Spring shooting has been abolished in a number of States, and other States were named in which the season has been markedly shortened on upland game in order that the breeding stocks might be kept up. In years gone by, at hearings before the Legislature on bills which had to do with shortening the open season for deer, Adirondack guides have made the plea that their business would be ruined if the season were shortened, just as the Long Island gunners now declare that their business will be destroyed if spring shooting were abolished. But it has proved that with the shorter deer season the Adirondack guides were better off than ever, and so it is very sure to prove with the Long Island batterymen.

Mr. Manning, of Saratoga, spoke for the sportsmen of his section, who are earnestly in favor of the bill. The ducks untroubled by the spring shooters would breed over a considerable part of New York State, and the result would be an autumn harvest of fowl which would be for the general good. He cited examples drawn from his own wide experience to show that in spring and even in late winter the birds had already paired and were ready to breed so soon as they reached their summer home. He accounted for the greater number of ducks to which the Long Island men had testified by saying that this increase in numbers was due to the passage of a law prohibiting spring shooting in Ontario, and showed that the ducks which were now permitted to breed undisturbed in that Province returned there in great numbers, to the great advantage of all New York gunners.

Judge Stowell, of Oswego, bore testimony to the fact that when the spring ducks reached his section of the country they were already mated, and gave examples to prove it.

Chief Protector Pond, who had just risen from a sick bed, spoke convincingly concerning the great numbers of ducks which in old times used to breed along the northern borders of this State, in the Montezuma marshes, in the Adirondacks, and about such lakes as Cayuga, Seneca, Oneida and Owasco. He believed that with reasonable protection in the spring, such breeding birds would be with us again, and that in this way much would be added to the supply of game in the State. Protector Pond's testimony was extremely interesting and convincing.

The question of the eggs in the female bird seeming to be misunderstood, one of the witnesses explained that it was not intended to say that the eggs referred to were complete eggs, possessing shells and ready for extrusion, but they were developing eggs which might be laid in the course of a few weeks or a few days, according to the conditions met with by the bird. All female ducks, of course, contain eggs, but these eggs may be in all stages of development. What was intended to be said was that the eggs for a spring's laying had begun to develop in the very early spring or late winter, but a person not familiar with bird anatomy might not recognize them as eggs at this stage, when they might vary in size from a No. 8 shot to an ordinary boy's marble.

It is not known when the bill will be reported.

Presidential Sport at Marly.

WE are indebted to a French correspondent for the following account of the photograph which we reproduce:

"On Thursday last one of those official huntings to which the President of the Republic invites all the dignitaries in every department took place in the shooting fields of Marly. This time the guests of M. Loubet were the members of the Superior Council for the War. The hunting, very cleverly led by the eminent M. Lamy, first huntsman of the Presidential hunting train, attended by M. Leddet, general superintendent of the forest, has been capitally entertaining.

PRESIDENT LOUBET IN THE FIELD.

"Before taking the field, the President's guests, the Generals Brugère de Negrier, Florestin, Duchêne, Grisot, Faure-Biguet, Lucas, Zurlinden, Grasset, Ganier des Garets and General Dubois, chief of the military house, met to the hunting lodge, where they lunched. The lunch is always very simple—an omelet, cooked by the game keeper's wife, a pie, some cold meat, and, besides, some dainties.

"After the meal, the members of the Superior Council for the War get up in a landau that drove immediately to the game keeper's lodge, where the first battue took place.

"The rain then began to fall, but it did not prevent the hunt, which was worthy of notice, for capital cynegetic exploits were performed.

"Besides, everybody knows that President Loubet, however left handed, is a first-rate shooter, and so much the worse for the game which venture to come in the range of his gun. The generals also vied with each other in the trueness of the aim, and in a short time there was a general massacre of fowls, roe deers, pheasants, which strewed the ground, victims of the never-tired guns of clever marksmen.

"Every hunter was followed by a game keeper in attendance to carry the gun between two battues, and supplies with a good number of cartridges. The game was taken up by men, and put in carriages led to an appointed place.

"The first battue lasted about five minutes, and every guest played his little part in the general slaughter.

"After a moment's rest, the President and his guests made for the rabbits' place, and the firing began again.

"At a quarter past four the President of the Republic gave the signal to put an end to the hunt."—London Sporting and Dramatic News.

CHICAGO AND THE WEST.

Governor Roosevelt Talks of Trip.

CHICAGO, Ill., Feb. 22.—There have been published within the last month or more scores of alleged interviews with Governor Roosevelt regarding his Western hunting trip. It need not be stated, in view of the absurd statements of most of the stories, that the bulk of these interviews has consisted of malicious or ridiculous misstatement of the facts. That this sort of thing was not relished by Governor Roosevelt may be inferred from the fact that he declined to discuss his hunt with the daily reporters of this city. He did say something, however, for the benefit of FOREST AND STREAM, when Billy Hofer and I called on him at the Union League Club yesterday afternoon.

"How many lions did you really get, Governor?" asked Billy.

"Twelve," was the reply. "Yes, we got twelve, nice lions."

"And how big was the biggest one?"

"The biggest lion weighed just 223 pounds, and it measured an even 8 feet from tip to tip" replied Governor Roosevelt. "Of course, I do not need to tell you gentlemen that all this talk about nine and ten feet lions was only folly. But we did get twelve lions—I had a rattling good time."

Michigan Game Law Matters.

There seems to be increasing dissatisfaction in Michigan over the condition of the game warden service in that State. Much criticism is made upon the administration of the warden's office during the past term, and the newspapers have taken up the fight for a more business like régime. The Saginaw Evening News of Feb. 18 contains editorial mention, as follows:

The indignation being expressed all over the State with regard to the exposures in the office of the State game warden is perfectly righteous. If there ever was a clear case of the hold up game, here is the instance The State game warden and his State deputies are the ones to blame, and not the system of game protection and inspection. The people of Michigan must be given to understand this, too; for it is highly important that the State should continue in its effort to protect the game and fish of the Commonwealth. It must be done, however, with honest endeavor, and not with a view of giving men with political pulls fat jobs, whereby they draw good salaries and bilk the treasury out of expense money even to a greater amount than their salaries, as has been the case of late. The figures show that the last year the game warden and his deputies drew $7,361 in salaries and $9,648 in expenses. This is of couse a mere farce, and the halt called by Auditor-General Powers is a proper one.

Game protection is needed. The people approve of it, but it must be placed in the hands of men who have a conscientious regard for the interests of the State and the taxpayers. The present regime has been a disappointment; but a cleaning up of the record and a reform in administration will clarify the situation and pave the way for effective work on the lines intended by the protective laws.

I make bold to quote from a private letter at hand from a very prominent sportsman at Saginaw, upon these same matters. This gentleman has given the subject of game protection a great deal of thought and a great deal of practical assistance. He remarks:

"I have advocated the abolishing of these high-priced officials who did their game protecting from their office and ran up a big expense account; and having instead one State game warden, with a salary of $1,200 or $1,500, and allow him a stenographer and reasonable expense account. Under his charge have twelve or fifteen deputy State wardens, doing work in all localities of the State, so they are not influenced by local favoritism or prejudice. Have them men who will get out and hustle and do good hard detective and practical work in the interest of game protection and fish protection, on a salary not to exceed $750; and I think that good men with ample caliber and good workers could be had at $600 a year, allowing them an expense account, audited by the State game warden. In other words, keep track of their expenses just the same as a business man does of his traveling salesmen, and keep them at work all the time. Eliminate all politics and favoritism from this, and you will have good game protection."

Senate Committee Coming West.

The agitation of the questions of the Indian reservations and the proposed National Park in Minnesota has been going on at Washington steadily, though little has been made public, and it is to be said to-day that the agitation has done great good, whether or not we shall ever have the park. It is not known that the prospect is flattering for the appointment of a House Committee, but it can be stated that the Senate Committee, whether or not joined by the committee from the House, will during the recess of Congress make a trip to this Minnesota country for the purpose of getting information at first hand, regarding the actual state of affairs. The whole question is very much involved. Part of the timber land has been ceded to the Government and some good tracts of pine lands still continue to be held by the Indians, some under allotment, and others by Indians living in tribal relations. The Senate Committee does very well to go out there to look at the thing itself. A committee from the House might very well do the same. Then the facts would come out, and if the facts were known the Minnesota forest park would be almost a certainty.

On Feb. 20 something of a surprise was sprung in the House by the discovery that the conference report on the Indian appropriation bill carried a quiet amendment authorizing the Secretary of the Interior to dispose of the timber on the diminished Chippewa reservations in such manner and at such prices as he may see fit. This puts the whole matter of handling this timber in the hands of Secretary Hitchcock, who is, in the main, safely to be depended upon by the friends of the park, or at least to be counted upon as strongly opposed to the hurried and wasteful denudation of these Indian lands. Naturally a certain number of the Minnesota Congressional Association are a bit startled to find themselves in this sort of a situation. They want the white men to get all the timber, and to put up their mills on the reservation. Secretary Hitchcock favors having the work done by the Indians themselves, and he intends to exercise his influence for the benefit of the Indians, and no doubt for the benefit of the pine. This is the most favorable turn the checkered history of the Minnesota park has had for months. The conference report carries an appropriation of $4,320 to establish a fire patrol on the Red Lake and White Earth reservations.

Getting Used to It.

This week I was talking with a man who has been much among the Indians, and I asked him how the Indians managed to get along without freezing their feet in the winter, when the snow was sloppy and slushy and capable of easily soaking through their moccasins.

"They get used to it," said he, "because they have to get used to it. I have seen an Indian come out of his tepee, many a time, and stand in the snow talking to me, apparently not thinking his feet were cold."

In the South I have often wondered how the negroes in their open cabins and their poorly covered beds keep from freezing in severe weather. "They get used it it," said a planter to me. "What a man has is always enough for him."

This morning it was below zero in Chicago, yet as I passed down State street I saw walking up and down in front of a woolen goods house a man dressed in full Highland costume, which, of course, leaves the knee and a good part of the leg absolutely bare. It was nearly cold enough to freeze one's ears in a short walk, and one could feel the cold wind cutting through his heavy clothing. The brawny Scotchman who was doing this act looked a bit blue about the nose and very thirsty, but his knees seemed to be standing it all right. I suppose he was used to it. It is a well known fact that sportsmen will endure hardships out of doors which they could not think of sustaining at home. The human system adapts itself to almost any sort of surroundings. If you tell your friend that you can sleep comfortably in a snowdrift he is apt to disbelieve you, yet the assertion is entirely true.

Alaska Dog Train.

There appeared on the streets of Chicago this morning a novel and interesting sight, no less than a dog train and sled of the genuine Alaska sort. There were four beautiful huskies or Esquimaux dogs, astonishingly big, heavy-boned and powerful brutes, yet with the shrewdest and most knowing faces imaginable, and under perfect control. This dog train is part of the Craine exhibit, under the auspices of the Alaska Geographical Society, which exhibit has been sent down to the sportsmen's show by the White Pass & Yukon Railroad. That enterprising and pleasant sportsman, Mr. J. Francis Lee, formerly district agent at Chicago for the Canadian Pacific Railroad, was this winter apointed general passenger agent of the White Pass & Yukon Railroad, whose line now practically extends from Skaguay to Dawson City. It was Mr. Lee who secured this exhibit, which will be one of the most fetching at the show. There were more than three car loads of the Craine exhibit unloaded at the Coliseum to-day.

To-day I saw Oscar Jarvis, who has charge of the team of husky dogs. Jarvis is hardly more than a boy, yet with this team of dogs he has carried mail for a long time between Dawson and Skaguay and between Dawson and Nome. He says that the dogs average about fifty miles a day, or about forty miles with a heavy load. They go on a steady trot, and will cover their fifty miles the last day of a week as easily as they do the first. He says that these dogs are from half to three-fourths wolf. They have the shrewdest face in the world, and are very gentle and lovable creatures. The lead dog is called Hunker, No. 2 is called Nome, No. 3 Yukon and the wheel dog, so to speak, or the one next to the sled, an enormously powerful brute, which will weigh about one hundred and twenty-five pounds, is called Hootch.

There is a young black bear which goes along with the dog team, and which is sometimes hitched up as rear dog, instead of Hootch. This bear is called Mack, and is a playful fellow enough, though a bit rough in his sport with a bystander. Mack can go out on the trail hitched with the dog team, but he is too fat to last for more than an hour or so. Mr. Craine does not take him out on the streets here for the reason that the sight and smell of the bear causes too many runaways among the horses. Mack is going to be a big card at the show.

Freak Legislation in Indiana.

Ideas in regard to game laws and game protection have always been a bit vague down in our sister State of Indiana, one of the best sporting grounds of the middle West. Most of the more popular Chicago shooting clubs have had their preserves located along the Kankakee iRver of Indiana, and up to the beginning of the present decade these clubs had good sport. They had it in the midd'e of a region which for a generation had known no such thing as game protection, and which had either an entire ignorance or entire contempt for game laws. The marsh dwellers of Indiana toiled not, neither did they spin, and neither did they plow to any great extent. They made their living off the marsh, and all seasons were alike to them, each contributing its own share of one wild product or another.

Time has passed, and to-day an entirely different sentiment prevails in the big and prosperous State of Indiana. Better game laws have found their place upon the statute books, and though the enforcement has not always been perfect, the tendency has been constantly toward better things. Yet always there has been determined rebellion on the part of local shooters against the preserve idea, and against the wealthy clubs which have taken up large holdings of land in the State.

The history of the Toleston Club is that of a continuous battle, and at times this battle has meant human blood and human lives, over a dozen men having been killed or injured on one side or the other in the wars around that marsh. The old American spirit dies hard, and our people are loath to believe that the old days of plenty cannot continue forever and for everybody. This winter there appeared before the Indiana Legislature the Lindley bill, which in effect takes up the cudgels for the Indiana resident as against the club man. This measure is ambitious. It seeks to do nothing less than abolish the ancient common law of trespass. It makes it lawful for any one to hunt on marsh lands without asking the consent of the owner. The land holder may keep the hunter out of his crop, but he cannot forbid him entry on the wild land.

The Lindley measure has already passed the Senate, though there exists considerable doubt that it will become a law. Should it do so, all the club holdings of sportsmen would become entirely valueless, and there could not be any such thing as a duck preserve, or indeed any other kind of preserve. The exact animus of this measure is difficult to gather. That it will be fought goes without saying, and there is not much likelihood that it will become a law.

There is, or was formerly at least, a law in Texas forbidding a man to fence in more than 10,000 acres of land to the exclusion of the public. There was necessity for this law in a country of long distances, few settlements, and infrequent camping places. This same necessity does not exist in Indiana to-day, and the Lindley bill is introduced for an entirely different purpose.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Mr. Tilden's Deer.

SCHENECTADY, N. Y., Feb. 20.—*Editor Forest and Stream:* Will you kindly give the following sta ement a place in your next issue? Whatever your personal opinion may be of the question at issue, as a sportsman you will doubtless concede the privilege of a statement to both sides of the question. As the editor of one of the most widely read sporting magazines in the country, I am requesting that you publish this statement, that it may be given the widest publicity, con radicting and correcting the garbled reports that have appeared in various newspapers.

S. W. TILDEN.

Statement.

Nov. 17, 1900, John Horstman and myself left Schenectady, N. Y., for a one week's hunting trip in Maine. We were unusually successful, each getting two deer in four days' actual hunting, and after accompanying game to Bangor forwarded same by American Express to Schenectady, N. Y. On arriving in Schenectady, a friend having expressed a doubt that it was lawful to possess venison after Nov. 15, I consulted two of the best lawyers in the city, who assured me that the law as written was intended to apply only to deer shot in New York State, as at the time said law was written any other interpretation would constitute a violation of the United S ates interstate commerce law (the Lacey law not being in existence at the time). On the above assurance I accepted the game from the American Express Company, and had it distributed among my friends. Some time after this I received a communication from Mr. Pond, Chief Game Protector, to the effect that Protector Scott was investigating my case and making an appointment if I wished to "explain the matter." I kept appointment and "explained the matter" as above, with the result that my next communication from Mr. Pond was to the effect that Mr. Horstman and myself were each fined $100. We declined to settle the affair at this figure, and decided to fight the case, whereupon Mr. Scott offered to accept a $50 penalty from each of us. As to contest the case (even though successful) meant a sum considerably in excess of this figure, we accepted this fine for the very cogent reason that "beggars cannot be choosers."

I have always been an enthusiastic advocate of more stringent game laws in this State, and I have various and sundry ideas in regard to the wording and enforcing of same, all of which however, have no place in this article, but the point I would like to make is this: If, as Protector Scott claimed (in an attempt to conceal the avarice actuating his legal hold-up), the fine imposed in this case was to establish a precedent to aid in the prosecution of more flagrant cases, then a nominal fine of $1 would have answered the purpose as well. If the fine was not imposed for the reason above stated, but rather as a penalty, why was not the extreme penalty of $100 per deer, or why, after placing it a $100 each and discovering that it would be contested at that figure, is it reduced to $50, at the discretion of the protectors? I infer from my experience in this case that it is the policy of the Chief Game Protector to take advantage of every opportunity to impose a fine of which they receive half. In this respect they are less considerate than the veriest pot-hunter, who, while depriving the sportsman of legitimate sport, hardly presumes to filch from his game bag. This is the inevitable result of sanctioning a system which provides for a pecuniary reward to any protector securing a conviction instead of rendering him a proper return for the conscientious discharge of his duty.

Just so long as this system of legal bribery obtains, just so long will the office of game protector continue to be a lucrative sinecure.

If it is impossible to secure the passage of a law prohibiting the sale of game at any and all seasons of the year, the present law could be tolerated were it interpreted in the spirit in which it was written, but if interpreted literally it deprives New York sportsmen of enjoying a hunting trip into Maine for moose or deer during the finest part of the season, if he desires to bring any meat out with him. Those who have experienced a similar trip will agree with me that in this respect the present law is a failure.

[Mr. Tilden appears to have acted with good intentions, but to have been misled by poor legal advice. The law, which reads, "Wild deer or venison shall not be possessed or sold from Nov. 21 to Aug. 31, both inclusive,"

applies to all venison, whether killed within the State or outside. It applied prior to the enactment of the Lacey law just as much as it does now; the Lacey law has not affected its application. The reduction in the penalty exacted by the protector was probably made in order to avoid the expenses of litigation.]

Guns in Maine Close Season.

BOSTON, Feb. 25.—Not less than 7,000 caribou were shot in Newfoundland during the season of 1900. As nearly as can be ascertained from the faulty manner in which all records of hunting are kept, alien sportsmen, who procured licenses, killed about 1,200 caribou; native sportsmen, not taking out licenses, about 1,300; English and French officers and men from the naval squadrons, privileged characters there, 600 to 800; settlers along the south shore, hunting for the St. Johns market, about 2,000 more. For the season of 1900 210 licenses only were issued to hunters outside of the island, showing how few sportsmen go there compared with other sections, where the hunting is not nearly as good.

There certainly is a good chance that some law regulating the carrying of guns and rifles in Maine during the close season on game may be enacted during the present session. A bill has already been entered in the House regulating the carrying of firearms into the wild lands of the State during the close season, and as far as I am able to learn, is receiving good support. It will be argued that the possession of a rifle in close season is prima facie evidence of intent to use it, and that the State has as good right to prevent this possession as it has to prevent jacklights or even burglars' tools. The State of Maine will do well to sit down hard on the perfect abandon with which sportsmen from out of that State have been in the habit of "taking their rifles along" when going on fishing trips, when they know, and everybody else knows, they do not even intend to stay till the legal open season on game. SPECIAL.

The Appalachian Park.

ASHEVILLE, N. C.—*Editor Forest and Stream:* I herewith inclose you a copy of the special message from the President to the Senate and House, pertaining to the establishment of a forest reserve in the Southern Appalachian Mountains. This message was also accompanied by a letter from the Secretary of Agriculture. You observe that both the President and Secretary recommend the establishment of a forest reserve in the Southern Appalachian Mountains, and upon their recommendation our Senators and Representatives have introduced a bill into both the Senate and House, praying for an appropriation of $5 000 000 for the establishment of such a forest reserve in the mountainous section of the Southern States.

You will remember that over a year ago, when we first approached Congress, we simply asked for an appropriation of $5,000 to defray the expense of a preliminary investigation. This appropriation we secured, and the investigation was made last summer under the direction of the Secretary of Agriculture, as per the letter herewith inclosed.

The only opposition our movement has met with thus far is at the hands of a few selfish lumbermen (I am pleased to report that the majority of the lumbermen are with us and in favor of the movement), and also a few of the Southern members of Congress have objected from a point of States rights. This latter objection, however, we have entirely overcome, and have secured legislation in North Carolina South Carolina, Georgia and Tennessee favoring our movement and praying the National Government to establish a reserve as requested. These States have also granted the Government power to acquire possession of the lands, even by the process of eminent domain, if necessary.

The Appalachian National Park movement is now in the best possible shape, and even though we do not secure an appropriation at the present short session of Congress, we begin to believe now that success is in sight.

Push the Appalachian National Park movement!

C. P. AMBLER,
Secretary-Treasurer A. N. P. Association.

The Sportsmen's Show.

Editor Forest and Stream:

The Sportsmen's Show, under the auspices of the National Sportsmen's Association, will open March 2 at Madison Square Garden, and continue two weeks. The scene will represent the land of Hiawatha, the home of the Ojibway Indians, of whom there will be a large number present. They will inhabit an island situated in a lake, on which the Indian dances will be performed and their home life portrayed in detail.

The lake will be larger than at any previous show, and will contain fifteen hundred live trout weighing from 2 to 5 pounds. These will be transported in the United States fish car to the garden, to insure safe delivery, and sportsmen who delight in casting the fly will have an opportunity to enjoy a little fishing.

The State of Maine has prepared a most attractive exhibit, bringing a fine specimen of every game animal found in the Maine woods. Guides and woodsmen to the number of eighty or more will be in attendance to give information. There will be camps and log cabins, coon trees and squirrel cages, and a special exhibit of large fish.

The Adirondack Guides' Association will make a very elaborate exhibit, trying to outdo that of former years. This exhibit will consist of live game animals, game fish, log cabins, lean-tos and new features which the guides will introduce of life in the woods.

The Canadian exhibit, under the supervision of Mr. L. O. Armstrong, will be of great interest to sportsmen and naturalists. Among other attractions there will be a beaver dam with live beavers just as they were taken from the wilds of Canadian woods by the trappers. The Indians and guides will be present in large numbers and will bring many relics from their native woods which are rare and interesting.

J. A. H. DRESSEL, General Manager.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

43

John B. Sargent, of San Francisco, who has been in the Kootenay mining district, tells the Denver Tribune a remarkable story of the way a tenderfoot from Montreal discovered a gold mine in that far-away mining region. The young man, who was a clerk, was spending a few weeks with a friend engaged in mining, and put in his time fishing and hunting. The location of his friend's cabin was far up toward the headwaters of one of the tributaries of the Kootenay River, far from any other prospector, and in a section where the bears were not only numerous, but inquisitive and troublesome.

One day as the two friends returned from a hunting excursion they saw three bears investigating the surroundings of the cabin, occasionally stopping to roll about a camp kettle which had been thoughtlessly left outside.

Both men were armed with rifles, and as they succeeded in getting near the animals without being perceived were able to take deliberate aim. As they delivered their fire two of the bears fell, the third scampering off up the mountain. As they supposed both animals dead, they neglected to reload, and had approached to within a few feet of the prostrate bears when the largest suddenly sprang to his feet and, with a fierce roar, made directly for them.

The young man from the city had never cultivated a close acquaintance with the bear family, and did the first thing that occurred to him—dropped his weapon and sprinted for the nearest tree, about 100 yards away, and growing on the edge of a gulch 12 or 15 feet deep. The bear stopped a few seconds to sniff at the rifle, and then contemptuoutly tossing it aside continued the chase. The hunter reached the tree and had climbed to the lower limbs when his pursuer reached it, and without any hesitation commenced the ascent. This was something that the amateur huntsman had not calculated upon, and he at once proceeded to climb higher, in the hope that his antagonist might get tired and give up. The tree leaned somewhat over the ravine, making the climbing easy, but the fact favored the bear as well, and when near the upper branches the young fellow found to his dismay that the bear was entirely too close for comfort. At that moment, however, his friend, who had recovered from his fright, and reloaded, shot the animal through the head.

Now another danger manifested itself. The combined weight of the man and the bear had been too much for the slender hold of the roots of the tree upon the soil, and as it leaned further and further over the gulch it became evidence that unless he could scramble down the man would be thrown upon the rocks at the bottom. Clinging to one limb after another, he made desperate efforts to get down, but before he had accomplished more than half the distance the last root gave way and there seemed to be nothing between him and death or serious injury. His grip closed upon the limb to which he was clinging, and in another moment the top of the tree rested on the bottom of the ravine, while the thoroughly frightened man dropped upon the carcass of the dead bear, himself almost dead with fright.

But the strangest feature of the adventure was that in falling over the tree had removed the earth from a 4-foot vein of rich quartz, the existence of which had been entirely unsuspected. Now the young man from Montreal is a horny-handed miner, making a good income out of his claim, which he has named "The Bear."

44

Parties out deer hunting ran across an old ruin on the top of the highest mountain nine miles north of Phœnix, Ariz. It is of stone, and some of the walls are still standing 10 feet high. The old building or buildings covered an area of about two acres of land. The large stones around the place are covered with hieroglyphics.

Sea and River Fishing.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

ANGLING NOTES.

Upper Dam.

IT is thirteen years since I have been at Upper Dam, Me., and Parmachenee Lake. Then and since I have heard that the fishing was growing poor compared to what it had been. I find in my memorandum book that "Upon returning from Parmachenee Lake I reached Upper Dam at 6:30 one evening, and found seven boats fishing below the dam. During the day a gentleman had really caught a trout on a fly and the fish weighed 5 pounds. At the hotel Mr. —— had seven trout on the ice. They had been caught in some way during the past two weeks and confined in cars in the river until they had injured themselves and were killed to-day. The trout weighed from 5 to 10½ pounds each."

The reason for referring to this old memorandum to-night is a letter from a friend who has been at Upper Dam this season. He writes: "My best day was 2 pounds 8 ounces, 3 pounds 5 ounces, 3 pounds 7 ounces, 5 pounds 2 ounces, 6 pounds 1 ounce. I did not fish much, but when I did the trout insisted that they liked my style better than the other style. The trout in that pool could easily teach a country school. It is the Devil's own work sometimes to make them drink, but this day it was easy."

It can scarcely be said that the fishing at Upper Dam is entirely a thing of the past when a man can in one day kill five trout averaging in weight over 4 pounds each, all killed in fair fishing with the fly, for the gentleman who wrote me would scorn to kill a trout in any other manner.

Big Black Bass.

In the note about the big black bass from the Delaware River I was in doubt about the species, and Mr. D. I. Roberts has sent me the original photograph, from which the half-tone referred to was made. Mr. Roberts is of the opinion that the fish are small-mouth black bass and an examination of the photograph leads me to the same conclusion. One of the fish shows the smaller scales on the gill covers, indicative of the small-mouth, but the others are so hung that the light makes such a blur that the size of the scales is hidden. As to the rows of scales between the lateral line and the base of the dorsal, it is difficult to determine the number, as in the case of the scales on the gill covers, but apparently there are more than seven, the number of rows on the big-mouth, though it cannot be said that there are eleven, the number of the small-mouth. The appearance of the mouth of each fish, however, indicates more plainly that they are small-mouth black bass than does the half-tone, and altogether I am of the opinion that they are the small-mouth species from such evidence as may be gleaned. This upsets all preconceived ideas that the extremely large small-mouth black bass are found only in the still waters of ponds and lakes and never in the strong waters of rivers. Eight pounds nine ounces, the given weight of the largest bass shown in the photograph, is almost the weight of the black bass from Glen Lake that was the record bass in 1888, though larger have been taken since. My memorandum of the 1888 bass from Glen Lake reads as follows: "Aug. 18, 1888. To-day L. D. Boynton caught a large small-mouth black bass in Long Pond (Glen Lake was formerly Long Pond, and to this day I am more apt to give it the old name rather than the new). The fish was shown to me but I did not weigh it, as I understand from Boynton that it had just been weighed at one of the markets at 8 pounds 12 ounces. Later I went to Green's Bridge, where Boynton lives, and weighed, measured and opened the fish. The weight was 8 pounds 10 ounces. From nose to caudal fin 18 inches, to fork in caudal 24½ inches, to extreme end of caudal 25 inches. Girth 18¾ inches. I opened the fish and removed viscera and gills and then the fish weighed 7 pounds 8 ounces. The viscera and gills weighed 1 pound ½ ounce. The difference of 1½ ounces was caused by lost blood and bits of viscera not saved. The stomach contained a perch estimated to weigh 5 ounces. C. H. Hitchcock bought the fish and sent it to W. S. Banta, 33 Pine street, New York city."

A. N. CHENEY.

Planting of Quinnat Salmon Fry

In the Short Coast Streams of Marin County, California With Results of Observations Made Upon Their Movements, Food, Rate of Growth, Enemies, Etc.

BY N. B. SCHOFIELD, OF CALIFORNIA FISH COMMISSION.

THE planting of quinnat salmon fry in the short coast streams of Marin county was primarily an experiment. The quinnat salmon has never been known to spawn in these streams, probably due to their proximity to the Sacramento River, which is the popular spawning ground for the salmon of this region. (North of the Russian River, the quinnat spawns in the small streams as well as in the larger rivers of the coast.)

Paper Mill Creek and its tributaries are exceptionally rich in aquatic insect life, affording an abundance of food for the fry; and the absence of predaceous fishes, excepting the trout and blob, make them apparently better streams for the rearing of young salmon than the Sacramento. It was thought that if the fry could thrive in these streams and pass successfully into salt water, it would be of advantage to utilize coast hatcheries and plant in the smaller streams where the young salmon would not be subjected to their enemies like they are during the long journey from the upper Sacramento to the sea.

In December, 1896, 855,000 eyed quinnat salmon eggs were shipped from the Battle Creek hatchery to the Bear Valley hatchery in Marin county, California. Here they were hatched early in February, 1897, and after the yolk sacs were absorbed, which was about thirty days later, they were fed for a few days on curds of milk, and then, in the second week of March, were turned into Paper Mill Creek and its tributaries—Nicasio, Olema and Hatchery creeks. The fry were strong and healthy, and as the streams were near the hatchery, and the fish were in no case over two hours in transportation, they were turned into the streams in the best of condition.

The young salmon were watched day after day and systematic observations made upon their movements, habits, etc. The work was first begun by the United States Fish Commission, and carried on until the middle of May. After a break here of three weeks, the California State Commission carried it on to completion.

The thing to be feared in this experiment was that the streams would prove too short and that the young salmon would arrive at salt water before they were ready to conform to the kind of life they would have to lead there.

The observations carried on in connection with the fate of these young salmon fully demonstrate the success of the experiment and prove that the fry can be as safely planted in these streams as in the Sacramento. They grew more rapidly than the same fry in the Sacramento, had fewer enemies, and passed successfully into salt water and thrived there.

By far the most interesting part of the experiment was the knowledge gained as to the habits, enemies and growth of the fry after being turned loose. The streams being free from any young salmon but those planted from the hatchery, an excellent opportunity to observe the rate of growth was afforded. Any knowledge in this line is of great economic importance, as it enables us to more intelligently choose the right time and place to plant the fry, and proves that they do not require two or even three years to reach salt water.

Description of Streams.

Paper Mill Creek, the largest stream in Marin county, rises in the high land just north of Golden Gate, and runs northwest for about twenty-five miles, where it empties into Tomales Bay after passing through a three-mile stretch of tide water. The bay continues a very

narrow stretch of water in the same northwesterly direction for thirty miles before the open sea is reached. Paper Mill Creek is formed by the junction of the San Geronimo and Lagunitas, each of which is quite small, the water cold and swift, running over a rough rocky bottom, and everywhere overhung with trees and bushes. After uniting to form the main stream, the water frequently runs over quiet stretches of gravelly bottom, but for the most part the bed is rough and rocky and there are many cascades and deep rocky pools. The stream for nearly its entire length is well shaded with overhanging trees. The width of the stream in its normal state is about fifty feet, and its depth averages about two feet, but its size is increased enormously after each heavy rain. The water in the upper end of Paper Mill Creek during the six months after planting the fry had an average maximum temperature of 64 degrees, while at the lower end in tide water the average was 71 degrees.

Nicasio Creek rises to the east of Paper Mill Creek, and flows into it about five miles above tide water. Nicasio Creek is very much smaller than the Paper Mill, being only about twenty feet wide, with an average depth of six inches. Throughout its length it flows over flat, gravelly beds, with few trees or bushes to shade the water. The sun has full sweep at it and heats the water each day during the summer to a temperature of 75 or 80 degrees.

Olema and Hatchery creeks rise to the west of the main Paper Mill, and flow almost parallel to it, emptying into it near together about one mile below upper tidewater mark. Olema Creek is about the size of Nicasio, but carries more water during the dry season. The water, too, is much cooler, and the upper stream has more of the character of the upper Paper Mill. The banks are thickly grown with brush and trees. The last two miles of the creek runs through low swampy land, with its banks most of the way heavily lined with willows. The average maximum temperature for lower Olema was 63 degrees, and the upper stream averaged but one degree colder.

Hatchery Creek is very much smaller than Olema Creek, and is not nearly so long. At first fed by springs and running through cool, shady woods, the water is quite cold, but on gaining the open valley and running through two miles of marshy lowlands, with but little shade, it becomes, on reaching Paper Mill Creek, even warmer than the water in Olema Creek. The average maximum temperature of the upper Hatchery Creek was 54 degrees, while at the lower end the average was 64 degrees.

The species of fish found in these streams are limited to four. The most important is the steelhead (*Salmo gairdneri*), which runs in from salt water each winter and spawns in the streams, keeping them well stocked with young trout. About the most abundant fish is the "chub" (*Rutilus symmetricus*). The "stickleback" (*Gasterosteus cataphractus*) and "blob" (*Cottus gulosas*) are fairly abundant. Occasionally the dog salmon (*Oncorhynchus keta*) enters these streams and spawns.

Tomales Bay, nowhere deep, grows very shallow at its upper end, where it receives Paper Mill Creek. No bar ever forms across the mouth of the creek, as is the case in most of the small coast streams, but is always open for fish to run either in or out. Temperature of Tomales Bay at its upper end averaged 70 degrees.

The Planting of the Fry.

The young salmon at the time they were turned loose had an average length of 1.35 inches. On being liberated from the cans they scattered in all directions, the swift current at first carrying them some distance down stream. But they soon recovered, and turned their heads against the strong current, and found their way immediately to the quieter waters along the shallow edges, in eddies, quiet pools, or among the stones at the bottom of the stream. Some few would even move a few yards up stream, and demonstrated that they were able to hold their own even against a very swift current. On gaining quieter waters they rested themselves, moving only enough to keep from drifting down stream. As soon as they gained a position of this kind they immediately began feeding on any particles of food that floated within their sight; often snapping viciously at flies half as large as themselves. Each individual acts for himself. They do not run in schools, and no more than two or three are found together unless the nature of the stream compels it. In eddies and pools they are thrown together, but in a long, shallow, quiet stretch of water they scatter out—each one taking a position in the eddy of a small stone or other object, where they have to barely move a fin to keep their position, while the water above them is moving swiftly. Lying in such places they watch for insects or any particles of food that may be floating past. They feed principally upon objects floating on the surface, but often they are seen to strike at objects beneath. After striking at an object they almost invariably return to their old position. Frequently one would be seen to move a few yards down stream and take up another similar position. The young salmon undoubtedly move down stream in this manner; moving down individually and by dropping a few feet at a time.

After two weeks in the stream but very few of them were to be found in the shallow water; nearly all had moved into deeper holes. Here they would be nearer the center of the current, where there is more floating food and where they could also hide, for by this time they are very shy, and dart into the deeper water or under a rock at one's approach. The young steelheads which hatched out shortly after this time were not nearly so shy at the same age.

Four weeks after planting, practically all had moved into the deeper holes, and as long as they remained in the streams they occupied these places. In the deep waters of the lower Paper Mill, where the water was four and five feet deep, they would hang stationary in the center of the current a foot or two below the surface, darting now and then at objects on the surface.

Movement Down Stream.

As before stated, the only noticeable movement down stream was the occasional movement of individuals dropping from one resting place to another. During the first three weeks after planting, the water in the streams was high and muddy, and except in Hatchery Creek, good observations could not be made. It was only a matter of a couple of days until most of the salmon had dropped down out of the upper Hatchery Creek. If there was a similar movement of the young salmon in the other streams during the first few days I do not know; but when the first seining was done, a month after planting, the fry were found more abundant in tidewater than in the upper streams where they were liberated. There can be no doubt that there was a decided movement down stream during the first month, which probably began immediately after planting.

Forty-five days after planting, the fry were found in considerable numbers in brackish water. As this was the first time seining was done in brackish water, we do not know how much sooner they reached this point. We subsequently learned that the fishermen near Marshall, fifteen miles down the bay, caught the young salmon in considerable numbers as early as the last of April, or fifty days after they were liberated. At this time for about a week they caught fifteen or twenty at a haul in their 300-foot nets. After a week they caught

PLATE I.—SALMON FRY.

Description of Plates.—The three accompanying plates are to illustrate the rate of growth of quinnat salmon fry from the streams of Marin county, Cal.

In Plate I. are four outline figures of the fry at progressive ages. Fig. 1 reprsesents the young salmon with yolk sac just absorbed; Fig. 2, 25 days after absorption of yolk sac; Fig. 3, 46 days after absorption of yolk sac; Fig. 4, 62 days after absorption of yolk sac. Figs. 1, 2, 3 and 4 are from specimens 1.35, 1.7, 2.51 and 2.98 inches, respectively.

Plate II. represents a young quinnat salmon taken in brackish water, 107 days after absorption of yolk sac—showing loss of markings below lateral line and the faded out parr marks, caused by the brackish water. Drawn from an average specimen 3.2 inches long. This drawing should be compared with Plate III., which figures a young salmon from fresh water.

Plate III. represents a young quinnat salmon taken in fresh water 162 days after absorption of yolk sac. Drawn from an average specimen 3.55 inches long.

only two or three in a haul, and then, as the fish grew scarcer, they caught only two or three in a day's seining. After the middle of June, three months after planting, they caught no more.

It is unfortunate that we have to rely solely on the fishermen for information as to when the salmon reached salt water. Information obtained in this way cannot usually be relied upon, but the young salmon was a new fish in the bay and the fishermen could not help noticing it. The stories of the different fishermen agree so well that in this case it is safe to rely on them.

The first seining in the bay was on April 29, fifty days after planting, on which day we caught one of the young salmon. This was at a place about two miles from the mouth of Paper Mill Creek. The seining was done with a thirty-foot net, and although we seined almost daily in the bay after this and with a fifty-foot net, not another salmon was caught.

The young salmon were found in brackish water, near the mouth of Paper Mill Creek, up to May 11, two months from the time of planting. This date probably marks the end of the run. Those that remained continued to go out a few at a time, until by the sixth month but very few were left in the streams. After the sixth month no seining was done until the eleventh month, which was after the winter rains. After the most thorough seining at this time only three of the fry could be found, showing that practically all had run out before the end of the year.

By the middle of the second month, when the water had become clear enough to watch the young salmon from the bank, it was found that they retained their positions in the current for hours without moving down stream even for a few feet. In one instance an albino (one without color) kept one position for three days, after which it could not be found either above or below its old position. These facts all tend to show that there was a decided movement of the salmon down stream during the first month, and after that time they moved out much slower. It probably took the rains of the next winter to drive them all out.

We tried another experiment. By stretching a net across a narrow place near the mouth of Paper Mill Creek as the tide was coming in, it was demonstrated that the salmon play back and forth with the tide before passing into salt water, as they repeatedly ran into the net ahead of the tide when it was fixed in this way.

Movement Up Stream.

In all of the streams except Hatchery Creek the fry were planted where they could easily move up stream two or three miles if they so desired. The streams were carefully seined above the planting places to determine to what extent they moved up stream. In Nicasio Creek only a very few had moved up, and they had gone but a fourth of a mile above where they were liberated. We found a few in Olema Creek a fourth of a mile above where they were planted. In Paper Mill Creek I found that none had moved up stream. All of the side streams were seined to see if the fry had entered any of them, but it was found that they had entered only one—a very small stream fed by springs flowing into lower Hatchery Creek. The water in this small stream was much colder than the water in the creek and was grown full of water cress. Nearly a hundred of the fry had entered this and were found as far up as they could get. Some had even found their way through a perfect mat of grass and drifted rubbish. The current in this stream was very slow, and it entered the creek at such an angle that it was a sort of trap, and I have no doubt the fry got in there in trying to get down stream. Although some of the fry do work up stream for a short distance, they are the exception. Why they move down stream we do not know, and we will have to credit it to instinct. A young steelhead or other trout when frightened prefers to dart up stream rather than down, and if one wades down stream and attempts to drive them before him he will find that they will not drive, but will dart between his legs or around him in their frantic efforts to get up stream. Knowing this trait of the fish, in seining for them the net is always hauled down stream. With the salmon fry it is different—when frightened they will run even more readily down than up stream. By walking along a small stream they can be driven either up or down. In seining for them they are caught as readily by seining against the current as with it.

Growth.

The most important part of the work was finding the rate of growth of the young salmon while remaining in the stream. This was determined by capturing series of the fry at intervals and making careful measurements of their length.

The young salmon were put in the stream on or about March 10, thirty days after hatching, at which time their yolk sacs were absorbed. At this time their average length was 1.35 inches, and the rate of growth is figured from this time. Although the rate of growth could have been determined more accurately had larger series of fry been saved, it is accurate enough to demonstrate a remarkable growth and to enable us to make comparisons between the different streams and different parts of the same stream. It also gives us some idea what to expect in larger rivers.

The most rapid growth was during the first month, at the end of which time they had, in the lower stream, reached an average length of 2.28 inches; a gain for the month of .93 of an inch. A few individuals reached a length of 2.40 inches.

Through the second month the growth was not quite so great, and during the third and fourth months correspondingly less. At the end of the second month the salmon in the lower end of the creeks averaged 2.98 inches in length, and a few had reached a length of 3.1 inches.

During these first two months the fish in the lower streams averaged considerably larger than those above. At the end of the first month those above averaged 1.71 inches, against 2.28 inches for those below. At the end of the second month those above averaged 2.75 inches, against 2.98 below.

After two months there was no marked difference between the salmon in the lower streams and those above, except in Hatchery Creek, where those above remained very small.

At the end of four months the average length of the salmon was 3.35 inches. The rate of growth during the four months, taken from an average of all the salmon retained, was 0.52 of an inch per month. After four months this rate of growth fell off very considerably, and at the end of the fifth month they had reached an average length of only 3.46 inches. After the middle of the sixth month no more seining was done in the streams until the following February, or eleventh month, when one salmon was found in Olema Creek measuring 3.64 inches. On April 14, thirteen months after planting, another was found in Olema Creek 4.45 inches long. One other was found in Olema Creek, of which I have no measurements.

Nearly all the salmon had run out of the streams by the end of the fourth month, and those remaining after this time were evidently stunted individuals, as is shown by their very slow growth. An instance proving this is shown in the following: In March, 5,000 of the fry were put in Bear Valley Creek, which is dammed at its lowest end and fixed with a screen so that the fish cannot get out. Here, eleven months after planting, two salmon were caught, each measuring 5.5 inches. At the same place, fifteen months after planting, two specimens were caught, one 6 inches, the other 7.5 inches long. This remarkable growth in a stream where they were confined is another point that leads to the belief that the salmon which preferred to remain, after four months, in the streams where they were not confined were individuals stunted or the physical inferiors of those running out during the first four months.

The growth of the salmon was the same in Paper Mill, Nicasio and Olema creeks, but in Hatchery Creek the growth was not so rapid. The salmon in the lower end of the creek grew rapidly enough, but those above grew very slowly, gaining on an average the first three months only .15 of an inch per month. At the end of the fourth month they had all descended to the lower stream. The

reason of this slow growth in the upper stream was due to the scarcity of food. Although the temperature of the water there is much lower than it is below or in the other streams, we cannot, knowing what we do of their growth in other cold streams, attribute their slow growth to the temperature of the water.

Owing to this difference in growth in the same stream, the variation in the size of the individuals is great. Out of thirteen specimens taken from lower Hatchery Creek at the end of three and one-half months, the largest was 3.53, the smallest 2.26 inches, a difference of a little over 1.25 inches; or, expressed in the amount gained by each since planting, the largest 2.18 inches, the smallest 0.91 of an inch. The variation in Olema Creek, where no difference was found between the upper and lower stream, after the second month was nearly as great. From seventeen specimens taken at the mouth at the end of three months the largest was 3.42, the smallest 2.58 inches.

The important points learned in connection with the rate of growth of the young salmon were: First, that during the first four months their growth averaged 0.52 of an inch per month; Second, that the few salmon remaining in the stream after four months were stunted, and grew very slowly in comparison with those confined in Bear Valley Creek.

An important fact to be noted in connection with the salmon confined in Bear Valley Creek is that of the two salmon taken in February, 1898, both were males; one with the generative organs fully developed. It is not uncommon to find young 4 to 4½ inch male salmon remaining in the streams with the testes fully developed, but it was never before found in a salmon whose age was known. This individual found in Bear Valley Creek was 5.5 inches in length, and was just twelve months old. It should also be noted that it was no smaller than the other male salmon taken at the same time. Evidently the development of the sexual organs did not retard its growth.

Although these young male salmon are occasionally found with the generative organs prematurely developed, no females, to the best of my knowledge, have ever shown such development. This premature development peculiar to the males accounts for the undersized males, or "grilse," accompanying each run of salmon up the rivers, and it tends to prove that such "grilse" are not stunted individuals, but simply that they have matured at an earlier age and are younger than the salmon which they accompany.

The Age of the "Grilse."

The following is a mere speculation in regard to the age of the above mentioned "grilse": We have already seen that one out of the two males taken in Bear Valley Creek at the age of one year was sexually mature. In the headwaters of the Sacramento we have in November found among the young salmon remaining in the streams several sexually mature males, which at that time were under ten months of age. These few examples which have come to my notice represent a very small percentage of the number that must mature within ten months or a year in the large body of salmon that leave the stream immediately after hatching. Reaching maturity they would naturally follow the next run of salmon up the river. There are two runs of salmon up the Sacramento each year; the fall run starting up the river about the end of July and reaching the spawning beds at Battle Creek in October. The eggs spawned by this run hatch in January and February. Ten months after hatching, at which time the "grilse" would have matured, would be too late for them to catch the next fall run up the river, but they could catch the next spring run, which starts up the river in April, and reaches the spawning grounds in the McCloud River in June and July, the eggs hatching in October and November. The salmon hatching from this spring run get out of the river in time for the "grilse" to catch the fall run ten months later.

If this is true the "grilse" running in the spring are about sixteen months of age on reaching the spawning beds in June. Those arriving on the spawning beds in the fall are about twelve months of age. If this actually happens, the "grilse" of the spring run should average larger than those of the fall run. The age of these "grilse" can be determined by better and more extended observations, and such knowledge would be a long step toward determining the important question of how old the full-grown salmon are when they run.

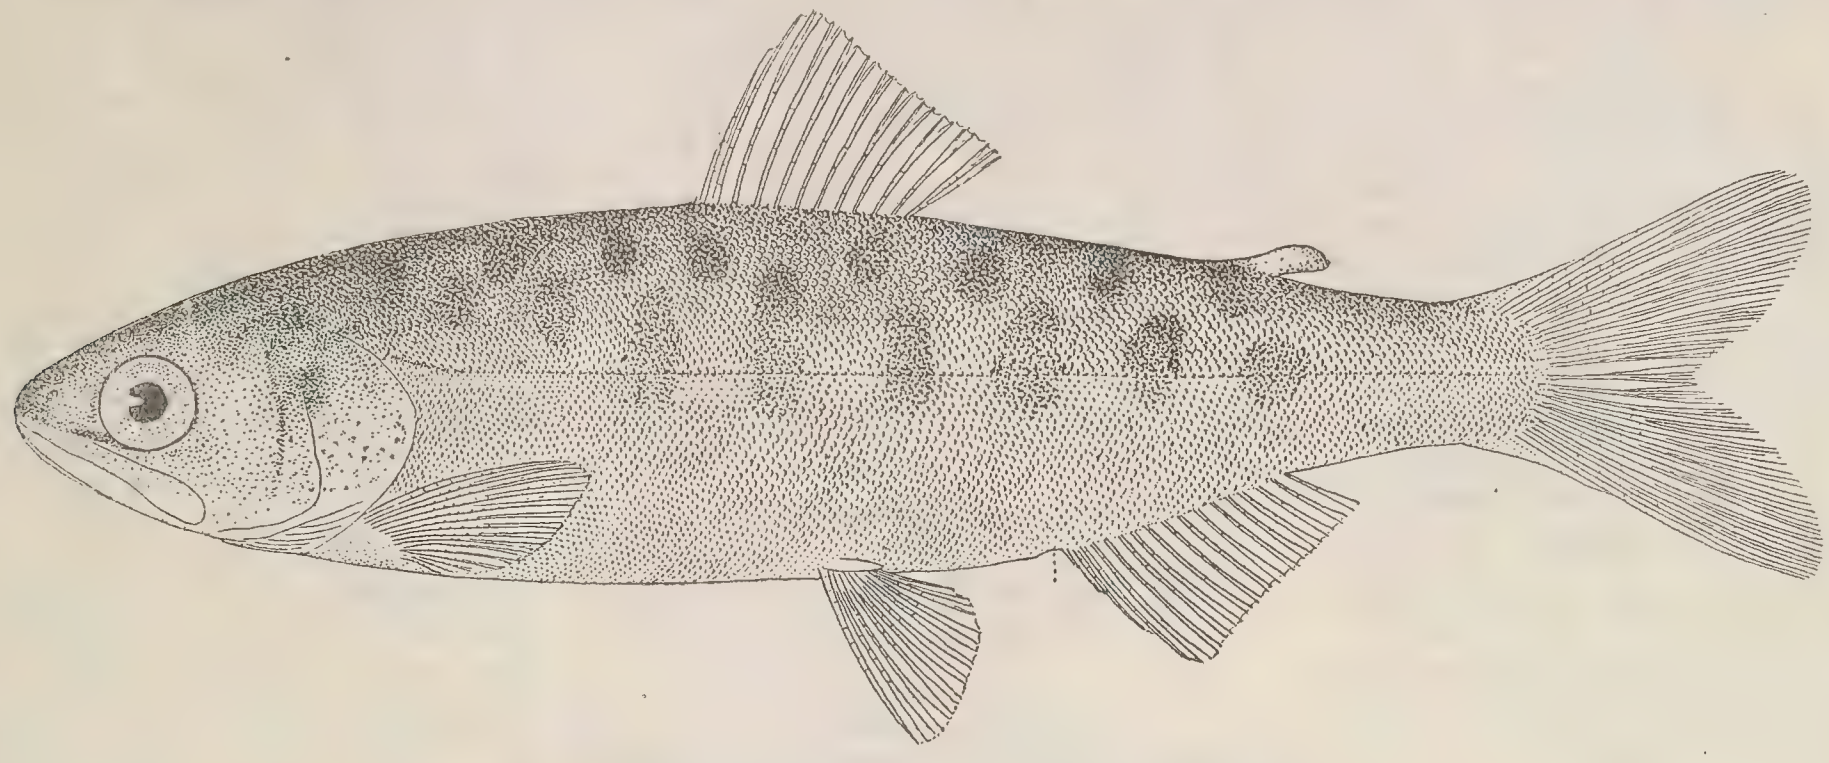

PLATE II.—SALMON FRY.

Food.

The young salmon, from the time they first begin to feed, eat almost anything they can get, but they show a preference for insects and insect larvæ, and they prefer to capture food that is floating on the surface of the water. An examination of the contents of the stomachs of the young salmon taken from Paper Mill Creek and its tributaries, from the time they were planted to the time they reached salt water, shows that their food was almost exclusively flying insects which had dropped upon the surface of the water.

These streams abound in caddice worms of three or four species, small periwinkles, the larvæ of stone-flies, may-flies, and other insects; but they were all neglected for the flies, bees, beetles, caterpillars, etc., that fall into the stream. No caddice worms or periwinkles were found in their stomachs, and but very few of the larvæ of aquatic insects. This same thing was observed in the younger trout; and although the larger trout eat large quantities of caddice worms, the insect larvæ in the water do not furnish the amount of food to these fish that is popularly supposed.

Although these salmon live almost exclusively on insects that drop upon the water, we have found in their stomachs pieces of leaves and buds, small feathers, shells of salmon eggs, and the helpless young of their own species. (See notes on planting of salmon fry before yolk sacs were absorbed, at Sisson, November, 1897.)

In the salmon taken in brackish water I found they had been eating small salt water crustaceans, and one three-inch salmon taken in salt water had eaten six of the young of the "silver smelt" (*Atherinops affinis*) and one small leaf-hopper of the kind that is found among the pebbles along the shore of the bay.

In almost every case the stomachs were filled to their utmost with food. Tomales Bay abounds in small crustaceans and the young of the "silver smelt," and the young salmon would have no trouble in finding an abundance of food on reaching salt water.

Scarcely any vegetable matter was found in their stomachs, and what little was found no doubt was taken by accident.

If these young salmon live almost exclusively on flying insects, the way to choose a good stream for planting would be to select one with plenty of trees, bushes and grass along its banks, for such vegeation is a harbor for insects.

Enemies.

The principal source of danger to young fish in a stream is from predaceous fishes, or even from older fish of their own kind. Of the four species of fish in these Marin county streams—chub (*Rutilus symmetricus*), stickleback (*Gasterosteus cataphractus*), blub (*Cottus gulosas*), and trout (*Salmo gairdneri*)—the last two only are predaceous.

After planting the young salmon, a number of these two species were caught daily and the contents of their stomachs carefully examined. Altogether only about twenty-five specimens of *Cottus gulosas*, of size large enough to prey upon the young salmon, were caught. Out of these twenty-five not one had eaten a fish of any kind. Thirty or forty specimens of *Salmo gairdneri* were examined daily for three weeks after planting, and in not one instance had a salmon been eaten. The only fish eaten by them was *Rutilus symmetricus*, and no more than ten of these were found in about seven hundred examined.

The other enemies to young fish observed were water snakes, kingfishers, herons, and divers. Although none of these were killed to find out what they were eating, it is safe to say that the loss of young salmon due to them was slight.

PLATE III.—SALMON FRY.

Planting of Quinnat Salmon Fry in Marin County Steams in 1898.

In February, 1898, 2,000,000 quinnat salmon fry were planted in Paper Mill Creek and its tributaries by the United States Fish Commission. On account of limited hatchery space and lack of funds, the fry were all planted before the yolk sacs were absorbed. The fry hatched at the same time as those liberated in these streams last year, but they were planted about three weeks earlier. The height of the water in the streams at the time of planting and during the next month was lower in 1898 than in 1897. Notwithstanding this, the salmon ran out earlier than the year before. In April there were not as many salmon left in the streams as in June of the year before. In June no salmon whatever could be found in Paper Mill Creek. Only a very few were found in Olema Creek, and they were not much more plentiful in Hatchery Creek—the same condition that existed two months later in 1897. The only reason I can give for this difference in time of running out is that they were planted at different ages. Apparently, planting before the yolk sacs are absorbed causes them to run out earlier. This brings up an important question: Does the holding

of the fry until after the yolk sacs are absorbed keep them from running out as soon as they would under natural conditions?

From a series of specimens taken in April and June, it was found that their average growth was 0.52 of an inch per month. It should be noticed that this rate of growth during the first four months is almost exactly the same as that found for the same period in 1897—differing only 0.05 of an inch.

New Hampshsre Hatcheries.

NEWFOUND LAKE, Bristol, N. H., Feb. 23.—A visit to the State hatchery on the shore of the lake is a matter of annual interest to our fishermen who are interested in fish propagation. This year a visit was made on the 16th inst., when we were shown around by Superintendent Randall Sleeper, who has been in the employ of the State a number of years.

The hatchery, as usual, was scrupulously clean, showing the care taken by Mr. Sleeper to have the embryo salmon and trout reared in germ proof trays and clear, running water. On the trays there were 500,000 brook trout eggs secured by Fish Commissioner F. L. Hughes from a fish hatchery at Plymouth, Mass.; 500,500 lake trout eggs and 16,000 landlocked salmon eggs, the two latter being taken from the adult fish at this lake last fall. All the eggs looked healthy and apparently quietly waiting for the few weeks to pass when the occupants would enter the strenuous life and perhaps in the dim future on this lake cause a fisherman to say, "What a beauty! Took me thirty minutes to land him. Will weigh 8 pounds, I'll bet." Or perhaps this, "I tell you he was a big one; broke water a half-dozen times. How he glistened in the sunlight. Would weigh 15 pounds, I'll bet. About as big a salmon as I ever saw, but he got away. That leader must have been defective that salesman sold me," etc. But here they are as we see them, a quiet, globular, gelatinous ball.

Another big lot of eggs for the waters of this State are under the care of Fish Commissioner Hughes at the Laconia hatchery; the trays there contain about 1,500,000.

As it is somewhat unusual to catch any game fish other than landlocked salmon or lake trout in this lake, it was a surprise to our fishermen here when a salmo fontinalis, Dolly Varden variety, was caught through the ice in 20 feet of water.

Our biennial Legislature being now in session, we are promised a general revision of the fishing laws, they having been brought to the attention of this Legislature by the Fish and Game Commissioners. S. H.

The South Branch Menaced.

ROMNEY, W. Va., Feb. 21.—*Editor Forest and Stream:* It is with a feeling of sorrow that I write of the destruction of bass fishing in the limpid waters of the famous South Branch of the Potomac. The erection of a large tannery at Moorefield by the Covers will, after this season, about eliminate the black bass from this once famous stream. The Covers have a tannery at Capon Bridge, on the Capon River, and for the past eight years have run all the filth and refuse from this tannery into the Capon River, and now are going to try to repeat this dastardly outrage on the rights of others by the same thing on the South Branch of the Potomac. Our State laws on the pollution of streams are adequate, but will not be enforced if the few that make a dollar or so out of this tannery, directly or indirectly, are able to keep them from being enforced. Lots of people living on this stream use this water for drinking purposes, and nearly all farmers living on the river below Moorefield get their ice in winter off of this stream. As this is the one stream left pure as God willed it, all sportsmen are interested in seeing it kept pure. There are annually about 1,000 people who enjoy the fine fishing on this stream in one season and several families between Romney and Moorefield make a living by keeping fishing parties. To say the least, these people should be given a small amount of protection, as these industries are only for the enrichment of the few who own and control them. With the tannery at Petersburg, a small hamlet eleven miles above Moorefield, starting up again this summer, and the new extract factory eleven miles above Romney running all their refuse stuff into the river, it will only be a question of a few months before this river will be so polluted as to be not fit for man or beast. It is to be hoped that this stream can be saved to the people who live on it and the sportsmen who enjoy the privilege of fishing in its beautiful water. Will write you soon again.

J. BURR BRADY.

Strenuous Fishing for Pickerel.

BOSTON, Feb. 23.—The Committee on Fisheries and Game in the Massachusetts Legislature has reported "Ought to pass" on the proposed bill of the Fish and Game Protective Association to prohibit the catching of trout of less than 6 inches in length.

Ice fishing has been done under great difficulties of late. The weather in Maine has been remarkably severe, and drifted roads have made it almost impossible to reach the ponds. A party of six left Lewiston, Me., for Rattlesnake Pond, in Raymond, a week ago Saturday. Expecting snowdrifts, each man armed himself with a snow shovel. They needed them. Their team of three horses was several times completely stranded in the drifts. The horses had to be walked much of the way, and shovel, shovel through tremendous drifts. At last they got to a logging road that the loggers were keeping open, but this did not take them clear to the pond. At 3 o'clock in the afternoon they were completely stuck in the drifts and could not get out. They had to hire the farmers to shovel them through to the pond. They caught fifteen pickerel, all told, none of them of less weight than 3 pounds. Two of the fish reached friends in Boston. The fishermen calculated that their fish cost them at least $4 apiece, besides the snow shoveling and the cold and exposure. They are satisfied, however, that Rattlesnake Pond is the home of big pickerel, and they want to go again when the weather is mild. SPECIAL.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

BENCH SHOWS.

March 6-9.—Pittsburg, Pa.—Duquesne Kennel Club's annual bench show. F. S. Stedman, Sec'y.

March 13-16.—Chicago.—Mascoutah Kennel Club's eleventh annual show. John L. Lincoln, Sec'y.

The New York Show.

THE twenty-fifth annual dog show of the Westminster Kennel Club, held in Madison Square Garden, Feb. 19 to 22, inclusive, surpassed all its predecessors probably in every respect. There was an enormous attendance each day. During the hours of greatest attendance the aisles were so thronged that a passage from one point to another was effected with the greatest difficulty, unless one drifted along with the slow movement of the crowd. The last day, Washington's Birthday, had every appearance of a record breaker in respect to the number of people who visited the show in one day. The number of visitors was estimated as high as 15,000. The dogs, as they were in their benches, attracted unceasing attention, particularly that of the visiting dog fancier, but the dog circus, which was the spectacular card afternoons and evenings, seemed of surpassing interest to the public at large. Choice places from which to witness the circus were secured long before it commenced. A somewhat new feature in this form of entertainment was the climbing of a perpendicular 30-foot ladder by a dog, which, after arriving on the small platform at the top, jumped to a canvas held by attendants below. He performed his feat bravely and eagerly, and the great jump of the little fellow apparently did not shock him in the least, for after landing he sprang out instantly and frisked merrily.

The benching and feeding were done most efficiently by Spratts Patent, a firm whose skill and vast equipment enable it to perform the task with promptness and ease. Everything was tidy and there was a freedom from unpleasant odors.

The veterinarian of the show this year, as he has been for years past, was alert to the exigencies of his office. He reported that only an insignificant number were rejected on account of disease, and that the show, barring a few cases of fits from extreme nervousness, was almost wholly free from disease.

The great amphitheater in point of decoration and attractiveness easily surpassed any prior attempts in connection with the dog show. The first gallery, from the rail to within five or six feet of the floor, was draped throughout its entire length in broad bands of pleasing color. At the Fourth avenue end of the Garden the Bulldog Club of America had its exhibit, most artistically arranged. The title of the club, in letters formed by electric lights, shone forth resplendently and could be seen distinctly from any place in the amphitheater. The benches, too, were neatly decorated. From the opposite end of the Garden the bulldog exhibit had the general effect of an immense canopy formed by draped American flags, on the back of which was the title in great letters of light, the general effect of form and color being most pleasing. The bulldogs were objects of unceasing interest.

The first galleries, amply floored on each side throughout their length, were set apart for the smaller breeds. The pet dog exhibits were marvels of dainty decoration, as well as good exhibits. Here and there valuable trophies of the different specialty clubs were on exhibition and were objects of great interest.

The special prize list was valuable and large. No doubt it surpassed in value any prize list ever given in America.

Mr. James Mortimer managed the show with his usual skill, and although he was not in the best of health, his executive abilities were equal to the great task.

Bloodhounds were judged by Mr. Arthur Trickett. Each class had a light entry; though taken as a whole the number exhibited was far above the average even for this great show. In puppies for both sexes, Queen Alexandra had no competition. Lougest's Luah, second, was thought by many to be better than Westbury Chimer, winner of first, and in limit dogs, three entries, Lord Warwick, the winner, was in many particulars inferior to Chimer. Novice bitches had four entries, of which Queen Alexandra, the puppy class winner, took first.

English fox hounds were few in numbers, but of good quality. They were all substantial, strong made specimens, and in fairly good condition as a whole..

In American fox hounds, Strive, famous as a winner, took second place to Bragdon, the latter being in far the best condition. There were two competitions in the bitch class, of which Carmen took first, Spot second. There were some specimens which had an extraordinary bloodhound resemblance.

Pointers were in strong numbers, and were of pleasing quality as a whole, though there were many inferior specimens present. The specials were numerous and valuable. The President's Challenge Breeder's Cup, presented by Mr. W. G. Brokaw, for the breeder of the best four pointers, two of which must be the property of the breeder, was won by Mr. Geo. S. Mott, with Mott's Banner Boy, Mott Regent, King William and May Hobson. Mr. Mott also won the prize for the best exhibit of four pointers entered and owned by one exhibitor, the Walton Challenge Cup for the best heavyweight bitch and some other specials which went with the decisions in the respective classes. Novice dogs had sixteen competitors, and of these Mott's Banner Boy, good in bone, well shaped body, neck of good length but throaty, took first. Fair Acre Cy, somewhat heavy in shoulders and rather coarse in head, took second. He has good legs, feet, quarters, back, and is fairly symmetrical as a whole. Third went to Westlake Dashaway, a bit straight in stifle, and throaty, but otherwise fairly good. In the limit class for dogs under 55 pounds, the winner of the first, Lord Jingo, is light in muzzle and bone. Fair Acre Priam is a well-made bitch of medium size. In limit dogs, 55 pounds and over, Baby Kent, possesisng a well ribbed and shaped body, showed coarseness of head and throatiness. In open dogs under 55 pounds, Champion Heather Malt was second to Mott's Banner Boy. The former is a soundly made dog, though somewhat straight in stifle. In open dogs, 55 pounds and over, King William, short in head and a bit heavy in shoulders, was second to Baby Kent. Novice bitches had fourteen entries, and of these May Hobsom won first over Fair Acre Jady, second, and Westlake Surprise, third. May is too wide in loin for the best symmetry, and while her head is of good shape it is rather light. Westlake Surprise shows some throatiness. She has a good body, legs and feet. Lass o' Yorka, the winner of first in limit bitches, is light in muzzle, is a good all-round bitch, though light in muzzle. In limit bitches, 50 pounds and over, May Hobson was first, Westlake Ornament second and Trixie II. third, the latter plain in head and flat in ribs. In open bitches, 50 pounds and over, May Hobson won first, with Champion Kent's Kate second the latter a very round bitch taken as a whole, and Belle Westlake third, the latter heavy in shoulders, good bone, body, legs, neck and general symmetry. The field trial class had no entries.

English setters were present in good numbers. They were quite mixed as to quality, there being a number of decidedly poor specimens, while also there was a number of ordinary ones. The special prize for the four best owned by one exhibitor was won by Mr. Francis G. Taylor. Novice dogs had twenty-three competitors. Of these Oakley Hill took first honors. He is light in muzzle and ordinary in head, and cannot be classed as a superior dog in respect to physical form. Tony's Jack was not in the best of condition, his coat being a bit rough, but he is a well-made dog and much better in head than the winner. Julien Lucifer, third, is flat in ribs, has a good head and a pleasing general appearance. In limit dogs, the new importation of the Vancroft Kennels made his debut in American competition, and easily defeated his opponents, Oakley Hill being second, with Tony's Jack third. In open dogs, as in the winners' class, the real contest, as it appealed to the fanciers, took place between Barton Tory and Knight Errant. Each dog had his admirers, who were strong in the belief that their favorite was of the true type and the better conformation. The judge studied them carefully and gave the award to Knight Errant. They are quite distinct in type, and both are fine dogs. Barton Tory is more delicately built, and his head is the cleaner cut, though Knight Errant has a head of exceptionally good type. He has also a more robust physique and is much the stronger dog in every respect. While there was a great diversity of opinion concerning the merits of the two dogs, to us it seemed that Knight Errant was the better, with a good margin to spare, conceding at the same time that Barton Tory is a dog of rare excellence. In novice bitches, Field Gladstone II., plain in head, took first honors, while Queen's Place Pride, recently imported, took second. The latter was painfully thin in flesh, but nevertheless showed excellent quality; a clean cut head of great beauty, long, lean neck, sound legs and feet, good stern and carriage. She, however, was very light in body, owing to scantiness of flesh, so much so that it is impossible intelligently to conjecture whether several pounds more of flesh would shape her up properly or not. Queen Bane, third, is throaty and light in muzzle. Elloree was first in open bitches, while second and third places were again taken by Queen's Place Pride and Queen Bane. In limit bitches, Lady Jane Gray, a well-made bitch of medium size, light in muzzle, took first. In the field trial class, Oakley Hill took first, Sport's Gath second and Tony Bee third.

Irish setters did not average more than commonplace as a whole. In novice dogs, another recent importation of the Vancroft Kennels, Prince Victor, took first in a class of ten. He is of medium size, good color, stands on good legs and feet, but is plain in head. Pat, second, is a fairly good all-round dog, while John L., third, is light in muzzle, heavy in skull, good in color, a bit stilty and fair in body. Prince Victor also took first in the limit class and second in open dogs, Ben Lau, a well-made, substantialy built dog, shown in good condition, winning first in the latter class. Novice bitches was won by Trilby Girl, a symmetrical bitch of good quality. Second was won by Princess Lonia, narrow in muzzle, heavy in skull and heavy in flesh. Third went to Belle of Newark, poor in head and lacking in general symmetry. In limit bitches Rockwood Queen, rather plain in head, but of fairly good symmetry, was first over Princess Lonia and Signal Bess, the latter light in body and plain in head. Open bitches had five contestants, of which Red Bess II., poor in head, won first, Rockwood Queen second and Signal Bess third.

Gordon setters were not remarkable for numbers or quality. The different classes were made up largely of the same dogs. Duke of Edgeworth was first in winners', limit and open dogs, while Count Noble's Pride was first in novice and second in limit and open classes for dogs. Duke was not in the best of condition, while Count Noble's Pride was coarse in build and smudgy in tan markings. J. H. W., third in limit, is coarse in head, throaty, and faulty in shoulders. In the different bitch classes, Heather Twinkle won first four in all. She is light built. The others were either faulty in form or out of condition, or both.

Griffons, workmanlike looking dogs, excited a great deal of interest, particularly on the part of the admirers of field dogs. They were symmetrical, strongly built fellows, four in all, the first one seeming to retain his health and vigor notwithstanding the name he bore, which was no less than Blitz Vom Kaiserlautern.

Beagles were excellent in numbers and quality. Many of them were proved workers, the bench show admirers and exhibitors of this merry dog being also very largely practical men afield.

The awards in the sporting classes follow:

BLOODHOUNDS—Puppies.—Dogs and bitches: 1st, Dr. C. A. Lougest's Queen Alexandria. Novice.—Dogs: 1st, Westbury Kennels' Westbury Chimer; 2d, Dr. C. A. Lougest's Lougest's Luah. Bitches: 1st, Dr. C. A Lougest's Queen Alexandria; 2d, Westbury Kennels' Westbury Careless; 3d, Westbury Charity; res., Westbury Cassandra. Limit.—Dogs: 1st, Dr. C. A. Lougest's Lord Warwick; 2d, Westbury Kennels' Westbury Chimer; 3d, Dr. C. A. Lougest's Lougest's Luah. Bitches: 1st, Dr. C. A. Lougest's Lady Rowena; 2d, G. P. Finnegan's Faustina; 3d, Westbury Kennels' Westbury Cassandra. Open.—Dogs: 1st, Westbury Kennels' Westbury Chimer; 2d, Dr. C. A. Lougest's Lougest's Luah. Bitches: 1st, Dr. C. A. Lougest's Lady Rowena; 2d, Dr. C. A. Lougest's Worker; 3d, G. P. Finnegan's Faustina; res., R. D. Winthrop's Chantress. Winners.—Dogs: 1st, Lord Warwick; 2d, Westbury Chimer. Bitches: 1st, Lady Rowena; 2d, Worker.

RUSSIAN WOLFHOUNDS—Puppies.—Dogs and bitches: 1st, A. A. Anderson's Duke; 2d, Mrs. N. Bennington's Countess Vera; 3d, Mrs. N. Bennington's The Czar; res., Mrs. Bennington's Princess Olga. Novice.—Dogs and bitches: 1st, W. E. Schneeloch's Nicholas; 2d, W. E. Schneeloch's Kidais; 3d, Mrs. L. T. Sheffield's Czar; res., T. W. Turner's Queen Regent. Limit.—Dogs and bitches: 1st, T. W. Turner's Little Zweika; 2d, C. Moore's Fabian; 3d, C. Moore's Louis; res., Mrs. T. G. Summerlin's Argoss II. Open.—Dogs: 1st, T. W. Turner's champion Marksman; 2d, John L. Kuser's Fernbrook Ivan; 3d, R. Adrian, Jr.'s Kuser; res., Mrs. J. P. Hutchinson's Nicholas of Cloverdale. Bitches: 1st, T. W. Turner's champion Lady Dietz; 2d, Wm. L. Andrus' Alma II.; 3d, T. W. Turner's Little Zweika; res., Mrs. C. Mercer's Milady.

DEERHOUNDS—Novice.—Dogs and bitches: 1st, Mrs. C. H. Livingston's Gelert; 2d, A. L. Page's Warwick; 3d, M. E. Bster's Freak; res., Mrs. L. Wharton's Drexel Bories. Limit.—Dogs and bitches: 1st, Miss C. H. Livingston's Gelert; 2d, A. L. Page's Warwick; 3d, Miss M. E. Boster's Freak; res., Mrs. P. Collier's Barcaldine. Open.—Dogs: 1st, Gelert: 2d, Warwick; 3d, Freak; res., Barcaldine. Bitches, 1st, A. L. Page's Norma.

GREYHOUNDS—Novice.—Dogs and bitches: 1st, Newton Abbot Kennels' Leeds Elect; 2d, B. F. Lewis, Jr.'s, Lansdowne Fashion; 3d, P. Wauckermann's S. Carnot; res., Long Spring Kennels' Lancaster Square. Limit.—Dogs: 1st, Newton Abbot Kennels' Whirlwind; 2d, Newton Abbot Kennels' Leeds Elect; 3d, F. H. Down's King William; res., I. F. Denton's Brannock II. Bitches: 1st, Newton Abbot Kennels' Leeds Music; 2d, T. J. O'Keefe's Lady Hortense; 3d, B. F. Lewis, Jr.'s, Lansdowne Fashion; res, A. Chasseaud's Sister May of Maybrook. Open.—Dogs: 1st, Whirlwind; 2d, Elect; 3d, Brannock II. Bitches: 1st, Leeds Music; 2d, I. F. Denton's Betsy; 3d, D. C. Sands, Jr.'s, Nellie J. Winners.—Dogs and bitches: 1st, Leeds Music; res., Whirlwind.

FOXHOUNDS, ENGLISH—OPEN.—Dogs: 1st, Middlesex Hunt's Sportsman; 2d, W. D. Williams' Pattern; 3d, Middlesex Hunt's Bowman. Bitches: 1st, Middlesex Hunt's Rarity; 2d, Middlesex Hunt's Reckless; 3d, W. D. Williams' Nora.

FOXHOUNDS, AMERICAN—Open.—Dogs: 1st, E. B. Chase's Bragdon; 2d, Mrs. W. A. Bragdon's Strive; 3d, G. P. Finnegan's Speed. Bitches: 1st, E. B. Chase's Carmen; 2d, G. P. Finnegan's Spot.

POINTERS—Puppies.—Dogs and bitches: 1st, C. P. Wilcox and R. A. Fairbairn's Fair Acre Priam; 2d, C. P. Wilcox and R. A. Fairbairn's Fair Acre Bonnie; 3d, A. L. Causse's Spot F.; res., Westlake Pointer Kennels' Westlake Ideal. Novice.—Dogs: 1st, Geo. S. Mott's Banner Boy; 2d, C. P. Wilcox and R. A. Fairbairn's Fair Acre Cy; 3d, Westlake Pointer Kennels' Westlake Dashaway; res., Woodbury Kennels' Point II. Bitches: 1st, G. S. Mott's May Hobson; 2d, C. P. Wilcox and R. A. Fairbairn's Fair Acre Jady; 3d, Westlake Pointer Kennels' Westlake Surprise; res., O. D. Thees' Renie of Kent. Limit.—Dogs (under 55lbs.): H. D. Ogden's Lord Jingo; 2d, Wilcox & Fairbairn's Fair Arce Priam; 3d, H. D. Ogden's Lansdowne Malt. Bitches (under 50lbs.): 1st, Wilcox & Fairbairn's Lass o' Yoka; 2d, Westlake Pointer Kennels' Westlake Surprise; 3d, A. Fitch's Prince's Lad's Lassie; res., G. S. Mott's Mott's Fashion. Dogs (55lbs. and over): 1st, J. S. Howe's Baby Kent; 2d, Wilcox & Fairbairn's Fair Acre Cy; 3d, W. Ferguson, Jr.'s, Westfield Lad; res., F. L. Lenoir's Bangaway III. Bitches (50lbs. and over): 1st, G. S. Mott's May Hobson; 2d, Westlake Pointer Kennels' Westlake Ornament; 3d, H. A. Colby's Trixy II.; res., G. S. Mott's Princess Alice. Open.—Dogs (under 55lbs.): 1st, G. S. Mott's Mott's Banner Boy; 2d, Vancroft Kennels' champion Heather Malt; 3d, H. L. Ogden's Lansdowne Malt. Bitches: 1st, Westlake Pointer Kennels' champion Westlake Startle; 2d, B. L. Toplitz's Fairview Mealy; 3d, Vancroft Kennels' Stylish Nellie; res., W. Ferguson, Jr.'s, Lady Lilley. Dogs (55lbs. and over): 1st, J. S. Howe's Baby Kent; 2d, W. Ferguson, Jr.'s, King William; 3d, R. Crompton's Mott Regent; res., C. E. Burtis' Roscoe. Bitches (50lbs. and over): 1st, G. S. Mott's May Hobson; 2d, F. J. Lenoir's champion Kent's Kate; 3d, Westlake Pointer Kennels' Bell Westlake; res., B. F. Lewis' Lady Belle. Winners.—Dogs: 1st, Mott's Banner Boy; res., Baby Kent. Bitches: 1st, May Hobson; 2d, Lass o' Yoka.

ENGLISH SETTERS—Puppies.—Dogs: 1st, H. A. Belcher's Colonel R., Jr.; 2d, Bloomfield Kennels' Greystock; 3d, A. Albright, Jr.'s, Dick of Eaton; res, H. Pape's Marlow. Bitches; 1st, J. Cole's Lady Cole; 2d, Bloomfield Kennels' Duchess D.; 3d, J. Lewis' Mayflower; res., H. Pape, Jr.'s, Clorine. Novice.—Dogs: 1st, C. F. Hartmetz's Oakley Hill; 2d, L. S. Hudson's Tony's Jack; 3d, H. J. Smith's Julien Lucifer; res., F. G. Taylor's Loyalty. Bitches: 1st, S. E. Thurton's Field Gladstone II.; 2d, C. G. Carter's Queen's Place Pride; 3d, F. E. Conlon's Jersey Queen; res., F. G. Taylor's Radiant. Limit.—Dogs: 1st, Vancroft Kennels' Barton Tory; 2d, C. F. Hartmetz's Oakley Hill; 3d, L. S. Hudson's Tony's Jack; res., H. J. Smith's Julien Lucifer. Bitches: 1st, F. G. Taylor's Lady Jane Gray; 2d, C. G. Carter's Queen place Pride; 3d, H. D. Grover's Queen Bane; res., J. Lewis' Mallwyd Queen. Open.—Dogs: 1st, F. G. Taylor's Knight Errant; 2d, Vancroft Kennels' Barton Tory; 3d, S. W. Carey, Jr.'s, champion Gilhooly; res., L. S. Hudson's Tony Jack. Bitches: 1st, R. W. Cunningham's Elloree; 2d, C. G. Carter's Queen's Place Pride; 3d, H. D. Grover's Queen Bane. Winners.—Dogs: 1st, Knight Errant; res., Barton Tory. Bitches: 1st, Elloree; res., Lady Jane Gray. Field Trial.—Dogs and bitches that have been placed at any public field trial in the United States or Canada: 1st C. F. Hartmetz's Oakley Hill; 2d, G. G. Williamson's Sport's Gath; 3d, J. G. Armstrong's Tony Bee.

IRISH SETTERS—Novice.—Dogs: 1st, Vancroft Kennels' Prince Victor; 2d, P. F. O'Neill's Pat; 3d, H. Hawkes, Sr.'s, John L.; res., M. Karatsony's Glenwood Ned. Bitches: 1st, Woodbury Kennels' Trilby Girl; 2d, Z. T. Bartleson's Princess Sonia; 3d, E. Harder's Belle of Newark; res., Vancroft Kennels' Heather Pet. Limit.—Dogs: 1st, Vancroft Kennels' Prince Victor; 2d, B. B. Lathbury's Rockwood, Jr.; 3d, J. Douglas' Toronto Lord Roberts. Bitches: 1st, Woodbury Kennels' Rockwood Queen; 2d, Z. T. Bartleson's Princess Sonia; 3d, M. C. Byer's Signal Bess.; res, F. P. Kernan's Belle of Nelson. Open.—Dogs: 1st, C. A. Gale's Ben Lau; 2d, Vancroft Kennels' Prince Victor; 3d, Woodbury Kennels' Rockwood II.; res., J. Douglas' Toronto Lord Roberts. Bitches, 1st, C. D. Snodgrass' Red Bess II.; 2d, Woodbury Kennels' Rockwood Queen; 3d, M. C. Byers' Signal Bess; res., Vancroft Kennels' Heather Pet. Winners.—Dogs: 1st, Bess; Lau; 2d, Prince Victor. Bitches: 1st, Red Bess II.; res., Trilby Girl.

GORDON SETTERS—Novice.—Dogs: 1st, C. R. Taylor's Count Noble's Pride; 2d, S. Le Roy Ackerly's Trap; 3d, W. C. Kugler's Doc Clinton. Bitches: 1st, Vancroft Kennels' Heather Twinkle. Limit.—Dogs: 1st, Vancroft Kennels' Duke of Edgeworth; 2d, C. R. Taylor's Count Noble's Pride; 3d, F. P. Smith's J. H. W.; res., W. G. Kugler's Doc Clinton. Bitches: 1st, Vancroft Kennels' Heather Twinkle; 2d, W. G. Kugler's Winona Clinton; 3d, C. R. Taylor's Janet Noble; res., L. P. Higgins' Princess View. Open.—Dogs: 1st, Vancroft Kennels' Duke of Edgeworth; 2d, C. R. Taylor's Count Noble's Pride; 3d, F. P. Smith's J. H. W. Bitches: 1st, Vancroft Kennels' Heather Twinkle; 2d, C. R. Taylor's champion Dell Noble; 3d, C. R. Taylor's Lady Maud; res., L. P. Higgins' Princess View. Winners.—Dogs: 1st, Duke of Edgeworth; res., Count Noble's Pride. Bitches: 1st, Heather Twinkle; res., champion Dell Noble.

GRIFFONS.—Dogs and bitches: 1st, R. Schneider's Blitz Vom Kaiserslautern; 2d, Cæsar II.; 3d, Lady Belle; res., Flora.

IRISH WATER SPANIELS—Open.—Dogs and bitches: 1st, T. A. Carson's Dan H'Carthy.

CLUMBER SPANIELS—Open.—Dogs and bitches: 1st, A. C. James' Medway; 2d, H. G. Charlesworth's Royal Swell; 3d, Newton Abbot Kennels' Alveley Loafer; res., Miss N. E. Douglas' Topaz.

FIELD SPANIELS—Puppies.—Dogs: 1st, M. A. Viti's Wealdstone Field Marshal; 2d, C. T. Mead's Woolton Baron; 3d, C. T. Mead's Woolton Bishop. Bitches: 1st, M. A. Viti's Wealdstone Morda. Novice.—Dogs: 1st, M. A. Viti's Wealdstone Field Marshal; 2d, C. T. Mead's Woolton Baron; 3d, R. P. Keasbey's Saybrook Judge; res., R. W. Barrow's Heather. Bitches: 1st, Swiss Mountain Kennels' Princess Correzina; 2d, M. A. Viti's Wealdstone Morda; 3d,, C. T. Mead's Woolton Lady Dagmar; res., Mrs. D. W. Evans' Snowball. Limit.—Dogs: 1st, M. A. Viti's Wealdstone Field Marshal; 2d, C. T. Mead's Woolston Baron; 3d, D. W. Evans' Sunninghill Bridford; res., R. P. Keasbey's Saybrook Judge. Bitches: 1st, Swiss Mountain Kennels' Princess Correzina; 2d, Mrs. D. W. Evans' Roker Queen; 3d, C. T. Mead's Woolton Lady Dagmar; res., Swiss Mountain Kennels' Wansbeck Chloe. Open.—Dogs: (black): 1st, Swiss Mountain Kennels' champion Endcliffe Bishop; 2d, C. T. Mead's Woolton Baron; 3d, Mrs. R. W. Barrow's Heather. Bitches (black): 1st, M. A. Viti's champion Bridford Morda; 2d, Swiss Mountain Kennels' Princess Correzina; 3d, Swiss Mountain Kennels' champion Endcliffe Myrtle; res., Mrs. D. W. Evans' Roker Queen. Dogs (any other color): 1st, R. W. Keasbey's Saybrook Popcorn; 2d, R. W. Keasbey's Saybrook Judge; 3d, C. T. Mead's Woolton Bishop; res., Mrs. D. W. Evans' Woolton Wonder. Bitches (any other color): 1st, C. T. Mead's Woolton Dagmar; 2d, Mrs. D. W. Evans' imported Waterlily; 3d, R. P. Keasbey's Saybrook Zaza; res., Swiss Mountain Kennels' Heather Meg. Winners.—Dogs: 1st, champion Endcliffe Bishop; res., Wealdstone Field Marshal. Bitches: 1st, champion Bridford Morda; res., Princess Correzina.

COCKER SPANIELS.—Puppies.—Dogs: 1st, C. T. Mead's Perfection; 2d, G. Dunn's Paragon; 3d, E. W. Fiske's Kantaka; res., Lavelock Kennels' Rosslyn. Bitches: 1st, G. Douglas' Flora Temple; 2d, W. T. Payne's First Choice; 3d, Brookside Kennels' Miss Nobody; res., H. G. Charlesworth. Novice.—Dogs (black): 1st, G. Douglas' Prince Albert; 2d, G. Bell's Mephisto; 3d, G. Dunn's Paragon. Bitches: 1st, Brookside Kennels' Windsome II.; 2d, F. C. Stengelin's Flossy R.; 3d, G. Dunn's Rara Avis; res., J. Kennedy's Queen. Dogs (any other color): 1st, E. W. Fiske's Chief II.; 2d, E. W. Fiske's Kantata; 3d, W. T. Payne's Angora. Bitches: 1st, G. Dunn's Waverly Sweetheart; 2d, Mrs. M. Taylor's Orange Lily; 3d, G. Dunn's Lady Mac; res., M. Taylor's Lady Mac. Limit.—Dogs (black): 1st, E. W. Fiske's Colonist; 2d, G. Belle's Standard; 3d, G. Dunn's Paragon; res., Swiss Mountain Kennels' Freedom. Bitches: 1st, Mepal Kennels' Mepal's Enid; 2d, H. G. Charlesworth's Nita; 3d, G. Dunn's Rara Avis. Dogs (any solid color other than black): 1st, C. T. Mead's Perfection; 2d, Brookside Kennels' Reality; 3d, E. W. Fiske's Kantaka; res., G. Douglas' Searchlight. Bitches: 1st, C. Y. Ford's Otterburn Evangeline; 2d, W. T. Payne's Lilith; 3d, Montrose Kennels' Rosamond; res., Brookside Kennels' Hampton Red Girl. Dogs (particolored): 1st, W. T. Payne's Midkiff Chimes; 2d, E. W. Fiske's Chief II.; 3d, Mepal Kennels' Braeside Bob; res., G. Douglas' Mottle Duke. Bitches: 1st, G. Dunn's Waverly Sweetheart; 2d, O. B. Hark's Blue Mountain Belle; 3d, Brookside Kennels' Elsie Venner; res., W. T. Payne's Magenta. Open.—Dogs (black): 1st, Swiss Mountain Kennels' champion Ono; 2d, E. W. Fiske's Premier; 3d, E. W. Fiske's Colonist. Bitches: 1st, A. Schierloh's Bess; 2d, A. B. Koenig's Koenig's Erie; 3d, G. Bell's All Cocker. Dogs (any other color): 1st, C. T. Mead's Perfection; 2d, E. W. Fiske's Mohican; 3d, Mepal Kennels' Braeside Bob; res., E. W. Fiske's Kantata. Bitches: 1st, W. T. Payne's champion Blue Belle II.; 2d, C. Y. Ford's Otterburn Evangeline; 3d, Brookside Kennels' Hampton Red Girl; res., E. W. Fiske's Missinneva. Winners.—Dogs (black): 1st, champion Ono; res., Premier. Dogs (any other color): 1st, Perfection; res., Midkiff Chimes. Bitches (black): 1st, Mepal's Enid; res., Lester Rose. Bitches (any other color): 1st, champion Blue Bell II.; res., Otterburn Evangeline.

BASSET HOUNDS—Open.—Dogs and bitches: 1st, Newton Abbot Kennels' Caprice; 2d, Newton Abbot Kennels' Longfellow.

BEAGLES—Puppies.—Dogs: 1st, Rock Ridge Kennels' Rock Ridge Pinewood; 2d, Rock Ridge Kennels' Rock Ridge Songster; 3d, Wharton Beagle's Wharton Pleader; res., Round Plain Beagle's Gambler. Bitches: 1st, S. E. Thurton's Gypsy Queen; 2d, Rock Ridge Kennels' Bonny Lass; 3d, Windholme Kennels' Windolme's Lorna; res., S. E. Thurton's Blanch T. Novice.—Dogs: 1st, Somerset Beagle's Harker II.; 2d, Rock Ridge Kennels' Rock Ridge Songster; 3d, W. Saxby's Dorsey; 1res., H. L. Kreuder's Elroy. Bitches: 1st, Windholme Kennels' Windholme Duchess; 2d, Rock Ridge Kennels' Rock Ridge Roxy; 3d, W. Saxby's Deuce; res., Windholme Kennels' Windholme Cycle. Limit.—Dogs (not exceeding 13in.): 1st, Somerset Beagle's Hector; 2d, H. Aling's George F.; 3d, Mrs. O. Giles' Caution of Radnage; res., Windholme Kennels' Windholme's War Cry. Bitches: 1st, Miss Cornelia Peabody's Beautiful; 2d, Windholme Kennels' Windholme's Daffodil; 3d, Windholme Kennels' Windholme's Cycle; res., Mrs. O. Giles' Mardon Bright Eyes. Dogs (over 13 and not exceeding 15 inches): 1st, Round Plain Beagle's Reed's Dan D.; 2d, Windholme Kennels' Windholme's Dalesman; 3d, Rock Ridge Kennels' Rock Ridge Songster; res., Windholme Kennels' Barber's Boy. Bitches: 1st, Windholme Kennels' Windholme's Bangle; 2d, Rock Ridge Kennels' Rock Ridge Rose; 3d, Windholme Kennels' Windholme Duchess; res., Somerset Kennels' Flossie. Open.—Dogs: 1st, Round Plain Beagle's Reed's Dan D.; 2d, Windholme Kennels' Windholme's Literol; 3d, Windholme Kennels' Windholme's Dalesman; res., Round Plain Beagle's champion Primate. Bitches: 1st, Windholme Kennels' Windholme's Bangle; 2d, Windholme Kennels' Fate; 3d, Rock Ridge Kennels' Lucy L.; res., Rock Ridge Kennels' Rock Ridge Rose. Dogs and bitches (not exceeding 12in.): 1st, G. F. Reed's Reed's Nell; 2d, Rock Ridge Kennels' Whiffett; 3d, Rock Ridge Kennels' Darky; res., S. E. Thurton's Fan R. Winners.—Dogs: 1st, Reed's Dan D.; res., Windholme's Literol. Bitches: 1st, Windholme's Bangle; res., Gypsy Queen T. Field Trial.—Dogs and bitches: 1st, Rock Ridge Kennels' Lucy L.; 2d, Rock Ridge Kennels' Hector Wood; 3d, the Wharton Beagle's Leader III.; res., Somerset Kennels' Hector.

DACHSHUNDE—Puppies.—Dogs: 1st, C. Motschenbacher's Reinecke; 2d, C. Motschenbacher's Young Phenomenon, Jr. Bitches: 1st, H. O. Waters' Melba; 2d, C. Motschenbacher's Peperl II.; 3d, H. S. Hyde's Belle; res., H. Sammis' Gretchen. Novice.—Dogs: 1st, C. Motschenbacher's Alexis; 2d, C. O. Polken's Paprika; 3d, H. Bromley's Windycroft Joe. Bitches: 1st, L. Stappenback's Dilly; 2d, C. Motschenbacher's Nixe. Limit.—Dogs (red): 1st, C. Motschenbacher's Papageno's Veto; 2d, C. O. Polken's Paprika; 3d, H. Bromley's Windycroft Joe. Bitches: 1st, C. Motschenbacher's Mardel; 2d, C. Motschenbacher's Tosca. Dogs (any other color): 1st, C. Motschenbacher's Romeo II.; 2d, C. Motschenbacher's Rodie Vom Jaegerhaus. Bitches: 1st, W. Steuber's Pebbl; 2d, W. Steuber's Melba; 3d, C. Motschenbacher's Peprl II. Open.—Dogs: 1st, Romeo II.; 2d, Papageno's Veto; 3d, Windycroft Joe. Bitches: 1st, Maedel; 2d, Nixe; 3d, Tosca. Winners.—Dogs: 1st, Romeo II.; res., Papageno's Veto. Bitches: 1st, Mardel; res., Pebbl.

Irish Setter Club.

PHILADELPHIA, Feb. 25.—The annual meeting of the Irish Setter Club of America was held at the Madison Square Garden, New York, on Friday, Feb. 22, at 7:30 P. M., the president, Dr. G. G. Davis, in the chair. Present, Dr. G. G. Davis, James B. Blossom, B. L. Clements and Geo. H. Thomson, and by proxy, Mrs. C. Salisbury, Miss G. Shippen and William Shippen.

The minutes of the previous meeting were read and approved.

The Treasurer's report, showing a balance of $205 96, was read and approved. It was decided to appropriate $50 for bench shows and $50 for field trials during the ensuing year.

The following new members were elected: Dr. Charles A. Gale, Rutland, Vt.; Mr. Joseph B. Vandergrift Pittsburg, Pa. The following gentlemen were then elected to hold office during the ensuing year: President, Dr. G. G. Davis, Philadelphia, Pa.; Vice-President, James B. Blossom, New York; Secretary and Treasurer, Geo. H. Thomson, Philadelphia, Pa.

Executive Committee—William Shippen, New York; T. G. Goodridge, New York; Woodruff Sutton, New York; B. L. Clement, New York; Dr. G. S. Lacock, Allegheny, Pa.; Joseph Lewis, Connecticut.

There being no further business, the meeting adjourned.

GEO. H. THOMSON, Sec'y.

English Setter Club.

NEW YORK, Feb. 23.—At the annual meeting of the American English Setter Club, held at Madison Square Garden, Wednesday, Feb. 20, Mr. Edgar Huidekoper, of Meadville, Pa., on motion of Mr. W. S. Bell, was called to preside. It being the first meeting of the club, there was no previous minutes to read.

The Secretary-Treasurer's report showed a most satisfactory condition of the club, financial and otherwise. After remarks in which Messrs. Bell, Belcher, Chapin, Law, F. G. Taylor, Osthaus and others participated, the action of the Standard, Constitution and By-Laws and Governing committees was adopted. A special resolution was passed requesting each member of the club to send in one or more names for membership as being the most effective way to increase the list and interest. The Secretary announced that the standard of the club is ready to be mailed for all who may apply for it, and that it will at once be mailed to members, without application.

The election of officers continued those now serving for the ensuing year.

It was decided that the dues paid in 1900, as well as those in 1901, will be applied to the current year ending Dec. 31.

English Bloodhound Club.

THE seventh annual meeting of the English Bloodhound Club of America was held at Madison Square Garden, New York city, on Friday, Feb. 22, at 11 A. M. The meeting was well attended by the members.

Voted to offer two silver cups to become the property of the exhibitor winning it three times; cup to be offered only at the New York Show.

Mr. George Raper, of Wincobank, Sheffield, England, was elected an honorary member.

The report of the Treasurer showed a good balance to the credit of the club, and after a general discussion of the advisability of holding field trials, which matter was left in the hands of a committee the meeting adjourned.

The following officers were elected: President, Dr. C. A. Lougest; Vice-Presidents, Louis B. Strong, George P. Finnigan; Secretary and Treasurer, Charles H. Innes; Executive Committee, the above named and Miss C. C. Whitney and Charles Dieterich. Dr. A. F. Stahl was elected a delegate to the American Kennel Club. The following judges were recommended: James Mortimer, J. L. Winchell, James Watson, Dr. Louis G. Knox, Roger D. Williams, Dr. A. F. Stahl and C. Walter Lougest.

Great Dane Club.

NEW YORK, Feb. 21.—The annual meeting of the Great Dane Club of America was held at the Belvedere House on Tuesday, Feb. 19, at 7 P. M.

The report of the Treasurer shows that the club is in a good financial condition. Two new members were elected.

The following officers were unanimously elected for the ensuing year: Mr. J. Blackburn Miller, President; Mr. T. D. M. Cardeza, Vice-President; Mr. C. H. Mantler, Secretary-Treasurer; Mr. G. Muss Arnolt, Delegate to the A. K. C.

The Executive Committee consists of the foregoing officers and Messrs. B. H. Stevenson, R. T. Harrison and Louis Letsche.

After the close of the meeting a banquet was held in celebration of the tenth anniversary of the club, which the members present heartily enjoyed.

Points and Flushes.

Prof. Edm. H. Osthaus, the famous artist, purchased two beagle puppies at the New York Show, namely, Trumpet T. (Dorsey's Woodman—Belle of Mount Vernon) and Duke of Mount Vermon, same breeding. He purchased them for his own use, and intends to take up the sport of rabbit hunting more actively in the future, as done à la beagle. Asked concerning the sale, he calmly wrote the following on a piece of paper: "The two finest beagles ever put on the bench. Bought for $50,935.25." The puppies are not for sale.

A cablegram received by Mr. E. M. Oldham at the New York Dog Show announced the death of the famous St. Bernard breeder, Mr. Sydney Smith, of Leeds, England, on Thursday of last week. Some of the dogs sold by him were world famous, and he realized extraordinary prices for them, particularly such as were imported to America.

The famous English setter, Count Gladstone IV. (Count Noble—Ruby's Girl), died in San Francisco, Cal., on Feb. 7. He was owned by the Verona Kennels. Few dogs had a more conspicuous place in the public eye. He was a noted field trial winner and the sire of field trial winners.

Like Picking Up Money.

In every city, town and village in the United States where there is shooting or fishing or yachting we want agents to canvass for subscriptions for FOREST AND STREAM. Every sportsman is deeply interested in its subjects, and every sportsman is glad to discuss his doings afield and to hear of the adventures of other sportsmen.

Money is to be made by canvassers for FOREST AND STREAM, and those who wish to take advantage of the opportunity we offer should send for premium list and circular.—Forest and Stream Publishing Company, 346 Broadway, New York.

Canoeing.

'Mid Reef and Rapid.

BY F. R. WEBB.

I.

"THERE now, I think she'll do!" said the Colonel complacently, as he stepped back, varnish brush in hand, and took a comprehensive survey of his handiwork.

What he surveyed was this: A trim, shapely canvas canoe, 16ft. long by 30in. beam, handsomely finished and tastefully painted, with gunwales, cockpit coamings and other trimmings of oak, elegantly finished and polished. The canoe was specially designed for him by me, her model and lines being patterned after the other canoes of our fleet, except that she was built on a larger scale, and her construction had afforded interesting occupation to the two of us on odd, spare afternoons for pretty much all winter. In her design she conformed as nearly as possible to the requirements of that bold, swift, rocky stream, the Shenandoah River, upon which she was intended to cruise.

She was well rounded away at both ends, so as to turn easily and quickly, the slope of bow and stern beginning, at her keel, fully 3ft. back of her deck lines. She had full lines and a broad, flat floor, insuring light draft and plenty of stowage room. Her canvas hull was amply protected by a broad, flat oak keel, ½in. thick by 3in. wide, with no less than five bilge keels of oak, 1in. wide by ¼in. thick, on each side of it.

The cockpit or well was 8ft. long by 20in. wide amidships, tapering to 12in. at each end; the taper following the lines of the gunwales. Three Tredwen folding hatches closed this opening. One at each end reduced the opening to 4ft., while a midship hatch closed this remaining space except the aft 18in., which was protected by an ample canvas apron, well oiled, which came well up over the breast of the crew of one and tucked in aft—a necessary precaution in view of the rough water she was built to cruise in.

She was a big, heavy boat, weighing something less than a ton, and she looked like a canal boat among the rest of our 14ft. canoes; but the Colonel was a big, heavy man, weighing something less than a ton also, and standing full 6ft. in his stockings, and he required a canoe large in proportion.

She was propelled by an 8ft. double-bladed paddle, which the Colonel, not caring to go to the trouble of making one himself, had purchased in New York at the store of a dealer in supplies.

A footboard, swinging back rest, camp stool, a light tent, folding mattress, a pair of stout blankets, an air pillow and a rubber sheet completed her equipment.

"I expect the Colonel will have her moved up into the front parlor this evening," remarked Lacy, as he looked the handsome craft over with admiring eyes.

"No; I think it more probable that he will build up a good fire here in his work room to make the atmosphere feel more like July than January," said I, as I took in the bright, cold, winter landscape through the window of the Colonel's work room—the shining, level blanket of snow sparkling in dazzling brightness in the afternoon sun—"and set her down off these trestles upon the floor, make up his bed in her and sleep in her."

"You probably speak from your own experience with your first canoe," said the Colonel, good naturedly warding off the chaff as it fell around him.

"No; I never had the fever quite as bad as that," I replied, as I gave the Colonel's fire a freshening poke; "but when we were preparing for the great cruise of '86, George and Lacy slept in their canoes for several nights previous to the cruise, and they——"

"We wanted to get used to our quarters before the start," interrupted Lacy, coloring a little, as he spoke, "and to test them to see where the sleeping arrangements could be improved upon."

"Yes," I replied, "and George was also afraid that the old machine works where they were built might take fire some night and burn up the whole outfit."

"And if they burned, he and Lacy were afraid they wouldn't be there to burn with them," said the Colonel.

"Yes, life would then have had no further charms for them," I replied.

"By the way," said Lacy, as he lit his pipe and changed the subject, "what shape is the kitchen outfit in? Did you remodel it this winter?"

"Oh, yes!" I replied. "Everything is in fine shape, and all new, and large enough for five or six men this time. Here it is!" I continued, as I dived into a closet in one corner of the room and reappeared with a sheet iron box, which was discovered to contain a large, bright tin pail, a couple of joints of 3in. pipe, a small camp axe, a half-gallon coal oil can, a malleable iron ladle, a small compass saw, a small, square tin soap box and a general assortment of tin cups, etc.

"There!" said I, placing the outfit on the Colonel's carpenter's bench and removing the tin pail and miscellaneous assortment of sundries. "There's the stove," as I inverted the sheet iron box, which then stood revealed as a compact little camp stove, 17in. long, 12in. wide and 6in. deep. There was no bottom to it, as the fire is built inside of it, directly on the ground. It had two holes in the top, 6in. in diameter, covered by lids swinging upon rivets, and the two joints of pipe were fitted together (one of the joints was an elbow) and placed upon a short collar at one end of the stove, to save top room, while at the other end was a door. A heavy wire was run in a hem around the entire open bottom of the stove, and a stout wire bail or handle was let into each end, hooking over the wire hem, by which to carry the stove and contents when not in use.

"There!" I exclaimed, as I placed the stove right side up and put on the pipe, "that will prove large enough for our party. You will observe that there is room for two frying pans at once, so that I can get up a fish supper for the entire party all at once without having to cook the fish on the installment plan as I did last year."

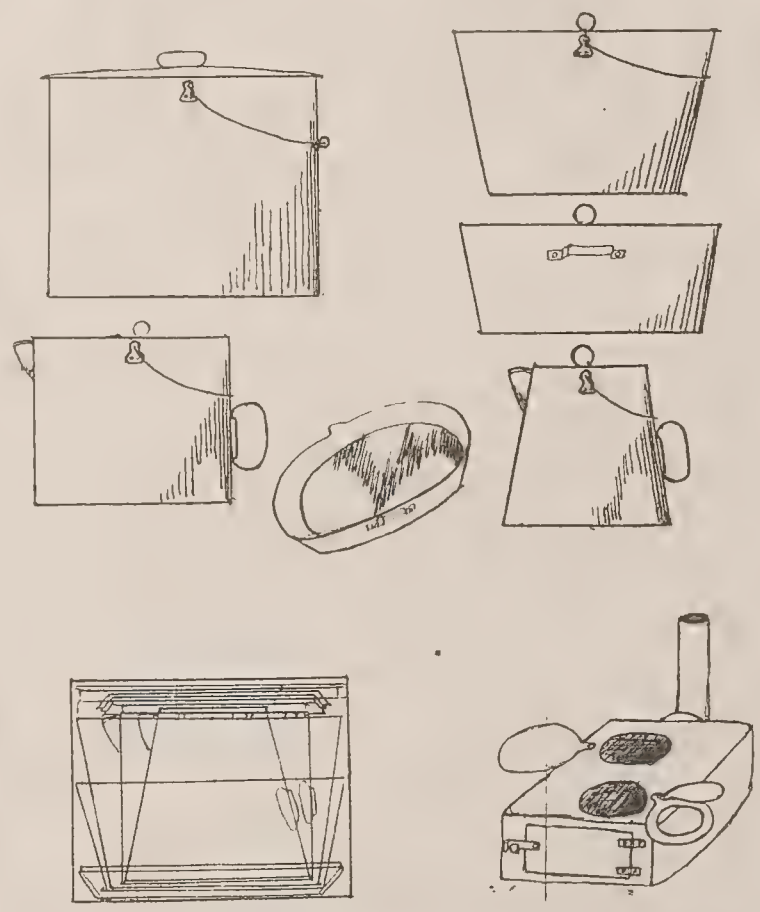
"Great Scott!" cried Lacy, as I took the cover off the big pail and unpacked its contents and spread them out to view, until pretty much the entire surface of the Colonel's work bench was covered with a conglomeration of pots, pans, tin plates, kettles, etc. "Where in the world did you find all that tinware, and how in the mischief do you expect to get it all back again in that pail?"

"Well," said I, laughing, "I didn't find it; with the exception of the frying pans and tin plates everything was designed by me, and made to measurement, so that all nest together inside of the big pail. So," I continued, gathering the articles together, "the pail comes first, of course. It is 11in. in diameter and 8in. deep. Then the two frying pans, which are of the same size. They are 10in. in diameter and nest together like a couple of tin plates, the handles, of course, being detachable. They are of heavy, pressed sheet iron, 10in. in size, and just go in the pail nicely. Then this saucepan comes next. It is 8in. wide at the bottom, 10in. wide at the top and 3½in. deep. Then this little flat pan, 7½in. on the bottom by 8½in. at the top, and a couple of inches deep, comes next."

"What's it for?" inquired Lacy.

"To wash dishes in and for general purposes," I replied. "Then this smaller pail, 7in. at bottom, 9½in. at top and 6in. deep, goes in next. Then the tea kettle, for boiling water for all sorts of purposes, 6½in. at bottom and top, and 5½in. deep, goes in next," suiting the action to the word. "Then this coffee pot comes next. It is 6in. deep, 6¼in. wide on the bottom and 4½in. wide at the top. That is all the utensils that go in the pail. Then you put on the lid to the coffee pot, and over that the tea kettle lid, then this little pile of 9in. tin plates, then the lid to the small bucket, next you put in these flat covers for saucepan and frying pans, and finally the big bucket lid goes over all, and there you are!" I exclaimed, triumphantly, replacing the big pail in the stove. "You will also note that all handles are folding iron rings or wire bails, so as to lie close to the sides of utensils, and all spouts, lips, etc., are as small as possible, to be practicable," I continued.

"Well, that's the best outfit we have had yet," exclaimed Lacy, admiringly, as I replaced the miscellaneous assortment of hardware in the stove alongside of the



pail, and set it back in the Colonel's closet.

"I should think so," said the Colonel, lighting a cigar.

"I think it will do," said I, modestly, as I took the burning match from the Colonel's fingers and lighted my own cigar.

"By the way, what shape are the rest of the canoes in?" asked the Colonel.

"Mine's all right," said Lacy. "I have overhauled and repainted her thoroughly, and she is all ready to launch."

"Same here," said I. "I have not only overhauled and repainted her thoroughly, but George's also; and the entire fleet looks like new."

"That's good," the Colonel commented.

"By the way, Lacy, one of the best tricks in the entire outfit I have at home in the mess chest in my work room," I continued.

"What is that?" he asked.

"A granite ware plate and cup for each man," I replied. "We use them on our Greenbrier fishing trips and find them much nicer to eat and drink from than the common tinware; besides being easier to clean after using."

"That certainly is a good trick," said Lacy, as he pulled on his overcoat and overshoes, in which example we followed him, and after the Colonel had shut and locked his work room door, we all wended our way down the snowy path through the yard to the street, leaving the new canoe, with its attractive, summery cruise suggestions, behind us, and the little conclave broke up, each going his separate way.

[TO BE CONTINUED.]

A. C. A. Amendments.

Editor Forest and Stream:

Will you have the kindness to publish the following names which have been added to the petition regarding sailing rules of the A. C. A. since your last issue?: J. B. Kelley, A. W. Brown, H. S. Bosson, A. W. Dodge, R. D. Smith, Danl. S. Pratt, Jr., Oscar J. Gerd, Francis J. Burrage, Edw. Lawrence, Jr., Jas. H. Law, Steadman Smith, Walter E. Clark, Geo. S. Brazer, Robt. K. Rogers, D. A. Johnson, H. J. Conand, G. E. Fickett, H. G. Chamberlain, J. E. Nold, W. A. Packard, Wm. V. Forsaith, Henry M. S. Aiken, Chas. T. Estabrook, W. C. Billings, John B. May, Abbot S. Mitchell, C. J. Halpen, W. D. Cram, Alfred E. Collins, Fred. A. Sears, F. G. Carter, A. W. Walls, W. K. Fowle, H. W. Cramphorse, Wm. J. Ladd, Jack Howard, A. G. Mather, Wm. M. Holbrook, H. V. Dimick, F. W. Fowle, F. H. Sawyer, O. M. Wade, E. T. Brigham, C. M. Howe, G. W. Buchanan, Wm. W. Crosby, H. W. Anderson, Edgar Ward, Edw. S. Baker, W. H. McLean.

This makes a total from the Eastern Division of more than one hundred men who are opposed to the changes made in the sailing rules last October.

HERMANN DUDLEY MURPHY.

A. C. A. Membership.

Mr. Harry S. Maffitt, of Boston, Mass., has been proposed for membership to the Eastern Division of the A. C. A.

Yachting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Our Boston Letter.

BOSTON, Feb. 25.—Many new wrinkles have been instituted in the Belmont syndicate defender, now building at Herreshoff's, which your correspondent has had the opportunity of finding out and can now give to the readers of FOREST AND STREAM. It would be strange indeed if Herreshoff did not embody some new ideas in construction, but the majority of yachtsmen have undoubtedly been unprepared to find so many startling departures.

The lead is not secured to the keel plate in the usual manner, but is held by over 800 screw bolts, ⅝in. in diameter and 6in. long, which are screwed through the lower streak of plating and into the lead. There are also 37 threaded bolts, 1in. in diamter and 10in. long, that pass through the keel casting into the lead. The distance from the bottom of the lead to the deck is 24ft. and the beam is exactly 26ft. There are 77 frame spaces, the same as in the Columbia.

The keel casting, which rests upon the top of the lead, is ½in. thick, and has flanges 4in. high, running along its length and transversely at the frame stations. This takes the heels of the frames, and also the heels of the floor plates. The upper edge of the lead is rabbetted to take the bottom of the lower streak of plating, thus making a smooth joint. The plating is arranged on the raised and sunken system up to the top of D plate, which comes flush with plate C. From there up to the deck the plating is flush. The plates at station 40 are from 49 to 48in. wide and from 8-32 to 6-32 in thickness.

There are belt plates which go around the inside of the boat and form floor plates and deck beams. These are 15in. deep and 5-40 to 7-40 in thickness. At the outer edge there is an angle bar on either side, which is riveted through the plate, and to which the outer plating is secured. From the plank sheer to the bottom of D plate, the belt plate is cut in at different places. Through these cut out places run bulbed angle bars and T bars, which run the entire length of the boat. The angle bars come at the middle of the outside plating, and the T bars come at the edges of the plates, to which they are fastened, making flush joints.

These longitudinal braces, or really frames, are to take the places of bulbed angle frames. The belt plates come at every fourth frame space, except at the mast station, where they double up. Between them there are bulbed angle frames and plain angle frames, which do not, however, go above the top of the third streak of plating. The frame stations are spaced 20in. on centers and the belt plates, coming at every fourth station, are spaced 6ft and 8in. Above the top of the third row of plating there is nothing in the nature of frames except the belt plates, to which the outer plates are fastened, and the longitudinal angle bars and T bars.

The T bars are 4½ by 4½in. amidships, and tapering at the ends. The bulbed angels are 3 by 2 amidships, tapering at the ends. The short frames, which are bulbed angles, are 3 by 2, except the one which comes in the middle space, between the belt plates, which is a plain angle, 1¾ by 1¾. There are floor plates and tie bars above the lead on the bulbed angle frames, and a solid floor plate running between the pair of plain angle frames. The stations at which the belt plates come are as follows: 4, 8, 12, 16, 20, 24, 28, 30, 32, 36, 40, 44, 48, 52, 56, 60, 64, 68, 72 and 76. The angle frames, which are called the intermediate frames, are placed at the following stations: 10, 14, 17, 18, 19, 21, 22, 23, 24, 25, 26, 27, 29, 31, 33, 35, 37, 38, 39, 41, 42, 43, 45, 46, 47, 49, 50, 51, 53, 54, 55, 57, 58, 59, 61, 62 and 63. There are no intermediate frames aft of station 63. At station 2 there is a bulkhead of steel plate.

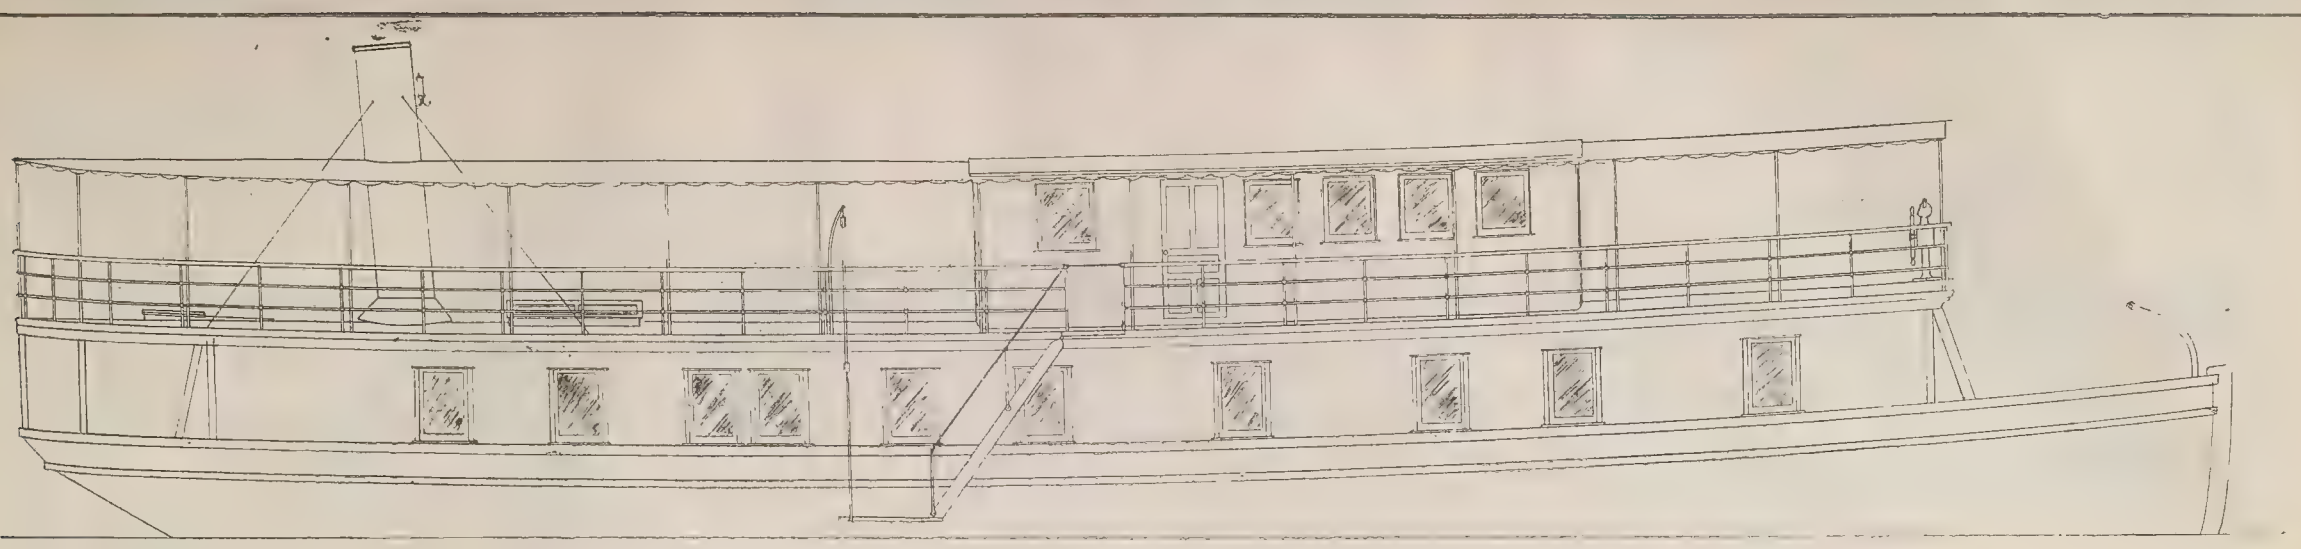
No previous cup defender has had a system of logitudinal framing installed to take the places of the regular angle frames. This principle of lightness seems to have been Herreshoff's greatest aim in the new boat, for her dimensions are not much different from the Columbia's except in the point of beam, in which he has given the new boat 2ft. more. In the construction of the boat, the plate plans of the Columbia have been used.

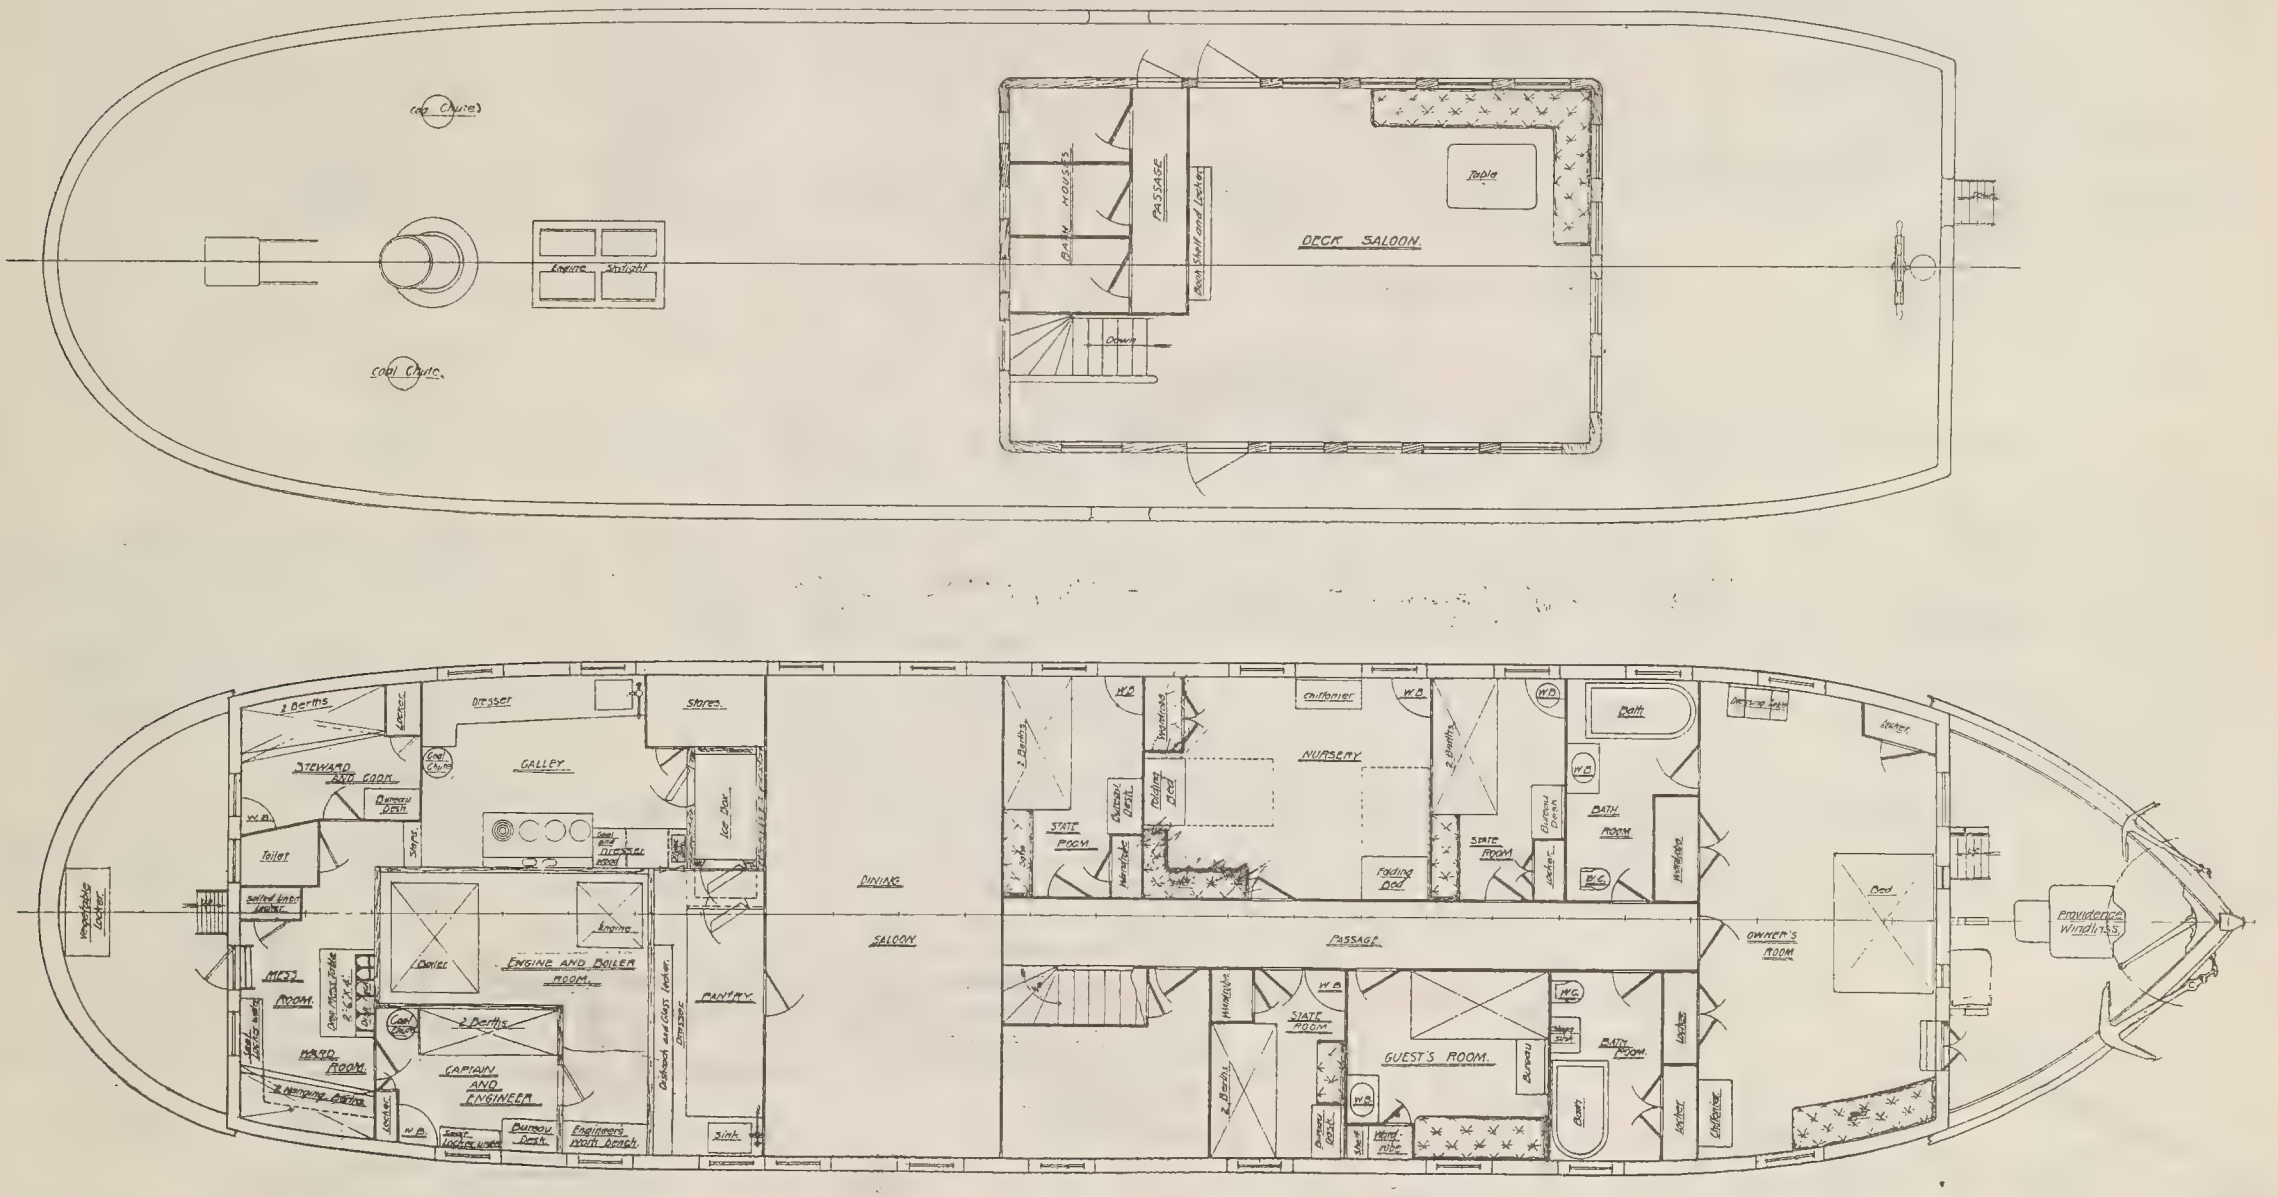
Another innovation is in the mast step. In former cup defenders this was a solid metal casting, but in the new boat it is formed of plates, 7-16in. in thickness. The mast will be stepped between stations 29 and 30, but the arrangement of plates will extend from frame 23 to frame 32, the mast step plates engaging the frames. The step itself is conical in shape.

Thomas W. Lawson has again startled the yachtsmen by making the most generous offer of prizes to be raced for after the international races are finished, that has ever before been known. The prizes are offered for yachts in the larger classes and for fishermen. The following is the list which was given out by Mr. Lawson to the press Saturday night:

For 90ft. sloops, a suitable cup; for all schooners, a cup valued at about $1,000, with siutable second and third prizes; for 70-footers, a cup valued at about $1,000; for the 51ft. rating class, a cup valued at about $500; also cash prizes for all fishermen, $1,000 first, $500 second and $250 third.

There is something lying underneath all this which





AUXILIARY HOUSE-BOAT—DESIGNED BY MESSRS. TAMS, LEMOINE & CRANE FOR MR. J. B. MACDONOUGH.

cannot fail to be appreciated by all yachtsmen, and shows remarkable keenness of foresight on the part of Thomas W. Lawson. In the first place the races are to be scheduled after the international races are over, this not interfering with any regular dates. It is only natural for a man like Sir Thomas Lipton to recognize the value of such enterprise by one man. Therefore, it is expected that he will be perfectly willing to bring the Shamrock II. to Massachusetts waters, that the people here may have the pleasure of witnessing a race between 90-footers. It is only natural, too, that the owners of the Belmont syndicate defender, not wishing to be outdone in recognizing the compliment implied, will bring their boat to enter in the races. With such an interest started, it would be surprising indeed if the whole racing fleet of the New York Y. C. did not come to Massachusetts waters to take part in the races.

And here is another feature which means a great deal for future yachting in these waters. The races are to be given under the auspices of the Hull-Massachusetts Y. C., of which Mr. Lawson is a member. This will place this club in a position before all others in New England, and will prove the starting point of making it the New York Y. C., of Boston. The club has every natural facility for maintaining this position, and is fortunate in having a member like Mr. Lawson, who is able and willing to take the initial means of making it possible.

But for the interest of the sport throughout the entire New England district it means a boom which has been long waited for. It means that the interest in the larger classes will be revived, and that each succeeding year will see a big fleet of large boats in these waters during the racing season. Massachusetts yachtsmen own large yachts which they cannot race here, as there are not classes for them. If these first races prove successful, it is likely that a series will be given each year, and Massachusetts will take the position in the yachting world which it should have before maintained through its natural facilities, and this revival of interest will be wholly credited to Thomas W. Lawson. JOHN B. KILLEEN.

The alterations that have been made on the stem yacht Surf, which is owned by Mr. C. K. Billings, N. Y. Y. C., were done under the supervision of Messrs. Tams, Lemoine & Crane. Mr. Percy Chubb, N. Y. Y. C., has commissioned this firm to change the rig of his cutter Vigilant to that of a yawl. This same firm has an order for a steam yacht for Mr. Edmund Randolph, N. Y. Y. C. She will be 85ft long, 11ft. beam and 4ft. draft. Geo. Lawley & Son Corp., of South Boston, will build her, and she will have a speed of 20 miles.

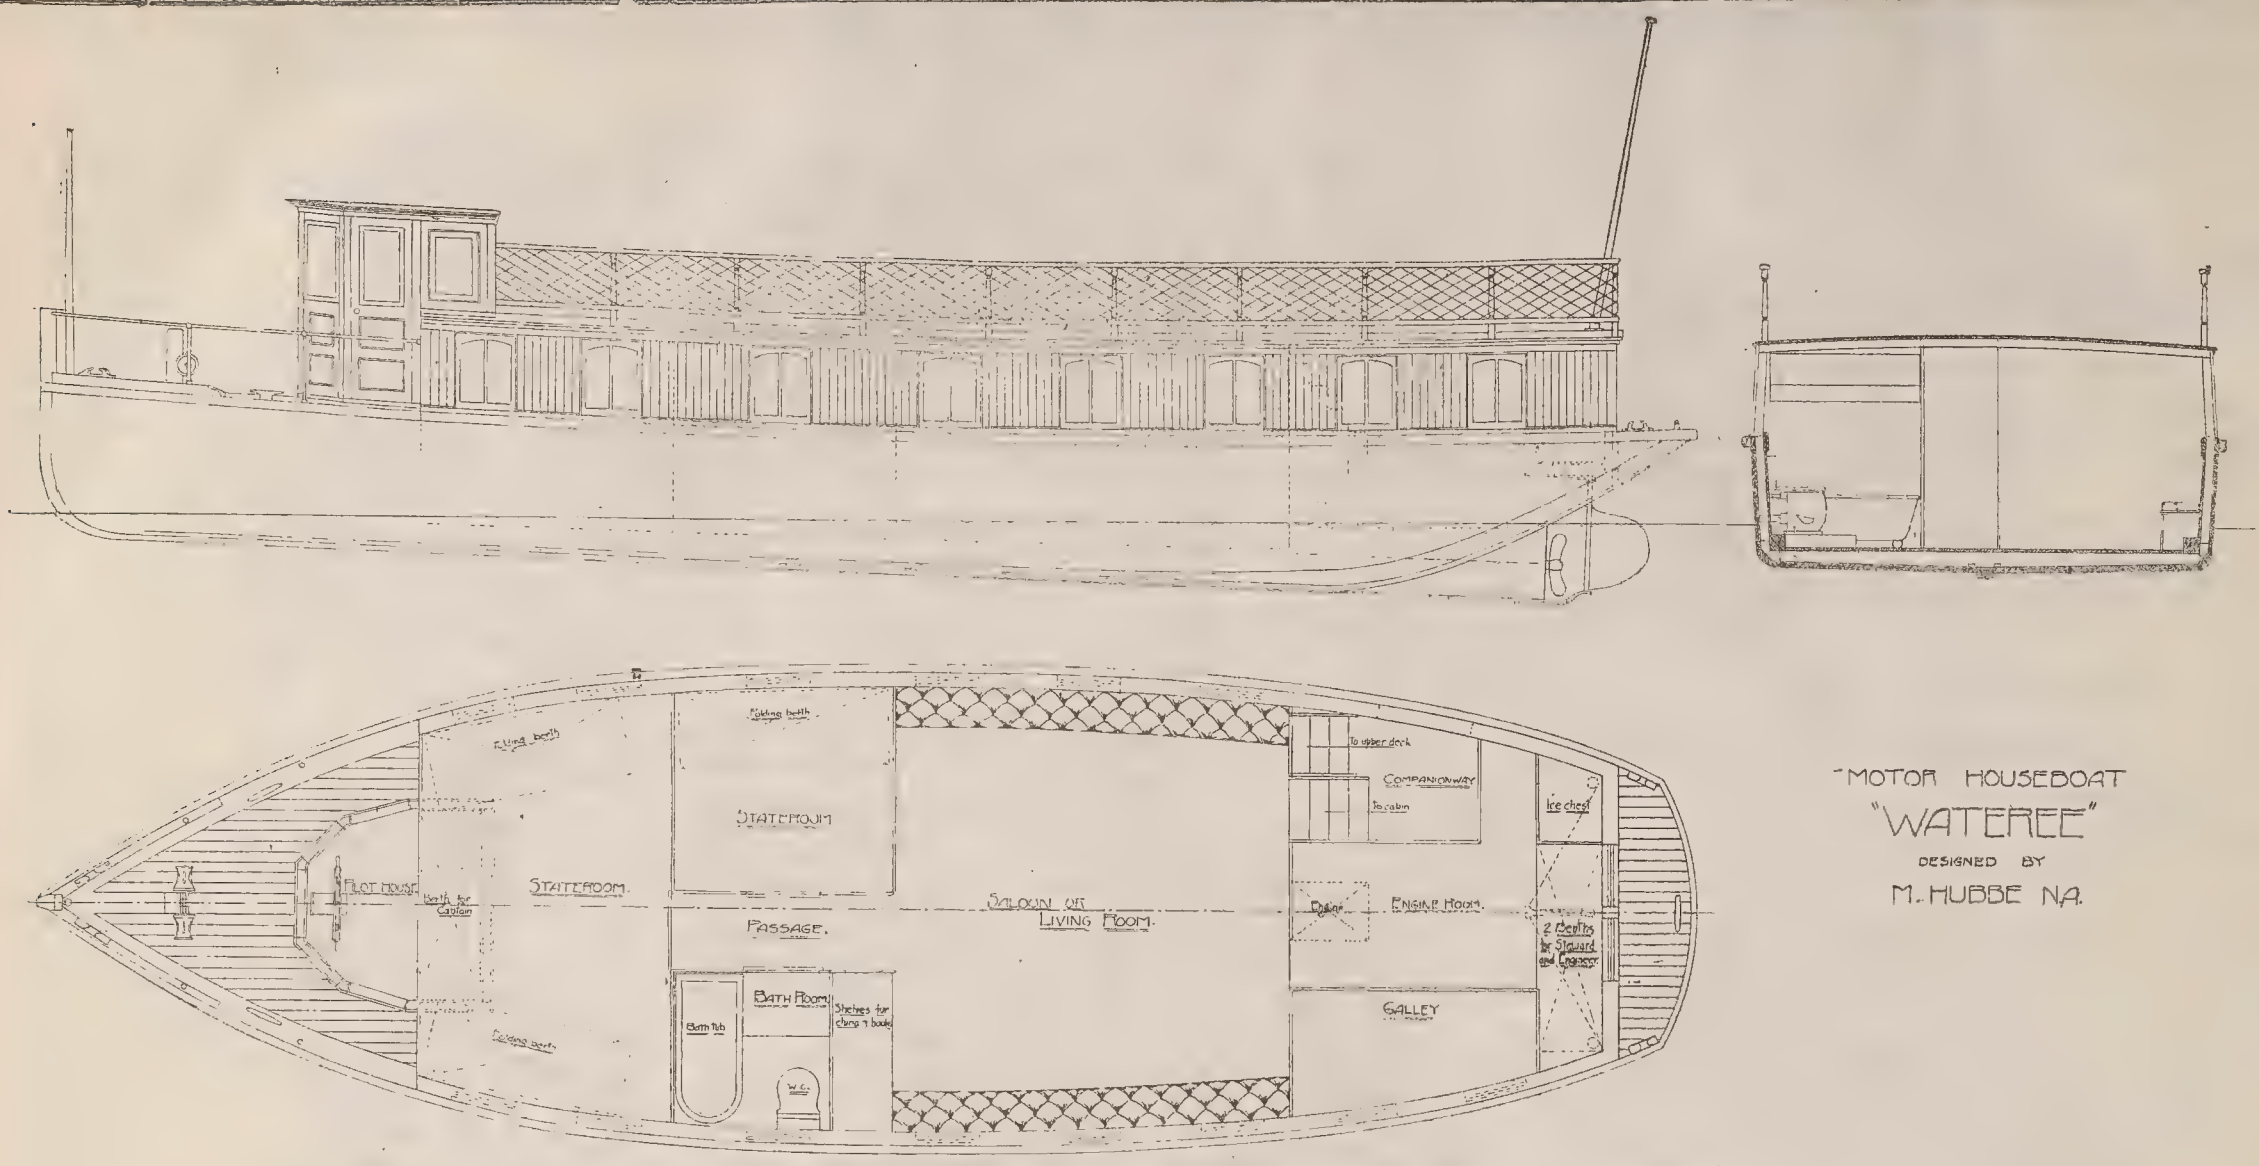
Increasing Interest in House-Boating.

THE large number of house-boats, both large and small, that have been built during the last few years, and the many requests that the publishers of FOREST AND STREAM have received from its readers for information on the subject, indicates a widespread interest in this novel, healthful and wholesome sport. The many uses to which house-boats can be put appeal to almost all sportsmen. This is clearly shown by the fact that some of the large railway and hotel systems have introduced house-boats for the use of sportsmen wherever game of any sort is to be found, either on salt or fresh water. At the Pan-American Exposition to be held in Buffalo this summer there will be seen a house-boat that is practically a floating hotel. This is intended for the use of those visitors who wish to be near the exposition grounds and who prefer to live on the water.

On cruising yachts the matter of living and sleeping accommodations is always of secondary consideration to the question of safety and seaworthiness. But in the case of the house-boat, the all-important features are questions of ease, comfort and luxury. The designer works with far more freedom in planning the vessel, and this would naturally be the case, on account of the requirements being so entirely different. In the house-boat the designer generally produces a craft of very shallow draft, so that she may lie close to the shore and be used in very shoal water, and that she shall be non-capsizable and able to be moved from place to place either under sail or motor power with reasonable speed and safety. It is the shape of the hull and the high cabin structure which shows the relationship of the entire craft to a house rather than to a boat. Merely because there is a general impression that the house-boat is a sort of a scow with a big dry goods box on top of it, still there is no good reason why any reputable naval architect should not be employed to make the plans and, if possible, superintend the entire construction of the boat. The small commission paid to the architect for such services could easily be saved by him in the cost of the boat, and eventually would prove a wise investment. In conversation recently with one of the best known naval architects in this country, he spoke of a house-boat that he had designed for use in Florida waters, and said that it was one of the most difficult problems he had ever tried to solve, for the reason that the boat was to be used in very shallow water and that under no circumstanecs was her draft to exceed 2ft. The boat was built in Northern waters, and it was necessary that she should be sufficiently staunch and seaworthy to enable her to make outside runs when going from one inside route to another, on her trip to the South. The boat was intended for use in rather a wild country where, of course, it was impossible to procure oil for the engine, and it was therefore necessary to build tanks large enough to carry a two months' supply. It was also necessary to make extra provision for a liberal supply of fresh water and ample accommodations for ice and supplies. To cover all these requirements and at the same time give the owner all the living room he wanted, it became a difficult matter to produce the results desired, and at the same time not to increase the draft of the boat. When the boat was built and turned over to her owner she was found to be perfect in every way, and it was evident that had her design been in less skillful hands it is safe to assume that there would have been danger of failure.

Through the kindness of Messrs. Tams, Lemoine & Crane, Mr. M. Hubbe, Messrs. Clay & Torbenson and several of our correspondents, we are able to reproduce this week quite a number of designs of house-boats. These include the most primitive as well as the elaborate, both power and stationary, that have yet been built in this country.

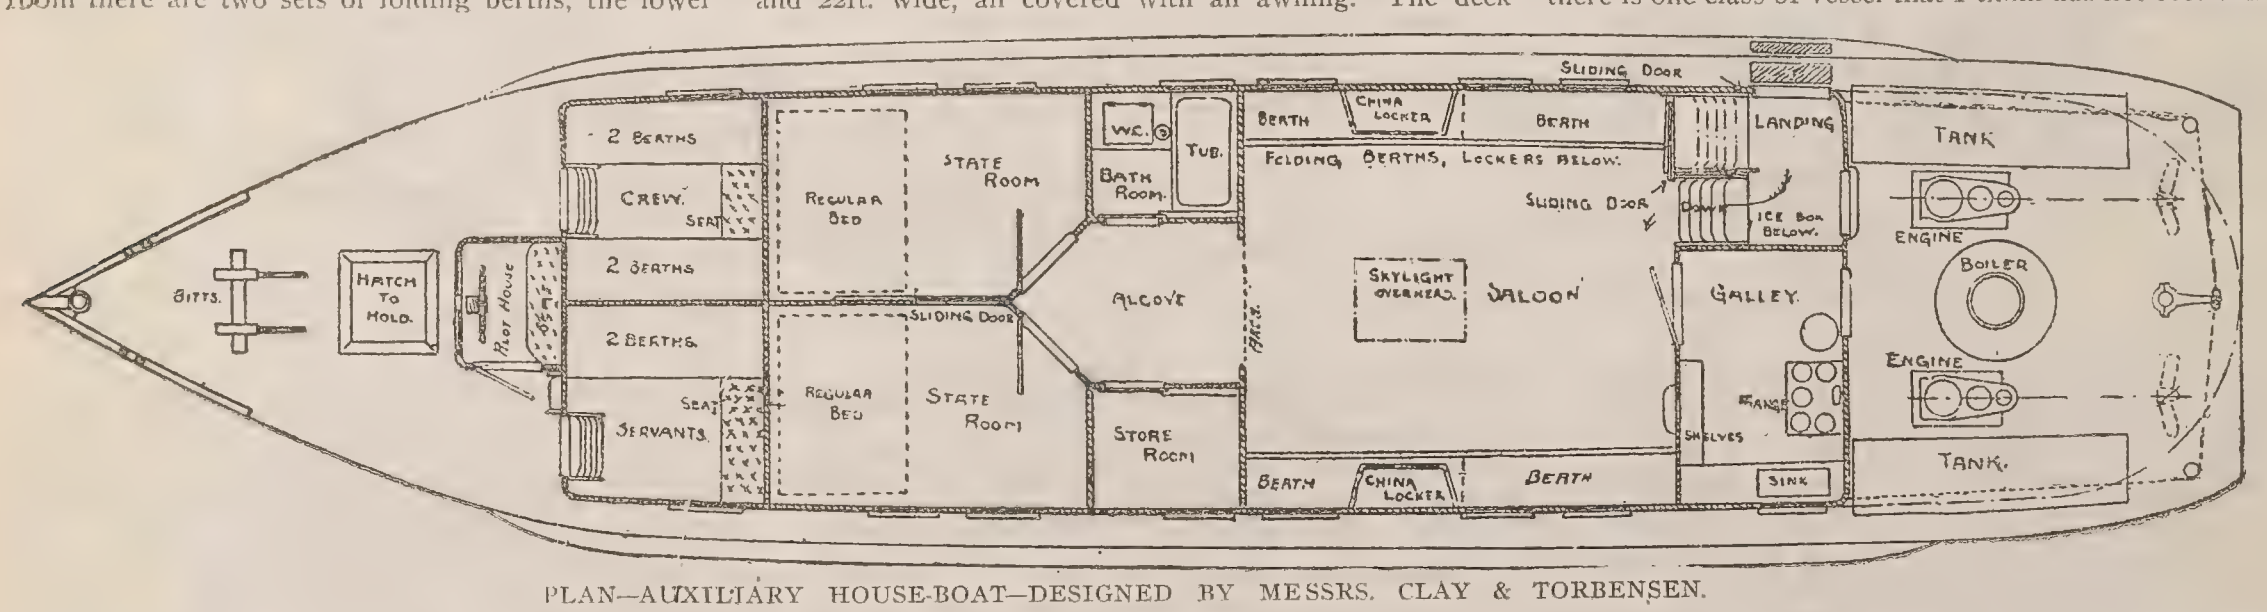
There is now being built by Messrs. T. S. Marvel & Co., of Newburg, N. Y., a twin-screw steel house-boat for Mr. Pierre Lorillard. This is not Mr. Lorillard's first experience with house-boats, as this boat will replace Caiman, that was burned in Florida last year. The new boat is 125ft. long over all, 119ft. 6in. on the waterline, 22ft. width of hull, 23ft. 4in. extreme width over guard rails, 8ft. 6in. depth of hull at lowest point and 2ft. 6in. draft. Her displacement at 2ft. 6in. draft is 137 tons, and her displacement at 2ft. 3in. is 122 tons. She will have two decks, and on the upper deck amidships will be an observatory 25ft. long and 13ft. wide, from which the main deck is reached by a staircase. The main deck is given up to the living quarters of the owner. Forward is a front parlor 16ft. long and 20ft. wide, which opens on to a passageway leading aft. On either side of this passageway are two large staterooms, a toilet room on the starboard side and a gun room on the port side. The back parlor is also reached by a passageway. This room is 13ft. long and 20ft. wide. There is a stateroom on either side of the after passageway, both of which have connecting toilet and bath rooms. Below the main deck the space has been utilized in the best manner. Each room is of liberal size and careful attention has been paid to the matter of ventilation. There is a good sized forecastle with swinging berths for the men, from which a passageway leads aft to the servants' sitting room. On the starboard side of the passage are rooms for the ship keeper, cooks and other servants; on the port side are rooms for the pilot, waiters and steward. The servants' sitting room is 20ft. wide and 15ft. long, and aft of this are to be found an ice house, which will hold five tons; a pantry and another storeroom. The kitchen comes next and then the engine room is reached. The greatest attention has been paid to the fittings and appoint-



AUXILIARY HOUSE-BOAT—DESIGNED BY MR. M. HUBBE FOR MR. L. G. BILLINGS.

ments of the boat, and they will be superb in every way, as it is Mr. Lorillard's intention to live aboard her several months of the year. The boat will be lighted throughout with electricity, and she will carry four boats—a skiff, a dinghy, a gig and a 3-horse-power motor launch. The power of the boat will be furnished by two 25-horse-power Murray & Tregur ha gasoline engine motors.

The motor house-boat Wateree was also designed by Mr. M. Hubbe and built in 1900 by Mr. A. Hansen, of Bay Ridge, Brooklyn, for Mr. L. G. Billings. She is 52ft. long, 15ft. beam, 4ft. deep and 2ft. 6in. draft. Forward there is a storeroom and naphtha tank which has a capacity of five barrels. The large stateroom forward is 13ft. wide and 8ft. long, running the full width of the boat. In this room there are two sets of folding berths, the lower one being 30in. wide and the upper one 24in. wide. From this room, leading aft to the living room, is a passage with a storeroom, bathroom and a smaller stateroom 6ft. wide and 6ft. 6in. long on either side. The saloon or living room is 14ft. wide and 14ft. 6in. long, and has two sofa and two folding berths; aft of the saloon is the engine room, adjoining which and on the port side is the galley. On the starboard side, opposite the galley and leading from the saloon, is the companionway which leads to the promenade deck, which is entirely covered by an awning. In the pilot house is a berth for the captain. In the engine room are two berths—one for the engineer and one for the steward. In the drawing, a motor is shown for a single screw, but the owner decided to have twin screws, and two 7-horse-power Coscob motors were installed, which drive the boat at seven to seven and a half miles an hour. Wateree has proved so roomy, compact and convenient on such light draft that several other boats have been built from the same plans.



PLAN—AUXILIARY HOUSE-BOAT—DESIGNED BY MESSRS. CLAY & TORBENSEN.

The plans of the house-boat designed by Messrs. Tams, Lemoine & Crane for Mr. J. B. MacDonough, former owner of the 46ft. Fife cutter Jessica, show a very wholesome type of house-boat. As she is to be used mostly on Long Island Sound and in the vicinity of New York, her designer was not especially restricted as to draft and for that reason he was able to turn out an ideal vessel. She is being built by Samuel Ayers & Son, of Nyack N. Y. The boat is 100ft. over all, 23ft. beam and 6ft. draft. She is fitted with a 100-horse-power engine that will drive her at a speed of eight knots. Her cabins are splendidly arranged, having been laid out with much care and study. Forward is the owner's room, 10ft. 6in. long, running the full width of the boat; from the owner's room aft to the dining room is a passage 3ft. wide with bath and staterooms on each side. On the starboard side next to the owner's room is a good sized bathroom 8ft. 6in. long and 5ft. wide, and adjoining this room is the guest room, 8ft. 6in. wide and 9ft. long. Next aft is a smaller stateroom 6ft. by 8ft. 6in., and beyond that another room and the companionway leading to the deck saloon or observatory. On the port side aft of the owner's room is the owner's bathroom, 6ft. by 10ft.; next aft is a stateroom 6ft. by 10ft.; adjoining this is the nursery, 10ft. by 13ft.; aft of the nursery another stateroom. Aft of the sleeping quarters is the dining room, which is 11ft. long by 22ft. wide, running the full width of the boat. Leading from the dining room is a large pantry 5ft. wide and 13ft. long. This connects with a large galley, 12ft. long and 9ft. wide, which is on the port side of the engine space. A large storeroom and ice box open from the galley. In the extreme after end of the boat on the starboard side, is the mess room, 6ft. by 14ft.; opening from the mess room is a stateroom for the steward and cook and another for the captain and engineer, also a toilet room for the crew. There is good deck space both fore and aft. On the promenade deck is the deck saloon, which is practically the only obstruction. The promenade deck is 86ft. long and 22ft. wide, all covered with an awning. The deck saloon is 18ft. long and 16ft. wide in the clear; in the after end are three bath houses and the staircase leading to the berth deck. Companionways forward and aft lead to the lower deck. The boat is lighted throughout with electricity.

Messrs. Clay & Torbensen were among the first to realize the possibilities of the house-boat in American waters. The boat of their design, which appears in this week's issue, is 67ft. over all, 16ft. beam with twin screws, the engines being in the extreme after end, leaving a large amount of space in the body of the boat for the saloon, staterooms, etc. The kitchen is fitted with a range set in brick, and the ordinary appurtenances of a house on shore. The estimated speed of this boat is from five to six miles.

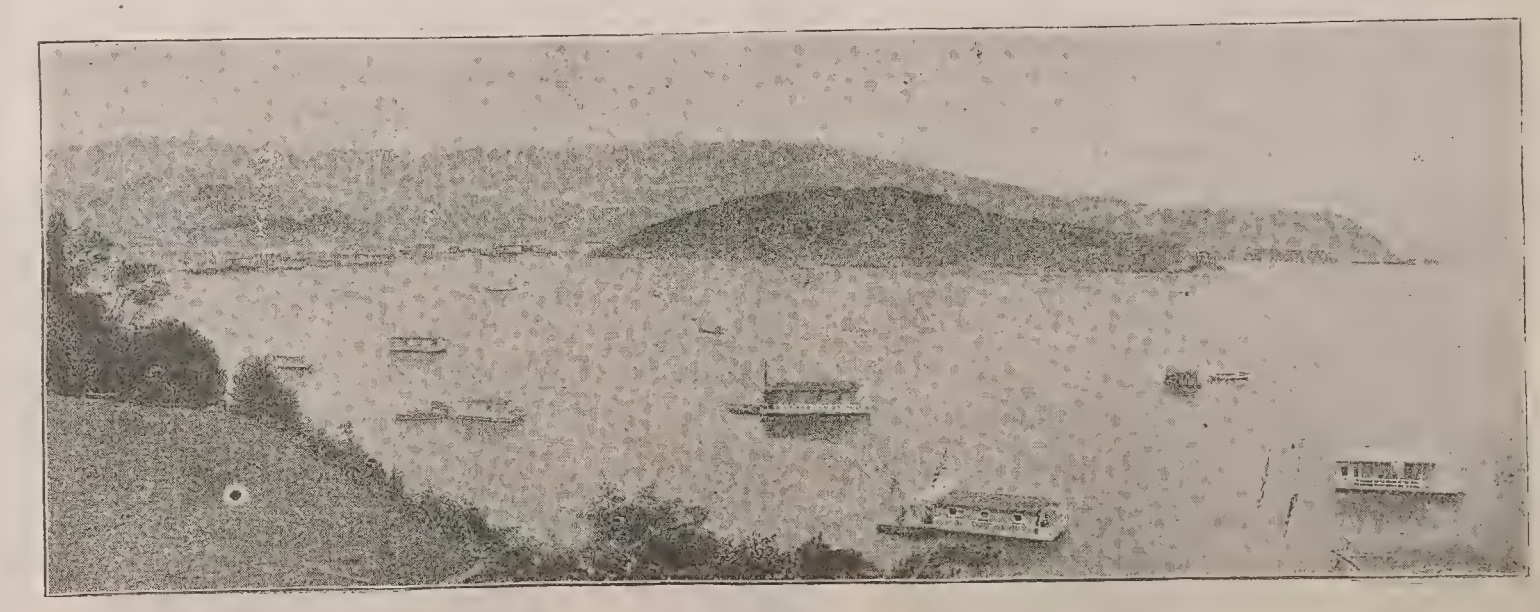
The two following letters, with photographs and sketches that accompany them, were published in the columns of FOREST AND STREAM some time ago, and as the numbers are now out of print, we publish them again by request. These three designs are of the most primitive sort, but will appeal to the house-boater of moderate means.

The first letter is from a San Francisco yachtsman, and a member of the house-boat colony of that city, his tiny craft being the second one from the right in the picture, with a yawl-rigged boat, the Muggamma Chuddee, beside it. The letter:

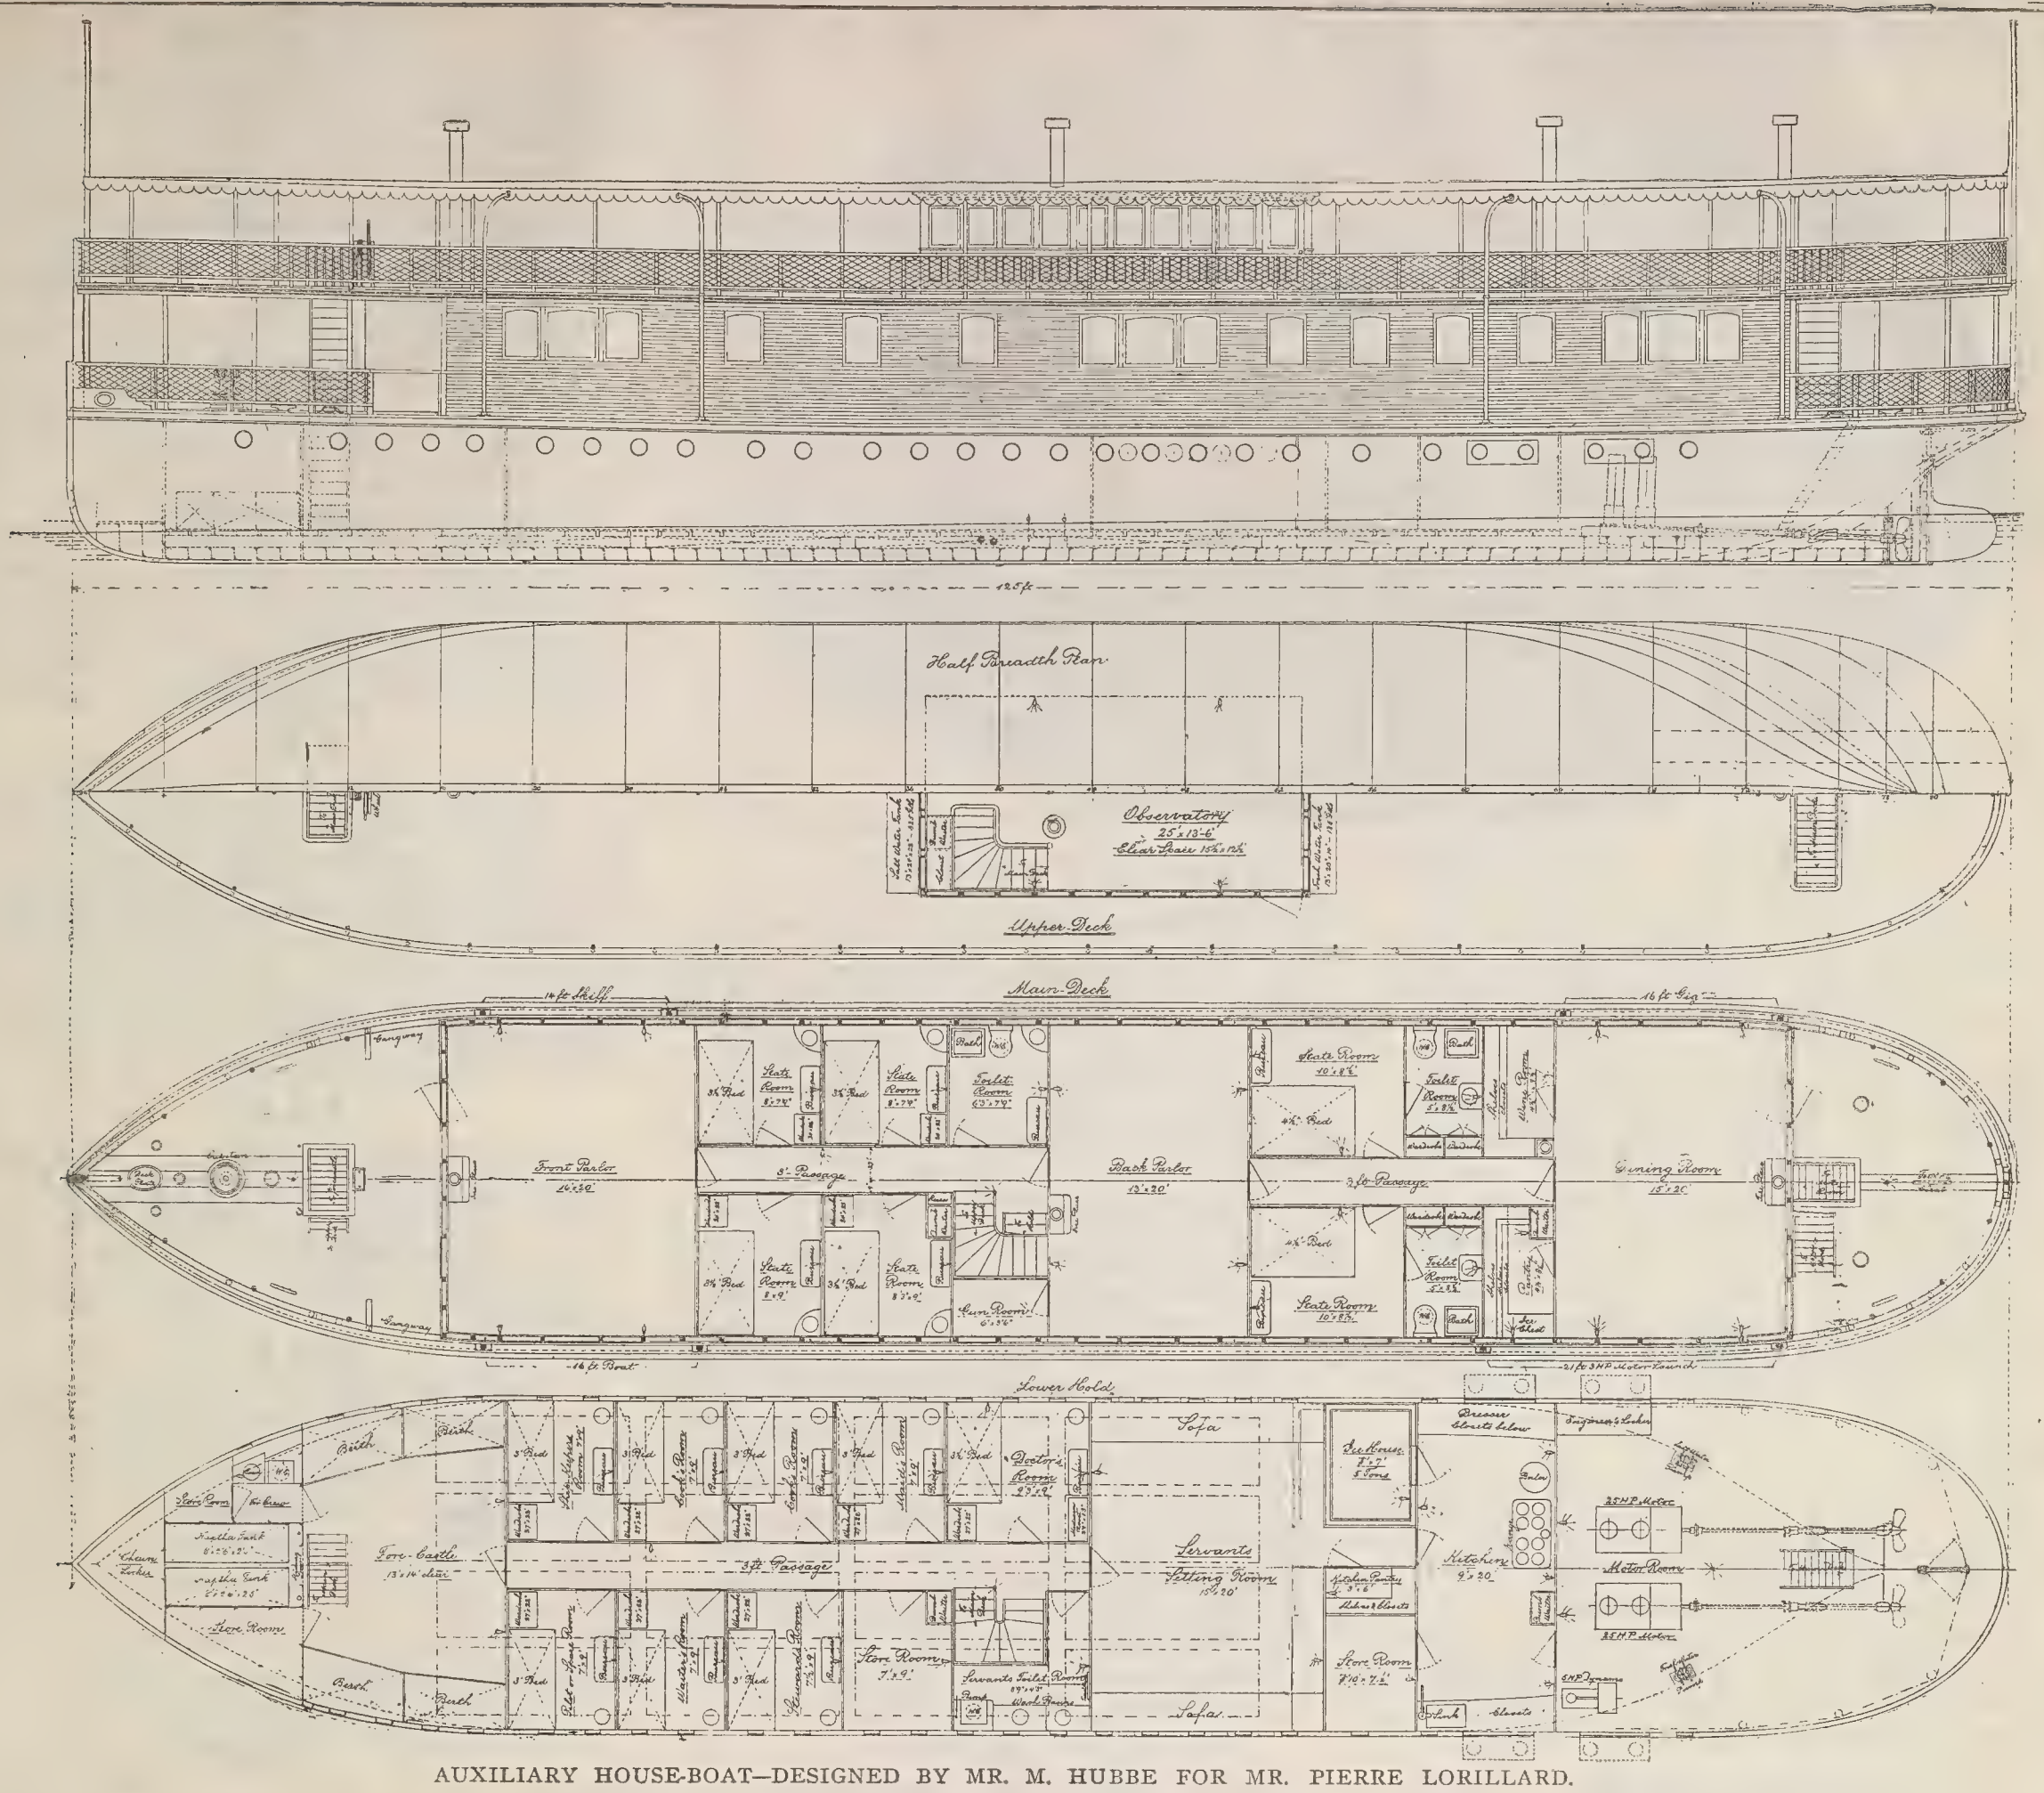
Editor Forest and Stream:

While the FOREST AND STREAM has turned its attention to almost everything within its province with great impartility—barring, of course, a weakness for cutters—there is one class of vessel that I think has not received all the notice its merits entitle it to. The merits and demerits, advantages and faults of the "hundred-tonner" and "half-rater," the canoe and the "sneak box" and the punt have all been discussed at length in the columns of FOREST AND STREAM, but as far as my knowledge extends the gentle, retiring and unobtrusive "ark" or "house-boat" has been singularly neglected. Being one of those who go down to the seaside in arks, it occurs to me to put in a small wee plea for this kind of aquatic property.

Some sort of description of the "house-boat" will, I suppose, be the proper thing at this juncture. Firstly, it consists of a float or flat boat from 16 to 60ft. long (this and all other dimensions and details of this craft are governed by the length of the proprietor's purse) and from 8 to 40ft. wide, and from 17in. to 4ft. in depth. This is built entirely with an eye to strength and durability, and with no pretensions to model; the sides straight, the ends sloping at an angle and the deck perfectly flush and level.

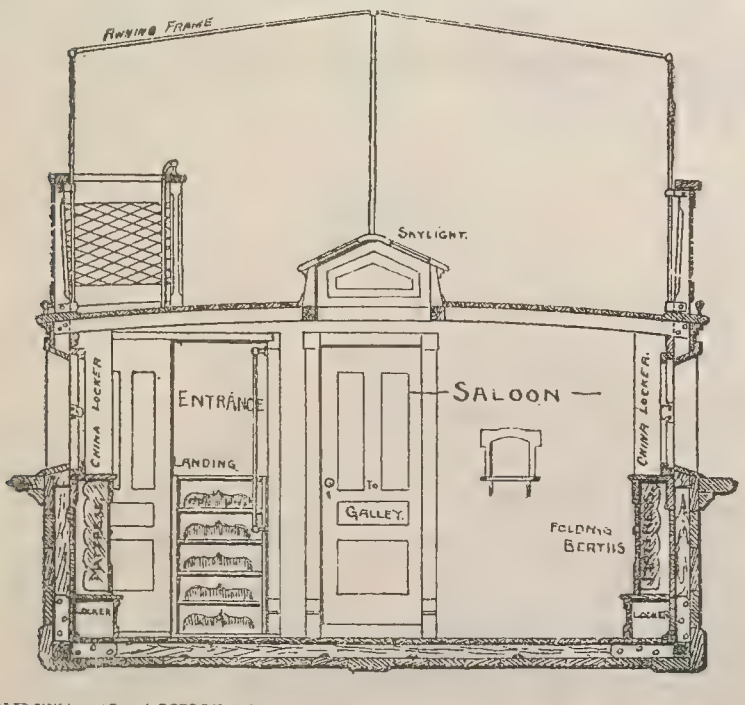


GROUP OF HOUSE-BOATS, SAN FRANCISCO BAY.



AUXILIARY HOUSE-BOAT—DESIGNED BY MR. M. HUBBE FOR MR. PIERRE LORILLARD.

Upon this floating foundation is erected a structure about 8ft. high at the eaves, and from 6in. to a foot higher in the center. There should be no ridge, but the roof should extend in an easy curve from side to side and be covered with painted canvas like a steamer's deck. This will shed water like a duck's back in the heaviest rain storms. The eaves may be carried out over the sides and ends for shelter if desired, and the deck should be so carried out



SECTION—AUXILIARY HOUSE-BOAT—DESIGNED BY MESSRS. CLAY & TORBENSEN.

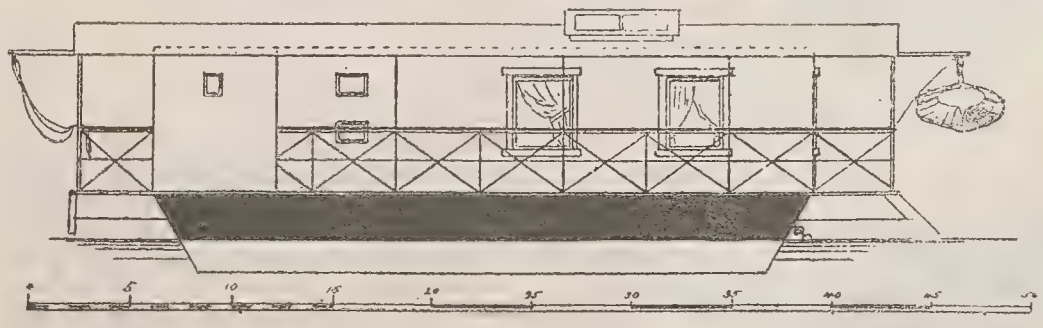
to give a promenade and lounging place all the way round. From the roof at each end boat davits should extend to allow the tenders to be hoisted up for the night, which will prevent their getting alongside and making night hideous by bumping. Note—An ark is a sort of big bass drum and the slightest contact produces a sound in the stillness of the night "fit to wake the dead."

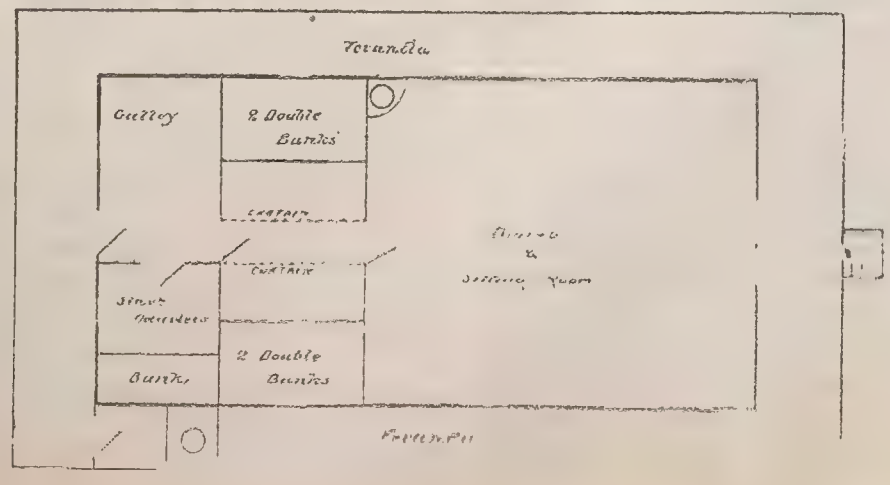
Under the eaves there should be a tank to hold water for the culinary department and another for the wash-stand, or one tank can easily be made to serve for both. These are filled by bringing a barrel of water alongside and pumping the water up into the tanks. On rivers and lakes, of course, this would be unnecessary. It is only on salt water that the barrel is requisite as an intermediary.

The interior may be fitted up as elaborately or as plainly as fancy (or the purse) dictates. A good general plan is, a large living, dining and smoking room. From this a passage leads to the after gangway, having on one side the kitchen and pantry, and on the other a small room for a servant if one is kept. In some of our arks the "Jap" (all the ark servants are Japanese) goes ashore after the dishes are washed, and is seen no more until the next morning in time to get breakfast. While the "arkonauts" are away, swimming or boating, the Jap puts things to rights, making beds, sweeping out, etc. These beds usually consist of a couple of bunks in each corner of the main room as wide as an ordinary double bed, with spring mattresses and all the modern improvements, curtained off and affording accommodations for eight sleepers if necessary.

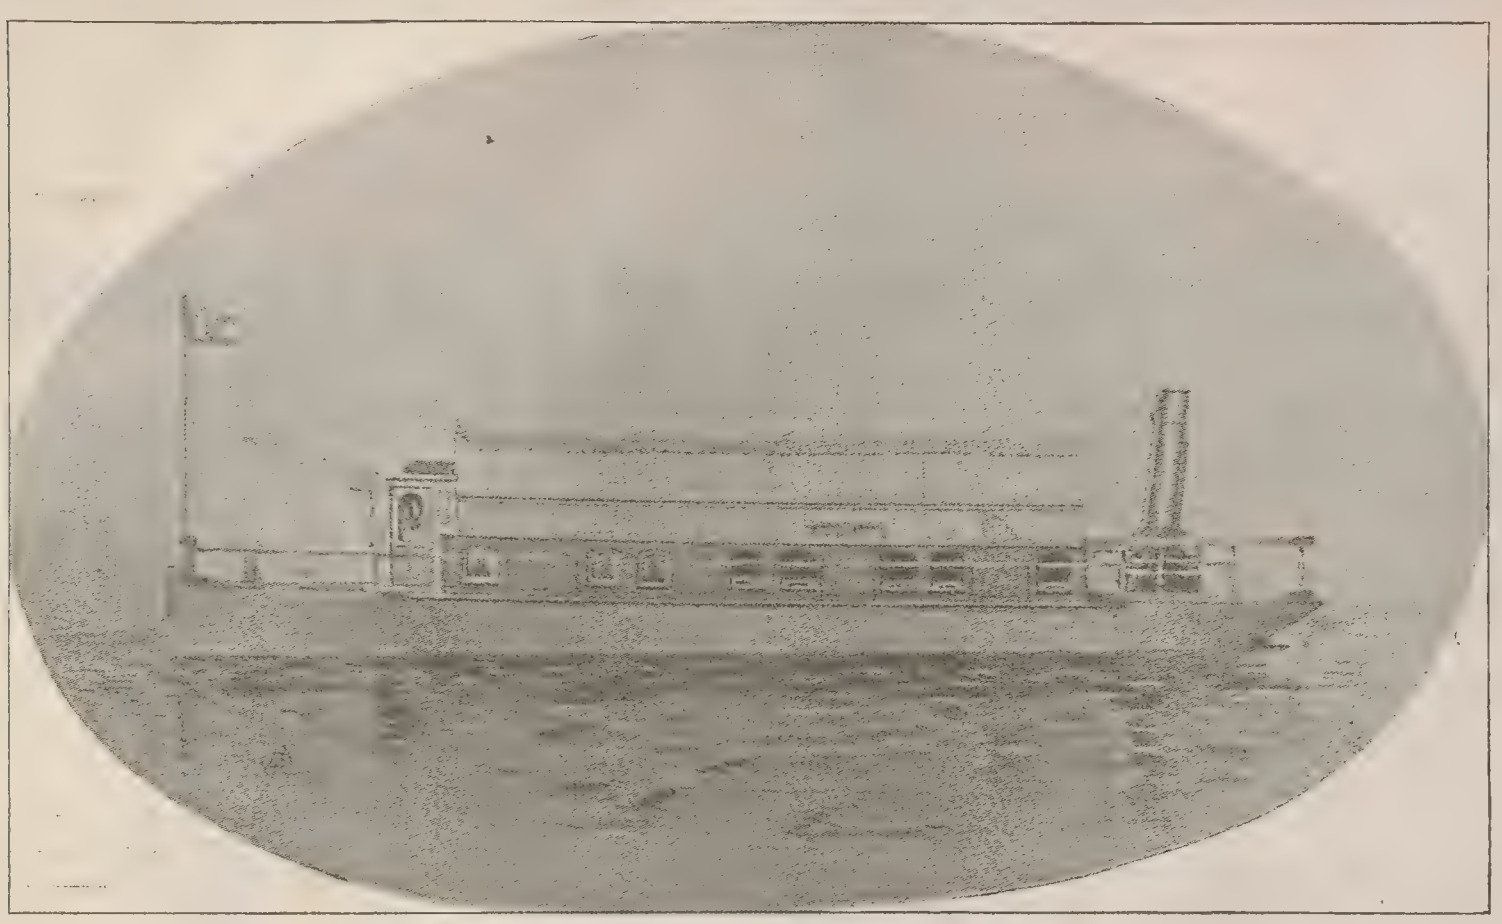
As to the cost of this affair, it, like the dimensions, is a matter to be regulated by the financial ability of the projector. I know one that cost, complete, considerably less than $200, and another whose owner didn't get off much under $3,000. One of the best we have was built by the owner and his friends (clerks in stores) in their spare time. It took a good while to do it, and I'm not at all sure her owner ever will stop work on it, but he and his friends have been living in it all this season. An ark can be just as simple and plain, and just as elaborate and as ornate as you please; so long as the "boat part" is well built, tight and strong all is well; that is the *sine qua non*, there must be no skimping of material there; the spikes must be long enough to hold the planks, and the planks thick enough to hold the spikes and the caulking.

Now as to the uses of the ark, they are diverse, but governed, of course, largely by the environment; one may be towed up some quiet stream where the fishing is good, or where milk and eggs are within call, and left in charge of madam and the young ones, who can amuse themselves rowing, swimming or doing nothing, while paterfamilias hies him to the neighboring railway station on his way to the city and slavery. As the headquarters of a hunting party the ark may be moored in some quiet bay or creek, or on some lake far enough from shore to avoid the blood-





SAN FRANCISCO HOUSE-BOAT, NO. 2



AUXILIARY HOUSE-BOAT—DESIGNED BY MESSRS. CLAY & TORBENSEN.

thirsty mosquito, but near enough to allow one to place himself in touch with civilization through the medium of the telegraph and railway whenever it becomes necessary.

My own ark is moored in a beautiful landlocked cove about five miles from the city, half a mile from the ferry, and a quarter of a mile or so from the yacht club house, and under the shelter of a high promontory, which effectually protects us from the trade winds and the summer fogs which roll in like a dense curtain through the Golden Gate, almost every afternoon. This protecting bluff is covered on its lee side with a dense growth of "tejon" and scrub oak, from amidst which peep out dozens of more or less pretentious villas; anchored about me in all directions are some twenty arks of various styles of architecture, but no two of them alike. In the evening the air is vocal with the twang of the mandolin or the plunk of the more plebeian banjo, while the summer girl and her temporarily best fellow tune their voices in (more or less) melodious concord. Big hanging lamps throw their light through stained glass windows, and are reflected in the phosphorescent ripples as we row by on our way to visit a friend or sit on the verandas idly blowing the after-dinner cloud.

When one grows sleepy, the tender is hoisted up at the davits, the lights put out, we tumble into our bunks, and, lulled by the scarcely perceptible rocking of the ark, and the gentle lapping of the wavelets alongside, sleep as if that were our manifest destiny.

The accompanying plans show the sizes of the California ark, and may be useful to intending house-boaters in other localities.

I have not attempted to go very deeply into details of construction, as that is a matter upon which any local shipwright or even house carpenter can furnish all desired information.

The smaller of these arks is calculated to accommodate two with some degree of comfort. The float is 8 by 16ft., the house 8 by 8, the quarter-deck, where smoking is allowed, 6 by 8.

If built of inch stuff 1ft. wide with the seams covered with ornamental battens 3in. wide, the house will require only three roof timbers and a frame of 2 by 3 scantling at deck and eaves to nail the top and bottom of the siding to, and a piece tying the corner posts together to prevent the roof over the quarter-deck from springing; the roof covered with light canvas and well painted will not leak in a deluge. This thing can be sculled at a respectable speed if it becomes necessary to move to avoid paying "ground rent" or taxes, or meeting your creditors.

The other structure is intended for the use of any number up to eight, being double the length and width of the first. Her strength would have to be proportionately increased, while the finish, appointments and cost may be carried to any extreme prompted by your purse or experience. Her framing would have to be much more elaborate than in the case of the smaller one, being, in fact, not unlike that of a small house.

I will not attempt to give any estimate of cost, as figures based upon the market here would be of little or no value to the majority of your readers. W. B.

SAN FRANCISCO, Cal.

The following letter takes us from San Francisco to Florida:

Editor Forest and Stream:

I inclose sketch of a boat or scow that I used on Indian River a few winters since. Of course it is quite different from the house-boat seen on the Thames, about Kingston and Richmond, but then the cost was no comparison.

On reaching Daytona, Fla., I at first thought of buying or chartering some cabin boat and living on her through the winter, but I remembered the sleepless nights and contracted quarters on such a craft when in Florida years before, and concluded to try a new plan.

Securing the services of a good house carpenter (boat builders want their own way) I selected some well seasoned hard pine at the local saw mill, and in a week's time we had a scow 24 by 8ft., all caulked and bottom covered with tar, and a house high enough for head room, 7ft., of thin stuff plowed and matched, roof slightly crowned, covered with drilling and two good coats of paint, making it weather proof; windows and doors I bought ready made at a small cost. I then purchased at the local stores an outfit of bedstead (full size), mattress, covering, etc., together with an oil stove and a few cooking utensils, groceries, etc., and I was all ready to move into my new quarters. Of course the boat was the subject of much adverse criticism from the natives, and I was the recipient of no end of advice, but I had built boats before and was used to that sort of thing.

For a tender I bought a well-proportioned little skiff or "flattie" about 14ft. long. She was easy to row, and by putting in a small centerboard and rigging up a sprit-sail, I found I had no occasion to use the oars when there was a breeze, which was almost every day. The nights were usually calm except during a norther. I was fortunate in securing an old mushroom or mud anchor and some fathoms of chain, enough to hold the craft in any situation I was likely to be anchored.

To abbreviate, I found the boat a great success, anchoring far enough out in the river to insure quiet. I spent a few days at each town along the river, dropping down with the tide gradually, as far as the Inlet, from this to Mosquito, some twelve or fifteen miles. I was towed by one of the small steamboats running between Daytona and Titusville, at a moderate cost.

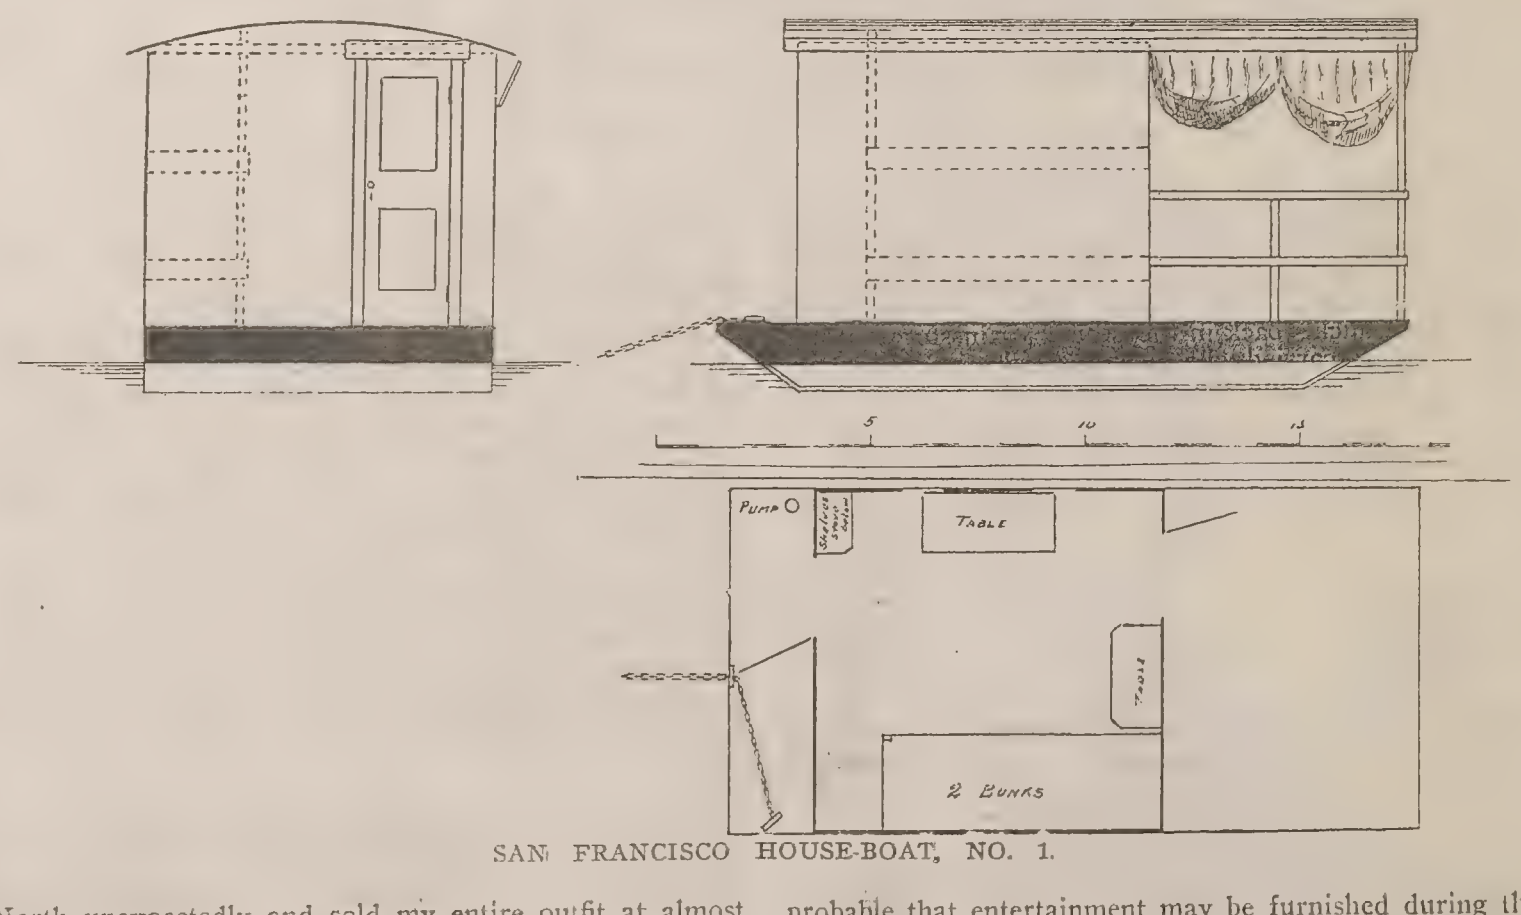
Mosquito Lagoon is pretty wide and exposed, so I worked down to the Haulover Canal with a favoring north wind and through into Indian River and across to Titusville. Here I anchored some two weeks, and securing an old spar and piece of canvas I rigged up quite a respectable mast and square sail, and bolting a lee board on each side, I found with any kind of fair or quartering wind my house-boat was as manageable as some catboats. I steered with a large oar on a pin over the stern.

From Titusville I cruised the entire river almost as far as St. Lucie and Eden, stopping as long as I felt inclined at the various places en route. I was obliged to return North unexpectedly and sold my entire outfit at almost first cost to a man clearing a piece of land for pineapples, who, I learned afterward, hauled the boat on shore and made it a permanent residence.

Regarding the cost, as near as I can remember, boat all complete, tender, anchor, sail, etc., cost about $150. I am sure my expenses for groceries and other eatables were not over $1.50 to $1.75 weekly. Fish, oysters, oranges, etc., cost nothing, visitors being usually allowed to help themselves to oranges lying on the ground in most of the groves. Occasionally the mosquitoes were troublesome, but I had a good net and never lost my sleep on their account. I would add that the boat was divided into two rooms, forward being the reception and sleeping room, and aft the kitchen and general repair shop.

Any one wintering on Indian River will get more comfort from this plan than living at a hotel or cramped up on a sailboat or yacht. The scow drew but 8in. Perhaps after a year or two she might have settled deeper in the water, but not much. E. D.

The publishers of FOREST AND STREAM will be glad to receive from designers, builders and all those interested in house-boats plans, photographs and descriptive articles on this subject.



SAN FRANCISCO HOUSE-BOAT, NO. 1.

Yacht Club Notes.

There was a large attendance at the annual meeting of the Larchmont Y. C., held at Delmonico's, Fifth avenue and Forty-fourth street, on Feb. 20. The prizes won during the past year were exhibited.

The secretary reported that there were 296 yachts in the fleet; that during the year 72 new members were elected and 5 were reinstated; there were 27 resignations and 11 deaths.

The trustees reported that the club had 600 regular members, 50 life members and 17 army and navy members, making a full membership according to the constitutional limit, and that there is now a waiting list. Fifty-two members have been elected since Jan. 1.

Some amendments to the racing rules were made, and it was announced that Commodore Adams will offer prizes to be sailed for in the coming season, to be known as the Adams Cups. The particular events for which these prizes will be offered will be decided by the Board of Trustees and the Regatta Committee.

The following officers for the coming year were unanimously elected: Com., Frederick T. Adams, schooner Sachem; Vice-Com., Wilson Marshall, schooner Atlantic; Rear-Com., James Baird, sloop Hussar II.; Sec'y, A. Bryan Alley; Treas., William Murray; Meas., John Hyslop; Trustees, to serve three years, William B. Jenkins and Edward J. Greacen; Trustee, to serve two years, to fill vacancy, Edward S. Hatch.

* * *

At the annual meeting of the Yachtsmen's Club, held at the club house, 47 W. 47th street, on Feb. 19, the following officers were elected for the coming year: Pres., David Banks, Commodore of the Atlantic Y. C.; Vice-Pres., Frederick M. Hoyt, Commodore of the Stamford Y. C.; Sec'y, E. M. MacLellan, Secretary of the Manhasset Bay Y. C.; Treas., Philip G. Sanford, Atlantic Y. C.; Trustees, C. Eckert, Cliff Haven Y. C. and C. T. Pierce, Riverside Y. C. The following new members were elected: E. V. Sumner, New York Y. C.; E. Hope Norton and George Hill, Atlantic Y. C.; H. B. Yates, E. K. Greene and H. M. Molson, Royal St. Lawrence Y. C., and G. H. Chasmar, Norwalk Y. C.

* * *

At a meeting of the Knickerbocker Y. C.; held Feb. 20, at the Hotel Manhattan, it was decided to apply to the Yacht Racing Union of Long Island Sound for the first Saturday in June as the date of the annual regatta of the club. It was stated that of the bond issue of $7,500 on account of the extension of the club house at College Point, bonds to the value of $1,800 had been canceled in the past year.

* * *

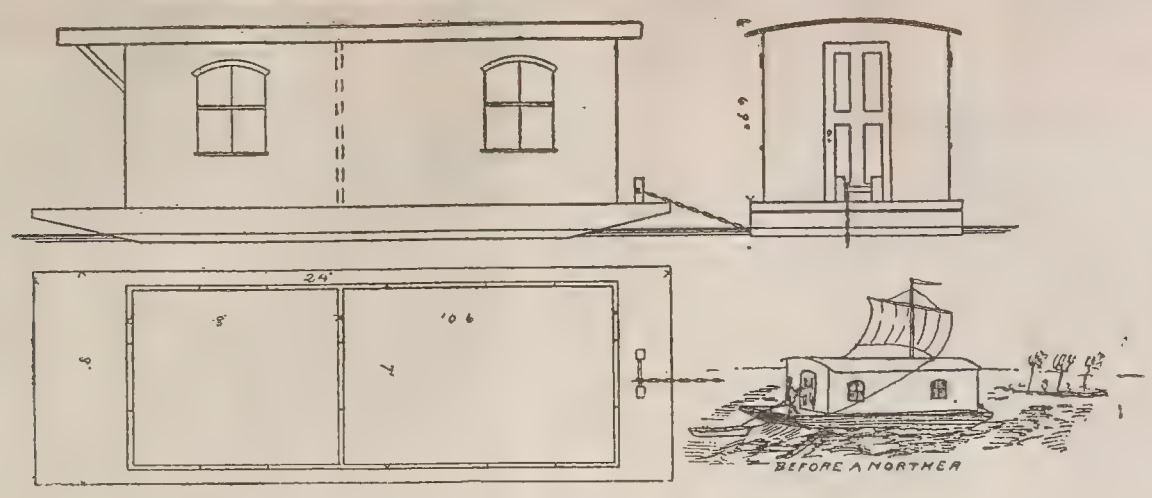
The "fitting out" dinner of the Manhasset Bay Y. C. will be given on Saturday evening, March 2, at 7 o'clock at the Yachtsmen's Club, 47 West Forty-third street. The purpose of this dinner is to encourage mutual intercourse and a general and complete acquaintance among the old and new members. More than double the number of men have been admitted to membership this year than were elected during the same period last year and it is requested that each member will so far as possible bring as his guest a friend or friends whom he can indorse for membership. There will be no speechmaking, and it is probable that entertainment may be furnished during the course of the evening.

The following proposals for membership are published in pursuance of the constitution: Mr. Howard Gould, 824 Fifth avenue, New York city; Mr. Clarence P. Wyckoff, 18 Wall street, New York city; Mr. Stanton Whitney, 103 West Fifty-fourth street, New York city; Mr. Glenworth D. Borden, 36 Broad street, New York city; Mr. J. Butler Wright, 42 West Ninth street, New York city; Mr. C. W. Scott, Port Washington, N. Y.; Mr. Edwin Stevens, 65 West Thirty-fifth street, New York city; Mr. Stephen H. P. Pell, 542 Fifth avenue, New York city.

* * *

Mr. William Gardner, the designer, talked to the members of the Yachtsmen's Club, 47 West Forty-third street, on Wednesday evening, Feb. 20, on "The Racing Yacht: Its History, Development and Design." Mr. Gardner treated the subject in a most interesting and comprehensive manner.

Emperor William has informed the Heligoland Cup Committee that in consequence of the death of Queen Victoria the race for the cup will not be sailed this year.



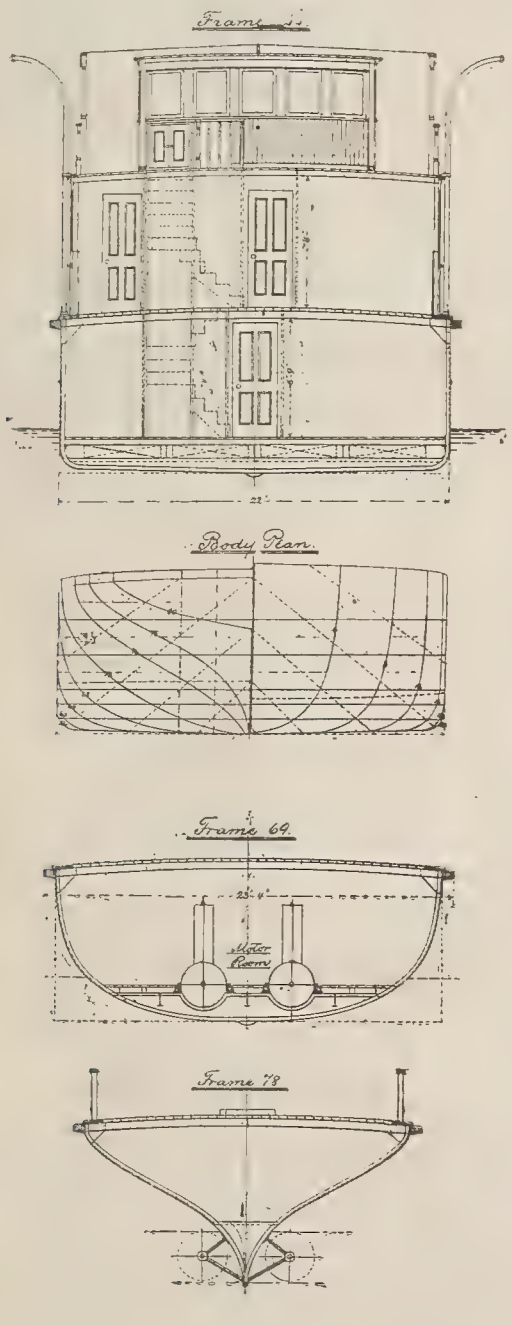
FLORIDA HOUSE-BOAT.

YACHTING NEWS NOTES.

The 51-footer ordered by Mr. J. Rogers Maxwell from the Herreshoffs will be ready by the time the season opens. Mr. H. W. Maxwell has sold his raceabout Snapper to Mr. A. Bryan Alley, who will put a larger sail spread on her and race her in the 25ft. class for sloops. Mr. Harry Maxwell has purchased the 36-footer Effort.

Mrs. Herreshoff, mother of the yacht designer Mr. Nat Herreshoff, died at her home in Bristol, R. I., on Feb. 19.

A contract for another new yacht has been placed with the Gas Engine and Power Co. and Charles L. Seabury & Co. The boat is to be an auxiliary yawl, 76ft., 6in. over all, 52ft. long on the waterline, 17ft. beam and 7ft. 6in. draft. She will be a keel boat, and will have a flush deck. Forward will be the crew's quarters, the galley and sailing master's stateroom. Next aft are two staterooms, with a passage between them. The main cabin is 11ft. long and runs the full width of the boat. The power



STEEL TWIN-SCREW HOUSE-BOAT

will consist of a 25 horse-power gasoline engine. The same firm is also building a launch for Gen. J. R. Brooke, Quartermaster's Department, Governor's Island. This boat will be 45ft. long by 10ft. beam. She will have a speed of 12 miles an hour.

Mr. Amzi L. Barber, N. Y. Y. C., has sold the steam yacht Shemara to the New South Wales Government. The yacht has arrived at Bermuda from Havana, and there will be delivered to her new owners. The crew will return to New York by steamer, and an English crew will be put aboard to complete the voyage.

The 21-footer Cohasset knockabout Oriole has been sold by Mr. John E. Wayland, through the agency of Huntington & Seaman, to Mr. E. B. Pinckney.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Trapshooting.

Fixtures.

Feb.28—West Chester, Pa.—Eighth annual live-bird shoot of the West Chester Gun Club. F. H. Eachus, Sec'y.
March 2.—New York.—Two-week Roof Garden tournament of the National Sportsmen's Association. Capt. J. A. H. Dressel, Sec'y.
March 19-21.—Asheville, N. C.—The Peters Cartridge Company's two days' target tournament. Maj. E. P. McKisseck, Sec'y. John Parker, Mgr.
March 21.—Newell, Ia.—Newell Gun Club's target and live-bird shoot. Henry G. Hall, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.
Feb. 27.—Interstate Park.—Team race, a New York team vs. a New Jersey team, at 1 o'clock. Sweepstake shooting commences at 10 o'clock.
April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap Tournament at Live Birds.
June —.—Interstate Park, Queens, L. I.—Forty-third annual tournament of the New York State Association for the Protection of Fish and Game.
Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds; $5 entrance. First contest took place June 20, 1900.
Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap tournament at live birds. Edward Banks, Sec'y-Treas., 318 Broadway, New York.
April 17-18.—Jacksonville, Fla.—The Interstate Association's tournament, under the auspices of the Jacksonville Gun Club. B. W. Sperry, Sec'y.
May 8-10.—Memphis, Tenn.—The Interstate Association's tournament, under the auspices of the Memphis Gun Club.
June 19-21.—Cleveland, O.—The Interstate Association's tournament under the auspices of the Cleveland Gun Club.
July 1-2.—Sherbrooke, P. Q., Can.—The Interstate Association's tournament under the auspices of the Sherbrooke Gun Club. C. H. Foss, Sec'y.
July 10-11.—Jamestown, N. Y.—The Interstate Association's tournament, under the auspices of the Jamestown Gun Club. Dr. C. Rawson, Sec'y.
July 23-26.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York.
Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament under the auspices of the Providence Gun Club. R. C. Root, Sec'y.
Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

In the Carteret championship contest, a rather novel point came up for adjudication. In the seventy-second round, Mr. Harold Money at the score, the trap did not open in response to the command "Pull." After an appreciable interval, Mr. Money turned to the referee, at the same time breaking his gun, and inquired as to the cause of the delay. At that juncture the trap was pulled and the bird escaped without being shot at. The referee declared the bird lost. It was rather an exceptional hardship to the plucky young shooter, since there was much to justify a "no bird," a little to justify a "lost bird." First of all the bird had not been offered at the call of pull; second, an extreme delay might easily be interpreted that the bird was not to be released at call; third, the rule of the Carteret Gun Club on this point reads as follows: "If in the opinion of the referee, the shooter is balked by any antagonist or looker on, or by the trapper, whether by design or otherwise, he may be allowed another bird." Let us suppose that the shooter calls "Pull," and that the trap is not opened there after for half a day, what is the shooter to do? That reduces the matter to an absurdity, and shows that after a reasonable time he may assume that the trap is not to be opened and act accordingly.

Admiral Courtney, imperturbable and dignified, as is his wont, was a visitor in the gun colony of New York in the early part of this week. While leaving the zephyr and sylphlike to the four-hundred as a specialty, the Admiral is most successful as a man of deeds. Witness his performance at the last G. A. H.! Had the shoot-off been on the high seas, that brute of a bird, shot flatly to the ground, would not have escaped beyond the boundless ocean. A bird falling into the salt water would have a more serious problem than if falling on dry land. The Admiral killed 25 and some more straight any way in the last G. A. H.

In the high averages of the Hot Springs tournament, Mr. W. R. Crosby led all the competitors with an average of .955. Gilbert was second with .943. Heikes was third with .933. Fanning was fourth with .925. On Thursday afternoon, in the ninth event, the squad whose members were Messrs. Heikes, Gilbert, Fanning, Burnside and Crosby broke 99 out of 100 targets. An account of the shoot, interestingly reported by Mr. F. C. Riehl, will be found elsewhere in our trap columns this week.

The victory of Mr. Harold Money in the contest for the championship of the Carteret Gun Club, on Thursday and Friday of last week, ranks in the first class. The conditions were 100 live birds, $100 entrance, 30 yards boundary. The birds were extra good, the weather conditions were favorable to the birds, and the competitors were performers of known skill and ability. Mr. Money killed 88, and won the trophy and the honors.

Mr. John Popp, the President, writes us as follows: "The Michigan State Trap Shooters' League will hold its first annual tournament at Saginaw, Mich., on May 28, 29, 30, under the auspices of the East Side Gun Club, of Saginaw. The tournament will be under the management of Mr. John Parker, of Detroit, Mich., and will be at both live birds and targets. It will be open to all, and $300 in cash will be added to the purses.

The preparations for the Roof Garden Tournament are in an advanced stage. Mr. Elmer E. Shaner arrived in town during the latter part of last week, and found the preliminary work well begun. The installation of the magautrap, the completion of the platform and back stop, etc., will be all done by Thursday of this week, or Friday at the latest, so that the shooting may commence at the appointed hour without any delay.

After winning the Carteret championship, Mr. Harold Money engaged in a miss and out, and stood at the 33 yard mark, the extreme back mark of the club. He killed 17 straight and won. He shot in finished form. While all this proves that Mr. Money is a great shot indeed, it also proves that the modern gun and ammunition is not handicapped at 33 yards.

In a team shoot at Washington Park, Gloucester City, Pa., Feb. 22, $25 a side, 3 birds per man, Hurlingham rules, the scores were as follows: Alexander Pierce killed 3; John Pew, 2; J. Brown, 2; W. J. Thompson, Jr., 2; S. F. Fluegelman, 2. Total, 11. E. Butler, 3; J. Redfield, 2; James Smith, 2; Charles Burdsall, 1; William Spencer, 1. Total, 9.

Mr. Harry Kirkover, the skilful and poular shooter, of Batavia, N. Y., made a visit to the gun colony section of New York, which in the shooting world is the shooting axis of the effete East. He was enthusiastic in his plans for the tournament to be held in conjunction with the forthcoming Pan-American Exposition, at Buffalo.

Mr. Gus Grieff, of Von Lengerke & Detmold, 318 Broadway, informs us that an Eastern championship at live birds will be inaugurated in the near future, at 25 or 50 birds, for a trophy, entrance nominal. This should fill a field which at present is unoccupied.

Mr. C. M. Grimm, of Clear Lake, Iowa, suffered the misfortune of a broken ankle recently, while engaged in his vocation. The many friends of this eminent shooter will deeply deplore the grievous occurrence, as we do. We wish him a speedy recovery.

The match between Dr. A. A. Webber and Mr. S. M. Van Allen, at one-hundred live birds each, at Interstate Park, on Feb. 19, was won by Mr. Van Allen, by a score of 94 to 88. He took the lead in the fourth round and never was caught.

On Feb. 22, at Riverton, N. J., in a 10-bird race, with a large number of contestants, Mr. J. G. N. Whittaker won in the shoot off. On Feb. 19 Mr. Thomas Jenkins won a silver cup donated by Mr. Alburger, at Riverton. He killed 30 straight.

In a team contest, ten men on a side, between the Allentown Rod and Gun Club and the Keystone Gun Club, of Lebanon, at the Duck Farm Hotel, Allentown, Pa., ten live birds per man, Keystone won by a score of 74 to 67.

The regular contest of the Oceanic Rod and Gun Club, at Rockaway Park, L. I., will be held on March 4. Trains leave East Thirty-fourth street station and Flatbush avenue at 11 o'clock A. M. Targets $1.50 per hundred.

The Peters Cartridge Company announces an amateur tournament at Binghamton, N. Y., April 24 and 25, to which will be offered $150 added money. Mr. John Parker will manage it. Mr. H. W. Brown is the secretary.

At the Peters Cartridge Company's Mardi Gras tournament, at New Orleans, Feb. 15 and 16, Mr. Blunt, of Greensboro, Ala., won the trophy for the highest average, scoring 323 out of a possible 350 targets shot at.

On the grounds of the Ambler Gun Club, Ambler, Pa., Feb. 22, a target tournament was held. The prizes were mostly merchandise. Messrs. Pfleger and Conway were the greatest winners.

There will be an interseting shoot of the Herron Hill Gun Club, of Pittsburg, on the club's grounds on Davis Island, on March 6, for a silver cup donated by Mr. G. E. Painter.

BERNARD WATERS.

ON LONG ISLAND.

Sheepshead Bay Rod and Gun Club.

Sheepshead Bay, L. I., Feb. 22.—The club handicap of the Sheepshead Bay Rod and Gun Club, held to-day, was won by Dr. O'Connell, after shooting off the tie with Messrs. Ira McKane, J. J. Pillion, Kronika and Dr. Wood. The scores follow:

W Van Pelt, 27	1012022—5	M J Rauscher, 25	0020002—2
I McKane, 28	2220222—6	F Brown, 23	0011002—3

Van Allen vs. Webber.

Interstate Park, L. I., Feb. 19.—The match between Dr. A. A. Webber and Mr. S. M. Van Allen at Interstate Park to-day was won by the latter by a margin of 6 birds, the scores being 94 and 88. From the fourth round to the finish Van Allen held the lead, and won with something to spare. The scores follow:

S M Van Allen, 30	2222222222222222222222222—25

The Carteret Championship.

THE Carteret championship, the great annual event of the Carteret Gun Club, was shot on the grounds of the club at Garden City, L. I., on Feb. 21 and 22. Each year the honor has been earnestly contested, this year being no exception.

The trophy was beautiful as a work of art, and intrinsically valuable. It was donated by Mr. William Payne Thompson, and was valued at $400 by the club. It was probably worth much more really.

The conditions were 100 live birds, $100 entrance, money to be divided 40, 25, 15 and 10 per cent., and 10 per cent. to the club. All shooters stood at 30yds. Each day each contestant was allowed one bye bird. In case of twelve entries or more the following rules were announced to govern: "The shooter who misses 10 birds by the time the 50th round was finished, and thereby becomes 10th in place or lower, shall drop out without the privilege of re-entry. The shooter who misses 16 birds by the time the 75th round is finished, and thereby becomes 8th in place or lower, shall drop out without privilege of re-entry. From the 75th round up to the finish the referee shall retire, with privilege, those shooters who, in his opinion, have no chance of sharing in the moneys. Entries will be received up to the first round on the day of the shoot. The referee shall continue the first day's shooting as long as in his estimation the light holds good, or as may be desirable to facilitate completing the event."

The shooting on the first day, Thursday, was concluded at the end of the 45th round. At that juncture Dr. T. C. Wilson, of Savannah, Ga., was 1 bird in the lead, having killed 41, with Harold Money and C. A. Painter, of the Herron Hill Gun Club, but 1 bird less.

The birds were an excellent lot of special birds. Birds and weather conditions combined to test the skill of the contestants to the utmost, for there was a driving, strong, cold wind, which helped the birds wonderfully, and they flitted out of the 30yd. boundary in a twinkling if not shot at promptly or accurately.

There were seventeen contestants. At the end of the 5th round the prospects for good scores were small indeed, for but two, Messrs. Harold Money and H. Kirkover, had killed 5 birds straight, the others having missed from 1 to 4 of their first 5.

On the second day the weather conditions were more favorable for good shooting, the wind blowing from 4 o'clock, not being so strong.

At the finish there was close work between Messrs. Harold B. Kirkover and Col Tom Martin. Mr. Money came out victor by 1 bird, the other two above mentioned being but 1 bird less. The win was an exceedingly popular one. Considering the excellence of the birds, the hard weather conditions, and the narrow boundary, the score was of a high order and deserving of much praise. The fact that so many seasoned and tried shots, of known ability, failed to do so well is the best testimonial to its merit.

Mr. Walker Breese Smith, of Tuxedo, acted as referee.

IN NEW JERSEY.

Trenton Shooting Association.

Trenton, N. J., Feb. 22.—The holiday shoot of the Trenton Shooting Association was a distinct success. Ninety entered in the first event.

Wilson Harding won the $35 Colt's revolver in the shoot-off with William Widman by 10 straight.

Sixteen tied for the second prize, and in the shoot-off Mickel won.

Seventeen tied with 8 targets for the third prize, and in the shoot-off Widman won.

The booby prize was won by F. W. Thropp after a miss-and-out of 20 targets.

Secretary Thomas badly injured his knee and was compelled to limp around the grounds.

The scores were as follows:

First prize, Colt's automatic revolver, valued at $35, 10 targets per man: Tied with 10, Harding and Widman; tied with 9, Thomas, Pickett, Albury, Harding, Mickel, Sinclair, Widman, Taylor, J. Thropp and Emmons; tied with 8, Jaques, Vanarsdale, Widman, Dale, Cartlidge, Taylor, Cole, Williams, Messler, Mack, Thomas and T. Thropp; tied with 7, Mickel, Sinclair, Firth, Taylor, Cole, Harding, Comp, Prickett, Thomas, Emmons, Wilson, Borden and F. Thropp; tied with 6, Prickett, Jaques, Gaskill, Wilson, Emmons, Vialcovitch, Williams, P. Thropp, White, Maddock and Mack; tied with 5, Albury, Cartlidge, Borden, J. Thropp, Coates, Mack, Ginnelly, Prickett, Thomas, and P. Thropp; tied with 4, Bowers, White, P. Thropp and Wilson; tied with 3, Borden, Sinclair, F. Thropp and Jaques; tied with 1, Pettit, C. Maddock; tied with 0, Cole and F. Thropp.

Shoot-off of ties for first prize, miss-and-out:

Harding	111	Widman	110

Second prize, $5 in gold:

Albury	1111110	J Thropp	10
Thomas	11110	Harding	10
Emmons	0	Prickett	10
Widman	111110	Cole	11111110
Messler	1111110	Mickel	111111111
B Sinclair	111111110		

Third prize, $2.50 in gold:

Jaques	0	Cartlidge	0

Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., Feb. 23.—Sixteen contested in the club handicap. The birds were an exceptionally good lot, and the day favored good work.

The main event was the club handicap at 10 birds, in which sixteen shooters took part. Vandergrift, Orth, Henry, McCoy and Felix finished with straight scores. Geikler, Russell, Darby and Francotte scored 9, Geikler's miss being a dead out of bounds.

Club handicap, 10 birds, handicap rise, open sweepstake, entrance $2.50:

J Orth, 29	2221212122—10	W Francotte, 30	2022222222— 9
H Henry, 30	2121111121—10	A Daly, 30	2202222*22— 8
F McCoy, 30	2222222222—10	J Campbell, 29	02222*0122— 7
J Vandergrift, 30	2222121122—10	F Van Loon, 30	12*1100202— 6
A Felix, 30	2222222222—10	F M Hobbs, 30	2*2*2102o1— 6
C Geikler, 29	22212*2222— 9	W Wilson, 29	1*20022001— 5
E Russell, 29	2220212221— 9	G Bell, 29	0101210200— 5
Dr Darby, 29	2220222222— 9	C Fitzgerald, 30	1*2000*002— 4

A sweepstake event at 8 birds followed, and Henry carried off first money alone. Fitzgerald missed his last and McCoy's first fell dead out of bounds. The next event was at 10 birds, and Vandergrift and Daly killed all their birds. Hobbs lost his second dead out, and Darby missed his last after killing 9 straight. Geikler and Orth also killed all their birds in this event, but each lost 1 dead out of bounds.

Two miss-and-out events wound up the day's sport. In these the men shot from the 26yd. mark, gun below the elbow, and one barrel. In the first Felix, Vandergrift and Henry divided first money with 3 kills, and in the second Felix and Henry divided on 4 birds.

On Washington's Birthday there was an open handicap, 20 live birds, entrance $10. The scores:

A J Felix, 29	22222222222211221222—20
C Fitzgerald, 30	12212111120110222221—18
H L Landis, 30	*22222222222212011122—18
I W Budd, 30	12112121222212201201—18

J Schenck, 27	00020022022000222000— 8

Miss-and-out sweepstake, live birds, entrance $1; Hobbs 7, Budd 7, Russell 7, Orth 7, Morris 7, Schultz 7, Geikler 5, Wynn 4, Ridge 4, Landis 3, Fitzgerald 2, Felix 2.

Forester Gun Club.

ALBANY, N. Y., Feb. 23.—The annual midwinter tournament of the Forester Gun Club, held on Washington's Birthday, was a success in every way. The attendance was larger than usual, and the weather conditions were all that could be expected at this season of the year. There was just enough breeze from the south to give the targets an uncertain flight at times, and this kept the boys guessing. The programme called for ten 15-target events, with a total entrance of $12.50. The purses were divided in four moneys. The scores:

H. VALENTINE.

Like Picking Up Money.

In every city, town and village in the United States where there is shooting or fishing or yachting we want agents to canvass for subscriptions for FOREST AND STREAM. Every sportsman is deeply interested in its subjects, and every sportsman is glad to discuss his doings afield and to hear of the adventures of other sportsmen.

Money is to be made by canvassers for FOREST AND STREAM, and those who wish to take advantage of the opportunity we offer should send for premium list and circular.—Forest and Stream Publishing Company, 346 Broadway, New York.

Peters Cartridge Co.'s Tournament at New Orleans.

THE Mardi Gras shoots of the Peters Cartridge Company opened up under very auspices circumstances as regards weather, attendance, etc., on the grounds of the City Park Gun Club, New Orleans, Friday, Feb. 15. Shooters were in attendance from Pennsylvania, Illinois, Ohio, Michigan, Mississippi, Alabama, Texas and Louisiana. The trade was represented by Messrs. Kaufman, King and Parker, of the Peters Cartridge Company, and King Powder Company, of Cincinnati, and Mr. Faurote, of the Winchester Repeating Arms Company.

The shoot was very ably managed by Mr. John Parker, of Detroit, who was assisted by Mesrs. Kaufman and King, and gun club members. Mr. Blunt, of Greensboro, Ala., won the average trophy donated by Peters Cartridge Company, making a total of 323 out of 350 targets shot at.

Mr. King, of Peters Cartridge Company and King Powder Company, did himself proud in a shooting way; in fact, he was shooting so strong that in a special race for a Greener gun at 25 targets he was backed against the field by some gentlemen on the ground, and made a score of 24 out of 25, dusting very hard the bird that was scored lost.

Messrs. Faurote, Blunt and Parker broke 25 straight in same race for gun. This shoot has created an impetus to trapshooting in New Orleans.

The local shooters—Messrs. Miller, Saucier, Stutte, Sinnot, Lee, Pourseine, Jackson, Kaufman, McMurdo, Benedict, Tiblier, Williams, and Lhote—were very much in evidence, shooting nearly through the entire programme. About 8,000 targets were thrown.

Mr. Emil Werk and Fred Bader, of Cincinnati, visited the shoot on the first day.

Maurice Kaufman, the genial and popular Southern representative of Peters Cartridge Company, was here, there and everywhere, making it pleasant for all the visiting shooters, making friends for himself and company all the time.

The scores are appended:

First Day, Friday, Feb. 15.

Gottlieb—De Long Match.

PRELIMINARY to the annual Hot Springs tournament, an individual match was shot on the afternoon of Saturday, Feb. 16, between C. E. De Long, of Hot Springs, and Chris Gottlieb, of Kansas City. The match as originally arranged was at 50 live birds per man, for $50 a side. However, Mr. De Long labored under the disadvantage of having a gun out of repair, so that it was not sure of fire on the second barrel. He started in to shoot the race in very good style, but working under this difficulty lost 3 birds in the first 25, and finally on the 31st round the contestants agreed to call the match off, Mr. De Long agreeing to pay for all birds shot at by both parties, and another match was aranged to follow immediately at 20 birds per man, one barrel only, 30yds. rise. This was a pretty stiff contract—more so, perhaps, than either man realized, for the birds were a fast lot, and most of them got away without a moment's hesitation. Up to his 31st bird in the first race Mr. Gottlieb shot in superb form, killing all his birds stone dead without a scratch; but in the one-barrel contest both contestants found themselves compelled to shoot in different time, and the black powder bushwhacker, in the person of the Arkansas small boy, got a chance to show his hand up on the mountainside.

Mr. Gottlieb won with 2 birds to the good. The scores:

First match, both barrels:

Gottlieb	22222222212221222122222222222222—31
De Long	22222022221220222212221122*221011—27

Second match, one barrel only, 20 birds, 30yds. rise:

Gottlieb	101*1011111000111011—17
De Long	01010011001010011111—11

F. C. RIEHL.

Frankford Gun Club.

FRANKFORD, Pa., Feb. 23.—The first of a new series, which calls for a contest every two weeks, commencing Feb. 23; also on the first and third Wednesdays of each month. At the known angles Brown, George, Meyers, Smith and S. B. Coverdale were the high men, each breaking 20. At unknown angles S. B. Coverdale was the high man with 22. The contest resulted in a tie between Dr. Smith and Howard George with 40 out of 50. Newcomb and Coverdale not being members of the club, were not eligible for the prize. In the shoot-off of the tie at 10 targets Smith won by breaking 8, George 5.

Twenty-five targets, known angles: Brown 20, George 20, Meyers 20, Smith 20, S. B. Coverdale 20, Redifer 19, Newcomb 19, Green 18, Krier 16, Baker 15, W. Coverdale 14, Bender 14, Riotte 10, McMichael 15, E. Dawson 9, J. Dawson 6.

Twenty-five targets, unknown angles: S. B. Coverdale 22, Newcomb 21, Redifer 20, George 20, Smith 20, Green 19, Meyers 19, Krier 19, McMichael 18, Brown 15, Baker 14, Bender 14, Riotte 10, E. Dawson 7.

Total of 50 targets for the prize: George 40, Smith 40, Redifer 39, Meyers 39, Green 37, Brown 35, Krier 35, McMichael 33, Baker 29, Bender 28, Riotte 20, E. Dawson 16.

The Hot Springs Annual.

Two score of the best known and most competent trap shots in these broad United States have been spending the present week in friendly but determined contest for honors at both target and live bird shooting. This is the fourth time the boys have come together here at these midwinter tourneys, and the time and place has seemed so opportune and so fitting that this has about come to be recognized as one of the features of the game, to be anticipated with pleasure and figured in as an important factor in the record of the year's work.

There was a departure from old arrangements this year in that the local gun club ceded the entire management of the occasion to the Whittington Park Association, of which Capt. H. O. Price and his son, the genial R. E. Price, are the active heads. Quite as a matter of course, gun club members, and in fact every one in Hot Springs, worked together for the success of the occasion, but to the Messrs. Price and Mr. C. E. De Long must be ascribed most of the credit for the success of this week.

Nothing was left undone that might be acomplished to expedite shooting or enhance the personal comfort and convenience of the guests of the occasion. The target traps were arranged in two sets on the Sergeant system, in the center of the race track arena and squarely on the baseball track, at the famous park adjoining the Price ostrich farm and deer park to the southwest of the city. Targets were thrown from bluerock expert traps, the birds going on a uniformly even flight strictly within the prescribed regulation angles, to the distance of perhaps of 55yds., and doubtless scores would have been even higher but for the unavoidable fact that a target going sometimes toward a particularly shaded spot on the mountain background defied certainty of aim. The live bird circle, with King's ground traps, was no less carefully arranged, retrieving being nicely done by a well-trained corps of colored boys.

In only one respect can it be said that the tournament proved anything of a disappointment. This is with regard to the attendance. Last year the total entry was not far from sixty, and this year it was twenty short of that number. The cause of this seems to have been purely local with the individual shooters, as the advance assurances would have guaranteed a much larger crowd. But, to the credit of the Whittington Park Association, be it said that, although the programme was an expensive one, every promise was carried out to the letter, and in a manner so cheerful as to win the admiration and unstinted praise of every shooter present. When such praise comes from the men who have campaigned on the circuit professionally for years, it means something, and the assurances given by Capt. Price and son that another and better programme will be presented here next winter, is a warrant with each of the boys of his personal indorsement of the Hot Springs' brand of shooting tournaments.

Monday, Feb. 18.

A short preliminary programme was shot on Monday, including 115 targets, but a good many of the boys who were tired from the long ride on the cars did not get to the grounds until after noon. Of the experts in this contest, W. R. Crosby made the best record, losing but 3 in 85, Gilbert and Fanning coming next with 5 each down. The weather was threatening for a time, but cleared toward evening, and the targets flew very satisfactorily. Practice shooting and extra events were continued until nearly sundown.

Tuesday, Feb. 19.

Tuesday morning dawned bright and fine, but if any one cherished fond dreams of phenomenal scores he was doomed to disappointment. A stiff northeast wind was blowing up the valley, which ever and anon was caught into a swirl by the jutting spurs of the hills and played particular smash with the flight of the targets. While the traps were working perfectly, it was simply impossible to shoot with certainty of aim under these conditions, and it was no common thing for even the best of them to fall below the money. In the afternoon the wind was lighter and scores correspondingly better. Bob Price handled the squads as few other men in this country can do this sort of work, and the programme was run through with such dispatch that there was time for half a dozen extras, in which all participated. When the smoke had cleared from the field in the regular events it was found that Fred Gilbert had first honor, with 12 misses, while Heikes and Crosby were respectively 1 and 2 birds behind.

The scores are appended:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Heikes	12	14	17	14	15	17	15	15	18	15	165	152	.921

Wednesday, Feb. 20.

The weather was all that could be desired, the wind of the previous day was no longer a factor in whipping the targets about and the scores throughout were higher. W. R. Crosby came to the front as high man. He shot in magnificent form and lost but 4 targets in the programme events. Fred Gilbert was second, Jack Fanning third and Rolla Heikes fourth. Twenty-six men shot through. The summarized scores are here given:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.

Thursday, Feb. 21.

The third and last day of the target programme was the best and most pleasant of the week. The air was again warm and comfortable, and another marked improvement in scores was the natural consequence. Crosby continued his great work, repeating his record of the previous day in losing but 4 targets. Gilbert was 3, Fanning 4, and Heikes 5 birds behind. Among the amateurs Kimball and Linderman forged ahead noticeably, and finished with a better than 90 per cent. average for the week. Scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Kimball	14	14	18	14	13	19	15	14	20	13	165	154	.930

Norman	20
Mackie	22222220
Hodges	0

General Averages.

In considering the general averages of this tournament and the individual work of the shooters, it must be remembered that, while the management was perfect in every respect, the peculiar conditions here prevailing militate against very high scores, and in view of this fact some of the totals shown are much more than ordinarily creditable.

W. R. Crosby won the first place with an average of .955, Gilbert comes next with .943, Heikes third with .933, and Fanning fourth with .925. Long runs were made by Crosby, 87; by Gilbert, 66; by Fanning, 68 and 57, and by Heikes, 79. The squad composed of Heikes, Gilbert, Fanning, Burnside and Crosby made a record of 99 out of 100 in the ninth event, Thursday afternoon.

Of the twenty-three men who shot through the programme only seven, namely, Crosby, Gilbert, Heikes, Fanning, Kimball, Parmelee and Linderman, finished with an average above 90 per cent. Fifty average money donated by the Association was divided among eight highest scores of amateurs, paid experts being ineligible to compete.

General averages:

	Tuesday.	Wednesday.	Thursday.	Total.	Average.
Heikes	152	154	156	462	.933
Fanning	146	155	157	458	.925

Linderman	142	153	151	446	.902

Friday, Feb. 22.

The big Hot Springs live-bird handicap was scheduled to be shot to-day, but the weather was very unfavorable, a heavy snow falling for several hours in the morning, and a late start was made. There were three other races booked for the day, and these occupied the time until after 5 o'clock, so that it was decided to defer the handicap until Saturday.

In the first event, a $3 miss-and-out, there were sixteen entries. The birds were a soft lot, with occasional exceptions, and 170 were shot, when Fanning, Gottlieb, Gilbert and Heikes divided the purse on the 16th round. They got $12 each for their work.

Next was a 7-bird race, entrance $7, birds included. There were twenty-six entries, and of this number fifteen finished with straight scores. Money in this event was divided according to the old class system, 50, 30 and 20; the straights received $4.55 each, the 6s, $8.15, and the 5s, $9.10.

A 10-bird event, same conditions as the previous one, was started directly after noon. By this time the atmosphere was clearer, and the birds much better, averaging quite high. Many drivers and cross-quarterers were trapped that kept even the best shots busy. With an entry of twenty-three, only five finishing with clean scores, eleven got 9 and two 8. First money amounted to $17.25, second to $4.70, and third to $17.25.

What would otherwise have been a cold, disagreeable day's experience was made pleasant and comfortable by the nicely heated and electrically lighted club house, thoughtfully provided by the management, and which had seemed almost a joke during the warm days earlier in the week. The scores are fully shown below;

Seven birds, $7, 50, 30 and 20 per cent.:

Fanning	1221111—7	Pumphrey	1221221—7
Riehl	2212112—7	Little	1222101—6
Parmelee	2212222—7	Hodges	1111122—7
Slob	2222212—7	Norton	2220222—6
Linderman	2211220—6	Arnold	1221222—7
Burnside	2221121—7	O'Brien	1122200—5
Gilbert	2121111—7	Thornton	2102102—5
Crosby	2222222—7	Burns	2210210—5
Kimball	2222202—6	Tramp	1222122—7
Mackie	2222222—7	Taylor	2000222— 4
Robertson	2112222—7	Collins	2121222—7
Heikes	1221212—7	Ward	0011220—4
Doty	1222220—6		

Ten birds, $10, 50, 30 and 20 per cent.:

Fanning	2212121111—10	Pumphrey	2111222200— 8
Riehl	2*121*2122— 8	Norton	**2222220*— 6
Parmelee	11212222*2— 9	Ingraham	2122222202— 9
Slob	2221122221—10	O'Brien	200*w
Linderman	2202222222— 9	Doty	21210**222— 7
Burnside	2122211222—10	Norman	2222022222— 9
Gilbert	22112*1222— 9	Little	2222202222— 9
Crosby	2222222222—10	Collins	0222222122— 9
Mackie	2*22200w	Parker	122*212222— 9
Kimball	2222220222— 9	Tramp	2111222212—10
Robertson	221222**20— 7	Bogardus	2*12221112— 9
Heikes	1021112222— 9		

Miss-and-out, $3, birds extra: Fanning 16, Riehl 4, Parmelee 10, Slob 16, Thompson 6, Tramp 9, Norton 3, O'Brien 8, Burnside 0, Gilbert 16, Crosby 12, Kimball 6, Heikes 16, Doty 8, Robertson 14, Taylor 11.

Saturday, Feb. 23.

The annual Hot Springs live bird handicap was shot to-day under conditions that would try the mettle of the best marksmen. The weather was clear and cold, with the snow of the previous day yet ranging on the hills and a hard wind blowing toward the traps from up the valley. If some of the birds in the earlier events were soft, that impeachment could not be brought against the lot trapped to-day. There were twenty-six entries, and from the first round it was apparent that this was to be a fast and furious game. The birds went out as if shot from a catapult, and in the first 10 rounds 38 were scored lost. After noon the wind was lighter, and the shooting somewhat easier, but by this time many had "gone to the woods," while others had but a bird to lose to fall below the money.

From the first it was aparent that a battle royal was on among the experts. However, it was a situation in which no favorites could be played with certainty, and this was demonstrated when Parmelee lost his fourth bird, a driving right quarterer, just outside; Crosby also lost his fourth, a driving twister from trap 2. Heikes came to grief on a driver from No. 3, on the tenth round. This narrowed the race down to Gilbert, Kimball and "Arkansaw Traveler;" these three ran in splendid form to their twenty-second birds, when both Kimball and the Traveler lost one dead out, the former a twister from No. 2, and the latter a low driver from No. 3. Gilbert kept on and finished with the only straight score, winning the handicap and handsome medal donated by the Association.

Money was divided on the high gun plan, there being 13 places; first gun received $70, and the 22 men, of whom there were six, got a little over $18 each.

"Jap" Knoler ably refereed the event, R. E. Price pulled the traps, Jake Buckler hustled up the shooters, while G. A. Newsalt and A. T. McNabb handled the score and office work, as they did throughout the week.

So closed a pleasant and successful tourney, amid mutual good feeling among all participants. Late in the afternoon a telegram was read from the Peters Cartridge Company, announcing the donation of a silver cup, to be contested for annually at the Hot Spring tournaments, winner to take same home without bond, three wins entitling to permanent possession.

In token of appreciation of the programme just completed, the shooters before leaving the grounds drew up and signed the following paper, which was presented to Capt. Price:

To Whom It May Concern.

The undersigned representatives of the shooting fraternity of the United States, whose privilege and pleasure it has been to attend and participate in the fourth annual midwinter tournament of the Whittington Park Association, of Hot Springs, Ark., take this opportunity of testifying to the excellent manner in which this tourney has been carried through.

Despite a disappointingly small attendance, every feature of an expensive programme carrying $1,000 added money, has been fulfilled to the letter, and with a spirit of cheerfulness that merits the fullest praise.

To Capt. H. O. Price and son, R. E. Price, the thanks of the undersigned are extended for this week's entertainment; coupled with the hope that these tournaments may become a fixed annual event in Western shooting annals, and with the pledge that the same under such management shall always have our good will and earnest support. Signed: Rolla O. Heikes, Guy Burnside, Frank C. Riehl, J. S. Fanning, Fred Gilbert, W. R. Crosby, F. S. Parmelee, Jack Parker, Chris Gottlieb, F. F. Norton, H. W. Knoler, R. R. Kimball, Herbert Taylor, J. H. Mackie, A. J. Lawton, C. D. Linderman, W. T. Irwin, Frank Hodges, Max Fleischman, "Robertson," Geo. C. Ingraham.

Hot Springs handicap, high guns, entrance $15, birds extra; $200 added. Geo. A. Newsalt, scorer; Jap, referee:

Notes of the Week.

Jake Boeckler, of the Cincinnati national baseball league team, made an excellent referee, and the shooting fraternity will "holler" for Jake whenever occasion offers.

A notable feature of the shoot was the constant intrusion of the tame deer running at large in the park. The pretty little animals, not the least alarmed by the sound of shooting, persistently came down from the hills into dangerous proximity with the flight of the targets, and more than once a squad had to lay by on unfinished scores while the deer were chased away. However, all present were sportsmen, and it was an intrusion dear to the heart of each.

Capt. Price's famous ostrich farm also claimed at least one visit from each, and was the subject of much interested inquiry.

Not many of the boys took the course of baths. This aggregation has few bodily ailments to complain of, and each had other work than to follow the advertising dodgers of cure-alls for real or imaginary ills.

The Kansas-Nebraska squad, composed of Kooler, Lawton, Gottlieb, Parmelee and Hodges, was dubbed by some wag of the aggregation the "Carrie Nation squad," and the name stuck to them like a brother.

Rolla Heikes made a remarkable run of 70 odd, including three programme events, two extra races of 5 pairs each, and one event shot at 25yds. rise, use of both barrels, but in which he did not once use his second.

While there was practically no attendance of local amateur shooters in the target tournament, the citizens generally showed a lively interest in the shoot, and there were from 100 to 300 paid admissions daily.

Frank Parmelee, Guy Burnside and Herbert Taylor were somewhat handicapped in their shooting work by breaking parts of their guns at the most inopportune time.

It is conceded by all that Tramp Irwin simply outshot himself at this tournament. His work was consistent throughout and far above the average.

Rolla Heikes, Herbert Taylor, R. E. Price, C. E. De Long and the writer composed the handicapping committee for the live-bird events.

Chris Gottlieb, besides shooting a great pace, also won the local cocked hat championship during the week. There are not many things, by the way, that this genial Kansas Citian does not know how to "make a hand at."

Ed Fulford, Tom Marshall, Ernie Tripp and Elmer Neal sent personal regrets, each being unavoidably detained by pressing business from attending this shoot.

Thanks to the liberal added money, this was a paying tournament, and no one lost anything on the programme who shot consistently 83 per cent. or over, although targets were charged for at the rate of 3 cents each. The entry was at no time large enough for bird money to cover the amount of the added purse.

Capt. A. H. Bogardus visited with the boys on the grounds several times, and talked over "the good old days."

Dr. Williams' trained retrievers did good work in several of the live-bird events.

Mr. C. E. De Long was compelled by illness to give up shooting on Wednesday. He has his new single trigger action now about perfected, and it was tested to good advantage on the grounds this week.

Killed a Carrier Pigeon.

In the accumulation of retrieved birds at the Indianapolis, Ind., shoot Mr. Fred Gilbert found one with the number and tag of a homing pigeon on one foot. The reading was "1899-Y-120." Mr. Gilbert has the tag in his possession, and will send same to the owner of the bird if claimed.

F. C. RIEHL.

The Cleveland Gun Club Co.

CLEVELAND, O., Feb. 22.—Our president is a good shot when he gets started, but he is a slow starter. He still thinks his new load is a great winner.

J. I. C. attributes all his misses to his loose rib, but the rib on his gun is very firm.

Lannert made the highest score in the 40-bird handicap race. He walks very erect ever since; but, poor Henry, some one stole his cap, and he started for home to tell his troubles, when some one found it. He is happy now, and wears a Tom Johnson smile.

If Stevens would shoot more often he might learn how.

Red Wing lost his nerve in the 40-bird race after he lost 4 birds in the first 10. That is why he withdrew.

Harris, the prize winners are thankful you shot so poorly, but some of us feel sorry for you.

Bob, if you don't shoot better Franklin will defeat you in the live-bird tie.

Where was Forrester?

The English Challenge Match.

AS THE active shooting season of the year draws on apace, interest is revived and talk is lively on the circuit as to the prospects for the success or failure of the project, first announced in the FOREST AND STREAM last August, for the sending of an American team of ten men to shoot a challenge match with a like English team, on the grounds of the latter. The terms of this proposed match have been fully explained heretofore and would not be changed in an important particular. The only point of doubt has been as to the ability of the promoters to agree on details that would bring the matter to a focus.

The writer has seen the proceedings of an informal meeting held recently in New York, at which this subject was thoroughly discussed. It was learned on inquiry that the companies employing the men who would probably compose the American team are as a whole favorable to the enterprise, and several firms have signified their willingness and desire to back their representatives in everything necessary for the trip. This is but natural, and was to have been expected, but the matter has never until now progressed to the point of such formal recognition. Mr. Paul North, of the Cleveland Target Company, who was the original promoter of the idea, is still working to bring about the match, and it is now thought that within a few weeks at the most the question whether to go or not will have been determined. An injustice seems to have been done our English cousins in the presumption that they were not anxious for the match. From latest reports it appears that they are not one whit less confident of being able to win than was indicated in their first informal proposal for a match; and it is a matter of history that with the Americans the only question has been from the start as to who would be the lucky ones chosen to represent their country on the team. Among themselves, of course, the boys realize that it must not be a matter of personal predilection, but that the ten best men, most truly representing the game in this broad land, must be selected. Yet even this is a puzzling and extremely difficult task, when the land boasts hundreds of shots any one of whom would perhaps be competent to hold up his end in the big race.

But all these points can be disposed of, and will be adjusted when the time comes. The match, if pulled off, will do more to advertise and bring into public favor the manly sport of trapshooting than anything that has taken place on either side of the water within the past decade. I have personally been informed by half a score of individual shooters that if the thing is a go they propose to be of the party, each on his own hook and at his own expense, as a pure matter of national pride.

F. C. RIEHL.

National Gun Club.

MILWAUKEE, Wis., Feb. 23.—Herewith are the scores of the monthly live-bird shoot of the National Gun Club, held on the 22d inst., at National Park. It was a very cold, disagreeable day, the birds lively, and the shooting far below the average, especially in the first event, as there was not a straight score made. In the second event five contestants were more successful, J. L. Scott, Uno, Rehfeld and Crane making straight scores. In the miss-and-out Clark, of Milwaukee, was the successful candidate.

Mr. Clark is a new member of the National Gun Club, and is just beginning to shoot live birds, and is handicapped in his shooting by reason of his being blind in his right eye; but his scores show that it is a good thing for the other members of the club that he is not blind in both eyes, or he would kill everything shot at. He is one of the coming shooters of the National Gun Club.

Geo. Crane, of Racine, another new member, is one whose shooting so far has been such that the crack shots of the country will find him no mark should they run up against him.

I might mention many more in this gun club who are coming to the front very rapidly as live-bird shooters. The scores:

Regular monthly prize shoot:

Collins .....1102211201—8
Thomas .....2100211122—8
Klapinski .....1121101222—9

Collins .....1021112122— 9
Case .....1221110201— 8
Uno .....2211211112—10
Rehfeld .....2211222211—10

Miss-and-out:

Scott 222122210
Clark 212121222
Uno 0
Weaver 0
Thomas 1111122202
Worth 021100
Collins 1110
Rehfeld 2

Feb. 18.—On Feb. 15 H. S. Blake, of Racine, and L. Collins, of Milwaukee, shot a second match of 25 live birds, the first one having been shot in January, at which time Mr. Collins defeated Mr. Blake, who shot under the name of Scott in both matches. At the same time E. E. Rogers, of Milwaukee, shot a match of 25 birds with Geo. Crane, of Racine. The result will be seen by the score following.

Mr. Crane had some hard luck toward the last of the game and did not shoot in his usual form, but taking it all in all the shooting was very fair. After the matches there were sweeps, in which J. I. Case scored 8 out of 10, Gumz 9, Clark 8, Klapinski 7, Johnson 7, Blake 8, Crane 8, Thomas 10, J. L. 9, Thomas carrying off first money, Gumz second (J. L. shooting for the birds only), Case, Clark, Blake and Crane dividing third money.

In first sweep of miss-and-out Reed and Gumz divided money. In the second sweep Clark took the money. Third sweep Reed took the money. Fourth sweep Clark won, Reed missing his 11th bird and Clark killing.

The regular monthly shoot takes place on the 22d inst., at which time a large attendance is expected.

LINDLEY COLLINS.

Boston Gun Club.

BOSTON, Feb. 20.—The Boston Gun Club's sixth serial prize shoot was held on their grounds to-day at Wellington, and was attended by shooters from Brockton, Pascoag and Lynn, as well as the home contingent. The shooting was a decided improvement over previous trials in the present series, and was an evidence that the windy day practicing we have had lately had done no harm. Leroy's shooting, all from the 31yd. mark, was a feature, and though starting with a 5 and a 6, soon got down to real business and broke 37 out of the last 40, incidentally breaking 28 out of the 30 in the prize match, the highest score made in the present series. Griffiths was not so very far behind, having to his credit a 25 in the match, and also securing high average for the afternoon. The club's lady representative was a welcome visitor, and shot in two or three of the events just to see whether the 16-gauge, with its small ounce of shot, was as good as it used to be. It evidently was all right, as some of the long shots that succumbed to a well aimed charge could tell. We hope to be favored with her presence a good deal more at later dates, when the weather will be just a little more comfortable for the sport of trapshooting.

Scores below. Event 11, 5 pairs; all others, 10 unknown:

C. G. B., Capt. O. G. Club.

Florists' Gun Club.

PHILADELPHIA, Pa., Feb. 19.—Fair light and a strong wind were the conditions as to weather which the contestants encountered today at the Florists' Gun Club's shoot. There was a large entry for the Eisenlohr prizes, which are the most valuable ever shot for by the members of this organization. Twenty targets, expert rule, rapid fire, and 20 targets, unknown angles, and 5 pairs of doubles were the shooting conditions.

At the expert rule, W. H. Wolstencroft made the high score, breaking 18, Mrs. Park, W. K. Park, George Anderson and E. A. Massey scoring 17. At the unknown angles, Anderson and Wolstencroft tied for first place with 19 breaks, Wolstencroft missing his first target and then breaking 19 straight, Mrs. Park coming into second place with 18. At the doubles, Park, Wolstencroft and Hallowell scored 9 out of 10. With the handicaps added to the score, Park, Anderson, Massey, Sheeler and Dr. Smith scored a possible 50, receiving 3 points each.

The feature of the tourney was the remarkably fine work by Mrs. Park, making one run of 10 straight at expert rule, breaking 18 out of 20 unknown angles, and scoring a run of 15 straight and breaking 8 out of 10 doubles.

The semi-monthly high gun contest for the club's championship medal at 50 targets resulted in a win for Wolstencroft with the score of 46, Anderson second with 44. Among the visitors were C. F. Gramlich, of the Allentown Shooting Association. Mr. Gramlich was here looking after the interests of the State Sportsmen's Association's next annual tourney. The scores follow:

	Expert Rule.	Unknown.	Doubles.	Hdcp.	Total.	Points.
Dorp	10	9	3	16	38	..
Bell	12	13	7	14	46	..
Webster	11	9	6	19	45	..

Hallowell	16	16	9	7	48	2

Westmount Gun Club.

MONTREAL, Feb. 23.—The regular weekly shoot of the Westmount Gun Club came off to-day on the club grounds. It was a typical Canadian winter day—two feet of snow, bright and cold,—with a strong cutting west wind that helped the flight of the targets that flew, when untouched, at least 75yds. from the trap. This kept the scores down below normal. The first event was the most interesting one, as it was for the handicap trophy, and between N. P. Leach and the Kynock expert, Hansen. The men sold at even money. N. P. L. would have been the favorite but for the fact that he had a new, untried gun.

Next Saturday, March 2, Cleghorn, the Parker crank, will have a try for the trophy:

Events:	1	2	3	4	Events:	1	2	3	4

Millbrook Gun Club.

MILLBROOK, N. Y., Feb. 20.—A gun club was organized here Feb. 6 with forty-two charter members. As soon as the club gets control of the present grounds they will erect a club house 12 by 20, and will shoot under the Sergeant system, bluerock expert traps. The grounds have a sky background.

The first monthly shoot took place on Feb. 16. The following scores were made:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	25	25	25	25	Targets:	25	25	25	25
I Tallman	25	25	24	25	Lake	18	20	18	20

A. A. SCHOVERLING, Capt.

PUBLISHERS' DEPARTMENT.

The tubular fly, a new departure in the fly line, is the invention of Dr. Cantrell, of Brooklyn, N. Y., who, in an announcement elsewhere in these columns, says he will forward description circular on application.—*Adv.*

Messrs. William Mills & Son, whose announcement appears in another column, have issued an extremely attractive catalogue of their fishing tackle, which contains, besides the list of anglers' necessities, many handsome fishing illustrations, hints on fly-fishing, fly-casting, etc. A copy may be had for the asking.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MARCH 9, 1901.

VOL. LVI.—No. 10. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

It may occur to analytical minds that the amount of labor is not commensurate with the utmost possible reward—i. e., a single shot at mallards—for a hard night's work, plus a cold breakfast on beer, bread and cheese. I am not going to argue that the game is worth the candle, but there is a period in life (past for some of us) when hard work and endurance are ignored, when cost is not counted, but adverse odds accepted, and no price deemed too high if thereby can be achieved some result one's mind is set upon.—Abel Chapman.

NEW YORK'S FORESTS, FISH AND GAME.

THE views expressed in another column by Mr. W. A. Wadsworth, President of the New York Forest, Fish and Game Commission, are extremely interesting, because those of a sportsman who has had experience of the inside, as well as the outside, workings of New York's laws on this subject. He calls attention to the anomalous position of the Commission, and shows how, even with the best will in the world, the most faithful officials are hindered by laws—supposedly for the public advantage—from doing those things most desirable for the State.

Our fish and game and our forests, which ought to be a source of revenue to the State which owns them, are instead of this a great and growing expense, and year by year are deteriorating. The forests, utterly neglected, though in some places protected from destruction by the axe, ripen, die, fall down and decay. The game of a State containing 47,000 square miles, 60 counties and 7,000,000 inhabitants is looked after by thirty game protectors—half a man for each county—with the result that the game and fish are not protected, so that sportsmen genuinely interested in its conservation are constantly grumbling over violations of the law, expecting the game protectors to perform physical impossibilities.

Had it not been that the bill for the reorganization of the Commission was pending before the New York Legislature when Mr. Wadsworth's letter was written, he might perhaps have spoken more fully than he has, and might have expressed the view that the four interests in control of the Commission—forest, fish, game and shell fish—should be under the control of four individuals—a forester, a fishculturist, a chief protector and a shell fish commissioner. Such a system is the one which has long been urged in these columns as the one most business-like and efficient. It has partial realization in the law just enacted to create a new commission.

Those who have had the widest experience in the practical protection of game and those who have studied the problem most carefully are agreed with Mr. Wadsworth in attaching great importance to the trespass laws. As he writes, the ultimate conservation of the game supply must depend upon the protection of the birds and the quadrupeds by the owner of the land on which they range, and the effectiveness of the protection the land owner may give is in turn dependent upon the extent to which he may be enabled to prevent trespass. In America we are passing through a period of far-reaching changes with respect to the freedom of ranging over lands for shooting. The growing tendency is to regard shooting as a privilege to be paid for, and the growing practice is to exact payment for the privilege. There is a more common recognition now than ever before on the part of the land owner that for the right of shooting over his lands some compensation should be made; and as the columns of FOREST AND STREAM will show, the sportsman on his part is accepting the new condition and for his shooting is looking to farmers and other land owners who in return for such payment can assure him game. The trespass laws, as a rule, have proved inadequate to secure protection for the land owner, and in some States the remedy for this has been sought in the enactment of laws with dire penalties for their infringement. Such statutes, however, are only likely to defeat their purpose. Juries refuse to make themselves parties to the infliction of punishments which are out of all reasonable proportion to the offense. The remedy for a lax observance of the trespass laws, we believe, is not to be found in increased severity of the statutes. It is indeed something which is incapable of immediate attainment. It can come only, and it will come only, when the course of education we are now going through shall have advanced to a stage where the rights of land owners in this regard shall have popular recognition, and the trespass laws shall in consequence be made efficient by the power of public opinion.

It would perhaps have been difficult to find any one likely to take a broader view of this subject than Mr. Wadsworth. He is a man of ripe experience, from his youth up devoted to all the best out-door sports, a man of means, a land owner and farmer, the President of the Boone and Crockett Club.

Since Mr. Wadsworth's letter was received, the bill for the reorganization of the Commission has passed the Legislature, and the newspapers have announced the names of certain individuals who are to be the paid and unpaid Commissioners. The appointments, however, have not been made.

IN THE NEVADA SCHOOLS.

WE have become accustomed to look to the West for innovations and inventions in game protection methods. The latest development is in a Nevada law, which Fish Commissioner Geo. T. Mills sends us, just enacted by the Nevada Legislature. It provides that every teacher in the public schools shall give oral instruction, at least once a month, to all children attending such schools relative to the preservation of song birds, fish and game, and read, or cause to be read, to such children, at least twice during each school year, the fish and game laws of the State of Nevada. In case of failure to do this the teacher's pay shall be withheld.

That is a sensible law. If the fish and the game and bird life of Nevada are worth preserving, they are worth teaching the school children about. In no other way may the popular ignorance of and indifference to these great native resources be so speedily and surely overcome as by thus beginning with the children of to-day, who are to be the men and women of to-morrow.

There are many things taught in the schools to-day of less use to the pupils and of less benefit to the community than the game laws. If Nevada shall pursue this system of game law education for a decade the changed sentiment in that State will be worth more than an army of game and fish wardens.

"MIGRATORY."

THAT term "migratory" stands in the way of the protection which wildfowl ought to have in New York. Wild ducks are thought of as migratory, and spoken of as migratory, and legislated for as migratory. The popular conception of them and their practical treatment is of migratory species, which pass across the State, south in the autumn and north in the spring, and are not to be classed as residents.

This is a great mistake. It is a mistake because while it is of course true that the wild ducks are migratory, there are yet some species of them which if given the opportunity would not all go north in the spring, but would in some number remain to nest in New York marshes. But so firmly implanted in the popular mind is this migratory nature of the birds that the task of persuading the lawmakers to give the nesting birds a chance is an extremely difficult one. If we could have a practical test for a few years there is reason to believe that the actual breeding of wildfowl in New York and the improved shooting thus afforded would convince the public of the utility of the prohibition of spring shooting.

SNAP SHOTS.

The bill to reorganize and combine the New York Forestry Preserve Board and the Fisheries, Forest and Game Commission was passed last week. It provides for one salaried commissioner at $5,000 a year, who shall serve for four years, and two consulting commissioners without salary, to serve two years, at the end of which term the salaried commissioner will serve alone. The offices of State fishculturist, game protector and forester are retained. The newspapers have announced that Governor Odell would name for the new Commission De Witt C. Middleton, of Watertown, a member of the old Commission. At the present writing there has been no official confirmation of this statement, but, as has already been said in these columns, the appointment of Mr. Middleton would be accepted with much satisfaction by those who are conversant with his record in the old board. It is also given out that Messrs. Woodruff and Babcock, of the old Forestry Board, will be named for the new Commission.

Mr. Hallock's letter on the ruination of the Dennys River is just what might have been looked for from one who knew so well the stream in its prime. He voices the indignation and protest all right minded men must feel who are familiar with the circumstances. We trust that the people of Dennysville may find a way to abate the nuisance of mill refuse which has overwhelmed them.

The Dennys River is a type of a vast number of waters which have been ruined by the selfishness and greed and brazen effrontery of individuals who have outraged the community by their saw mills and tanneries and refineries and rendering works. Tiverton, Rhode Island, is a case in point. Set amid enchanting scenery, on a river teeming with fish, and holding out manifold allurements to the summer resident; Tiverton was in an evil hour chosen as a site for a fish oil factory. The town's ruin as a summer resort speedily followed. The infernal stench from the fish factory nauseated the summer boarder, and packing his trunks he left incontinently. The refuse which was spread abroad upon the waters killed the fish, poisoned even the scallops and quahogs, and so defiled the hulls of yachts that the vile harbor was given a wide berth by yachtsmen. The place was converted from one of the most inviting spots on the Atlantic coast into a stench breeding nuisance, and for the personal advantage of the fish oil renderers the rights of the community were defied.

An unusual case was heard in Wilbraham, Mass., the other day, when the owner of a dog was summoned to answer the charge of being the keeper of a dog found chasing deer. The extraordinary feature was the existence of the deer in Hampden county for dogs to chase. Several deer have been reported of late in the roads of western Massachusetts, and it is no idle fanyc that if the cleared country continues to revert to woodland at the present rate, one of these days there may be deer hunting in a region where it has been extinct for generations.

Two sportsmen's expositions are in progress in the two great cities of New York and Chicago, and tens of thousands of visitors are getting a sniff of woodsy scents and a glimpse of the creatures of the forests and the out-door life of the rod and gun folk. Just now then the sportsman and his world hold a large place in the public eye.

An effort is making in Connecticut to provide by legislation for the opening of public highways to ponds and lakes. The movement has been prompted by the extraordinary growth of fishing and shooting preserves in Connecticut. Syndicates and individuals have been taking up lands and waters at a prodigious rate, and many a community is finding itself shut out from privileges which have been enjoyed from time immemorial. In some States, as in New Hampshire, the statute provides that on application by the people the road commissioners may open a way, and maintain it, for public access to waters which are entirely surrounded by posted lands.

The introduction of Mongolian pheasants has been an unsuccessful enterprise in Vermont. The capercailzie which were imported from Sweden and put out in the neighborhood of Dr. Seward Webb's estate at Shelburne did not survive. The sharp-tailed grouse which were brought from the West are believed to have fallen victims to the farmers' boys, who on sundry occasions have reported the killing of strange pa'tridges. The only imported game for the survival of which there appears to be hope is the black game which came from Sweden. It is known that the birds bred and hatched their broods. The introduction of the capercailzie has not been abandoned as an impossibility. With the experience already gained those who are interested in the enterprise will avoid the mistakes of the past, and the game may yet be established in North America.

The Sportsman Tourist.

Bees and Wasps.

Being a Careful, Accurate and Scientific Inquiry Concerning Practical Points in Natural History.

A GENUINE Californian January storm raged outside. The naked arms of the locust trees lining the sidewalks swayed and clashed in the fierce blasts of the south wind. The great rain drops splashed against the panes of the office windows and ran down them in wavy streams. Through these could be caught panoramic glimpses of our storm-swept little city, clustered in the hills, each house snuggled in its own individual greenery, with the quivering fronds of the palms and the green and gold of the laden orange trees to tell us that this was still our beloved California.

A party of five had just finished a business meeting and had fallen into a story telling mood, the weather outside holding no inducements to counterbalance comfortable armchairs, good cigars and a glowing grate within the shelter of sound walls.

DRAMATIS PERSONÆ.—L. W. W., C. E. (a comical cuss); W. S. G., C. E. (a dryly humorous cuss); J. S. (taciturn, but all right when he gets a-going); T. J. N. (strictly business, but can tell a good story when he has time); Arefar (the truthful scribe).

ACT I., Scene 1: A room filled with fragrant blue smoke, through which is seen at intervals five interested persons. *Enter First R. E. Loquitor.*

L. W. W.: Speaking about wasps reminds me of the time when I was on the railway survey making a reconnaissance through the Siskiyou Mountains for the C. & O. road. Our camp was pitched in the Sacramento Cañon, and we had been six weeks in the same place. A short distance above the camp was a large oak tree, in whose shade the boys would lie on a blanket and read in their leisure moments. A large limb had been wrenched off in some storm and lay, dry and weather beaten, on the sunny side of the tree, where no one wished to lie.

About the time we were to break camp and come out for the winter, it had turned quite cold up there in the mountains, with sharp frosts every night. One evening one of the party named Jim, and myself, reached camp ahead of the others, and found the Chinese cook in a very morose frame of mind and no preparations being made for supper. It seems that the axeman, whose duty it was to supply camp fuel, had overlooked his hand, and there was no wood to cook with, and the Chinaman was sullen and angry, and was sulking in his tent like Achilles.

Jim at once volunteered to go and cut wood enough for the evening meal, being always a good natured fellow and ready to accommodate even a sulky Chinaman. During our summer in the mountains, Jim had returned to primeval ways. He had not shaved or cut his hair, nor used a comb more than once a week. He wore a flannel shirt, open at the neck, exposing a well-haired breast, with sleeves rolled up to the shoulder. A pair of trousers confined at the waist by a leather belt, with the legs tucked into a pair of strong boots, had comprised his apparel during the trip. Altogether he had become a wild and weird figure.

Jim started out to cut some wood, and bethought him of the large dry limb lying under our loafing tree as being suitable and handy to camp. I had washed myself and lain down in my tent with an old illustrated paper to while away the time, and had drawn a blanket over myself to keep out the evening chill. I heard Jim industriously plying his axe for a moment, and then the strokes ceased and there came some words of wild profanity from the mountain side, followed by the sound of coming feet and flying gravel. A second afterward Jim's face, distorted and wild looking, was thrust through the tent flaps, and in a voice almost inarticulate with pain and rage, he yelled, "Pick 'em off! Pick 'em off! —— 'em, pick 'em off!"

I certainly thought the man had suddenly gone insane, as in his unkempt condition he looked the part naturally. Then he disappeared from the tent door and went shouting, in a voice lessening with the distance, all kinds of weird profanity, mingled with howls and cries to "Pick 'em off! Pick 'em off! For God's sake pick 'em off!"

At last there came to my ears one last shout and a great splash as he landed in the river. I sprang to the tent door and looked out in alarm in time to see Jim emerge dripping from his plunge bath, and plucking frantically at his beard and hair. After a moment he started for the cook, and in picturesque language commanded him to "Pick 'em off!" "Surely," I thought, "poor Jim has gone mad," but on approaching the pair, I found the cook busy in removing scores of yellowjackets from the poor fellow's hair and beard.

Jim sat on a stool with his back to the fire during the operation, as he was shivering with cold after his plunge in the river, and all at once a new look of wildness came into his eyes, and with another curse he sprang to his feet, threw his hands over his head, and grasping his shirt in the back, he tore it off with one motion and threw it from him. As he did so a whole handful of the tormenting insects fell from his person. These had been warmed back into working condition by the heat of the fire and had given him a few parting shots.

It seemed that the limb of the oak tree that he had started to chop had a lively colony of wasps in it, which no one of us had discovered in all our loafing near it, but on his cutting into the nest they attacked him furiously. As the evening was so cold, they were not lively, and stuck where they alighted and presented him with a few practical points in natural history.

His head swelled up the following night like the proverbial poisoned pup's, and he kept his bed till we broke camp.

SCENE 2: *Enter L. U. E. Loquitor.*

W. S. G.: I will tell one on L. W. W. himself. We were out on a survey in the Sierras, and had come to a particularly bad bit of ground, where we could not set a tripod for our instrument. I went on with the target and W. took a pocket compass and worked out on the cliff, and sat down to squint and level the best he could. It came out afterward that he sat down squarely over the entrance to a wasps' nest. The insects could not get out to sting him, and all was serene for a moment. Presently a few members of the colony who had been away came home. Then there was trouble. W. dropped his compass, which rolled down the cliff with a jump and a rattle, until it finally disappeared in the far beyond, and began frantically beating the air with hat and hands and using language. But he made one grand mistake! He rose to his feet, thereby uncorking the nest, and the whole community came out like a column of yellow smoke, and attacked him front and rear. He was immediately routed, horse, foot and artillery, and I stood roaring with laughter to see him shambling over the rocks on all fours, like a grizzly, slapping and saying his prayers backward, until one of the maddened insects took me a crack in the jaw, when "the subsequent proceedings interested me no more."

SCENE 3: *Enter R. U. E. Loquitor.*

J. S.: When I was a boy on my father's farm in Maine, I was spreading hay one summer day after the mowers. This was before mowing machines had come into general use, and boys were of some account in the mowin' lot. 'Longside where I was workin' lay a bit of wild pasture land, all grown up with rozberry bushes, bent down with their first crop of fruit.

Mother had a big buxom Irish girl as a "help" that summer, an' she was in the patch that mornin' a-plummin'.

I was workin' away a-spreadin' the hay for all that was in me, when I heard a most infernal squallin' in the rozberry patch, an' lookin' that way I could see two fat legs a-wavin' in the air an' smothered yells comin' from the bushes below them. Then the legs disappeared, an' our "help's" face came up in their place, an' of all the hustlin' you ever saw, that girl beat it a-gettin' out of there.

I thought sure it must be snakes, but 'twa'n't. She had run foul of a ball hornets' nest, an' two o' the critters had hit her to onst. One on 'em took her in the under lip an' t'other hit her fair in the left breast, where 'twa'n't protected by anythin' but her shift an' a thin caliker dress, an' they knocked her down fair an' square.

By the time she had reached the house her lip would have made a leather hunting jacket, an' her breast had swelled till it had burst the buttons off her dress, an' she took to her bed an' staid there for nigh a week.

SCENE 4: *Enter First R. E. Loquitor.*

T. J. N.: I was brought up on a farm in central New York, and father had a churn that he ran by dog power. He kept a great lazy dog for the purpose, because he was so large and heavy that when he was put in the wheel it had to go. We used to churn at first on Mondays and Thursdays, but the dog got onto the days, so that he would hide away, so we had to break days on him, churning first one day and then another. Then he got to lying around and watching household matters, and whenever he saw any signs of touching the churn, he would make a break for a retreat under the barn, or some other out of the way place, from which he had to be hauled out by the scruff of the neck, with language, and then switched into the wheel. I guess if it had not been for the fact that he was always hungry, he would only have shown up at night.

Father kept a large apiary and protected his hives with a thick hedge of shrubbery against the northwest wind. One morning the dog saw symptoms of churning, and as he had been detected in and hauled out of every other hiding place about the premises, he this time sought sanctuary behind a hive of bees that stood close to a particularly thick portion of the hedge. This was all right, as far as it went, and the dog might possibly have escaped attention, had he kept still. But when he heard himself called, he probably had tried to squeeze closer into cover, and in doing so disturbed the bees.

"As bees bizz oot wi' angry fyke, when robber han's assail their byke," so did these. Then there was fun for father and me, who were looking on, but serious business for the dog. He came out of the bush with a rush, whirling, snapping his teeth, ki-yi-ing and shaking his ears till we could hear them snap. After a moment of this he concluded that he had business in the next county, and struck out like a gray streak across the neighboring field, with his tail between his legs and ululating at every jump. But his hair was long, and a good many bees must have lodged in it, for he would whirl and snap about every half-dozen jumps. When he was about half-way across the field, the thought seemingly suggested itself to him that this must be some new form of torture devised by his oppressor, man, to make him churn, for he made a sudden turn and made straight for the hated wheel, into which he jumped, and began churning as he had never churned before.

SCENE 5: *Enter C. Loquitor.*

The Truthful Scribe: When I first came to California I stopped for a short time at the home of a wealthy rancher, who owned a 3,000-acre place on the banks of the Sacramento River. There was a man living there at the time named Gee, who earned his way as a kind of Jack-of-all-trades, and whom the other ranch hands had nicknamed Ah Gee, from the Chinese suggestiveness of his patronymic.

One day Ah Gee discovered a colony of bees in the limb of a great oak tree that stood a short distance from the horse corral. One evening during my sojourn at the place he went to the tree after dark and closed the opening in the limb. The next morning he took ropes and a saw, and accompanied by myself, started out to secure the colony. He climbed the tree by means of a short ladder which he had used the previous evening in closing the entrance, and affixed the ropes to the limb and then threw them over a higher branch and fastened the swinging ends to the trunk of the tree below. It was his intention then to cut off the extremity of the limb containing the bees, then to cut it off close to the trunk of the tree and lower the swinging segment carefully to the ground, where he had placed a pile of straw to receive it, should it slip. Lucky it was for Gee that he made provision for a soft tumble, as the sequel showed, for his calculations as to the extent of the hollow containing the nest were faulty. He crawled out upon the branch and began to saw vigorously, but as soon as he got through the bark and began cutting into the wood, the end fell with a crash, being hollow to the extremity, and the angry bees came out in a cloud and fairly smothered the poor devil. He was blinded in an instant, and simply fell off his perch, but the straw saved broken bones for him.

Scrambling to his feet, fighting and swearing like a maniac, he started on a wild run for the corral, intending to throw himself into the great horse trough to rid himself of his tormentors. Unfortunately, or perhaps otherwise, as it turned out in the end, there was a hog wallow between the tree and corral fence, caused by the overflow from the pump of the windmill which supplied the horse trough. This wallow was occupied at the time with fully two dozen swine, all buried but their noses, and giving an occasional "woof" to keep the filth out of them. Right into the midst of these contented porkers poor Gee plunged, lost his footing and went headlong into the slime. The frightened swine, with protesting squeals, hastened to vacate their pool, rolling him over and over as they did so. Presently all were out excepting one fat old boar and Gee. The latter had just regained his feet when the boar slowly raised himself on his forefeet in time to get a crack in the eye from a maddened bee. This started him into action, and, hog-like, he dashed forward between the man's legs and upset him once more in the slumgullion, which by this time had been thoroughly stirred up and stank beyond description.

The poor fellow crawled out completely nauseated, but safe. No self-respecting bee, however angry, could touch such an odorous object as Ah Gee was at that moment.

Fellow correspondents of FOREST AND STREAM, can't you give us a few more points on this interesting subject, now that the ball is set a-rolling?

Gentlemen, "It's up to you!"

AREFAR.

Camp-Fire Stories from Canadian Woods.—I.

Fishing on Stoco Lake.

THE scene of the following stories was laid on the shores of a beautiful lake, noted for its fishing. Its waters afford relaxation and pleasure to the thriving community composing the adjoining village of Tweed, on the line of the Canadian Pacific Railway, between Toronto and Montreal.

Stoco Lake is really an enlargement of the Moira, one of the many rivers falling into the famed Bay of Quinte and enriching its waters with many varieties of fish. On the east, Stoco receives the waters of Clare River, on the north the Moira, which is here a considerable stream, having just been reinforced by the Scootamata and Black Creek.

These streams are noted for their perennial and, as yet, unexhausted supply of the highly prized white pine. Their annual burdens, brought down by the great lumber firms, the Rathbuns and the Gilmours, are still almost worth a king's ransom. Follow up these waters for thirty miles or so and you will come into well-protected timber limits, the land of the deer, the home of the beaver and the otter and all the paradise of delights that forests bring.

We had been fishing for pickerel that sultry afternoon in the middle of one of the heated terms common to our northern climate. Six of us—two in each boat—had carefully drifted on a weed bed and dropped anchor.

My companion was catching minnows. After trying in vain to get a bite—the other boats, only a few yards away, were having great luck—I concluded I would make myself useful by catching minnows also. I selected a small trout hook with single gut, baited it carefully and threw out. My bait seemed scarcely to have reached the water when it was taken with a snap. Away went the fish and whiz went my reel. I thought I had a 5-pound pickerel. I played that fish for all I was worth; I handled him with the skill and care of an Izaak Walton for about ten to fifteen minutes. When I finally got him up to the boat, lo! up turned a great red-finned sucker. The yell that went up from the rest of the party and the chaffing I got over that sucker made it more interesting than agreeable. Disgusted with fishing in general, and for pickerel in particular, I proposed we go to a point near by and take a rest in the cool, inviting shade.

While enjoying our smoke under the benevolent branches, one of our party, B., who was the postmaster at the village and champion fisherman of these waters, remarked, "Yes; a man who goes for a number of years fishing in our waters or tramps through our forests sees many strange sights and goes through many an experience which, when put in print or told, seem incredible. A hunter or a fisherman is often alone; he is necessarily the hero and central figure of his story. There is no one on hand to contradict him, and it is only human nature that he should be tempted to put himself in the very best light, particularly if he is an amateur or a tenderfoot. Now, an old hand will take more delight in telling you how he was fooled by a buck or how he hooked a big fish and 'muffed' it than he does in telling of his success, because his years of experience is a sufficient guarantee of the fact.

"Now, to give you an example from the 'chamber of curiosities' of my many years' experience. Suppose I should tell you that some years ago in this water I caught a large maskinonge with a minnow hook and about an 8-foot pole. No? Well, it was this way: I intended to go fishing one day, and in early morning went to catch minnows for bait. Had a small punt and pushed myself well up on a weed bed. I lay over the stern with the line in my hand, the pole beside me. I was fishing in about 3 feet of water with good success, until I saw a large maskinonge swim up and take my bait. I had presence of mind to jerk on the line just enough to set the hook and then let go. Away went Mr. 'Lunge with bait, line, pole and all. I out with my punt and after him. Sometimes the end of that pole was 6 feet out of water, sometimes a foot, and at times it skipped along the surface. Round and round the lake we went for about two hours. I gave the fish no time to rest. At length he

commenced to get tired, and I could begin to get quite close to him. I kept calling for some one to fetch a spear (fishery laws were not very strict in those days). The people of the village heard my shouting and thought some one was drowning. They swarmed down to the water, and when they saw me apparently paddling about aimlessly and yelling like a wild Indian, concluded I had gone mad. At length one fellow took in the situation and brought a spear. I got the fish, and he weighed 23 pounds, dressed."

B. continued, "I don't want to draw upon your credulity too much, but I will relate one more experience. In this case I was a witness. One September morning I was out duck shooting at the outlet of this lake. I had left my boat somewhere down the channel and was walking along the shore to get a shot at some wood ducks. I came upon them, shot one and winged another, which started to swim across to the other side. Now, if you wing a wood duck and it gets to land a few minutes first—without a dog—you had better go look for another duck. I looked up the lake and saw a man in a boat. I called to him to come quickly and put me across. It turned out to be Pat D., a shoemaker in the village, who was out in a dug-out canoe trolling for 'lunge. He paddled toward me and was taking in his line as he neared the shore. I called out to him to be careful, as there were plenty of rocks. He had taken up his line to within a few feet, and as he threw the bait into the canoe, in jumped a good sized maskinonge. He had evidently followed the bait. Pat threw himself upon the fish, and I witnessed the tussle. Pat conquered. The fish weighed over 20 pounds—but I lost my duck."

The writer had nearly Pat's experience that same afternoon. As the fierce rays of the sun cooled down toward evening, our party went out trolling for 'lunge. My spoon fouled in some weeds and I was drawing it in to clear it. When the same was about 3 feet from the boat I gave the line a jerk to throw in the bait. As it came out of the water a good sized 'lunge jumped after it, exposing about two-thirds of his body out of water.

EDISON B. FRALECK.

Caribou Shooting in Newfoundland.

To the lovers of sport who wish to go where game can be obtained for a certainty, even by the most amateur, Newfoundland will without doubt be found satisfactory. Caribou are very abundant, but there are no other animals of the deer kind. Attempts have been made to introduce moose, but up to date with no result.

For the benefit of those who care to go there, I have thought it might be interesting to recount the experiences of myself and party who were there last autumn. Before going we found it more or less difficult to get reliable information about the place. What we secured was from literature obtained from various railroads and steamboat companies who wish to induce travel over their respective lines, and places are usually overdescribed for this purpose by some one who can depict scenery or extol the game resources as a special inducement to tourists. What I have to say will be a true account of what we saw and experienced.

The party consisted besides myself of Messrs. W. S. Kaulbock and H. I. Jenkins, of Malden, Mass., and J. F. Davenport, of Allston, Mass. Having secured a tent and sleeping bags of Phelps, of Boston, we embarked on the steamship Halifax, of the Plant Line, for Port Hawkesbury, on the Strait of Canso. We encountered that night a very severe storm, it being about the time of the Galveston cyclone, and had a rough passage, all of us being seasick. Arrived at Halifax a couple of hours late, and were glad to go ashore and get something to eat where there was a prospect that it would stay down. At last, until we started again for Hawkesbury, we took in what we could of the city, and about 1 o'clock that morning started again, arriving at Hawkesbury the following afternoon at about 4 o'clock. Here we found evidences of the storm of the preceding night, the steamboat pier there being damaged and two or three schooners and a steamer dismasted and ashore. The accommodations for passengers, that day at any rate, were the worst I ever experienced. We were piled into a little tug boat, bag and baggage, and taken across to Point Tupper, one extremity of the railroad to Sydney. Arrived at the latter place about dark and went aboard the steamship Bruce, en route to Port-au-Basque, Newfoundland. In passing I should not forget to say a word of praise for this steamship. She is owned by Mr. Reid, of the Newfoundland Railway. Her accommodations are excellent. She resembles a steam yacht in her furnishings. We were surprised to find so nice a boat up there.

Next morning found us at Port-au-Basque, where we took the train up country for the game region. At the custom house our baggage had to be examined, and at this point I should mention the importance of taking out licenses at the place when you land in the country, and not from some game warden up near the sporting districts. By buying licenses of the custom house officer at the port of entry you thereby show that you are bona fide tourists, and as such your whole baggage goes through without inspection or paying any deposit whatever.

We had promised to buy our licenses at the Bay of Islands, and consequently were required to open up and show our baggage and put up a deposit equal to the duty on everything we had. The ride up country was very pleasant. We made the acquaintance of Mr. Wilson, on the parlor car, who proved a very agreeable companion and gave us lots of useful information about the country. Arrived at Bay of Islands late in the afternoon and stopped over night. Here we met our guides, secured our provisions and boats and went on in the morning to Sandy River, arriving there about 2 P. M. Our guides were John Nichols and Edward Michaud, and our cook Samuel Farnell. We liked these men very much, and recommend them to others who can get them. Their address is River Head, Bay of Islands. Having taken our dinner we rowed down the river to Grand Lake and along the eastern shore about fifteen miles, when night coming on we landed and struck tent, for the weather was threatening. While going down the lake we encountered five caribou swimming across—one stag and four does. We secured the former and allowed the rest to get away. The stag had thirty-two points on his horns, which is not considered extra up there. Next day we went further down the lake opposite a high mountain peak known as Mount Harry. Here we encamped at the mouth of a small stream which comes down the side of the mountain at that point. Next day we ascended the mountain and camped a short distance from the summit. Having rested and taken dinner, we strolled out, surveyed the landscape round and saw nineteen caribou, some singly or in pairs, the most we saw together being four. Here we stayed four or five days, having bad weather all the time—fog, wind and rain. Having secured five stags and one doe with horns, we returned to Sandy River Crossing, then went further up the river to the second rapids and camped a short distance below Little Deer Pond. Here we shot the best stag that we secured. He had very massive horns with thirty-two points. Before leaving we got two other does with fairly good horns. Had we gone up to the place at first we would have had a much more easy and satisfactory trip.

After Oct. 1 the caribou begin to gather in herds for the southern migration, but they do not all participate, for our guides informed us that they can be found all over the island any time of the year, only a considerable portion of them migrating. I had my mind made up that when we got them, all we should do would be to go out, find a herd, shoot down our pick and that would be the end of it. It proved to be a delusion in our case, possibly because we were there too early. The stories of monster herds of five hundred or so are absurd. Our guides informed us that the most they had seen together was forty-eight, but that they had heard of somewhat larger flocks being seen. They informed us that wolves were practically extinct, and that bears were very scarce also. I had expected from what I had read that there would be good ptarmigan shooting. These birds are white in winter and are of two kinds, corresponding to our so-called birch and spruce partridge. I did not see any alive, but some of our party shot one or two. Other men I met there said they were really plentiful in some parts, and so tame that they could be killed with sticks. I suspect this another story like the monster herds of caribou we hear of but do not see. I should judge by the looks of the streams there that trout and salmon ought to be plentiful at the right season. I made a few casts in some of the best pools and got a few rises, but the fish were small and did not take a fly well. However, our friends said that in the spring and early summer one can get all he has a mind to catch.

A peculiarity of the island is the absence of reptiles. Many of the small animals we find in Canada are also absent, such as the woodchuck, mink, raccoon, porcupine and skunk. There are muskrat, beaver and otter there. also marten. We were told that there were two kinds of rabbits there in abundance. Our party saw none of either kind. Taking away the caribou, there is not much there to go hunting for, and unless you see some of these you may tramp all day over the barrens and see no signs of animal life except an occasional mohawk. I saw plenty of these when we pitched our tent, and they were so audacious that they would almost steal food from our tents. Perhaps what I have written is not an average description of the game resources of the island, but it is true so far as we observed.

In regard to licenses, one may get them for three different prices. A forty-dollar license allows the holder two stags and one doe; a fifty-dollar license three stags and one doe, and an eighty-dollar license five stags and two does, and I think any one can buy as many licenses as he wants and kill all the game he cares to pay for. Our guides and cook charged us $2.50 a day for themselves and boat. This is the average wages up there, but men can be got for less if you want that kind. Some of the more experienced guides get higher wages than this. I would recommend that sportsmen going from the United States take their provisions with them, as they cost more up there and cannot be easily obtained unless ordered before hand from St. Johns. If one buys his license at the port of entry, no duties will be charged on such supplies as the sportsman may require. The law is off there after July 15 and up to Oct. 1, then after Oct. 20 until the end of the year.

I was surprised by the absence of public roads in the island. The people all live beside the water and travel about in boats. I did not see much land fit for cultivation, but was informed that some parts were well suited for agriculture. In the interior of the island are large bogs and vast stretches of barrens, the latter covered with moss and growing plenty of berries of various kinds. Gulches of all dimensions run through these barrens with streams at the bottom and small trees and bushes lining the sides. These gulches afford excellent hiding places for the caribou when pursued. One often cannot see these gulches until almost upon them. On the large marshes I saw paths as wide as a carriage road and quite deep where the deer have been traveling for centuries. Smaller paths lead from the marshes over the barrens in all directions. From what I have learned the caribou of Newfoundland are larger than those of the mainland and have better horns. In Nova Scotia, where I have hunted, they are more difficult to approach and of a much smaller size.

The railroad is a narrow gauge, and is fairly well equipped. The officials are very courteous to sportsmen and will stop the train anywhere along the route to let them off or take them on. The scenery along the road is beautiful, particularly the Valley of the Humber. Grand Lake is sixty-five miles long and has an island twenty-five miles in length, with an elevation of from 1,500 to 2,000 feet. The country is comparatively new to the sportsman, and it is to be hoped that the game laws will be strictly enforced to prevent the extermination of these animals.

In closing I would recommend those who are fond of shooting to give Newfoundland a trial, feeling sure that they will be well repaid for their trip. A. C. FALES.

MALDEN, Mass., Jan. 9.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Natural History.

Experiences with Wild Animals.

Editor Forest and Stream:

It has been with pleasure I read your good editorials and the letter from Mr. Wells on the dangers from wild animals. They are identical with the conclusions drawn from the experience I have had and observed during the forty-five years I have put in on the frontier and in the mountains. During that time I have killed a number of bears, mountain lions (cougars I call them), wolves, and in fact all the dangerous animals inhabiting the Rocky Mountains. I have traveled alone through many different wild sections of the mountains and plains, camped in some of the most inaccessible places where there were plenty of wild beasts, as they are called, and I have found but two animals that tried to give me battle. One was an otter, the other a wounded buck.

In 1861 I was hunting on one of the tributaries of the Platte, about three miles from the South Park in Colorado I had left camp early in the morning, and had kept along the stream as near as the brush would admit. The sun was shining very bright on the snowy range, but had not got high enough to strike the bottom I was hunting in. I saw up to my right a very big buck. He had evidently seen me first, as he was standing broadside and looking at me. I raised my rifle and fired; at the crack of the rifle the deer gave a jump, then stopped, and waited until I was nearly ready to fire again; then he started off, and I soon followed. There was no snow, so I had to track on the bare ground, which sometimes is slow work. I soon found blood on a dry log the deer had crossed, and by examining close I saw there was chewed food mixed with the blood. Then I knew I had shot the deer too far back. I followed on, and soon came to where he had been running, quartering down the mountain, and soon I came to what seemed to be the end of his tracks, and was standing and taking a good look in all directions, when all at once I heard a sniff, and on turning up the mountain I saw the buck coming down at me. He was so close I could not shoot with any certainty, but I shot, and then dodged behind a small pine tree. The deer passed as close to me as the tree would let him. He was going with such force that he was at least twenty feet below me when he stopped and turned half-way around. I lost no time in reloading my rifle, and as the deer stood watching me with his eyes as green as a mad dog's, I slowly and carefully raised my rifle and shot him dead. I reloaded my rifle and then as the deer did not move I went to where he lay. He was a fine deer, and brought $25.

I was busy drawing him when I was startled nearly as much as I was when the deer charged. Another hunter had come up the mountain from the other side, and hearing my shots came over that way, and was just across on another ridge when the buck charged at me, and he told me that he had been in the mountains in California, and in fact all over the West, and it was the first time he ever saw an animal charge on a hunter. I told him I had wounded it a short time before and was tracking it, and had lost the tracks when the deer charged. He helped me hang the deer up, then we hunted together for a while, but got separated, and it was dark before we got to camp.

The other wild animal that showed that he would rather fight than retreat was an otter. I had got between it and a stream, and instead of trying to get away and go round, it wanted that I should do the getting out of the way, while it was going to go straight for the stream, but when it raised up to give me battle I shot it with my revolver.

I will now speak of a few of the times I have tried to get that wonderful animal, bear, to stand. In 1865 I was coming out over the mountains from Clearwater Station, in Idaho, to the Mountain House. I was on foot, and had my blankets on my back and was traveling along at a lively gait. On coming out from a service thicket into some openings, I saw not more than 50 yards away a large black bear and four cubs cross the trail, I slipped out from my pack and gave chase, for I wanted to see if the old bear would fight or leave her cubs. I made the pace so strong that soon three of the cubs turned down to the left, and the old bear and the other cub kept quartering around to the right. I soon made it so hot for them that the cub ran up a large pine, and stopped on the first limb it came to. But the old mother never stopped to see what had become of her cubs. There was one thing peculiar, two of the cubs were as black as cubs can be and the other two were cinnamon. I sat down and watched the cub in the tree, and soon I heard a bell, and I had not long to wait till three men came along the trail, going over the mountain. I went up and took my blankets out from the trail, and I told the men that I had just chased an old bear away from her cubs. While the men did not say that I was a liar, they showed by their looks that they took the story with a big grain of salt. I told them that one of the cubs was up a tree a short distance down the hill, and they wanted I should show it to them. I did so, and one proposed to go back and get a rifle out of the pack to kill the cub with. I told them if they wanted it I would kill it for them. One said "What would you kill it with?" I said, "My revolver." I would like to have a picture of that man when he looked at me.

I raised my revolver and was about to shoot when one of the men said, "Hold on; let me get a club, so that if you only wound it I can finish him." I waited till he got his stick, then I shot, and out rolled the cub, but it was so dead that it did not need any finishing strokes.

A number of years after, Ben Morris, Ezra Baird and I were coming through the mountains from Boise to Mount Idaho, and when we were passing through the Weiser Meadows I was riding ahead, and soon I noticed a large animal up to my left. At first I thought it was a small dark colored cayuse, but soon I saw it was a large bear, and there were four cubs running around her. I proposed to Ben that we run her away from her cubs, and he was willing we should try. Soon the bear saw us and started on the run for the timber. As it happened, we were on the opposite side of the creek from the bear, and

we had some difficulty in finding a crossing, and when we got across the bear was nearing the timber. We urged our horses as much as we could, and when we were about 50 yards from the bears they got to the timber. The old bear turned partly around and growled, but we let them go, as the logs were too thick for us to run our horses over.

Another time I was hunting for a berry patch with a friend, and we had hitched our horses and were walking along talking, when I noticed not more than 100 yards ahead a large cinnamon bear, sitting up looking at us. I called the attention of my friend, and at the same time reaching for my revolver, and when he saw what I was going to do he grabbed me and begged me not to shoot, as the bear might charge on us. I laughed at him, and soon the bear ran and crossed the ridge we were going down. I pulled loose from my friend and gave chase after the bear with my revolver in my hand, and I kept in sight of the bear, and it soon turned up the mountain to the right and stopped about 100 yards away. It had its feet upon a log and afforded one of the best kind of shots. I raised the revolver and fired, and over rolled the bear. I ran up so that I could finish it if necessary, but it was not. I went back then to see what had become of my friend, but I could not find him. Soon he came riding his horse and leading mine, and when I told him I had killed the bear, instead of praising me he gave me a good lecture on my rashness, as he called it, and told me that some day I would get killed by the bears. We went to the bear, and I took the gall, which I sold to the Chinaman in Mount Idaho for $5.

I was once plowing with three mules, one of which was noted for his aversion to Indians. Often I have seen Old John hold up his big ears and snort long before any Indians would put in an appearance. Old John had been looking and snorting for quite a while, and finally two squaws rode up to the fence and gave me to understand that they wanted me to get my rifle and go with them over into the cañon a short distance. I drove down to the house and, tying up the mules, took the rifle and the two dogs and followed the Indians. When I got to the cañon I saw on the opposite side two more Indians, and from their actions I knew there was some kind of an animal at the carcass that lay in the cañon, not more than 100 yards from where I was. The Indians that had come after me had stopped; I kept on, and when within less than 30 yards of the carcass I saw a very large panther jump from the carcass and make off up the cañon. I told the dogs to catch it, and in less than 150 yards they treed it. I went up within about 20 yards of the tree and whistled, and when the panther looked toward me I shot it in the eye. When it was dead the women came in and wanted I should give it to them. I told them they could have the meat, but I wanted the hide, which I agreed to give them $2 to dress with the fur on.

One day while watching some deer feed in little Sheep Cañon, I saw a panther spring on a deer, and I think it killed the deer as quick as a cat can kill a rat, and while I did not measure the distance it sprang, it certainly was more than 40 feet. I went around and crossed the cañon and came up to within less than 30 yards of it, while it was still eating. I whistled, and when the panther looked up I shot it in the head. I could not see where the deer had struggled to amount to anything. The panther had bitten the deer through the back of the head. It had eaten out the back of the neck down into its shoulders.

The largest panther I think I ever saw was the one I killed with my revolver on the Clearwater. The boys wanted to go to the house and get my rifle, but I told them that I would kill it with the Navy, and I did so, much to their pleasure. We weighed it and it tipped the scales at 105 pounds.

LEW WILMOT.

OAKMONT, Pa., Feb. 24.—*Editor Forest and Stream:* I notice that in your issue of Feb. 23 Mr. Ames cites instances of dangerous panthers in Vermont, but as having been seen in long past times. That suggests to me the inqury of how much truth there may be in the old-time theory that animals which were bold and ferocious when their habitats were thinly settled by civilized man became cowardly when man brought his exterminatory processes to bear on them? When we were boys, the grizzly, the alligator, the "painter" and the wolf were painted as very dangerous beasts, and of later years we got the information that they were all cowardly unless wounded or starved, as the result of man's merciless warfare on them. Has anybody any facts bearing on this question? Getting up plausible theories to explain almost anything is as easy as rolling off a wet log in a mill pond, and the fewer the facts the easier the theory manufacture. What little I have known of him warranted me in believing that the wildcat is dangerous on half-provocation, and he has hung round the fringes of man's settlings almost as closely as the rabbit, and reports from California at the time that that 18-pound fox terrier out there killed that 42-pound wildcat, indicated that he was still as dangerous a beast as ever, while the "painter" was a ridiculous coward. Perhaps it is a matter of individuality of breeds. Some may cow under man's warfare and some may remain as they originally were. Anyhow, facts will be interesting and perhaps valuable.

W. WADE.

Editor Forest and Stream:

I have been very much interested in the articles in FOREST AND STREAM about the "Wild Animal Fear" and am glad to offer my experience.

I have been a hunter in the country west of the Missouri River since 1856, and have killed most of the various wild animals found there. I am familiar with the case recently cited by you where an old man was killed by a deer in Nebraska, and was one of the men who found the body.

I have been in some tight places during my life, but I think that I was never in such danger as I once was from the unprovoked attack of a white-tailed deer.

I think it was in the autumn of 1877 that I was hunting on the Dismal River in central Nebraska. I had just come up over a hill and was looking over the country, when, without any warning, a white-tail buck and two does came over another hill, more than half a mile away. I happened to see them as they topped the hill, and lay down in the hope that they would work toward me, but as I did so the buck must have seen me, for he left the does and came toward me on a run. I was puzzled at his actions, and as he got near me it seemed evident that he was going to attack me. When he was within 100 yards I stood up, thinking that the deer would stop and I could then shoot him. He did not stop, but came directly on, his head held low and hair on his back standing up. The wind was blowing so hard that I was afraid to shoot for fear of missing him, and I waited until he was within a few jumps of me and then fired, and jumped to one side. I was not quick enough, for as he passed me he threw out his head and struck me on the arm with his antler, giving me so hard a blow that the arm was numb, and I could not use it.

As soon as the deer could stop and turn, he came at me again, but just before he reached me he fell dead. If I had missed him, I think the chances are that he would have killed me.

This was in the rutting season, and no doubt that was the cause of the attack. On the other hand, while at first the deer may have taken me for another deer, his error must have been corrected when he saw me stand up.

I think that I sent an account of this incident to FOREST AND STREAM many years ago, but am not certain about this.

L. H. N.

MONROE, Neb.

Editor Forest and Stream:

It was in the early summer of 1884 that I was up on the mountain back of the ranch, in Wyoming, looking for some meat to kill. I had left my horse and was hunting on foot near the edge of some timber, when, as I passed over a little rise of ground, I saw at the foot of a group of pine trees a large black mass on the ground. I stopped to look at it, and as I stood there, the mass separated itself and five bears that had been lying close together got on their feet and began to walk around, snarling and growling at each other. This had not gone on very long before the largest of them saw me and started for me at a dead run. I did not know what to do, and had very little time to think about it. My horse was a long way off and no tree to climb was within reach. Only one bear had charged; the other four were still walking about the place where they had lain.

As there was nothing else to do, I stood fast, waiting for the bear to come on, and when he had come close within 15 or 20 feet of me, I fired, and then turned and ran as hard as I could. I heard nothing behind me, and after I had run 50 or 60 yards, on looking back I could see nothing following. But I kept going at the best gait I could keep up, until I reached my horse.

When I was on his back I felt better. I hunted up my companion, who was off to the north, and with him went back to the place where the bears had been. I could see where the bear that had charged me had fallen and the ground grow wet with a great pool of blood that he had lost. He had finally got up and gone back to the others, and the five had then started off across the mountains. We followed them without difficulty, for they made a broad trail, through open parks, open pine timber and across snow drifts, which even then were 40 feet deep or more. It was interesting to notice that on some of these drifts where the snow was so hard that our horses' hoofs did not sink in at all, the footprints of the bear which I had shot, and which still bled a little, sank in from 6 to 8 inches. I guessed he was a big one.

At last the bears entered some heavy and low pine brush, and there we left them. I confess that for my part I was quite willing to let them go.

SEMINOLE MOUNTAINS, Wyoming.

A Pair of Red-Tailed Hawks.

WHILE I was living in Farmington, Me., and while yet a schoolboy, there was a pair of red-tailed hawks (*Buteo borealis*) that nested year after year in a large patch of old growth situated on a steep side hill, known to the residents thereabouts as Pick Hill. These birds were often seen hunting for food in patches of woods and about the farm houses for several miles around.

The farmers, many of them, tried to shoot the birds, believing they were trying to catch their poultry. All of the depredations of the numerous sharp-shinned hawks (*Accipiter velox*) and Cooper's hawks (*Accipiter cooperi*) that caught a few chickens about the locality, these red-tails got the blame for. 'Tis true they caught an occasional hare (*Lepus americanus*), as I have sometimes found bits of fur and bones of a hare in a patch of woods thereabouts, left by these hawks, after making a meal on them.

On two or three occasions I found the remains of a Canada ruffed grouse (*Bonasa umbellus togata*) which they had captured. But at no time have I known of one of this pair to catch any one's poultry. Though I have often heard the farmers remark that probably those hawks had caught a great many hens and chickens, yet none had ever seen them take any poultry. Not one word was ever remarked about the countless numbers of rodents, snakes and frogs and such food that these hawks had captured. It was a case similar to "poor dog Tray's" experience. They had rid the community of a great many injurious rodents, yet not a particle of credit for good did they get, but were blamed for the harm done by the smaller hawks.

For several years they nested in a very tall old-growth yellow birch, on the steep side hill, each year returning early in April and commencing their nesting about the middle of May, using the same nest year after year, relining it annually with a few twigs of green hemlock and bits of birch bark. The nest soon became an enormous structure, and could be seen for a long distance through the woods. They seemed to know the significance of a "boy with a gun," and if one approached would keep a long distance off. I had no desire to shoot them, so they became more accustomed to my frequent visits, and were not so shy, yet when any one visited that woods with a gun, he rarely got a glimpse of the birds, as they left for another patch of woods across the stream, remaining until the trespasser upon their domains had wearied of the chase and retired.

No amount of trying to hide could be "worked" upon them, as they were very wary and could not be fooled. I have watched these birds for hours as they would fly leisurely to a dead stub and quietly watch for food. When disturbed they uttered a hoarse, prolonged cry, not so shrill as the cry of their cousins, the red-shouldered hawks (*Buteo lineatus*); a more hoarse, prolonged cry like k-a-i! uttered at intervals of several minutes apart, sounding as if they had a "frog in their throat." For hours, too, have I watched these birds as they gracefully soared with wings outstretched in large circles, going higher and higher, with scarcely a movement of the wings, soaring aimlessly about with seemingly no other object than the pleasure of cutting such aerial circles, far too high up to be searching for food. The sensation derived from skating and cutting circles on the ice and in riding a wheel along a smooth, hard path or boulevard, even the pleasure of spinning along with the automobile, cannot, I imagine, be compared with the sensation of cutting such circles through the air.

The tree in which these birds had nested for years had been too high and large to try to climb, but in June, 1897, my cousin and myself repaired to it with climbers, and he volunteered to ascend to the nest. After a hard climb he succeeded in reaching the fork on which the nest rested, but the nest was so tall and broad he had great difficulty in getting to a point from which he could see into the nest. He found three young hawks covered with down, about a week old. These he let down to me in his hat, with a string tied to it. I took them home and fed them on earth worms and bits of mice and frogs.

It was very interesting to watch them try to tear the flesh I gave them, and to see them strike angrily at each other, often catching each other by the beak, and a general mix up would then follow. They made very interesting pets, but I was only able to keep them until about half-grown. Unlike my old red-shouldered hawks (see FOREST AND STREAM, July 28, 1900, page 65), the old birds did not lay another set of eggs after being disturbed, but returned the next year and occupied the old nest.

Once afterward I took their first set, and they remained about the nest, but made no attempt to rear young. They returned the next spring and reoccupied the old nest as usual.

In the fall of '98 the heavy winds blew their tree down, and on their return the following spring they built a new nest in a tall, leaning birch, a few rods from the old site. This did not prove so satisfactory as the old nest, as the following spring, instead of relining this nest, they built a nest in a large basswood at the extreme end of the woods, south of the old site. Here they resumed their regular order of household duties. I visited this nest the last of May last year and found my old friends were still occupying it. But a week later a young fellow by a chance shot killed the female, and the male, which was perched on a tall tree not far off, flew rapidly off, and he was not seen about the place after that, though I made several trips to the nest to see if he was to be seen. Several days after the female was shot I climbed to the nest and found that the crows had broken the two eggs and eaten the contents, leaving the shells in the nest.

I shall look next spring, as I spend my vacation near that locality, to see if the male will return, mated, and occupy the same patch of woods that he has become so much attached to, or if this is to be the last chapter I am able to record of this interesting family of hawks. If the woods is deserted by this remaining hawk and none of their progeny come to occupy "the old homestead," there will be a vacancy there. The winter wrens will sing on as usual, the rose-breasted grosbeaks will nest on the hillside and the woods will ring with their beautiful songs. The "nightingales of the North" will make the woods resound with their mellow call on the dark and rainy days. The hermit thrush will sing his evening songs, and the many other species will make it a charming spot, yet it will never again be complete without a pair of red-tailed hawks to soar above the treetops and make the early morning air ring with their hoarse cries. Their old nest, unoccupied, will be appropriated by the gray squirrels, and will soon decay. The heavy snow and the fierce wintry winds will soon break down the once happy home of my old friends, the Buteos.

J. MERTON SWAIN.

PORTLAND, Me., Jan. 22.

The Labrador Duck.

Editor Forest and Stream:

In a book entitled "Exploration de l'Ile d'Anticosti," by M. Paul Combes, published in Paris in 1896, a statement is made that the author recently saw the Labrador, or pied, duck near that island.

I do not know that this statement of M. Combes' has been seen by American ornithologists—I have not seen the work myself—but it is one which will interest them.

It is believed that the Labrador duck is extinct, and this belief is expressed in the A. O. U. check list, and is shared by American ornithologists generally, though Mr. Ridgway (1887) says more cautiously, "Believed now to be nearly if not quite extinct." Mr. Wm. Dutcher, who has given especial attention to this bird, writes me: "I have made every effort to get information regarding the Labrador duck in every portion of the northern part of this continent, without any success whatever, and I therefore conclude it is extinct."

In an article published in Nature of Jan. 10, 1901, entitled "Some Animals Exterminated During the Nineteenth Century," R. L. Ydekker speaks of the Labrador duck as extinct, adding, "the last known example having been killed in 1852." This is an error, as American ornithologists will readily recognize. About the year 1871 or 1872 I saw more than one of these birds in process of being prepared by a taxidermist, for the late George A. Boardman. They had been purchased in the New York markets.

While it is rather unsafe to venture a conjecture as to what M. Combes' statement really means, the suggestion may be hazarded that he mistook ducks of another species for *C. labradorius*.

G. B. G.

Oh! was ever a man more happy,
Could ever more gleefully sing,
Than when buying trout in the market
And swearing he caught the whole string?
—Boston Courier.

Voice—Catching anything? Fisherman—Yes; malaria.

New York Forest, Fish and Game Interests.

President Wadsworth's Views.

Editor Forest and Stream:

In answer to your request for my views on the subject, I beg leave to say that I think that the Forest, Fish and Game Commission is an anomaly as at present constituted, for reasons given under the following heads.

The Forests.

The Commission is supposed to have charge of the State lands, amounting to hundreds of thousands of acres (1,384,128), valued at over ten millions of dollars, yet divided into nearly six thousand separate lots (5,974), some covered by valuable timber, subject to forest fires, decay and death; others miles away from the rest, surrounded by hotels and settlements, useless for game, timber or water supply, but of great value for lease, sale or exchange.

But the Commission can make no rules regarding them beyond the laws enacted. The Constitution prohibits the leasing of land or even the giving away of dead timber, and the Legislature allows but three foresters to look after this property.

Fisheries.

These must in their nature be looked after by expert specialists. The technical part is well provided for, but it seems foolish for the State to spend money for putting fish into streams to have them killed by acid or sawdust, and prevented from spawning by dams and nets; or to raise them in captivity until mature, and then put these tame beasts where they are so easily captured that they might as well have been shipped direct to the kitchens instead of the pools of the "sportsmen."

If the Legislature would provide for keeping streams pure, so that fish could live in them, free from obstruction from dams and nets, so that they could spawn in them, and protected from molestation during that period, a much smaller appropriation would be sufficient to look after the valuable food fishes and for the care of such large bodies of water as cannot be seen to by towns and counties.

The men who fish for fun are amply able to take care of themselves, and the communities which profit so much by their presence can well afford to cater to their wants.

Shell Fish.

The Shellfish Office, which is a thing by itself and can easily be made self-supporting, must be kept in New York so long as the State adheres to its present policy of leasing oyster rights, which experience, thus far, has shown to be beneficial, owing to the magnitude of the industry, the complexity of the necessary surveys and the local rivalries and jealousies of small communities.

Game.

The present force of thirty protectors cannot act as private game keepers for every man in the sixty counties of the State, and it is not desirable that they should. The local police protection should be thrown on the towns or counties which profit by it, and the State should confine itself to general supervision, propagation, cold storage, sale, transportation and such matters. The game laws are so complex and change so often that they are absolutely unknown to the bulk of the people, and it is doubtful if there is any one man in the State who could tell what they are to-day. They should be simplified, and in each locality the season begin and end at fixed dates, outside of which no one should be allowed to carry a gun off his own premises without a license, or to catch, kill, sell or transport game of any kind whatsoever. There should be an express understanding that no fish or game should be put out by the State where there were not efficient local protectors, so that no locality whose inhabitants have not sufficient intelligence to appreciate the money value of good shooting and fishing should reap the advantage at the expense of other taxpayers.

The Commission.

At such time as the people feel that they can trust their officers and will withdraw the constitutional provision regarding them, the State forests should be put in charge of an unpaid Commission, not to exceed three members, who should have absolute jurisdiction within their limits on all matters pertaining to them, such as water supply and pollution, game refuges and protection and the control of camping parties. They should also be empowered, under proper restrictions, to exchange, lease or sell outlying lots, and to practice forestry in a proper and conservative manner under a well defined plan, and should be allowed sufficient force under their own control to do so.

And I earnestly hope that the Legislature, instead of multiplying laws, restrictions and penalties beyond what already seems excessive for a free country, will cut down and simplify them, and increase the power of farmers and land holders to keep intruders off their premises.

There are hundreds of thousands of farms in the State whose owners never shoot and would gladly allow game to breed on them if there were any effective way of keeping the village loafer and pot-hunter from tramping over them and killing every living thing.

W. A. WADSWORTH.

American Wildfowl and How to Take Them.—XXV.

BY GEORGE BIRD GRINNELL.

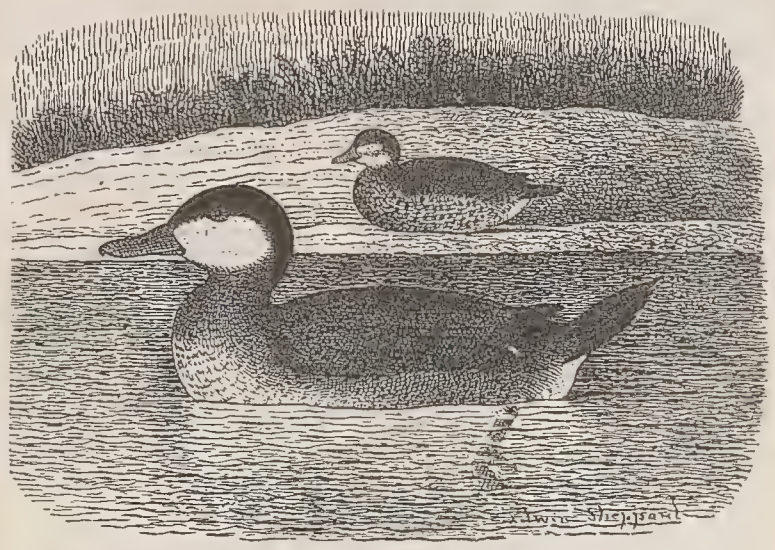
[*Continued from page* 164.]

Ruddy Duck.

Erismatura rubida (Wils.).

THE adult male has the crown black, which color runs down on the back of the neck; the side of head, including cheeks and chin, pure white; the entire upper parts, reddish-chestnut, except the wing coverts; the middle of the rump and lower back, greenish-brown, freckled with paler. The quills of the wing and tail are brownish-black; the under parts are silvery-whitish, something like the breast color of some of the grebes. The long tail-coverts are white; the bill and feet grayish-blue; length, 16 inches.

The female is much duller; the upper part of the head is dark brown, paling on the sides of the head. Often there is a white strip below the eyes, running almost from the base of the bill to the back of the head. The chin is white. The throat and neck are brownish-

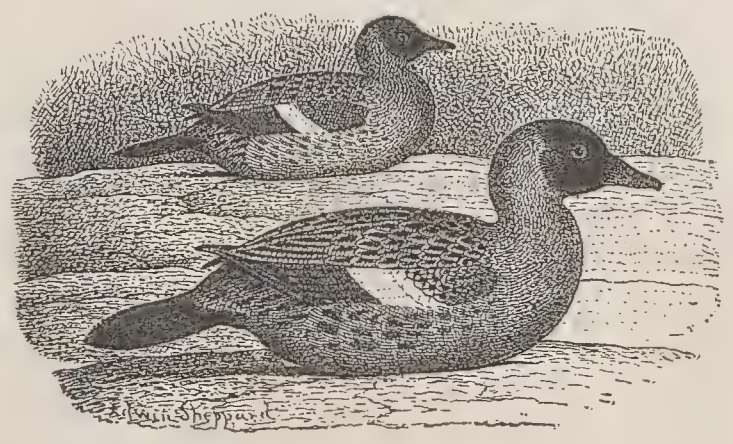


RUDDY DUCK.

gray, fading to silvery on the breast and belly. The upper parts are grayish-brown, mottled and speckled with reddish. The wings and scapulars are dark brown; the tail and wings as in the male; the bill is bluish, often blackish, and the legs and feet, bluish-gray. The young male is still duller.

The ruddy duck is found throughout North America, and is one of the gentlest and most unsuspicious of our birds. It is resident in northern South America and yet it frequents the northern portions of the continent as far as the 58th parallel. It is abundant in California, and equally so on our south Atlantic coast, and occurs often in Massachusetts during the spring migration.

The ruddy duck, although it takes a long time to rise from the water, is a strong flier. It is, however, very much at home on the water, a rapid swimmer and a very good diver. The ruddy is a most gentle and unsuspicious little bird, and appears to pay no attention to the gunner, though he may be standing in plain sight, as it darts down and splashes into the water among the decoys. Until within a few years, gunners in our south Atlantic waters never shot these birds, which were accustomed to come to the decoys and feed among them and then swim or fly away unmolested. Of late years, however, this has become a fashionable bird for the table, and bringing good prices is eagerly sought after by market-gunners. Great numbers are therefore killed each



MASKED DUCK.

season now where formerly they were almost unmolested, and the result has been a very noticeable reduction in the numbers of these little birds.

The ruddy duck has a great number of common names, most of which refer to its physical peculiarities or to its great gentleness. Thus it is called sleepy broadbill, sleepy-head, sleepy duck, sleepy coot, sleepy brother, fool duck, deaf duck, booby and booby coot, paddy and noddy. From its tail it is called stiff-tail, spine-tail, quill-tail coot, pin-tail, bristle-tail, heavy-tailed duck, stick-tail and dip-tail diver. From its supposed toughness, or the difficulty with which it is killed, come such names as hard-headed broadbill, shot-pouch, stub and twist, hard-head, tough-head, hickory-head, greaser, steel-head, light-wood knot and perhaps hard tack. There are a great number of other names, for which the reader must be referred to Mr. Trumbull's excellent volume.

Masked Duck.

Nomonyx dominicus (Linn.).

The adult male, in full plumage, neck all around, back and sides, dark cinnamon-brown, the back and sides with the feathers broadly streaked with black; the front of head, including chin, cheeks and crown, black, this color extending nearly to the back of the head. The lower parts are rusty, but the feathers of the side are streaked with black. The wings are brownish-black, with a white speculum. The under tail coverts are brownish, spotted with black. The tail is dark brown; the bill blue, and feet blackish; length about 15 inches.

The female has the head black, with one or two brownish streaks running back from the bill. The chestnut is paler, verging to yellowish and spotted with black; the sexes are thus much alike, but the female is very much duller.

The masked duck is found in North America only as a straggler, for it belongs in the tropics. It is a common West Indian and South American species. It has been taken on Lake Champlain, in New York, in Massachusetts, in Wisconsin, Texas and Mexico. It does not appear to be anywhere an abundant species, as is its relative, the ruddy duck. We are told that it does not seem to be at all at home on the land, and that when it walks it is in some degree supported by its long, stiff tail. Gunners should be on the watch for this species.

Maine and Sportsmen.

BOSTON, March 2.—There is an element in the Maine Legislature this winter that is bound to cause the Fish and Game Commission all the trouble possible, and it is reasonable to suppose that a good deal of the feeling comes from the constituency of the members—the people. Economy and relief from taxation is demanded by the grangers, and they are ready to look for economy in any direction. Representative Thornton, of Ashland, introduced into the House on Friday an order that will make work for the Fish and Game Commissioners at least. It reads: "That the Commissioners of Inland Fisheries and Game furnish the Legislature with a full list of all acts relating to inland fisheries and game that have been enacted or are now pending in the present Legislature. Also a list of all appropriations, with title and number, that have passed or are now pending in the present Legislature, for the purposes of fish and game. Also a statement in full of the amount of fines and forfeitures under the fish and game laws during the years 1899 and 1900, the same to be classified by counties." Another order put in reads: "That the Committee on Taxation shall take under consideration the matter of raising a larger revenue from the wild lands in unincorporated places, and whether there is any constitutional method whereby it can be done, and report by bill or otherwise." It is well understood that this last order is introduced for the sake of devising some means of raising direct revenue from the sportsmen who visit these wild lands and unincorporated townships. The farming and lumbering elements claim that while sportsmen, according to the reports of the Commissioners on Fisheries and Game, annually bring millions of dollars into the State, none of it goes to the State, and the farmers are not relieved in the least from taxation, but are annually being assessed more and more for the support of fisheries and game. It certainly looks as though the days of free hunting and fishing in Maine were doomed, and that some form of exaction from them other than what they have always suffered from greedy camp keepers and transportation companies, will hereafter be in vogue. Maine law makers will do well to proceed carefully in the matter of greater taxation and annoyance upon visiting sportsmen. It is a fact that as many people stay away from Maine every year—many who have been there—as go there, for the reason that it costs too much.

SPECIAL.

A March Afternoon.

THE night after the "February Afternoon" the weather dropped the mercury to 20 below zero, the wind blew 50 miles an hour for nearly thirty-six consecutive hours, freezing ice a foot thick on all the streams, and all the ducks were gone. There was no sign of a thaw till the middle of March, and the man with the gun was shut in the schoolhouse for a month. Then the weather got warm and it rained for several days, and the ice in the streams broke to pieces and went tumbling over the mill dams, and ponds were open again, and long lines of ducks and geese harrowed the sky, all going North for the first few days, but after that there was a great flight to the South from three to five each afternoon, and to the north from five till long after dark, the reason for these flights being that to the north of the Coon River "timber" lay a vast tract of prairie, dotted with innumerable ponds and traced by many winding marshy sloughs. To the south of the "timber" was "Quaker Ridge," a high, dry prairie. There were no ponds there, but there were thousands of acres of corn stalks, among which was enough corn to make fine feed for the ducks, so they went there to feed, and to the north prairie for water and roosting grounds. Each afternoon when school was out the man with a gun watched these great flights and said to himself, "On Saturday I'll be with them, and there will be roast duck at our house next Sunday."

It was a long week, but Saturday came. The man with a gun was eager to be using it, so it was not late in the morning when he was tramping through the timber on the way to the north prairie. A walk of seven miles brought him to "Parker's," where he visited with the folks till after dinner. Wayne Parker said there were any number of mallards roosting in "the ponds" every night, and there hadn't been a gun fired there this spring. "Parker's Pond," as we called it, was half a mile long and 200 to 500 yards wide, thickly covered with rushes or reeds ten feet high, the water shallow and the bottom soft deep mud. After dinner the man with a gun sat at Parker's upstairs window and watched the ducks leave the pond for the feeding grounds. They rose in flocks of half a dozen, by fifties and then by hundreds, so many in all that it seemed as though they must have been piled on top of each other in the pond. By 4 o'clock they were all gone.

Then the man got a board six feet long and another four feet long and made a cross of them, borrowed Wayne's old overcoat, and took his way to the pond. About two-thirds of the way to the north end of the pond was a place perhaps three hundred yards wide, and there was an island pretty well over to the east side. He knew this place very well, for he had been there many a time before. He stuck the cross in the ground at the west side of the pond and hung the overcoat and an old hat on it, then started to go round to the east side where he could wade to the island. He had reached the high

grass at the north end when he heard sandhill cranes just over the knoll in front of him. They were not in sight, but in hopes they were coming his way, he dropped in the grass and waited. He had tried for years to get one of these shy birds, but had never bagged one. This time fortune favored him, for they came squarely over him and not thirty yards high. Selecting the biggest one, he fired, fully expecting it to wilt. Then there was trumpeting and wing flappinng and confusion in the flock that was so orderly a moment before, but the one he had shot at didn't wilt. It was hard hit and would no doubt have come down before going far, but the shooter thought one bird in hand worth two on the wing, and immediately gave it the other load, and that time it wilted. This and one other were the only sandhill cranes he killed in three years of hunting in a region where they were to be seen every day from August to December, and from March to May.

Wading out to the island, which was surrounded by thirty to forty yards of open water, he set the box of shells within easy reach and sat down on the old board that had been there since last fall's shooting. He regretted that he had no dog, for just then Flora was interested in a litter of puppies that she thought were the nicest puppies that ever were, and old Sinner was at home whining with rheumatism and crying because he could not go. However, the dead ducks would fall in the open water, and it was not too deep to wade.

For half an hour after everything was ready, not a duck came within a mile, and but few were to be seen. One who didn't know the ways of the ducks would have thought that the prospects were very slim, but this man knew that he would get fifty shots that evening, and bdied his time in patience. Presently two brant came over, flying high, and just for luck and to hear the gun crack again he gave them a shot, and was surprised and greatly pleased to see one of them turn over backward and tumble to the ground almost at his feet. "Hit him in the head," said the man to himself, and it was found that one No. 5 shot had entered the throat and lodged in the brain. This was a good beginning, and he was assured of roast wild fowl for his Sunday dinner; but like Oliver Twist, he wanted more. At 5:30 there were still no ducks, but a dozen prairie chickens came sailing over the pond and lighted on a bare spot a litttle way out from the pond. The man in the grass watched their antics with great interest. The bare orange colored spot on the necks of the cocks was distanced, their tails were spread out and wings drooped, and they strutted around the hens with all the pride of turkey gobblers, continually making that booming sound that no one who has heard it will ever forget, and which cannot be described in words. While watching the chickens there came a sound of s-w-i-s-h, s-p-i-a-s-h, and turning his head a little he saw a dozen green winged teal right at the edge of the island. A shot at the bunch while they were on the water and another as they rose laid out four of them. A few bunches of mallards now appeared, flying high and going to ponds further north, but as yet none of the ducks that roosted in Parker's Pond were coming, nor would they come till nearly sundown, but that would not be long, and the man was glad of it, for with the lowering of the sun the air grew chilly, and by dark it would be freezing. From now on the flocks came faster and faster, till there were tens of thousands in sight, and an occasional flock swooped down toward the pond, then soaring upward passed on north. But now see that bunch drop from the sky to the other end of the pond. Down they come; wings outstretched and settling slowly till they are not twenty feet above the rushes. But the man on the island keeps low and quiet, for he knows they will not settle yet, because they will not be satisfied till they have explored the whole ground and that they will probably come within gun shot. There, see them rise, as if they saw danger in the water below them. Now they come straight toward him, but swerve off to the northwest and he thinks they have started to Pilot Lake, but now the old coat and hat serve their turn, for the birds see it and shy off from it toward the shooter. Now he feels sure of the shot, but is doomed to disappointment, for they make another turn and speed away for Butler's Pond.

Seeing they were gone he turned his head to see whether more might be coming, and there saw about thirty, so close that he could see their eyes. By the time the gun could be swung into position they were past him and an opportunity for a good shot lost, for neither shot disturbed a feather. Looking again to the south he saw five or six bunches of mallards circling over that end of the pond, and after a few minutes of anxious waiting, got an easy shot as one of the flock passed thirty yards to one side and, pausing an instant, settled as if to drop into the water. Selecting two drakes that were close together, he dropped both of them at the first shot, and selecting another drake, dropped it with the second barrel. By this time the sun was just sinking to rest in the bosom of the prairie, and the sky appeared to be fairly alive with the vast numbers of ducks returning to the ponds.

From this time on there was more shooting than a dozen guns could handle, and when full darkness shrouded the land just one cartridge of the fifty brought out remained. The dead birds were yet to be gathered, but that was a short job, for they all lay in the open water surrounding the little island. He was just laying the gun down to begin gathering the dead, when he heard some geese, which a moment later passed right overhead and not twenty feet high. Firing the last cartridge at one of the geese the charge cut off a wing, leaving it held to the body by a few ligaments. The goose fell in the open water but a few feet from the wall of rushes, and at once made for their cover. It would never do to let a goose get away, so the hunter rushed after it and caught it by the broken wing as it was going to cover, and the way that old gander splashed the water almost took the shooter's breath. Then to make matters worse, as he stepped backward his foot went into a muskrat hole, and to keep from falling full length in the water he sat down, getting wet to his waist. The water was cold and the air was chilly, but he held to the old gander and getting him by the neck dragged him ashore and killed him. Then he grabbed the gun and started on a run for Parker's, for it was too cold to be out any longer, and the ducks could be gathered in the morning. After getting warmed and dried and eating supper, he felt none the worse for the wetting, and slept quite late next morning.

When he went to get the rest of the ducks that had been killed, there were a good many hawks to be seen flying over the place, and on arriving at the island there was a thin skim of ice on the water where the ducks lay, and eighteen of the dead mallards that lay breast upward had their feathers torn off and scattered over the ice and their breasts eaten by the hawks. The shooter had not been in the habit of shooting hawks, but this was too exasperating, so he established himself in the blind from which he shot the ducks and when he left there, two hours later, there were thirteen dead hawks lying around. This did not put the meat and feathers back on the mallards, it made them "never do it again." There were plenty of ducks without the mutilated ones, so many that they were too heavy to carry home, and were left for Parker to bring down in the wagon next day. After dinner the shooter trudged back to town, feeling at peace and in a good humor with himself and all the world.

O. H. HAMPTON.

CHICAGO AND THE WEST.

The Chicago Sportsmen's Show.

CHICAGO, Feb. 27.—The so-called private view of the first annual exposition of the International Forest, Fish and Game Association was had last evening, Feb. 26. So far from there being a small but exclusive crowd, the attendance was a very large one, the use of a liberal supply of personal invitations having been very generous. At half-past 9 o'clock in the evening the ticket office reported over 13,000 admissions. The lines of carriages practically blocked Wabash avenue, in front of the Coliseum, and the street cars were over half an hour late all along the thoroughfare. The crush of people in the Coliseum was extreme. The crowd, however, was a typical Chicago assemblage, clever and good-natured, and it need not be said that the impression they carried away was a good one. If the popular attendance be so liberal and pleasing throughout the two weeks of the show, the management certainly will have no occasion for regrets of any nature.

A view of the interior furnishing of the Coliseum discloses certain departures from the earlier exhibited ideas in regard to sportsmen's shows, or rather, perhaps, a development of the idea in the natural way of growth and excellence attributable to a greater experience. The trade feature is not emphasized to any great extent, but upon the other hand, the scenic features, the out-door idea and all the general appointments are suggestive of a dignified handling of out-door topics. Various popular games constitute a part of the varied programme. On the whole the show can be called as justly a big popular amusement enterprise as it can be called a sportsmen's show, although the latter is certainly a fitting description of the first entertainment of this kind that has ever come to Chicago.

The primary credit for the success of this undertaking is due to Mr. Richard E. Follett, who has certainly labored faithfully as any man could and with great intelligence and executive ability. Mr. Follett has had good assistants and strongest financial backing, but I mean to say that, last summer he came here, unknown and unsupported, hunted out his own capital, made his own friends and passed through practically alone those hard early stages which are the ones which count in any undertaking. A better executive for this big enterprise could not have been found.

The scheme of decoration is the principal part of this show, and that scheme is purely a Chicago one, and is distinctive in its way. Mr. W. L. Wells deserves credit for the original suggestion of the idea of a forest, lake, marsh, etc., and of the flight of wild geese which appears in the upper air, as well as the many minor features, such as the log cabin which incloses the entrance, the use of natural objects in decoration, etc. Mr, Wells' facile pencil has been of great assistance in the daily papers of this city. He was assisted nobly by Mr. George L. Schreiber, who has been the executive artist in charge of the work. Mr. Schreiber has done yeoman service and his artistic taste is visible on every hand. Mr. H. G. Maratta is the third Chicago man who made up the last member of the board of artists. Mr. Maratta suggested the use of heroic plaster figures of wild animals, and also the old Roman idea of oak leave garlands. Mr. Maratta personally executed for the Santa Fe Railroad the beautiful panorama of the Grand Cañon of the Colorado, which is one of the most brilliant and stirring attractions of the exposition. These three men made a strong team, and it may be said that they made the show.

In brief the scheme of the interior is that of the natural forest. A giant tree rests in front of each girder of the balcony, extending up into the vaguer regions of the air. Norway pines were used in this scheme, their orange colored bark blending hansomely with the decorations of the Coliseum as well as with the oak leaf strands. At the foot of these giant pines were grouped smaller trees—white pines and spruces—so that the whole barn-like interior of the Coliseum was made to resemble the cloistered grove. At the point of intersection of each giant tree with the balcony face a group of plaster figures was erected. Between the arches were medallions carrying the mounted heads of native game animals in great abundance. From group to group of these heads and medallions run long streamers of the cool green pine boughs, blended with the autumn colors of the oak leaves. The effect was superb, and was heightened by the clever use of masses of foliage on the floor space.

At the right hand of the Coliseum, as one enters, are grouped the very large numbers of wild animals in pens erected by the Page Woven Wire Fence Company. Next to this on the main floor comes the duck pond, erected by Dr. Heber Bishop, of Boston. The whole pond was railed in and was full of wild ducks, wild swans, wild geese, etc. This was a favorite spot in the show.

Next toward the center, on the main floor, came the group of trade exhibits, of which more will be said at a later time. Across the aisle from these groups extends a solid band of green forest, and just inside of this rises the mound upon which the Indian camps are pitched. There are three tepees here, two held by the Winnebagoes from Wisconsin, and one, a genuine fourteen robe skin tepee of the old times, is occupied by Joe Kipp—dear Joe Kipp—from the Blackfoot country, the quietest and the wisest outdoor man that ever was. Joe brings with him his little daughter Mary, who will please the white ladies a great deal when she is rigged out in her full buckskin and bead costume. On toward the center comes the swimming tank. In this tank aquatic sports such as water polo, fancy swimming, high diving and the like are carried on. The water runs to the edge of the Indian camp, and the two make the prettiest picture in the entire show. On the left, further on the main floor, is the athletic stage.

Next across the aisle from the athletic platform comes the splendid pheasantry in charge of Mr. Samuel Evans, of Oak Park. As in the case of the wild ducks no expense has been spared in getting these pheasants from the old country, as much as $75 having been paid for a single bird. Almost every known variety of pheasant is shown here in splendid condition. Mr. Evans deserves great credit, as does the management, for the pluck displayed in furnishing this expensive and beautiful attraction.

Beyond the pheasantry rises the approach to Maratta's Grand Cañon. I cannot describe this panorama, but it is worth going some distance to witness. The illusion is perfect. The opening of the proscenium is about thirty feet, but there is no sense of distance possible. One sees the whole cañon, and feels it is really 30 miles across. The light is superb. This is as sterling and artistic an attraction as has ever been seen in any city and under any proposition whatever.

To the left of the Grand Cañon, and on the space occupied by the Santa Fé Railroad, is the Navajoe settlement, showing the "hogans," the brush huts of that far off people of the Southwest. There is a splendid specimen of the Navajoe, and two blanket weavers accompany him. A magnificent collection of those grand fabrics, the Navajoe blankets, is shown on the walls and draped all about the space in this corner of the exposition. The color effect when seen from well up toward the center of the hall is simply superb.

It would be wrong to say that this is the largest sportsmen's show ever held, although I have so stated in earlier mention. The Coliseum is not as large as Madison Square Garden in New York, and indeed it does not lend itself perfectly to the Chicago idea of this show. We need more room, more breaking up of the interior, more rooms for different exhibits and a better place for café facilities. Yet it is questionable whether a better use could be made of the space at hand than has been made here, and Chicago claims with perfect pride that no sportsmen's show ever yet brought off has compared with this in the perfection of its detail and the general excellence of its ensemble.

As the trade side of the show is not too much emphasized, so also is the artistic side in the show weaker, or rather smaller, than one would like to see. This is not in the least to disparage the splendid show which is made by the materials at hand, but it is too limited to gratify the Chicago idea of doing things. There are perhaps fifty paintings here, each a gem in its way. Chicago would like to see five hundred or five thousand. Mr. Alexander Pope, of Boston, has charge of the art department, and he exhibits a number of his splendid pieces, also displaying some of Mr. Walter Brackett's superb salmon pictures. Mr. Pope creates the best impression in the world among Chicago people, and he has somewhat the reputation of a Herrmann or a Kellar. His best painting is that of a large white swan, and it is so conscientiously done that it absolutely deceives the eye of the most suspicious. It looks like the real bird and one can only persuade his eye that it is not until he has run quite into the canvas and proved against his own belief that the thing is not flesh and blood but simply a creation of the artist's brush and brain. Mr. Pope has made a magnificent showing, and he deserves the greatest credit for coming to this country and offering the public of this city the treat which he has. It may be said of this display that it is superb in its way, but all too limited in its scope. If Mr. Pope can give us more things as good as this, we would like more, very much more.

The gallery of the Coliseum is badly constructed, and much cluttered up with beams and girders. It does not lend itself naturally to those small and interesting side exhibits which should be a part of any great sportsmen's show. One end of the gallery is occupied by Mr. Pope's department, and that is the only attempt made to utilize the gallery space. At the opposite end of the gallery the band stand has been erected, and forty musicians are doing their best to earn the union scale. On the main floor, grouped around to the edges of the building, are many exhibits of great interest, and it may perhaps be as good a scheme of description as any to take this in detail, beginning at the right hand of the log cabin entrance.

Hence we find the first exhibit of interest to be that of the White Pass & Yukon Railroad. Mr. J. Francis Lee, General Passenger Agent for that far.off transportation line, has secured for the show here the magnificent Craine Alaska collection, which is controlled by the Alaska Geographical Society. This exhibit takes up more than three carloads of space in transit, and a large amount of floor room at the show. With it are Mr. Richard Craine, the collector, a successful Dawson miner, and Oscar Jarvis, a dog train mail carrier, who has carried the Government mails from Dawson to tide water and from Dawson down to Nome. This boy has with him a superb team of huskies dogs, which have stood him in such good stead in the icy north. These shrewd-faced beasts constitute one of the most popular attractions of the show. They are a typical team, beautiful, strong and sagacious. They have as vehicles several native "cheechacks" sledges, all made without nails. Oscar Jarvis can tell many a good story of his experiences in the cold country of Alaska, and the only regret is that space does not serve to tell all of these at present.

Mr Craine is a mighty hunter who has killed some of the specimens shown with his own rifle. Among these grand trophies are several grizzlies and black bears, and probably the finest specimen of polar bear ever taken out

of the North. There is also a tremendous Kadiac bear-skin, which he obtained from the Indians. I cannot get the exact measurements of this skin, since it is hung up high in the air, but it appears to be between eleven and twelve feet. Joe Kipp says it is a third larger than any buffalo skin he ever saw. There are white sheep, bear cubs, big-horns, as well as all sorts of fur bearing animals, all sorts of native weapons, tools and appliances, all sorts of native boats, and some of the lightest and handsomest long and narrow snowshoes that I have ever seen. This exhibit is an education for any one who has not lived in Alaska.

Just beyond the masterful Craine exhibit with its splendid collection of hides, horns, etc., comes the tasteful space of the Page Woven Wire Fence Company.

Passing for a time the animal park, of which more extended notice will be made later, it may be well to begin with the trade exhibits which occupy the semicircle back of the Indian camp. A local wholesale firm, Hibbard, Spencer, Bartlett & Co., occupy the first space, and show a handsome collection of sporting goods. Next comes the busy booth of Montgomery Ward & Co., whose name is literally a household word all over America. The exhibit of Montgomery Ward & Co. is small but very select, and is confined to rod and gun materials exclusively. It is well handled and creates a good impression.

The next booth is that of a food company, and just beyond this is the typical booth of A. G. Spaulding & Bro., who have a small space well and tastefully provided with the goods and furnishings dear to the sportman's heart. It need not be said that the exhibit of this firm is of high-class, and of a quality which has made the sporting name. Just beyond the Spaulding exhibit is the booth of a local grocery house, which is interesting to sportsmen by reason of the variety of tinned goods offered in portable form.

Next in line is the exhibit of a local sporting paper, and beyond this comes the brilliant little booth of George B. Carpenter & Company, whose staples are known wherever a tent is raised or a sail set. Binnacles, compasses, all sorts of cooking outfits, boat and canoe jewelry, little tents, cots—everything in canvas is shown as this firm only in the West can show it.

Beyond the tidy and shipshape Carpenter exhibit comes the display made by the Truscott Boat Manufacturing Company, who have put in a couple of launches, and create a good impression. Just beyond them comes the small and low but attractive display of the Lake Shore Engine Company, of Marquette, Mich., who show a series of their gasoline engines.

Near the gallery, back of the above-named exhibits, is a beautiful little room in which is shown the handsome book "Brush, Sedge and Stubble," which has been done by Mr. Dwight W. Huntington.

Under the gallery, beyond the last-named exhibit, comes the grand collection of heads, horns and mounted specimens shown by Periolat and Frieser. This is especially noteworthy in view of the superb Alaskan specimens which are shown. To stand in front of the grand Alaskan moose head, which is perhaps the finest feature of this exhibit, is to witness a creature that is simply appalling in the impression created. One can hardly believe that so great a creature can fall to the tiny bullet of the sportsman. The name of Periolat is well-known in the fur trade of the West for many years.

Next beyond, under the gallery, is displayed the food product of another company, and in the next booth are shown lenses big and small for sportsmen and others. A candy company near by furnishes a booth much visited by the ladies, and beyond that is shown a good supply of sea shells in the booth of a local concern.

This brings us naturally to the splendid showing of American fishes, under charge of Dr. S. P. Bartlett, of the United States Fish Commission. I shall pass mention of this collection to be taken up with the animal exhibit. We go thence beyond the Grand Cañon, finding great difficulty in passing without a long stop before the magnificent Navajoe blanket and pottery exhibit shown by Fred Harvey, one of the most sterling and unique attractions of the show. Then we strike the handsome interior of the booth of the Southern Pacific Railway Company. It was the intention of this company to bring on a number of Indians, but at the last moment the company was unable to secure the proper people on account of the lack of time. It therefore simply hung up in the space about twenty superb paintings done by master artists, and on themes connected with the glorious West, which is tributary to this transcontinental line. The Yosemite and big trees are shown naturally, and so are all the game fishes of the fresh waters, and of the salt waters upon which this great line takes hold. The paintings are superb, and this really should be called an art exhibit rather than a railroad exhibit. It is highly creditable. The next space is held by the same company, and is handled in a somewhat different form, being given over to photographs and to mounted fishes. Some of the photographs are grand. California exuberant, unbounded and glorious is written in every line.

Adjoining the Southern Pacific spaces is the handsome display made by William C. Kaempfer, the leading Chicago taxidermist. Mr. Kaempfer has shown in tasteful arrangement nearly all of the greatest American trophies, as well as a splendid case of birds and many mounted fishes, the latter difficult topic being handled extremely well. Mr. William C. Kaempfer is the son of Frederick Kaempfer, Sr., Chicago's oldest taxidermist. The latter established a magnificent business, which has been kept up by his sons.

And now we come to one of the very coziest and sweetest corners of the entire show. The circuit has brought us again up to the main entrance of the Coliseum, and we are at the space of the New Brunswick Guides' Association. This company was really organized by Mr. W. T. Chestnut, of the old house of R. C. Chestnut & Sons, Fredericton, N. B. The party is composed of Mr. W. T. Chestnut, Henry Braithwaite, Arthur Pringle, Harry Allen, George Armstrong and Adam Moore, each a well-known guide of his own district of that great country, so full of game and so little known to the western sportsmen, New Brunswick by the sea. With the party is Robert Allen, of the Tourists' Association. That these men should come all the way out into the West shows the pluck and enterprise of their kind. They have come a long trail, and every Western sportsman is bidding them a hearty welcome. They are a splendid looking lot of men, hearty, powerful and of almost gigantic stature in most instances. Mr. Braithwaite is not so big as his contemporary, little Adam Moore, the latter weighing two hundred and fifty pounds and standing six feet two in his stocking feet, every ounce of him good, hard flesh. There is not a more magnificent group of Americans to be seen in this Coliseum than that at the New Brunswick cabin. These men brought their own cabin with them, as well as some of the most superb specimens of moose and caribou trophies ever collected upon the eastern part of this continent. They have one grand moose mounted full size. All their taxidermist work is done in grand shape. They show photographs of their country and they have the documents to back up everything they say. Among the photographs which they have is a portrait of the late Frank H. Risteen, and every woodsman lowers his voice when he speaks of poor Frank. As I am one of the few men of Chicago who can boast of being able to wear a pair of Pringle snowshoes, I have the inside track at the New Brunswick cabin, and after awhile am going to foregather with these folks from the far Northeast. They are making a splendid impression here, and if all the inhabitants of New Brunswick are like these, we cannot annex New Brunswick too quick. Furs, heads, hides, trophies, splendid photographs, a grand exhibit of native timbers, etc., are all combined at the New Brunswick exhibit, and the latter is a credit to the men who sent it here. I shall get some stories out of this camp a little later on.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

The New York Sportsmen's Show.

THE seventh annual exhibition of the Sportsmen's Association in Madison Square Garden opened March 2 in the usual state of unpreparedness which is a necessary consequent of the short time given for arranging the exhibits. For two weeks it will be the feature of the Garden, and the most popular attraction in New York. Artistically, the show is the best that has ever been given, and in other respects it is probably the most interesting and more nearly approaching the ideal of such an exhibition that has been seen in New York.

The trade exhibits which formerly cumbered the floor space to the detriment of other features have been moved to the galleries, and aside from the exhibit of launches the amphitheater is devoted to the essentials of sport other than paraphernalia. There are Indians and guides galore, and wild animals and fish and water, balsams and birches and an outlook—painted though it be—of the sunset and laughing water of the land of Hiawatha beyond the ancient Laurentian cliffs.

The harsh lighting of the Garden has been softened by the placing of filmy curtains under the big skylight. The crudeness and commercialism has been toned down. Diving and water polo and similar contests, which belong essentially to the city athlete, have been dropped. But after all has been said vernal—Indians and guides and game—it is much the same as the first Sportsmen's Show—much the same, only old Tenny is gone.

A Land Mark Removed.

When FOREST AND STREAM did so much in May, 1895, to assure the success of the first Sportsmen's Show, one of the features of its exhibit was a practical demonstration of throwing the diamond bitch given by Billy Hofer and members of the staff, with the assistance of a bronco that had somehow drifted into a New York livery stable. The bronco was branded, which showed its genuineness, and if further proof was wanted it was furnished by the artistic bucking exhibit given on the second day of the performance, when even the big Garden proved too small to contain the beast, and it was only subdued after a final plunge had landed it in a grocer's cellar across Fourth avenue, one hind leg through the hatchway stairs and a front leg in a barrel of eggs.

It was at this time that old Tenny, the big Irish doorkeeper, was hurt. Tenny was a product of the tenement and had never seen a bucking horse. He was scandalized that any horse should carry on so on the floor of the building he had come to regard as his own, and when the horse came his way he protested, with the result that he was picked up a moment later considerably the worse for wear.

He was laid up several weeks in his home in a court on the west side river front, where he was visited and looked after by FOREST AND STREAM, and then he came back to his post, and for five successive shows his herculean frame stood between the ticketless and the fascinations of the Garden like St. Peter at the door of Paradise. This year he is gone—"gone from a worrld of toil and torture," as his successor put it.

Birdseye View of the Show.

Almost a third of the amphitheater is given up to the artificial lake, which is stocked with 1,500 trout brought on with the Maine exhibit. Here also are beaver, which Mr. N. E. Cormier encourages in a praiseworthy effort, to dam a stream of Croton water from a two-inch pipe. The beaver are fed on popple wood, with an occasional change to birch and alder.

There is an island in the lake and an Indian camp at the end, with half a dozen well-worn birch canoes drawn up at the side. Interesting, though *ex cathedra*, is the fact that the lake is contained in a canvas bag, deftly sewed by a firm of tent makers and brushed over with copal to make it waterproof. As the main part of the lake is over 60 feet across and the water several feet in depth, it may be seen that a considerable pressure is exerted on the sides and bottom, but so far the canvas bag has proved fully equal to its task, and its existence is not suspected by the passing throng. The remaining floor space of the Garden is largely devoted to exhibits of living game fish, birds and animals.

Game Fish and Fry.

The exhibit of fish is from the New York State Forest, Fish and Game Commission hatcheries at Cold Spring, Saranac Inn, Caledonia and Constantia. It includes brook trout fry and yearlings, as well as adult rainbow, brown, lake, steelhead and red throat trout; black bass, pike-perch, yellow perch, pike and pickerel. An interesting feature is the tray hatchery of brook trout, and the automatic hatchery jars for whitefish, shad and smelt, both of which are shown in actual operation.

Game Birds and Water Fowl.

Mr. Verner de Guise has charge of the exhibit of birds. In one of the cages is a bevy of quail, suggestive of brown stubble fields and eager dogs and the tingling call for alertness on the part of the man behind the gun. There are also California quail and wild turkeys and the various pheasants of old world origin. Among the water fowl the strongest showing is made in geese and swans.

Big Game.

The big-game animals are from Merrymeeting Park, Brunswick, Me. The superintendent of the park, Mr. C. H. Stuart, has the animals in charge. There are buffalo, moose, elk, caribou, antelope and Virginia deer, beside black bears, timber wolves, coyotes, porcupines and the lesser animals.

The different species of deer are all fat and in the best of condition, except for the fact that all are discounting the season by shedding their coats for the spring pelage, and the bull caribou has horns six inches long, that bid fair to get their full development by May.

The reason for this unseasonable state of affairs is that the animals spent a couple of months on exhibition in Boston in the early winter instead of being outdoors as usual. Confinement to a summer temperature has upset their natural tendencies to a marked degree. When at home in the park, though provided with comfortable shelters, the deer prefer to lie out in the snow all during the winter.

Feed for Captive Animals.

Mr. Stuart gave some interesting particulars as to his method of feeding the various animals. The moose are given ground oats and cracked corn with hay morning and night daily, only getting birch and balsam browse three times a week. The elk have hay and grain, and are fed just as a horse would be. The buffalo have nothing but hay and grain. The antelope are given any kind of ground food and hay. The caribou are more particular, and eat little beside the white "caribou" moss from old ledges and rocks, which is gathered for them by the ton before snowfall. At times they will take a little clover hay, but this is given them but sparingly. The porcupines get bread with a few balsam boughs and sweet potatoes as a special treat.

The secret of the perfect health the animals enjoy is largely in the fact that in addition to the above regular diet they are frequently given little extras to tempt their taste. Roots, such as turnips, beets and carrots, are frequently on their bill of fare, and also anything that they like and will eat.

Tricks and Oddities.

A gruesome trophy, suggestive of the Klondike trail, is a human skull with a raven mounted on it picking at the empty eye socket. Howard McAdam, of Calais, Me., who exhibited some interesting freaks in the animal world at the Boston show last year, has a remarkable six-horned buck's head. The deer was a mature six-year-old buck in good condition, killed Oct. 6, 1900, near Calais. The entire top of the head is crowned with a fungus growth which is brown and, superficially, very similar to the velvet on the new horn. From this cap-like covering six imperfect horns take their start, five on one side and one on the other. These horns are only about two inches in length and are in the velvet. The effect is far from being ugly.

Mr. McAdam also shows an albino porcupine and a deer with a remarkably heavy set of antlers, which spread twenty-eight inches and measure seven inches in circumference just above the burr.

There is a second white porcupine in the Garden, and in the Aroostook exhibit F. R. Wilson has the mounted head of a horned doe shot three years ago late in December. Despite the time of year, the horns, which are spikes three inches long, are in the velvet.

In this exhibit may also be seen fine specimens of the albino deer of which Maine is so prolific, and also a cow caribou head with a finely developed set of antlers.

Maine, Canada and the Adirondacks.

Maine, Canada and the Adirondacks have by far the largest exhibits. The Adirondack exhibit is in charge of Mr. E. E. Sumner, who has just been elected President of the Guides' Association for the third time. C. C. Nichols, State Game Warden, is in charge of the Maine exhibit, which takes up a large part of the south and west side of the amphitheater. Mr. L. O. Armstrong, of the C. P. R., is the moving genius of the Canadian section, with his Ojibways and his Indian play founded on the Hiawatha legend.

The Indian Play.

"Hiawatha," as performed by the Ojibway Indians, lineal descendants of the men who gave Longfellow the theme of his poem, is a novel and highly interesting presentation. Unfortunately, however, for the majority of spectators, the play is a vaudeville performance. They take it in with an amused but not altogether edified approval. The average spectator knows absolutely nothing of Longfellow's poem, and the play is taken as a combination of kangaroo dance and war whoop. The artistic and suggestive side is seen by those with rare perception.

The play opens with the assemblage of representatives from the tribes of the wide scattered Indian nations in a council of war. A war dance follows and then the delegates are addressed by the Great Spirit, at whose instance the council was called. The Great Spirit prays that peace may descend upon the tribes, the war paint is washed away and the pipe of peace brought out and smoked.

In the second scene the boy Hiawatha makes his entrance. With Nokomis standing near, he receives instruction in the art of shooting at a mark on a skin held by two of the Indians. The following scene shows Hiawatha grown to maturer years. His journey to the Rockies and meeting with Minnehaha are introduced and he maps the route and pictures his adventures on birch

bark with a bit of charcoal for the edification of his friends. The return of Minnehaha, the wooing and the wedding, and the other various incidents of the story are all given in turn, and finally the departure and last farewell of Hiawatha. Mr. Armstrong has published a libretto of the play, which may easily be obtained.

Asohabgan to Log Cabin.

The shelters of the woodsmen and aborigines are an interesting feature of the show. A primitive type is the asohabgan, or winter lodge of the Northern Indians, made from long sheets of birch bark—some measuring three by twelve feet in size—wound spirally around a tripod arrangement of poles. The turtle back tepee of the Ojibways has the same birch bark roofing, but the lower, more nearly vertical periphery is made of dried rushes, strung on with wattup and the door protected by a mat of woven basswood bark.

The birch bark roofs of both asohabgan and tepee are arranged to be rolled in compact bundles for convenience in carrying. The ends of the sheets are protected by wooden strips, which prevent splitting, and the ordinarily brittle and intractable bark seems to be almost as easily handled as the moose hide coverings of other lodges or the buffalo hides of the plains Indians.

There are canoes, tents and Adirondack lean-to camps and shanties of various kinds and log cabins. One of the cabins near the Madison avenue entrance was built by three Maine guides, Messrs. Marr, Wilson and Mayo, of Moosehead, in less than two days from the time the logs were dumped on the floor of the Garden. It is a good example of accomplishment by men skilled with the axe and crosscut saw. The cabin has two windows and a door, and is twelve by fourteen feet in size. Work was commenced Friday morning, when the logs were felled, and before night the four walls had taken shape, thirteen logs high at the eves, and the roof was on, and a few hours' time Saturday sufficed to saw out windows and door and shingle the roof and complete the camp ready for occupancy.

Among the Guides and Hunters.

Billy Soule has a cozy corner and exhibit near the Fourth avenue entrance on the south side of the Garden. He says that there is at the present time about three and a half feet of snow on the level in the Maine woods, and that there has so far been no crust. There has been no thaw since about Nov. 20. The deer are in good condition at present and wintering well.

E. L. Abercrombie, known as Uncle Ned, who is with Bily Soule, was with parties in the Moosehead country in Aroostook county who secured seventeen moose for twenty-one men, a record that New Brunswick would find hard to equal.

Uncle Ned was in a bear scrap last summer in company with a man named Murphy. Mr. Murphy had never had an argument with a bear, and it was not supposed that he was on the lookout for trouble. He was carrying a pack and perspiring and attending strictly to his own business, when, without warning, a bear appeared on the trail. A red rag waved in a bull's face could have produced no more electrical effect. Murphy dropped his pack, and with a small hatchet he happened to have in his hand, gave chase to the bear. The bear took refuge in a blow down, from which he was dislodged by a pistol shot. He tried to gain a swamp, but the strenuous Murphy drove him into a mud hole, whence the bear emerged a moment later in a badly battered condition.

The bear tried to escape by dodging around a ledge, but on the other side he was headed by his implacable pursuer and forced to make a stand, and it did not take long to kill him when the man with the pistol came up.

Murphy's exploit was a surprise to those who knew him, and who had not credited his being such a Philistine. They aver that the bear was scared to death by his ferocious onslaught.

Warren Wing, of Flagstaff, Me., makes a specialty of guiding bear hunters. Last May he was instrumental in securing Mr. Thos. B. Parker, of Lynn, Mass., a fine bear. The three first days of his visit at Wing's camp it rained and Mr. Parker waited in camp, but the fourth day was fine, and the hunters started out, and within half a mile of camp a bear was encountered, which Parker downed the third shot. The hide measured 6 feet 4 inches in length.

John Cushman, of Sherman, one of the best bear trappers in Maine before the Game Commissioners refused him a license, captured three cubs last June close to his camp on Katahdin Lake. He had shot the old bear, and noting that she was suckling cubs, he left her with the fur on, knowing from previous experience that the cubs would return and stay with the dead body until driven away by starvation.

The next morning on his return the three cubs were discovered hastily climbing nearby trees. One of the cubs had chosen a comparatively low tree, and Cushman's companion climbed after it, and as it was quite weak and dispirited had little difficulty in catching it and dropping it in a sack. The other two cubs were secured by chopping down the tree in which they had taken refuge, which happened to be a bad one to climb, and these two made but little resistance. They were fed on condensed milk, diluted to the consistency of cow's milk, and three days later, to use Cushman's expression, "You couldn't touch 'em no more'n you could a tiger."

J. B. BURNHAM.

Peters Cartridge Co.

The generous space, Nos. 26 and 27, near the Fourth avenue end of the Garden, occupied by the Peters Cartridge Co., of Cincinnati, O., is replete with matters of interest to the sportsman. There are the great trophies of world-wide fame, the American Centennial trophy (Palma), the Wimbleton trophy, the Military and Naval trophy, the Soldier of Marathon, all of which have a wealth of historical significance. Then there are numerous targets which offer material evidence of the skillful deeds of great men with the rifle and its ammunition. Also there are group portraits of distinguished men of the realm of sport. In the further corner, over a desk, is the sign "Secretary of the National Rifle Association." (Philadelphia Rifle Association, New Jersey State Rifle Association, Massachusetts Rifle Association, Zettler Rifle Club.) The space also is furnished with a view to making a gathering place for the friends and patrons of the company. The exhibit is in charge of the urbane and popular sportsman, Mr. T. H. Keller.

Remington Arms Co.

Spaces 28, 29 and 30, occupied by the Remington Arms Co., New York, contain a large display of various grades of shotguns. One of them, a gem of the gunmaker's art, listed at $750, and owned by Admiral Courtney, is a rare exemplification of beauty and utility. A special feature of the display is the Remington hammerless steel barrel gun for trapshooters, listed at the moderate price of $25. Also this gun with ejector will be ready for manufacture July 1, and will be sold at $35. The long, mammoth case, extending the length of the space, contains also a fine line of rifles and other products of the Remington factory. The exhibit is in charge of Admiral A. G. Courtney, who is affable and courteous always, and pleased to explain the excellence of his company's products. The Colonel—that is, the Admiral—listens with great interest to the Indian drama of "Hiawatha," explaining that this was not from mere curiosity, but from a profound purpose to learn the Indian language and to add it to his already extensive fund of linguistic accomplishments before his flagship arrived.

Tatham Brothers.

Space No. 33 is occupied by Tatham Brothers, of New York, in which is exhibited a full line of their many sizes of shot. Their improved chilled shot is a special feature. There are about forty kinds of their shot all told, ranging from 24 pellets to 162,000 to the ounce. Their new circular, setting forth the merits and peculiarities of their manufacture, can be obtained on application to them.

J. H. Lau & Co.

Messrs. J. H. Lau & Co., of New York, have a display of Ballistite in Space 32, the merits of which they are pleased to explain to visitors.

Chamberlin Cartridge & Target Co.

Space 36 is devoted to the exhibit of the Chamberlin Cartridge & Target Co., of Cleveland, O. The main feature is a mautrap, whose workings and merits are untiringly explained to visitors by Mr. Charles North, who is in charge of this interesting exhibit. A glass case contains many useful articles manufactured and owned by this company—bluerock gun cleaners, Heikes hand holder, Rowley cheek pad, etc.

Lefever Arms Co.

In space 38 is the exhibit of the Lefever Arms Co., of Syracuse, N. Y., in charge of Uncle Dan Lefever. It contains a most interesting display of shotguns, from the light featherweight field gun to the heavier guns for trapshooting. Medium priced and high priced guns are in the exhibit, and the pigeon guns are objects of special interest to the trapshooter.

Union Metallic Cartridge Co.

The exhibit of the Union Metallic Cartridge Co., Bridgeport, Conn., in spaces 39 and 43, is much the same as that of last year. The beautiful, mammoth arch-shaped case contains articles by the thousand. There are all kinds and sizes of rifle cartridges from the smallest to the largest. Shotgun shells, primers, blocks showing the penetration of different bullets, cannon ammunition, etc., offer objects of unceasing interest for the information of the visitor.

Schoverling, Daly & Gales.

The great firm of Messrs. Schoverling, Daly & Gales, of New York, occupy spaces 11, 12 and 13. They display a very complete line of sportsmen's equipment. Daly guns, Marlin rifles, Mauser and Borchardt pistols, golf goods, lawn tennis, canoes, fishing tackle, Bristol steel rods, etc., are shown in profusion. The whole are very artistically grouped and arranged.

Bridgeport Gun Implement Co.

Spaces 24 and 25 are occupied by the Bridgeport Gun Implement Co., of Bridgeport, Conn. Their space is devoted to a display of golf goods, of which a very complete line is exhibited.

Colt Fire Arms Co.

The pistol and revolver range is under the management of the Colt Fire Arms Co., represented by C. F. Small. He will make an effort during the week to hold a meeting of pistol and revolver enthusiasts to promote a general organization.

Other Exhibits.

Thos. W. Fraine, of Rochester, has his usual display of highly artistic fish and other mounted specimens; and Fred. Sauter, of William street, New York, shows some heads and groups well worth seeing. Austin, Young & Co., of Boston, show their well-known dog food. H. H. Kiffe, the Truscott Boat Co. and other marine exhibits will be noted in our yachting columns next week.

Among the other exhibitors are Messrs. J. Stevens Arms & Tool Co., Francis Bannerman, Leroy Shot & Lead Co., G. W. Cole & Co., D. S. Abercrombie & Co., Indian Oldtown Canoe Co., N. Y. Marine Power Co., International Gas Engine Co., Standard Motor Mfg. Co., N. Y. Kerosene Oil Co., and the Scheckner Motor Co.

New York Spring Shooting.

Editor Forest and Stream:

The situation at Albany on the spring duck shooting question seems to be about this: Long Island don't want to stop it, and she has generally had her own way in the matter of game legislation. Oswego county, as represented by Judge Stowell, is willing to stop—that is, if Long Island does. This means that the bill won't pass at all. Why is it that the sportsmen of Oswego county refuse to consent to a law that will give the rest of the State good fall duk shooting? Simply because an island in the Atlantic Ocean won't stop it? They might just as well say Connecticut won't stop it. Do the sportsmen realize that our present law is a direct benefit to Long Island and that we are driving birds out of the rest of the State to breed birds for Long Island shooters? Up here in Jefferson county, which is separated from the Province of Ontario by the grand St. Lawrence River, we are perhaps better situated than are the interior counties to see the utter absurdity of the present law. Consider that it is a law that prohibits the shooting of wildfowl for the four months in a year when you couldn't possibly kill a duck if you tried. A law that says to the mated wildfowl which in the spring stop to rest and feed, or to stay with us and nest and rear their young, "Get out or we'll kill you"; a law which permits the Canadian to help us shoot and drive the birds from our waters into their own, where protected by wise laws they are at last permitted to breed undisturbed; a law which caused the Province of Ontario to pass a law which forces a resident of this State to pay a license fee of $25 before he can shoot one of these ducks that we refuse to allow to nest in the State. Our Canadian friend may wear a fur cap, but there is plenty of gray matter inside. He comes over in the spring, has a good time with the boys and helps them drive the birds over to the Canadian side of the river, then puts his gun away until Sept. 1, and from that time until the season closes on Dec. 15 he has such wildfowl shooting as only those who have shot there can justly appreciate. This means three months of good sport for our friends across the border. What do we get? A week or ten days, when it's cold enough to freeze the hair off a brass monkey, and I don't believe there was a shooter in this country that killed fifty ducks last fall. and I know of two spring duck butchers who killed as many as that in one day last spring. Now, why is the present law a direct benefit to Long Island?

1st. We drive the birds out of this State into Canadian waters to breed.

2d. The birds stay there until forced to leave by the freezing of the waters.

3d. Our waters close at nearly the same time.

4th. The distance to the coast is so short that very few birds stop to rest or feed on the way.

5th. How can we prove this? We don't have to; you can prove it yourself. Just find out when the first heavy flight of ducks reached Long Island Sound last fall and you will find that it was just before or at about the same time that winter set in in Canada.

Will the ducks breed in this State? In 1892 a law was passed making the close season March 1 to Sept. 1, excepting Long Island. That one year convinced the sportsmen of this county that ducks would breed here. Better black duck, mallard, teal and wood duck shooting was had that fall than we ever had before or since. Not only this, but the fall ducks—broadbill, bluebill, whistler, redhead, etc.—came earlier and stayed longer. A gentleman of the name of Angel, residing on the north shore of Point Peninsular, has told me since, that a pair of bluebill ducks nested on his shore and that the next spring he believed that these same ducks came back, as a small flock of sixteen birds remained along his shore long after the other birds had been driven out, but that finally a hunter shot into the flock, killing three of them, and the rest left. He said that if these birds had not been shot at he believed they would have stayed there and nested that year. But what is the use of trying to prove a self-evident fact? Every duck shooter, the men who are working for and the men who are working against this bill, knows that ducks will, and do, breed in this State. If the bill for the entire State is defeated Long Island sportsmen are to blame if a bill for the State, excepting Long Island, is defeated, Oswego county sportsmen are the guilty ones, and if both these bills are defeated we hope to be permitted to pass a bill for Jefferson county.

Assemblymen Bryan and Roberts, Senator Brown, chairman of the Fish and Game Committee, and our efficient and energetic Fish and Game Commissioner, De Witt C. Middleton, are with us in this fight, and if we don't win you can't blame Jefferson county, for we have all voted. How is it, brother sportsmen of Oswego country? Have you all voted? If so, vote again, and ask your representatives to support a bill excepting Long Island if it becomes necessary to do so. I don't believe you'll regret it, but if at the end of three years you do, we'll help you repeal the bill and help you drive the birds into Canada to breed ducks for Long Island and Southern shooters.

W. H. TALLETT, Pres. J. C. S. A.

WATERTOWN, N. Y., March 1.

Quail Hiding.

Editor Forest and Stream:

We are all more or less inclined to dispute the unusual incidents reported by observant brother sportsmen, and if persuaded will excuse the bigotry shown by saying, "I never saw any such thing." The claim has been made that a quail will lay a dead leaf over its back when "laying close" in the woods, and this I have always thought an appropriate extract from a pretty fairy tale, and pitied any one who could be gulled by such a very transparent fable.

Last week while hunting quail, a covey flushed wild and scattered in the woods. My companion took the old dog and I the pup, and we proceeded to beat up the cover. The first point the pup made was at the foot of a small tree where the trees stood thick, but where the ground was stony and was covered with only thin patches of dead leaves.

Taking the direction of the dog's eyes I passed close by his head and, brushing by the tree at the foot of which he stood, walked on 10 or 15 feet, but flushed nothing.

Going back to the dog, I carefully took the direction of his eyes, and looking closely discovered sitting between the roots of the tree within a span of my foot, the bird, and lying well over its back was a large dead oak leaf, placed in such a manner as to convince me beyond the shadow of a doubt that the bird had placed it there.

My reputation for veracity is fairly good, but I wish that pup could also make a statement in this case, for he and I were the only witnesses of this—to me—strange and interesting incident. LEWIS HOPKINS.

P. S.—We got the bird. H.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Breeding of Wild Ducks in New York

Editor Forest and Stream:

In 1899 ducks bred sixty miles from here at Patterson, in Putnam county, this State, on the marshes of the Croton River, within 500 rods of my home. In the particular place referred to one pair had a brood which were more than once seen sneaking along in the tall grass and among the branches of the trees that hang over the water. At that time they were not full feathered. Besides the pair mentioned other broods were raised further down the marshes.

Last year (1900) the birds were disturbed by gunners and did not remain with us to breed. I am convinced that if not shot in the spring these birds would nest and rear broods with us regularly.

I inclose wing of one of these birds.

JACOB ALVAREZ.

NEW YORK CITY, March 1.

[The wing of the bird inclosed is that of the male wood duck.]

ORIENT, Suffolk County, N. Y., March 2.—*Editor Forest and Stream:* For sixty years I have traversed the marshes along the bays and creeks which belonged to my great-grandfather, grandfather, father and now myself. During this time I have never seen a nest of duck's eggs. I did, about forty years ago, find two or three little black ducks, six or eight inches long, which, of course, must have come from a nest on the main land. Nine miles south of us is Gardiner's Island—a preserve, a wild, undeveloped place. Occasionally each summer the fishermen who camp upon the beach find a nest of black duck eggs. I have never heard of any other species of duck eggs being found until my son read of it in your paper to-day in my hearing. It is stated there that wood duck eggs were found at Sayville.

We think it too bad for the people up State to restrict us in our shooting, as we have little but the riff raff of the ducks—coots and old squaws. We have very few black ducks and broadbills, and a few sheldrakes sandwiched in. I never killed but one wood duck in my life. Up State they have canvas ducks, mallards and black ducks which are fit for a king's table. Here we are isolated from the State, and we feel it is not neighborly for them to shut down on us.

DANIEL T. TUTHILL.

UTICA, N. Y., March 4.—*Editor Forest and Stream:* In your editorial of March 2 you call for information from "ornithologists and older readers of the FOREST AND STREAM" as to the breeding of wild ducks in this State.

While I cannot claim the honor of the first title, I certainly can the second, and I therefore venture to send my little, hoping that it may help to swell a considerable amount of testimony.

The black duck is a common summer resident throughout the Adirondack region of Herkimer and Hamilton counties. Wherever there are not too many cottagers there is a brood on every piece of water, more especially on the smaller ones. My journal shows that I found nests containing eggs on June 21, 1874, in Hamilton county, and on June 4, 1878, in Herkimer county, and I have seen some other nests.

The Blue-Winged Teal—I have seen broods of this bird at Utica, at Oneida Lake and at the Montezuma Marshes, which seemed too young to have migrated from the north, but I have never found a nest nor seen birds which could not fly. You will, I think, have more positive information from the Seneca River country.

The wood duck is a common summer resident through the central part of the State. In the Montezuma Marshes, down the Seneca River, up the Oneida and in the swamps bordering Oneida Lake, I have observed these birds, and though I have no record of a nest found, there is no doubt as to their breeding. I saw a brood there the first of last September, which had evidently been raised there.

The American Golden-Eye—Perhaps the most valuable information which I have is of this bird. For several summers in the seventies I spent the month of June in Hamilton county wilderness and found the whistlers breeding on two little lakes for several years in succession. My journal records that on June 5, 1877, I found broods of young just hatched, not over two or three days old, on two different lakes, and that I captured one of the little fellows alive. Well do I remember what a beauty he was, covered with soft down, "all black and white, just like his pa." He was so beautiful and cunning that much as I wanted him as a specimen, I had not the heart to put him to death, but released him and watched him scuttle away to join his mother and his brothers, who were waiting for him out in the lake.

This is all my personal knowledge, but without looking far I find this additional information:

The blue-winged teal is given as breeding on Long Island by Giraud.

The gadwall is given as breeding in the State by DeKay.

The bald-pate as probably breeding, by the same authority.

The American swan is given as breeding at Tupper Lake, in Hamilton county, by the same authority.

EGBERT BAGG.

The West Virginia Warden.

Editor Forest and Stream:

I inclose in this letter a clipping from a paper in reference to the pollution of South Branch River and think it is good enough for a place in your columns. Our last Legislature gave to our State game warden a salary of $1,200 per year and $300 for expenses. It also gave him the power to appoint deputy game wardens for each county, and refused to repeal the non-resident license tax, so that law now stands as it was before, namely, a fee of $25 for each non-resident hunter, the license good only in the county where issued and for one year from the time of the license is issued, and the Legislature refused to put a license on fishermen. I think we will now have sufficient protection on the game and fish in this State, as the State game warden, Capt. E. F. Smith, of Hinton, is a young and active man, and will get around among his deputies to see that they enforce the law.

J. B. BRADY.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

45

A beautiful grotto, 300 yards deep by 130 yards wide, has been discovered near Tapotitlan, Oaxaca, Mexico. The walls are of a brilliant quartz and the stalactites are very large and beautiful, most of them of the form of giant pillars supporting the roof 90 feet above the floor. The grotto was discovered by a couple of hunters, who found several skulls, evidences of human sacrifices, and obsidian figures within, showing that the cave was known to the Aztecs. The cave has in its center two pools of beautiful, clear, cold water, which never vary in height and have no visible supply or discharge places.

46

Some hunters in the forest of Drommling made a very strange discovery. They began to fell a venerable oak, which they soon found to be quite hollow. Being half-decayed, it speedily came to the ground with a crash, disclosing a skeleton in excellent preservation; even the boots, which came above the knees, were perfect. By its side were a powder horn, a porcelain pipe bowl and a silver watch. The teeth were perfect. It would seem to be the skeleton of a man between thirty and forty years of age. It is conjectured that, while engaged in hunting, he climbed the tree for some purpose and slipped into the hollow trunk, from which there was no release, and he probably died of starvation.

47

The members of a fishing party during a week's camp on a portion of the battlefield of Antietam, on the spot where the Philadelphia Corn Exchange Regiment met with its heavy loss in the battle, found the complete skeleton of a man, and by its side the scabbard and blade of an officer's sword. The body was in the midst of a thicket of young trees, which probably accounts for its being overlooked for so long a time. There being no clue as to the identity of the remains, the bones were interred by the anglers near where they were found.

Fishing Up and Down the Potomac.

Washington's Diary.

IN giving some extracts from Washington's diary some time ago,* it was, of course, in ignorance of the late George H. Moore's little book on "Washington as an Angler," and due acknowledgments are cheerfully made to the author's memory and to the *Woodcraft Magazine* for April, 1900, kindly sent by the editor, and which contains Mr. Moore's entire paper.

*FOREST AND STREAM, Feb. 23.

On continuing the examination of the diary, Mr. Moore's book was found inserted as an annotation, presumably by Dr. Toner, in a later volume at July, 1787.

It turns out that there are two private diaries of Washington covering the period from which Mr. Moore quoted. One of these volumes is in the Congressional Library, and part of this has been printed, and another volume for the same date in the custody of the State Department at Washington. The two do not always correspond in form, and the State Department copy is particularly interesting, in that on at least two occasions it mentions the kind of fish which the celebrated angler was after.

The citations in the book were from the copy in the Congressional Library and the entries for corresponding dates from both diaries are here given for comparison.

July, 1787. Monday, 30th.

(Library copy.)

"In company with Mr. Gouverneur Morris went into the neighborhood of the valley Forge to a Widow Moore's fishing at whose house we lodged."

(State Department copy.)

"In company with Mr. Gov'r Morris and in his Phæton with my horses went up to one Jane Moore's in the vicinity of Valley Forge to get Trout."

Tuesday, 31st.

(Library copy.)

"Before Breakfast I rode to the Valley Forge and over the whole Cantonment & works of the American Army in the winter of 1777-8 and on my return to the Widow Moore's found Mr. and Mrs. Rob't Morris. Spent the day there fishing &c. lodged at the same place."

(State Department copy.)

"While Mr. Morris was fishing I rid over the old Cantonment of the American Army of the Winter 1777-8. Visited all the works which were in Ruins; and the incampments in woods where the grounds had not been cultivated."

August, 1787. Friday, 3d.

(Library copy.)

"Went up to Trenton on a Fishing party with Mr. and Mrs. Rob't Morris & Mr. Gov'r Morris. Dined and lodged at Col. Saml Ogden's. In the evening fished."

(State Department copy.)

"In company with Mr. Rob't Morris and his Lady and Mr. Gov'r Morris I went up to Trenton on another Fishing party. Lodged at Col. Sam Ogden's at the Trenton Works. In the Evening fished, not very successfully."

Saturday, 4th.

(Library copy.)

"In the morning and between breakfast and dinner fished."

(State Department copy.)

"In the morning and between breakfast & dinner fished again with more success (for Perch) than yesterday."

1788 was an unlucky year for his fishing landing. The entries are as follows:

April 28. "Few fish were caught in the forenoon of this day."

April 29. "No fish caught to-day of any consequence."

April 30. "Few or no fish caught to-day at the time I was at the landing."

May 3. "Few or no fish being caught to-day I ordered them to discontinue drawing the Sein after Monday unless they were more successful on that day."

May 5. "No fish being caught to-day I ordered the hogsheads and everything else to be secured and the people to repair to their respective places and businesses."

In 1794 he went up about Harrisburg, and Oct. 3 has this entry: "The Susquehanna at this place abounds in the Rockfish of 12 or 15 inches in length & a fish which they call Salmon." The latter was the wall-eyed pike or yellow pike perch or jack-salmon.

This completes the references to fishing in his diary so far as examined.

In November, 1789, he was making a tour of New England, and the following entry is of interest in connection with a former paper: Sunday, 8th. "It being contrary to law and disagreeable to the People of this State (Connecticut) to travel on the Sabbath day—and my horses, after passing through such intolerable roads wanting rest, I stayed at Perkin's tavern (which by the bye is not a good one) all day—and a meeting house being within a few rods of the door, I attended morning and evening service, and heard very lame discourses from a Mr. Pond."

He gives a vivid description of a storm at Mt. Vernon, July 24, 1788: "Thermometer at 70 in the morning, 71 at noon and 74 at night. A very high N.E. wind all night which this morning being accompanied with rain became a hurricane driving the miniature ship Federalist from her moorings and sinking her; blowing down some trees in the groves and about the houses, loosning the roots & forcing many others to yield and dismantling most in a greater or lesser degree of their Bows, and doing other and great mischief to the grain, grass &c. and not a little to my mill race; in a word it was violent and severe more so than has happened for many years. About noon the wind suddenly shifted from N.E. to S.W. and blew the remaining part of the day as violently from that quarter. The tide about this time rose near or quite 4 feet higher than it was ever known to do driving Boats &c. into fields where no tide had ever been heard of before. and must it is apprehended have done infinite damage on their Wharves at Alexandria, Norfolk, Baltimore &c."

This century-old record is wonderfully interesting, and voluminous as it is one cannot help hoping other fragments of the journal may yet be unearthed.

HENRY TALBOTT.

Winter Fishing at Lake Winnipesaukee.

BOSTON, Feb. 27.—*Editor Forest and Stream:* Early in the month I received notice from my friend, Mr. Warren D. Huse, of Laconia, to be ready for a fishing trip to Lake Winnipesaukee. Mr. Huse is a pretty business busy man in the thriving city of Laconia, where, with his two sons, Walter and Leon, he is engaged in the manufacture of knitting and other machines. They are all more or less addicted to the use of the rod and gun, and when either of them wants to go fishing or shooting, why he simply goes. On the 18th came word from Mr. Huse that he and Mr. Edwin Stone were going to his cottage at the lake that day and for me to join them as soon as possible. The next day at 12:15 Conductor John Cameron pulled the signal and I stepped from the train at the little flag station of Spring Haven, where Mr. Huse gave me a cordial greeting. I could not help contrasting the difference in the aspect of the surroundings from what they were in August last when I closed the Seaver cottage, where Mrs. Smart and myself had passed that month in good, solid enjoyment. Then the wild flowers lined the highways and were seen everywhere in the fields and pastures, while berries abounded in all directions. Now how different Plenty of snow, packed hard, making excellent sleighing; the lake frozen with from 16 to 18 inches of ice, with excellent going over its smooth surface, the wind having swept the snow in piles along the shores. A few minutes' walk brought us to the cottage where a big coal fire made the whole house warm and comfortable. The fish house was out a short distance from the shore and a few holes had been put in. After lunch I got into my fishing rig and we went out to the house. Here was a good fire, and 4 feet from the stove was a well hole in the floor, into which a trout line was set in 40 feet of water. The wind was blowing a moderate gale, and it was pretty cold work bobbing the lines outside. Mr. Stone was over near the Rattlesnake Island shore, and I walked over to fish with him for a while. He got one handsome trout over there. It was a short afternoon, and before 5 o'clock we were back in the cottage, where we were joined by Mr. William Wallace, of Lacania. Among other things Stone knows about is how to cook, and it was not long before he had a smashing hot supper on the table. That over and the necessary chores done, pipes were in order, and the short evening was devoted to various topics. Mr. Huse told of his early experiences with the gun—how he got his first fox and how he blew his first partridge all to pieces, not finding a piece big enough to pick up. Mr. Stone gave us a very entertaining account of his eight months' sojourn in Paris during the Exposition, where he was in charge of an exhibit of machinery for making wire corkscrews. He made them by the thousands every day, selling them almost as fast as they could be turned out. Wallace and I told a few fish stories and the evening passed quickly.

After breakfast next morning, farmer Batchelder was brought into the game, and we hitched the bob-house behind his horse step and toward it over to the broads between Rattlesnake Island and the Tuftanborough shore, where it remained two days. The wind blew straight down the lake both days, strong and cold, and it was extremely hard fishing, but we kept at it, and we occasion-

ally brought to the surface a handsome trout. I have always thought myself a pretty enthusiastic fisherman, but Stone and Wallace can give me cards and spades at the game. They fish together quite often, and it came out that after they have caught all they want they play a game of pitch to see who shall clean the fish, the loser doing the job, of course. Stone says Wallace is very expert at the business. It's a great scheme—for the winner—but if I had a hundred or more big perch before me, as Wallace did once this winter, taken over near Long Island, I should feel like sub-letting the job if possible. Thursday the fish house was brought back to our shore, where Mr. Huse and I fished Friday, while Stone and Wallace put in some lines off Birch Point, further down the lake toward Alton Bay. Altogether, the fishing was not what it ought to have been. We tried what are considered the best grounds in the lake, and we lost but three fish after they had once taken the bait. We called that pretty fortunate, for it must be borne in mind that it requires good care and a steady nerve to pull a good sized trout from 75 feet of water—the depth we fished in on the broads. Our total string was seven trout, three cusk and probably twenty shad waiters, some of the latter quite sizable fish, while our biggest trout was 5 pounds. However, I had a most delightful outing, and more than ever did I realize that it is not all of fishing to fish. Wallace and Stone I found to be gentlemen and sportsmen; Mr. Huse I have known to be such for some time, and I hope we shall meet at the Huse cottage next winter, when the ice isn't so thick, the wind less furious and the trout in a more biting mood. Saturday noon saw me home again with more than my regular share of the trout, the biggest cusk and a whole lot of appreciation of the kindness of my friends. WM. B. SMART.

The Megantic Club.

AT the annual meeting in Portland, Me., Feb. 26, of the Megantic Fish and Game Corporation, the annual report was presented, showing an addition to the membership in exchanges and shares sold of 41.

During the year past, in addition to the regular running expenses of the club, five new camps were built, one sleeping camp at Northwest and Big Island Ponds, two at Arnold Pond, and a dining camp at Big Island Pond, which for size and conveniences cannot be excelled in the State. These improvements with some new trails cost over $1,300. Three new private camps were built, and there are five more in process for the coming season.

The Board and Supply Department was run at a profit of a little over $2,400, all the camps showing a balance on the credit side of the ledger.

One hundred and sixteen members spent 2,709 days on the preserve, and fifty-four guests were there 500 days.

Below is a summary of the report of the treasurer, showing a cash balance with all expenses paid of $1,336.35.

Quick Assets.		
Cash, including $310.65 in the Permanent Improvement Fund	$1,388 10	
Accounts receivable	218 70	
Rentals due	125 00	
Assessments for 1900 due	480 00	
		$2,211 80
Invested Assets.		
Real estate	$5,000 00	
Treasury stock	1,100 00	
Unexpired insurance	112 90	
Supplies on hand	650 48	
Camps, furnishings and office fixtures	13,311 53	
		$20,174 91
		$22,386 71
Amount We Owe.		
Employees, balance withheld under contracts		$51 75
Total assets		$22,334 96

The directors chosen for the year are: Clarence A. Barney, Boston; John W. Cutler, Binghamton, N. Y.; L. Dana Chapman, Boston; L. O. Crane, Boston; Frank Fallon, Medford, Mass.; A. W. Gleason, New York; George A. Gibson, Boston; R. A. Griffing, Hartford; S. F. Johnson, Boston; Dr. W. G. Kendall, Boston; F. A. Niccols, Boston; George H. Payne, D.D.S., Boston; D. C. Pierce, Boston; Jeremiah Richards, New York; Arthur W. Robinson, Boston; Henry W. Robinson, Boston; Richard E. Traiser, Boston; L. Dana Chapman, Boston; Dr. E. D. Robbins, Boston; Harry W. Sanborn, Boston; clerk, Dr. George W. Way, Portland; assistant clerk, H. W. Robinson, Boston.

The Dennys River.

Editor Forest and Stream:

Your editorial on the wane of the Dennys River of Maine in FOREST AND STREAM of March 2 is pathetic. It must be so, especially to the scores of habitués who have been wont to seek its delectable shores summer after summer and enjoy for the nonce not only its scenic attractions but the privilege of fishing *ad libitum* without license, fee or charge. It is the only absolutely free entire river worth fishing that I know of in the United States or Canada—that, is within striking distance. The consciousness of this exceptional privilege is of itself as ecstatic as a draft of pure air to a lifelong inmate of a dungeon. And to blight the joys of a resident community by destroying the beauty and resources of such a stream, as well as by ignoring the prerogatives inherited from their forefathers for generations by deliberately closing the natural fishway around the dam, and turning loose a perpetual output of sawdust and edgings, regardless of protest or appeal, is truly an offense which may be classed as criminal, more's the pity!

The remedy which your editorial suggests of appeal to the State Fish Commission and the Legislature ought to have been invoked and applied three years ago. It might be made efficacious now. If it is possible to keep mill waste out of streams elsewhere, it can be done in Dennysville, and the salmon will follow their propensity to seek the spawning beds of the upper streams as soon as they find the way clear. That they attempt the passage every year is shown by the quantities of salmon caught in the estuary.

It is a marvel to industrial economists that the mill company cannot see that it is to their pecuniary profit to utilize their mill stuff by disposing of it to fuel yards, ice packers, upholsterers, canners, et al., instead of turning it loose to pack knee deep on the bottom or find its way out into the ocean. But at the present acute stage of the complaint, it looks as if compulsory measures would effect more than the *argumentum ad hominem*. For my part, I declare I cannot understand how the manager and resident members of the mill syndicate can have the nerve to look their fellow citizens of Dennysville squarely in the face. Oh, love of lucre! How it sours the milk of human kindness! Mind you, good Mr. Editor, I would not save the Dennys River for monopolists to enjoy, while those to the manor born stand helpless and forbidden to fish. Better let the slabs and sidings continue to drift with the tides which flow in and out of the estuary. But if, by some happy chance or effort, the river is to be restored to its old prestige, and the angling for salmon become again what it was when Walter Brackett took his dozen fish per day out of the pool above the present railroad bridge, I am thinking that a rod tax of $5 or less would not be a bad idea, as it would enhance the fishing privilege, on the theory that one values most whatever has cost him most or been hard earned; and the income would go to keeping the fishway open and a vigilant guardian on the river.

As you say, "It is an outrage that the conditions now existing should go on unchecked." I hope that the mills of the gods will eventually outdo the mills of the sawyers, albeit they grind so slowly. CHARLES HALLOCK.

On Lac San Claire.

THE Detroit News chronicles in rhyme in the style of D. Drummond Mr. Dan Davies' catching a big bass in Lake St. Clair:

A fisherman on Lac San Claire,
'Bout six mile off from shore,
Fished hard for one, two, three, four hours;
By an' by he fished some more.

Some time he fish with old dry bait,
Some time he fish with wet—
He give the dry bait to the fish,
The wet bait—nit! you bet.

Long time some fish did never come,
Then one, two, three passed by;
They smell of that old dead, dry bait
And wink the other eye.

By an' by one great big bass come 'long,
'Bout five, six, seven pound weight;
So old he neither smell nor see,
And ate that old, dry bait.

The fisherman stood very still
And reeled out yards of line—
He worked that poor old blind black bass
So very, very fine.

By an' by the fish began to pull,
By an' by he pull some more;
And then was fun in Lac San Claire,
'Bout six mile off from shore.

The fish he plunge like one mad horse,
And then he pulled like ten—
He towed that boat nine miles an hour—
Big boat and four big men.

He pulled like bass 'bout six feet long,
May be he be 'bout seven;
May be, if not pulled out right quick,
He'll grow to be 'bout 'leven.

By an' by they pull that bass half out,
By an' by they pull him more,
And Lac San Claire fell four, five feet,
'Bout six mile off from shore.

The Lime Kiln Crossing got so low
The boats they could not pass;
An' Dan he say the river fell
When he pulled out that bass.

Color in Differentiation.

MR. CHENEY says that he is convinced that very little is known about the primal cause of color variation. "Only this fall," he says, "I have been struck with the difference in the coloring of breeding males in the same trout pond, one individual being highly colored, others shading down to a pink blush, and all fed on the same food and confined in a small pond at a breeding station. There is nothing uniform about them so far as coloring is concerned. There will be light trout and trout almost black, the vermiculation pronounced and the vermiculation obscured, and so on to the end of the chapter."

The best object lesson I know of is a goldfish pond, in which one often discovers pink, white, black, red, yellow, crimson and silvery specimens, with mottlings and combinations of these basic colors in puzzling variety, and all from the same stock. In flowers the zinnia is one of the most striking illustrations of vagary in coloration, exhibiting quite frequently many different hues on the same stems.

These studies in nature are interesting, but it is not easy to explain or understand the "whyness of the what."

CHARLES HALLOCK.

Annual Dinner of the Laurentian Club.

THE Laurentian Club had its annual dinner at the Holland House on Fifth avenue last week. It was a success. More than eighty members and guests were present. Mr. Joseph W. Howe, the President of the club, presided. On his right and left were seated Dr. William H. Drummond, of Montreal, the author of "The Habitant and Other Poems" and a director of the club; J. Bishop Putnam, Dr. A. A. Smith, Bayard Dominick, E. W. Coggeshall, Chas. P. Frame, J. W. Cromwell, Percival Roberts, Jr., Wm. H. McCord, L. A. Bevin, Edward Holbrook, J. M. McCutcheon, Dr. George S. Huntington, of Columbia University; Wm. H. Parker, of Montreal, managing director of the club; F. C. Wagner, Dr. Chas. T. Poor, Jos. E. Gay, Jos. Bushnell, David S. Cowles, W. S. Cornell, Messrs. Phelps, Chas. P. Cowles. Among others present were Geo. A. Weber, Emory Lyon, A. E. Hart, of Hartford; Chas. H. Lane, Waldo K. Chase, Howard Fuguet, J. P. Howe, J. H. Bailey, A. B. Miller, J. B. Miller, R. W. Poor.

After a speech, welcoming members and guests, the President called upon Dr. Drummond, who spoke and recited in his inimitable way several of his poems.

Mr. Parker made a flattering report of the condition of the club. Mr. J. Bishop Putnam was introduced as the publisher of "The Habitant."

Mr. Weber read a letter written to the Dinner Committee by Hon. S. N. Parent, Premier of the Province of Quebec, regretting in graceful terms his inability to be present, as the Parliament of the Province opened on the day of the dinner.

Mr. Chas. P. Cowles responded in a happy manner to a vote of thanks to the committee.

The report of the club, just issued in pamphlet form, shows that the club now has more than 250 members, with ample space of water and forest land and fishing and hunting privileges for all of them. WALTON.

FEB. 23.

A New Hampshire Lake Trout.

NEWFOUND LAKE, Bristol, N. H., March 1.—A large lake trout (*Cristivomer mamaycush*), taken from this lake through the ice in 85 feet of water, has been on exhibition in the rotunda of the State House at Concord, and created quite a stir. Hundreds of people, including many of our Granite State fishermen, have gone in to see so large a fish from inland waters. It weighed 25 pounds, measured 38 inches in length, girth 27 inches. The trout has been sent to Boston to be mounted, and we understand it is the intention of the State officials to have it placed in Doric Hall at the State House. Perhaps it is to be kept there as a reference guide to anglers that they may explain to their friends what size fish it was that got away when they lost that big one. This is the second fish about that size the writer has seen taken from New Hampshire waters. The previous one was caught with a 9-ounce rod while trolling in May by Sam Fay, of Wolfboro, about seventeen years ago at Lake Winnipiseogee.

At this writing a bill has just passed by both branches of the Legislature prohibiting ice fishing in Newfound Lake. S. H.

The South Branch of the Potomac.

A CORRESPONDENT writing to the Hampshire Review, at Romney, enters his protest against the pollution of the South Branch of the Potomac by the proposed establishment of a large tannery at Moorefield, and this protest should be sanctioned and upheld by every good citizen residing along this grand old stream. As the writer truly states, it is about the only stream in the State whose waters are limpid and pure, and it should remain so forever. It is the angler's paradise, and along its grassy banks in youthful days we have waited and watched with eager expectancy for a "nibble" from a "sunny" or "sucker," and in more mature years we still love to visit its verdant banks and angle for that gamiest of all the piscatorial tribe, the black bass. Let no one raise a hand toward its pollution in any way whatever, and the strong arm of the law should be used to protect it from contamination from any source whatever.—Piedmont Independent.

The Vindication of the Foxhounds.

"Well, your hounds were running in my woods, and I found the dead sheep in the edge an hour after."

So said our friend the farmer, and though still unconvinced, we settled, and entered it up, "Kennel account, $3.50." The hounds had never been seen to notice sheep in the least. Several times they had followed a fox through a flock, which scattered and ran a short distance and then stood watching the dogs out of sight. It was, perhaps, unwise to admit responsibility, but we preferred propitiation to having our dogs shot indiscriminately.

* * * * * *

The first snow came unexpectedly in November, and three fox men and two hounds were out early in the morning. A fox was started opposite the gun club grounds and made for a high hill a mile or so away, and circled about its wooded top. Just before reaching their runways the hunters came on a dog track and, as it led their way, followed it. A short distance further, as they were about to separate, they came upon a freshly killed sheep. Their feelings can be appreciated only by fox hunters in a sheep country. That it was the work of one of their own dogs they had not a doubt, and with heavy hearts they took up the trail with the determination to shoot on sight.

Ten minutes later they surprised a collie in the very act of pulling down a lamb. The dog started, and four long shots resulted in slightly wounding him; but the chase was taken up with lighter hearts and a grimmer determination to deal justice. The fox and hounds were left to enjoy the day as best they might.

From 9 A. M. to 5 P. M. that collie dog led the three fox hunters and a small army of farmers, recruited along the route. He was seen several times and several long shots were taken. No one recognized him. At last he was seen to enter a barnyard, and in the watering shed he was cornered and dispatched. The owner was afterward located nearly five miles from the scene of the dog's depredations.

The hounds are vindicated! Fox hunters get the glad hand and the open oat bin wherever they choose to put up.

Jos.

SHERBROOKE, Quebec.

Black Bess.

THAT grand little bitch, Black Bess, the property of A. E. Perry, of St. Paul, has met the fate that seems to overcome a majority of our best dogs—a death by poison.

Black Bess was one of the best dogs that I ever had the pleasure of shooting over. She was very active, staunch and possessed of one of the best of dispositions,

It was Mr. Perry's intention to enter her in a number of the trials of this year, and I am positive she would have given a good account of herself. The loss to her owner is quite a severe one, as he paid me a good fee for breaking, and had just refused $100 for her a very short time ago.

Mr. Perry has offered a reward of $50 for information that will lead to the conviction of the party who placed the poison. DR. BILL.

'Mid Reef and Rapid.

BY F. R. WEBB.

II.

"Now, by the great horn spoon, but that's too bad!" exclaimed George, as we scrambled aboard the train at the Staunton station, all primed and eager for our long expected and much planned Harper's Ferry cruise one bright Monday morning in August, our destination Mount Crawford Station, on North River of the Shenandoah, where our canoes were awaiting us.

"What's too bad?" queried the Colonel.

"Why, I've walked right off and forgot my kodak, and——"

"The mischief you have!"

"You're a pretty blockhead to take along on a cruise!"

"What's the use of possessing all that intellect if you can't make better use of it?"

"You'll go off some day and forget your canoe!" were some of the exclamations hurled at the luckless George by the entire strength of the company, for George is notoriously forgetful, and would go off and leave his head if he wasn't reminded of it.

"Yes, that's all right," he replied, meekly and dejectedly; "at any rate I didn't start off on a cruise and forget my paddle," at which inconsiderate remark I became thoughtful and had no further comments to make.

"The main point is, what's to be done?" he continued. "I'd rather stay at home than make another cruise without the kodak. Talk quick," as the engine bell began to ring.

"There's another train down at noon," the Colonel remarked. "We might wait till then."

"I have it," cried Lacy, seized with a brilliant inspiration—that boy is occasionally subject to them, although you wouldn't suspect it to look at him—as he caught sight of a friend on the platform. "Here, Dabney!" he cried, thrusting himself half out of the open window, just as the same idea occurred to me, as I caught sight of Frank, my hopeful son and heir, standing wistfully on the platform gazing at the train, and wishing with all his boyish heart that he was a few years older, that he, too, might go on a cruise.

Dabney promptly responded, as did also Frank to my hail, and the situation explained and the location of the kodak described to them—in the middle of the floor in Lacy's room, where George had carelessly placed it temporarily, and then gone off and left it—and Frank instructed to do what "trotting" Dabney might require of him, and the train moved out, with assurances from both Frank and Dabney that when we reached Port Republic, at the head of the Shenandoah, to-morrow, we would find the kodak awaiting us in the express office, with which assurance we were fain to content ourselves as we settled comfortably back into our swaying seats to enjoy our morning smoke, while the train rattled and jolted along down the beautiful valley toward our chosen stream; albeit, we knew that in the day's cruise on North River between Mount Crawford and Port Republic that kodak would be needed a score of times, of which fact, it is hardly necessary to add, the luckless George was freely reminded, as we rumbled along.

Reader, are you a canoeist or fisherman? If so, did you ever, as your train dashed around a curve or around a bluff or rocky spur, or perchance thundered across a bridge, and you noticed a stream (of course you noticed it, else are you no true fisherman or canoeist), brawling and foaming along beside the railroad track as you sped along; I say, did you ever come upon such a stream without at once taking note of all its points?

Perchance it is muddy and there is no hope of a strike, or perhaps it is clear and in fine fishing condition, or at a good canoeing stage. There, just at the foot of that little rapid or behind that rock, you are sure to get a strike from a bass or a rise from a trout; or down that smooth, deep looking fall between those two big boulders, and right down that line of big waves below, is a splendid shoot for a canoe—perhaps if you were actually in the canoe and at the head of that shoot you would think twice before you took it, and it is not unlikely that you would flunk and not take it at all; but from the train window—with the usual tendency of an elevated position to flatten the appearance of rough water—it looks practicable, and you tell your companion with careless self-confidence that that would make a fine, exciting shoot, and you would love to have the opportunity to try it.

Too rough? Oh, no. You have tackled lots worse places than that—shoots compared to which this one is but child's play; you run on, with the offhand mendacity of the practiced canoeist and fisherman, filling your friend full of the most thrilling stories of adventure and hairbreadth escape.

Here, where the water spreads out among those reefs and ledges and breaks into miniature cascades, with little foaming curls trailing off into long lines of white water at the foot of each one, you note that there would probably have to be some wading done to get a canoe through, and that you would work along over and among those reefs with a fly-rod to good advantage.

That was the way it looked to us, as our train broke out of a deep cut and hurled itself with a roar and a rattle across the lofty iron bridge over North River—our chosen cruising stream—that bright Monday morning in August, and the stream meandered alongside of the road as we rushed along, now winding away, out of sight for a brief space, behind the red clay screen of some deep cut; or perchance a bold, bluff-like knoll crowned with a dense growth of trees intervenes, around whose cliff-like base the river winds in serpentine curves from our sight, again suddenly appearing in view, directly under our car windows at the foot of some steep, high "fill" or lofty trestle bridge, spanning a ravine or small side stream, occasionally taking a header and coming up on the other side of the road, or winding close alongside of us, as our train shoots swiftly and boldly along the face of the high cliffs that line the river, in a narrow little terrace, cut high up above the water, with many a dizzying swing and sudden lurch around some sharp curve.

"Great Scott! isn't it low," exclaimed Lacy, as we studied the stream.

"Yes; I expected to find it low after such a long, dry summer," said I, "but this beats my expectations."

"It's beautifully clear, though," said the Colonel, "and the fishing will undoubtedly be good. Look! You can see every rock and ledge in the bottom."

"Yes, you can see entirely too many rocks and ledges in the bottom," said George, discontentedly. "You can see altogether too much bottom. In fact, the bottom is entirely too close to the top."

"Yes, there might be a little more space between the bottom and the top," put in Lacy, as he knocked the ashes out of his pipe and put it in his pocket.

"I'll tell you what, fellows! We'll never make it in the world," George continued. "We'll have the canvas cut clear off the bottoms of our canoes long before noon on this water, or rather on this lack of water."

"Oh, I think not!" I replied. "We'll have to be careful and will have a great deal of wading to do, and we'll

have to portage all the fish dams and falls, but we'll get along all right after a fashion, and after Middle and South rivers come in, we'll have water enough."

"Well, we'll soon find out. Here's our station!" exclaimed the Colonel, as the brakeman threw open the door and—his voice half-drowned in the roar and rattle of the train, the clang of the wheels on the joints of the rails and the cyclone of dust, smoke and cinders that rushed in with him through the open door—yelled, "All out for Mount Crawford!"

The agent at Staunton had obligingly placed an empty car at our disposal on Saturday, in which the four canoes had been placed, and the provisions, outfits, etc., duly packed in each boat, after which the car was locked and sealed and sent down to Mount Crawford, where, on our arrival, we found it, standing on the siding, so all we had to do was to report our arrival to the station master, who broke the seal and unlocked the car and disclosed the four canoes, just as we had left them, ready packed for launching.

The inevitable little crowd of loungers and depot idlers quickly gathered around and stared at us and our unique little fleet of canoes disclosed in the open car with great curiosity and interest, and readily lent us a helping hand to get them down out of the car and onto the platform. It is quite a long, tedious carry of some 200 or 300yds. down the long hill from the station to the river, and we were quite glad to engage four of the before mentioned idlers to do the carrying for us, and their quarter apiece was well earned before the last of the canoes was deposited at the water's edge.

George rigged up his large Anthony camera and took a picture of the scene as they brought in the last canoe, after which the boats were shoved into the shallow, pebbly pool at the ford above the railroad bridge and led through it by their respective crews—the water being barely ankle deep—to the steep, gravelly bar just below, down over which the water rippled and trickled in a thin, flat sheet an inch or so deep, and over which the canoes had to be lifted and carried bodily to the deeper water below, where we embarked, just above the huge iron railroad bridge which towered high in the air above us, and upon which the entire able bodied male population of the little station had assembled to see us off, and at just 9 o'clock our long, adventurous and exciting cruise of 172 miles and eighteen days was begun.

[TO BE CONTINUED.]

Recently Cal Knapp, coming into his chicken yard, found a fox lying dead on the ground. The animal seemed to have just died, and Knapp's first impulse was to take him by the tail and throw him over the fence. He finally concluded to take it in the house and show it to his family and then skin it. His wife held it in her lap a while, remarking that the body was still warm, and the children played with it for some time. Suddenly some one opened a window and like a flash the fox leaped from Mrs. Knapp's lap and bounded for the window. He fell about an inch short and the window was closed. After some lively chasing about the house, Reynard was caught, and in an hour or so he became quite docile.—Carson (Nev.) Appeal.

The increase of foxes along the Eastern Shore accounts for the scarcity of diamond-back terrapin. The fox regards terrapin eggs as a special delicacy, and during the breeding season tracks the terrapin in the sand, scratches up the freshly laid eggs and devours them.—Washington National Republican.

Yachting.

Our Boston Letter.

BOSTON, March 2.—At last the Boston Cup defender has been christened, and the name is one that appeals to all. She will be known as Independence, a name that has more than one significance, especially in regard to the yacht and the attitude of her owner. It is a name that is dear to every American, and will make a beautiful combination with Eagle. Eagle and Independence have always gone hand in hand, but it is to be hoped that no one will regret a friendly competition between the two during the coming racing season.

It has generally been the custom among yachtsmen to select a name for their yacht which contained seven letters. All manner of out-of-the-way names have been dug up, so that this combination might be maintained without having a constant repetition of names. But this feeling is now commencing to die out, and the yachtsmen are putting names on their yachts that have all numbers of letters. The number of letters is the only thing that yachtsmen have questioned, many thinking that it is too ponderous; but the task of Independence will be very ponderous, and it seems only right that she should have a name in proportion. B. B. Crowninshield is enthusiastic over the name, and this feeling can readily be accounted for when one thinks of his own name and ancestry.

Work on Independence is progressing rapidly now. There have been times when the interested yachtsmen thought that she was growing too slowly, and Capt. Haff when he was in Boston recently expressed this opinion. It may or may not be that it was on account of Capt. Haff's remarks that greater efforts have been employed on the yacht, but it is certain that since his visit there has been great hustling to get the parts together. She is now almost entirely in frame and the lower streak of plating has been started. There are two gangs of riveters at work riveting the floor plates to the frames. Most of this work on the fin has been completed.

It is proposed to have the greater part of the riveting done by machines operated by compressed air, and the steam pipes which will supply the power to the compressors have been run in at the head of the shed. Riveting by machinery is fast taking the place of the old hand method, and the results of the work are much more satisfactory. The hammer of the riveting machines makes from 1,200 to 1,500 strokes per minute when operated by a pressure of about 95 pounds to the square inch. It may be imagined that under this rapid hammering the rivet is headed up rather quickly. This is where the advantage comes in. The rivet is completely headed up while the metal is still red hot, and as it cools it contracts, thus making a tighter joint than could be obtained by any system of hand riveting.

There is enough of the boat now in position to show her general outline, which, to say the least, is beautiful. As one stands aft of frame 65 and looks forward, she appears to be a perfect wedge. The lines are not perfectly straight by any means, but the curves are so graceful and so true that the appearance of straight lines is obtained Looking aft from frame 8 the same effect is noticed, but in a lesser degree. She will be a much better looking boat when she is completed than she is on paper or in the model. I have never seen a yacht which has such a combination of speed producing lines. Those who have had an opportunity of seeing her at the Atlantic Works have been enthusiastic in their praise.

Her overhangs lay very close to the waterline, and she will get the maximum of that long, straight side of hers in the water when she takes a heel. Those sharp bilges will play an important part in such a case, too, for they will give her a remarkably fine entrance. The run is the prettiest ever seen on a racer. It does not rise as quickly as Columbia's, and appears beautifully proportionate to the general lines of the hull. It is in this harmony of lines that the greatest speed is produced, and Independence should certainly have a large amount of that necessary article.

Frank P. Miller was at the Atlantic Works Friday and Saturday. Mr. Miller is to be second mate of Independence. He is very enthusiastic over the lines of the boat, and says that it will be a wonderful yacht indeed that will beat her. Mr. Miller will probably be at the yard every day until the yacht is finished. Capt. Haff has every confidence in Mr. Miller, who is one of the best light sail men in this country. He was with Haff on Volunteer and on Vigilant, and went on Vigilant at Capt. Haff's request when she went to England.

Rigger Billman had a talk with Geo. F. Lawley a few days ago, with the result that when Independence is ready to be rigged Billman will do the work. Billman is to be on Eagle in all her races, but his foreman will be on Independence, and the interests of the boat will be well looked after. The fact that Billman is to rig the Herreschoff boat will have no effect on Independence, for the best men that can be obtained will be put on her.

At the meeting of the South Boston Y. C. it was voted to remain in the Yacht Racing Association of Massachusetts. This is a wise move on the part of the South Boston Y. C., which it will see later. There are many yachtsmen who do not realize the importance of their membership in the Association. The Association is the only means of protection that the smaller clubs have in their open races. This has been proved in the past, and there is no reason to believe that the same conditions do not exist at present.

A peculiar condition confronts the Massachusetts yachtsmen at present. Two of the clubs have arranged championship dates for the season which conflict. These championships are given principally in the 25-footers and the 21-footers, the popular classes of the Association. The dates of one of these clubs is sure to conflict with some of the open dates of the Association, but the club is going ahead nevertheless. The other club, which is an influential one, has made its dates only provisionally, and is ready to change them so that they will not conflict with the Association races.

This club is ready to consult other clubs in regard to dates, so that general racing will not be hurt, as the majority of the members believe in interclub racing. It is a well-known fact that the yachtsman will go where he

will get the biggest prizes, no matter what his means. Now if the smaller club persists in holding to its schedule it will simply become a matter of who gives the greatest inducements. In such a case the outcome of the races in the smaller club can be easily foretold. The larger club will increase its racing fleet, but general racing in Massachusetts Bay will suffer, and the popular classes will die out instead of increasing. It has been distinctly proven that attempts at confining racing to one small district are rank failures and that the sport suffers in consequence.

At Lawley's, Illinois, the Pynchon syndicate defender of the Canada cup, is about completed, and she is a very slick looking craft. The men who have worked on her are very enthusiastic and swear by her. The Sloane 85ft. schooner is all in frame, as is the Bar Harbor 25-footer. The Parsons 46-footer is all planked. The Peabody 25-footer is nearly completed. An 85ft. steamer, designed by C. H. Crane for Edmund Randolph, is ready to be laid down. The frames will be set up on the Eno 120ft. steamer this week. A 70ft. steamer and a 35-footer, of Binney design, will be started soon.

The Boston Y. C. will attempt to revive the racing spirit of its members this year by giving an open Y. R. A. race, which is to be held June 29. There will also be a club cruise to Marblehead and Gloucester on June 15, 16 and 17. Twelve new yachts have been built during the winter for members of this club, and there is a bunch of Y. R. A. racers among them.

JOHN B. KILLEEN.

Endymion and Ellida.

By courtesy of Mr. Clinton H. Crane, of the firm of Tams, Lemoine & Crane, we are able to reproduce in this issue the cabin and sail plans of two highly successful cruising boats that were designed by the above firm. Although the designs represent wide extremes as to size, Endymion being 100ft. on the waterline, while Ellida measures but 28ft., yet both the boats have been remarkably successful as cruisers.

Endymion was owned by the late George Lord Day, who did not live to take many cruises in the vessel, but who had the satisfaction of winning one of the greatest honors that a cruising yacht could achieve, that of breaking the ocean record for yachts. Endymion started on her first cruise from New York at noon on Jan. 31, 1900, and reached Bermuda on Feb. 3, the run being made in seventy-one and a half hours. From Bermuda she touched at Barbadoes on Feb. 16 (1,200 miles in five days) and arrived at Trinidad the next day. The cruise was continued all through the West Indies, the yacht finally returning to New York on April 18. From Cape Charles Lightship to Winter Quarter Shoal, about 61 nautical miles, Endymion sailed in four hours and eighteen minutes, making at times fourteen knots an hour. Endymion made a remarkable run on her outward voyage from Sandy Hook to Southampton. The following figures are taken from Endymion's log for the passage across the Atlantic. The runs given are from noon to noon, and as about one-half an hour a day is lost on the eastward run across the Atlantic, the runs were made in practically twenty-three and one-half hours, and not twenty-four hours. The upper figures are from the mate's log and the lower figures from the skipper's. The lower figures are corrected for distances through the water and are more nearly accurate than the others:

At 12:30 passed Scilly Island, twelve days sixteen hours; at 4 P. M. passed Land's End, twelve days and twenty hours; at 5:08 P. M., July 5, passed Needles; at 6:30 anchored at Cowes.

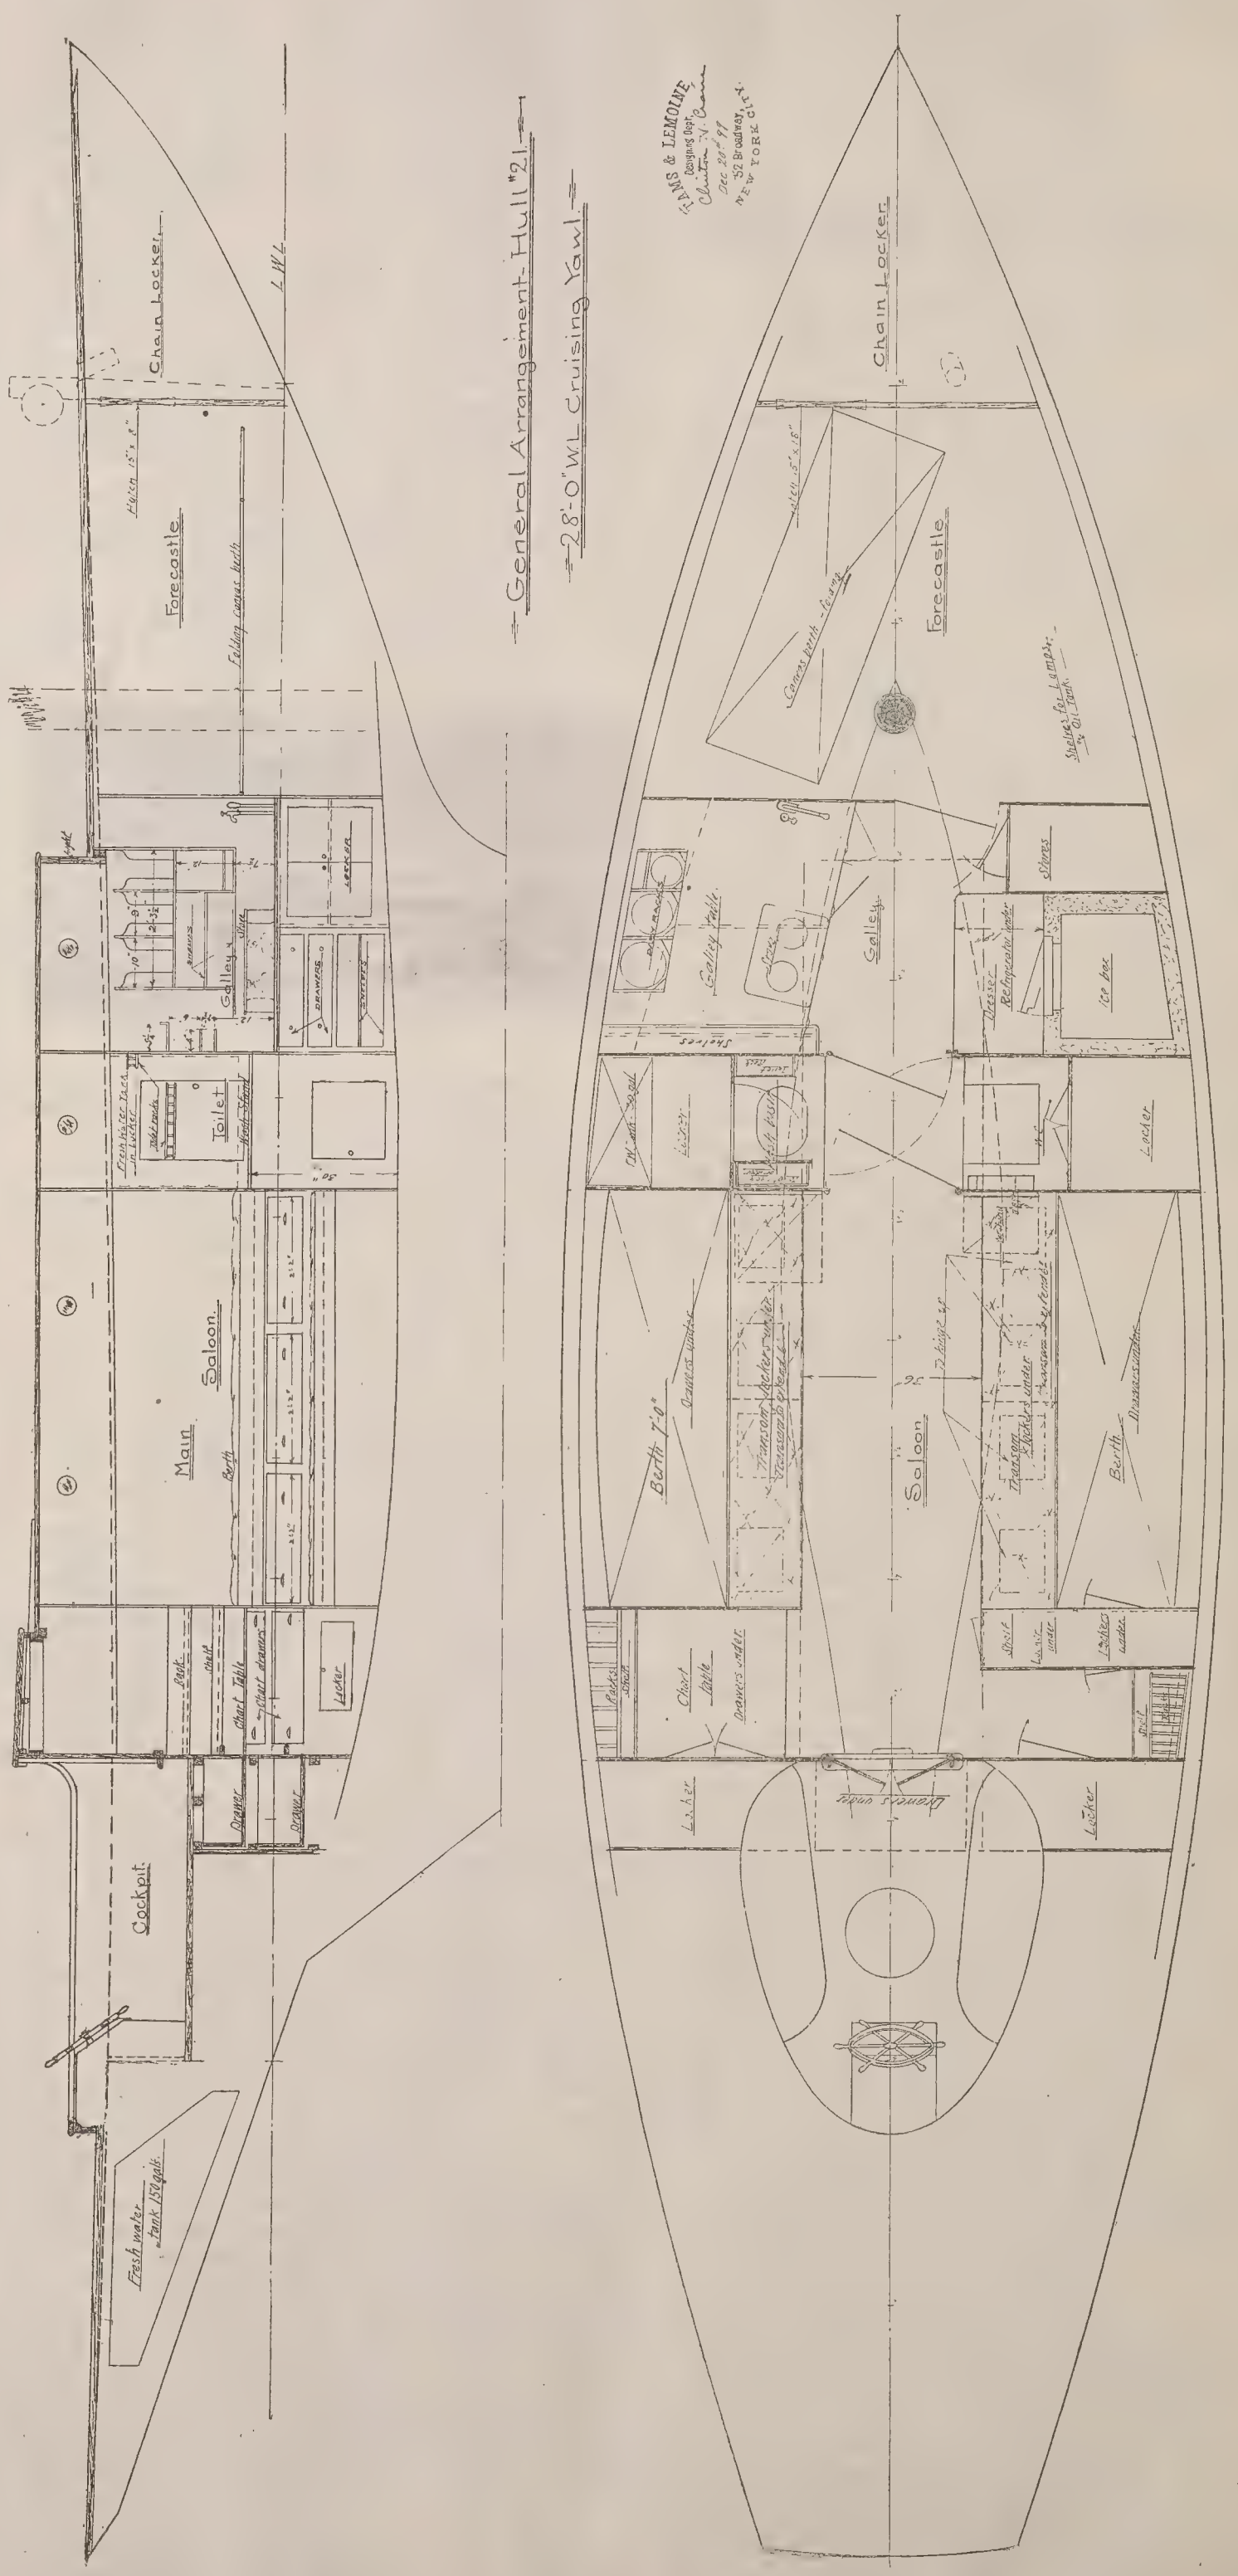
This works out a daily average for the whole distance of 236 knots per day, or nearly ten knots an hour for the whole distance. The greatest day's run showed an average of thirteen knots an hour for the twenty-four hours, which is good as compared with any sailing vessel's daily average ever made.

The largest figures shown in Crowninshield's account of the privateer America are very much less than these. She beat the record held by Mr. James Gordon Bennett's schooner Henrietta by nearly two hours. Endymion was built at the yard of George Lawley & Son Corp., South Boston, and was launched on Nov. 18, 1899, and is a splendid example of the fine work turned out by these builders. The yacht is of composite construction, the frames being of steel, the planking of yellow pine and the deck fittings of teak. While in England she was hauled out, recaulked and coppered. Her dimensions are as follows:

Length—

Over all ..... 136ft.

L.W.L. ..... 100ft.



ELLIDA—CABIN PLAN.—Designed by Messrs. Tams, Lemoine & Crane for Mr. Austen F. Riggs.

ELLIDA—SAIL PLAN. Designed by Messrs. Tams, Lemoine & Crane for Mr. Austen F. Riggs.

Overhang—	
Bow	14ft.
Stern	22ft.
Freeboard—	
Bow	11ft.
Taffrail	8ft.
Least	7ft.
Beam—Extreme	24ft.
Draft—Extreme	14ft.
Depth	12ft. 9in.

Unusual care was taken to make Endymion as complete for cruising purposes as any vessel of her kind afloat. The quarters for the owner and his guests consist of five large staterooms and two bath and dressing rooms. The owner's room extends the full width of the vessel and has a dressing room adjoining. The cabin or saloon amidships is richly furnished with a divan on one side, a sofa and bookcase on the other, while a large sideboard is in the middle of the forward end, faced on the opposite side by a fireplace. There are four officers' rooms, and the officers have their own mess room. The galley and pantry are of good size, and opening from the galley is a large store room, while in the hold are the water tanks, ice room, bins for stores, sail locker and trunk room.

Ellida was built at the Jacob Yard, City Island, during the winter of 1899 and 1900 for Mr. Austin F. Riggs, who has cruised extensively in her. She has proved to be a splendid sea boat, being easily handled at all times and showing unusual speed, considering her small rig. Her dimensions are as follows:

Length—	
Over all	43ft.
L.W.L.	28ft.
Overhang—	
Bow	6ft. 6in.
Stern	8ft. 6in.
Freeboard—	
Bow	3ft. 9in.
Taffrail	3ft. 3in.
Least	2ft. 10in.
Beam—Extreme	11ft.
Draft—Extreme	6ft.
Sail area (ex. topsail)	1,110 sq. ft.

Considering the fact that the boat is only 28ft. long on the waterline, she has an unusual amount of room below. She has full headroom throughout. Under the forward end of the cockpit are large drawers and lockers which are reached from the cabin. On the port side of the companionway is a chart table, back of which are racks and shelves for the charts. Opposite on the starboard side are lockers, racks and shelves to be used for general stowage purposes. The main cabin is 7ft. long and contains a set berth on each side with extension transoms in front, so that four can sleep comfortably in the cabin. A good sized skylight ventilates and lights the cabin. Forward of the cabin is the lavatory, which extends the full width of the boat. This compartment can be separated from the galley and cabin by folding doors. On the port side of the lavatory is a set marble wash basin, behind which are the necessary lockers and racks for linen, etc. On the starboard side opposite is the closet, behind which is a large locker. Next forward is the galley, where there is also full head room. The galley is completely fitted, having ample shelf and locker room for dishes and pans, a large ice box, a locker for daily stores, a pump that is connected with the fresh-water tanks and a two-burner stove. The lavatory and galley are lighted and ventilated by a skylight. The forecastle contains a folding berth for the paid hand. There are two fresh-water tanks, one aft with a capacity of 150 gallons, and one in the lavatory holding 30 gallons. The boat steers with a wheel. Her narrow cabin house makes her practically a flush deck boat and gives ample room to move about on deck.

Changes in Cup Conditions.

THE New York Y. C. has made public the correspondence between its Secretary, Mr. J. V. S. Oddie, and Mr. Hugh C. Kelly, Honorable Secretary of the Royal Ulster Y. C., regarding the conditions that govern the races for the America Cup. The Cup Committee declined to grant the request for a flying start, but allows Shamrock II. three weeks for preparation on this side of the Atlantic in the event of her being late in her arrival. Provision is made, however, that the races shall be begun not later than Aug. 27. The matter of measuring the yachts at the navy yard, it was pointed out, is a question of courtesy resting with the Secretary of the Navy, that being Government property. The conditions governing the coming races are very similar to those used during the last contest. The details of the racing conditions and the letters modifying the original agreement are as follows:

NEW YORK Y. C.,
67 Madison Avenue,
NEW YORK, Nov. 28, 1900.

Conditions to govern the races for the America Cup, under the challenge of the Royal Ulster Y. C., on behalf of Sir Thomas Lipton, dated Oct. 2, 1900, as agreed upon by the committee of the New York Y. C. and Royal Ulster Y. C.

The match to be decided by the best three out of five races.

Courses, Starting from Sandy Hook Lightship.—First race—To windward or leeward and return. Second race—Equilateral triangle. Third race—Similar to the first race. Fourth race—Similar to second race. Fifth race—Similar to first race.

In every case the course from the starting line to be laid to windward, if possible, from Sandy Hook Lightship.

The courses shall be, as nearly as possible, thirty (30) nautical miles in length.

The starting signal shall be given, as nearly as practicable, at eleven (11) A. M., and this time shall not be changed.

The preparatory signal shall be given fifteen (15) minutes before the starting signal, and a warning signal five (5) minutes before the starting signal. In case of a change in the time of starting, the same signals shall be used. At the starting signal a yacht may cross the line; the exact time at which a yacht crosses the line during the succeeding two minutes to be taken as her start, and the end of that period as the start of the one crossing after its expiration. No race shall be started after 1 P. M.

If in any race neither yacht goes over the course within five and a half (5½) hours, exclusive of time allowance, such race shall not count and must be resailed.

The races shall be sailed on the following dates, until the series be completed, viz.: Aug. 20, 22 and 24, 1901, and on the following Tuesdays, Thursdays and Saturdays. An unfinished race of one kind shall be repeated until finished.

In case a serious accident occurs to either vessel prior to the preparatory signal, she shall have sufficient time to effect repairs before being required to start, or if such accident occurs during a race, before being required to start in the next race.

Each yacht shall stand by the consequences of any accident happening to her after the preparatory signal, and upon the occurrence of any such accident disabling either vessel, the other vessel shall sail out the race.

Distinct marks shall be placed at the lower water line at the bow, and as far aft as possible on each vessel. Signed: Lewis Case Ledyard, Com.; August Belmont, Vice-Com.; C. L. F. Robinson, Rear-Com.; J. V. S. Oddie, Sec'y; S. Nicholson Kane (chairman), E. D. Morgan, E. M. Brown, J. P. Morgan, C. Oliver Iselin, Regatta Committee.

ROYAL ULSTER Y. C.,
Mountpettinger Road,
BELFAST, Jan. 30, 1901.

J. V. S. Oddie, Esq., Sec'y New York Y. C., New York.

Dear Sir: I have had a meeting of my committee upon the subject of the conditions in above, received from you a short time ago, and in reply we would like you to consider and if possible agree to the following slight alterations, viz.:

Signals—In the second paragraph, for the purpose of making the matter clear, we suggest the following words should be added: "Either" between the words "which" and "yacht," "first" between the words "yacht" and "crosses," "after the starting signal" between the words "line" and "during," and the word "yacht" instead of the word "one."

Would it not be possible for your committee to agree

to a flying start without any time allowance to either yacht? This is the rule upon our side of the water, and we find it to work very well; besides, it makes the result of the race more easily understood by the public.

New York Y. C. Rules to Govern—In the conditions for the 1899 races were the words "Unless the Shamrock be detained by stress of weather or other cause, in which case three weeks shall be given her for fitting out after her arrival at New York," and we would like those words inserted in the second paragraph after the words "following dates."

Measurements—We would further suggest that, if practicable, the measurement should take place at the Graving Dock of the Brooklyn Navy Yard, as was done on the last occasion.

All the other conditions are quite satisfactory, and if you agree to our suggestions I can interline the words referred to and forward you a copy duly signed.

Yours faithfully,

HUGH C. KELLY, Hon. Sec'y.

(COPY.)

SECRETARY'S OFFICE NEW YORK Y. C.,
37 West Forty-fourth Street, Feb. 18, 1901.

Dear Sir: I have the honor to acknowledge the receipt of your communication of Jan. 30, 1901, requesting, on behalf of the committee of the Royal Ulster Y. C., the consideration by our committee of some slight alterations in the conditions to govern the coming races for the America Cup, which were forwarded to you on Dec. 10, 1900. Your letter was submitted to our committee on Feb. 11, with the result that they cheerfully agree to the following changes, viz.:

First—That the clause entitled "Signals" be changed to read as follows:

"Signals—The preparatory signal shall be given fifteen (15) minutes before the starting signal, and a warning signal five (5) minutes before the time of starting signal. In case of a change in the time of starting the same signals shall be used.

"At the starting signal a yacht may cross the line; the exact time at which either yacht first crosses the line after the starting signal, during the suceeding two minutes, to be taken as her start, and the end of that period as the start of the yacht crossing after its expiration. No race shall be started after 1 P. M."

Second—That there be inserted under the clause "New York Y. C. Rules to Govern," a second paragraph, to read:

"The first race shall be sailed on Tuesday, Aug. 20, 1901, unless the Shamrock II. should be detained by stress of weather or other cause, in which case three (3) weeks shall be given her for fitting out after her arrival; but the first race shall not be started later than Aug. 27, 1901, and the races shall be sailed on Tuesdays, Thursdays and Saturdays, until completed."

This clause allows the same period after arrival as was provided in the agreement for the last match. It was omitted from the conditions sent you through inadvertence.

Third—I am instructed by the committee to answer the uggestion of your committee that there be a "flying start" without any time allowance to either yacht, by saying that they see no reason for changing, in this respect, the conditions governing the last match.

Fourth—I am also requested to state in reference to the suggestion of your committee that the rules as to measurement be modified so as to provide for measurement at the Graving Dock of the Brooklyn Navy Yard, that our committee concurs in your opinion that the Graving Dock is the best place to measure the yachts, and will do all that they can to secure it, but in view of the fact that they have no control of it and cannot be assured, in advance, of their ability to obtain its use, it is deemed inexpedient to make this one of the conditions of the match.

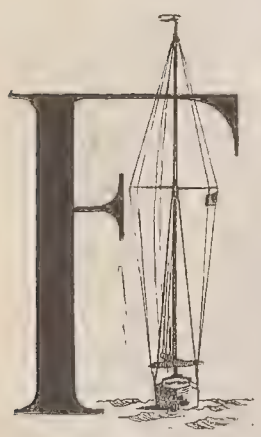
Will you kindly insert the changes herein agreed upon in the copies of the conditions that you have, and forward them to me, duly signed by your committee, that I may return one to you signed by us? Yours sincerely,

(Signed) J. V. S. ODDIE, Sec'y.

HUGH C. KELLY, Esq., Hon. Sec'y, R. U. Y. C.

How t e Commodore Made the Run in the Fog.

BY C. G. DAVIS.



FOR nine long, weary days the yacht Pontoon lay fog bound in the harbor of Newport, R. I. Three times she had started out along with many other yachts and a fleet of twenty-eight Gloucester fishing boats, and three times the fog came rolling in from the sea, a white wall that sent all hands scurrying back for the anchorage.

Most of the yachts were on their way to New London to see the Yale-Harvard rowing race, and sporty crews they carried. They it was who got up rowing matches between the dories of the fishermen and put up money prizes for them to race for, thereby relieving the monotony that hung over the fleet for one day at least. It was a regular gala day, that day, and such rowing as those hardy dory fishermen exhibited was worth going to see.

The saloons along Thames street heard that race discussed from the standpoint of every individual fisherman who could find room at the bar. And on every corner where sea boots and oilskins glistened in the lamp light we heard the if's and and's being discussed, as we made our way back to the yacht with supplies that night.

While it was principally a pleasure cruise, the cutter Pontoon was now on, there was a certain amount of business at the end of it, and the way I happened to be one of the party was this: I had not been ashore two weeks from a West India voyage in a schooner when, as I was walking up Broadway one day, I ran across a pompous young friend of mine who bore the proud distinction of having, at one time, been Commodore of a yacht club, and Commodore he is to this day.

"Say! Charlie!" was his greeting, "you're just the man I want," then he pulled at his small mustache for a moment to think, and added: "You know my yacht, don't you—the Pontoon? She used to be the flagship of this and that club."

"Yes," I answered, "I knew her," but I didn't tell him I knew her to be a deep, wall-sided tub.

"Well," continued the Commodore, somewhat puzzled, "I've sold her to a chap up in Buzzards Bay, and I can't get any one to go with me. Will you go? Say! It'll be a bully trip!"

Having no work at that time, I told him I would, and that is how I came to be spending nine miserable fog-bound days in Newport.

Every day when the fog shut down as it did regularly about 8 o'clock, we, the Commodore, the Lieutenant and myself, dressed up and were rowed ashore by Olsen, the paid man, to spend the day playing pool in a place we had found on the way up to Truro Park.

The morning of our tenth day at Newport dawned on a clear blue sky, and the few yachtsmen that remained—for all the Yale-Harvard men had left their yachts deserted at anchor and gone on to New London by train—shouted across the harbor to each other, "Thank heaven, the fog's gone!"

Certainly it looked so, and after eating a hurried breakfast, the Commodore, Olsen and I cast off the stops and hoisted the Pontoon's soaked sails, while the Lieutenant stowed things away below.

On all sides of us sails were being hoisted and anchors hove up, as the fleet of fishermen, after their prolonged spell of idleness, got under way for the fishing grounds. Being away under the stern of one schooner, luffing past

the end of another's bowsprit, and then ranging along side by side with a fisherman, the Pontoon bore out the inlet, past Fort Adams, and all hands were happy. A fresh southerly breeze sent the yacht crushing through the head seas off Beavertail, so that sometimes her bowsprit end soared dripping heavenward, then down it went, the seas going clear over the forward deck, but Pontoon pushed on, her big tub-like hull boring into the water so hard that she turned a sea off from either bow big enough to swamp a good-sized rowboat. Having been one of the first to get under way, we were now given the pleasure of seeing boat after boat walk past us as though we were anchored. It made my blood boil to see a little fishing schooner, loaded so deep that our yacht should outweather her, go storming past us, splitting the head seas that worried our old tub.

Out toward the horizon line, the Brenton Reef lightship was our goal, and we were nearly to it when, far out to sea, we saw that same gray wall of fog coming rolling in toward the shore that on three previous occasions had sent us all back to Newport, but this time I was determined. Go back? "No! Hanged if we will!" I got out the chart and found the compass course from Brenton Reef lightship to the Hen and Chickens was east half north, so setting the compass box in place I told the Commodore to keep her to that course. I squared away the main boom, while Olsen eased out the head sails, and when backstays were set up, I went aft and sat down near the Commodore, in the cockpit, while the Swede lit his pipe and sat with his legs in the forehatch.

The Commodore wanted to run in for Newport, and while I was arguing with him not to do so the lightship astern went out of sight and the fog enveloped us in its steamy folds, so our horizon narrowed down to a circle not a hundred yards across.

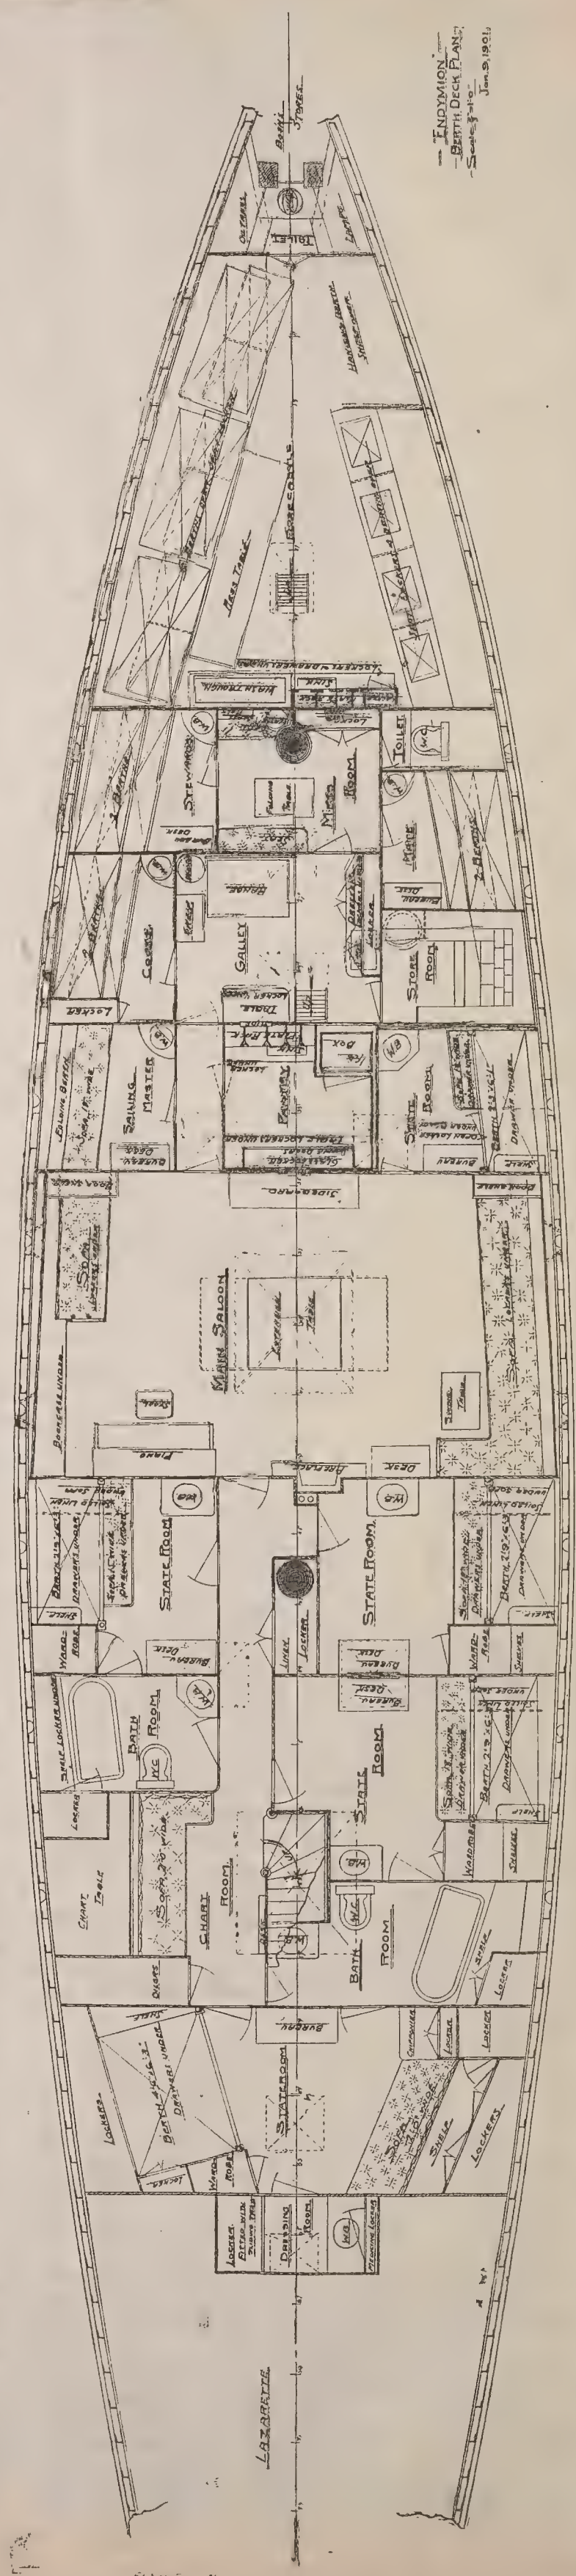
Now this was my first off-shore experience with the Commodore, but having often heard him relate thrilling experiences he had gone through on the traing ship St. Mary's, I supposed him to be a thoroughly seasoned deep-water man

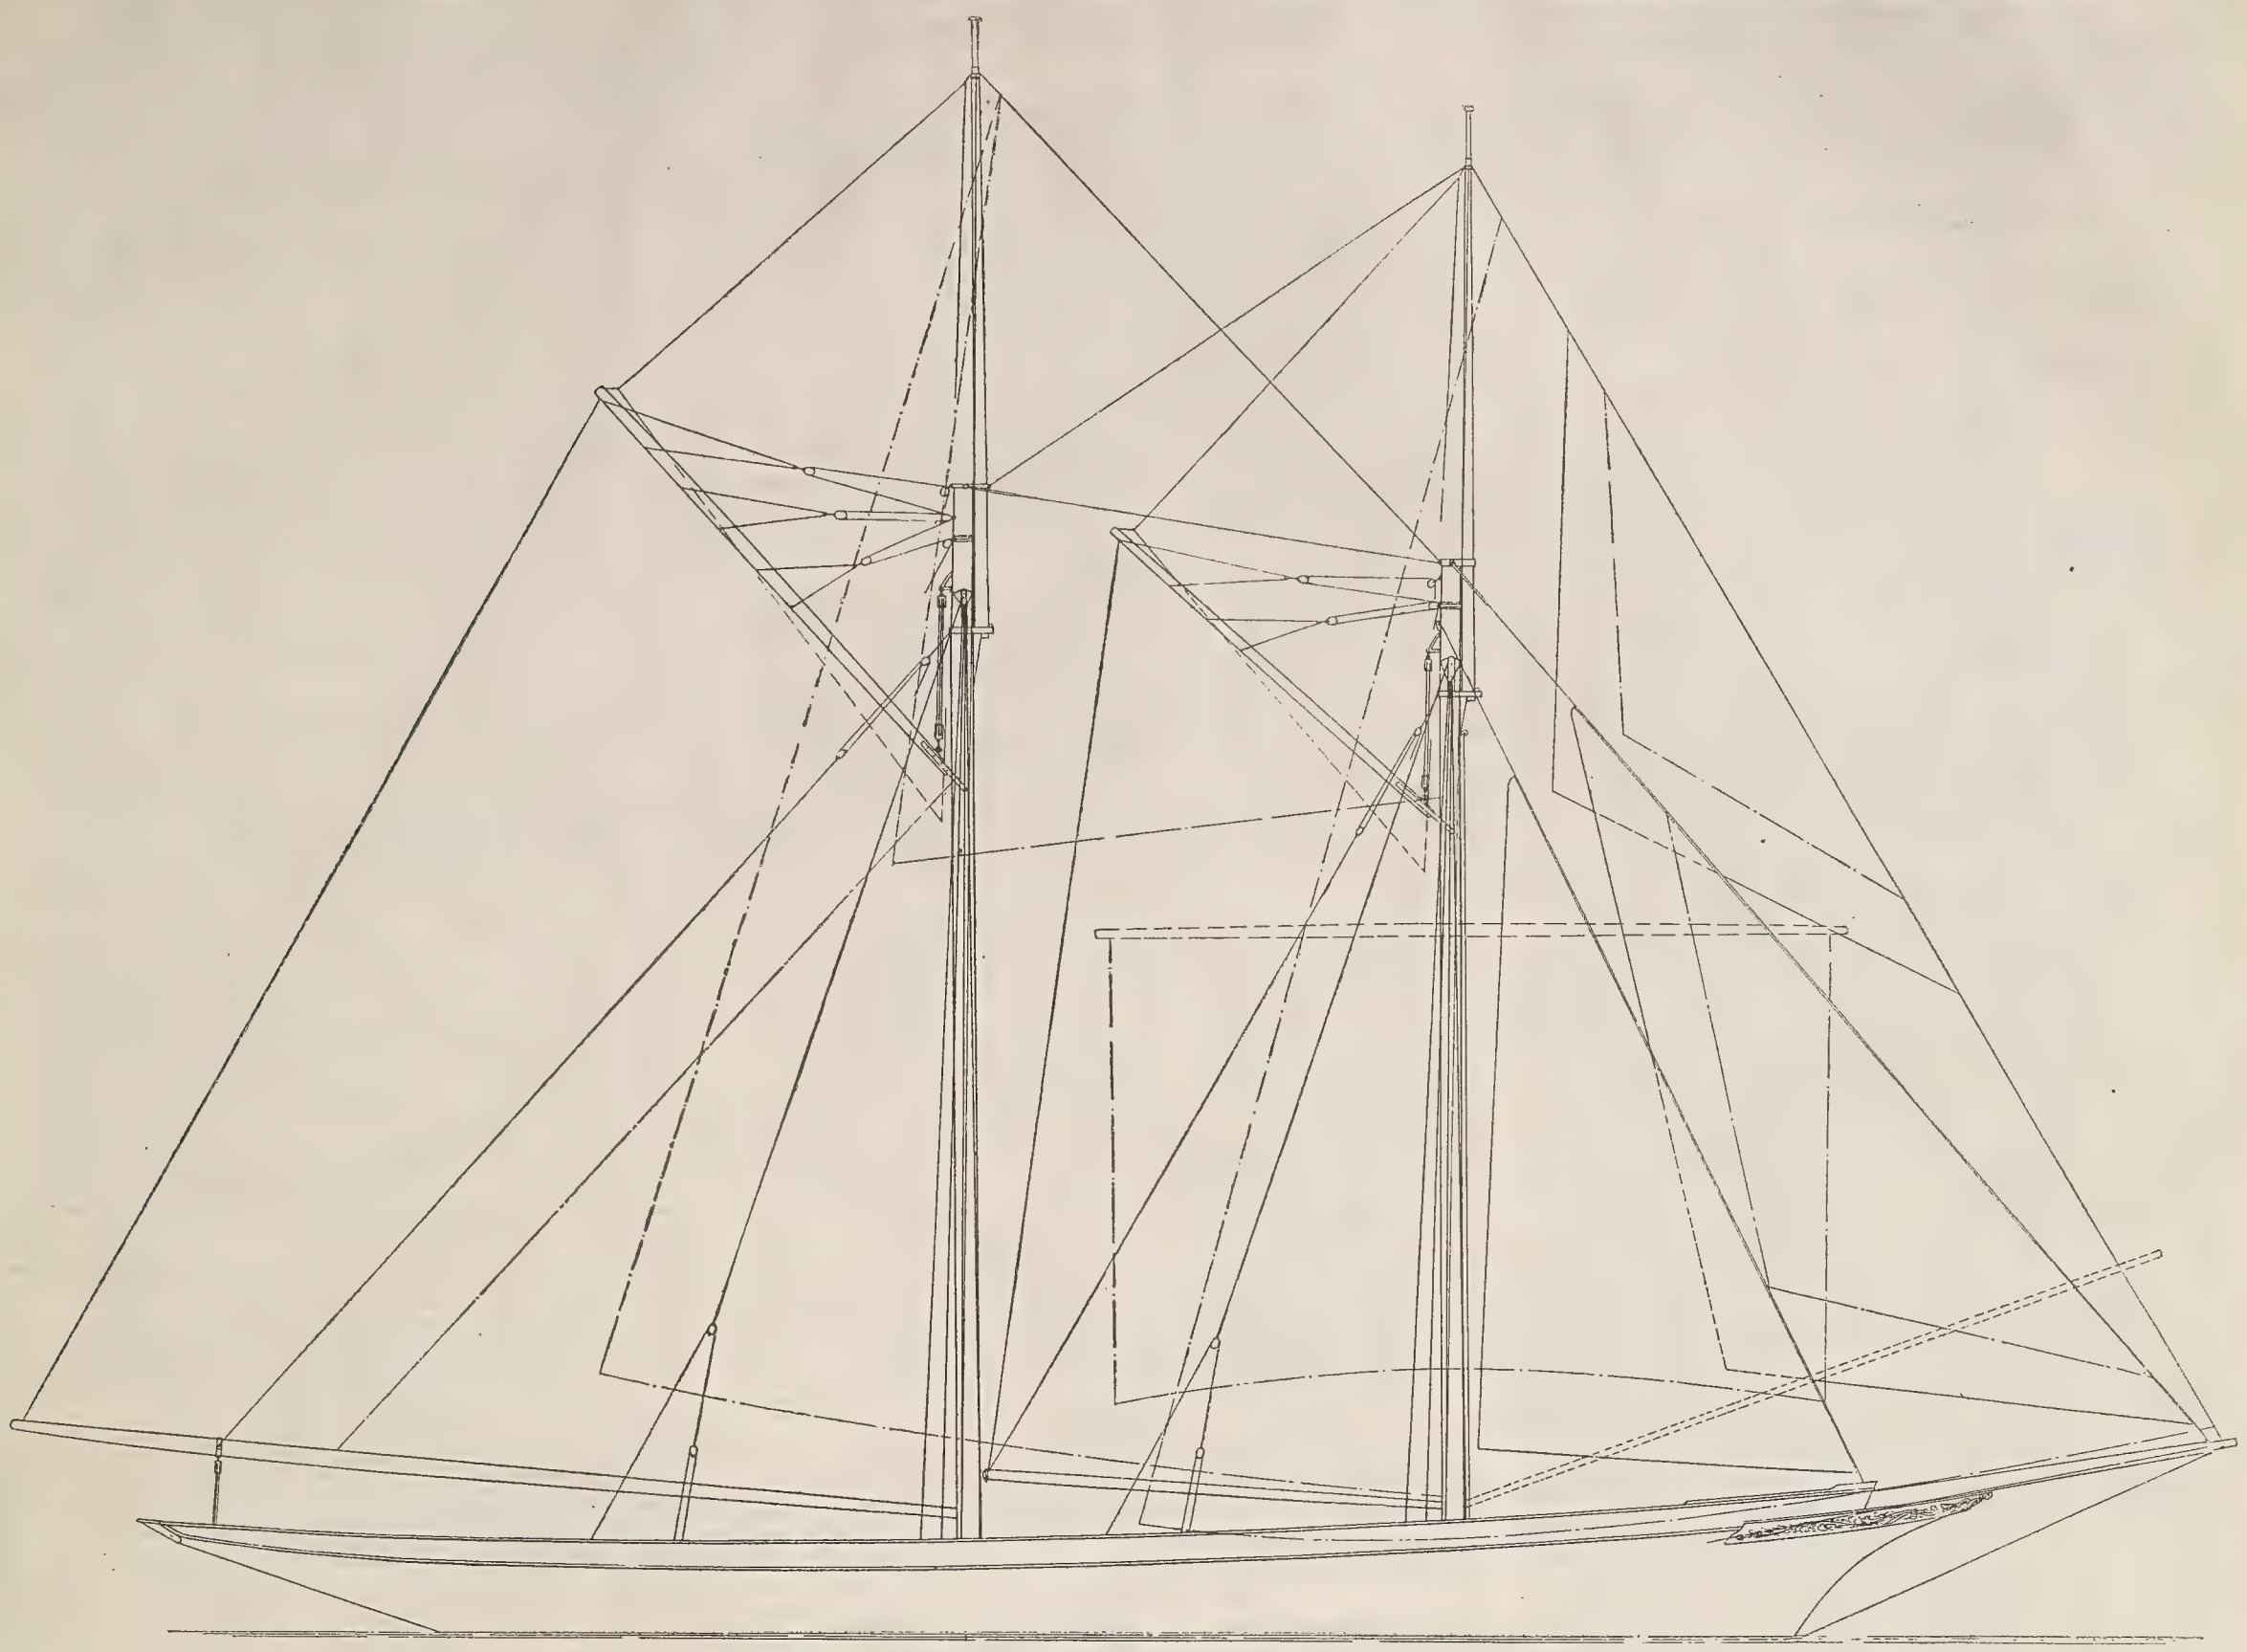
As I sat alongside of him now in the Pontoon's little cockpit, with the old Lieutenant saying nothing, but looking hard at the streams of vapor pouring through our rigging, and the yacht pushing silently along through the fog, I noticed he let her yaw about badly, sometimes two points off the compass course, so I remarked:

"Keep her steady, Commodore; we've got to run twenty miles and pick up the Hen and Chickens lightship."

He made no reply, but got up and motioned me to take the tiller. This caused me to look up at his face, and instantly I realized he was seasick. Flat on the wet deck he threw himself, with his head over the lee rail, and when he picked himself up a little later he was white as a sheet and had undergone a wonderful transformation. He was no longer the rosy-cheeked dandy. His pretty, white ducks were a sorry sight, and he looked as limp as a wet wash rag. It took all the strength and dignity at his command to sit up and explain his situation to me.

"You see, Charlie," and then the poor fellow gulped, "it's queer how I get sick"—another gulp—"every time I go on deep water, I always get sick once, and then—I'm all right."





ENDYMION—SAIL PLAN. Designed by Messrs. Tams, Lemoine & Crane for the late George Lord Day.

"Oh! I know lots of captains going to sea who get seasick," I said, consolingly.

"One cleaning out and then I'm all right," he continued, "and I feel much better for it, too, don't you know."

"There isn't a better remedy going to clear a man's stomach than a spell of seasickness," said I, although I had never experienced it myself.

For a few moments he busied himself about, coiling down the ends of the jib sheet, and I began to think he was going to get over it; but no, poor devil, he soon grew quiet again, and going below, threw himself down on the transom, dead to the world.

The big Swede forward could not suppress a smile as I caught his eye after watching our host go below. When the fog set in, the wind came with it, and slowly, but steadily, increased to a good hard breeze.

Pontoon originally was a cat yawl with one mast stepped clear up in the eyes of her, and to accommodate it she was built so full in the ends you could stand up in the fo'castle with your hat on and put your hand against the stern. While this made her as comfortable as a Harlem flat below decks with her roomy galley, forward and aft of this a saloon with swinging table and two folding bunks above the transoms, it did not improve her sailing or steering qualities any.

Several tons of lead held this high-sided plumb bob on end, but so full and chunky was her model that running before the wind, as we now were, the rudder was working only in dead water. You had to put the helm hard over to make her mind it at all, and then she would yaw about so it would have broken an eel's back to have tried to follow in her wake. From port to starboard her stern swung with the regularity of clockwork, and from starboard to port, just as regularly I pulled with all my might on her short tiller, in vain endeavors to make her go in a straight line.

The Pontoon yawed about and I tugged and swore until tired out, and then called Olsen aft to take a trick at it, for the Lieutenant was only a passenger, knowing nothing whatever about a boat, yet unaffected, as her owner was, by the motion.

Poor little Commodore, he alternated between the lee rail and the cabin, and the fish between Newport and New Bedford were better fed on that day than any day in their recollection for many a long year. And when he couldn't feed them longer, he lay and groaned in agony on the transom. Sorry as I felt for the poor fellow, there was nothing I could do for him, as all our attention was needed on deck. Driving along through a dense fog with a half a gale screeching aloft the Pontoon was kept as near as possible to the course, and we kept careful calculation as to about the speed she was going, and made allowance for the tide.

Dinner time came and went, but out of pity for the Commodore no one mentioned eating.

About 2 o'clock, according to our calculations, we should begin to listen for the bell and horn that indicated the Hen and Chickens lightship. But all hands listened and listened in vain—not a sound save the swash of hurrying water greeted our ears, and I grew uneasy lest some unknown current had set us inshore so far we could not hear the bell. If we failed to pick up the lightship, there was nothing for us to do but heave to and wait for it to clear up; if we kept on running we would only fetch up on the mainland, or possibly somewhere around Cuttyhunk, on the Martha's Vineyard shore.

Minutes merged into half hours, and no horn was heard, until very faintly we all three heard far off to windward the sound of a fog horn.

"Heavens! we're not that far off our course, I hope," said I, as I luffed up, and we trimmed in sail to beat up toward the sound. Blown into our faces by the wind, the fog felt almost like rain, and the Commodore had to shift into the lee bunk every time we tacked, for the old Pontoon was staggering along under full sail.

From a faint moan, louder and louder grew the sound, until just as we made a tack to starboard, and the canvas stopped slapping, a roar so loud and deep that it startled all hands greeted our ears, and out of the dripping fog loomed the black hull of the Vineyard Sound lightship of Cuttyhunk, several miles to windward of the Hen and Chickens.

I swore when I saw the name in large letters along the side of the lightship, and luffing around we bore away before the wind and sea, and while Olsen steered I went below and found the compass course from this lightship to the one we wanted to find.

With the wind just abaft the beam so the headsails stoods full, the yacht sailed a straight course, and when we judged we were about where we were before we started to beat up to the other lightship, there suddenly loomed up right ahead of us the missing ship, but silent as the grave. We stood on across her bows, then jibed over and continued on the compass course for New Bedford. When we were well astern of the lightship we saw the dark figure of a man go forward along her leck, and then born down wind on the fog came the heavy clang of her fog bell, making our eardrums vibrate. "Dey never rung dot bell, dot's vye we don't hear 'im before," said Olsen, and I agreed with him.

We now had a thirteen mile run to Clark Point lighthouse, but to us it was like a midnight sail for all we could see. The fog shut us in completely. The first thing we saw to indicate land after a couple of hours' sail was a large three-masted schooner, that loomed up ahead of us on a sudden. Running close under her stern we asked her skipper, who was watching us, what the course was to New Bedford, and sailed as he directed, with the result that in a half an hour a red spar buoy loomed up ahead, and sailing by this we made our way up to within a mile of the town, although we did not know we were so close until the Pontoon suddenly ran out of the fog, and there before us, bathed in the red light of sunset, lay the old romantic town of New Bedford, with the spars of the dismantled old whaling ships standing up black against the glow in the west.

Here the water was like a mill pond, the breeze had gone down to a gentle air, and a feeling of thankfulness and rest seemed to prevail with nature, as well as us.

Then it was the Commodore, who up to this time had been forgotten, came up the companionway and said with a resurrected smile:

"I'll take her in now, Charlie." I was only too willing to surrender the tiller to him. But when a week later, bedecked in gold buttons and creased white ducks, the Commodore related to an attentive audience on the club's piazza how he sailed the Pontoon from Newport to New Bedford, "in a howling gale and fog so thick you couldn't see the bow of the yacht, and brought her right smack up to the dock at New Bedford, b'gad!" and called on me to confirm his statements, I thought of the figure he cut on that run and turned away.

Yacht Club Notes.

The Entertainment Committee of the Yachtsmen's Club has sent out the following announcement for the lectures to be given during the month of March:

March 6—"The Measurement Rule," John Hyslop, Esq.

March 13—"Ocean Steam Vessels and Their Management," Capt. P. C. Petrie, late Commodore Inman Steamship Company.

March 20—"High Speed in Steam Vessels," Chas. D. Mosher, Esq.

March 27—"Methods of Determining Position at Sea," Commander Henry H. Barroll, U. S. N.

* * *

Several gentlemen interested in yachting attended a meeting on Thursday, Feb. 28, and organized a club to be known as the City Island Y. C. The following officers were elected: Com., Howard Horton; Vice-Com., Dr. Frederick C. Lawrence; Rear-Com., Piierre Wood; Sec'y, Albert Wood; Treas., Franklin Smith; Official Meas., Charles Herold; Board of Directors, George Miller, James H. Rice and Dr. L. F. W. Seifert. A set of by-laws, rules and regulations are to be drawn up and adopted similar to the Knickerbocker Y. C.'s rules and regulations. Five boats of A1 class, centerboard sleep type, are now nearing completion, and it is expected six or seven will mark the number for the first regatta.

* * *

The Seawanhaka Corinthian Y. C. met at Sherry's on the evening of Feb. 26 and adopted the new rule of measurement which special committees of the New York, Larchmont and Seawanhaka Corinthian yacht clubs recommended for consideration and adoption. The rule is to go into effect on Jan. 1, 1902. Any boats built after July 1 next will come under the new rating. The rule was adopted by the Seawanhaka Corinthian Y. C. independent of any action that the other clubs might take, but the committee of the new rule was made permanent with power to act, in order to modify the rule should a change seem desirable.

The committee consists of John Hyslop, chairman; J. Fred Tams, A. Cass Canfield, C. H. Crane and Henry W. Eaton.

The new rule, which taxes both beam and draft, is

different from anything that has been proposed before. It is as follows:

"Yachts shall be rated for classification and time allowance by racing measurement, which shall be determined by adding to half the load waterline half the square root of the sail area and a quantity determined as L. and by dividing the sum of these quantities by 1.1.

$$\frac{\frac{1}{2}\,L.W.L.+\frac{1}{2}\sqrt{S.A.}+L.}{1.1}=R.L.$$

"The quantity L. is to be obtained in the following way:
"B. is breadth of load waterline plane at ⅛ of its length from fore end.
"B. is breadth of load waterline plane at ⅛ from after end.
"B. is breadth (greatest) of L.W.L. plane.
"C. is (B.+B.')—B.".
"D. is draft at MS.+2-5 of any greater draft aft, and all of any greater draft forward.
"E.=(B."+D.)—3 1-3√ MS. submerged.
"C.+E=L.

"On all yachts launched after July 1, 1901, there shall be placed, by the owner or his agent, on every vessel to be entered for racing, marks on each side of her to indicate the waterline, and other marks vertical to and 3in. above the first named. These shall be placed immediately over the largest cross section of the submerged part of the yacht.

"The owner shall furnish to the measurer a certificate of the draft to the waterline as above indicated, and shall also include a statement of any greater draft, whether the same is at a place or places forward or aft of this point. The certificate shall also state the measurement of the yacht's greatest breadth on the load waterline and the area of the submerged section when measured to the marks at the waterline, and also to the marks 3in. above it. These marks shall be kept on hand at the club house, and supplied to all who may require them; they shall be small disks of noncorrosive metal, each having a hole in the center, through which it may be secured to the side of the vessel by a pin, the center of the latter to indicate the point measured to.

"In case of metal hulls a cross, such as can be made with a cold chisel, may be used, the intersection of the lines to indicate the point measured to. The measurements furnished by the owner to be subject to verification by the club's measurer when called in question by protest, or when required by the race committee.

"Any yacht launched before July 1, 1901, whose measurements, made under the rule of the previous year, brought her within the limits of a class, shall be eligible to race in such class, although when measured under the rule 1901 she may exceed the limits of such class, or may fall below it, and such yachts shall be rated for time allowance at their actual measurements.

"Yachts launched after July 1, 1901, shall not be entitled to time allowance except from yachts launched prior to that date whose measurements may exceed the class limit. Such yachts shall allow time to smaller vessels launched before the date named.

"When the measurer shall have to measurer, draw and compute the area of midship section or other under body dimensions of a yacht the charge for the same shall be for a cabin yacht $12, and for an open yacht $6."

The committee of the Larchmont Club is John Hyslop, chairman; John F. Lovejoy, Philip T. Dodge and E. A. Willard. The following extracts from its report explain the new rule:

"When the present rule was framed, and for some years afterward, the use of lead keels was practically unknown, and the few instances of their use, partial or othewise, were to be found in small vessels. Keels were formerly used to prevent leeway, not as levers to hang lead upon. The draft taken was moderate and proportionate to the bulk and accommodations of the vessel associated with it, and there were no flattened end frames, convex bow waterlines and shovel-nosed bows. When ballast was used inside the hull a fair amount of it had to be carried, and a corresponding extent of displacement and roominess in the yacht was assured, without extravagance in draft or other dimensions; but a time arrived when yachts having these characteristics and with roomy cabins and good accommodations were found to be classed in racing with vessels having little room and displacement, and possessing sail carrying power through the agency of a short keel or fin used as a lever on which to carry lead ballast. Another new feature also appeared about the same time in very full and convex waterlines, with correspondingly flattened and sharpened vertical longitudinal section lines and lengthened over water ends.

"It is proposed to make practicable the building of any yacht having a symmetrical and useful area of midship section proportional to the breadth and draft associated with it. It is also proposed that any yacht having a disproportionately small midship section, with large dimensions of breadth or draft, or both—providing only that the sum of the two is large—shall allow time or its equivalent in the increase of other factors, to what may here be called the normal yacht. It is further proposed to make practicable the building of any yacht with only a useful and normal amount of fullness in the ends of the load water plane.

"It is also proposed that vessels with flat or extravagantly full ends shall allow time or its equivalent to the more normal vessel. It is not proposed to in any way affect vessels which have been referred to as within normal limits, except to give to them such allowances as they may become entitled to from vessels built or to be built to which the new factors apply. From the time of the America to and including Volunteer, Titania, Katrina, Minerva and Lasca it would be difficult, if not impossible, to name a yacht built for these waters with a midship section so small relative to her draft and beam that the square root of its area when multiplied by 3 1-3 would not be equal to the sum of beam added to draft. It would be still more difficult to name one in which the sum of the two dimensions of breadth of load waterline measured at one-eighth of its length from each end would be equal to the greatest width of the waterline. The area of the load waterline of such yachts usually came under 65 per cent. of the parallelogram which would include it. To-day, in the middle and in the larger sizes, the coefficient of the load waterline may be found at 75 per cent. and over, and in smaller vessels it may run to the extreme of almost the whole parallelogram. Such vessels not only lengthen out very materially the waterlines to which they are measured, but gain for racing under average conditions much in other ways, and it is due to excesses of form of the kind indicated that great length of overhang at bow and stern can be used with advantage.

"As under the rule proposed, all vessels recently built would most likely have their measurements added to. No vessel racing with a modern vessel would be called upon to give to another the full extent due to the addition to her racing length, but only the difference due to the varying additions to each. It is confidently believed that if adopted the effect will not necessarily be to repress any variety of form whatever, but to give a new encouragement to yacht building, a new freedom in yacht designing, and to make possible the introduction, in some variety, improved, and in the view of many yachtsmen, more acceptable forms."

The committee shows the working of the rule by giving the old and proposed new racing lengths of the following well-known yachts:

	Old Racing Length. Feet.	New Racing Length. Feet.
Schooners—Class B.		
Emerald	91.07	83.35
Corona	93.07	86.13
Class D.

YACHTING NEWS NOTES.

Mr. G. Howland Leavitt, N. Y. Y. C., has commissioned Mr. H. J. Gielow to design for him a naphtha launch. The contract for the construction of the yacht has been placed with the Townsend & Downey Shipbuilding and Repair Co., of Shooters Island, S. I. The dimensions are as follows: Length over all, 55ft. 4in.; length on waterline, 55ft.; beam, 9ft., 9in., and 3ft., 4in. draft. Forward there will be a pilot house, 6ft. long. Aft of the pilot house is a low cabin trunk 26ft. long, with the galley in the forward end. Next comes an engine room containing a Craig gasoline engine, with a passage on the starboard side and a captain's room on the port side. The saloon, 12ft. long, follows and aft of this is a cockpit covered with an awning. All the joiner work will be of mahogany. The naphtha tank in the bow will hold a supply sufficient to run 360 miles at full speed or 630 miles at 10 miles an hour. The maximum speed will be 14 miles an hour.

Mr. Charles Billman, head of the well-known firm of Charles Billman & Son, ship riggers, died at his home in Boston, on Feb. 27, aged seventy-two years. Mr. Billman had been prominently identified with yachting for many years, his firm having rigged all the America Cup defenders since 1876. Mr. Billman was born in Stockholm, Sweden, on Sept. 4, 1828. He stood at the head of those in his business. It was he who was credited with giving the late Edward Burgess his ideas about rigging and when the original cup yacht America was altered he refitted her. He leaves five sons and four daughters.

The Gas Engine and Power Co. and the Charles L. Seabury Co. have an order for a steel steam yacht that will be built at once for a yachtsman whose name is for the present withheld. She is 140ft. on the waterline, 177ft. 6in. over all, is to make 18 knots an hour and will be schooner rigged. The quarters for the owner are to be aft of the engine space, and will consist of two large double staterooms. Connecting with the owner's stateroom will be a large bathroom. There will be two single and double staterooms for guests. These rooms and the saloon are to be finished in mahogany. The dining saloon and butler's pantry will be in the forward deck house, which is to be built of mahogany. The galley will be below decks, and connected with the butler's pantry by dumb waiter. The officers' quarters and forecastle will be in the forward part of the vessel. A music room will be in the after deck house and entrance to the owner's quarters will be by a companionway from this house.

Major Fred. Ackerman, of the A. Y. C., is having a sloop built by William P. Kirk, at Toms River, N. J., from designs by Mr. H. J. Gielow. She is 41ft. over all, 26ft. 9in. on the waterline, 11ft. 7in. beam, 3ft. draft, and has 900 square feet sail area.

Mr. A. E. Lazzoro, of Hartford, Conn., has purchased the steam yacht Waiontha, formerly the Fra Diavolo.

The steam yacht Margaret has been sold by Mr. J. H. Rutherford, N. Y. Y. C., to Mr. George J. Smith, of New York.

The Yachting World says: "It has frequently happened that ships have got out of their course at sea by some unaccountable means, and a warning just issued by the Admiralty may perhaps have some bearing on the matter. Their lordships say that their attention has been called to the practice of seamen wearing steel stretchers in their caps, and to the danger which may result from these stretchers becoming strongly magnetized, and being worn by men close to the ship's compasses. Instances have been reported of compasses being considerably deflected in this manner, and their lordships have now directed that the use of steel stretchers in caps is to be immediately discontinued."

The steam yacht Augusta, formerly the Egret, has been sold through Damer's agency to Mr. Paul Ames, of New York.

Mr. James Seaman, of Boston, has purchased from Mr. W. H. Bromley, of Philadelphia, through Messrs. Gardner & Cox, the steam yacht Telka.

Vice-Commodore William N. Bavier, New Rochelle Y. C., has purchased of Mr. E. Hope Norton, through the agency of Messrs Huntington and Seaman, the fin keel sloop Memory, built by the Herreshoffs in 1894.

The American auxiliary Genesee, owned by Mr. J. S. Watson, 26 days out from New York, bound for Naples, arrived at Gibraltar Feb. 28, with her steering gear deranged, bulwarks stove and launch smashed. Plans and description of Genesee appeared in FOREST AND STREAM of Dec. 22, 1900.

"The charterer of Mr. William Clark's steam yacht Tucarora," says the Field, Feb. 16, "is Mr. Ballantine, of New York, and the charter will extend for four months from the beginning of June. The Tuscarora is to cruise in American waters, and will be at Sandy Hook for the cup races." This yacht was built in 1896 by Scott & Co., of Greenock. Her dimensions are 181ft. long, 26.8ft. beam and 14.55ft. draft. She is a steel vessel of 540 gross tonnage, and has triple-expansion engines.

The New York Herald has organized an excellent system for reporting yachts when in foreign waters. The following is taken from their announcement: By hoisting the proper signals, as indicated in the international code, when passing any Lloyds signal station, yachtsmen will be reported by telegraph to the Herald in New York, Paris or London, as they may direct. An arrangement has been concluded by which Lloyds undertake to forward to the Herald all such yacht movements signalled to their stations, thus enabling yachtsmen, without any other trouble than hoisting flags at the masthead under their number, to have the passage of their yacht made known to their friends throughout the whole world the next morning. In the new international code, on page 266 of the General Vocabulary, under the heading "New York," it will be found that by hoisting two flags, "U K," you signal "Send news of me to the Herald, Paris." If instead of "U K" the yacht owner hoists "U I," the same news will be sent to the Herald, London. If he hoists "U J," it is addressed to the Herald, New York.

Mr. Frank Bowne Jones recently sold to Mr. Philip T. Dodge, a member of New York Y. C. the English cutter Eelin. This yacht yas built for the 65ft. linear rating class, by Summers & Payne, of Southampton, from designs of Arthur E. Payne, in 1899. This yacht is 84ft. over all, 59ft. waterline, 15.8ft. beam and 9.9ft. draft. The yacht is of composite construction, and was built for Capt. J. Orr Ewing, and is similar in design to Tutty, the fastest yacht in this class. The yacht will be fitted out for the transatlantic voyage at once, and will sail from Southampton about the middle of March, arriving here in good time to be put in commission for the following season.

The cutter Vencedore, lately sold through Mr. Jones, is being prepared for transportation to Chicago, where she will be raced by the new owner, Mr. F. A. Price, the coming season. The yacht will be taken from the yard at City Island, where she is now lying, on one of the Merritt & Chapman lighters, and placed on a flat car for shipment West. This will avoid launching the yacht until she arrives in Chicago.

The new steel steam yacht that Mr. Jones is building for Mr. Charles J. Canfield, at Wilmington, Del., will be named Cangarda. It is expected that this yacht will be completed in April, and she will immediately sail for the owner's home, at Manistee, Mich., going from New York to Halifax, and thence via the St. Lawrence River and the Great Lakes to her destination.

Designs Recently Published in Forest and Stream.

25-footer Flirt, Oct. 13-20.
21-footer Tattoo, Oct. 27.
Minnesota, Nov. 17.

Trapshooting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for a quarter-century.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

March 2-16.—Madison Square Garden, New York.—Roof Garden Tournament of the National Sportsmen's Association.
March 19-21.—Asheville, N. C.—The Peters Cartridge Company's two days' target tournament. Maj. E. P. McKisseck, Sec'y. John Parker, Mgr.
March 21.—Newell, Ia.—Newell Gun Club's target and live-bird shoot. Henry G. Hall, Sec'y.
April 9-12.—Baltimore, Md.—Eighth annual spring tournament of the Baltimore Shooting Association; two days targets, $100 per day added; two days live birds, $500 guaranteed. H. P. Collins, Sec'y.
April 10.—St. Louis, Mo.—Contest for Dupont trophy at Dupont Park.
April 12-13.—Newark, N. J.—Forester Gun Club's tournament. J. J. Fleming, Sec'y.
April 16-18.—Leavenworth, Kan.—Annual tournament of the Kansas Sportsmen's Association. W. H. Koehler, Sec'y.
April 18.—Newell, Ia.—Newell Gun Club's target shoot. Henry G. Hall, Sec'y.
April 24-25.—Binghamton, N. Y.—Amateur tournament of the Peters Cartridge Co.; $150 added money. H. W. Brown, Sec'y. John Parker, Mgr.
May 7-10.—Tournament of the New Jersey State Sportsmen's Association. C. W. Feigenspan, Sec'y.
May 7-10.—Lincoln, Neb.—Twenty-fifth annual tournament of the Nebraska State Sportsmen's Association, under the auspices of the Lincoln Gun Club. W. D. Bain, Sec'y.
May 14-17.—Allentown, Pa.—State shoot of Pennsylvania State Sportsmen's Association. C. F. Kamlich, Cor. Sec'y. Elmer E. Shaner, Mgr.
May 1-3.—Newell, Ia.—Newell Gun Club's annual tournament; targets and live birds. Henry G. Hall, Sec'y.
May 14-16.—Elwood, Ind.—Tournament of the Zoo Rod and Gun Club.
May 14-17.—Newton, Ia.—Annual tournament of the Iowa State Sportsmen's Association, under auspices of the Newton Gun Club. D. R. Tripp, Sec'y.
May 21-25.—Springfield, Ill.—Twenty-seventh annual tournament and convention of the Illinois State Sportsmen's Association. Chas. T. Stickle, Sec'y.
May 22-23.—Mechanicsburg, O.—Ninth annual tournament of the Mechanicsburg Gun Club. C. W. Phellis, Sec'y.
May 28-30.—London, O.—Tournament of the London Gun Club.
May 28-30.—Saginaw, Mich.—Tournament of the Michigan Trapshooters' League, under auspices of the East Side Gun Club. John Parker, Mgr.
May 30.—Canajoharie, N. Y.—Tournament of the Canajoharie Gun Club. C. Weeks, Sec'y.
May 30.—Auburn, Me.—Annual shoot of the Auburn Gun Club.
June 5-7.—Circleville, O.—Under auspices of the Pickaway Rod and Gun Club, annual tournament of the Ohio Trapshooters' League. G. R. Haswell, Sec'y.
June 11-12.—St. Marys, W. Va.—Fifth annual tournament of the West Virginia State Sportsmen's Association, under auspices of West Virginia Gun Club. Mallory Brothers, Mgrs.
June 11-13.—Sioux City, Ia.—Seventh annual amateur tournament of the Soo Gun Club. W. F. Duncan, Sec'y.

June 17-20.—Warm Springs, Ga.—Southern Interstate tournament; two days targets, two days live birds. Chas. L. Davis, Mgr.
June 25-27.—Walla Walla, Wash.—Seventh annual tournament of the Sportsmen's Association of the Northwest. W. G. Campbell, Sec'y.
June —.—Columbus, Wis.—Tournament of the Trapshooters' League of Wisconsin. First week in June.
July 23.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.
Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.
Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.
April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap Tournament at Live Birds.
June —.—Interstate Park, Queens, L. I.—Forty-third annual tournament of the New York State Association for the Protection of Fish and Game.
Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds; $5 entrance. First contest took place June 20, 1900.
Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

INTERSTATE ASSOCIATION CONTESTS.
Elmer E. Shaner, Manager.

April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap tournament at live birds. Edward Banks, Sec'y-Treas., 318 Broadway, New York.
April 17-18.—Jacksonville, Fla.—The Interstate Association's tournament, under the auspices of the Jacksonville Gun Club. B. W. Sperry, Sec'y.
May 8-10.—Memphis, Tenn.—The Interstate Association's tournament, under the auspices of the Memphis Gun Club.
June 19-21.—Cleveland, O.—The Interstate Association's tournament under the auspices of the Cleveland Gun Club.
July 1-2.—Sherbrooke, P. Q., Can.—The Interstate Association's tournament under the auspices of the Sherbrooke Gun Club. C. H. Foss, Sec'y.
July 10-11.—Jamestown, N. Y.—The Interstate Association's tournament, under the auspices of the Jamestown Gun Club. Dr. C. Rawson, Sec'y.
July 23-26.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York.
Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament under the auspices of the Providence Gun Club. R. C. Root, Sec'y.
Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Roof Garden Tournament, under the management of Mr. Elmer E. Shaner, is progressing with gratifying smoothness and success. All the time allowed to it is filled with active competition, and it has engaged the participation of many of America's most renowned knights of the scatter gun. Among the number are the formidable Messrs. Heikes, Crosby, Fanning, Gilbert, Parmelee, Leroy, Fox, Hull, Hallowell, Griffith, Parks, Van Allen, Banks, Taylor, Keller, and others. As the days pass the emulative struggle will grow more and more intense, and great scores may justly be expected.

In respect to his live-bird shoot at Interstate Park, on March 13 Mr. John S. Wright announces that one of the programme events will be at 10 live birds, $7.50, the main and first prize of which is valued at $75, a beautiful painting of a trout by the well-known artist, Mr. H. A. Driscoll. All the surplus above a certain number of entries will be divided into second, third and fourth moneys, class shooting, 50, 30 and 20 per cent. There are other events on the programme at 5 and 7 birds. Handicaps by distance and misses as no birds and kills will be allowed the contestants of lesser skill.

Mr. J. S. Fanning, the eminent and skillful trapshooter, was the recipient of an elegant and useful present on Thursday of last week, a testimonial of esteem and appreciation from his company, in the form of a valuable heavy gold chronometer repeater, which strikes the hours, quarter hours and minutes. The obverse bears the monogram, "J. S. F.," while the reverse bears the date 1900. The inside cover bears the following inscription: "Presented to J. S. Fanning by the Laflin & Rand Powder Co., in recognition of his securing the largest number of firsts in 1900." Mr. Fanning deserved it all.

On Monday of this week the very liberal contribution of $10 was received by FOREST AND STREAM from Mr. Elmer E. Shaner, as a part of the fund toward defraying the expenses of the forthcoming American team in the international team contest. The true way in a patriotic matter of this kind is not to wait to see what others do, but to show others, who are waiting, what you yourself do in the matter.

In the match between New York and New Jersey, fifteen men on a side, 25 live birds per man, at Interstate Park, L. I., Feb. 27, New York won by a score of 303 to 302. The wind blew a half gale at times, with a gustiness which was most disturbing to the shooters and helpful to the birds. A return match will be arranged in the near future.

Mr. John S. Wright discovered that he had made an error in respect to the amounts due each of the four high guns in the division of the surplus money at his recent shoot for a Francotte gun, and sent a check on Friday of last week to each of the parties at interest, thus fully settling the matter.

A handicap live-bird shoot for a new 12-gauge Francotte gun, under the management of Mr. Herbert Alexander, Oxford, Pa., is announced to take place on March 12. Entries close at 2 o'clock P. M. Miss-and-out, $1 entrance. Shoot commences at 10 A. M. Two sets of traps will be used.

At Lawrenceville, N. J., the Lawrenceville Gun Club was organized on Feb. 27. The following officers were elected: President, Herbert Van Zandt; Vice-President, N. C. Chambers; Secretary-Treasurer, A. R. Scott; Manager, I. S. Kampmann.

After the team contest at Interstate Park on Feb. 27 Messrs. G. W. Page and S. M. Van Allen shot a match at 25 live birds, with the result that they tied on 22. They shot off the tie at 10 birds, and Mr. Page won by a score of 9 to 8.

The contest for the Dewar trophy between Dr. A. A. Webber, holder, and Mr. W. H. Sanders, challenger, at Interstate Park, on Feb. 26, resulted in a victory for Dr. Webber by a score of 23 to 19. Dr. Webber stood at 31yds., Mr. Sanders at 27.

On March 9, on the grounds of the Forester Gun Club, of Newark, arrangements have been made between Messrs. Chas. Smith and J. J. Fleming to shoot a match at 50 targets, for $10.

The contest for the H. C. Hirschy live-bird trophy at Intercity Shooting Park, Minneapolis, Minn., Feb. 22, had eight contestants, and of these, Mr. Kribbe proved to be the victor.

Mr. J. J. (U. M. C.) Hallowell defeated Mr. I. W. Budd, of Pemberton, N. J., at Interstate Park, Feb. 26, in a match at 100 live birds, by a score of 93 to 82.

The address of Mr. Elmer E. Shaner, manager of the Interstate Association, is now 111 Fourth avenue, Pittsburg, Pa., instead of 122 Diamond Market.

The eleventh trophy contest of the Garfield Gun Club, of Chicago, was won by Mr. L. Thomas on Saturday of last week with a score of 10 straight.

BERNARD WATERS.

ON LONG ISLAND.

New York vs. New Jersey.

Interstate Park, L. I., Feb. 27.—Few shoots of importance have been held with so little surface manifestations as was the team shoot between New York and New Jersey at Interstate Park to-day. It was all arranged without any ostentatious preliminaries, but there was the greatest array of shooting gladiators and their kindly, friendly rooters that have been seen around New York in many a month or many a year past. There was the keenest of friendly interest in the competition. It was more a spirit of emulation than of rivalry. New York applauded heartily the good work of the New Jersey contestant, as opportunity offered, and New Jersey reciprocated with equal zest likewise.
The fortunes of the day fluctuated greatly. New York took the lead near the start and then New Jersey cut down the lead till the chances of the former waxed dim. Each had its strong men up at the start and finish, with some of the weaker shooters sandwiched intermediately. The close of the contest was most exciting, but finally New York won out by 1 bird.
The conditions were unusually severe as to weather. There was a strong, gusty, driving wind, which swayed the shooters betimes as they stood at the score.
The birds were a good lot, with now and then a demon which at the third flop of its wings would be near the boundary; therefore, there were a great many dead out, and a great many incidental hard-luck stories. New York went to the score first. The race was shot man against man, as follows:

Webber vs. Feigenspan.

Hallowell vs. Budd.

Interstate Park, L. I., Feb. 26.—Mr. J. J. Hallowell, of Philadelphia, and Mr. I. W. Budd, of Pemberton, N. J., shot a match at Interstate Park to-day at 100 live birds, $100 a side. The result showed an easy victory for Mr. Hallowell by a score of 93 to 82. The famous navigator, Admiral A. G. Courtney, acted efficiently as referee. The scores:

I W Budd, 30.....2000102222212121101111*021—18
2*012121221221222122111222—23

Dewar Trophy.

Interstate Park, L. I., Feb. 26.—The contest for the Dewar trophy at Interstate Park to-day between Dr. A. A. Webber, holder, and Mr. W. H. Sanders, challenger, resulted in a victory for the former. The scores were 23 to 19. This makes the fourth victory of Dr. Webber for this trophy. Mr. S. M. Van Allen acted as referee. The scores:

W. H. Sanders, 27.....22201222222*1010102022221—19
Dr A A Webber, 31.....222222222*2222222*2222222—23

The Roof Garden Tournament.

THE Roof Garden Tournament opened on schedule time on Saturday of last week, and the ceaseless popping of the gun continues through the hours devoted to the trapshooting contests. The interest is keen and the competition progresses without flagging. As will be noted on referring to the scores, there are many of the famous experts present at this great shoot. There are so many shooters present that in order to give every one an opportunity to shoot, re-entries in the championship event will be prohibited or restricted.
The manager, Mr. Elmer E. Shaner, informs us that the shoot is progressing with the regularity of clock work.
The conditions of the sportsmen's Association championship are 100 targets, unknown angles, entrance 50 cents, in addition to targets at 1½ cents each. Re-entries unlimited. Competition in this event from 12:30 to 5 P. M., excepting Wednesdays and Saturdays, when it takes place from 10 A. M. to 1:30 P. M. The scores on Saturday were as follows, the contestants in squads shooting at 25 bluerocks:

West Chester Gun Club.

WEST CHESTER, Pa., Feb. 28.—The West Chester Gun Club held, as advertised, its eighth annual live-bird shoot on its grounds today, and it was a success throughout. There were 119 entries in the main event. About 550 birds were trapped, and were a fine lot, but two refusing to fly. The number of visitors was far beyond the club's expectations, and taxed the club house to its utmost, as it was quite cold, and each was trying to keep in the best possible condition in order to win. There was also a fine lunch to be had, which I have noticed is a very pleasing feature to the average shooter.
There was but one sweepstake event, twenty-one entries, $1 miss-and-out, and it was divided by McKelvey and Jackson with 5 kills each.
The main event was started promptly at 12 o'clock, and was continued until dark, when there were fourteen in with 7 kills, and these agreed to divide. Those who figured in same were H. Alexander, C. Mink, F. B. McCoy, A. B. Cartelege, Wm. Feiles, H. B. Fisher, D. Dawson, J. Twaddell, Dr. Pepper, E. Emmers, Geo. Williamson. Messrs. McCoy and Mink had two chances shot up.
Several arrived too late to enter, as the entries closed at 2 P. M.
Among the visitors, and without showing any favoritism, were the following: J. J. Hallowell, of U. M. C. Co.; Chas. Mink, H. B. Fisher, H. B. McCoy, Dr. Pepper, A. B. Cartilage; Alexander, Barnes, of Oxford; Thomas Ambler, Buckwalter, of Royersford; Feiles, of Christiana. I also wish on behalf of the club to extend thanks to the shooters who attended and made the event one of the most successful we have ever had, and hope next year to be able to give a still better one. F. H. EACHUS, Sec'y.

IN NEW JERSEY.

Trap at Guttenburg.

Guttenberg, N. J., Geb. 23.—The following are scores made in a private match at Sullivan's Guttenberg race track to-day. A. A. Schoverling was scorer:

A. A. SCHOVERLING.

Freehold Gun Club.

Freehold, N. J.—Inclosed please find scores made at the annual all-day shoot of the Freehold Gun Club on Washington's Birthday. The day was a fine one for shooting, and a goodly number of shooters took advantage of it. Prominent among the visitors was Carl Von Lengerke, Capt. Borland, Banta, and L. Cannitz, of New York city; Will Watts, of Keyport; Farr, of Princeton; Rue and Hall, of Atlantic Highlands; Schenck, of Asbury Park; Height and Bennett, of Spring Lake, and many more. The events were run off principally over the magautrap, but a few were decided on the Sergeant system. In all about 3,000 targets were thrown. The programme called for eight events, and two extras were added. Event No. 3 was a merchandise, 10 targets, 50 cents entrance, privilege of re-entry, four prizes. First prize, Winchester "Take-down" shotgun; second, sole leather gun case; third, shell box; fourth, fishing rod. In this event Vanderveer and R. A. Ellis, of the home club, were the only ones to make the possible, so took the gun, and the gun case was also landed by a member of the home club, H. D. Hance, after shooting out all the 9-men in a miss-and-out. Von Lengerke was the only man to stick to him, and he dropped his 7th target. J. T. Laird, another Freeholder, landed the shell box, and Schenck, of the Asbury Park Gun Club, landed the fishing rod. Following are the events:

Events:	1	2	3					4	5	6	7	8

Hudson Gun Club

Jersey City, March 3.—These are the scores made by the members of the Hudson Gun Club and their guests. The day was cold, and a strong wind was blowing. There was quite a crowd of spectators, as the new draw of the bridge over the Hackensack River of the D., L. & W. R. R. was put in place. Photographs were taken of the bridge, shooters, etc., by several camera fiends. The next shoot will be on March 10:

No. 6 was at 5 pairs. No. 8 was the club shoot.

SECRETARY.

Forester Gun Club.

Newark, N. J.—The Washington's Birthday shoot of the Forester Gun Club was started at 10 A. M. at live birds. The club was disappointed in not getting enough birds. Each shot at 5, and all stood at 28yds. rise. The birds were very fast. Lunch was served at 12:30 P. M. The target shoot started at 1:30 P. M. It was one of the best shoots the club has ever run off. It threw about 2,000 targets up to 5:30 P. M. Six handicap events were run off during the afternoon. H. E. Winans was scorer. J. J. Fleming had charge of the handicapping, squad hustling and optional sweepstake events. Chas. Smith looked after the work on the outside and saw to it that every one was well satisfied with his day's sport. The well-known and reliable trapper of the South Side Gun Club trapped, and is always with us on our big shoots.

Whitehead and Hayes divided in event No. 3; Stanton won in events Nos. 4 and 5; Belcher won in events Nos. 6 and 7; Tighe won in events Nos. 8 and 9, and Weller in event No. 10. The handicap was carried over the same after the second prize events.

The match between Wheeler and J. J. Fleming did not come off, as Mr. Wheeler wanted all the say after he had challenged and was accepted. He wanted each to pay for his own birds, stand at 21yds. rise, and to have an 80yd. boundary. He is not a member of any club. On March 9 a match will be shot between Mr. Chas. Smith and J. J. Fleming, 50 targets, Sergeant system, for $10, loser to pay expenses.

Live birds, two moneys, $2.50 entrance:

Ferguson .....22112—5
Hayes .....22122—5

WM. A. RASENER.

Trap Happenings at New Castle.

NEW CASTLE, Pa., Feb. 25.—The contest for the bronze medal emblematic of the inanimate target championship of western Pennsylvania took place Friday, Feb. 22, between Jack McNary, of Greenville, Pa., challenger, and James T. Atkinson, holder, of New Castle, Pa. Atkinson won by the narrow margin of 1 bird. This is the fourth time Mr. Atkinson has successfully defended the trophy. His scores in the preceding matches were much higher than this last one. Jimmy is one of the steadiest, nerviest shooters in the business, and the man who beats him has to shoot all the time; any "bad half hours" will be fatal to him.

L. B. Fleming, of Pittsburg, has challenged Mr. Atkinson for the medal. The contest will occur some time in April next. The exact date has not yet been set. This will be a battle royal, as these men are evenly matched. Fleming is one of those fellows who

"Shoots for keeps,
And lays his victims out in heaps,"

to paraphrase the lines of some fellow who wrote about a famous personage whose last name rhymed with Bill, and while he is a team mate of Atkinson's, sentiment will not debar him from doing his level best to carry away the medal.

A number of shooters were present from Pittsburg, Oil City and Greenville, and a dozen events of 10, 15 and 20 birds each were pulled off.

The scores in the medal contest were: Atkinson 79, McNary 78. This may seem, and was, exceedingly low for shooters of such ability as these two men, but when one considers the fact that it was shot during the worst weather we have had this winter—the thermometer being nearly at zero, the wind blowing a gale, with plenty of snow flurries—it was not so bad. About 80 per cent. was the best any one could do during the day.

Howard Sergeant was present to help the boys out, and right well he did his work. Standing out in the cold all day, acting as referee or scorer, he was perfectly happy.

"Papa" McNary, as we young fellows affectionately call him, has a grievance, and it is with real pleasure we take this opportunity to set him right before the shooting world and remove any cause he may have for losing sleep nights. Some ignorant or vicious-minded person circulated the report last spring at the Chambersburg, Pa., shoot that he was the oldest shooter in the world, that his age was bordering on seventy years, and that he had learned to shoot with Scott, in Mexico, during our little tilt with that country, more than half a century ago. We have made careful search through his family Bible, "rolled back the billowy ages of time," as it were, and find he is not near seventy years old. In fact he will be only sixty-seven "come next Michaelmas." We also discovered he never was in the Mexican war, although he did serve as scout and hunter for Fremont when that famous man was making his explorations in the far West.

A full score of the events is not at present obtainable. We append only the winners of each event, as follows:

No. 1, 10 birds: Fleming 10. Nos. 2, 3, 4 and 5 were 15-bird events, and the winners were Bates, Atkinson, Chlay, Fleming, Alex, Pills, and Watson. Fleming and Shaner won in the 20-bird events.

HENRY P. SHANER, Sec'y.

Trap at Dupont Park.

ST. LOUIS, Mo., Feb. 24.—The contest for the Dupont Park medal to-day had forty entries. The birds were good and the weather was clear and cool. Kenyon killed 43 in the shoot-off, and won. The scores follow:

A new shooting organization was formed at John A. Esterly's Farmers' Hotel, this city, Feb. 2, to be known as the Spring Valley Shooting Association. Officers were elected as follows: President, John A. Esterly; Vice-President, John A. Shaaber; Secretary, Arthur A. Fink; Treasurer, Henry J. Seidel; Board of Governors, John A. Shaaber, Chairman; Arthur A. Fink, Lee J. Wertz, Harry J. Coldren, Wilson Spatz; Captain, Lee Wertz. The new association will lease the Spring Valley Shooting Park, a finely equipped grounds with high fence inclosing the entire grounds. A fine club house is at one end of the park, where the shooters can enjoy themselves when not shooting. Arrangements are now under way to hold a three days' shoot during the coming spring—two days targets and one day live birds. Application will be made for membership in the Pennsylvania State Sportsmen's Association at the annual meeting, to be held at Allentown in May.

The Independent Gun Club, of this city, held a target shoot on the club's grounds on Feb. 22. The attendance was light, but owing to the frigid weather many shooters who intended shooting stayed indoors, hugging a stove instead of freezing. The scores:

Events:	1	2	3	Events:	1	2	3
Targets:	10	15	25	Targets:	10	15	25
Moyer	9	..	21	Trout	8	14	..

DUSTER.

Boston Gun Club.

BOSTON, Feb. 27.—Ten shooters graced the platform of the Boston Gun Club at their seventh serial prize shoot on their grounds at Wellington to-day and attempted to grind bluerocks to dust in the best manner possible. Variable winds, at times blowing a gale and the next minute nothing, prevented them from carrying out their intentions as they would have liked, but as these scores were not expected to rank and be classed with roof garden participants a little thing like a few misses did not injure good fellowship a bit, only making every one wonder how the target could be so mean as to be as tricky as it had been. Straight scores were fought shy of by all except one, F. H., he thinking that there should be at least one tabulated to some one, and nobody else seeming to want the honor, kindly condescended to take it himself. In the prize match Williams, Leroy, and Spencer were running close all through, the former coming in just 1 little lonely target in the lead. Griffith was high in the average for afternoon.

Scores below, all events unknown, handicap distance, except events 8, 9, 10, which were 16yds.:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

Harrisburg Shooting Association.

HARRISBURG, Pa., Feb. 22.—The Harrisburg Shooting Association's annual holiday shoot was held to-day with a good attendance, and targets were shot in four squads up to 2 P. M., when 20 live birds, $10, were started with nineteen entries. Two sets of traps were used, and between snowing and blowing the match was shot out. A miss-and-out with $10 entrance was shot to 7, when Conway and Kreuger divided. Shooting was resumed next day, and a race between Conway and Disney was shot at 25 birds, $10, and was won by the latter, 20 to 19. Over 600 birds were used, and everything was carried along with promptness.

Twenty-live-bird handicap, 27 to 30yds. rise; entrance $10; Rose system, four moneys:

H. T. ERDMAN, Sec'y.

The Cleveland Gun Club.

CLEVELAND, O., Feb. 28.—Regular semi-monthly shoot at targets: Scott 27, Lewis 32, Red Wing 39, Mack 34, Brock 34, Johns 32, Harris 34, Franklin 33, Mist 21, J. F. W. 22, F. Silsby 23, Klint 13, Hopkins 31, Tamblyn 23, Winter 26, Harbaugh 23, Hogen 35, North 27, Alex 33.

No. 2: Delker 33, Lewis 33, Harris 36, Mack 30, North 21, J. F. W. 27, Brock 32, Red Wing 40, Alex 28, Hogen 37.

Colorado State Shoot.

COLORADO SPRINGS, Colo.—The thirteenth annual tournament, Feb. 22 and 23, of the Colorado State Fish and Game Protective Association was well supported. It was held under the auspices of the Colorado Springs Gun Club, at Bradmoor. About 20,000 targets were thrown. It was considered as being the most successful shoot ever given by the Association.

The high average for both days was won by Mr. John W. Garrett, the captain of the Colorado Springs Gun Club, he scoring 310 out of a possible 340, a fraction over 91 per cent.

The State individual championship, which was won by Mr. Garrett at Florence in November last, with a clean score of 50 out of 50 birds, went this year to A. L. Bennett, of Pueblo, whose score was 46 out of 50. W. W. Shemwell and D. L. Macaffree tied for second honors in this match, their scores being 44 birds each. John Garrett, who was expected by local shots to win this prize, was very much out of form all Saturday afternoon, owing to the fact that for thirty-six hours he had had no sleep whatever. After finishing the shoot Friday, and making arrangements for yesterday's tournament, Mr. Garrett spent the early part of Friday night working on the score of the day, and then devoted an hour and a half to fighting fire at the club house, after which he walked in from the club house at Bradmoor to Colorado Springs and was so busy arranging for yesterday's shoot that he did not go to bed at all.

Had it not been for the prompt and long-continued efforts of three men, fire would have destroyed the building and would have prevented the completition of the State shoot to-day.

From 10:10 P. M. until midnight Charles Mann, John Garrett and one other man worked at extinguishing the flames. The means that they used was such as they had at hand, and it required the exercise of a good deal of both muscle and brain to save the building. The damage that did occur amounts to about $50, the building being fully protected by insurance.

The first fire started from the fireplace in the main room of the house. It burned through the wall, and when discovered had burned a place 2ft. by 1ft. in size out of the back of the building. There were in the club house two large milk cans filled with water and a third which contained two gallons of coffee. The water and the coffee were thrown upon the fire, but it did not suffice, and a further supply was needed. The only water connection in the building is a small pipe which furnishes water for the toilet room. This is the only tap within three or four blocks of the building. The flow is steady and quite rapid. The discovery of the fire made quick action necessary, and Garrett and Mann were not long in deciding how to avail themselves of the water supply. The pipe was cut so that the water would flow as rapidly as possible. The cut was made outside the building at a point not far distant from the blaze. A hole was dug in the ground, into which the water from the pipe would run, and the volunteer fire fighters took the milk cans and dipped the water from this hole to throw upon the fire. Had there been any wind the building would surely have gone, but the fight that was made to save it finally proved successful, and at midnight it was regarded as safe to leave the building.

Besides the two milk cans, the men had a pickaxe, a shovel and a hatchet with which to fight the flames, and these were used with good effect. A hole about 10ft. wide and as high as the men could reach was cut in the back of the building.

Had the flames not been conquered by the men who were there there would have been a decidedly interesting fire. There were in the building about forty shotguns and about 15,000 rounds of ammunition.

At the Alamo Hotel Feb. 22 the annual meeting of the Colorado State Game, Fish and Protective Association was held, and the following officers were elected: President, R. A. Creek, Denver; First Vice-President, W. W. Shemwell, Colorado Springs; Second Vice-President, Dr. W. M. Shultz, Florence; Secretary, John W. Garrett, Colorado Springs; Treasurer, A. L. Bennett, Pueblo; Directors, E. L. Deibert and A. F. Miller, of Florence, and John M. Killen, of Pueblo.

First Day, Friday, Feb. 22.

The scores:

High average for Friday, out of a possible 200: Garrett 184, Shemwell 179, Creek 178, Bulwer 176, Diebert 175.

High average for Saturday, out of a possible 140: Bennett 130, Garrett 126, Ellis 123, Bulwer 121, E. Diebert 121, Sharpe 120, Creek 120.

H. C. Hirschy Live-Bird Trophy.

MINNEAPOLIS, Minn., Feb. 22.—The shoot for the Hirschy trophy yesterday was pulled off under rather adverse circumstances. The weather man turned on the cold wave valve and gave us a dose of condensed air that soon put the mercury down to 22; in fact the day was an ideal George Washington one in regard to figures—the thermometer showed 22 degrees below, the day of the month was the 22d, and the high score in the race was 22.

The weather no doubt kept away a number, but those present had the pleasure of shooting at a class of birds that would be hard to duplicate. The management had gone to quite an additional expense to secure the best pigeons that were to be had in this section of the country, and to say that we succeeded is putting it mildly. The birds were of that small, black variety that fly as though the old man himself was after them.

In addition to the above there was a very strong northwest wind blowing across the traps that gave the birds a great start, and many of the scores will show that this wind also carried, or rather helped carry, these hard-hit birds out of bounds.

French, in the race for the trophy, had things well in hand until the 19th round, when he caught on to those flying rings that he tells of, and could not, or rather would not, let go. We never accuse this fellow of being troubled with a yellow streak, but I must admit that his complexion on this day (especially after the 19th round in the race) looked to me as though he was troubled with a severe case of jaundice. I trust that in the next event of this kind he will have fully recovered from this dreaded affliction.

Hirschy thought he had discovered a new method of destroying pigeons in the Association book, and I fear that the "both barrels at once scheme" put him to the bad. Hirschy is of too small stature to stand a deal with 7drms. back of it.

Some one cut the strings on Parker's balloon, and it is said in these parts that he lost something.

Mulligan, a new shooter on these grounds, did very well, considering that he has not shot at live birds in some ten or twelve years.

Morrison come out of that trance? He said he would, but when you see him again it will no doubt be with that Winchester that has put so many of us to the bad.

Kabo may have been here to shoot, but I think he must have been thinking of something in Eau Claire, for the way he shot at his first 5 birds was something awful. From his 5th to his 25th he was himself again and made a great many very pretty kills. Now just to show you that he knows that he can beat that score he has challenged the winner, Kribbe, of Grand Rapids, this State.

Kribbe, the winner of this trophy race, is a new one at live birds, and a good one. He was somewhat handicapped by the position he was in in this, as he was tie with the best shot in this neck of the woods, and wanted that cup pretty badly. His shooting was of high order, and he was called upon more than once to show what was in him. In the shoot-off with Parker and Hirschy, his 2d and 5th birds were corkers, and the way he put the second shot into those birds drew rounds of applause from the crowd as well as from the shooters:

All I can say for Brown is that he digs up the coin for this crowd, and they write after his name, "He also shot."

Practice, miss-and-out, $3:

French .....22222—5 Parker .....22220—4
Morrison .....22222—5 Brown .....22222—5
Hirschy .....22222—5

Ten Birds:

Morrison .....222*222222— 9 Scherer .....0002220011— 5
Brown .....2222222222—10

Ten Birds:

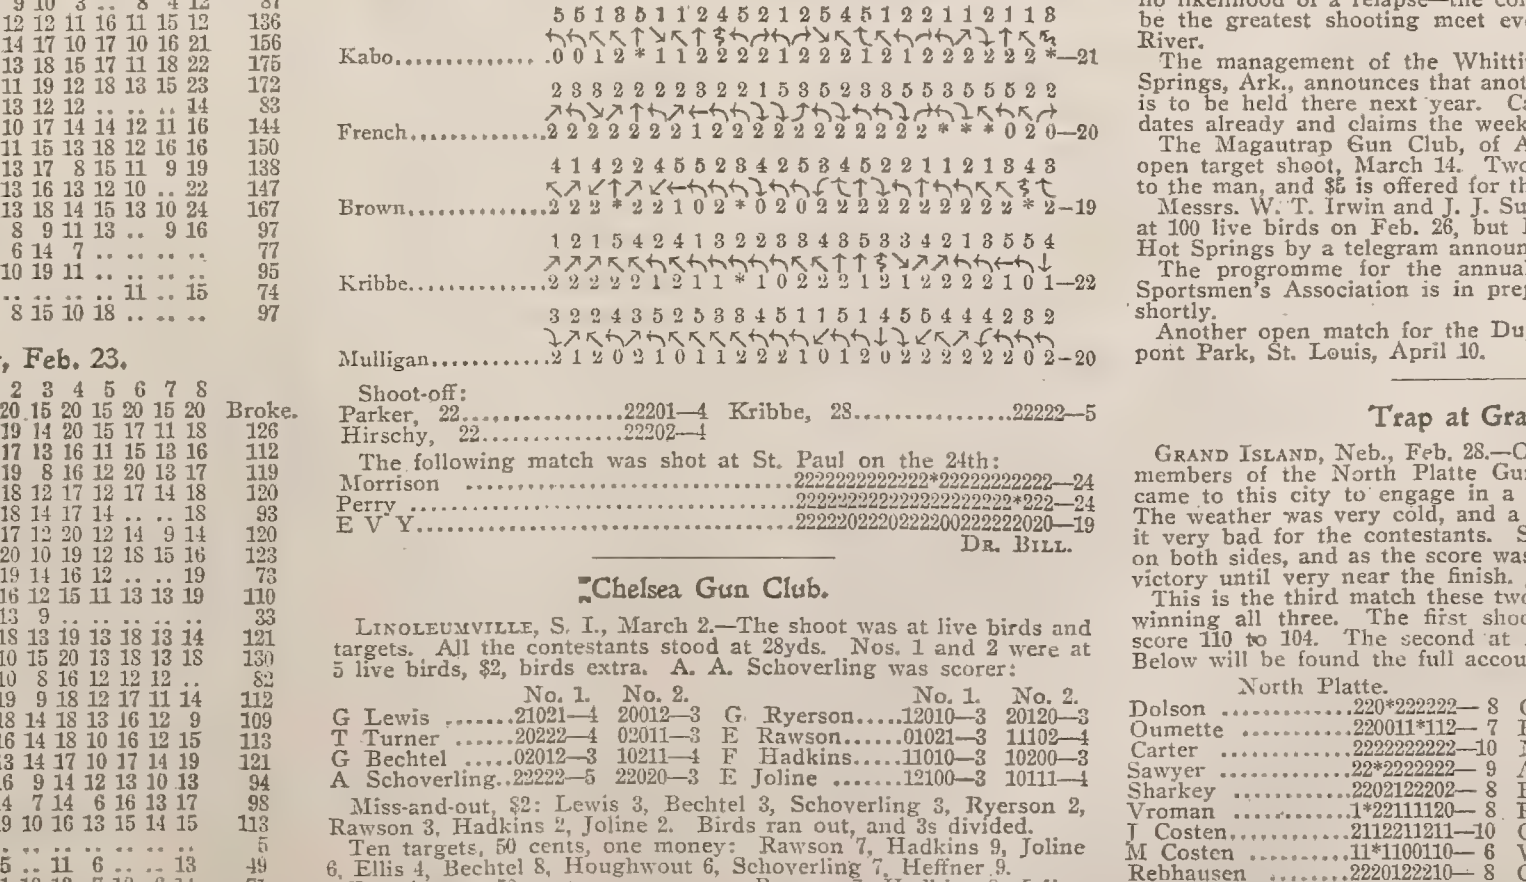
Brice .....2200222022— 7 Norongerg .....2222002222— 8
Jack .....2222222200— 8 Gerber .....2222200222— 8
Steck .....2222220021— 8 Morrison .....2222222222—10

Hirschy knows that he can't shoot live birds, but he does think that he can shoot targets, so he made a race with Morrison for $5 a corner at 15 targets. Look at the result:

Morrison .....111111111111111—15 Sprague .....111110011110111—12
Hirschy .....101101111011110—11 Parker .....111110101011111—12
Brown .....111110011011111—12

Kabo, of Eau Claire, has challenged Kribbe, of Grand Rapids, for the Hirschy trophy, the race to take place on the grounds of this park on March 2.

Trap score type—Copyright, 1901, by Forest and Stream Pub. Co.



Shoot-off:

Parker, 22.....22201—4 Kribbe, 23.....22222—5
Hirschy, 22.....22202—4

The following match was shot at St. Paul on the 24th:

Morrison .....2222222222222*22222222222—24
Perry .....2222222222222222222222*222—24
E V Y.....2222202220222200222222020—19

DR. BILL.

Chelsea Gun Club.

LINOLEUMVILLE, S. I., March 2.—The shoot was at live birds and targets. All the contestants stood at 28yds. Nos. 1 and 2 were at 5 live birds, $2, birds extra. A. A. Schoverling was scorer:

	No. 1.	No. 2.		No. 1.	No. 2.
G Lewis	21021—4	20012—3	G. Ryerson	12010—3	20120—3
T Turner	20222—4	02011—3	E Rawson	01021—3	11102—4
G Bechtel	02012—3	10211—4	F Hadkins	11010—3	10200—3
A Schoverling	22222—5	22020—3	E Joline	12100—3	10111—4

Miss-and-out, $2: Lewis 3, Bechtel 3, Schoverling 3, Ryerson 2, Rawson 3, Hadkins 2, Joline 2. Birds ran out, and 3s divided.

Ten targets, 50 cents, one money: Rawson 7, Hadkins 9, Joline 6, Ellis 4, Bechtel 8, Houghwout 6, Schoverling 7, Heffner 9.

Ten targets, 50 cents, one money: Rawson 7, Hadkins 8, Joline 6, Ellis 6, Bechtel 9, Houghwout 7, Schoverling 8, Heffner 5.

A. A. SCHOVERLING.

Altoona Rod and Gun Club.

ALTOONA, Pa.—Trapshooting in midwinter, when the mercury is hugging the zero mark, the wind blowing a perfect gale, and at intervals a blinding snow veiling the targets, is not the most fascinating sport. Such were the conditions that confronted the Altoona Rod and Gun Club during its tournament of Feb. 22 and 23. The fact that a warm house, with every convenience of a home, was within a few feet of the score helped matters considerably, but even at that the longer races were too much for some of the braves, and they packed their guns on the evening of the 22d and did not remain for the 100-target handicap event of the 23d.

The visiting shooters were Warren Smith, Osterburg, Pa.; J. A. Holderbaum, Cessna, Pa.; H. B. Rumbaugh, Greensburg, Pa.; Robert Tash and Justus Volk, South Fork, Pa.; C. Wenderoth, Cresson, Pa.; P. J. Trego, D. D. Stine and L. B. Blair, Tyrone, Pa J. B. Holsinger, Henry Eichensehr and J. F. Nisley, Johnstown, Pa.; C. H. McFeeley, Hooversville, Pa.; R. S. Denniker, Kaylsdale, Pa.; Leon Brownie, Abilene, Kan.; A. H. Fox, Baltimore, representing the Winchester Repeating Arms Company, of New Haven, Conn., and J. R. Hull, of Parker Brothers, Meriden, Conn.

The shooters began to arrive on the afternoon of the 21st, an impromptu live-bird sweep having been arranged for that date. The birds for this event did not arrive until too late in the day, and the latter part of the afternoon was devoted to target shooting.

The following scores are very good ones, considering the weather conditions:

First Day, Feb. 21.

Events:	1	2	3	4	5	6	7	8

Mississippi Valley Notes.

THE Indians will shortly appear in a jaunty new shooting costume, which is to distinguish the braves of that tribe at the score.

There is a well-backed movement on foot to inaugurate a series of intercity live-bird team shoots between St. Louis and Cincinnati. The arrangements are being quietly talked over by leading shooters of both cities, and it is believed that, unlike the lately attempted match between St. Louis and Chicago, this enterprise will succeed.

St. Louis is enjoying such a boom in trapshooting as the old Mound City has not experienced in many years. The semi-monthly target and live-bird shoots arranged by Dave Elliott at Dupont Park attract from forty to fifty shooters every fair day, and the competition is close and spirited. If this keeps up—and there is no likelihood of a relapse—the coming Missouri State tourney will be the greatest shooting meet ever held west of the Missiissippi River.

The management of the Whittington Park Association, of Hot Springs, Ark., announces that another big midwinter shooting meet is to be held there next year. Capt. H. C. Price has chosen the dates already and claims the week of Feb. 17 to 22 for that event.

The Magautrap Gun Club, of Alexis, Ill., announces a one-day open target shoot, March 14. Two hundred targets will be thrown to the man, and $5 is offered for the best score of the day.

Messrs. W. T. Irwin and J. J. Sumpter were to have shot a match at 100 live birds on Feb. 26, but Mr. Irwin was called away from Hot Springs by a telegram announcing the death of a relative.

The progromme for the annual meeting of the Illinois State Sportsmen's Association is in preparation and will be announced shortly.

Another open match for the Dupont trophy will be held at Dupont Park, St. Louis, April 10.

Trap at Grand Island.

GRAND ISLAND, Neb., Feb. 28.—On Washington's Birthday eleven members of the North Platte Gun Club, of North Platte, Neb., came to this city to engage in a live-bird contest with our boys. The weather was very cold, and a stiff wind blowing, which made it very bad for the contestants. Some very good work was done on both sides, and as the score was very close it was neither side's victory until very near the finish.

This is the third match these two teams have had, Grand Island winning all three. The first shoot took place at Grand Island, score 110 to 104. The second at North Platte, score 123 to 112. Below will be found the full account of the last shoot:

North Platte.		Grand Island.

JOHN BIGELOW.

WESTERN TRAPS.

Audubon Gun Club.

Watson's Park, Ill., Feb. 19.—The sun shone on snow-covered ground. The wind blew a gale, outgoing, making most all the birds outgoers and very hard to stop in bounds. Von Lengerke shot in fine form, scoring all but 1, which dropped dead just outside the boundary.

Club contest, handicap allowance, extra birds to shoot at:

Felton, 3	201122010220101012	—12
Von Lengerke, 0	2222222222*2222	—14
C S Wilcox, 2	001*02022122010w	
Wells, 1	221201002111*12w	
Gillis, 1	1110202100000100	— 7
Amberg, 1	111102*0120*0*1w	

Feb. 20.—Mr. R. E. Ward and N. E. W. Parker shot a 50-bird match for price of birds. The weather conditions were the same as above:

R E Ward	10201000001122222122112221	—18
	10111020200000000100121110	—12—30

RAVELRIGG.

Garden City Gun Club

Watson's Park, Ill., Feb. 23.—There were two sweeps in the one shoot to-day, one the straight 15 score, and one with the handicap added, $2 each, three moneys.

In the straight sweep Willard won first with 15 straight, and a win on the Stone gun case also. Steck won second, 14 out of 15. Comley, Gillis, White and Barto won third with 13 out of 15.

In the sweep with handicap added Willard won first with 15. Comley, Steck, Gillis, Barto, White and Robertson won second with 14. Oliphant and Levi won third with 13.

The day was clear, bright and sunshiny; ground covered with snow. The wind from right to left across the traps. Birds very fast, as the scores will show:

Oliphant, 3	201020012222112012	—13
Comley, 1	1*111222*1111122	—14
O'Brien, 3	001121*2*121221012	—12
Mack, 3	021011112010002 12	—12

Dr Miller, 0	*01102121110*11	—10
Rust, 3	102021000012112110	—11
Willard, 1	112221222212222	—15
Steck, 0	221221221220222	—14
Walters, 3	201010221202220*22	—12
Bowles, 3	100022000200*10021	— 7
Roll, 0	02112*222202222	—12
Rubo, 3	2*1011022200002220	—10
Palmer, 0	020100202211222	—10
Hunter, 1	0110020001122021	— 9
Wells, 1	2210100211022222	—12
Long, 3	2200202001012020 20	— 9
Gillis, 1	2222022221022122	—14
Barto, 1	2022012211122212	—14
Day, 3	2202021012022200 00	—10
Dr. Carson, 1	0012012111210 02w	
M E White, 1	2202122211220212	—14
Amberg, 0	2202222202222220	—12
Robertson, 3	0221222222121002 01	—14

Ten birds, $5 entrance, three moneys, ties divided:

Comley	2221212111	—10	Barto 2220222221— 9
Roll	1211121211	—10	M E White 01*2021221— 7
Willard	1211221022	— 9	Palmer 1121122222—10
Dr Miller	1201212210	— 8	Hunter 1120222210— 8
Steck	21*1222222	— 9	Long 1022000110— 5
O'Brien	2200120w		Amberg 1222221022— 9
Oliphant	1011221211	— 9	Rust 1001212111— 8

Six birds, $3 entrance, three moneys; ties divided:

Comley	101221	—5	Palmer 220202—4
Roll	221122	—6	Rust 222111—6
White	202222	—5	Rubo 200212—4
Steck	022011	—4	O'Brien 222220—5
Barto	222220	—5	Miller 201111—5
Day	221022	—5	Oliphant 222122—6
Willard	212222	—6	

The unfinished shoot of Feb. 9, as follows:

There were two sweeps—one on the straight scores and one on the score with the handicap, making two sweeps in one shoot of $2 each. Levi, Comley and Long are tie for the loving cup, counting one win each. In the straight sweep Amberg won first with 24 out of 25. Comley and Roll won second with 23 out of 25. Willard, Alabaster, Odell, Irwin, Steck, Gillis and Pumphrey won third with 22 out of 25.

In sweep with handicap counting Levi, Comley and Long divided first with 25. Alabaster, Odell, Gillis, Pumphrey, Amberg, Dr. Carson, R. B. Mack and Day divided second with 24. Willard, Oliphant, Palmer, Roll, Steck and Barto divided third with 23.

RAVELRIGG.

Garfield Gun Club.

Chicago, March 2.—The appended scores were made on our grounds to-day on the occasion of the eleventh trophy shoot of the season.

L. Thomas carried off the honors of the day, as well as the bulk of the money, being the only one to go straight in the main event. The day was fine for shooting, there being but little wind and not too cold. The birds were a mixed lot, alternating between sitters, dawdlers and real screamers, there being plenty of the latter to keep the boys guessing:

Thomas, 29	2212112212—10	220*21—4
Delano, 28	0*12121101— 7	212112—6
McDonald, 29	22121102**— 7	211101—5
Dorman, 29	21222*1221— 9	020222—4

DR. J. W. MEEK, Sec'y.

Winchester Gun Club.

Detroit, Mich.—The annual meeting of the Winchester Gun Club was held at the Cadillac Hotel, Feb. 11, at which it was voted to change from the merchandise prize system to a trophy one, consisting of a silver cup for best ten scores in each class for first and a medal for second, the medal being also won and lost at each shoot. The classfication was also changed to 60 and 80 per cent. for C. B and A.

The following officers were elected for the ensuing year: President, Dr. Gibbes; Vice-President, Thos. Reid; Secretary, J. T. Warner; Treasurer, H. H. Rackham; Captain, T. M. Brodie; Sub. Captain, Geo. Huntington; Member of Board of Directors, D. A. Hitchcock.

The first shoot of the season was held Saturday, Feb. 23, at the club grounds, with fair attendance and scores, considering the weather. The medal winners were Wood in Class A, Hitchcock in Class B, and Gibbes in Class C. The scores:

Targets:	10	10	10	10	10	25	Targets:	10	10	10	10	10	25
Gibbes	8	6	5	5	..	14	Warner	..	6	..	7	8	15
Wood	8	7	7	7	..	16	Brodie	7	..	8	..	6	15
Rackham	..	..	6	8	..	15	Hatashita	..	..	..	..	0	6
Hitchcock	..	..	..	..	5	16							

Chicago Gun Club.

Burnside Crossing, Ill., March 2.—At Watson's Park, Burnside Crossing, the shoot of the Chicago Gun Club resulted as set forth in the appended scores. Quite a nunmber of the members were absent at Milwaukee to witness the contest between Garden City Gun Club, of Chicago, and the National Gun Club, of Milwaukee. The scores:

Club shoot:

Miller, 30	0101011012020 01	— 8
Mack, 28	1202211112100 10	—11
Bowles, 28	20211*122222120	—12

In practice:

RAVELRIGG.

Providence Gun Club.

PROVIDENCE, R. I.—The Providence Gun Club opened the shooting season on Feb. 22 at its grounds in East Providence by holding an open shoot, which was well attended and a successful event. The weather conditions were hardly favorable for large scores, as it was not only cold but the wind blew hard, causing the birds to duck, and thus prevented any big averages.

The interior of the club house was warm and cozy, but was not occupied any great length of time, as the shooters preferred to be at the traps. During the afternoon something over 1,500 targets were thrown, and the traps worked well, especially after being idle all winter.

Among the out-of-town visitors were McArdle, Moore, Gavitt, and Rose from the Canochet Gun Club, of Narragansett Pier, where the Interstate shoot was held last season, and Winchester, from Carolina. Griffith, the State champion, and Phetterplace, from Pascoag, were on hand and participated.

Some creditable scores were made by some of the twenty contestants. Bain made a run of 25 straight, killing 10 straight in a 10-bird event, and then making 15 straight in the next, a 15-bird event. Several 10-straights were scored, in spite of the wind. The scores:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7

C. G. B., Capt. O. G. Club.

Rifle Range and Gallery.

Fixtures.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Off-hand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Cincinnati Rifle Association.

THE following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading road, Feb. 17. Conditions, 200yds., off-hand, at the standard target. Weather, snow in the morning, clearing in the afternoon; thermometer 43 degrees; wind fitful, 3 o'clock. Mr. Roberts distinguished himself to-day with the fine score of 96. He now holds the record for the range, which was held all along by Mat Gindele, who has scored 95 twice. In his run of five 10s he had two that were 25s. Unfortunately he pulled a 7 on the last shot. Had he followed as he had been doing during the balance of the score he would have claimed the record on the standard target, but it was not to be. Gindele distinguished himself with three 90s to his credit to-day.

Roberts	10	10	10	10	10	9	10	10	10	7	—96

On Monday of this week at No. 513 Sixth avenue, New York, there was a special meeting of the Metropolitan Shooting Club for the purpose of arranging a schedule of rifle, revolver and pistol matches for members of the club. It was decided that the first of the series would be held on March 4, at Conlin's rifle gallery, and continue till midnight on April 1. The chief prize will be the valuable Gastinne Renette medal. At 15yds., the standard American target, 1¾in. bullseye will be used, and at 20yds. the 2¾in. bullseye. Each contestant will have six shots at each target, and the best three targets at each distance will count. Entrance fee $3. Send entrance to the secretary-treasurer, Mr. James C. Summers, 116 Nassau street, New York. The club will hold a regular meeting on March 4.

"Sharpshooting for Sport and War" is the title of a work by Mr. W. W. Greener, who is the author of several other standard works pertaining to the gun and its use. It covers every particular of its subject. The importance of rifle shooting in its public significance as it pertains to defense; to sport, recreation, competition and afield, is fully set forth. There also is a large fund of valuable instruction as to rules, position, manner, hints to beginners, ballistics, atmospheric effects, mathematics, deeds of great riflemen, ranges, clubs, conditions, etc., which cover nearly every imaginable detail of rifle interests. It can be obtained of the Forest and Stream Publishing Company.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Feb. 17.—Columbia Pistol and Rifle Club had a range full of very active shooters to-day, and lots of fine average work, for the weather conditions. Pape led with the rifle, closely followed by W. G. Hoffman and Young. Mr. Hoffman is a new member and recently from the East. He used to shoot in New Jersey, and bids fair to be in with the best of the club, as he is determined to win. It makes us feel good to secure one of New Jersey's 2,000, especially as he likes our target. He bought a new Schuetzen .38 Winchester, but couldn't get first-class results until Young doctored it up with a new bullet and King's semi and smokeless powders, which prevented him discarding the barrel. It is strange that the factories don't get a man to test their ammunition for off-hand shooting as well as rest, for rifles. We believe they do for pistols and revolvers, which accounts for it shooting better off-hand than their rifle ammunition does.

G. M. Barley was high with pistol, with Washburn close on to him, while Daiss led with revolver with all his shots in the 5-ring but one, and this so close as to cause a question, which, if settled in his favor, will give him the Cosgrove medal, which has been up a year for the first possible in the 5-ring with revolver or pistol.

Capt. Fred Kuhnle was first with the .22 rifle. He is going after the fine rifle again, and is studying how to improve his sight so he can see more clearly at 200yds. I recommend plain Lyman or large peep hole, but he may also need some sort of a glass to help him out. Dr. Twist burned his face badly and came near injuring his eyes by accidentally igniting some loose powder about two weeks ago. He was as glad to be with us as we were to see him again, and we expect he will shoot as well as ever next time we meet. Our new system at 50yds. gave good satisfaction, and the best results we ever obtained.

All hands got all the shooting they wanted, and not a jar, there being over 250 entries, 10-shot. Many visitors were in attendance and new members were added. It is hard to please either old or young rifle cranks, but we feel really pleased with the successful results of to-day, after eight years of continued effort to make our conditions at the range more modern and practical.

Scores, 10 shots, Columbia target, off-hand shooting. Rifle, 200yds.: A. H. Pape, 47, 50; F. O. Young, 50, 56, 56, 62, 67; W. G. Hoffman, 50, 50, 51, 66, 71; C. M. Daiss, 56, 69, 75; A. B. Dorrell, 64; G. Mannel, 64; P. A. Becker (Krag), 107, 111, 115; O. Feudner, 127; O. H. Fiddes, 157, 180.

Pistol, 50yds.: G. M. Barley, 37, 47, 50, 57; F. S. Washburn, 40, 40, 41, 43, 50, 53; E. Hovey, 41, 45, 49, 55, 57; F. O. Young, 44, 44, 44, 45, 45, 46, 47, 48, 49, 45; Dr. J. F. Twist, 60, 67, 65, 62; Mrs. G. Mannel, 60, 61, 72, 82, 94; O. Feudner, 61, 64, 67, 72, 73, 79, 81, 83, 84, 92; G. Mannel, 78, 79, 80, 91.

Revolver: C. M. Daiss, 39, 60, 63, 67, 69; P. A. Becker, 61; A. J. Brannigan, 72, 88; O. Feudner, 74, 78, 88; Treto, 90.

.22 rifle: Capt. Fred Kuhnle, 20, 20, 24, 25; G. Mannel, 26, 26.

Jan. 20.—Columbia Pistol and Rifle Club held its first shoot of the season to-day. Its first regular day, Jan. 6, was so stormy that it had to be postponed, the first time in eight years. It rained to-day, but so many were on hand that the matches were opened. Ten double sliding targets have been put in at the 50yd. range to accommodate the growing conditions of the club, and the Walnut Hill system of using 'scopes applied. This gives us twelve men shooting at the same instant.

It cleared at noon, and we got four hours of good weather.

Daiss, Kuhnle, Mannel and Dorrell fought for first place with rifle. Daiss finally put up 57 and 56, which stood high until Young made 53, then Dorrell went in at the last moment and beat his own official rifle score by 3 points, making the splendid score of 42, which is the average for the highest, bar this year. It was thought that Washburn was high with pistol, but later it was found that Barley beat him 4 points. Washburn weighs 300 and Dorrell 220, and these babies owned the range for the remainder of the day. Daiss and Dorrell challenged Mannel and Young to a 50-shot match for next shoot, and were taken on the spot. Allen was high at 50yds., making 26 with his little Stevens Favorite and Peters long rifle cartridges.

We have trouble here with rim-fire ammunition hanging fire, and I believe it is due to their being old and probably being exposed to dampness, which causes the powder to cake and deteriorate.

Scores, Columbia target, 200yds. with rifle and 50yds. with pistol and .22 and .25cal. rifles, off-hand shooting:

Rifle, 10 shots:

Rire, 200yds., 3 shots:

F O Young 5 5 2—12 Capt F Kuhnle 6 5 8—19

Feb. 22.—Several members celebrated Washington's Birthday in practice shooting. Young imbued our new Satyr, shooting, W. G. Hoffman with the idea that he could shoot in expert form with a pistol. He purchased a S. & W. pistol and demonstrated that he really is a wonder with that weapon without any preliminary practice, and he is so taken with it that his first love, the rifle, is sitting in the corner disconsolate and forlorn, while he is out practicing on chippies. He shot 14 sparrows consecutively in competition with a friend, beating his friend, who used a .22 rifle, and to-day he fired two consecutive scores at 50yds., counting 40 and 38, 9 of the 10 shots in his 38 being in the 4in. ring and eight of the same being in a 2in. group, a little low and to the left. He shot these two scores with Peters long rifle cartridges which Young gave him to try. The last lot of these cartridges is giving great satisfaction with pistol, and the boys all want more of them. Young took fifty cartridges loaded with King's semi and smokeless powders and his bullet, which weighs about 200grs., and U. M. C. 7½ primers, bullet crimped tight for service. He fired two scores, Daiss one and Hoffman one, making the following unprecedented shooting for 40 shots, three men using Young's revolver, which is a S. &. W. .44 and recut by Young, viz.: Revolver, 50yds., Columbia target, rings, Creedmoor:

F O Young	3	5	5	4	8	3	4	2	4	3—41	50
	1	4	8	5	5	4	3	1	1	4—36	50
C M Daiss	2	3	5	5	5	4	2	6	2	6—40	50
W G Hoffman	8	9	6	8	6	2	5	6	3	8—61	49

This was Hoffman's first score at a target with revolver, and he only took one sighter. This revolver would not shoot well before Young recut it, when he immediately beat the club record with it. He did the job in three hours' time, including the making of the tool, and he feels like a ten-year-old with a new toy.

After much experimenting covering a period of about three years he has settled down to using King's smokeless powder for priming instead of Dupont's, as it seems to work more satisfactorily with semi-smokeless. The above shooting was done with this combination after being loaded for some time and packed to the range and back. We see no reason why the factory could not load cartridges in this way. Young and others tried the same in the Colt's new service revolver, and it shot out of sight. All smokeless cartridges are more or less unreliable, but this seems the ne plus ultra of the shooters' desires. To those who wish to try it in their revolvers I would say use about 8grs. No. 1 King's smokeless and 11 or 12grs. FFF semi-smokeless and about a 200gr. bullet, crimping the same as for revolver. U. M. C. 7½ primer or Winchester No. 3 capper will also work well, and does not blow out with Young's load. Bullet 1 to 40, about.

F S Washburn	1	2	3	4	5	2	5	9	3	3—37	
	3	3	4	4	3	5	6	7	8	3—46	
W G Hoffman	1	2	2	3	4	4	4	4	4	10—38	
	1	2	2	4	4	6	6	6	6	3—40	
	2	3	3	3	4	4	5	5	6	9—44	
	2	2	3	3	4	4	5	5	3	10—45	

G. W. Hoadley, 50, 65, 66; Dr. Twist, 61.

Washburn and Hoffman used Peters long rifle cartridges.

Revolver: P. A. Becker, 59, 58, 62.

This morning's papers state that Shell Mound was destroyed by fire last night, including range and dancing pavilion. This is the place chosen for the Bund's shoot.

F. O. YOUNG, Rec. Sec'y.

Four French sportsmen fired simultaneously at a rabbit, but it escaped; then they asked all together, "I wonder who missed that time?"—Tit-Bits.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2. | NEW YORK, SATURDAY, MARCH 16, 1901. | VOL. LVI.—No. 11. No. 346 BROADWAY, NEW YORK

By the side of a pleasant river thou art otherwise pursuing thy recreation. For the gliding of waters, the song of birds, the lowing of cattle, the view of delightful prospects, and the various occupations of rural life, shall dispose thee to quiet reflection; while the beauties of Nature, the power, wisdom, and goodness of the Almighty in caring for all His creatures, the order and course of His providence, the rewards of a good life, and the certainty of thine end be thy subjects of mediation.—Charles Cotton.

ILLUSTRATION SUPPLEMENTS.

Continuing the illustration supplements which have been an acceptable feature of the Forest and Stream, we have prepared a new series of four pictures which will be given with the first number of the month, as follows:

May 6—**The Trapper's Camp.** Drawn by E. W. Deming.

May 4—**Rap Full.** The schooner yacht Constellation in a northeaster. From a photo by Stebbins.

June 1—**Between Casts.** On a trout stream. Drawn by W. P. Davison.

July 6—**The Home of the Bass.** Drawn by W. P. Davison.

DUCKS AND CABBAGES.

A CLAUSE which was contained in the general game bill before the Indiana Legislature was in these words: "That it shall be lawful to hunt on swamp and overflow lands, which have never been cultivated, or are not situated within forty rods of cultivated lands, without securing the consent of the owner or tenant of such lands." The provision was eventually stricken out, but had it been retained it could have counted for nothing, since it must have been declared null and void by the courts, as an invasion of property rights.

The owner of a tract of land, whether the land be uncultivated or covered with a crop of cabbages, by the very fact of his proprietorship has exclusive possession of it and exclusive enjoyment of its use, whether for growing cabbages on it or shooting game over it, or fishing on it or entering upon and being upon it. This sole and exclusive right of occupation, use and enjoyment is wrapped up in the ownership; in short, the ownership consists in just that and nothing more. To declare by statute that the public may have free run of a person's land, whether for shooting or for any other purpose, is to invade and nullify the owner's exclusive right of occupancy and use, and in effect is to confiscate the land for public use. That is precisely what this Indiana proposition would have amounted to, and no such scheme of land confiscation could have stood in the courts.

The Indiana Legislature may no more confer upon shooters the right to trespass upon private lands for shooting than they may give the right to squat upon private lands for cabbage growing. There is a widespread popular delusion in this country respecting the right to invade lands for shooting, but it might reasonably be expected that legislatures should not share these mistaken notions.

ADIRONDACK GAME REFUGES.

AN admirable measure has been introduced at Albany to provide for game refuges in the Adirondacks. Mr. Axtell is the author, and his bill empowers the Forest, Fish and Game Commission by resolution to set aside parts of the Forest Preserve, each not exceeding 10,000 acres in extent, and not exceeding in the aggregate one twenty-fifth of the preserve, as places of refuge and propagation for animals and birds. The boundaries of such places are to be stated and to consist of water, highways, railroads or townships, tract or lot lines. Provision is made for publishing resolutions to this effect and for the due posting of the limits thus set apart; and when these conditions shall have been complied with, disturbing or hunting game within the confines of the refuge is to be punishable. The having in possession of hunting appliances within the preserved area is made an offense.

This would be an admirable innovation in Adirandack game preservation, and Mr. Axtell's bill should have warm support. We have frequently pointed out the advantages of such refuges in a game country. The Yellowstone National Park is on a large scale what we might well have as protected areas, large or small, in many of the States. The private preserves in the Adirondacks are demonstrating from year to year, by the overflow of the game from them into contiguous territory, the beneficial effect they have on the game supply. There are good hunting tracts in the North Woods to-day which owe their game stock to the preserved lands adjoining them. We see the principle demonstrated on a smaller scale by the improved bird shooting in the neighborhood of posted farms. The State as a landowner may well adopt the game preserve system for a portion of its wild land holdings in the Adirondacks. With game harbors here and there through the North Woods, nature may be depended upon to maintain the stock of deer indefinitely.

What is good for the Rocky Mountains and for the Adirondacks is good for the rest of the country. Here is an inexpensive and effective expedient for game conservation which should have general adoption.

SNAP SHOTS.

The Maine Legislature has enacted a law for the protection of wild birds which is a model of its kind. It protects all wild birds, except the English sparrow, the common crow, the hawks and owls and the game birds, from being killed, caught or had in possession, living or dead, or bought, sold, offered or exposed for sale. No part of the plumage, skin or body of any bird protected by the section may be sold, or had in possesison for sale, nor shall the nest or eggs be taken or needlessly destroyed or had in possession. The game birds are defined according to the terms of the act formulated many years ago by the American Ornithologists' Union, as the anatidæ, including swans, geese and ducks; the rallidæ, rails, coots, mud hens and gallinules; the limicolæ, shore birds, plovers, snipe, woodcock, etc., and the gallinæ, turkeys, grouse and quail.

The chief purpose is evidently to protect the gulls and terns of the Maine coast, whose shameful destruction in recent years has been so often adverted to in these columns. The form of the law is especially to be praised, since instead of protecting a few species by their common vernacular names, which to most people mean nothing, it spreads the mantle of the State's protection over all birds except certain named species, which are clearly defined.

The credit for the initiation of this legislation in Maine is chiefly due to Mr. Wm. Dutcher, representing the Bird Protective Committee of the American Ornithologists' Union.

The South Branch of the Potomac, to which public attention has been drawn because of the threatened destruction of the fishing, is one of the notable examples of the lasting benefits of fishculture, for the Potomac was not by nature a black bass stream. The bass was introduced into the Potomac Basin, at Cumberland, in the year 1853 by Gen. W. W. Schriner, of Wheeling. Soon thereafter the anglers began to take out noble specimens of the small-mouth, and for almost a half-century the South Branch has been counted among the best black bass waters of the East. It has attracted hundreds of anglers from Wheeling, Washington, Pittsburg and many other points more remote, and the commercial returns to the people of the vicinity in the revenues derived from visiting fishermen have been in the aggregate large and important. It would be stupid and foolish now to permit the fishing resources of the South Branch to be ruined by a tannery, as is threatened.

It is gratifying to note that the sentiment in favor of shortening the season during which wild ducks may be killed is growing. The bill passed at the last session of the Legislature of Massachusetts forbids the killing after March 1 of any ducks except the coots or scoters, a group which furnishes much winter shooting along the Massachusetts coast. These scoters, however, not being highly valued as food, are shot very little except on the coast of New England, New York and New Jersey. It may confidently be predicted that in a short time the State of Connecticut will take her place in the ranks of those who are in favor of wildfowl protection. Meantime the sportsmen of the country will watch with interest the course of the Empire State to see whether the selfish interests of the few shall override the good of the many.

INDIAN MAPLE SUGAR.

MAPLE sugar is something that is familiar to every one, and a very large number of people in the northern tier of States are not only familiar with the product itself, but with the way in which it is manufactured. In old times, when the country was new, when there were no means of rapid communication, and people lived far from one another, the annual sugar making was an important part of the year's work. In many places the maple tree furnished the only sugar that was to be had, and the failure to gather a good sugar crop meant a failure to have sugar in the settler's tea or coffee during a part of the year.

To-day many millions of pounds of maple sugar and millions of gallons of maple molasses are manufactured each year in the United States and in Canada, so that the industry of making sugar from these splendid trees is one of some importance.

Very few of the people to whom maple sugar is an entirely familiar and commonplace thing are aware of the fact that the method of making sugar was taught to the white people by the Indians, and that they made sugar long before the discovery of America. This is only one of the many things that the white people learned from the Indians. Others were the weaving of cotton, the cultivation of Indian corn and the use of tobacco.

Some of the early writers tell us that the French were the first to make this sugar, and that they learned how to make it from the Indian women. The sap was collected in a rude way, a gash being cut in the tree and into this a stick was thrust, down which the freely flowing sap dripped into a vessel of birch bark, or a gourd, or into wooden troughs hollowed out by fire or the axe. Then into larger wooden troughs full of the sap, red-hot stones were thrown—just as in old times they used to be thrown into the water in which food was boiled—and by constantly throwing in hot stones and taking out those that had become cool the sap was boiled and evaporated, and at length syrup was made, which later became sugar.

This manufacture of the sugar was not confined to any one tribe, but was practiced by all Northern Indians, and was known to those living as far south as Florida and Texas. Among the sugar-making tribes a special festival was held, which was called the maple dance, which was undoubtedly a religious festival in the nature of a prayer or propitiatory ceremony, asking for an abundant flow of sap and for good fortune in collecting it.

In "Drake's Indian Captivity" Colonel Smith speaks of the manufacture of sugar as follows: "In this month [February] we began to make sugar. As some of the elm bark will strip at this season, the squaws, after finding a tree that would do, cut it down, and with a crooked stick, broad and sharp at the end, took the bark off the tree, and of this bark made vessels in a curious manner that would hold about two gallons each. They made about one hundred of these kinds of vessels. In the sugar tree they cut a notch sloping down, and at the end of the notch stuck in a tomahawk; in the place where they stuck the tomahawk they drove a long chip, in order to carry the water out from the tree, and under this they set their vessels to receive it. As sugar trees were plenty and large here [on the southeast shore of Lake Erie], they seldom, or never, notched a tree that was not two or three feet or over. They also made bark vessels for carrying water, that would hold about four gallons each. They had two brass kettles that held about fifteen gallons each and other small kettles in which they boiled the water. But as they could not at times boil away the water as fast as it was collected, they made vessels of bark that would hold about one hundred gallons each for retaining the water, and though the sugar trees did not run every day, they had always a sufficient quantity of water to keep them boiling during the whole sugar season.

"The way we commonly used our sugar while in camp was by putting it in bear's fat until the fat was almost as sweet as the sugar itself, and in this we dipped our roasted venison." Speaking of an occasion when utensils for boiling the sap were lacking, he gives an incident which shows a clear knowledge on the part of the Indians of certain properties of the maple sap. He says: "We had no large kettles with us this year, and they made the frost, in some measure, supply the place of fire in making sugar. The large bark vessels for holding the stock water they made broad and shallow, and as the weather is very cold here, it frequently freezes at night in sugar

time, and the ice they break and cast out of the vessels. I asked them if they were not throwing away the sugar. They said no, it was water they were casting away; sugar did not freeze, and there was scarcely any in that ice."

Among many if not all the Indians inhabiting the Northern United States, maple sugar was not merely a luxury—something eaten because it was toothsome—but was actually an important part of their support. Mixed with pounded, parched corn, it was put up in small quantities and was a concentrated form of nutriment, not much less valuable in respect to its quality of support than the pemmican which was used almost down to our own times.

Among all the older writers who had much familiarity with the customs of the Indians, accounts are given of the manufacture of sugar, and this custom was so general that among many tribes the month in which the sap ran best was called the sugar month. By the Iroquois the name Ratirontaks, meaning tree eaters, was applied to the Algonquin tribes, and an eminent authority, Dr. Brinton, has suggested that they were probably "so called from their love of the product of the sugar maple." On the other hand, Mr. A. F. Chamberlain has very plausibly said "That it is hardly likely that the Iroquois distinguished other tribes by this term, if its origin be as suggested, since they themselves were sugar makers and eaters." A more probable origin of the word is that given by Schoolcraft, in substance as follows: "Ratirontaks, whence Adirondacks, was applied chiefly to the Montagnais tribes, north of the St. Lawrence, and was a derisive term indicating a well-known habit of these tribes of eating the inner bark of trees in winter when food was scarce, or when on war excursions." This habit of eating the inner bark of trees was, as is well known, common to many tribes of Indians, both those who inhabit the country where the sugar maple grows and also those in other parts of the country where the maple is unknown.

On the Western prairies sugar was made also from the box elder, which trees were tapped by the Indians and the sap boiled down for sugar, and to-day the Cheyenne Indians tell us that it was from this tree that they derived all the sugar that they had until the arrival of the white man on the plains, something more than fifty years ago.

It is interesting to observe that in many tribes to-day the word for sugar is precisely the word which they applied to the product of the maple tree before they knew the white man's sugar. It is interesting, also, to see that among many tribes the general term for sugar means wood or tree water—that is to say, tree sap. This is true of the Omahas and Poncas, according to J. O. Dorsey, and also of the Kansas, Osage and Iowa, Winnebago, Tuscarora and Pawnee. The Cheyennes, on the other hand, call it box elder water. Mr. A. F. Chamberlain, who has gone with great care into the question of the meaning of the words which designate the maple tree and its product, is disposed to believe that the name of the maple means the tree—in other words, the real or actual tree, or the tree which stands above all others.

Another evidence of antiquity of sugar making among the Indians is found in the fact that a great wealth of myth and folk-lore has grown up about this tree. A story is told by the Ojibwas concerning the change of a certain Nishosha, who was a magician, into a maple tree, and another Ojibwa story, quoted as having been told to Dr. W. J. Hoffman some years ago, is as follows: "One day Nokomis, the grandmother of Manabush, was in the forest, and accidentally cut the bark of a tree. Seeing that a thick syrup exuded from the cut, she put her finger to the substance, and upon tasting it found it to be very sweet and agreeable. She then gave some of it to her grandson, Manabush, who liked it very much, but thought if the syrup ran from the tree in such a state it would cause idleness among the women. He then told Nokomis that in order to give his aunts employment and keep them from idleness, he would dilute the thick sap, whereupon he took a vessel of water and poured it over the tops of the trees, and this reduced the sap to its present consistency. This is why the women have to boil down the sap to make syrup."

Mark Morrow.

ROCHESTER, N. H.—*Editor Forest and Stream:* I see in the issue dated Feb. 23 Mr. C. H. Ames makes an inquiry for the name of a story. Some time ago he wanted the source of a bear story, and I was fortunate enough to remember it. The same luck again. The story he asks for is named "Nick Whiffles." It was published years ago in the New York Ledger and is to be had now in book form—at least I have seen it within a year or two. Mark Marrow was one of the characters; Chris Carrier, Le Loup, a Delaware Indian and a fighting Quaker, whose name I can't remember, were some more. The location and time of the story was laid in the Northwest at the time of the rivalry between the Hudson's Bay Company and the Northwest Fur Company. He speaks of Dog-Ribbed Indians. The authority I have names them Dog-Rib, a family of the Athabascan tribe, or family of tribes. I never have seen or read Hearne's Journey, but have seen quotations and references to it, so can't say that the Mark Morrow is the same; but the one I do know is as above. E. C. NEAL.

The Sportsman Tourist.

The Stone Whale of Safata.

IN the declining years of the last century, while yet Laupepa sat on the throne of his ancestors, the Malietoas, whose scepter was destined to fall from the feeble hands of his son and impermanent successor, Tanumafili, in this posture of the affairs of the Samoan kingdom, it befell that an embassy of the ruling lords of Safata toiled across the mountain chain which accentuates the east and west extent of the Island of Upolu, an embassy directed to the representative of the United States, bearing gifts and empowered to negotiate a matter which, while not political in itself, would yet call for the exercise of the not inconsiderable amount of diplomatic talent in the possession of these embassadors.

It is not often that these narratives of jungle heights and South Sea depths offend through any such attempt at the grand style of historical prose. But it might have been done; only the saving grace of a keen sense of the ridiculous has prevented. Taken seriously—and that is how Samoa has too often been taken—Samoa is a tragedy; it is the part of wisdom to see it for the farce that it must ever continue to be so long as its chiefs are allowed to think themselves a people of peculiar dignity and free from any necessity to earn their living. No little of the troubles which Samoa has brought to civilized people has arisen from the mistake of dealing with its petty squabbles as though they were worthy the pen of the historian.

Reduced to the verities of plain statement, the introductory period means no more solemn a matter than that two chiefs of the Safata district on the south coast of Upolu had come on a begging expedition to obtain funds tward the completion of the new church which was to replace the one that had been destroyed in the last war, and was destined in its own turn to be destroyed in the war about to come, that being the common fate of all the Samoan churches. Incidentally, these two chiefs intended to get any other benefit for themselves or their community that could be acquired by the island arts of compliment and cajolery. It being impossible to conceive of a Samoan as ever informal, it should scarcely be necessary to add that the two chiefs were attended by the proper allowance of talking men to make their speeches and a number of bearers who carried the presents of live stock and vegetables which etiquette required them to offer us, and for which the return presents of biscuits and cans of corned beef would make payment at a somewhat exorbitant rate, as is usually the case in such interchanges.

In the course of a few hours of making and hearing long speeches, the two chiefs, Te'o and Tuia, managed to obtain a satisfactory assurance that a sufficient contribution should be made toward the completion of their church. This was a well recognized tax on the consular corps, and was generally accounted for as an item of the political corruption fund, it being certain that any village to which had been denied the contribution for the building or repair of its church would go over to the rebel side within a month. But of much more importance to Te'o and Tuia was the acceptance of their invitation that we should pay a formal visit to their village of Vaie'e—in fact, a regular "malanga" with the fixed duration of three days of entertainment. It was impossible for any of the officials to go on malangas for less than $50 in wages and the necessary presents, and when consuls were green to the ways of the land the expense might far exceed that figure. The presents amounted to a considerable item in the village visited, and while they were religiously repaid by return presents, the exchange was handicapped by the fact that all Samoan presents were the products of the soil, and cost the donors nothing, and the Papalangi presents were such testimonials of esteem as kegs of salted beef and tins of biscuit, which grow on no trees and cost no small figure when bought of the traders on the Apia beach. A village that was visited by a malanga of one or other of the high officials was the envy of its whole district, and was considered to have done very well indeed. When Te'o and Tuia found their invitation accepted they felt the glow of the utmost satisfaction. Knowing the possibilities of slips 'twixt cup and lip, they sent a runner across the mountain with the joyful news and decided to accept the hospitality of Vaiala for the few days which must intervene before our departure to visit their village. Thus they prevented our being side-tracked through the scheming of any envious politician from some slighted village, a thing that experience had shown was always more or less possible.

This is not meant to be an account of the malanga; it differed in no particular from other such trips already sufficiently described. Its only point of difference lay in the finding of a local legend and the proof of the same lying at the bottom of the beautiful bay on whose shore the days of the visit were spent.

It also discovered another trail across the Tuasivi, one that was somewhat longer in point of actual distance, and rose to a higher altitude on the cone of Mount Suisenga, but which had the great advantage that it skirted the morass on the summit plateau into which the Ala Sopo plunged for a mile of mud march. It was not on this account that Te'o and Tuia guided us along the other trail. They thought nothing at all of the mud or the breakneck scramble that lay beyond where the trail found its way down the center of the Papapapa cascade. But they did mind Suatele, the head chief of the whole district on the south coast. He had established himself as a planter on the very summit of the Tuasivi at the edge of the morass, and the trail went by his door. He had the most suave gentility imaginable, and he never asked any questions, but he had the most observing eyes; nothing escaped his vision that went over the mountain along his trail, and when he saw anything that he thought he could put to some use, a very polite message was received, stating just what he fancied and claiming it by virtue of his superior rank. It was the part of wisdom for Te'o and Tuia to wait our pleasure and guide us over the road that was not under Suatele's very eyes. Kegs of beef are hard enough for Samoans to get, without having them snatched away by the order of higher chiefs.

The Vaie'e from which the invitation had come—Vaie'e-i-uta, that is Vaie'e inland as opposed to Vaie'e-i-tai, which lay across the bay on the edge of the ocean—is as beautifully situated as any place of human habitation in the South Seas. Here was Safata Bay, a safe though shallow harbor. On the east of the bay the beach stretched away for glistening miles of clean sand, and offshore nearly two miles away was the surf-marked line of the barrier reef, and in the intervening space good channels for such small craft as were likely to seek that still-water sailing. On the west of the bay there was little reef, and after the next point had been rounded there was nothing but the iron-bound coast of Aana, which for mile after mile offers no refuge for such boats as may be endangered in the perils of the open ocean. Looking shoreward from the sea there is nothing to cause one to suspect that behind the bright sand beach which makes the eastern cape of Safata Bay there lies a landlocked body of water. The entrance cannot be seen even from the bay until one gets fairly abreast of it. Except on just one bearing the entrance looks to be no more than a tide channel into the muddy recesses of the mangrove swamp in which there is nothing more interesting than the scrambling of fighting crabs or the oysters growing in clusters on the branches of the trees like some sort of marine grapes. On that one bearing, however, and just for a fleeting moment, the eye will be caught by the beauty of the placid inner bay and the commanding site of a large Samoan house set on the crest of a rocky bluff some thirty feet above the water. If the beauty of this single glimpse proves sufficient to attract the voyager to follow the channel before him, he will be well repaid when he has made his way between the mangrove swamp on the one hand and the cocoanut groves of the sand beach on the other. Then for the first time he discovers that this entrance, not much more than wide enough for two boats to pass without tossing oars, leads to an inner bay extending for nearly a mile on the left hand, for twice that on the right hand and about half a mile across. As he rows across it to the village that lies at the foot of the little bluff, whose crowning edifice has attracted him at the first glimpse, the village of Vaie'e-i-uta, he cannot fail to remark the appearance here and there of pools in the water of concentric ripples as though something were boiling up from below. If he follow the example set by his Samoan boatmen and scoop up the water to his mouth, he will find that from the salt sea he is quaffing water as fresh and clear and cold as from the highest mountain spring. As he comes to land beneath the bluff of the village he will see many springs issuing from the rocks above high tide level or between the tides, thus showing the existence of a very considerable underflow, which here comes to the surface. A closer search will disclose the fact that through these springs, both on the shore and submarine, so much fresh water enters this inner bay as to prevent the coral from growing. The bottom, then, of this inner bay is of thick, black mud, with recurring patches of black volcanic pebbles. These facts should be sufficient for any person at all skilled in the physics which go to mold the earth's surface to enable him to tell how this inner bay happened to be at this particular spot, and how long it will probably be before the bay turns into flat areage of rich soil. But the Samoans are not at all scientific observers; their explanation had nothing to do with physical geography, but it was so satisfying to their own ideas of the supernatural that it was only with difficulty that I was able to dig out the story, the people professing the missionary religion in fair weather, but at night or in the gale cherishing a sneaking suspicion that the old gods have not left the country or consented to the new ideas which seem to have ousted them.

With every acknowledgment of the desire of Vaie'e to make the visit enjoyable, it is fair to confess that there is a most tiresome sameness about these set visits. Daily for the three days there is the same formal drinking of kava and the making of ceremonious speeches. Daily there is the same underdone pig baked whole, proclaimed to the guests and villagers with much loud shouting; the same fish toasted in green leaves; the same sprinting chickens stuffed with a cobble stone apiece, and from the general flavor roasted with the feathers on. By day there is the unflagging political conference with the village elders that never leads to anything; by night the dreary round of native dances. At the end of this visit the pigeons had retreated so far toward the mountain summits that it would have been an all-day affair to get near them. At the upper end of the inner bay there was a fine grassy marsh much affected in the proper season by the ducks, but this was not the proper season. Along the shore scurried any quantity of birds that seemed to promise well. They looked like snipe, and good large snipe at that; they were manifestly plump and in good condition and clearly shootable. Their only unfavorable qualification was that after they had been beautifully broiled they tasted like salt codfish that had fallen on evil days. Even the Samoans, who have the most catholic taste in food, after politely nibbling the birds, confessed that they were too strong to be palatable. The only sport left was to go outside and fish. The need of the boat for this purpose brought me to my first knowledge that there was a special Vaie'e story that was worth looking into.

Although the trip had been made afoot and across the mountain, the boat's crew had gone along to carry the precious kegs of beef and other presents. From the trader across the bay they had borrowed a boat for my fishing; and while it was by no means so commodious or so clean as our own trim craft, it served, and there were no good clothes to think of. While they were rowing across the inner water and toward the passage out into Safata Bay, one of the boys (Tulifau, I imagine, since he was the acknowledged poet of the crew) began to improvise a song with local application. Now that is a very nice thing to do in Samoa, and is very highly thought of by the person or community thus honored, and any person who has a laureate under wages who is capable of doing this spontaneous poetry is greatly to be congratulated. Well, one verse passed off very well, and it was stuffed full of complimentary things about the village. But the next verse was suddenly choked off by one of the Vaie'e men who was in the boat with us, to give us the benefit of his local experience in the choice of fishing grounds. He said something to the improvisator, something which I could not catch, and the poet stopped in short order. Then Vaenga up in the bow started up some common boat song

and all hands joined in. I could not imagine why the Vaie'e man had choked off my poet when he seemed to be doing so well, and I puzzled my memory to discover what could have been offensive in the unfinished verse. As well as I could recall, he seemed to have dropped the praise of the village by name and to be busy with another theme, which involved the praise of the "sacred fish, the stone fish, the fish that leaped, the fish that broke the earth." I had been too long on the lookout for such things to pretend to take any notice of the incident at the time. The boat load would have lied me out of my face, and probably Tulifau would have had the effrontery to compose for me as being his interrupted song one of much the same sound, but far different meaning. I gave the matter no marked attention, but I knew that there was some story about the stone fish, and, as usual in such cases, I made up my mind to know all about it, all the more particularly since it was an off season for the gun.

My first application was to Simele, who was at that time performing some of the duties of a major-domo, others of a professor of the Samoan language and literature, and in general was understood to act as my talking man and make all my speeches for me. Simele was a mystery from first to last. He used English quite well, thanks to the teaching of Mrs. Bell at the mission school. He wanted to save money and become a lawyer, and he did succeed in saving as much as $15 on several occasions, but he found that to be as high as he could go, and he reclaimed his deposit and blew it in. He was not tattooed, and while he claimed that it was against his religion, his enemies had no hesitation in saying that he did not have the sand to bear the pain of the operation. He had religious scruples against war, but it was said that he was afraid to fight. In this matter of the stone fish Simele said that he felt it contrary to his religion to talk about the idolatry of the heathen Samoans, now all happily converted, and furthermore it was never safe to talk about the magic of the aitu in the place where they held sway. He gently but positively declined to yield up the story, but he made it clear that there was a story of a pretty powerful god or devil of the old times if it had the power to let Simele's heathenry appear through his smug veneer of Christianity. As a sop to my disapopintment, Simele was willing and ready to tell me once more the story of the swimming Siamese sisters of Samoa, of whom one found her name right off Safata Bay. That is the one story that seems to be free from danger to the teller; every Samoan seems willing and ready to tell about those girls on their long swim, and I felt as competent as Simele to tell that yarn.

Tonga was more pliant. Tonga had been to the Chicago Fair, where she ornamented the Midway, and she had been on a tour of the United States with Barnum's circus, and had become a pronounced rationalist in all such matters. She would express her profound disbelief in all the heathen powers and then slyly ask me if I did not think that there might still be something in them, at least for South Sea Islanders. In this instance Tonga was really ignorant; she had never heard of the stone fish; she came from a distant part of the country and the story had never come to her. But Tonga had relatives here—I never found the place in Samoa where Tonga was not able to scare up some person in native authority and introduce him as "my lashe," which is her English for "my relation." So it was here. As being a relative, she introduced to the guest house in which we were stopping an old chief, one who had been the Te'o or the Tuia of his younger days, but now was known as Mailei. It was altogether a very surreptitious narrative; the old man refused to tell his story in the presence of any Samoans but Tonga, and no person was to know that he had told the story or even that he had visited us. Tonga attended to the dispatch of all our party to a frolic in a neighboring village, and when the coast was clear insinuated Mailei into our house, which had no other light than that of the moon. Sitting close to us, yet in a shadow which prevented recognition of him by any chance passer, he told the story of the way the inner bay was formed and the part that was played in it by the holy fish, which is now the stone fish. Like all Samoan stories, it is so filled with trivial and inconsequential details and frequent repetitions that it can be told better without following the old chief's own words.

In the times close to the beginning of things, the cuttlefish was the great power of all animal life. Because of his wisdom all other animals obeyed him, and those which disobeyed his orders soon learned to fear his power to punish. At that time, indeed, until the white men came to Samoa, the waters were filled with great sperm whales, which sometimes stranded on the reefs and yielded rich store of teeth, and each tooth was worth the life of a man. Now there are no more whales in the Samoan sea; the white sailors have killed them all. But in the early time when this bay was made there was one whale that was larger than all other whales and stronger and more clever, and this whale set at defiance the orders and authority of the cuttlefish with scorn of a thing that lived in the crevices of the coral. But the cuttlefish is clever, even though he does not live in the coral. He got the shore birds to go up into the bush for him and bring down leaves of the nettle tree. These leaves the cuttlefish sprinkled over the water where the whale was feeding, and he swallowed them with his food. Then he went wild pain. You know how if you but graze it in passing it is as though you had been burned with a blazing billet from the fire. This feeding of the whale was done in the bay beyond there, for that bay was always full of feeding whales before the Papalangi came to kill them. In his agony the suffering whale ran his head ashore, for some of the nettle also had stung his eyes and blinded him. Not being able to see his way, he made a mighty spring and leaped high into the air, as I used to see them do in play when I was a boy, and the whales were not then all dead. Not being able to direct himself by reason of his blindness, the whale, instead of falling back into the sea, fell on the land. How great a whale he was you may see by looking at our inner bay. That was his length and his girth, for it was there he fell on the dry land and broke it down beneath his weight. But the cuttlefish was not yet done with the whale; the punishment for disobedience was not yet complete. When the cuttlefish saw that leap into the air and where the whale fell, he and his brothers cut the shallow passage from Safata Bay into our bay and let the water flow in around the stranded whale, but they made the passage a shoal one to keep the whale a prisoner. And at the passage there were always fish on guard to prevent the things that whales eat from coming through. All that the whale had to eat was the grass and bananas and the cocoanuts that had grown on the land that he had broken in. Really, the whale starved there day after day, and as he starved he grew smaller and smaller, until from being larger than all whales, he became smaller than any. But every day when the cuttlefish demanded if he would submit and become obedient, the whale refused, and at last he died, and the cuttlefish, being unforgiving, turned him to stone. And now he lies at the bottom of this our bay, and through the water you can see the stone which is his body. But because he was once very powerful above all other animals, that is why we do not like to speak about him here in Vaie'e, at least not since the missionaries introduced the "lotu" and taught us that it was wicked to think of our old gods since they were devils.

Mailei's story can be confirmed in one particular. In the bottom of the inner bay there is a black rock which has about the size and shape of a sperm calf. That I know, for Tonga paddled me out to the spot to which Mailei directed us, and there we saw for ourselves.

LLEWELLA PIERCE CHURCHILL.

In the Indian River Country.

INDIAN RIVER, Brevard County, Fla.—Several years ago, when I first came to this place, I met Jim Hatten, and he bore fresh scars received in a battle with a panther and a mule, which I have always thought worthy of being recorded. There came in a new boarder today, and while it rained I had Jim tell him the incident, and while it is again fresh I will record it for you, in substance, the way he tells it.

"There were three panthers," Jim says, "that had been prowling in my neighborhood, near the shore of Indian River. Their hunting range was between two big hummocks, about three miles apart, and as they cleaned up the wild pigs and deer about each, they would change their places. You remember old man Chancy, who was a scout in the Indian wars and the last war, who was always glad to get into some rough-and-tumble scrape? Him and me at one time and another killed two of them and the third one seemed to go off, I thought, for good. One day Jim Robinson and his brother came to my house early in the morning and told me they saw panther tracks in the sand in the road just outside of my orange grove. I had an old hound and two young ones, and I saddled my mule, took my gun and dogs, and Robinson and me soon had the panther up. It run up the side of a hickory tree, and Robinson shot it dead in the scrub bushes. It was a whopping big one, and before we were to tie it on my mule behind me, I helped Robinson to shoulder it, to be carried into the road. Robinson kind of hung it around his neck, and I followed on my mule behind him. My mule was jist as gentle as a dog, and I had tied many a bloody old buck on her. I noticed the mule nosing the panther and laying back her ears, but I never thought anything of that. All at once she began bellerin', and jumped on the panther, knocked Robinson down and throwed me over her head in a pile with the panther. Then she began to stomp and bite and paw us, all the time bellerin' as I had never heard a mule before. Robinson was scared to death, and stood by like a stump. I told him to shoot her, but he was too bad scared, besides his gun, an old cap lock one, was in the pile with me and the panther. Finally Robinson got the mule off me some way, and you can see how my face and ears are scarred up. I soon sold that mule, and the skin of the panther was stuffed and set up on the pilot house of the Sweeny, a steamboat that used to run on Indian River. This happened about twelve years ago, and was the last panther ever killed around here."

Did you ever see the Indian River? Do you not think it and the country around is a most beautiful spot of this earth? Just think, that in forty-eight hours you can leave behind in your city the bleak wintry winds and come here, where never a snow flake falls!

The fragments of the orange trees, left from the unprecedented freezes of 1895, have sprung again into trees, bearing the famous Indian River oranges. This narrow peninsula one day gets the winds from the Atlantic, or, better say, the next hour they are swapped for the breezes of the Gulf. They tell us Ponce de Leon, in his "Island of Florida," hunted for the spring to preserve eternal youth. Was it the ozone from the Gulf Stream that aroused his imagination? If this stream can warm portions of this terrestrial globe, where the rays of the sun themselves are powerless, old Ponce was not far wrong if he hunted for its source.

When I came here about the first of January I brought my setter Dan with me. To avoid injury, I crated him and saw him once only en route. About the time I landed on the platform of my arrival station Dan burst through the door of his crate, and came bounding to the baby. He soon raised a quarrel with an old stump-tailed pointer, who rolled off a greasy goods box where he had been watching a side of bacon put there by the merchant to air. Dan, however, contented himself by rushing at and running over the old pointer; then, without inquiring into the character of the country, ran into scrubs and palmettos, got the scent of some doves, and finally dashed into a sharp knot on a pine log and split the skin from his eye to his ear. Dogs, at least, have individual traits not unlike men. Put some of either wherever you may, and their courage and enthusiasm are always with them. No wonder the world admires these attributes. I will tell you something about Dan's experience in Florida directly.

Soon after my arrival my friend of many hunting forays and myself started out for a camping expedition. We didn't care where, for which ever way you turn your head here you find sunshine and fat pine, all that is needed for outdoor life. A native Floridian with his little trick mule to a wagon; our hunting ponies harnessed to another, both full of what a hunter can better imagine was in them than I can write, composed our hunting outfit, except a team of dogs made up of two deerhounds—one a veteran old lady, before whose relentless trailing I have seen many a deer go down, the other her son, an obstreperous, untrained creature—and setter Dan.

You know there is a kind of superstition or pride which a hunter has in not starting out with fresh meat. We expected to supply our first meal with quail, and our horses' heads being turned toward Lake Winder on the St. Johns River, this point became our destination whereat to camp for the night.

Our guide led us a near route through the prairie, which proved too wet for birds, and when camp was reached a supper of bacon was expected, when our guide told us not to worry, as the day before he had killed a wild pig and had brought half of it along. This was scarified, salted and peppered and spitted on palmetto sticks, and its dark complexion from close contact with fat pine coals did not prevent us from taking to our cots well satisfied with our supper. Our guide, who proved an excellent one, was then a stranger to us, and old Ida seeming rather dignified the next morning, we concluded to take both the hounds out. You know the best way to hunt deer here is on horseback, with a dog that does not "yelp," but which, while on the track, is careful, noiseless and slow. In this manner, if the deer are not hunted much, you may be led right up to their beds, and can shoot them when they rise—when they "rip," as it is called here. If the deer are up to this they are trailed until their lying place is supposed to be not far off, then you dismount and generally put a cord on the dog to prevent too much speed or possible loss in grass and brush, and follow thence on foot. I have never seen this mode practiced elsewhere, and no one could make me believe it could be successfully done until I saw it with my own eyes.

We had not gone far from our camp, when the trail of two deer was found and followed to a likely looking place for them to lie. We halted for a consultation, when presently we heard a crashing in the scrub clump in the pond, saw the water flying, then two white flags raised in the sedge grass beyond—and the hunter knows what this means.

The afternoon was spent by my friend and myself shooting quail. Dan started out with a long ranging gallop, feeling that he was in the brown sedge and blackjacks of historic old Appomattox, from whence I purchased him. His points were high-headed from wind scent, and as stylish as if he had found the close-lying Virginia partridge in the stubble. On our approach to flush you ought to have seen his surprise—the birds had gone on. This was repeated time and again on the same covey, and he would pathetically look at me as much as to say, "Master, I am still a dog of veracity; these creeping things smell like partridges, but where and what are they, really?" Finally they would rise, and then would come Dan's trouble in earnest—on the single birds. These half the time have to be literally run up. That evening Dan found a feeding covey among the circular clumps of low palmettos, between which was short grass. He pointed on first scent, then went to roading the running covey. Round and round for ten minutes at least they went and never a halt. Finally they went into a palmetto bunch, and then continued to run around, and Dan began to bark furiously, something I never heard him do at birds, and I remarked to my comrade that he must have run on a coon (of which there were a number about), and I stooped and looked under the fans in time to see Dan, who had grown tired of such foolishness, jump into the birds. Dan finally caught up with these tricks effectually, as I will tell you directly.

We now wanted to cross the St. Johns River, and sent our guide to discover some way to get over for a "lighter" to transport us. No one inhabits the vicinity we were in and our guide found the camp of an otter hunter after a long day's search in the swamp, and took him and brought us the lighter. From our camp to the lake was a drive of two miles through the prairie. Along the road was the single aristocratic palm, its body hoary with age and bleaching storms. Small clumps of these trees stood about, whereunder shaded the little wild cattle, running like deer before our advent. The lowing of the cows for their startled calves was like the music of the bugle. On the shore of the lake was one high sand dune covered with live oaks, palms, magnolias and oleanders. There stood a large sweet berry tree, carved high up and all over with names and dates, but, unlike the sturdy timber of my native heath, this tree repelled these scars, and they stood out excrescences, looking exactly as if pasted on, and the oldest date I saw was 1889.

Lake Winder is about three miles wide, a pretty sheet of water, with bottom of white sand. We were poled across, the water at deepest being less than 10 feet. On the other side we emerged at once into the prairie, unlike any other prairie you ever saw. Really here nature seems to have grown tired of making peaks and mountains and thundering torrents, grown lazy, and tried its 'prentice hand on landscape gardening. In this prairie are narrow strands of pine and palmetto, and the low saw palmetto in circle beds of from one hundred to three hundred feet around; some beds as high as your head, others to your knee. Here Dan left the wagons and swung out windward, of which I was glad, for did you ever find it necessary to hunt for meat? Hungry campers and their dogs must eat. So I put together my little bird gun and went out literally for meat. The Bible people of old may have had more quail, but we had enough for both men and dogs. They flew lazily and low. Here Dan got up to their ways. Finding them, he would point and hold till I came to him, then if they ran (as they nearly always did) he would road them, swing far around in front, getting them between me and him, and point, and if they failed to stop, he would disregard all his usual modes and jump on to them. What professional trainer could have put this reasoning into Dan's brain? Whose whip would crack over such an intelligent creature? The camp that night conferred on him the degree of *artium magister*.

We made two parties for the next day's deer hunt, my companion being our guide. Ida had followed for nearly an hour the tracks of a feeding doe and her yearling, when they were joined by a buck. Then there must have been some moonlight acorn dances by these three, as old Ida worked with all her skill to unravel the windings of these nocturnal orgies. I am sure the smell of the old buck's track was more to her notion, for as I sat almost hopeless on my pony, watching her circling wider and wider, she trotted off and looked back as much as to

say, "Come on, I've got the buck now." And while I was going to her she leisurely went into a pond, bathed and drank, came out and took the track and led us straight to the buck's lair. He must have been sleeping soundly in the saw palmettos by the little clear pond, for Ida led me within ten steps of him. I dropped my bridle reins, and the pony went to nipping grass, while Ida, with her ears raised, crept on to the deer, put him up, and, although the "rip" from the rattling palmetto is no tame noise, the pony never looked up while I was shooting, nor did he flinch when the buck was tied behind my saddle. Neither men nor dogs wanted for fresh venison from thence on.

In our attempts to recross Lake Winder we had to camp on its shore for forty-eight hours on account of hard winds before we made the attempt. This was not unpleasant, as quail, turkey and ducks were near in abundance. Near by our tent was a huge live oak, about 10 feet above the roots of which put out four large limbs, themselves trees. Branching out with a great stretch these limbs came together at the top, thus forming a graceful and perfect globe, all tasselated with long hanging gray moss. As our great fire of rich pine illuminated this tree, how spooky and wierd its rays appeared among the pendent moss! Now and then the glinting leaves of the magnolia, which thrust its branches among the moss, shone like a hundred little mirrors.

Well, well, this is a semi-savage life, but who of the active among us wishes the lingering basic element of man—the savage—civilized out of him? The dazzling sparkle of the electric chandelier has taken the place of the camp-fire and the goblin moss strands, but I leave it to the world to say which of the two inspires most the stirring manhood that the world relies on.

S. C. GRAHAM.

Welsh Indians.

Editor Forest and Stream:

In reference, but not in answer, to Mr. Chapman's query in FOREST AND STREAM of Feb. 2, "What became of these Welsh-speaking Indians, that they have not been discovered by modern travelers?" I would refer him to George Catlin's "North American Indians."

Catlin spent eight years, 1832-9, among the Indians then located west of the Mississippi and in the "hospitable and gentlemanly Mandans," to quote his words. He seemed to feel quite sure that he had found the last relic of the blood of Madoc. At the time he wrote they comprised only some 2,000 souls in two villages, though their traditions all pointed to a former state of great numbers and power. They had apparently been gradually forced up the Mississippi, until they had reached a point on the Missouri near what is now the boundary between North and South Dakota.

Catlin laid great stress upon the difference in their dwellings, manners, customs, and, I think, particularly the variations in the color of the hair, comprising every shade but red or auburn, and the fact of their having hazel gray and blue eyes. His idea was that at some time after the settlement of Madoc and his followers the Welsh were all massacred, while the half-bloods had been allowed to live, and that this Welsh blood still showed faintly after the lapse of centuries in various ways in these Mandans. They had no tradition of ever having seen white men before Lewis and Clark visited them, yet Clark described them to Catlin as "a strange people and half-white."

The tribe entirely disappeared during Catlin's life time, but I do not remember that he states the cause.

Natural History.

One Buck that Was Dangerous.

CAMP R. S. MACKENZIE, Near Puerto Principe, Cuba, Feb. 19.—*Editor Forest and Stream:* You sometimes have a column headed "That Reminds Me," and having just completed the reading aloud to my little son Mr. Wells' more than interesting article on the subject of dangerous wild animals, together with your pertinent remarks on the same subject, I am moved to give my personal experience to aid in the demonstration that a deer is a dangerous animal, and that he doesn't have to be so terribly wild either.

A few years ago I was stationed at Fort Meade, in South Dakota. One exceedingly cold day I had occasion to go to the neighboring town, and as it was so unusually cold, I concluded I would walk, for the distance was but a few miles, and I thought I would be more comfortable in going that way than by either riding or driving. I was warmly dressed and wore German socks and enormous arctics upon my feet. I was well enough adapted to walking along, but as there was a few inches of snow upon the ground, I was not exactly tricked out in the best manner for a scuffle, as events proved. As I was leaving the house, my wife called out to me, asking if I couldn't bring her a few eggs, as she was entirely out and could get none elsewhere such cold weather. I told her I guessed I might probably bring a half-dozen in my overcoat pockets. I attended to my affairs in town in due season, purchased the eggs, putting three in each pocket, and had gotten about half-way home, when I saw coming toward me in the road a pretty fair sized white-tailed buck. I had heard that one of the men had recently gotten a tame deer, and I inferred at once that this was the one and that he had broken out of his yard, so I walked along, paying no further attention to him. My setter was with me, and as he trotted on ahead, of course he couldn't resist the temptation to bark a little at the deer. The deer apparently paid no attention to the dog, but as I approached he made quite a semicircle in order to pass me on the road, holding his head down and facing toward me all the while in a most peculiar manner. In fact, his threatening aspect as he passed me awakened my suspicions, and I turned around to see what he was up to. It was doubtless well for me that I did so, for I discovered the rascal within a few feet of me, his head still lowered, and in the act of charging me from the rear. There appeared but one thing for me to do, and that was to seize him by the antlers.

I lost no time in acting upon this inspiration, and as I weigh about 175 pounds and am fairly vigorous, I had no great difficulty in holding his head so close to the ground that he was unable to use his forefeet upon me, as he was evidently attempting to do. We scuffled and tore around in the snow, my great arctics and German socks preventing me from getting any foothold whatever, whereby I could get the better of him, and though he bruised me in good shape with the points of his antlers with every rush that he made upon me, nevertheless I dared not let go of them for fear I should be attacked in the face with his sharp hoofs, so we kept up the struggle.

I have said that the day was cold when I started out, but after a few minutes' engagement with this partner I didn't find it cold at all; and even yet, after two years' service in Cuba, I can still remember how hot it was in Dakota that February morning. I was also getting pretty well out of breath, while the deer's courage appeared as good as ever, and I was beninging to wonder how I was going to excuse myself from so objectionable a partner. In the story books the hunter's faithful dog frequently rescued him from such perilous positions by bravely rushing in and seizing the foe by the throat, but mine discreetly kept at a distance, and though I believe he brought the whole mischief on by barking at the deer in the first place, instead of coming to my relief like a good story book dog, he made matters worse by continuing to irritate the deer by his barking. I had hitherto remained quiet to preserve my strength, but I recalled seeing some men cutting ice at no great distance away on my way to town, though the pond was screened from my present view by a fringe of bushes. I saw no prospect of getting the better of the deer myself, and the only way out of it seemed the chance of making those men hear me if they were still there. I called as lustily as I could, and in course of time three men came and relieved me of my troublesome antagonist. Perhaps it is needless to say that my wife never made any cake out of those eggs.

I found upon subsequent inquiry that this buck had been raised as a pet upon a large cattle ranch, and the herders had constantly irritated him for the purpose of making him show fight, until they had gotten him so cross that it was dangerous to have him around, and the manager had gotten rid of him on this account.

I trust no one will assume that I am discussing the general question of the danger from wild animals. I am merely writing for the columns of "That Reminds Me."

WM. F. FLYNN.

Another Maine Panther.

IN our issue of Feb. 16 was printed a letter from Mr. Gardiner Cram, of Brunswick, Me., relating the occurrence of a Maine panther, as within his personal experience. That letter Mr. Ames now supplements with the subjoined one from another correspondent:

SKOWHEGAN, Me.—Mr. C. H. Ames. Dear Sir: You say that Mr. Gardiner Cram, of Brunswick, Me., tells you that an animal that I saw near the Forks of the Kennebec River last fall was a panther, or that it was my strong impression that it was such. I am absolutely certain that I saw a panther, or catamount, which I understand to be the same thing, the first of last June about four miles above or north of the Forks of the Kennebec River.

I was coming from Parlin Pond toward Skowhegan, my home, on the stage that runs from the Forks to Parlin Pond on the only highway which leads from Skowhegan through the forests of Maine and Canada to Quebec. The highway leads generally north and south; we had ridden or passed through a strip of forest ten miles from Parlin Pond to the West Forks Hotel, and had passed the hotel about a mile. No one was on board the stage excepting Charles York, the driver, and myself. I was looking into a field lately cleared and covered with grass to get sight at a deer, with which the country abounded. As we passed down by the field and struck the evergreen bushes, with which the road on both sides was skirted, the driver, Mr. York, called my attention to the fact that he saw a deer jump into the bushes on the east side of the road. I immediately turned and looked carefully. I discovered nothing in the bushes, but happening to look down the road over which we were traveling, I saw an animal trotting along ahead of us in the road. I could see nothing but his rump as he was going from us. The driver remarked that that was not the animal that he saw, because that one had jumped into the bushes, but that it looked just like it.

Both of us watched the animal with a great deal of interest, for Mr. York was an old woodsman, and I have always had a great deal of interest in the wild animals of our State. We saw him for several rods plainly, and we also approached nearer to him, as our horse was trotting at a pretty smart gait. Finally the creature turned and sprang into the woods. As he did that I saw him plainly; his neck and breast were much lighter in color and he had the catamount head and form.

As near as I could estimate he was about 7 feet long from the tip of his nose to the tip of his tail; his tail was something less than half his length, and curved upward toward the end exactly like that of a panther or catamount. While I never saw a panther in the woods before, I have seen them in menageries, and I have no doubt about this animal being a panther. It certainly could not have been anything else. It appeared to have an enormous development of the muscle in the hind leg and the hip, and when it sprang into the woods it scarcely seemed to make any effort. Mr. York, who has been a woodsman all his life, remarked to me that he had seen all sorts of wild animals in the woods, but had never seen anything like that before, and he expressed the opinion that from what he had heard of the appearance of such animals it was a catamount. Evidently there was a pair of those animals near together when we came down the road. One of them sprang into the woods and the other trotted down the road, as I have already stated. There was a schoolhouse a short distance below where we saw those animals, where several small children attended summer school. I requested the driver to notify the parents what we had seen, so that they might protect their children, and he promised to do so. When we reached the Forks, where there is a small settlement, I notified every one that I met what we had seen. We afterward ascertained that the people at the West Forks Hotel that we had just passed when we saw the animal had both seen and heard these creatures. Mrs. Davis Purse, the landlandy, had seen her husband's cattle running out of the woods chased by some large animal, which she took to be of the cat kind, although it was a long distance away. They had also heard the cry of some animal, which in their way of expressing it they called a "screech." The landlord had also sent his little girl to school in the charge of one of his men.

These people had said but little about this before we saw these animals, for the reason that, even in that wild country, any one who tells a story outside of ordinary occurrences is accused of "drawing the long bow," or in the words of your letter, they are "skeptical of the occurrence of a panther in Maine." There are no settlers in this country except occasionally a woodsman or river driver who lives along on the Canada road before mentioned. The country is full of deer, and I did not think it at all strange that we should discover these animals as we did. Any further information I can give you I will cheerfully furnish. Very truly yours,

S. J. WALTON.

"The Fear of Snakes."

Editor Forest and Stream:

In a late number my attention was arrested by an editorial paragraph in which I am called upon to explain the fear that manifests itself in the minds of children toward snakes at an age when such fear can not have resulted either from teaching or experience. A little further on in your pages I come upon an article from the hand of my esteemed and gifted friend, Col. E. P. Alexander, who, it seems, has been sharpening a knife for me for a good while past, and who, while patting me on the back with one hand, with the other impales me upon the keen point of his logic, all unmindful of the squirms and wriggles that must ensue from such an ordeal.

Col. Alexander's adroit fencing demands my first attention, and I must even set my lance in rest to maintain my side of the controversy, with such puissance as I may, trusting to find some weak joints in the Colonel's armor.

As I understand Col. Alexander's argument, his scheme of philosophy assigns to one domain various more or less incongruous elements. The causes and activities that combine to make variety of species—in other words, the processes of organic evolution; organic functional processes, and that which lies back of all these, the great impenetrable mystery, the fundamental life principle—he combines under the general designation "sub-ego," which he holds as equivalent to my "mysterious tip."

Col. Alexander's *bete noir* appears to be the assumption that the "variation of species" in the Darwinian scheme of evolutionary development rests upon "blind chance" or unguided accident. I believe this is a "straw man" that the Colonel has set up for the satisfaction of exercising his astute reasoning powers in buffeting and discomfiting him.

In the language of one of Mark Twain's interesting characters, "There is no such thing as accidents; it's a special providence," with which doctrine the Colonel seems fully in accord. But in the language of science also, "There is no such thing as accidents." While the words "accidental" or "by chance" may have been used in a conventional sense, it is recognized as a basic principle of scientific philosophy that no phenomenon can occur except as the result of an adequate cause, and the two elements—cause and effect—are mutually interdependent for existence, and consequently inseparable, both causes and effects being absolutely under the dominion of inexorable law.

So the "chance variations" in the development of species result from the operation of natural law, the causes being found in the environment. There are many such so-called "chance variations," all caused by peculiarities of environment. Some of these confer advantages on individuals or races, giving them a superiority over their less fortunate rivals in the struggle for existence, enabling the better endowed to survive while those less favorably equipped perish, according to the universal law of the "survival of the fittest."

There does not appear to be any inscrutible mystery about this process, and certainly no "chance" in the strict meaning of that term; but all is in obedience to law, and the relations of cause and effect are not difficult to perceive. This gives an impetus to the further development of such advantageous variations, thus giving rise to the differentiation of species, all such phenomena being controlled by natural law. This is the plain story that evolution tells.

But Col. Alexander's "blue print" scheme, as I apprehend it, makes his "guiding intelligence" play the rôle of a yard master in an extensive railroad yard, who, sitting in a tower, by the manipulation of levers directs the movements of a multitude of cars, and having made a "blue print" of the train he is making up, controls by means of his system of levers the detailed movements of each car in the process. According to this theory natural laws are not self-operative, but must await the initiative of the guiding intelligence."

If the stem of the apple is detached from the tree, the "guiding intelligence" must release the law of gravity by pulling a lever before the apple can descend to the ground.

If I have misapprehended Col. Alexander's meaning as to the rôle of his "guiding intelligence" in the work of evolution, I must crave his pardon.

Organic Functions.

So far as human insight is able to penetrate, the activities that are involved in the exercise of organic functions present a mystery as unfathomable as that enshrouded in the life principle itself, of which, indeed, they seem to be part and parcel.

The two little microscopic specks of matter that constitute the germs of two distinct species of organic life, while perhaps chemically identical in substance, embody within their small compass potentialities of the life principle, and functional differentiation of such stupendous import as to cause the vast orbs of inorganic matter that revolve in universal space, notwithstanding their mere

physical magnitudes, to "pale their ineffectual fires" in comparison.

In the field of functional activities, while their phenomena are among the most common of our experiences and observations, their cause and motive power is just as inscrutible to human perceptions as the life principle itself of which they are inferentially merely attributes. We can form no conception of the power nor process by which oak germs make oak trees and chestnut germs make chestnut trees out of the same chemical substances, nor how hog germs produce hogs and human germs produce men out of the same food. Neither can we know anything of the functional workings of the stomach, of the brain, the heart, the lungs, the liver and the whole *ensemble* of the bodily organs; nor of vegetable root "tips," nor the leaves, nor of the power that raises water from the ground to the tops of trees. Then there is the force we call "gravity" and "electricity" and "magnetism," of molecular attraction and repulsion, to which we have merely given meaningless names, knowing absolutely nothing of their nature nor the processes of their activities.

Here is where science must stop and philosophic speculation may revel ad libitum. In this mysterious domain Col. Alexander is at liberty to enthrone his "guiding intelligence"—his "sub," "alter" or "anti," "ego," whose awful mills shall continually grind out "blue prints" and whose ready messengers shall constantly fly to the "uttermost parts of the earth" and the realms of boundless space, with fresh promptings to hawkdom to meet particular contingencies, etc., and there is none to say him nay.

But the necessity is not apparent of installing any of the egos to manage the details of the processes of evolution, nor of investing organisms with "innate intelligence" as a substitute for heredity, the operations of whose laws are plainly discernible and the accepted theories concerning which are based upon ascertained or clearly inferential facts.

Heredity.

Col. Alexander makes war upon the law of heredity, and cites the fact that corporeal mutilations, both of brutes and human kind, for perhaps "a thousand generations," have failed to leave their impress in hereditary transmission. Well, a "thousand generations" is a very long term. According to the conventional estimate of the length of a generation it would extend over about 33,000 years, exceeding by five or six times any period coming within the scope of human retrospection.

But there are two objections to this argument. One, suggested above, is that any period of time that could come within human contemplation as a basis of deductions upon the question of evolution would be but as a drop of time in the great ocean of the ages that must have elapsed since the process of organic evolution began.

The other objection is that hereditary transmissions are, of inherent tendencies, the effect of long persisting agencies of environment and not of individual peculiarities resulting from extraneous agencies intermittently applied. Thus, the dog in a cold climate might be shorn of his hair for many consecutive generations, and yet the effort of nature would be not to perpetuate a defect militating against the preservation of species, but to remedy it. The remedial effort, not the defect, might acquire the quality of hereditary transmission, under the compelling influence of the demands of environment. But transplant the dog to a tropical climate and in the course of time he may become hairless, in obedience to the requirements of a new environment, a modification that is transmitted by heredity. Restore the hairless dog to his original cold climate and for a time he will continue to transmit his hairless feature to posterity, but by degrees he will resume his former coat, more befitting the cold climate, through the agency of natural evolution.

The inherent tendencies are responsive to demands of environment; the extraneous agencies with destructive tendency are antagonistic to such demands. The former may become hereditary, the latter may not.

In combatting the idea of instinct transmitted by heredity, Col. Alexander cites as a conclusive argument the fact that children do not inherit fear of fire, though the fact that it will burn has been known to their progenitors for many generations. But neither do they inherit fear of water, nor of the prick of a needle, though their ancestors have long known that water will drown and the needle prick produce pain.

In the first place it is unfair to assume that because "children" do not manifest fear of certain evils there has been no transmitted instinct in that direction; because the childish mind is still in the formative stage and must reach some certain stage of development before it acquires all the furniture of the parent mind.

The distinction, however, is plain between that class of experiences which implant hereditary instincts of more or less strength, and the class above cited that do not. For example, fire and water are not aggressive evils, constituting a constant menace to the well being of mankind, and requiring unremitting assiduity in measures of defense against them. On the contrary, they are familiar objects of utility, that can do no harm except when their own domain is invaded, a contingency that is generally easily avoided.

As an example of the other class of experiences, let us consider man's attitude toward the serpent tribe. The repugnance and dread felt by mankind toward the whole serpent family possesses a universality that stamps the feeling as an inherited instinct, and it is probably true that the instinct is more pronounced in the adult mind than in the adolescent or infant stage.

The experiences that should implant such an instinctive feeling of dread and repugnance toward all forms of snake life would probably be something like the following: In the earlier stages of man's development from the animal state, or perhaps beginning at an earlier period in the history of the race, long antedating the paleolithic, and for innumerable generations thereafter, his dwelling was in a climate and with surroundings where deadly serpents abounded exceedingly and constituted his most formidable enemy as being most difficult to guard against. The most prominent characteristic of the serpent habit is that of lurking, lying in wait and eluding observation until the victim unwittingly comes within reach. It is a fact known to the writer from personal observation that the rattlesnake possesses the power to so simulate in colors the surrounding objects as to be invisible to the eye of an observer at a short distance, and without obstruction to the view, and then suddenly to flash upon the vision with startling distinctness.

This ever-present menace to the safety of the man-animal, or animal-man, under aggravated conditions of exposure with slight means of defense, requiring constant vigilance as the price of immunity, and that but partially effective, must have, with long persistence, left the impress on his mental machinery, which we find still present as an instinct, and bearing a close analogy to that propensity so conspicuous in the horse, to shy away from wayside objects that might have concealed his deadliest foe, lying in wait to spring upon its defenseless prey.

The fear of man for harmless serpents, and the fear of the horse toward innocent bushes thousands of years after they have ceased to be legitimate objects of dread, cannot be from the suggestion of a "sub-ego," nor from the promptings of an "innate intelligence," but must be the survivals of deeply implanted instincts, resulting from long exposure to dangers that menaced racial existence. Col. Alexander holds that each of his "sub-egos" is endowed with just sufficient intelligence, "no more and no less," to enable it to survive in the struggle for existence. But what of the millions that failed to survive in that severe struggle? Were they endowed with a little less than sufficient intelligence, and if so why were they so discriminated against? Col. Alexander says, "The strongest instincts and passions, and those of most universal possession and lifelong activity, seem to gain no increase of strength in a thousand generations, while many very obscure and subtle instincts, often entirely dormant through many generations, still persist in unabated vigor."

It is not clear what bearing the above statement has upon the questions at issue, but the first assumption in the sentence may be challenged on the ground of a lack of means of information by which to verify it. The process of instinct formation must have been so exceedingly slow that no duration of time coming within human observation would be sufficient to justify such a deduction.

In Mark Twain's "Innocents Abroad" he humorously relates that he and his party took passage on a glacier near the summit of Mont Blanc to ride down to the valley below. After waiting an hour he inquired when the glacier would start, and was informed that it moved at the rate of eight inches a day. So they abandoned that mode of conveyance. Birds and animals, if capable of such a degree of ratiocination, would conclude that the glacier did not progress. The application of this is obvious.

As to the second statement quoted, it may be assumed that the conditions that produced the dormant instincts have long since ceased, and only upon the fitful recurrence of similar conditions are they again aroused, a kind of atavism that may possibly account for the readiness with which the red-shouldered hawks responded to unusual demands upon their procreative functions.

Blue Prints.

The "blue print" theory must assume not only a preconception of ultimate types (for who can say when ultimate types are to be reached?), but a blue print must have been made of every momentary stage in the long process of development of every organic form—a conception that utterly beggars the powers of the human intellect to comprehend. Otherwise we must get back to the yard master conception of lever pulling every instant in the process, or the "mills of the gods" constantly grinding out new "blue prints" with the rapidity of electro-photography. The "sub-ego" must have for its guidance fresh patterns in endless variety, momentarily supplied, for the multitudinous steps in the onward progress of evolution.

It is true that Col. Alexander hints at a sort of autonomy of the innumerable "sub-egoes" with which the organs of plants and animals are supposed to be endowed; but they must either be supplied with "blue prints" from a higher source or have blue print apparatus of their own. This appears to me a narrower conception than that embodied in the views I have endeavored to express above—that is, that all natural phenomena, even those whose specific cause and character we cannot comprehend, are under the control of well defined and unvarying law, the source and authority of which we can never know anything, however we may indulge in ingenious speculations on these deep subjects; and the best we can hope to do in relation thereto is for each individual who cares to do so to frame for himself a "working hypothesis" which best satisfies the demands of his own mind workings.

Since writing the foregoing, I have read Mr. Arthur Erwin Brown's very interesting recital of experiments with snakes upon monkeys, from which the instinctive fear of snakes in monkeydom appears to be fully established.

COAHOMA.

Albino Hawks.

YUMA, Ariz., March 1.—Referring to the note of Mr. Ruthven Deane, in FOREST AND STREAM of Feb. 9, on albinism in the red-tailed hawk (*B. borealis*), I have to say that about ten years ago I had just such a bird. It had been shot by a Mexican and slightly injured in the left wing. It was an almost pure albino and a most magnificent looking bird. I had it alive for several months, and although I planned many times to kill it and make up the skin, I had not the heart to do so, and in the end I lost it altogether. I foolishly allowed myself to be talked out of it by a friend, by whom it was kept for nearly a year. Eventually it escaped and was never again seen by either of us. I spent much time and some money in trying to again find it, for I much regretted the loss of so beautiful a specimen. I hired a number of boys to locate or kill it for me, and every man I saw with a gun I told of my lost bird, but it seemed to have dropped out of sight altogether. It had been taken on the Santa Cruz; about twelve miles above Tucson. But for a faint waving of red near the base of the tail and a few flecks on the side just under the edge of the wing, the bird was a pure white. Later I saw another in the foothills of the Santa Catalina Mountains, in the vicinity of Tanque Verde, but it had a dirty yellowish appearance and was very wild.

HERBERT BROWN.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Wild Ducks Breeding in New York.

NEW RUSSIA, N. Y., March 6.—*Editor Forest and Stream:* I will briefly state what I have seen in regard to the breeding of wild ducks in New York State at the present time, and also twenty or more years ago.

Within the last ten years I have made it a practice to visit Lake Champlain in summer at least twice or more times each month on fishing and boating excursions, and also have been around certain streams and lakes of the Adirondacks, my home being in the central part of Essex county. In all this time I cannot recall the memory of seeing a flock of young ducks in Lake Champlain or in the Adirondacks, neither have I seen any nests. Before this time the ducks bred plentifully in the Adirondacks on almost every lake and small pond and on every stream that had any still stretches of water having wooded or bushy banks.

I have lately made some inquiries in regard to the matter, and the answers have been about the same as the above statement, although one man says that for the last two years he has seen one or two broods of young ducks on Lincoln Pond in Essex county. This pond is mostly in the woods, and is associated with a great marsh. I used to hunt ducks on this pond years ago. Hundreds of ducks were there then. Now there is nothing worth going for. I have visited and passed by the pond many times in the past few years in the summer, but did not see any ducks.

There is a trout stream near my home with a mill dam on my farm which sets the water back and makes quite a stretch of still water. Twenty years ago black and wood ducks raised a brood or two every year. I have seen their nests not fifty rods from my house. When trout fishing I used to see young ducks in different places on this stream (Boquet River), also on nearly every small pond or lake throughout the North Woods.

To sum up, I would say that the use of a little common sense ought to settle the question of the evil of spring shooting of ducks. The spring flight of ducks are what is left after the shooting of both North and South throughout the preceding autumn and winter. They are the only seed saved, or left, for the next year's crop. These ducks come north in the spring for the purpose of setting up housekeeping and raising a family. The practice of destroying them at this time is disastrous. This ought to go without saying. For instance, what would be the result of legalizing the catching of trout when they first gathered on their spawning grounds, allowing the public to destroy the only seed (for another crop) that was left over from the last season's fishing? I cannot but think that our Legislature has sense enough to settle this question aright.

BAINBRIDGE BISHOP.

SYRACUSE, N. Y., March 5.—*Editor Forest and Stream:* Seeing your request for information on the subject of wild ducks breeding in this State, I offer the following:

Last summer while looking for some feathers suitable for fly-tying, I found an English sparrow's nest in the West Shore Railroad Station at Cazenovia, Madison county, N. Y. On pulling it to pieces I found about twenty-five or thirty feathers like the sample No. 1 inclosed. These are very similar to the No. 2 breast feathers of a mallard, only they are a trifle darker. The station is situated about 100 yards from a large swamp and about the same distance from Cazenovia Lake, which is about four miles long and three-fourths of a mile wide. I do not understand where the sparrows got these feathers unless it was from a deserted nest. A wood duck is known to have had a nest five years ago at the head of the lake, about four miles from the station.

I believe in giving the ducks fair play, and hope the law which you advocate will be passed. W. M. F.

[The feathers sent us by our Syracuse correspondent are undoubtedly those of the male and female mallard, but it would be difficult for any one to say whether they were from wild or domesticated birds. And even if from wild birds, their presence would not be satisfactory evidence of the breeding of the mallard near Syracuse, since the feathers might have been shed by migrating birds on the surface of the lake, blown ashore and later picked up by the sparrows.]

The Coming of the Birds.

MILHURST, N. J., March 8.—*Editor Forest and Stream:* Saw a bluebird for the first time this year, Feb. 26; on March 3, Sunday, saw a red-wing blackbird and two robins for the first; also several bluebirds, and March 3 gathered several spathes of the swamp cabbage in a little ravine having a southern exposure. I see by my journal that I found a bunch of violets in bloom on Oct. 26 of last year. This morning I have seen several red-wing blackbirds, several bluebirds and quite a number of brown hedge sparrows.

A. L. LYON.

Various explanations have been suggested for the fact that most flat fish have the dorsal or upper surface colored, and the ventral or lower surface white. It has been said that the white ventral surface protects the fish, for the surrounding water with the light shining through it has about the same tint, and so an enemy floating below and looking up could not distinguish him. Recent interesting experiments to discover the influence of sunlight on the color of flat fish are noted in the Revue Scientifique. Having placed a few young fish in a glass vessel, the experimenter covered the sides and top of the vessel, placed it on a support, and beneath it so arranged a mirror that the sunlight was reflected into the water, and illuminated the ventral faces of the fish, while the dorsal faces were in darkness. The natural conditions were thus reversed. The water was frequently changed, and the fish were well fed. At the same time similar fish were placed in a glass vessel and exposed to the light in the usual way. The result was that out of thirty fish exposed to the sunlight from below, only three remained like those in the ordinary glass vessel, and the others developed greater or less quantities of pigment cells on the ventral face. This indicates that light has an important influence on the color of animals, but it evidently is not the only influence to be considered, since some animals whose habitat is dark have color.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

A Virginia Quail Hunt.

Editor Forest and Stream:

I have enjoyed so many interesting letters on shooting by your correspondents in nearly all parts of the United States that I thought a short account of quail or partridge shooting in this rather remote corner of southwest Virginia might amuse some of your readers.

Quail give us our principal diversion, and although there are ruffed grouse (locally pheasants) and turkeys in the woods, they are few and far between, and nowhere near us are they sufficiently numerous to insure a day's sport. We have also the *Lepus sylvaticus*, commonly, though erroneously, called rabbits instead of hares; two or three of these cottontails are generally bagged, especially in the early days of the season.

Our patron Saint Hubert has been good to this small town, having brought together a brotherhood of true sportsmen; and you know that this term implies gentlemen in the best sense of the word. Our little band, about six in number, are endowed with many lovable and admirable qualities, together with simple and refined tastes. All like a nice horse, a good cigar and a quiet, sedate game of whist, not extending later than 8 P. M. to 11. But above all, they admire pointers and setters and guns by first-class makers, and being constant readers of FOREST AND STREAM they are well abreast of the times and up to date in all matters relating to shooting and other gentle sports. We use guns of the latest type. Our party are divided as to the merits of pointers and setters. Having been brought up with pointers, I have always preferred this dog. Our rough country, however, would indicate the setter as the dog for the work we have. Our experience is that the dog, whether pointer or setter, should have plenty of white in his make up; this color assists materially in locating the dog when ranging in stubble with a heavy growth of ragweed.

Our sportsmen represent a variety of callings. One is manager of a large manufacturing concern—an ardent sportsman, naturalist and taxidermist; he also tells a most excellent story; the children simply worship Grandpa W. Brother Billy, statesman and legislator, looks after our game interests in Richmond; no man more thoroughly enjoys a day's outing. H. and B. are lawyers; both have served the commonwealth and are regarded with much respect by the profession as well as by the rest of the community; added to their many good qualities, they each own a fine farm of several hundred acres about three miles from town, and on these lands we do much of our hunting. Next comes Frank, the bank president, a good shot, with cultivated tastes for literature and music, and a great love for nature; a most amiable and accomplished companion. And last, but by no means least, comes another Frank, our latest addition; he also owns a fine place about two miles beyond the farms I have mentioned, and these lands, with two or three adjoining properties that we have leave to shoot over, afford ample territory for our sport.

The season for quail extends from Nov. 1 to Dec. 31; in the adjoining county to the west the season opens Oct. 15 and closes, as with us, Dec. 31. We generally run up to this western county and have a few days' sport before our own season opens.

The fall of 1900 was extremely beautiful, and we had many delightful days' sport. The beauty of the weather was enhanced by the beauty of the scenery of the surrounding country, the mountains having bold and fantastic outlines, and all through November they exhibited the most striking and gorgeous autumnal tints, often suffused with a blue haze that added an indescribable charm to the prospect. The mornings and evenings were somewhat cold, succeeded by a genial warmth during the rest of the day.

Toward the end of November I made an engagement to go out with our bank president, and arranged to walk down to his house at 8 next morning. Frank was anxious to see two puppies in the field that I had amused myself with during the summer and beginning of autumn, trying my hand at training and bringing them up in the ways they should follow—they are liver and white and rejoice in the noble names of Rex and Duke. They are not by any means "registered dogs," and one, Duke, is somewhat coarse in his lines and a little lighter about the head and heavier at his stern than is quite desirable; he will never take a prize as a bench dog. His brother Rex has much finer points, and doubtless throws back to some noble ancestry. They both have fine, sound constitutions, and have developed into large, handsome dogs. On the day we went out they were seven months old. Going down on the morning at the hour appointed, I see the rig standing at the gate all ready to start. Jake, with the light of battle in his eye—all darkies love sport—was just putting a finishing touch to the harness, and Frank soon appears, looking fit and smart in his khaki shooting things, and quickly as possible the guns, ammunition, lunch and puppies are put on board and we are spinning along the hard macadam road, through fields white with hoar frost, the sharp air making our blood circulate and ears tingle. As we have only six miles to drive, and knowing the birds will not be out till the sun has had time to warm things up and the hoar frost disappears, we begin to drive more leisurely and exchange a word or two and a little chaff with friends on their way to town. Our objective point is a long, narrow stubble field lying between the railroad and the river that winds through the valley a short distance from Frank H.'s place. We are soon there, and giving Jake directions to drive on a mile further and wait for us, we equip ourselves and strike across the railroad into the stubble, now looking almost black with ragweed.

The puppies know very well what their duty is, and begin ranging with great zeal. After working through the field without a sign of game, we come to the conclusion that we are too early, and determine to retrace our steps and rejoin Jake and go further on. As we arrived near the place we had entered the field the dogs suddenly came to a point, and almost at the same instant the birds flushed and darted into the woods fringing the river. We each fired and scored two misses. The covey had crossed the river and our chances of another shot at them were over till the afternoon. Not much elated by our opening performance, we walk up the railroad and taking a cross road, we soon come back to our wagon. We proceed along the public road to a famous stubble field on Brother H.'s land, which we reach after passing through a narrow strip of woods. Jake is sent on with instructions to wait for us on the top of the hill about two miles further on. Just after getting over the fence an outlying solitary bird gets up on my side and goes off like a little brown cannon ball, giving a beautiful quartering shot. I cut him down at 40 yards and feel better for the performance. Soon the puppies are trailing a hot scent, and after some good and careful work locate their birds and come to a dead point. They seem transfixed into marble. A fine large covey flushes, from which we fire at two birds, each missing, I with my right, Frank with the left. As they drop into thick woods close by, we decide to leave them, hoping to find them on the same feeding ground in the afternoon. On the further side of the field Rex came to a sudden stop and was at once backed by Duke. A large covey got up almost under our feet, and we managed to bring three to grass with four empty shells in our guns.

We now descended into the little valley in the direction the birds had taken. We soon came to the conclusion that they had flown over to the woods and proceeded up the valley, following a line of narrow stubble fields. Getting over the rail fence I nearly trod on a large covey. We both fired and missed, remarking to each other that out shooting the unlikely always occurs. Our attention was quickly drawn to the dogs. They were evidently either on the tracks of the birds we had just fired at or had got in fresh game. Their zeal and perseverance soon convinced us that it was another covey, and we had a most beautiful illustration of roading and drawing. Rex, with nose close to the ground, was working on their tracks, and Duke, with nose up, was carrying an air scent. The birds ran about 250 yards and were located in a clump of briers at the fence, where the dogs made a beautiful point. Leaving Frank with the dogs, I hastily crossed the fence; the birds refused to break cover, so taking up a large stone I plumped it into the brush. The effect was like taking the cover off a volcano. With a great noise and flutter the birds shot up into the air and instantly dropped into the thick woods hard by. We each got in a shot and picked up two birds. This was the largest covey we saw during the day. From here we worked in toward the summit of the hill, having one or two fields higher up that we wished to look through. We got two or three more birds, and at last came in view of Jake and the trap. It was getting on toward 1, and we were admonished inwardly that lunch would be about the right thing. We drove down to a clear, gushing cold spring on the banks of the river, and spreading out the good things Frank's wife had so thoughtfully provided, we enjoyed a meal with an appetite that only shooters, fishermen and hunters and a few other honest men are permitted to enjoy. I suppose all your readers have not tasted old Virginian ham. I can only say they have lost something.

Our birds, when spread out, were not a great show; however, we resolved we would make up in the evening. Nothing could exceed the delightful cigar after lunch. The day was perfect. Rising abruptly and close to us was a magnificent mountain; its sides, upon which the sun was shining, were a mass of scarlet and gold. The day was an ideal one, and it had turned so warm that a host of large yellow butterflies were skylarking over a wet place in the road. And so still was the atmosphere that we could distinctly hear the voices of some children half a mile away.

After an hour's rest we got to work again and had some nice sport. The birds seemed more plentiful than in the morning. We also shot better. Duke rather disgraced himself by breaking his point on some running birds and flushing them before we got within shot. Toward evening the dogs, after considerable work, located a covey in a circular depression in a stubble field. On our going up a fine strong covey flushed, and Frink did what I had never seen before; he killed three birds, one with his right and two with his left. We now observed that the sun was nearly down, and moreover we were tired, so it being too dark, we rejoined Jake, took out our overcoats and stowed away our traps, remarking that our cartridge bags were very much lighter than when we had started in the morning. However, we had some fine birds, and lighting our cigars were soon spinning toward home, where bright lights and dinner awaited us. L. C.

Maine Game Legislation.

BOSTON, March 9.—On the mild weather of a week ago some of the pickerel fishermen were out. C. H. Jones and Henry Wilkins went up to Barratt's camp, on the Sudbury River, the other day. They took over a dozen, though the size was rather small, the largest 20 inches. Mr. Jones has made several trips the past season to the same camp, with friends. On one trip a couple of weeks ago twenty-six pickerel was the score.

Probably the attempt to prevent the carrying of guns and rifles into Maine in the close season on game is arrested for this session of the Legislature. The latest reports from Augusta say that the Committee on Inland Fisheries and Game has voted that it ought not to pass. Reports suggest that the bill was wanted only by the owners of wild lands, who fear forest fires, but I am sure that the measure had the support of some of the best friends of game protection in the State. Doubtless the influence of the resident hunter, added to that of the hotel and camp proprietors, has killed the measure, and sportsmen who make August and September trips into Maine, ostensibly for fishing and canoeing, will continue to take their rifles along, just as much as their fishing rods. The same committee is considering a law compelling hunters to take out a $25 license to hunt moose in that State. I asked a gentleman yesterday, who has hunted moose several seasons in Maine, what he thought of such a license law. He replied: "That will settle it with me. Moose hunting is too uncertain in Maine any way. For one or two seasons I have had it in mind to go to Canada—New Brunswick or Nova Scotia—after moose, where they are surely more plenty, but the license fee has caused me to go to Maine again, each time without success. I believe that a license fee of $25 for hunting moose in Maine will drive about every non-resident hunter to the Provinces instead of Maine. Then what moose hunting there is left in that State will be left to the resident hunters, who are already getting to be too thick for the outsider."

The general hunter's license for non-residents of Maine has been killed again by the Committee on Fisheries and Game. This measure was referred from the last Legislature. The resolve appropriating $3 000 for scientific investigation of the best methods of propagating fish has been killed by the same committee. Leave to withdraw has been reported by the same committee on the petition of the marketmen of the State, that they be permitted to sell game legally killed in the open season, by taking out a license. The repeal of the September deer shooting license law has not yet been decided, but I learn that there has been a revulsion of feeling and that the lumber landowners who want this law repealed do not stand in as good favor as early in the session. SPECIAL.

A Market Gunner's Views.

CURRITUCK COUNTY, N. C., Jan. 20.—*Editor Forest and Stream:* The day's shooting was over and we had picked up and were on our way home. The wind was fair, though light, and three-quarters of an hour at most would see us at the house. I was sitting on the midships thwart of the skiff, leaning back over the centerboard trunk, and George, the boatman, was managing tiller and sheet, while the dog—just now receiving his first lessons in the art of retrieving wildfowl—lay at his feet.

The day's flight had been poor. Not but that we would have had a good many more birds if I had shot well, but at best a dozen or fifteen would have been the whole bag, and often hours went by without our seeing a bird, let alone getting a shot at one. Naturally, then, we fell to talking over the increasing scarcity of the ducks and the causes. "It is not strange," I said, "that they are scarce. The other day I came down the sound, and it seemed to me that every half-mile I saw a battery, and where there wasn't a battery there was a bush blind, and where there was neither battery nor bush blind there was a sloop or a skiff sailing up the birds to make them fly to some gunner."

"That's right," said George. "It's the sailing that does it. Ducks ain't fools, and if people keep chasing 'em up all the time, the ducks are bound to get tired of it and to go away so far that the boats can't follow 'em. That's the way we've drove all the ducks out of this part of the sound, and 'most everybody's followed 'em down twelve or fifteen miles below; where they was when I last heard of them. People about here are getting onto this battery shooting racket, and there's getting to be right smart of a feeling against it. I wish they'd stop it, but above all stop sailing. Up in Back Bay, you know, north of the line between Virginia and North Carolina, they have a law against sailing, just as we have here, only they enforce it there and we don't enforce it here. There, a man can take out his battery, put it overboard, rig it, and sail back to the marsh or some nearby land. He can't put sail on his sloop again until he is ready to take up his battery, and if he does put sail on, he's got to take up. Up there the canvas weigh a pound to a pound and a half more than they do down here, and so they bring a better price. We chase the fat off ours down here. We never did enforce the law against sailing in this county, but it's got worse in the last few years, since people got crazy about boobies, ye know—ruddy ducks. In old times there were worlds of boobies, and they were no good on earth. Nobody'd eat 'em or buy 'em, or shoot 'em. But after the people got to wanting them and paying for them, men and small boys took to sailing them and ringing them, and it's just got to be the fashion down here to chase the ducks all the time. Why, them boobies brings $1.25 a pair now—half as much as canvas and nearly as much as redheads."

"Well," said I, "what prospect is there of anything better? The sailing may correct itself in part by permanently driving the ducks away, but I do not see how that is likely to benefit you."

"They're pretty near driven away now," replied George. "If I had my way," he went one, "I'd fix it, I think, so that the shooting wouldn't be harmed so much, and so that an honest man would have a chance to make a living. Now you know I gun in winter, and I want to make what I can at it. At the same time, I don't want to kill every living duck there is in the sound. I want some left for next season. I ain't got much education and maybe I can't express myself very well, but I know what I want.

"There's lots of men that guns for profit that don't seem to look after their own interests. But if I had my way, I would limit the decoys that a man could own. He could own fifty if he was a bush blinder or a point shooter—that's a great plenty. On these he'd have to pay $10 before he put them out the first of the season. A battery man could have 150, instead of from 300 to 400 as they have now, and on these he would have to pay $25. The law against sailing would be put in force. If all this were done, it would put an end to this harrying of the ducks. They would stay here and every responsible person would have a chance at them."

"Now these taxes all going to the county would run up into hundreds of dollars, and would be enough to hire three or four men during the season to patrol the sound and see that the law was enforced. The men would have to be deputy sheriffs or marshals—regular law officers who had the power to arrest people who were doing things that were against the law, and to call on citizens to help them to make arrests or to give evidence. If they got the right kind of men for the work it would take only a short time to make people understand that the law meant something. The sailing and chasing fowl about would stop, and when the ducks got here they would stay all winter instead of just stopping here and then being chased off to some other place where we who need them can't get at them.

"I ain't sure but the best way would be for us to make a county matter of it altogether, not to go to the State Legislature at all, but just to make our county commissioners order an election held about this here and let us who are interested decide it for ourselves. If we did that, I believe the law could not be changed until we ourselves had voted on it again.

"The people who live in this county most all make their livings by farming in summer and gunning in winter, when the ducks are here, and we are the ones who want plenty of ducks, for they are a good share of our living. As it is now, they come and are chased away, and we don't get a half a chance at them. Men go out to sail ducks, and if they don't find ducks they sail geese, and after they have driven the geese away they sail boobies and blue peters. They don't make any money themselves, and they won't let no one else make any. It's all wrong, I tell ye, and somehow, some time before long, it's got to be stopped."

I give these remarks for what they are worth, as the opinions of a professional gunner whose living during the winter months is earned in this way. He belongs to a class whose interest it is to have the duck crop each year as large as possible.

I should say for the benefit of those ignorant of the locality, that in this county the season for wildfowl extends from Nov. 10 to March 31. Shooting is permitted on Monday, Tuesday, Thursday and Friday of each week.

M. M.

American Wildfowl and How to Take Them.—XXVI.

BY GEORGE BIRD GRINNELL.

[*Continued from page* 185.]

Fish Ducks.

Sub-family *Merginæ*.

THE mergansers, or, as they are often called, the fishing ducks, may be distinguished from all others of the *Anatidæ* by their narrow and round (not flattened) bills, always provided with sharp, backward-directed, tooth-like lamellæ. Except for their bills, they are like the sea ducks. They are birds of handsome plumage, always provided with a crest, which in the male may be enormously enlarged and very striking, as in the hooded merganser, or merely puffy, with brilliant iridescent hues, as in the goosander. The mergansers feed almost altogether on small fish, which they capture by diving, and as a consequence their flesh is not at all desirable. All our species are widely distributed over North America.

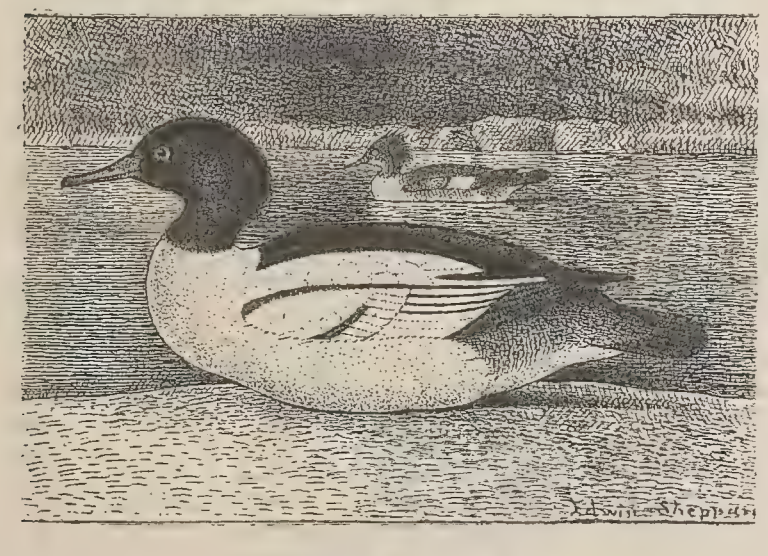
American Merganser.

Merganser americanus (Cass.).

The adult has the head and upper neck greenish black, with brilliant metallic reflections, the head being puffy and the feathers slightly longest on the back of the head. The back is black, fading to ashy gray on the rump and upper tail coverts. The primaries and secondaries are black, but the rest of the wing is chiefly white, crossed by a black bar. The under parts are white, tinged with salmon color, rosy or pinkish, which does not last long after death. In old skins, the breast feathers often become barred with ashy. The tail is ashy gray, with bill, eyes and feet bright red. Length about 26 inches.

In the female the head and neck are reddish brown, and there is a long crest on the back of the head, much more marked than in the male. The chin and throat are white, the upper parts gray. About one-half of each secondary feather is white, forming a speculum on the wing. The primaries are black, the flanks and tail gray. The lower parts are pinkish salmon color in life, fading to white. The bill and feet are red.

Valueless as food, the great merganser is certainly one of our most beautiful and graceful birds. It is a close relative to the goosander of Europe, and was long con-



AMERICAN MERGANSER.

sidered to be the same bird. The differences on which they are separated are very slight. The merganser is a resident of the extreme North in summer. It is found in Alaska, though apparently not very common there; and in fact it does not seem to be a very common bird anywhere, both the other species exceeding it in numbers. It is one of our most hardy birds, and one of the last to go South in autumn; and indeed it will remain about air holes in the rivers, where it can fish, long after most other ducks have taken their departure for the South.

It is well established that goosander breeds in the hollows of trees, wherever trees are accessible, though some observerss who have reported nests of this species from the far North, beyond where timber grows, state that it builds its nest upon the ground in the ordinary manner of many of the salt-water ducks.

Definite information as to the breeding habits of this merganser were first given by Mr. Geo. A. Boardman, of Calais, Me., to whom ornithology owes so much. In FOREST AND STREAM he says:

"Many years ago I was up at Grand Lake Stream salmon fishing, when I saw a large duck fly into a hole high up in a large birch tree. The log drivers said it was a sheldrake, and had nested there many years. I was anxious to see what kind of a merganser it was. After the log drivers' day's work was done one of them by driving spikes managed to get up. The old bird flew out, and he brought down one egg, and said there were seven more. I then got the man to arrange a noose over the hole, and the next morning we had the old bird hung by the neck, and the eight eggs were new to science. The log drivers said they had seen the old bird bring down the young in her bill to the water. Several years later Mr. John Krider, of Philadelphia, went with me to the same tree and collected eggs. He was a well-known collector. Mr. Audubon was mistaken in his account of the nesting of this merganser, since he describes it as nesting on the ground among rushes, in the manner of the *serrator*, having a large nest raised seven or eight inches above the surface."

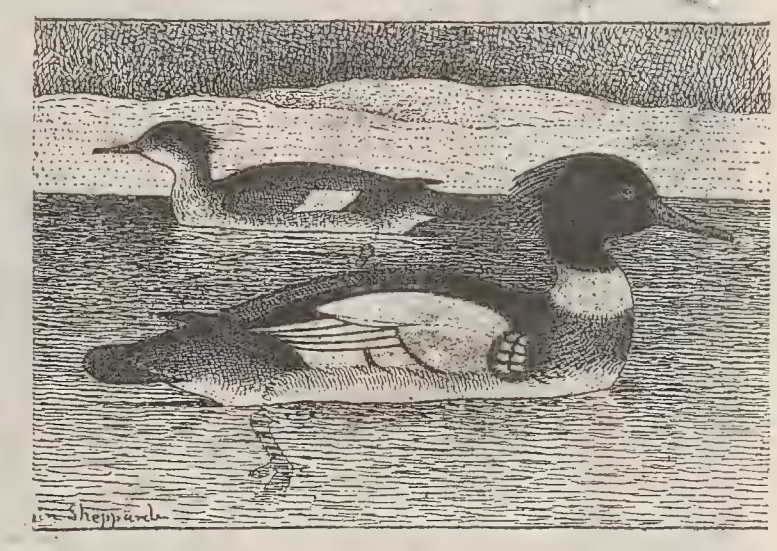
Often, while traveling along streams in uninhabited parts of the country, one may come upon a mother merganser and her brood of tiny young and may drive them before him for miles along the stream, the birds keeping well out of his way, and the mother watching over them with the tenderest care. It is a curious sight to see these tiny creatures run, as it seems, over the surface of the water, at the same time flapping their tiny featherless wing, but making extraordinary progress the while.

The goosander, like others of its kind, feeds almost exclusively on fish. It is said that in the autumn its flesh is not noticeably bad, but that in spring it is exceedingly rank and oily.

Red-Breasted Merganser, Sheldrake.

Merganser serrator (Linn.).

The adult male has the head greenish black, with some metallic reflections of violet and purple. The crest is a ragged one, chiefly on the back of the head; the feathers are irregular, but few of them being long. There is a well-marked white collar around the upper neck below the black. The lower neck and breast are pale pinkish brown, streaked with black from above downward. The back and inner scapulars are black; the lower back and rump grayish, waved with black and white; the tail grayish brown. The wing is chiefly white, crossed by two black bars. The primaries are brownish black, and the outer webs of the inner secondaries edged with the same color. On the side of the breast, in front of the bend in



RED-BREASTED MERGANSER.

the wing, is a patch of white feathers, margined with black. The sides are barred with black and white, and the rest of the under parts white. The bill, eyes and feet are bright red. Length about 22 inches. In this species the nostrils are situated near to the base of the bill, whereas in the goosander they are nearly half way between the base and tip of the bill. This will enable the observer to distinguish between the two species.

The adult female has the top of the head and crest reddish brown; the sides of head and neck somewhat paler, fading to white on the throat. The upper parts are dark ashy gray; the sides almost the same, but somewhat paler. There is a white patch on the wing, divided by a black bar. The under parts are white, often with a pinkish or salmon tinge in both sexes, but this is by no means always present. The bill, legs and feet are like those in the male, but perhaps a little duller.

Like the goosander, this species belongs to the Northern Hemisphere at large, and is found in Europe, China, Japan and other islands of the Pacific. Mr. Shepherd found it breeding in Iceland, in company with Barrow's golden-eye, and Old World observers generally have reported it as abundant in the North. It occurs regularly as a resident in Greenland, and of course in North America is quite a common species. It has been reported in summer from Alaska, and from Maine, and breeds in both sections. Mr. MacFarlane found it also breeding on the Anderson River, in the far North. The nest is reported to be closely similar to that of the black duck, and the parent often lines it with down plucked from her breast.

Like the preceding species, the red-breasted merganser is a tough and hardy bird, well fitted to endure our Northern winters, and not proceeding southward so long as there are any open waters in which it can gain a livelihood. It spends much of its time on the salt water and associates more or less with the winter sea ducks of the New England coast, but more perhaps with the whistlers than with any others.

The red-breasted merganser feeds altogether on fish, and for this reason has no value whatever as a table bird. Dr. D. G. Elliot, in his excellent work on "North American Wildfowl," gives a graphic description of their fishing which is well worth reproducing. He says: "When engaged in fishing, by their rapid diving and maneuvering beneath the waters they cause the small fish—if the schools are of any size—to become widely scattered, and many rise close to the surface. The gulls take advantage of such opportunities and pounce upon their luckless finny prey from above, and then, with ducks diving into the depths and gulls plunging from above, the scene is a very lively one. I remember on one occasion watching a number of this merganser engaged in fishing in a cove, when their movements attracted to them a large flock of Bonaparte's gull (*Larus philadelphia*), which hovered over the ducks for a moment and then began to plunge head foremost into the water, one after another, in rapid succession, emerging, frequently with a small fish in the bill. The mergansers paid no attention to their fellow fishermen, although at times a plunging gull would come perilously near one of the saw-billed gentry as he rose from the depths; and what with the rising and disappearing mergansers and the air above them filled with the forms of the darting gulls, executing all manner of swift and graceful evolutions, the scene was very spirited and full of animation."

The red-breasted merganser is swift of wing, and, as might be imagined, an expert diver. It frequently comes in very gently to decoys, dashing along at great speed, until it reaches the point where it wishes to alight, and then, without checking its flight, throwing itself breast down upon the water and sliding over it for some distance. After alighting, it looks about for a moment, alternately raising and depressing its crest, and if it sees nothing to alarm it, goes to work fishing. There is no reason for shooting it, as it is worthless for food. Among the common names applied to this bird in different sections of the country are sheldrake, saw-bill, fisherman, pied sheldrake, shelduck and big saw-bill.

Hooded Merganser.

Lophodytes cucullatus (Linn.).

Adult male has the head, neck, back and scapulars black. The very long full crest is pure white, margined with black. The wing coverts are gray, fading to ash color behind, and the greater coverts are black at the base and tipped with white, showing a distinct black and white band across the wing. The secondaries are white, the basal portion black, which gives the effect of two wide white wing bars, bordered in front by two narrow black wing bars. In front of the wing on the side of the breast are two black and two white bars, crescent-shaped. The sides and flanks are rusty brown or tawny, growing darker toward the tail, and crossed by fine black lines. The under parts generally are white; the under tail coverts streaked with dusky. The bill is black, eye bright yellow and the feet yellowish. Length about 18 inches.

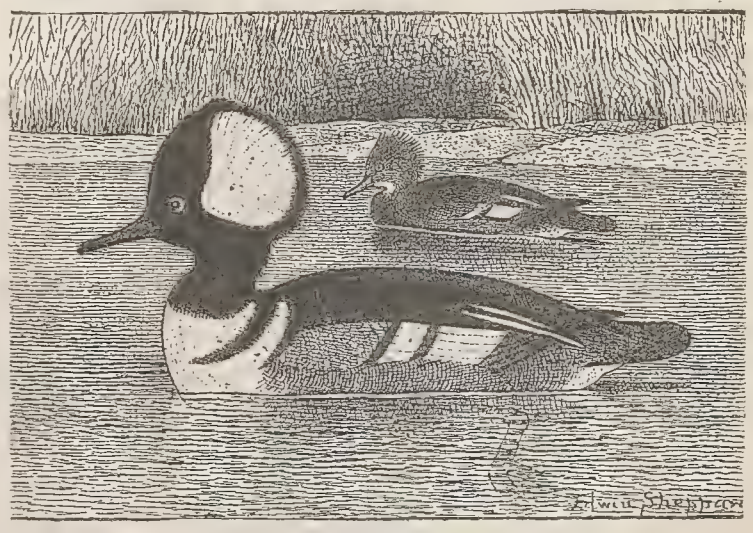
In the female the head and crest are reddish brown and the upper parts are grayish brown. The chin and throat are white; the flanks grayish brown. There is a patch on the wing, white, crossed by a black bar, and the under parts generally are white. The bill is yellowish, darkening to brown on the margin and on the nail.

The hooded merganser is one of the most striking of our North American ducks. It is exclusively a North American species, and occurs in Europe only as a straggler. Throughout the whole of North America, however, it is generally distributed, and seems to be no less abundant, for example, in Nebraska than it is on the Atlantic or Pacific coasts.

The hooded merganser breeds over much of the country in suitable localities. Mr. Boardman has found it breeding abundantly in Maine, where its nests were always found in the hollows of trees, the cavity being usually lined with grass, leaves and down. He has related the following curious incident in regard to the breeding of this bird:

"On one of my collecting trips my attention was called by the log drivers to a singular contest between two ducks—it proved to be a female wood duck and a female hooded merganser—for the possession of a hollow tree. Two birds had been observed for several days contesting for the nest, neither permitting the other to remain in peaceful occupancy. The nest was found to contain eighteen fresh eggs, of which one-third belonged to the merganser, and as the nest was lined with the down of the merganser it appeared probable this bird was the rightful owner of the premises."

Audubon states that the hooded merganser bred in Kentucky, Ohio and Indiana; and Dr. Bachman believed that it bred in South Carolina. It certainly breeds in Florida. During its migrations, the hairy-



HOODED MERGANSER.

head, as it is often called, is common in New England, and generally all along the coast, at least as far as South Carolina. In the marshes of Currituck Sound I have seen them in great numbers, sometimes in flocks of over one hundred individuals.

The hooded merganser is a bird of exceedingly swift flight, and at a little distance may often be taken for a canvasback or blackhead as it flies swiftly toward one. It is an unsuspicious bird, coming up readily to decoys, striking the water with a swift rush, and for a few moments after alighting, swimming about alertly, as if to observe its surroundings. Usually it flies with great directness, and is not easily frightened into changing its course. The hooded merganser is an extremely expert swimmer and diver, and it is a beautiful sight to watch a small body of them, as one sometimes may, when they are feeding without knowledge of the presence of an enemy. At such times the startling plumage of the male is seen to very great advantage, and one is greatly attracted by the beauty of his plumage and the grace of his motions.

This bird rejoices in a variety of names, of which water-pheasant, hairy-crown, hairy-head, saw-bill diver,

little saw-bill, swamp sheldrake, spike-bill and cock-robin are the most familiar.

Note.

The smew *(Mergus albellus)* was reported by Audubon to have been taken in Louisiana, near New Orleans, in 1817. The bird was a female. Since that date no specimens have been reported as taken within the United States. If the bird ever occurs on this continent it is only an accidental straggler. It is perhaps more likely that in the case of the specimen taken by Audubon there was some mistake of identification. However, the description is given here, taken from Dr. Elliot's "Wild Fowl": "Adult male: General plumage white. A large patch at base of the bill, including the lores and eyes, lower portion of nuchal crest, middle of back and two crescentic narrow lines on side of breast, outer edge of scapulars and rump jet black. Upper tail coverts gray, edges lighter. Middle wing coverts white, greater coverts and secondaries black, tipped with white. Primaries blackish brown. Tail dark gray. Sides and flanks undulated with fine black lines on a gray ground. Bill bluish, nail lighter. Iris bluish white. Legs and feet bluish lead color; webs darker. Total length about 16¾ inches; wing 7 6-10; culmen 1¼; tarsus 1⅛.

"Adult female: Head and nape chestnut brown, lores and cheeks brownish black. Throat and sides of neck white. Upper parts brownish gray, darkest on the rump; some feathers on back, tipped with ashy gray. Sides and flanks brownish gray. Under parts white. Tail brown gray."

CHICAGO AND THE WEST.

Threatening Indiana Law.

CHICAGO, Ill.—There is a large threat against Chicago sportsmen, and against reasonable game protection, in a certain Indiana game bill, which bids fair to become a law at this session of the Indiana Legislature. This is the Layman bill, Senate Bill No. 73. It has passed the Senate and has been referred to the committee in the House, and has passed that committee. The Indiana Legislature adjourns a week from to-day, so there is a very good chance that the bill may go up on the statute books. A few of its startling measures may be mentioned:

It opens the chicken season Oct. 1, and closes it Nov. 10, and it carries the apparently contradictory clause that no dog may be used on chickens from Oct. 1 to Nov. 10. It brings forward the wise limitation of the daily bag to 24 quail or 24 ducks daily. It also wisely prohibits altogether the sale of quail. It opens the duck season Oct. 1, and closes it April 15. It proposes no restriction whatever on snipe shooting.

So far as the above clauses are concerned it might be tolerable, but this is but a part. No man may go upon another man's farm with gun and dog without the consent of the owner. Yet he may go upon any swamp land without asking the consent of the owner. Hence it may be seen that a Chicago man cannot hunt on a farm without permission, yet the farmer may hunt upon the Chicago man's duck preserve without any hindrance. This clause, abolishing the common law of trespass, will perhaps eventually knock out the law.

A $25 shooting license is to be required of non-residents, though none of residents, and every hunter must have his license on his person. A railroad company carrying game out of the State can be fined $50 to $200. No shooter can go out with his gun on Sunday. Lastly, there are stiff fines and imprisonments provided for each violation of the law, and on top of this fine, and assessable upon the defendant, there is to be an additional fine, or blood money, of $20 for each conviction, which $20 goes to the State Game and Fish Commission. Thus it may be seen that Indiana also has caught the idea of "raising a fund for game protection." Indiana will at least raise a disturbance, if she does not raise a fund, with this law.

An emergency clause is attached to this bill, so the law will go into effect in ten days, if it be passed.

Hearing of this sweeping measure and seeing its evident animus, a number of sportsmen have altered their plans in regard to Indiana game clubs. Several members of the Tolleston club have given up their membership. Should the law actually be passed and enforced it would make game abundant in Indiana. No one dreams that it would be enforced against the local men. It would porbably be enforced to some extent against the city shooters who visit Indiana.

CHICAGO, Ill., March 9.—A telegram from the Secretary of State of Indiana, bearing date of March 7, reads: "Game bill has passed and now in the hands of Governor." At this date the bill still remains in the hands of the Governor of Indiana, though little doubt exists that it will become a law. This law more nearly affects the shooters of Chicago than any game law which has ever been passed by any State adjoining Illinois. The test of these things is the popular interest which they create, and every shooter in Chicago is discussing this Indiana measure. It will exact a $25 license from every member of the Tolleston, Calumet Heights, Maksawba, English Lake, Cumberland, Nickel Plate, Pittsburg, Lake George and many other minor shooting clubs, whose membership is made up mostly of non-residents. It will ask the same sum from every one of the 300 or 400 Chicago shooters who each week during the shooting season throng down to such points as Shelby and Water Valley. There is going to be trouble over this law just as sure as the world. It may stick and it may not. None the less it will advertise the question of game protection in a country where there has been little enough protection. Some features of the law are good.

The bill makes the close seasons as follows: Quail, ruffed grouse, prairie chickens, pinnated grouse, Jan. 1 to Nov. 10. Squirrel, Jan. 1 to June 1 and Oct. 1 to Nov. 10. Wildfowl, April 15 to Sept. 1 and Oct. 1 to Nov. 10. Dove, Jan. 1 to Jan. 1 and Oct. 1 to Nov. 10. Deer, wild turkeys, pheasants, protected entirely. Squirrels and wildfowl may be killed from Oct. 1 to Nov. 10 by permit from the Game Commissioner. Hunting on inclosed land without written permission of owner forbidden, under penalty of $10 to $25. Export of game is forbidden, except that non-resident licensees may carry with them twenty-four birds. Lawful number of quail in a day is twenty-four. Sale of quail is forbidden. The non-resident license sections read:

Sec. 13. It shall be unlawful for any person who is a non-resident of the State of Indiana to hunt, anywhere within the State of Indiana, any of the wild animals, fowls or birds that are protected during any part of the year without procuring a license to do so, and then only during the respective periods of the year when it shall be lawful to do so. Said license shall be procured in the following manner, to wit: The applicant shall fill out a blank application, to be furnished by the clerk of the Circuit Court of any county of the State, stating the name, age, occupation and place of residence of the applicant, which application shall be sworn to before some person authorized to administer oaths in the State of Indiana or the State in which the applicant resides. Upon the presentation of such application to the clerk of the Circuit Court of any county in the State, such clerk shall issue to applicant a license to hunt anywhere in the State of Indiana. Such license shall be good for one year. Before the issuance of any such license the applicant shall pay to such clerk the sum of twenty-five dollars and fifty cents, twenty-five dollars of which shall be paid to the Treasurer of State as a part of the fish and game protective fund, as hereinafter provided, and fifty cents of which shall be reserved by said clerk and disposed of as other fees of his office are disposed of. Any licensee under the provisions of this section hereby authorized to take from the State of Indiana twenty-four game birds of all kinds, killed by himself, which shall be carried openly for inspection, together with his or her license.

Sec. 14. No person to whom a license is issued under the provisions of the preceding section shall be entitled to hunt, pursue or kill game in this State without at the time of such hunting, pursuing or killing of game he has in his possession his license ready to exhibit the same to the Commissioner of Fisheries and Game or any of his deputies.

CHICAGO, March 11.—Governor Mount, of Indiana, has vetoed the new game bill as too arbitrary and sweeping in nature.

North Dakota Game Law.

The House of the North Dakota Legislature has passed the bill prohibiting the sale of game—yet another Western State to swing in line. North Dakota will probably pass a wolf bounty law,

Still another new thing for the sportsman is a paper fiber goose decoy. I saw it at Von Lengerke & Antoine's to-day for the first time, and the thing commends itself singularly to the goose hunter condemned to long voyages across country. In brief, this false goose is stamped out of a sheet of properly colored paper fiber,

THE INDIAN CAMP AT THE CHICAGO SHOW.

and is bent on a curve and fastened across the lower edge with a tin clip. The wooden neck and head are fastened by a simple clip at the front end of this curved body, which now presents the appearance not of a profile, but of the full body of the bird. Legs can be made of two clips of iron, which run up inside the hollow. The wind passes freely through the interior of the bird, so that it has no wobble. It has been tried by Western shooters, and works perfectly as a decoy. Now if you wish to pack your decoys, free the bottom clip, take off the head and neck, and pile the paper bodies out flat, one on top of the other. A dozen geese will not weigh a dozen pounds complete, and the problem of transportation is solved at once. The only thing lacking in these days of abundant devices for taking game is a little more game to be taken.

Sheep and Elk.

Last night I met at the Sportsmen's Show my old friend Jones, of Sandwich, Ill. He ought to be hired as a before-and-after sign betokening the virtues of sporting journalism. Six months ago he was a wreck. FOREST AND STREAM sent him out into the mountains, and to-day he is fat and talks bass. Mr. Jones tells me, by the way, that the elk in the Jackson's Hole country seem to him in danger of extinction, not so much from hunters as from sheep. The sheepmen are threatening to invade the winter range of the elk below the Park, and if they once get in there it is good-by elk. The local men are trying to keep out the sheep herders, but the result is still to be determined.

Game Laws in New Brunswick.

Arthur Pringle, of the New Brunswick guides here at the show, tells me that the New Brunswick Guides' Association has petitioned the Government to pass a law prohibiting night shooting of moose. This cuts off the popular form of night calling for moose, but in the opinion of the guides it is a necessity. They are going to have game in New Brunswick after we have killed all of ours in the United States.

Needs a Bear.

Mr. Oren Scotten, of Detroit, Mich., is going out into the Blackfoot country to kill a bear this spring, and he has sent out to his guide, J. W. Schultz, four bear traps.

Log Cabins and How to Build Them.

The log cabin reception room, which was one of the features at the show just closing here in Chicago, attracted considerable attention among sportsmen. Mr. George Schreiber, the executive artist at the show, and his able lieutenant, Charlie Norris, have taken orders for six of these cabins, to be put up in and around Chicago for sportsmen. Charlie Norris, by the way, was in charge of the timber operations which had so much to do with the success of the decoration scheme at the show. He got the pine here in time—nineteen car loads of it—and but for his ability as a hustler the decorations would have been up in the air. Charlie Burton, who had charge of the transportation facilities, was also mighty useful in getting these goods on the floor in time.

Interesting Things at the Show.

The trade features at the Sportsmen's Show in Chicago were, as earlier stated, made subordinate to the general scheme. The big ammunition houses did not put in booths, but were represented only by distributers. The Peters Cartridge Company, among others, made a good showing at the booth of their agents, Hibbard, Spencer, Bartlett & Co., and deserve great credit for the pains taken in the selection and arrangement of the goods. Had the show continued a week longer the Peters target gallery would have made a hit, as its attendance increased daily. The arrangement furnished for this essential part of the Sportsmen's Show were the best obtainable, though not so good as might be desired.

Toboggans and Snowshoes.

The New Brunswick cabin proved to be a very winning feature. A toboggan which they showed is the result of the genius and of the years of hard study of Henry Braithwaite, and it surely would seem hard to improve upon it. The old flatbottom board is, of course, done away with, that being impractical, as I have myself discovered long ago, in spite of the sporting pictures which show a snowshoer jauntily dragging behind him a moose on a toboggan. Braithwaite's toboggan has thin wooden shoes about four inches wide, set about fifteen inches apart. The sideboards of the runners are made out of the root end of the tree and retain the natural curve. The runners rise above in a long graceful curve about twenty inches from the foot of the sled to the top of the curve. Their ends are lashed back to the frame of the sledge, which is made with light standards and cross bars, all firmly lashed together. This sledge is not rigid, but will twist and give, though it cannot break. The curve of the runners carries it clear of any little obstacle, and big Adam Moore proved to me last night that this toboggan would go over anything that a man could step over. Getting into the shafts, he stepped clear across the table and the railing of the exhibit out into the aisle. The toboggan rose by the leverage of the shafts, mounted the table and was steadied down across the railing by the same means of the shafts. This is the secret of the tractability of the sledge. It is all in the shafts. From the sides of the vertical runners, a little way back from the front of the sledge, projects a loop of hide. Now you have two long slender poles about as thick as the little end of a broomstick, one going on each side of the sledge. The ends of these poles are thrust through the loops from behind, the hide engaging in a groove cut around the lower end of the shaft. Now you throw the shafts forward, and assume the position of the horse between these shafts. A couple of feet from the front end of the shafts is a ring of hide, fastened tightly. Behind this ring you fasten the end of your neck strap. You pass this neck strap back of your neck and out under the arms, and you are hitched up. In front of you projects a couple of feet of shaft, by means of which you rest your hands and guide your sledge. Now the wonderful parts of these shafts is that they do away entirely with all the side wabble, which makes a toboggan hard to pull. The lower ends of the shafts press tightly enough against the sides of the runners to be perfectly rigid so far as side motion is concerned. The pulling on the neck strap binds the shafts against the side of the runners. The toboggan is just wide enough to come along in a

snowshoe trail, and all these guides say you can walk all day and never need to think of your toboggan. They mention 100 pounds as being about the proper load, and say that those people who can pull 200 pounds easily don't grow in their parts of the woods. This sledge is a beauty, and is one of the most ingenious specimens of resourcefulness in the woods that was ever seen at any show.

I had a good talk also with Arthur Pringle, the famous snowshoe maker. I told him that when he sent me my pair of snowshoes he left off the straps. "They must have got lost in the custom house," said he, "for I sent them on the shoes, and had them tied just the way we all tie our shoes up there." He took down a pair of shoes and showed me the tie, and it is one of the prettiest things I ever saw, and the only regret is that one cannot describe it any more than he can describe the diamond hitch, or show it any better even in a picture. Briefly, there is a permanent toe strap made out of moose hide. Now take your thong, also of moose hide, double it, and pass the free ends through the corner hole on each side. The loop of the strap is now back on the body of the shoe, and the ends hang down below the shoe. Now bring the ends up through the shoe, over the first bar braces on each side of the toe hole. Cross the thongs. Pass the left hand end under the toe strap and bring it back. Pass the right hand end under the other strap and over the toe strap. Now pull both ends free and straighten them out back on the snowshoe. Now throw each end forward, and take a half hitch over the crossed thong at the front of the foot. Bring both the free ends back again until they join the original loop of the thong, which you left lying on the shoe. Tie them of the same length as that loop. Now you have a double strap running back behind the heel. You do not change this strap at all, but kick your foot into it, or out it, when you are using the shoe. You can tighten your straps by rolling them at the heel. Now the wonderful and indescribable part of this tie is that on the toe of your foot you have something which looks as though you had started to braid some meshes with moose hide. You have not a single, thin, biting strap, but a pad of braided straps. Your foot cannot slip sideways in the shoe, friction is reduced to a minimum, and that great desideratum, firmness combined with flexibility is attained. This snowshoe tie is the ancient device of the Millicete Indians. The Micmac tribe follow this same tie, except that after making the half hitch or turn of the strap they do not bring it back and tie it behind the heel, but pass the free ends through a slit in the side strap, and confine it by a peg tied crosswise of the slit. They thus have only one heel strap instead of two. There are all kinds of snowshoe ties, but the fittest survive. There is every likelihood that this ancient tie of the snowshoe Indians, which has come down for so many generations, is the best, simply because it remains unchanged. Not even Henry Braithwaite has been able to improve upon it, and everybody from Mr. Armstrong and Harry Allen to Mr. Chestnut says that that settles it.

Wading Boots and Casting Lines.

Mr. Norman Fletcher, of Louisville, Ky., wants some information about fly-fishing outfits, which I am sure some reader of the FOREST AND STREAM will be good enough to give him. His letter follows:

"Can any of the readers of FOREST AND STREAM tell me in detail how to fasten leather soles with hob nails on to the bottoms of mackintosh wading pants that have boot feet so that there will not be any leak? Until last year I have always used the stocking feet waders with canvas shoes having hob nails in soles. With this outfit I could walk over clay or smooth stone bottom without the slightest danger of slipping. With the usual boot feet waders (the soles being of rubber) I find it impossible to avoid slipping down occasionally. In 1899 and 1900 I had bad luck with enameled fly-lines. I bought the most expensive lines from some of the most reliable houses in the United States. The trouble was that the enamel was too hard and cracked off in places, leaving the lines in a limp condition. In one instance the line had no strength. It seemed to be rotten. I usually use E. & F. tapered lines. I never had any of this trouble until the summer of 1899, although I have been using fly-lines for quite a term of years."

Spring Game.

Under date of March 4 Mr. Emile Pragoff writes from Louisville, Ky.: "The first snipe of the season was killed here to-day."

Reports were received from Fred Allen, of Monmouth, Ill., to-day, March 9, that there are a great many pintails on the prairies at that point.

Ducks are reported to have appeared at the Maksawba Club yesterday, March 8. I saw a large number of bluebills in Lake Michigan to-day, March 9.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Ticonderoga Gun Club.

THE Ticonderoga Gun Club, whose motto is K. W. Y. A. A.—"Know what you aim at"—held its first annual dinner at the Yale Club, this city, on March 8. These officers were elected for the year: Edward M. Bliven, President; W. Bradford Smith, Alexander H. Weed, Paris Scott Russell, Vice-Presidents; Peter Flint, Secretary, and George Ketchum, Treasurer, 150 Nassau street, New York city; Cass Pease, Ticonderoga, and Alanson Moore, Eagle Lake, Local Secretaries; Robert Donohue, J. E. Taylor, Herbert Moore, Committee on New Members; Edmund O. Luthy Herbert Smith, J. A. Paez, B. F. Hibbard, David Abercombie, George Farrington, F. H. Russell, Charles Hanft, Albert Weed, W. C. Witherbee, Directors.

President Edward M. Bliven, of Yonkers, spoke on the Vineyard, where he has hunted for several years. He fully indorsed the purpose and liberal scope of the organization, and favored rigid laws for the punishment of the careless shooter. He said that K. W. Y. A. A. was practiced at Bunker Hill when Old Put told his men not to fire until they could see the whites of the Britishers' eyes, and that the careful placing of bullets should be taught to all young or careless hunters.

Paris Scott Russell spoke enthusiastically about the Ticonderoga hill country, and referred to the beauty of Eagle Lake for fishing and hunting.

Mr. Robert Donohue, who has returned lately from a trip up State, spoke of the popularity of the movement among central New York hunters, and that similar bodies are soon to be formed there.

W. Bradford Smith, of Newark, N. J., told of his twenty years' experience in Ticonderoga hunting, and was glad that Eagle Lake is to be the summer rendezvous of the club, where its trout dinner will be held at Eagle Lake Inn, Aug. 21, with a target shoot and boat races as additional features. There is a new post-office at the lake, which will be appreciated. Mr. Smith said that the region extending from Eagle Lake to Schroon Lake, through miles of virgin forest, was one of the most interesting hunting localities in the Adirondacks, and was unsurpassed for the beauty and number of its large and small lakes.

A hearty vote of thanks was given to Mr. Peter Flint, the new Secretary of the club, for his promptness in capturing the sentiment K. W. Y. A. A., which has resulted in the formation of so powerful an alliance for protection to hunters.

Letters of regret were received from Lieutenant-Governor Timothy L. Woodruff, Dr. Arthur Matthewson, Charles T. Catlin, Brooklyn; Edmund O. Luthy, Cincinnati, and F. S. Russell, Chicago.

Hounds on the Northport Preserve.

AT the annual meeting of the Northport Gun Club a notable feature was the passing of a resolution prohibiting the employment of hounds on club grounds during the month of November, in order to improve bird hunting, which certainly is the noblest part of the sport. There is no doubt that the noisy hounds frighten every species of game from the preserves, and the stand the club has taken in this matter deserves the hearty approval of every true sportsman.

Ducks in New Jersey.

BAYVILLE, N. J., March 7.—There are lots of ducks on their way up. The cold snap has stopped them here. They will not stool, but stay in the middle of the bay. They will leave the first fair day. HERB.

Sam Lovel's Boy.*

THE quaint Danvis Folk with whom the genius of Rowland E. Robinson peopled the hills of Vermont have become very real beings to thousands of readers of his books. For their sterling qualities and human foibles as so truthfully and sympathetically depicted by Mr. Robinson, we long ago came to love them. Sam Lovel we knew, and Huldy we knew, and for the sake of such a father and such a mother we were prepared to take into our hearts the boy Sam, and he speedily showed himself worthy of our affection for his own sake. As was to have been expected, Uncle 'Lisha assumed the delightful office of mentor of the boy in woodcraft, and under the guidance of the old man the young Sam soon showed himself a true son of his woods loving father. The chapters which describe Sam's initiation into the mysteries of fishing and shooting and wilderness life are among the most charming in all the Danvis series. The book is filled with those pen pictures of nature in which the author excelled, and as in all the other works which came from Mr. Robinson's pen, there is throughout a play of the humor and of the pathos which make up human life amid New England hills as the world over. Keen as he was to have noted the ways of nature, and marvelous as are his graphic pictures of natural phenomena, Mr. Robinson was a searching observer of human nature as well, and it is the human nature in his inimitable books that will give them life.

*SAM LOVEL'S BOY. By Rowland E. Robinson. Cloth. 259 pages. Price, $1.25. Sent postpaid by the Forest and Stream Publishing Company.

Sea and River Fishing.

The Beaverkill.

Editor Forest and Stream:

There is a stream the very name of which is music to the ears of the veteran trout angler of this State, and that stream is the Beaverkill. Its praises have often been sung, but I am not sure that any history of it has ever been written. Other trout streams have been visited and are known to the present generation of anglers for trout, but this one has a history, and was known before the streams in the North Woods were ever heard of, and it has been visited by the most expert and noted anglers this State has ever produced.

The angler of to-day knows but little in his tramps, either in the Catskills or the Adirondacks, of the wealth of trout which abounded in some of our streams from a half to three-quarters of a centry ago, and there are but few living to-day who can tell of it. None of the veteran anglers who visited this stream in the forties are now living, so far as I know, and but few are now living who fished it fifty years ago.

It may be well to explain to those who have never given the subject any thought that there are two watersheds in the State of New York, one in the Adirondacks north of the Mohawk River, with Mount Marcy some 5,400 feet high, and the other and perhaps the greater of the two is in the Catskill region south of the Mohawk.

This lower watershed contains fifty-nine mountains 3,000 feet high, and upwards, twenty-five of which are over 3,500 feet above tidewater, the highest, Slide Mountan, being about 4,800 feet high.

About the year 1802 the State of New York conveyed certain lands on this lower watershed, and among the rest conveyed what is known as Great Lot No. 9, of the Hardenburgh Patent, which contained 10,000 acres and extended on the crest of the mountain from a point now known as Lumberville, 17 miles easterly to a point about five miles east of Balsam Lake.

The persons who were foolish enough to purchase this tract committed greater folly in laying out a road from the head of Dry Brook over the mountain; thence down the Beaverkill some twelve or fifteen miles to Alder Brook, and from thence over Cross Mountain to Lumberville, and this made accessible the most noted trout stream which ever existed in this State. From Alder Brook a road soon extended down the stream through Westfield Flats, and to its junction with the Delaware.

This stream has its source near the crest of the Catskill mountain range, some 3,000 feet above tidewater, and is from forty to forty-five miles in length.

For half a century it furnished from twenty-five to thirty miles of as fine fishing for bait or fly as any stream in the State, and that largely because it was so inaccessible. It was difficult to reach it without a trip of a couple of days by private conveyance.

About 1835 a gentleman in New York City found it necessary to provide a mountain retreat for a near relative, and he selected for that purpose the most delightful spot he could find on the Beaverkill, where he erected a beautiful Gothic cottage, in front of which was a charming lawn, extending to the stream.

James Murdock, then a young man, was engaged to take care of the invalid, and he was given the privilege of entertaining a limited number of anglers.

After some years the invalid died, and Murdock became the owner of the property, and continued to own it until his death, a year or two ago. No fact is better known to the angler than that the cooking of trout is an art, and no one ever excelled Mrs. Murdock in this art.

I presume that there is no angler now living who knows more than the writer in regard to the condition of this stream from forty to sixty years, or even longer. James Murdock was a close friend of mine, and I also knew and fished for many years with the most remarkable trio of anglers who ever lived in this State, and to the veteran angler of to-day I need only mention the names of "Fitch, Adams and Smedburgh." Judge Fitch lived in Catskill, William Adams, a brother-in-law, in New York and John Smedburgh, another brother-in-law, in Prattsville.

In 1838 this party took its first trip to Murdock's, starting from Prattsville, with a team of three-year-old horses belonging to Smedburgh, and repeated this trip with the same team for twenty-one years.

They always started as near the 24th of May as they could, without traveling on Sunday, and always spent just ten days on the stream. Judge Fitch, who survived the others, died some years ago, at the age of eighty-four.

In 1858 I joined the party, making a fourth member; for several years we fished together in the Beaverkill and adjacent streams, and if I have to-day a correct idea of what the true angler is and should be, and if I have acquired any skill in throwing the fly, I owe it to them. I knew them for years, and had a history of their early trips from Murdock, and during all their visits to the Beaverkill, none of them was ever known to utter a profane or coarse word, to fish on Sunday, to travel in or out on Sunday, and although abundantly supplied they were never known to offer a single drop of liquor to any one, even a guest.

It is hardly necessary to say that they fished the Beaverkill when at its best, but the angler then as now had sometimes a barren trip, for the reason that forty or fifty years ago we were almost sure to have a violent northeast storm in the last week of May or the first week in June, and in 1859 there were two, so that we had but one day's fishing during our whole trip, but this was an exception.

These gentlemen always carried a 24-pound basket (the modern term creel, which generally applies to a little basket, was not then in use), and it was an off day when they did not bring in at least twenty pounds of good-sized fish.

On one morning in the fifties they went out before breakfast, and when they came in about ten o'clock, their three baskets were full.

Early in the sixties, while I yet carried a 24-pound basket, I went down the stream and soon had it a third full, which I gave to a friend who was on his way out, and when I came in at the close of the day my basket was full.

A year or two later, however, there came a great freshet, and in a year or two it was followed by another, with the result that from one-half to two-thirds of the trout, which took refuge in the pockets on the banks, perished when the waters receded and the stream has never rallied.

After the first of these freshets I counted over seventy trout, many of them over half a pound in weight, lying dead in one pocket, and I saw many others.

I will not undertake to give the names of the well-known anglers who have visited this stream, but there is one who could give a charming history of his visits to it, enriched with sketches of his own. Mr. Joseph Jefferson has spent many days at Murdock's, and being equally skillful with rod and pencil he often devoted a part of the day to making sketches from nature, and when the sun was low and the mountains on the west of the stream cast over it their afternoon shadows, and the late flies abounded, he would take his rod for an evening fish. He has a portfolio full of sketches.

My story of the Beaverkill would not be complete if I did not mention one or two singular facts.

When the trio of anglers to whom I have referred went to Murdock's in 1838, there was not an angle worm to be found on the place or in the neighborhood, and as they had taken in a supply they planted what they had left, with the result that in a few years there was an abundance.

Another fact is this, that while many large trout were taken with bait, neither they nor I ever took a trout in the Beaverkill, nor in the Willewemoc, Neversink or Rondout, which tipped the scales at over 15 ounces.

In this respect the veteran anglers who fished our streams when at their best seem to have had less success than our modern ones, who find them almost depleted of fish, and yet so often take trout weighing a pound or upwards, perhaps—but why try to explain?

J. S. VAN CLEEF.

POUGHKEEPSIE, N. Y.

Fishing Up and Down the Potomac.

Shepherd's Wharf.

WHEN John Smith made his famous voyage of daring exploration up the Potomac he found an Indian town of Nacochtant, just below the mouth of the Eastern Branch. The Rev. Edward D. Neill, writing on the "Founders of Maryland," quotes from a manuscript in the library of the Archbishop of Canterbury, of the voyage of Capt. Henry Fleet, who spent several years among the Indians here at an early date. He set sail from England in 1631, on the 4th of July, of all days, and in the following summer was doing business with the Nacostines or Anacostans, a tribe living south of the Eastern Branch, and whose name is still perpetuated in the suburb, Anacostia, that is nestled among the hills opposite Washington. Fleet said: "This place without all question is the most pleasant and healthful place in all this country, and most convenient for habitation; the air temperate in summer and not violent in winter. It aboundeth in all manner of fish. The Indians in one night will catch thirty sturgeons in a place where the river is not above twelve fathoms broad."

The sturgeon continues to attract attention from the later navigators and writers. Hugh Jones, Chaplain, etc., writing "On the Present State of Virginia," in 1724, a pamphlet of 151 pages, printed in London, for J. Clarke, at the Bible under the Royal Exchange, said: "As for carrying on the Fishing Trade in Virginia, though there be plenty of fish there, yet I believe other countries where fisheries are established, and that have little else to mind and depend upon, would outdo it in this respect. Only more whales might be taken upon the Eastern Shore and bring good gain to such people as would make it their business; and I don't question but the sturgeons (with the best of which the rivers abound) might with good management and industry be made to surpass all others, both for cheapness and goodness, for they are large, fine and easily taken; nay, they frequently leap, some ashoar and some in boats, as I have been credibly informed." And in a pamphlet of the same title, printed for John Wyat, at the Rose in St. Paul's Churchyard, in 1727, the triple authors say: "Here might be a great trade for Sturgeon, Drums, Sheepsheads and several other fish, as also Whales."

The sturgeon attains a tremendous size, and Badham in his Halieutics tells of one in the Po, of 15 feet in length and reaching 3000 pounds. But Faber, in his Fisheries of the Adriatic, while claiming seven species in that locality, of which four are distinct and local, puts the limit attained by the Po sturgeon at 7 feet and 100 pounds. A discrepancy so marked as this leaves one in grave doubt as to anything except the unusual exaggeration of the Badham account. But Houghton, always reliable, is authority for the statement, and he gives convincing details of one caught in English waters weighing 623 pounds. Six or seven feet was not uncommon for sturgeon in the Potomac up to a few years ago, but the demand for caviare, and above all the enmity of the fishermen, have so reduced them that they are now rarely caught in the upper estuary. They proved so destructive to the nets that they were destroyed whenever taken; if too small to use or too far from market to handle they were killed and thrown away. An establishment for the gathering of roe was for some time maintained lower down the river, the product of which was sent to some caviare manufactory. It has been calculated that the roe of the largest sturgeons contain three million eggs. The Caspian factories turn out or have produced as high as a million and a half pounds of caviare in a year. Most of our own product is exported. An excellent account of its history and manufacture is contained in the Bulletin of the Fish Commission for 1898.

Shepherd's wharf, in the District of Columbia, is a terminus of the Baltimore & Ohio Railroad, opposite Alexandria, Va., where a car ferry connects it with the Southern Railway, nearly a mile distant. The postoffice is Oxen Hill, and is an interesting instance of the corruption of names. The mansion house here, a century and a half ago was Oxon Hall, built by Col. John Addison, and named in honor of Oxon, the ancient title of Oxfordshire, where he had at Queen's College been educated; he married Rachel Dulany, of Annapolis, was a Tory impenitent, and went to England during the Revolution, but after the peace, came back and died at 72 in 1789. Oxon Hall is forgotten, save to those who care to wander through the old records, and there is left Oxen Hill for the postoffice, and Oxen Run, an insignificant stream that makes into the flats just below Shepherd's wharf, near the dividing line between Prince George's county and the District of Columbia.

From the great sturgeon so easily taken in the olden days to the little sunfish or perch which are the fisherman's reward to-day of the natural inhabitants of the river, is a long way down hill; from a hundredweight to a few ounces. But it is true of other life as well. The Canadians used to come to this region to trade for buffalo skins, and to-day the squirrel and the muskrat are the only fur bearing animals a hunter might be confident of finding. A bear has not been seen since the Revolution. It does not take long to clear out game with firearms. Rev. Jos. Doddridge in "Notes on Settlements and Indian Wars of Western Parts of Virginia and Pennsylvania, from 1763 to 1783," speaks of the disappearance of the wild turkey, once so numerous, and says that while woodpeckers were still plenty the large redheaded woodpecker or woodcock was already very scarce. This bird, the ivory-billed woodpecker, called Indian hen in the West, was plenty enough thirty years ago on the lower Potomac and the heavy timber country of the Mississippi, but is now rarely seen. So rarely, indeed, that even the watchful Burroughs confesses he never heard one drum, and it's worth a ten-mile tramp to catch his rataplan, on the dry limb of a giant sycamore, in the still woods of a quiet morning, and if the wind is toward you you need only walk five.

While the indigenous life is thus declining, the artificial stocking of the woods and waters with suitable objects of the chase would be easily possible, if only they were protected by the laws and public sentiment; without the sentiment laws are not very effectual. The bass from the West is thriving here as no native fish is doing, and there are a good many other immigrants and their descendants in the Potomac, not all valuable, but at least all curious.

Among the fish often taken by the seines in this river, but rarely in any great number, is the golden ide, now called *Idus idus* by the Commission, from whose ponds it escaped into the Potomac and has there bred. When the fish was first introduced into England from Germany, our Commission in describing it called it *Idus melanotus*, or golden orfe, or golden tench, though the latter is a very different fish. The golden ide is a fine aquarium fish, the upper color a brilliant red, but reaching its best development in domestication and sunlight. In the deeper dark waters of the river as it runs wild, it goes off in color to a pink tinted white, and even in the house tanks of the Commission the specimens are losing their brilliancy. They are called sand perch by the fishermen and a few are sold in the fish markets here. The gold fish too have bred freely in the Potomac, and sometimes crossed with the carp. These crosses too are called sand perch and not easily distinguished always. It is odd to notice that the red ide fades to a sickly pinkish-white, while the red gold fish when run wild turns to the olive brown of the carp. Thousands of these wild gold fish are used for bass bait every year, and so exactly are they like the carp that specimens submitted to the Fish Commission experts were at once pronounced young carp, and it was only on close examination they found to their surprise that the bronze beauties were real gold fish. The lack of barbels, arrangement of the teeth, with some other slight distinguishing marks not apparent on a cursory examination, decided the Chinese crimson cyprinoid had got back where he started from.

The ide grows about a foot in length, and as we have very few bright colored fish in our waters, he always creates a sensation when seen swimming about in clear water. He is reputed good eating, but what is a good fish is so much a matter of taste, prejudice or habit that it is a little unsafe to call any fish good till it is eaten. It is bony, like all the carps, and there are some people so unreasonable as to insist that only one bony fish is good to eat, the shad.

We took a skiff at the dock in Alexandria one hot day in the late summer, and paddled across to the wharf, glad of the shelter of its shadow. While the sun was high and burning, we found little desire to try the shallow flats, already grown with grass, which is spreading in all the bays along the river.

We made half a dozen short trips, at intervals, up and down the shore, but there was more comfort and more reward walking along the edge of the pier and whipping the fly as far under as we could reach, or lounging in the skiff in the shadow and making side casts about the piles. Small fish were plenty, too plenty; more rises than casts, and occasionally we had a glimpse, or an offer, from rockfish or something worth while; enough to make the day pleasant and interesting. There was litttle use and little temptation to venture into the bay until evening. Then the holes in the moss beds and the channel through the grass, where Oxen Run creeps out to the river, offer first rate sport with bass, especially late in the season, when they make their fall run. They seem at this season to haunt the mouths of the creeks, whether haunting shallow waters for winter or only because they find such abundance of feed where the smaller fish play in the grasses or because the flies are thickest in these grassy bays, is still a matter of conjecture to the layman. At any rate the fishing is not to be despised here where 270 years ago the Nacostines were practicing for food what we are only doing for fun.

HENRY TALBOTT.

A Hatchery for West Virginia.

ROMNEY, W. Va., March 6.—*Editor Forest and Stream:* Since writing my last letter we have been visited by the coldest weather we have had this winter, preceded by a rain and snow, which makes it bad for the small game. I had the pleasure of meeting Mr. Johnson, of Washington, D. C., who is here looking for a suitable site to establish a hatchery for the propagation of bass and other fish. He has examined a number of springs in this vicinity, and says that he will return here in warmer weather and investigate more carefully before deciding upon a site for the hatchery, which was authorized by the last Congress, through the efforts of Senator S. B. Elkins and Hon. A. G. Dayton, our present Congressman. We hope that a suitable site can be found here, as it would be a help to our county and also we would then be able to restock the South Branch River with plenty of the game black bass. Our efforts, with this place in sight for a hatchery for fish, to prevent the covers or any one else polluting this stream, will be redoubled and every lover of sport will extend us his aid in this fight against the mercenary spirit of this age, which would destroy the good and pure of anything in its greed for gold. Will write again soon.

Our weather has been fine here this winter for game, and so far we have had little snow and the turkeys, partridges and pheasants have had a show for their life. A good many fish of the sucker species were killed under the ice here in the early winter by local fishermen.

J. B. BRADY.

The Cumberland News says: The contemplated building of a tannery at Moorefield, W. Va., by Leonard & Dayton and other parties at Winchester, Va., has called forth many protests from the sportsmen who for many years have enjoyed angling in the South Branch of the Potomac, which is regarded as one of the best fishing grounds in the country. The recent announcement that a wealthy Pennsylvania tanning company is also negotiating for a tannery site near Moorefield, the sewage from which must go into the South Branch, has stimulated the local lovers of piscatorial pursuits in opposition to the pollution of the stream. The hundreds of anglers from Pittsburg and other points in western Pennsylvania who annually camp on the historic stream have joined the ranks of the local sportsmen and declare that it shall be preserved from pollution at any cost.

Upon which the Hampshire Review comments: The Review agrees with the Hardy News that it is "busineses before pleasure" and as much pleasure as is to be found in angling for bass in the South Branch, if it was an absolute necessity to dump filth in the streams and pollute them, we would not, for the mere love of sport, protest or attempt to hinder it. However, public health is at stake in the pollution of the streams. It has been demonstrated time and time again that disease has been contracted by persons and particularly by cattle and other animals for miles down a stream below plants where hides of diseased animals were tanned.

Cumberland's expensive but successful fight against the pulp mill's pollution of the Potomac has shown two things—first, that the law can be enforced; second, that great industries can be operated without endangering the health of the people of a large section and destroying the beauty and usefulness of the water of the streams on which they are located.

The Review wants to see the South Branch Valley humming with industries of every kind. But it wants to see the river remain pure as it now comes trickling from the mountain sides. There is a law for the prevention of the pollution of streams, and as long as that law remains on the statute books we will stand for its enforcement. This, "with charity for all and malice toward none," but with earnestness, nevertheless.

ANGLING NOTES.

Planting Black Bass in Adirondack Waters.

A prominent lawyer in New York city, and a personal friend of the writer, asked me a short time ago about the advisability of planting black bass in a certain Adirondack lake in which it is reported that pike, the fish commonly called pickerel, had made its appearance through fair means or foul. Naturally I opposed the movement to introduce black bass, for pike can be removed and black bass cannot, and in small waters black bass do well, if at all, only for a few years. Furthermore, black bass introduced with the best of intentions in a lake surrounded by trout water is dangerous, because the bass may find their way through natural channels into trout waters, and evil disposed persons have placed at their disposal the means of doing much harm. My friend has just written me again on the subject, and I quote a paragraph from his letter: "Two points with respect to the bass: If you are clear that it is unwise to plant them in those waters, you had better keep your eyes pretty carefully out, for I had some intimation during this summer that somebody up there (I forget at this moment who) had talked about putting them in the lake on his own hook."

It may be well to call the attention of this somebody to Section 70 of the Forest, Fish and Game Laws of New York, which reads:

"Fish, or the fry, spawn or milt thereof, other than trout, lake trout and Adirondack frost fish, shall not be placed in the waters of the Adirondack region except under the supervision of the Commission and pursuant to a resolution thereof." The Commission means the Forest, Fish and Game Commission. Now as to penalty. "A person who violates any of the provisions of this article is guilty of a misdemeanor, and in addition thereto is liable as follows: For each violation of Section 70, in relation to placing fish in the Adirondacks, a penalty of five hundred dollars."

A man who, "on his own hook," planted black bass in Adirondack waters might find it an expensive experiment in fish planting. There is a provision in the law which reads: "The Commission may permit the taking or destruction of pickerel at any time in waters inhabited by trout." I suggested this to my lawyer friend, and he replied: "I feel very much afraid that your suggestion about netting pickerel will fail up there because nobody will attend to it." I expect from past experience that that is the cold truth, and no one will ever make the attempt, for it is much easier when pickerel get into a water to ask the State to furnish other fish that may destroy the pickerel than it is to net out the pickerel and preserve the water by so doing for trout that are native to it. The first movement, since the planting of black trout in Raquette Lake, to introduce the black bass into other Adirondack waters, which are natural trout waters, was begun by people interested in an Adirondack hotel, and the old Fish and Game Commission defeated it. The next was also by people interested in a hotel, and that was defeated. It is true that it would require some labor and an expenditure of money to remove the pickerel to assure the safety of the trout to a reasonable degree, but it is constantly done in Europe, where pike (pickerel) are in very many trout waters and are kept down by netting. Here it is easier to ask the State to do the work of planting other fish on the blind chance that matters can be no worse. Last summer I was one evening sitting on a hotel piazza which overlooks the lake that some one proposes to plant with black bass on his own hook. A guest had been fishing and complained to a friend in my hearing about his lack of fish. He advanced some very original ideas about what should be done to make good fishing in the lake, and I finally discovered that he was talking at me, not to me. From his tackle and his speech I thought the trouble was not so much with the fish as with the fisherman, for in my opinion he would have caught no fish had the water been stiff with them unless some one put a fish on his hook and held it on. He talked as I would expect the man to talk who once applied to the State for some black bass for fresh water, and some black bass for salt water, and some lobster spawn.

It is a very easy matter to criticise the conditions that one happens to find, without knowing what may have brought the conditions about, or what may be necessary to remedy the conditions which may operate against good fishing. If I should get a letter from someone who proposed to undo what may have been done in the way of poor fish stocking or unwise fish stocking, as a starting point, it would surprise me; but when water has been stocked with fish or found unsuitable, there is no effort made to remove them, but at once, the people who discover this condition say, "Why, put in something else, for whatever is put in, it cannot be any worse than it is at present."

Here is a case from the records: An application was made to the State for trout for a certain lake in the Adirondacks. The person to whom the application came knew something of the waters, and had reason to believe

that black bass or pike had been planted or made their way into the lake, and therefore the question was asked of the applicant if the water did not already contain black bass and the so-called pickerel. This is a literal copy from the reply of the applicant:

"It appears that you must have misunderstood about black bass being in ——— Lake. Therefore, I will state that I have no remembrance of black bass having been caught in it, and am able to show that the lake has been faithfully fished for many hours by several persons during the last year, for pickerel, with little or no success, and I cannot understand why it is not a profitable and safe lake to stock with brook trout."

If this is not an evasive reply, I don't understand what constitutes evasion. The applicant has "no remembrance of black bass being caught in the lake," but he does not say that they are not in it, and people have fished for pickerel in the lake. Why did they fish for pickerel if there were none in it? But he admits that they had little or no success. The letter concludes:

"As it is a natural trout water, my idea is that it is not folly to plant brook trout," he having been told that it would be folly to plant brook trout to feed black bass and pickerel.

A. N. CHENEY.

The Tuna in Newfoundland.

ST. JOHNS, Newfoundland, Feb. 28.—*Editor Forest and Stream:* In looking over the current number of Munsey's Magazine I was greatly interested by an article on the tuna fishing at Santa Calalina Island, California. What magnificent sport it must be to hook or play such enormous fish as those described, with rod and gear of ordinary character. May I ask is the sport confined to this locality, or to the Pacific coast only, as I have never heard of it on our side? If such be the case I do not see why it should be so, as the fish, so well known to our fishermen as the horse mackerel, is quite abundant on our island shores in summer time.

I have seen these agile marine acrobats disporting in our bays and inlets scores of times, and have frequently attempted to shoot them, but their movements were too quick for me. It never occurred to me, nor to any here I know of, that they would afford such noble sport with rod and hook as that described in the article referred to. Only last summer I was surrounded with these sportive gentry while crossing the beautiful Humber Sound, Bay of Islands, and for days together they could be both seen and heard, dashing the water up like a miniature submarine explosion. During this time the weather was simply superb, and the surface of the water like a mirror, especially in the early morning.

I have witnessed a similar scene many times before in almost every one of our inland waters. On one occasion in Placentia Bay, a shoal of these fish, numbering thousands, was seen to advance toward our schooner, in a line of a mile or more in length. Their advance could be distinctly discerned for a long distance by the disturbed line of water, but more particularly by the continuous and extraordinary acrobatic feats, in the air, of the leaders of the van.

If hen these active denizens of the deep afford such unparalleled sport, here is the ideal locality for indulging in it to the fullest extent, and I would wish to draw your sportsmen's attention to the fact. I will be happy to furnish any further information in my possession if required.

In connection with this matter it is rather curious to find that the two places particularly alluded to in the Munsey's article, viz., Avalon and St. Catalina, should both be extant in Newfoundland, and dating back too, especially the latter name, to 1500. Catalina or St. Catherine's was supposed to be given to a harbor in Trinity Bay, by Cortereal. Avalon was the name of Lord Baltimore's colony here, and the name now applies to the whole peninsula, or easternmost projection of Newfoundland.

JAMES P. HOWLEY.

A Day with the Pickerel.

BOSTON, March 7.—*Editor Forest and Stream:* Whitehall Pond is quite an extensive body of water in the pleasant little village of Woodville, in the town of Hopkinton, some thirty miles from this city. It is one of the storage basins of Boston's water supply, and many years ago, when Col. Horace T. Rockwell, ex-president of the Massachusetts Fish and Game Association, and myself composed two-thirds of the Boston Water Board, we had considerable dealings with the entire water supply of that vicinity. The pond is liberally supplied with the usual varieties of fish common to such waters. Woodville boasts a first-class hotel, owned and managed by Mr. Leroy S. Coolidge, where the comforts of this life abound and where sportsmen are made to feel entirely at their ease.

Our day with the pickerel came about this way. Mr. Coolidge is a member of the House of Representatives this year from his town, and Col. Rockwell meeting him one day, referred to the fishing in Whitehall. He was informed that it was still good and that if he would make up a party, Coolidge would do his part to secure them a pleasant outing. And he kept his word. Tuesday, 5th inst., five enthusiastic fishermen—Col. Rockwell, William S. Hinman, S. R. Raymond, F. N. Ganong and the writer—after a pleasant ride by rail to Ashland, electrics to Hopkinton and carriage to Woodville, arrived at the Reservoir House at 6 o'clock. Supper over, the evening was passed as is usually the case when a few good fellows get together, and it didn't seem a great while before breakfast was ready. Shortly after 8 o'clock we were on the pond, where upward of sixty holes had been cut and most of the lines were in when we got there.

It had rained and snowed a little the night before, and the walking was a little soft, but we had all seen the conditions so much worse that we didn't mind it at all. For a couple of hours there was lively work—the flags were going up in all directions. Col. Rockwell and Billy Hinman might be termed heavy weights, and, of course, couldn't sprint with some of the others, therefore they took things leisurely, giving the fish plenty of time to get a good hold of the bait before they took the line to feel them out. They generally got their fish, however, as the others did theirs. The fish generally run small, though we got several of good size. As usual, the biggest fish got away. In this instance Mr. Raymond was handling the line, pulling a big fish into the hole, where several of the party could see him, when he gave a sudden flop and away he went under the ice. At noon we counted thirty-seven fish and stopped. Then to the hotel for dinner, then a couple of hours go-as-you-please, then to the city, all agreeing that though brief it was an occasion full of genuine enjoyment, and that under favorable conditions fishing is the best of sport; it is "not all of fishing to fish."

WM. B. SMART.

Cold Storage Trout Culture.

CHICAGO, March 7.—*Editor Forest and Stream:* I have read with a great deal of interest and still greater surprise an article which appears in the Inter-Ocean of this date, which is signed by George E. Oster. Here it is:

In 1873 I was residing at Junction City, a pretty little city located in a romantic spot on the banks of Mill Creek, in central Wisconsin. I remember the date because it was my twenty-first birthday. I had wandered along the banks of the stream for a distance of perhaps two miles, when I ran on to an old hunter who had cut a hole in the ice, through which he was fishing for trout. He was meeting with great success, for scattered all around him could be seen the speckled beauties, where he had thrown them as he took them off his hook. I was invited to help myself, which invitation I cheerfully accepted, and I proceeded to put a number of the fish in my game bag.

It was just 4:47 o'clock when I returned home that afternoon, tired and hungry, and after hanging up my rifle took one of the largest of the trout and placed it out in a large cold-storage warehouse that stood near my house, intending to present it to Uncle Sam Carson for his breakfast the next morning. The fish was forgotten, and as a result lay in that warehouse solidly frozen until June 10, 1884.

On the night of the date last mentioned, just about eleven years after this fish had been placed in the cold storage, the building was totally destroyed by fire. During the process of the fire the fire department, in the effort to save the property, had thrown sufficient water to fill up the cellar, which, by the way, was walled up in rock and cement, and was, therefore, water-tight. Three years later it was decided to rebuild the cold-storage warehouse upon the site originally occupied, and men were set to work pumping the water out of the cellar, which the rains had kept well filled. To our amazement 447 fair-sized speckled trout were taken out, besides the old one, which had evidently fallen into the cellar at the time the warehouse was destroyed, thawed out and spawned. The original trout was easily identified, one of its eyes having been accidentally knocked out and a part of its tail broken off before it was placed in the warehouse.

Any one doubting the truthfulness of this story can easily satisfy himself by writing to Frank Blood or Arthur Sturtevant, of Stevens Point, Wis., or to Eugene Sheppard, of Rhinelander, Wis.

George E. Oster.

The article states as a cold fact, attested by three living witnesses, that in February, 1873, he obtained a brook trout, which was frozen solid. He further says that he deposited the trout in a cold storage warehouse, where it remained solidly congealed for a period of eleven years, when the building was destroyed by fire. Deponent further testifies that three years later the cemented cellar of the former warehouse was found to be a veritable trout pond, from which were taken 447 "fair-sized" trout, as well as the prolific mother of them all.

Of course there cannot be the slightest doubt of the literal truth of this extraordinary sequence of circumstances; and the contemplation of the facts simply excites in the minds of all laymen the most utter contempt for the addle-headed stupidity of modern pisciculturists and their alleged scientific methods. What a solemn lot of humbugs they must all be, with their array of hatching troughs, screens, running waters, artificial food, etc., to say nothing of their ignorance of parthenogenesis in trout.

A bas the scientific pisciculturist—let his name be anathema! Let the name of Seth Green be painted over with blue mud and the United States Fish Commission be forever abolished.

ZERO.

Fish in Wisconsin Waters.

LA CROSSE, Wis., Feb. 18.—*Editor Forest and Stream:* Our beautiful country, one of the finest in the world and keeping apace with if not outstripping many others in its diversified and varied industries, finds problems to meet and solve made so through the mistakes of others. New species of fish which at the time were thought to be valuable additions to our commonwealth have proved to be the greatest source of nuisance which could be employed for the destruction of fish a hundred times their superior, which nature so plentifully provided homes for in our fine water courses.

The German carp is an evil worker in our finest streams, where the bass, pike, perch and many other kinds of fish have made such lucrative and pleasant enjoyment for the angler. They were introduced some twenty years ago. Advance representations were made of the wonderful properties and wholesome use of this fish. Wisconsin being for improvement, was able to secure fry at this time which came from Washington, D. C. They were planted in some of our finest streams and ponds—tributaries of the Mississippi River. Their woeful destruction of other fish is now becoming apparent, and it is said that their propensities for destroying the spawn of other fish are alarming, while they are found to be of no use, either as an edible fish or a sporting one, so they are left alone to multiply and are fast becoming the preponderating fish in the streams. What will be the outcome? We have no prophets to foretell. In recent years they can be seen below the many Government dams (for preserving the channel for steamboats) in innumerable numbers, rolling and tumbling over each other, yet they are seldom caught with a hook, as they are not a fish that bite, but are more the nature of the sucker. They are more destructive to spawn, being much larger and stronger. They have very coarse flesh.

In the spring of 1899, following a severe cold winter, which gave great thickness to the ice, a part of the water of the Neshonoc Pond, on the La Crosse River, went out, and this left the ice resting on the muddy bottom. It remained so for some time, until finally thawed out by the spring rains and warm weather. The fish which were caught under the ice and smothered were 90 per cent. carp, as other active fish had been in the channel and had escaped. The wind drifted these dead fish to the shore as they rose and came to the surface, and one could travel for a mile or more and find the shore strewn with them by the wagon load. And yet the streams show no perceptible falling off of these fish.

Our State made a great mistake in allowing their distribution in its waters. But now we have got them, and no one has a remedy for their disposal, while great fears are entertained that their final destruction of other fish will be the sequel.

We have many kinds of fish which are yet found in our streams to entice the angler out for a holiday when conditions are favorable. The speckled or brook trout may be said to head the list in choice. These can yet be found in the smaller streams in our county that are kept stocked, but not in the quantities they were nearly fifty years ago, when we first began to take them, with any kind of an alder pole, wrapping-twine fish line, and salt pork for bait, using this in the early season before grasshoppers hatched out. Grubs and angleworms were not found in these early days, and fly-fishing was unknown. The streams were quite alive with trout, and on favorable days one could secure a string of two dozen in an hour's time which would satisfy any family of the pioneers which was not very small (ours was eight).

The bass may be said to be the best sporting fish in our streams, and when it is on the table is truly a treat to the most delicate appetite. Last year there was little success in fishing, owing to the continued high water, which kept up all summer, though a few were caught above Winona, where the water cleared up to some extent. Those not previously caught are left for this year, and we hope to be favored with better conditions when La Crosse will be one of the best points on the river.

Wall-eyed pike and other varieties are also found in our waters, and when one gets a 4 to 10 pounder, as is often done, he has something worthy of notice, not only while landing him, but till the last bone is picked. The meat is delicious. There are also the croppies, sunfish of similar size, pickerel, catfish, and which are taken in considerable quantities. The angler can pick his favorite to fish for. I intended to say something about native game before I closed, but can touch on the subject in a later issue.

O. S. SISSON.

Destruction of Spectacle Pond Fish.

PROVIDENCE, R. I., March 5.—*Editor Forest and Stream:* Where are the Commissioners of Inland Fisheries of Rhode Island? Fish are being scooped out of holes cut in the ice on Spectacle Pond in the town of Cranston by the barrels full. An ale and lager beer brewery is said to be the cause of all the trouble. It seems that a certain brewing company was restrained from dumping refuse into Tonque Pond some time ago on account of the pollution which it occasioned, and so got permission to run their refuse over a farm. This refuse consists mostly of ammonia, which has been used in the manufacture of ice, and when the ground is not frozen is absorbed by it; but since the ground has frozen up so hard it runs over the top of the ground and into the pond, and the pond being covered by an exceptionally heavy crop of ice, the fish are either dying or dead. This pond was stocked with small-mouth black bass in 1897 or 1898, and some had been taken from there last summer of 3 pounds weight. Something should be done to stop such wanton murdering of game fish put there by the Commissioners of Inland Fisheries. Mr. Henry T. Root, one of the Commissioners, told me last summer that Mashapang Pond was stocked at the same time.

The close season on bass commenced March 1, but I saw two which came from Kingston, which were caught through the ice Sunday, March 3 and which weighed 9½ pounds. There does not seem to be much protection for bass in this State; nobody seems to care whether they are caught all the year round or not.

There are two ponds in this State where there is no close season on bass; these are Moswansicut, in the town of Scituate, and Sneach's Pond, in the town of Cumberland. The trout law is lived up to very well; one seldom sees one out of season, and generally that is caught by accident. The trout season opens April 1 and closes July 15.

SELDOM.

Maine Lakes Becoming Adirondackized.

BOSTON, March 11.—The matter most discussed at Bemis and the Rangeley lakes at present is what is known as the Decker purchase. This is a strip of shore land on the earterly side of Mooselucmaguntic Lake of about three miles in length. It is situated south of Haines Landing, and is backed by a high mountain. The lots are for sale, and that fact makes them more desirable for sportsmen, or rather summer cottagers, since no other land can be purchased on that lake, or the Upper or Lower Richardson, for that matter. The heirs of E. S. Coe own all the rest of the land on the shores of these lakes, and under the policy of Mr. Coe, when alive, they still decline to sell an inch of land. The camps on Richardson and Mooselucmaguntic lakes are all on leased land at a yearly rental of $50 for five acres. That the Decker land can be owned will doubtless make it attractive to summer residents, though the seclusion that the sportsman so much loves will all be gone when camps are constructed on lots of only 100 feet lake frontage and 30 feet back. It is reported that Capt. Fred C. Barker has secured ten lots and will build camps on them similar to those at the Birches. He will also put in a wharf before the ice goes out this spring. John E. Stephens, of Rumford Falls, has bought three lots and will build a cottage this season. Clement R. Hooper, of Philadelphia, has bought two lots, and R. E. Taylor, station agent at Bemis, and A. S. Hinds, of Portland, one lot each. Alas! for the seclusion of Bald Mountain camps and Allerton Lodge! They are in danger of becoming the center of a row of summer cottages.

SPECIAL.

Editor Harmsworth Plays with Big Game.

MR. ALFRED HARMSWORTH, the noted editor of the London Globe and other English newspapers, who is fishing at Boca Grande, is having much sport, taking big and little fish. One day this week a monster porpoise was harpooned, one end of the three-quarter-inch rope attached to the harpoon being fastened on the steamer Belle of Myers. For three hours the steamer was hauled around by the porpoise, when it was completely tired down and towed to the shore, where it took six hours to get the fish up on the beach. The porpoise weighed fully 1,000 pounds.—Fort Myers Press.

A Cure for Nervous Prostration.

TAMPA BAY HOTEL, March 4.—Mr. Marc Klaw, of New York, with an 8-ounce rod and a silk braided line, went out into the alligator precincts of the Hillsboro River yesterday afternoon trolling for sea trout. He had been fishing about a half-hour and had laid down his pole for a moment to take a camera snap shot of a grove of palmettos, when there was a whizz of his reel and the line began paying out so rapidly that the boatman will make affidavit that it actually smoked. Mr. Klaw, who is a recent convalescent from grip, dropped his camera overboard and went sprawling on his stomach in his effort to get to the pole. His attendant was horror-stricken to witness the struggle which now ensued between a man recovering from an attack of nervous exhaustion and a big redfish just contracting that disease. Before Klaw could say Ben Hur the fish had taken out enough of his line to fly a kite, and had done it so rapidly that it wore a blister on his thumb, which he was using as a brake. After playing him for about twenty minutes the fish made a dart under the boat, the line became tangled in the rudder, and while the boatman kept the little craft waltzing around in a vain effort to untangle, Mr. Redfish got a taut line and broke it. Mr. Klaw preserves a sphinx-like silence on the subject, but to his attendant he remarked that he would wager $100 that any man who can go through the experience he had in that twenty minutes will either be cured of nervous prostration or die in the effort. The nurse says his temperature was normal at the end of the adventure, but that his pulse was about 110. The boatman, who is a reliable man, says that the fish didn't weigh less than 15 pounds. H. A. D.

Whitefish for Lake Ontario.

In his monthly report to the Fish Commission for September, 1900, State Fishculturist A. N. Cheney wrote:

"I have inaugurated a new policy in whitefish work, which will result in the saving of at least $600 as compared with the work of last year. I believe it should be the policy of the Commission to plant the great bulk of whitefish reared by the State in Lake Ontario. I am utterly opposed to planting the Great Lake whitefish in Adirondack trout lakes, where they simply consume the food of trout and serve no good purpose as food fish, as the law does not permit the taking of whitefish in nets from these lakes, netting being the only means of taking them. Whitefish is a most delicious food fish, and people should be encouraged to net them in such lakes where they are now found where licenses can be issued under Section 64."

In February of this year Mr. Cheney wrote us: "I secured from the United States Fish Commission 25,000,000 eggs. The fry from these eggs will be planted in Lake Ontario. Ten million of fry hatched from State eggs will also be planted in Lake Ontario. My belief is that, with one or two exceptions, all whitefish eggs taken from State waters should be hatched and planted in a lake where commercial fisheries are authorized. In our case, it would be Lake Ontario that would receive the benefit of whitefish eggs taken in interior waters."

Training the Hunting Dog.

By B. Waters, Author of "Fetch and Carry: A Treatise on Retrieving."

XIII.—Ranging.

(*Continued from page* 92.)

To the novice the manner in which a dog seeks his prey is a matter of but little consideration. So that the dog gallops out in search of birds, or even gallops at all if he will but continue galloping, it would seem that nothing more was necessary or to be required. It, however, is far from being such a simple matter.

In practice the novice will sooner or later find that a dog, though he be of great range and speed, may have distinctly inferior finding abilities. Good heels require good brains and noses to direct them.

The best ranger is the dog which "stays out at his work," beating out the likely ground in front and on both sides of the general course of the shooter, and all this with such method and regularity as the nature of the grounds best permits. His judgment should be so good that he forecasts the course of the shooter in a general way, or determines it by wise observation, and keeps it ever as a base of operations from which to work.

Let us assume that the dog is seeking quail. Bare or unpromising country, such as bare ground, closely grazed pasture, etc., he skirts or entirely avoids. He notes such covers to the right and left as are likely to afford a habitat for the birds, and he ranges from one of them to the other, observing due economy in following his course so that he will cover the most ground with the least galloping consistent with the work to be done. He goes through cover when in his wise judgment it is necessary for the best chances of success, or taking the wind to the best advantage he gallops along other stretches of cover which are likely to be sought by the birds as a place of refuge. Sometimes he skirts around an entire field to hit off the trail of moving birds, while at other times he goes through it, accordingly as the wind, scenting conditions, etc., dictate. From experience he learns the kinds of ground which the birds most frequent, and the times of day in which they are most likely to be found in them.

When the birds are plentiful he beats out a much smaller area of ground than he does when they are scarce.

In the broad prairie, the chicken country where to the untrained eye there is little difference of ground surface apparent, the dog may not need to exercise so much good judgment as in seeking quail, but he needs to exercise good judgment nevertheless. The prairie, from where the beholder stands to the horizon, has its lesser and greater undulations, with their innumerable miniature water sheds, forming networks of hollows, in which grow much coarser and ranker grasses than those of the higher ground. They therein afford concealment and shelter to the chickens during the night and the midday hours. In the morning and evening, their favorite time of food seeking, the chickens frequent the grain fields in the season when the grain is fit for their food or the higher ground, where the growth is shorter, and where insect life is more abundant.

Of the dogs which range at high speed, a large percentage run faster than their noses and judgment warrant if we consider the best possible results. Indeed, some run so fast and hurriedly that they do not take time to dwell even for a moment in searching out the likely places, although they have the general appearance of earnest and good industry. They simply are high-class pretenders.

A dog may be so intent in the use of his eyes to pick out the easiest going that he gives no attention to the practical use of his nose.

In a country known to contain birds he may work over great areas without finding other than the birds which he happens to run directly across. He on the other hand may have the speed and good finding intention which are shown by continuous industry and judgment, and yet, from functional dullness of the nose as an organ of scent, be incapacitated as a finder.

Before a dog can range in the best manner he must have had sufficient experience to learn what sections of ground and cover the birds prefer for a habitat and a food supply, what are their general habits of life, and what peculiar devices they exercise to evade pursuit. In a manner it is much the same knowledge that the shooter himself should possess.

Of two shooters, the one knowing at a glance what section of certain grounds the birds seek for food and shelter, the other ignorant or heedless of their habitat, habits, and the manner of working the ground to the best advantage, no explanation is needed as to which of them would be the most successful.

The intelligence and industry which the shooter must exercise in bringing success to the use of gun are not unlike those which the dog must exercise similarly in bringing success to the use of his nose.

As to working out the ground properly there is no arbitrary method. What might be a thorough working of it by one dog might not be so at all when done similarly by some other dog. The one might have a very keen nose, which would command a wide scope, and therewith might take every intelligent advantage of wind and grounds; the other, owing to a dull nose and its consequent smaller scope, might be unable to work out the ground properly if he followed the same lines set by his keener nosed rival.

Local conditions also have their importance. In a close country the range should not be so far that the dog is out of sight for appreciable lengths of time, for then the shooter cannot know what the dog is doing. If he then gets on a point he is difficult to find, and if he flushes and chases, the shooter is ignorant of it. If he points a mile away on the prairie it is more of labor than of pleasure to go so far to him for a shot.

The matter of pace is essential to consider in connection with ranging, and with it also the matter of endurance. As hinted at herein, a very fast dog, extended to his utmost in speed, is rarely a thorough hunter. Being over-extended, he has not the time to consider or search out the nooks and corners with the care and thoroughness necessary to the best finding results, nor time to concentrate his mind on anything other than mere running. On the other hand, a dog may show good speed for a while, then slow down to a trot, working a while and loafing a while.

The best pace is a steady, swinging gallop, which is easily within the dog's physical compass, and such as he can maintain all day long. If to this he has bird sense and concentrates his powers on his work, remaining out at it constantly, he as a success is in pleasing contrast to the flashy, over-speeded dog, whose mind is concentrated solely on picking out a clear course to run in. Too much speed often denotes an ignorance of hunting rather than a knowledge of it, as it relates to the service of the gun.

Aside from the matter of pace, the most common examples of bad ranging are as follows: When a dog takes his casts, be they long or short, straight out in any direction in which he first starts, generally up or across wind, then turns and comes directly back to his handler on nearly the same line which marked his course in going out. On the return, in most instances, he forgets that he has a nose while using his eye to watch his handler as he hurries straight to him. In any event, it is not then necessary that he should use his nose on ground which he a moment before ran over.

A particularly annoying phase of this style of ranging is the taking of a straight line directly ahead in the course of the shooter. Thus, most of the time the shooter and the dog are following the same line. More than half of such dog's time and effort are wasted, for it takes him as long to return as it does to go out. He necessarily is a poor finder. He knows no difference between the best and the worst ground. He may point birds when he happens to run across them, as he is sure to do sooner or later in a bird country, for even the shooter will himself walk up a bevy now and then; but so far as any real merit is concerned, such a dog has none.

Another faulty manner of ranging is when the dog turns to the rear at the end of a cast and swings in behind his handler or on to ground which he covered before in his previous cast, thus repeatedly and uselessly crossing his course.

Some dogs acquire the habit of working entirely on one side of the handler's course. If forced to cast on the opposite side, they are intent on returning to their favorite position, and soon craftily return to it. Others have the extremely objectionable fault of working behind their handlers. Still others work very close for a while, regardless of the character of the ground, then take an extremely long cast with little judgment or purpose to it, returning after a time and resuming the pottering range.

The wind and its direction are important factors in ranging; all dogs work best when the shooter is walking against it. They can then beat across it to and fro, turning up wind at the end of their casts if they turn properly, thus having the best advantages of catching scent of the birds which are within range of their noses.

If the shooter is going down wind the dog, though he can beat across wind as before, must necessarily turn down wind at the end of his casts if he keeps best in place relatively to the shooter. If the dog turns up wind under these circumstances, he turns on to ground which he has worked, making loops at the end of his casts, all of which results in inferior effort.

In their ability to work out the ground regardless of whether the shooter walks up, down or across wind, dogs vary greatly in their powers. Some dogs, good rangers up wind, seem to lose all ideas of intelligent ranging when the shooter walks down wind; others perform well regardless of the course of the shooter.

When the shooter walks straight across wind he gives the dog the most difficult proposition to range to, since, if he then casts straight across the shooter, he must go straight up and down wind. The wise dog, of good sense and good experience, works well regardless of his handler's course, for he casts out and stays out far enough to have a free fling according to the circumstances.

It is better to give the dog experience in working out the ground regardless of the wind, for many times it happens in a day's shooting that owing to the nature of the grounds and general course of the hunt, an up wind course cannot be followed.

Quartering denotes that the dog crosses to and fro in front of the shooter on lines as parallel and equidistant as may be. It is an artificial method, and no doubt is of use in a section where the ground is favorable to it and where birds are likely to frequent all parts of the ground indiscriminately. The English authorities emphasize its importance. In America, where the grounds exhibit all kinds of irregularities as to surface and covers, it is much better that the dog should beat out the ground intelligently from one likely point to another. The habitats of the birds are so irregularly placed, and there is so much barren ground mixed in with that which is fertile, that a set form of quartering is neither taught nor desired by the majority of shooters.

In quartering, the dog covers as much ground as his nose and speed will permit consistently with the size of the field or ground to be worked, and at the same time with keeping in front of the shooter. It is apparent that if the dog makes his casts too wide he will not be able to cut out his parallels and at the same time keep in front of the shooter. In sections where on the one hand the intelligent ranger succeeds in finding birds in abundance, they on the other might appear to be very scarce when sought by a dog which hunted in parallel lines across his handler's course.

A dog which does not range well naturally is capable of but little improvement from the efforts of his handler. If he comes in repeatedly as a habit, a crack or a cut of the whip, as he comes in, will tend to keep him from coming entirely in; but instead of going out to work when so unpleasantly received he may sulk. At all events, his imperfect judgment is not to be materially mended by any efforts of his handler. Constant whistling and signaling and directing may help the faulty dog to a limited extent, but the handler then is furnishing all the brains and doing the thinking for the dog which the latter, if of the right grade as a worker, would do for himself.

To teach the dog quartering, implicit obedience to the whistle and signals of the hand must be taught as a prerequisite. The course is always up wind. Then when the dog is ranging the handler walks to and fro from left to right, keeping him on the correct parallels across wind as near as he can, and turning him when at the proper distance at the end of them. This is continued day after day till the dog will from mere habit follow the artificial range thus established. It requires a world of labor and patience to teach it thoroughly. After it is taught it has certain spectacular features which appeal to the novice, but which to the expert suggest a worthless redundancy of effort.

The theory of brace work when the dogs quarter their ground is that they work on wider parallels in their casts, which alternate so that neither works on the other's ground except when turning at the end of their casts. They should cross in front of their handler at about the same time, should cast about the same distance to the right and left, and should make their turns at the ends of their casts at about the same moment. To approximate, even remotely, to this degree of refinement, the dogs must work independently, must be nearly equal in pace and industry, and in general must have the same ideas of quartering; in short, they must be fairly well matched.

Dogs develop idiosyncrasies in quartering as they do in free ranging. One may cast well on one side, turning up wind properly, while at the end of his cast on the other side he turns down wind; or he may cast irregularly wide and close, or wide on one side and short on the other, or come to his handler in the middle of his cast, or cast to the rear of his handler betimes, etc., or be working outside the boundaries which are most advantageous to the shooter's success. A point made a half mile or more away imposes a great loss of time and extra walking or riding on the shooter, as do also the long searches for the dog when he is lost on point, and the latter is a frequent occurrence when the dog works beyond bounds. The dog which so works is a semi-self-hunter, and is a very laborious dog to handle.

"Hello, Bub! Is this a good place to hunt for reed birds?"

"Y-e-s."

"Seen any round here?"

"No. Pop's been beatin' the marshes for over a week."

"Did he get any?"

"No; he didn't get none. That's why it's a good place to hunt 'em—but as to finding 'em, it's the meanest place in Jarsey."—Philadelphia Call.

'Mid Reef and Rapid.

BY F. R. WEBB.

III.

We found nothing exciting or adventurous in our first day's cruise, however, for the water was so unusually low that we were able to get our canoes down the river after a fashion, and that was all. All day we worked slowly along, most of the time not exceeding a mile an hour; generally out in the water, lifting our canoes over the ledges or off the rocks, and even when we had water enough to float us in them it was still and currentless and full of ledges which reached nearly to the surface, or projected above, in long, irregular, parallel lines, and we had to paddle slowly and cautiously along, weaving in and out among the intricacies of the reefs, which fortunately could be plainly seen everywhere through the clear water. At all of the fish dams and at the numerous rapids, where the ledges constituted natural falls of several feet in height, we were obliged to portage the canoes by lifting them carefully over and down the obstructions, much as we would ordinarily portage a mill dam, and there were no exciting shoots and jumps such as delight the heart of the cruiser.

North River is a bold, swift stream, abounding in falls and rapids, with high bluff-like banks, and with, here and there, great masses of cliffs overhanging the water, and with frequent curious, shell-like limestone reefs of gigantic size, projecting their thin, knife-like edges from the sides of the bluffs, far out beyond the line of trees, or towering aloft in fantastic, chimney-like spires, high up among the tree-tops. The general trend of the river is directly across the valley, toward the Blue Ridge; and although some twelve or fifteen miles distant, these mountains loomed up before us majestically, pretty much all day, their tree-clothed buttresses and spurs gleaming brightly in the sun, and thrown into relief in contrast with the dark, shadowy gorges between. The scenery along the river, with its wider pastoral and mountain views, is very beautiful; which, taken with its rapids and falls, makes of it an ideal cruising stream; for the falls and rapids, while swift, rough and exciting, are entirely within the ability of the average canoeist, and at an ordinary stage of water this first day's cruise would have afforded us rare sport; but at the present stage the water trickled through the stones of the fish dams, leaving their entire crests bare, and rippled in a thin, bright, transparent sheet down over the faces of the reefs, or danced in miniature wavelets down the slopes usually covered by the rapids, with an occasional channel where a canoe, by good management, and not a little rubbing and scraping and bumping, was worked down without its crew being compelled to disembark.

It by no means followed, however, that because we were deprived of all our hoped-for sport in shooting these rapids and falls we found the cruising dull, or that we didn't have any fun. On the contrary, the day's run was full of fun and enjoyment; and no party of schoolboys out for an afternoon's holiday could have had a better time or more sport than we got out of the day's cruise; for the ludicrous mishaps and misadventures incidental to the stage of water—none of them, in the least serious, or of a character to cause particular discomfort or inconvenience—that were continually occurring, caused constant merriment and furnished an endless amount of amusement; and the cheerful jibe, the lightsome chaff and the encouraging badinage dropped harmlessly around and enlivened the cruise; while the luckless George was a score of times roundly berated for forgetting the kodak, which would have been of inestimable value on this day's cruise.

Of course we were all the time wet, as to our feet and lower limbs; but as the water was warm and the day was hot, this, so far from being a source of discomfort, was a positive luxury, and but added to our pleasure; and as our costumes—consisting as they did of flannel shirts, short woolen knee trousers or knickerbockers, long woolen stockings and canvas shoes, heavily hobnailed to insure a firm footing among the rocks and on the slippery edges of mill dams, the whole crowned with a light straw helmet—were specially adapted for this work, no inconvenience or discomfort arose from it, beyond the comparatively unimportant one of getting the floorboards of our canoes wet and more or less muddy from the constant stepping in and out.

It speaks well for the strength and durability of our canvas canoes that none of them were in the least injured by the constant bumping and scraping they received; notwithstanding the fact that many of the reefs and detached masses of rock with which the river bed was profusely studded were so honeycombed that they looked like huge petrified sponges, and their sharp edges and innumerable points and corners were rough, raspy and cutting to the last degree, and wounded and scarified the hands and fingers if grasped even lightly.

We reached the Rockland Dam at 1 o'clock, and a portage was quickly and easily made by sliding the canoes over the crest of the dam, which stood up, baked hard and dry in the hot sun, a foot or more out of the water, clear across the river. Lacy and I stood on the crest of the dam and slid the boats over, while George and the Colonel stood on the apron below and let them down and slid them into the currentless pool below. Most of the water—all that did not find its way through the interstices of the dam—went down the mill race; and the short and usually swift and deep rapid below was all but dry.

We beached our canoes on the gravel bar at the head of this riffle and waded ashore, pulling the boats up after us, after which the hatches were opened up and, taking out our mattresses, camp stools, pipes and tobacco, or cigars—according to the taste and fancy of the smoker—and books to read, also the mess chest, which contained an ample lunch of cold boiled ham, tongue, hard-boiled eggs, cheese, biscuits, butter, jelly, pickles, etc., we repaired to a shady bank not far from the mill; and after Lacy had procured a bucket of water from a farmhouse near by we proceeded to satisfy the somewhat clamorous and insistent inner men of the party. After lunch an hour or more was most comfortably and profitably spent, flat on our backs, on our mattresses, our heads and shoulders supported by our air pillows and camp stools, with books and smoking materials, the which more than one of us forgot in a delicious little siesta.

I use the word profitably advisedly, for nothing is more refreshing and beneficial to the cruiser, after a hard morning's work—particularly in a hot sun (and our sun to-day was more than hot—it was broiling)—than a prolonged rest and siesta about the middle of the day, or a little after; after which, particularly in very hot weather, the evening run should be short and an early camp made.

After the canoes were packed, George rigged up his 5x8 Anthony camera and took a view of them and of the river—or, rather, of what river there was to view; after which each man picked up the stern of his canoe and shoved her, bow first, down over the rocky bar, into the deeper water below, wading alongside until she was clear of the bar and well afloat, when he carefully disposed himself after the usual manner in his seat with wet, dripping feet hung one over each side of the canoe, to let the water drip back into the river where it was needed, instead of into the canoe, where it was certainly not needed.

We had good water on down to the Brubeck Dam, a mile and a half below, the one or two little rifts being easily run, and had a rather tedious portage over this ugly, ragged, drift-covered dam; and the mile and a half between here and the mouth of Middle River was worked over with not a little difficulty, as the river spreads out to considerable width, and is correspondingly shallow; and it is safe to say that we walked over half the distance, until we reached the broad, deep pool forming the beautiful sheet of water at the confluence of the two rivers.

A quarter of a mile below the union of the two streams is a big, rough stone dam, built in accordance with the curious custom of the natives to form a ford; although just what the dam has to do with the ford we have never yet been able to determine, beyond the fact that since the road crosses above the dam it deepens the water, to what purpose we are unable to discover. At any rate, the dam is very much in evidence, with a rough fall of several feet, and some two or three canoe lengths in extent.

We had considerable fun with Lacy at this dam. Lacy, with commendable but mistaken originality, had not followed the rest of us down the regular shoot over the dam, but had tackled it in a new place; and he was discovered with his canoe hanging broadside on the verge of the dam, while he was knee deep in the water on the upper side, vainly tugging, pulling, lifting and swearing against the flow of the water that held her there, his equanimity in nowise enhanced by the advice, good, bad and indifferent, which was liberally bestowed on him by his comrades, rounded to below to see him through. He finally got his bow pointed down stream over the dam and succeeded in shoving and bumping his unlucky canoe down into deeper water below, where he soon joined us; and after a little further advice, to the effect that it is always easier to run a canoe over a dam where the water was deepest, and that it was not as a rule successfully accomplished over the almost bare rocks, we let him off.

"This is the place where I used my sail, on our '86 cruise," said I, half a mile below, as we got out of our canoes and took a walk, dragging the canoes after us, over and among the flat reefs which here extend clear across the river, with so little water over them that a barefooted boy might easily have picked his way across from bank to bank without wetting his ankles.

"It doesn't look much like sailing water along here," said the Colonel, stepping out of his canoe again, as she slid gently up onto another reef and came to a stop, while the Colonel, with one foot on either side of the canoe, and grasping his gunwales with both hands, managed to work her over into deeper water below, with a series of ludicrous, ungraceful jerks, bumps and shoves. Lacy called it doing the bullfrog act, and more than once took occasion to assure the Colonel that it was lots more work and trouble than to step clear out of the boat alongside, once for all, and, picking it up by the stern, shove it, bow first, gently and steadily over the obstruction; while George had frequently, during the day, suffered contumely and abuse from both Lacy and myself for not having that kodak just when the Colonel was particularly agile and graceful in his efforts.

"Well, no," I admitted; "I don't think a sail would be particularly useful here. In fact, my experience leads me to believe that both sails and rudders are superfluities anywhere on the Shenandoah, and that they are simply in the way. You can easily imagine how long a rudder would hang on a boat in such water as this; and even on good water it would be sure to be knocked off in jumping the reefs and fish dams. On the occasion I speak of, however, there was not only good water, but you will remember that the slack water from the Rippetoe Dam—which is now broken out—at that time covered all these reefs, and backed up in a noble, lake-like sheet of water, clear over that dam back there, below Middle River, where Lacy hung up. It was the first and last time I ever used a sail on the Shenandoah, and—— Hi! What's that, Sonny? Cantaloups? Why, certainly!" said I, driving my canoe ashore, in answer to the hail of a little group of small boys, the guardian angels of an adjacent melon patch, who were standing on the bank, watching us pass, in open-mouthed astonishment and admiration. A dime readily procured half a dozen nice cantaloups, which were distributed around wherever was most convenient, in my canoe, until we should reach our evening camping place, at the big spring at Rippetoes, which was but a couple of miles below.

[TO BE CONTINUED.]

A flintlock gun containing a load of irregularly cut lead slugs was fished out of a lime water spring in Virginia last month in almost perfect preservation. It is supposed to have been in the bottom of the spring for at least fifty years, and to have been preserved by the chemical action of the lime water.

Yachting.

Our Boston Letter.

BOSTON, March 9.—Thomas W. Lawson gave out a statement to the press to-night in which he perfectly defines his position with regard to the New York Y. C. and his intentions in regard to the future sailing possibilities of Independence. His statement is very clear and is of the straightforward kind that sportsmen like to read. He makes no excuses whatever for building his yacht, and allows that it is the right of any American gentleman to build whatever kind of boat he likes and sail her where he chooses.

He starts from the very beginning and tells the reasons why he determined to build the Cup defender. Boston yachtsmen wanted a Boston designed and built boat, owned by Boston parties, and, as he had reason to believe that the boat which Mr. Crowninshield drew the lines for would be one that every Bostonian would be proud of, he felt no hesitancy in furnishing the necessary cash to make her a reality. He said that he gave it to be understood that all responsibility connected with the boat was his alone, with the exception of the construction. In regard to a certain feeling among some people that he would be at a large expense for nothing, Mr. Lawson pertinently quotes the old English proverb, "Never lose sleep about the pepper in your neighbor's snuff box; it is he who does the sneezing."

Mr. Lawson allows that he is not a member of the New York Y. C., and also allows that there are a number of Americans, of more or less influence, who are not members of any yacht club. He infers that the reason for his not being a member is because he has not filed any such application, a statement which is at variance with common reports that have been circulated. He says that at the time when he ordered Independence built he did not contemplate joining the New York Y. C.

In regard to the future possibilities of his boat, Mr. Lawson makes the following statement, the sense of which will appeal to all: "When my boat is finished I will cause to be announced, in as pleasing language as I am capable of using, that I am ready to race under any fair conditions against any boat in American waters; that I prefer to race against Columbia and the new boat which Mr. Herreshoff is building. If one or both of these boats will meet Independence, I will be pleased. I will not quibble as to time, place or conditions—in fact, will agree to any conditions that the New York Y. C. or any club or association composed of American sportsmen decide to be fair. If Independence should lose, I will congratulate the owners of the boat beating her; if she wins, I will be happy, and I will ask that Independence be allowed to defend the America Cup, and if it is decided by those who have the right to decide that there is some reason which makes it impossible to defend the Cup, I will cheerfully withdraw such request."

All kinds of rumors have been in circulation in regard to certain possible ways in which Mr. Lawson might overthrow the possibility of Independence not competing in the trial races. It has been suggested that he could enter her in the name of some friend who is a member of the New York Y. C., and several statements have been made to the effect that he would do this thing. Mr. Lawson knocks all these calculations to the winds in his statement. Touching on this point he shows that he is made of the true kind of American stuff in the following words:

"In regard to the statements printed that, under certain conditions, I would resort to the subterfuge of allowing some one else, who had no ownership in my boat, to be proclaimed her owner for the sake of being allowed to race, I can only say I regret there is any one connected with yachting so unmanly as to think this possible. No one has ever suggested such a thing to me, and perhaps it is well no one has made that mistake. Of course I want to have Independence race. If she does not I suppose the tides will come in and go out, and all good Boston sailors will go down to the sea in ships the same as heretofore, but rather than resort to the method suggested to obtain a race I would, without regret, sink Independence on her launching day, turning her sternpost into a permanent beacon for the guidance of future New England sailor men."

In justice to Mr. Lawson, it must be stated that the issuing of this statement was really forced upon him by the various reports which have been circulated in regard to the possible methods he would adopt. He has been placed in a very unenviable position by these suggestions and it would have been a very easy matter for many to judge his intentions wrongly. It must be very surprising to those who have put a false light on his motives to find such a manly, straightforward statement coming from him.

The Executive Committee of the Hull-Massachusetts Y. C. has selected the committee which will conduct and control the races for the 90-footers, 70-footers and other large classes and fishermen for the cups and prizes offered by Thomas W. Lawson, to be competed for under the rules of the Hull-Massachusetts Y. C. These names were suggested to the Executive Committee by Thomas W. Lawson, and were immediately adopted. It is understood that all of the men have signified their intentions to serve. The following men have been selected: James R. Hooper, Louis M. Clark, Henry Bryant, E. V. R. Thayer, William Otis Gay, George H. Richards, W. E. C. Eustis, C. E. Hodge, Henry S. Grew, 2d, and Francis Gray.

These men comprise some of the best known yachtsmen not only in Massachusetts, but in the country. They are all men of wide experience, who are capable of conducting races in the most approved manner. Some of them have been identified with former Cup defenders and all are thorough racing men. The Hull-Massachusetts is fortunate in securing such a committee to take charge of the races.

Mr. Lawson particularly specified that the proposed races for the prizes which he has offered will not take place until after the close of the regular racing season. By doing this he has taken no chances in interfering with other club dates, and leaves every opportunity for the yachts to be present. The dates set will probably be soon after the racing season closes, probably about the second

week in September, so that it will not be very late and will be in plenty of season before the hauling out time comes.

The matter of courses has not yet been decided upon, and this will undoubtedly be left to the committee. It is very likely, though, that the races will be sailed over the regular Hull-Massachusetts courses off Boston light. These courses are the finest in the country. They are in every sense ocean courses, but the land formation is such that the entire course can be seen from points of vantage on the shore. There are a number of large yachts—in fact, nearly all of those that are racing at the present time—which have not had an opportunity of trying these courses, and the Boston yachtsmen are very anxious to have their value thoroughly proved.

At Lawley's Illinois, the Chicago syndicate defender for the Canada cup, is all completed, and will be launched next week. Part of the planking is on the Sloane 85ft. schooner. An 18-footer designed by C. H. Crane, of Tams, Lemoine & Crane, for Buzzards Bay, is being constructed. The Lawley 25-footer for Buzzards Bay will be laid down this week. The 120ft. steamer for W. P. Eno is in frame. The Boreland 85ft. steamer is all planked. The plating is being put on the 50ft. steamer Bostonia, which has been lengthened out. The Parsons 46-footer is planked. The Y. R. A. 21-footer for H. W. Wiggin is set up.

The schooner Constellation is fitting out at Beverly. She will go to Bermuda, where Mr. Skinner will join her and cruise for a time in Southern waters, returning some time in May.

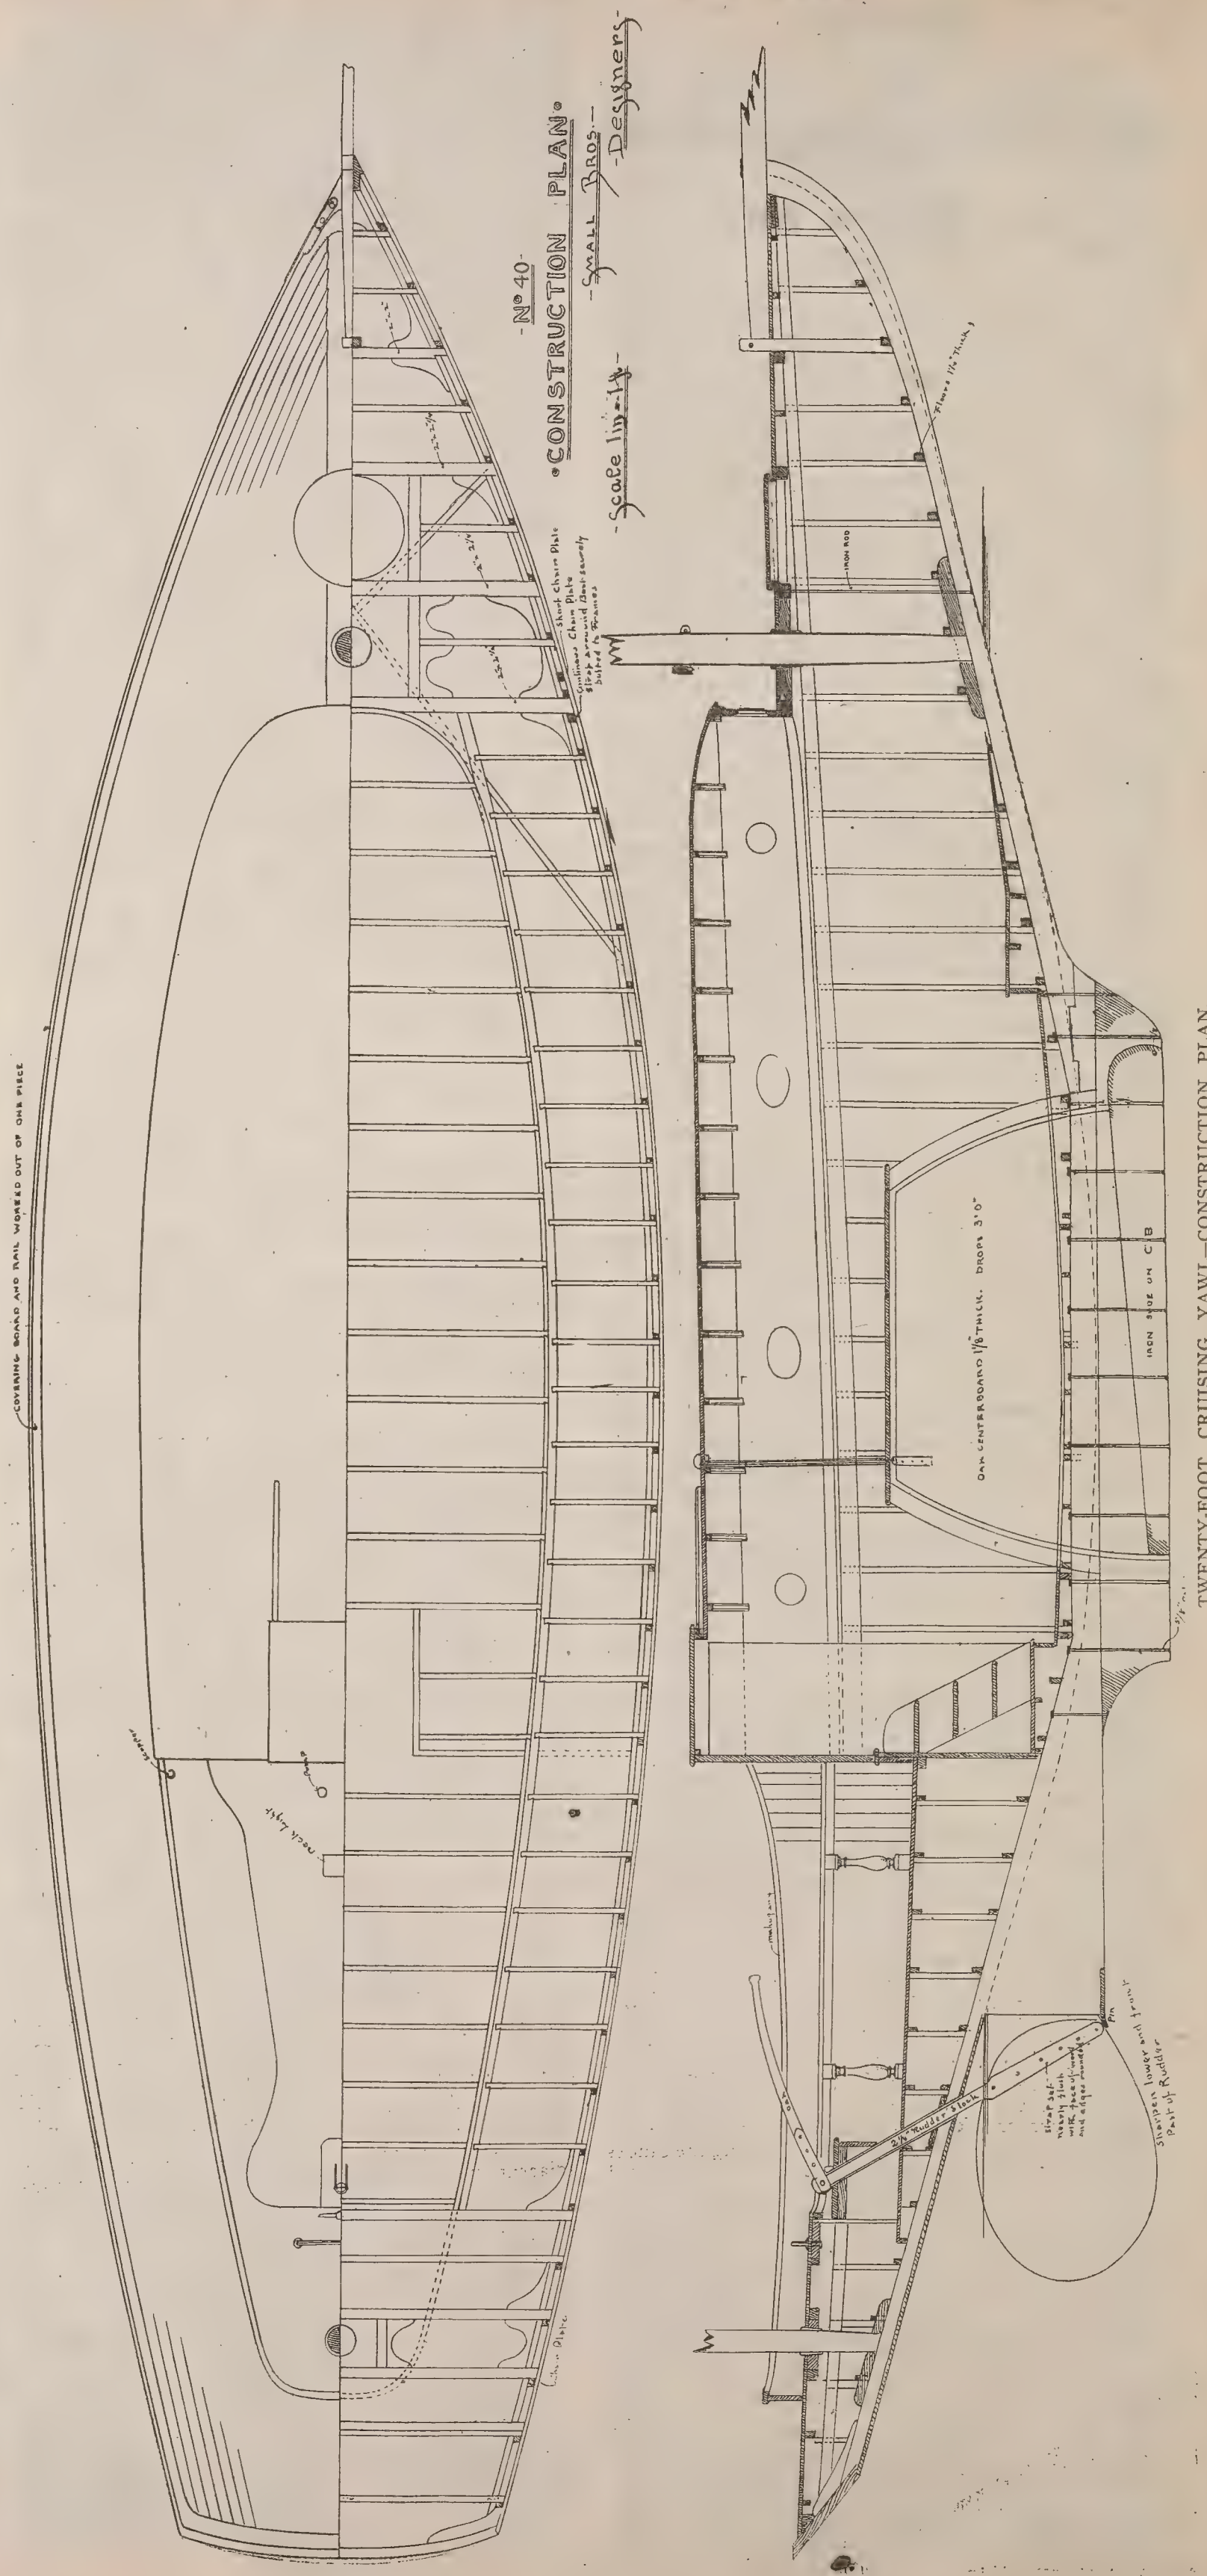
JOHN B. KILLEEN.

A 20-Foot Cruising Yawl.

MESSRS. S. N. AND J. F. SMALL, the well-known Eastern yachtsmen and yacht designers, who have already gained a splendid reputation for turning out successful boats, have formed a co-partnership under the name of Small Brothers, and have opened an office in Boston, Mass. It is the intention of the firm to make a specialty of racing yachts and fast cruisers, and the fact that the firm already has several orders on hand is ample evidence that the venture will prove a prosperous one. We publish this week one of their designs for a cruising yawl, the plans showing a very handsome and roomy boat, and she will undoubtedly be a fast one. She was designed for Mr. F. B. Rawson, of Sandusky, O., and is being built by the Wyandotte Pleasure Yacht Works. She was designed to conform to the scantling restrictions of the Yacht Racing Union of the Great Lakes, and was intended more for afternoon sailing and cruising on Lake Erie than for racing, as her accommodations and headroom indicate.

Her dimensions are as follows:

Length—		
Over all	35ft.	
L.W.L.	20ft.	3in.
Overhang—		
Bow	6ft.	11in.
Stern	7ft.	10in.
Beam—		
Extreme	9ft.	3in.
L.W.L.	8ft.	6in.
Draft—		
To rabbet	1ft.	8in.
Extreme	2ft.	9in.
Board down	5ft.	9in.
Freeboard—		
Bow	3ft.	2in.
Taffrail	2ft.	6in.
Least	2ft.	2in.
Sail Area—		
Mainsail	463 sq. ft.	
Mizzen.	148 sq. ft.	
Jib	115 sq. ft.	
Total	726 sq. ft.	
Displacement	6,550lbs.	
Ballast—		
Outside	2,000lbs.	
Inside	600lbs.	



The Yachtsmen's Club.

MR. JOHN HYSLOP, the official measurer of the N. Y. Y. C., lectured before a large number of members of the Yachtsmen's Club at 47 West Forty-third street, on Wednesday evening, March 6, the subject being "The Measurement Rule." Mr. Hyslop has been identified with yachting for many years and is probably more familiar with its history than any other man in this country. In consequence of this he has had ample opportunity to see the effects of rating rules on yacht design and construction, and for this reason Mr. Hyslop was able to put his subject before his audience in a particularly comprehensive manner. After going over the effect of the early rating rules and formulas both in England and America, he led up to the new rule recently adopted by the Seawanhaka Corinthian Y. C., and illustrated it by drawings, explaining how boats would be measured in actual practice under the new rule. The lecture was most interesting, and the club members extended a vote of thanks to Mr. Hyslop.

Designs Recently Published in Forest and Stream.

25-footer Flirt, Oct. 13-20.
21-footer Tattoo, Oct. 27.
Minnesota, Nov. 17.
19ft. sailboat, Nov. 24 and Dec. 1.
Cutter Isolde, Dec. 8.
Catboat Lazy Jack, Dec. 15-22.
Raceabout Jolly Roger, Dec. 29.

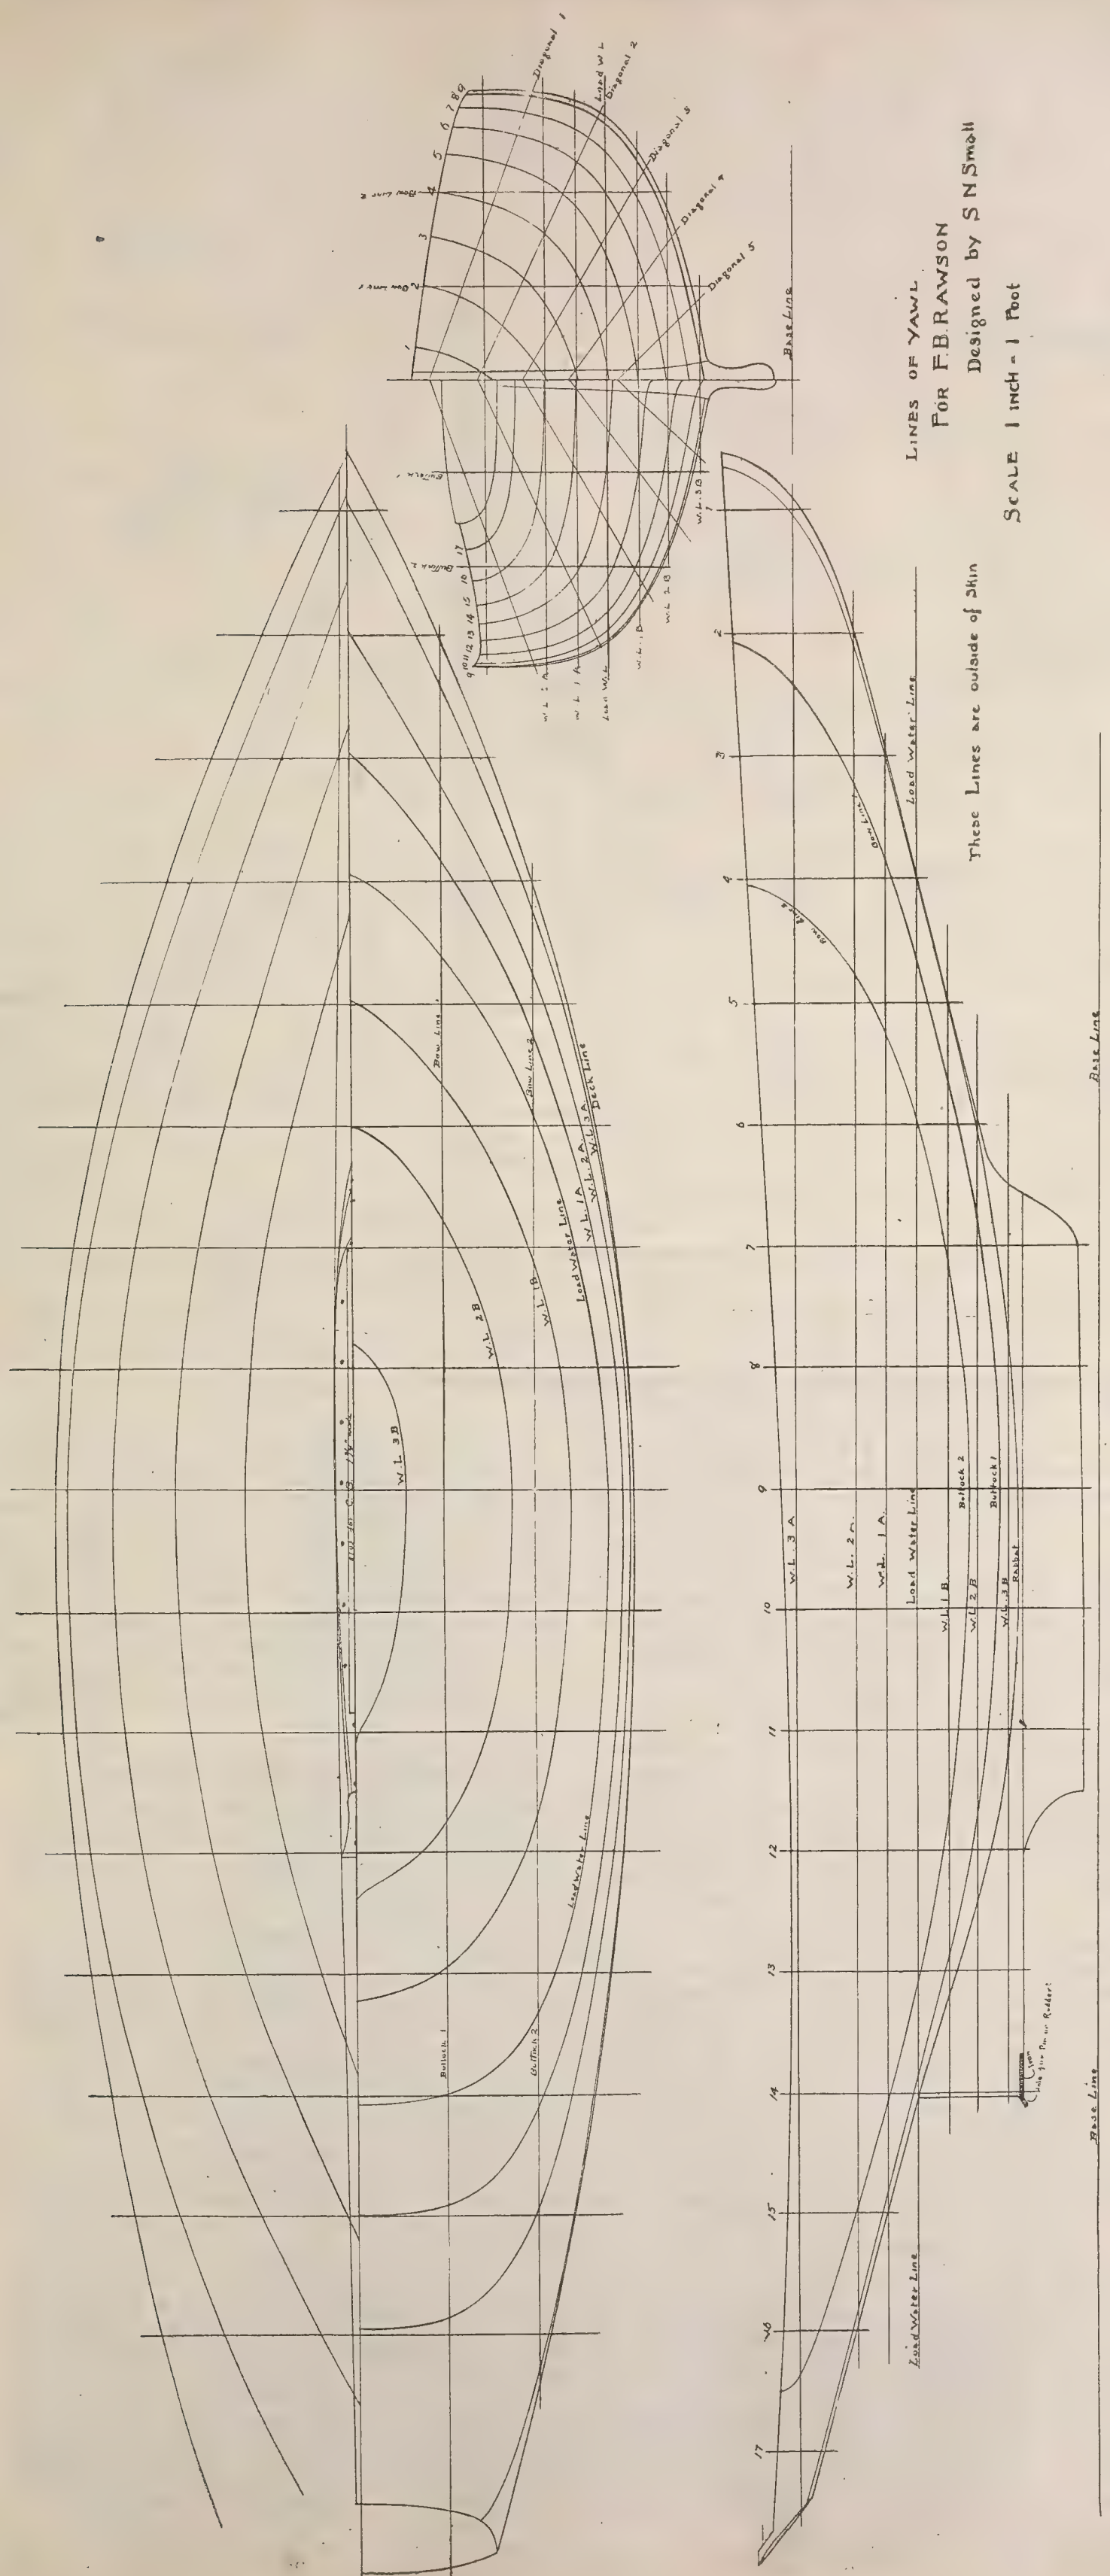
25ft. cruising sloop, Feb. 16.
32-ft. fast cruiser, Feb. 23.
House-boat designs, March 2.
Schooner Endymion and yawl Ellida, March 9.



The Marine Exhibits at the Show.

IT is a matter of general regret that the Sportsmen's Show, now being held at Madison Square Garden, contains so few marine exhibits. No better opportunity to display their products could be offered to the many manufacturers in all parts of the country, and yet less than a dozen avail themselves of it. These few, however, make up for lack of numbers by their exhibits, and they have no doubt met with success.

The Snecker Motor Co.

One of the most interesting displays was made by the Sneckner Motor Company, of Greenwich, Conn., who build one of the most compact, powerful, economical and absolutely safe gas motors on the market. This firm exhibited a launch that has been specially built for them by Mr. L. D. Huntington, of New Rochelle.

The Truscott Boat Manufacturing Co.

Perhaps the largest marine exhibit was that of the Truscott Boat Manufacturing Company, of St. Joseph, Mich. Two boats are shown, one an open launch 18ft. long, and the other a cabin boat, 30ft. in length. Both these boats were perfectly appointed in every way, and were sold soon after the exhibition was opened. The New York office of this firm is in charge of Mr. J. W. Newbury, 471 West Twenty-second street.

The Standard Motor Manufacturing Co.

Another splendid exhibit is that of the Standard Motor Manufacturing Company, of 148 East 129th street, New York city. This firm manufactures 4-cycle gasoline engines of 2, 3 and 4 cylinders from 10 to 75 horse power, all of which are equipped with automatic governors and vaporizers, speed regulators and spark timing device and reversing gear. The compactness of this engine especially adapts it for auxiliary uses; the propeller revolves without any drag when the boat is under sail. Some of the boats already equipped with this type of motor are: Trochilus, owned by Mr. Mayhew W. Bronson; Meda, owned by Dr. Morton R. Peck; Toma, owned by Mr. Bradley L. Eaton, and Sea Bird, owned by Mr. J. O. L. Wharton.

The Wolverine Motor Works.

Mr. A. V. Evans, the New York agent of the Wolverine Motor Works, of Grand Rapids, Mich., has on exhibition at space 37 a 6-horse power 2-cycle Wolverine motor. This motor shows the high class work that this firm turn out. Their 3-cylinder motor is self-starting and reversing, and can be handled the same as a steam engine; it is made in 1, 2 or 3 cylinder types and from 2 to 60 horse power. It is an ideal engine for launches, yacht tenders and auxiliaries; can be used with solid propeller or reversing screw; reversing screw can be set so that blade does not drag when the boat is under sail. Mr. Evans will have one of these motors on exhibition at his office, 105 Beekman street, New York city, and will be pleased to explain its merits to prospective purchasers. Over 1,000 Wolverine motors are now in operation, 175 of them being in working boats receiving almost constant daily use, and many are in use in the fruit trade in Central and South America. One of their boats is to be taken on a North Pole expedition by Messrs. Baldwin and Zeigler. It is an interesting fact that there are Wolverine motors in use in every civilized country in the world.

The D. M. Tuttle Co.

Still another exhibit that attracted much attention is that of the D. M. Tuttle Company, of Canastota, N. Y. This company manufactures gasoline engines, boats and launches, and has already gained an enviable reputation. The launch which is on exhibition is thoroughly constructed and is well finished; it is 16ft. long 4ft. 2in. beam and 16in. draft; the decks are finished in oak. The boat is fully equipped with a 1½-horse power Tuttle motor, an interesting feature of which is the self-wiping sparker. A written guarantee is given with each boat and a two weeks' trial is permitted. It would appear that the price asked for these boats ($200) is very reasonable. The New York agents are H. H. Kiffe Company, 523 Broadway, who will send catalogues and any desired information on request.

The Carlton Boat & Canoe Co.

The Carlton Boat & Canoe Company, of Oldtown, Me., make a creditable showing with their high grade canoes.

The International Gas Engine Co.

The International Gas Engine Company, of 26 Broadway, New York, has on exhibition a 22-horse power engine. This is a durable motor of simple construction, which occupies a small amount of floor space; it is self-starting and very economical in fuel consumption. Beside the large number of these engine in use on yachts and launches, many are used on the oyster and fishing boats of Long Island Sound and Great South Bay.

The New York Kerosene Engine Co.

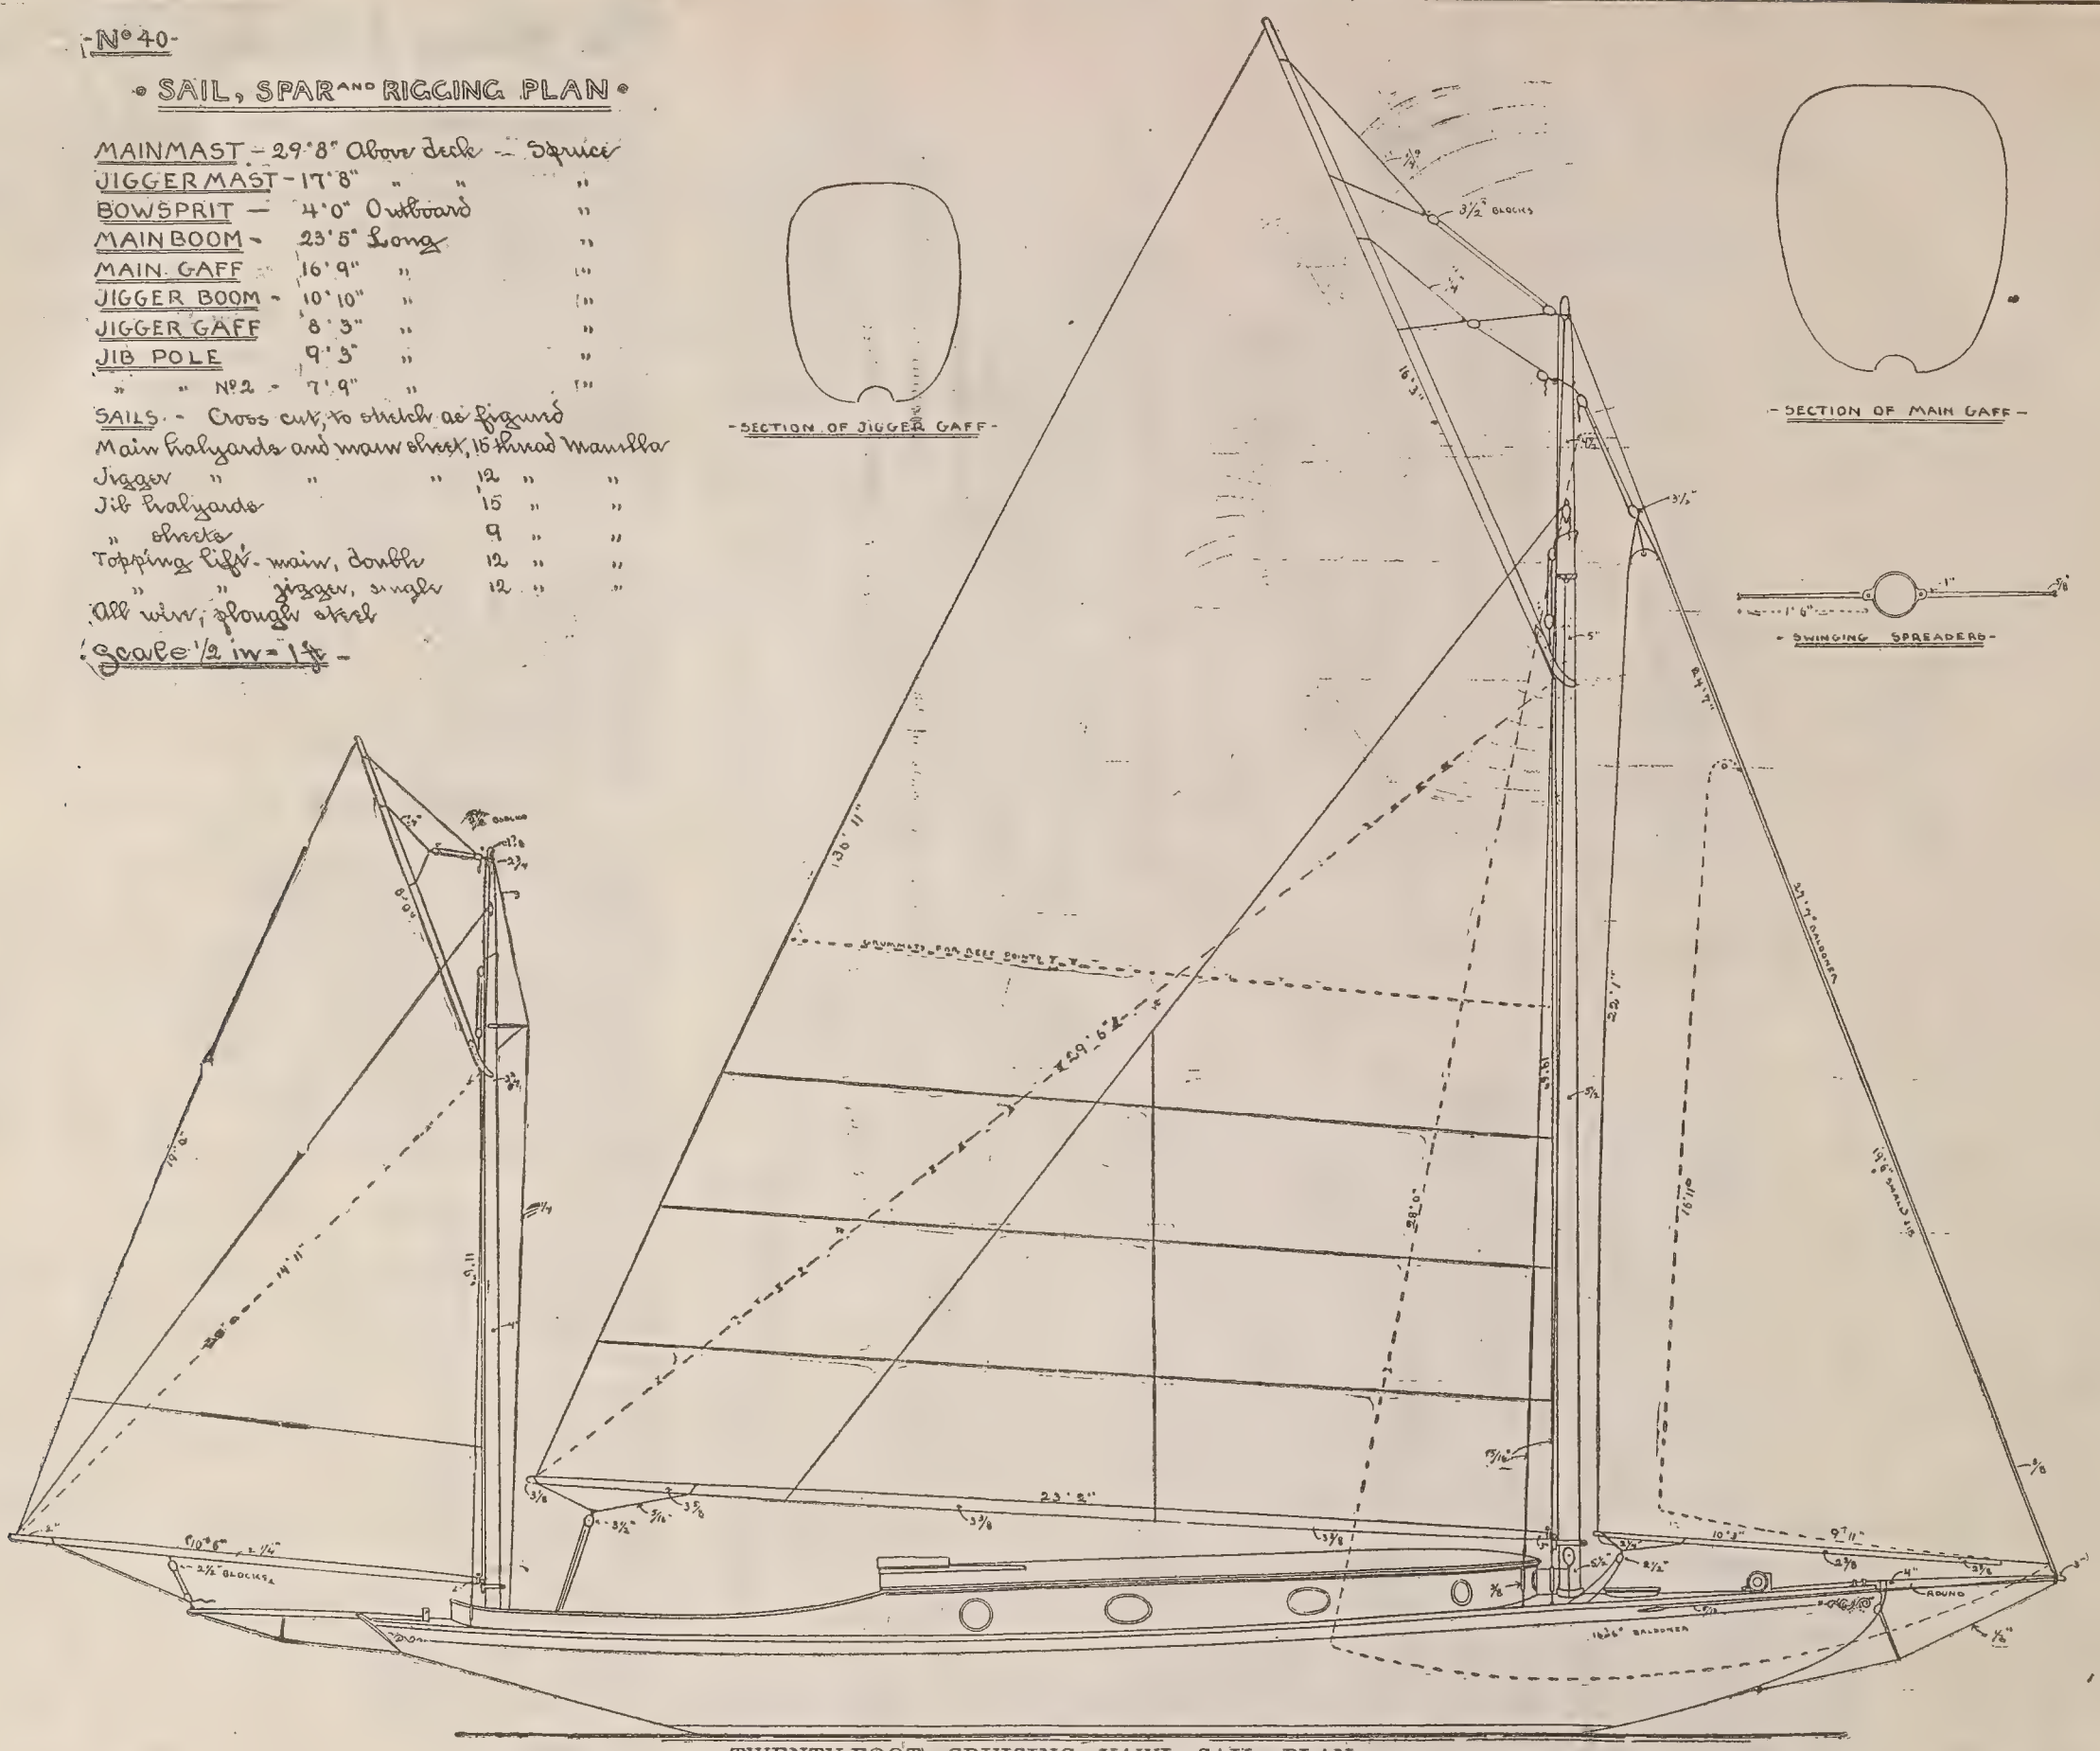
One of the few exhibitors who had a motor in full operation was the New York Kerosene Engine Company, of 31 Burling Slip, New York city. This concern manufactures the most successful kerosene oil motor on the market, and those interested can see one of these engines in operation at the firm's yard, 131st street and Harlem River.

The Craig Gasoline Engine.

Mr. James Craig, Jr., of 556 West Thirty-fourth street, has on exhibition a 3½-horse power 4-cycle engine. The Craig engine is made with 3 and 4 cylinders, by means of which they are arranged in correct balance and the explosions in the different cylinders occur in regular sequence. This provides smooth and quiet running and permits of high speed with maximum power for minimum weight. Mr. Edward F. Leeds, of Bridgeport, Conn., is the sole agent for Connecticut and Long Island.

White Star Motors.

Mr. W. R. Smith, of 868 Eighth avenue, has two White Star motors on exhibition. Mr. Smith manufactures



marine and stationary gas engines from 2 to 50 horse power. Circulars and all information sent on request.

The Indian Oldtown Canoe Co.

Spaces 14 and 15 are occupied by the Indian Oldtown Canoe Company, of Oldtown, Me. They have a very complete exhibit of canoes, paddles, etc.

The Mather Launch and Canoe Co.

The Mather Launch & Canoe Company, of Atlantic, Mass., occupying spaces 11, 12 and 13, in connection with their New York agents, Shoverling, Daly & Gales, are exhibiting canvas canoes and canvas-covered rowboats.

Clarette.

CLARETTE was designed by Mr. S. N. Small, of Small Brothers, of Boston, and was built by Messrs. Higgins & Gifford, of Gloucester, Mass., for Mr. Walter Burgess. She was planned to conform to the cabin and scantling restrictions of the Massachusetts Y. R. A. Clarette has a large amount of accommodation, there being 6ft. of headroom in the cabin. She has a large main cabin with two berths on either side and wide transoms in front. Forward is the toilet room, galley and a good sized forecastle; there is also ample locker room. Her dimensions are as follows:

Length—	
Over all	45ft.
L.W.L.	28ft. 6in.
Overhang—	
Bow	7ft. 6in.
Stern	9ft.
Freeboard—	
Bow	3ft. 6in.
Taffrail	2ft. 6in.
Least	2ft. 3in.
Beam—	
Extreme	12ft. 2in.
L.W.L.	11ft. 4in.
Draft—	
Extreme.	3ft. 2in.
Board down	7ft. 6in.
Sail area, total	1,450 sq. ft.
Ballast	4,650lbs.

Yacht Club Notes.

The Pelham Country Club has organized a yachting department to be known as the Lark Club, its object being to promote boat racing and social intercourse among its members. The club's headquarters during the summer months will be at Pelham Bay. Races will be held every Saturday afternoon in the bay off the club house, and special open races will be held during the season. Some twelve one-design larks are being built, and special attention will be given to this class. Ten of these boats are being constructed at the yard of C. G. Downer, at College Point, L. I. Suitable prizes will be awarded to the winners in all classes. At a recent meeting of the club the following officers were elected: Com., Paul R. Allen; Vice-Com., M. St. G. Davies; Rear-Com., Frank Downing; Secretary and Treasurer, H. S. Sayers, 218 West 131st street, New York city. A number of large boats have been enrolled on the club's list, and the membership is increasing rapidly.

* * *

At the annual meeting of the Columbia Y. C., held at the Yachtsmen's Club, the following officers were elected: Com., Walther Lüttgen; Vice-Com., W. C. Trageser; Rear-Com., Alfred Carr; Secretary, T. S. Coale; Treas., J. A. Weaver; Fleet Surgeon, H. Griswold, M. D.; Meas., Mansfield M. Doty. Trustees to serve two years—George R. Bidwell, W. M. K. Olcott, W. Dixon Ellis and W. T. Colbron. Nominating Committee—J. F. Hitchcock, chairman; W. H. Carpenter and T. S. Coale.

* * *

At the annual meeting of the Portland Y. C., held Wednesday evening, March 6, the following officers were elected: Com., C. W. Bray, steam yacht Maitland; Vice-Com., Edward Woodman, knockabout Banshee; Sec'y, J. E. Butler; Treas., C. F. A. Weber; Meas., D. W. Fox; Fleet Capt., P. S. Jones; Fleet Surgeon, Dr. W. H. Bradford; Regatta Committee, N. Clifford, W. Noyer, F. S. Vaill, C. W. Small; Membership Committee, E. H. Rice, F. S. Macomber, F. S. Bullard. The club has 260 members, and there are eighty-three yachts enrolled. The Treasurer reports the club free from debt, with a good surplus with which to begin the year. A special smoker will be held at the club house April 26 to celebrate the thirty-second anniversary of the organization of the club.

* * *

The Canarsie Y. C. has announced the following racing dates for the coming season:

Thursday, May 30—Opening of the season, parade and review of the yachts in club's fleet; reception and review at club house, Sands Point, Canarsie, L. I.

Saturday, June 8—Pennant championship race on Jamaica Bay, over ten miles' triangular course.

Thursday, July 4—Dress parade, review and fireworks.

Saturday, July 22—Open regatta off club house on Jamaica Bay.

Saturday, Aug. 17—Corinthian regatta off club house at Sands Point, L. I.

Monday, Sept. 2—Ladies' day regatta, each boat in contending fleet to be handled by ladies.

Saturday, Sept. 21—Commodore's cup races off the club house, Sands Point, L. I.

At the annual meeting of the Greenville Y. C. of New Jersey, at the club house, foot of Linden avenue, Greenville, Upper New York Bay, the following officers were elected for the ensuing year: Com., A. G. Roemer; Vice-Com., C. N. Pinkney; Rear-Com., O. Greiff; Sec'y, A. L. Bogart; Treas., C. P. Boos; Meas., C. Johnson; Sergeant-at-Arms, F. Lange. The Trustees elected were A. G. Roemer, C. N. Pinkney, O. Greiff, A. L. Bogart, C. P. Boos, A. Renshaw, G. Ruffle and F. J. McMullen. The reading of the annual report showed an increase of 50 per cent. in the membership of the club, a total of 100 members, 40 of whom are boat owners. At the April meeting a schedule of dates will be announced for the yachting season.

YACHTING NEWS NOTES.

The auxiliary sloop Massasoit, built at Smtih V. Rogers' yard, Sayville, L. I., for Mr. W. M. Blaisdell, of Brooklyn, was launched a few days ago. She will be the flagship of the Canarsie Y. C. The boat is 55ft. over all, 35ft. on the waterline and 14ft. 6in. beam, and is equipped with a 20-horse power engine.

* * *

Palmer Bros., of Miamus, Conn., are building for Mr. J. S. Johnson, of Baltimore, Md., a 35ft. cruising cabin launch, the power to be furnished by a 12-horse power Palmer gasoline motor. The boat will be used on Chesapeake Bay.

* * *

The New York Y. C. realized about $1,500 on the sale of the furniture that was left in the old club house at 67 Madison avenue.

* * *

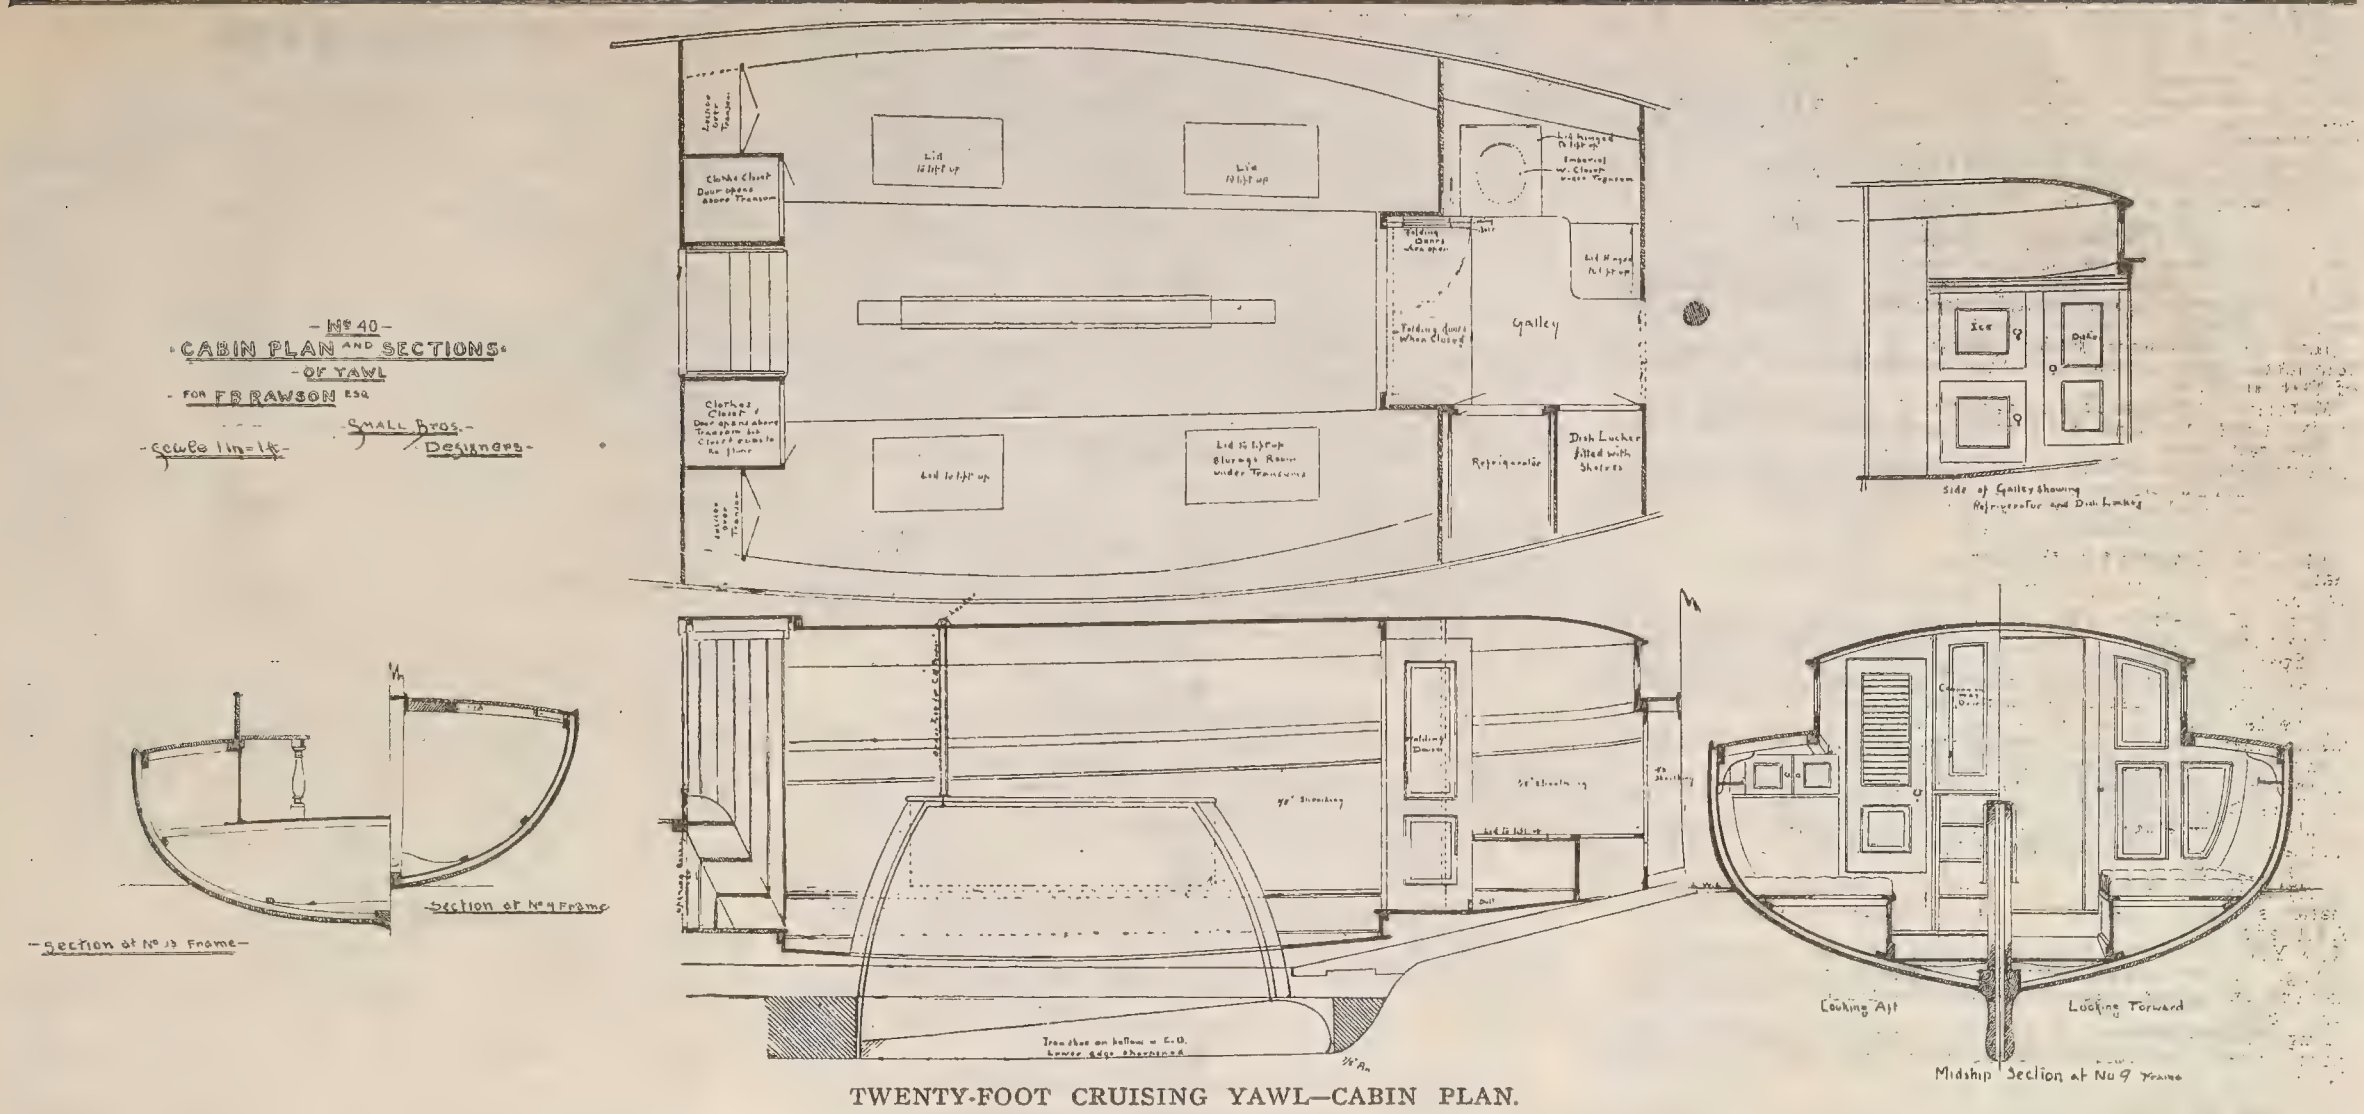
Dr. E. M. Culver, of New York, has purchased the steam yacht Cero, which is now in Florida. He will make an extended cruise on her with a party of friends through the West Indies.

* * *

The yacht Laurea that won the Coupe de France is not a total loss, as was at first reported. She has been raised by a shipbuilder of Marseilles and will be repaired in time to do some more racing before the Mediterranean season closes.

* * *

The foreign-built steam yacht May, owned by Mr. Alexander Van Rensselaer, has recently been admitted to American registry. A bill was passed by the Senate and the House authorizing the Commissioner of Navigation to classify the yacht as a vessel of the United States. The May rendered the Government valuable services as a relief ship during the Spanish-American war. In a letter to Senator Frye, chairman of the Committee on Commerce, General Miles speaks most highly of the usefulness



TWENTY-FOOT CRUISING YAWL—CABIN PLAN.

of the yacht in carrying medicine and supplies to the soldiers and sailors in Porto Rico. The May was originaly owned by E. D. Morgan; she was afterward purchased by Mrs. Sarah D. Fell, and later was sold to Mr. Alexander Van Rensselaer.

* * *

Work is being rushed on the Cup challenger, Shamrock II. The Yachting World says: "Fresh gangs of men were started last week on the construction of the new challenger in Denny Bros.' yard at Dumbarton, and a serious effort is being made to try and have the shell ready for launching on the tides which fall due in the last week of March. All the hands retained for the job have been turned on, and the work goes on incessantly by day and night. During the day the work is done entirely inside the shed and the shaping and fitting of the heavier pieces, which require the assistance of the ordinary machinery, are done at night, when the yard has been cleared of the men on the day shift. Capital progress has been made, but although much of the material for building her is already shaped and ready, there seems to be little prospect of the vessel being ready for launching at the time originally named. A dredger has now started work in the River Leven, opposite the yard, for the purpose of dredging a launching berth and a channel right to the Fairway of the Clyde."

* * *

The Spalding St. Lawrence Boat Company, of Ogdensburg, N. Y., have received from the Herreshoffs an order for three topsail hollow spruce spars for the new Cup defender being built at Bristol, R. I. These hollow spars, of the special method of construction of the Spalding Company, will be from 50 to 60 per cent. lighter weight than if of solid wood of the same dimensions, and also considerably lighter than steel tubing of sufficient weight for the purpose. Such a saving in weight aloft on the Herreshoff boat will be considerable and of immense advantage.

* * *

The following large steam yachts, among others, will have new Roberts boilers next season: Steam yacht Admiral, owned by Mr. Pliny Fish, of New York; new steam yacht (formerly steamer City of Quincy), owned by Mr. H. B. Anderson, of New York; steam yacht Say When, owned by Hon. W. J. White, Cleveland, O.; new steam yacht now being built on the St. Lawrence River, owned by Mr. W. H. Nichols, President of the General Chemical Company, of New York; three steam yachts now being built by the George Lawley & Sons Corp., South Boston, Mass.; steam yacht Venice, owned by L. C. Smith, of Syracuse, N. Y.; steam yacht Chetolah, owned by Mr. A. J. Wise, of New York; new steam yacht (not yet named), owned by Mr. James Averill, of Champlain, N. Y.

Trapshooting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for a quarter-century.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

March 21.—Newell, Ia.—Newell Gun Club's target and live-bird shoot. Henry G. Hall, Sec'y.

April 9-12.—Baltimore, Md.—Seventh annual spring tournament of the Baltimore Shooting Association; two days targets, $100 per day added; two days live birds, $500 guaranteed. J. M. Hawkins, Sec'y.

April 10.—St. Louis, Mo.—Contest for Dupont trophy at Dupont Park.

April 12-13.—Newark, N. J.—Forester Gun Club's tournament. J. J. Fleming, Sec'y.

April 16-18.—Leavenworth, Kan.—Annual tournament of the Kansas Sportsmen's Association. W. H. Koehler, Sec'y.

April 18.—Newell, Ia.—Newell Gun Club's target shoot. Henry G. Hall, Sec'y.

April 24-25.—Binghamton, N. Y.—Amateur tournament of the Peters Cartridge Co.; $150 added money. H. W. Brown, Sec'y. John Parker, Mgr.

April 26-28.—Chicago.—Annual spring tournament of the Crescent Gun Club. John S. Boa, Mgr.

May 7-9.—Peru, Ind.—Fifth annual amateur tournament of the Peru Gun Club; two days at targets for amateurs; one day at live birds. Chas. Bruck, Sec'y.

May 7-10.—Tournament of the New Jersey State Sportsmen's Association. C. W. Feigenspan, Sec'y.

May 7-10.—Lincoln, Neb.—Twenty-fifth annual tournament of the Nebraska State Sportsmen's Association, under the auspices of the Lincoln Gun Club. W. D. Bain, Sec'y.

May 14-17.—Allentown, Pa.—State shoot of Pennsylvania State Sportsmen's Association. C. F. Kamlich, Cor. Sec'y. Elmer E. Shaner, Mgr.

May 1-3.—Newell, Ia.—Newell Gun Club's annual tournament; targets and live birds. Henry G. Hall, Sec'y.

May 14-16.—Elwood, Ind.—Tournament of the Zoo Rod and Gun Club.

May 14-17.—Newton, Ia.—Annual tournament of the Iowa State Sportsmen's Association, under auspices of the Newton Gun Club. D. R. Tripp, Sec'y.

May 21-25.—Springfield, Ill.—Twenty-seventh annual tournament and convention of the Illinois State Sportsmen's Association. Chas. T. Stickle, Sec'y.

May 22-23.—Mechanicsburg, O.—Ninth annual tournament of the Mechanicsburg Gun Club. C. W. Phellis, Sec'y.

May 28-30.—London, O.—Tournament of the London Gun Club.

May 28-30.—Saginaw, Mich.—Tournament of the Michigan Trapshooters' League; under auspices of the East Side Gun Club. John Parker, Mgr.

May 30.—Canajoharie, N. Y.—Tournament of the Canajoharie Gun Club. C. Weeks, Sec'y.

May 30.—Auburn, Me.—Annual shoot of the Auburn Gun Club.

June 5-7.—Circleville, O.—Under auspices of the Pickaway Rod and Gun Club, annual tournament of the Ohio Trapshooters' League. G. R. Haswell, Sec'y.

June 11-13.—Sioux City, Ia.—Seventh annual amateur tournament of the Soo Gun Club. W. F. Duncan, Sec'y.

June 13-14.—Bellefontaine, O.—Fourth annual tournament of the Silver Lake Gun Club. B. G. Cushman, Sec'y.

June 17-20.—Warm Springs, Ga.—Southern Interstate tournament; two days targets, two days live birds. Chas. L. Davis, Mgr.

June 25-27.—Walla Walla, Wash.—Seventh annual tournament of the Sportsmen's Association of the Northwest. W. G. Campbell, Sec'y.

June —.—Columbus, Wis.—Tournament of the Trapshooters' League of Wisconsin. First week in June.

July 17-18.—St. Marys, W. Va.—Fifth annual tournament of the West Virginia State Sportsmen's Association, under auspices of West Virginia Gun Club. Mallory Brothers, Mgrs.

July 23.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.

Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap Tournament at Live Birds.

June —.—Interstate Park, Queens, L. I.—Forty-third annual tournament of the New York State Association for the Protection of Fish and Game.

Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds; $5 entrance. First contest took place June 20, 1900.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap tournament at live birds. Edward Banks, Sec'y-Treas., 318 Broadway, New York.

April 17-18.—Jacksonville, Fla.—The Interstate Association's tournament, under the auspices of the Jacksonville Gun Club. B. W. Sperry, Sec'y.

May 8-10.—Memphis, Tenn.—The Interstate Association's tournament, under the auspices of the Memphis Gun Club.

June 19-21.—Cleveland, O.—The Interstate Association's tournament under the auspices of the Cleveland Gun Club.

July 1-2.—Sherbrooke, P. Q., Can.—The Interstate Association's tournament under the auspices of the Sherbrooke Gun Club. C. H. Foss, Sec'y.

July 10-11.—Jamestown, N. Y.—The Interstate Association's tournament, under the auspices of the Jamestown Gun Club. Dr. C. Rawson, Sec'y.

July 23-26.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York.

Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament under the auspices of the Providence Gun Club. R. C. Root, Sec'y.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

E. W. Tinker, of Providence, R. I., famous in the trapshooting annals of a past school, died last week. He defeated both Ira Paine and A. H. Bogardus when they held the center of the stage in their zenith as shooting wonders. His favorite style of shooting was according to the Rhode Island rules, gun below the elbow. His last conspicuous participation in a public contest at the traps was at the Interstate shoot given under the auspices of the Providence Gun Club, July 19,-20, 1899, and although he was then well along in years he broke 21 targets out of 30. Of him, in FOREST AND STREAM'S report, Mr. Edward Banks wrote as follows: "The Old Guard was represented by Ned Tinker, one of the best-known trap shots of Rhode Island in the days when gun below the elbow and 21yds. rise were the thing, with live pigeons for targets. Ira Paine and Mr. Tinker were giants in those days, and the latter's scores in the first two events on the first day show that Mr. Tinker's blue eyes have not forgotten how to look along a gun barrel, although the sight may not be as clear as it was when feathers flew. Mr. Tinker is well thought of by the Providence Gun Club; he is its solitary honorary member."

It seems that the Indians, the new fraternity of the trapshooters, have a solemn ritual, and that all candidates are subjected to it to the end that their worthiness and stanchness are properly tested before they can properly be classed as braves. At Chicago, the famous naval man behind the gun, Admiral A. G. Courtney, was a candidate in search of membership, and was being just put through the form where his socks were turned down over his shoes and he was being led, blindfolded, round the tables and through the doors and then seated. A glass of water was handed to him. He was commanded to drink it and name it. At the first taste he shivered and said in disgust, "I never was good at naming these French drinks," whereupon he was elected to full membership by popular acclamation.

The tournament programme of the Newell Gun Club, of Newell, Ia., can be obtained of Mr. H. G. Hall, the club's secretary. It tersely sets forth that the tournament date is March 21; strictly amateur; targets 2 cents; live birds 12½ cents; purses divided 40, 30, 20 and 10 per cent.; magautrap rules. Annual shoot May 1, 2 and 3. Eleven events are provided, of which seven are at targets, four at live birds. Two of the latter are at 10 birds, $5; one at 7, $3; one at 15, $7.50 entrance. The target events are one at 10, four at 15, and two at 20, $1, $1.50 and $2 entrance.

Mr. Franklin Stearns, of Richmond, Va., is steadily coming to the front as a skillful and successful trap shot. On Thursday of last week he shot two 50-bird races with Mr. W. A. Hammond, at Richmond, the first for the championship of Virginia, the second for the championship of Richmond city. In the first contest he won by a score of 45 to 43, losing 3 dead out. In the second there was a tie on 41, and in the shoot-off both had scored 10 when the supply of pigeons gave out, and further competition was postponed to Wednesday of this week.

In his "Century of Chinese Literature" H. A. Giles tells this: "A general was hard pressed in battle and on the point of giving way, when suddenly a spirit soldier came to his rescue and enabled him to win a great victory. Prostrating himself on the ground, he asked the spirit's name. "I am the God of the Target," replied the spirit. "And how have I merited your godship's kind assistance?" inquired the general. "I am grateful to you," answered the spirit, "because in your days of practice you never once hit me."

The New Utrecht Gun Club, of Newark, and the Riverton Gun Club, of Philadelphia, have arranged a club team match, fifteen men on a side, each man to shoot at 25 live birds from the 29yd. mark. The match will take place at Riverton, March 22, to be followed by a return match at Interstate Park some time in April. The difference between 29yds and 30yds. is so slight that the latter, being a standard of the best performance, would seem to be the more desirable from an outsider's point of view.

The Baltimore Shooting Association will be represented at the Grand American Handicap by twelve or more of its members. There is evidence on every hand that this great national event has lost none of its keen interest to the shooting fraternity. Incidentally, those who are at the G. A. H., who contemplate attending the Baltimore shoot and desire information concerning it will have a good opportunity to interview its representatives and meet a fine lot of gentlemen sportsmen.

The programme of the Baltimore Shooting Association's annual spring tournament will be issued about March 20. The dates, April 9 to 12, inclusive, follow conveniently after the Grand American Handicap for the shooters who contest therein to attend the Baltimore shoot, of which the first two days are at targets, $100 added each day. Also $500 are guaranteed in the Maryland Handicap. The address of the secretary, Mr. J. M. Hawkins, is P. O. Box 454, Baltimore, Md.

The recent team shoot between New York and New Jersey has demonstrated that a competition which has new features, when properly backed, will have a strong and earnest support. The same men facing the same proposition week after week and month after month do dot need to compete to learn the results. With a new proposition and therewith the element of uncertaintiy new interest and effort are evoked. There is more trapshooting skill in America to-day than ever before, but, in a majority of instances, they have nothing new offered in the way of competition. At least, instead of offering the same events over and over again, changes could be made, team shoots one week, sweepstakes the next, trophy events the next, etc., much to the activity of the sport.

On Saturday of last week, at Interstate Park, in the continuous match, the crackerjack squad being at the score, there was extraordinarily quick action. Heikes, Gilbert and Banks missed on the first target; Fanning went out on his second, and Leroy tarried but a moment longer, retiring on his third. Eight targets were sufficient to put out the entire squad at that time, but the scores will show that such a happening is rare enough to class as an event.

Mr. E. L. Greenin, of Westwood, N. J., informs us that the Westwood Gun Club, of which he is secretary, has erected a new club house on its grounds. It was decided at a meeting on March 2 to hold its regular club shoot the third Saturday of each month. Mr. V. Van Buskirk, was elected captain of the club. The organization is in a very promising condition at present, new members being constantly added to the roll.

Mr. John Watson, Grand Crossing, Chicago, Ill., writes us as follows: "To give the shooters from the West on their way to the Grand American Handicap a chance for some practice, I will give a two days' shoot—March 28 and 29—commencing at 10 A. M. each day. Programme: Ten birds, entrance $5, divided 55 and 45 per cent; 15 birds, entrance $8, divided 40, 35 and 25 per cent. Same both days. Handicaps 28 to 31yds."

In our advertising columns, Mr. E. D. Fulford, of Utica, N. Y., calls attention to his celebrated live-bird traps, which have been adopted by many of the leading trapshooting Associations of America. Besides his celebrated automatic traps, he manufactures portable traps, a set of which can be installed in five minutes. Concerning them, for further particulars address Mr. Fulford.

The Carlstadt Gun Club, of Carlstadt, N. J., was organized on March 7. Officers were elected as follows: President, Theo A. Gemp; Vice-President, Chris Niederer; Secretary, Henry Krug; Treasurer, George Frank; Captain, Wm. Rasmus. There is a large membership. The club shoot will be held every Saturday. The club holds a meeting on the first Monday of every month.

No. 1 squad in the championship 100-target race on Saturday, at Interstate Park, did a remarkable thing. It broke 124 out of 125 targets when up to shoot at the last 25 of the 100. The squad consisted of Messrs. Crosby, Gilbert, Heikes, Fanning and Parmelee, the latter missing his 19th target. It was very careless.

The following has been communicated to us: "Alexander Stein, of the well-known firm of Conrad Stein Sons, has purchased a battle axe of the firm of Schoverling, Daly & Gales at their exhibit at Madison Square Garden, intending to send same to Mrs. Carrie Nation, inviting her to come here and try same."

In the championship contest at 100 targets, on Monday of this week, at Interstate Park, Messrs. Parmelee, Crosby, Gilbert, Heikes and Fanning each broke his first 25 straight, making 125 for the squad without a miss. Gilbert continued as he began and broke 100 straight, making thereby a perfect score.

Owing to the objections of residents whose domiciles were adjacent to Madison Square Garden, the Roof Garden tournament was adjourned to Interstate Park on Friday of last week. No shooting, further than a start, was done on Thursday, the shooting being stopped at 11:15 A. M.

The Union Gun Club, of San Francisco, Cal., whose programme for the year 1901 we publish elsewhere in our trap columns, recently elected officers as follows: President, Fritz Walpert; Vice-President, M. J. Iverson; Secretary-Treasurer, Wm. Janssen; Captain, C. M. Wollam.

Mr. J. L. Head, of Peru, Ind., writes us that the Peru Gun Club's fifth annual amateur tournament will be held at Peru, Ind., May 7, 8 and 9. Two days at targets for amateurs, and one day at live birds, open to all. Mr. J. L. Head is the president, Mr. Chas. Bruck, secretary.

On Thursday of last week the return match between Messrs. J. Stubbs, of Frenchtown, and J. Hagey, of Hellertown, took place at Greisemersville, near Allentown, Pa. The first match resulted in a tie. This match was at 47 birds. The scores were Stubbs 41, Hagey 38.

The California Wing Club recently elected officers as follows: President, Dr. S. E. Knowles; Vice-President, Edw. Donohue; Secretary, C. C. Nauman; Board of Directors, the officers, with C. H. Shaw, O. Feudner and F. Vernon.

Mr. Ed Bergen, of Grand Rapids, Minn., won the H. C. Hirschy trophy in the last shoot on March 2 at Intercity Park, Minneapolis, Minn., with a score of 24 out of 25. The next contest for this trophy will take place at Grand Rapids, Minn.

We are informed that on March 15 at Bunn's Hotel, Singac, N. J., a match will be shot at 100 live birds each for a purse of $200, between A. Doty, of Paterson, N. J., and E. A. Dickson, of Newburgh, N. Y., commencing at 1 P. M.

Mr. B. G. Cushman, the secretary, informs us that the Silver Lake Gun Club, of Bellefontaine, O., will hold its fourth annual tournament June 13 and 14, rain or shine, and that the preparations are in charge of a hustling management.

The fifteen-men team match between the National Gun Club, of Milwaukee, and the Garden City Gun Club, of Chicago, at Milwaukee, March 2, was won by the former by a score of 190 to 171, each contestant shooting at 15 birds.

The Crescent Gun Club, of Chicago, Ill., announces its annual spring tournament at targets to take place at its grounds, California avenue and Forty-seventh street, April 26-28. Mr. John S. Boa is manager.

On Tuesday of last week Dr. Geo. D. B. Darby defeated Mr. C. E. Geikler in a 100-bird race, 28yds., on the grounds of the Keystone Shooting League, at Holmesburg Junction, Pa., by a score of 90 to 85.

Mr. John S. Wright has postponed his shoot from March 13 to March 20, owing to the Roof Garden tournament having been transfereed to Interstate Park. Shooting will commence at 10 o'clock.

Mr. Louis Erhardt, at the shoot of the Metropolitan Gun Club, St. Joseph, Mo., held recently, won high average with 170 out of 180 targets, an average slightly over .944 per cent.

The Oceanic Rod and Gun Club will hold its regular club contest at targets on March 18. Targets $1.50 per 100. Mr. J. H. W. Fleming (Johnnie Jones) is secretary.

BERNARD WATERS.

ON LONG ISLAND.

New Utrecht Gun Club.

Interstate Park, L. I., March 9.—There was a good attendance of shooters, and excellent shooting was the rule, as the scores will show.

Event No. 1, 7 birds, club prize. *Indicates no bird allowance. †Indicates miss as kill:

H C Werleman	7	18	6	20	38

Deft panel, 15 targets, expert traps; handicap allowances: D. C. Hopkins, 4, 15; W. W. Marshall, 4, 15; G. Stephenson, Jr., 1, 14; H. B. Martin, 1, 13; F. B. Stephenson, 0, 13; H. C. Werleman, 5, 13; Dr. J. J. Keyes, 2, 11.

Shoot-off, same conditions: Hopkins 13, Marshall 11.

Union Gun Club.

ON the first Sunday of each month—March 3 to Sept. 1, inclusive—on the San Francisco Trapshooting Association grounds, Ingleside, the following events will be shot. Take Mission street electric cars:

Warm Up—Ten-Bird Match.—High guns to win. Entrance to be named by captain.

Club Shoot, 25 Birds.—Not more than one score to be made up during the season of seven shoots. Club offers $8 money, divided into 40, 30, 20 and 10 per cent; 20 breaks and over will constitute first class; 16 to 19, inclusive, second class; 12 to 15, inclusive, third class; below 12, fourth class. Ties to shoot off at 10 birds or shooter's option.

Club Handicap Match.—Twenty-five to thirty birds, entrance 50 cents. Handicap to be governed according to scores made in club match. Winners of medals to wear same each month. Medals to become the property of members winning same the greatest number of times during the season. Gold medal, over 68 per cent.; silver medal, below 68 per cent. Ties to shoot off at 10 birds or shooter's option. Handicap to be done as follows: Give 11 and under 5 birds; give 12 to 15, inclusive, 3 birds; give 16 to 19, inclusiyc, 1 bird.

Ability Handicap Medal.—Entrance 50 cents, 20 to 30 birds. Shooters handicapped according to ability. Possible 20 birds. Medal to become property of shooter winning same the greatest number of times during season of seven shoots. Ties to shoot off at 10 birds or shooter's option.

Special Medal at 10 Birds.—End of season, for shooters who fail to win prize in club or handicap shoot. Shooters to enter this match must take part in five club events.

Outsiders' and Members' Match.—Entrance 50 cents. Handicaps 20 to 25 birds, 20 breaks or over being possible. Club will add money at each shoot. Purse to be divided into 50, 30 and 20 per cent. Other matches to be arranged by the captain. All shooters are invited to participate in any club or other event for birds at the rate of 2 cents a bird. Practice shooting from 9:30 to 10:30 A. M. Regular Club events at 10:30 A. M.

On March 31, June 30 and Sept. 29 this club will have three live-bird handicap shoots at 12 birds, on the San Francisco Trapshooting Association grounds, Ingleside.

UNION GUN CLUB.

Excellent Nerve.

AN exchange presents the following:

"A Chicago daily contained a paragraph recently that awoke mingled feelings of pity, disgust and sorrow. It was about a 'live-bird shoot,' the reward being a certain cup. Two men shot 200 live birds. The loser was a 'trifle nervous'; his opponent 'displayed excellent nerve.' Reverently, we wonder what God thinks when he sees men made for His glory using their wondrous powers thus—slaughtering His birds, wasting time, money and life in ignoble contests and sowing the seeds of death in their souls. 'A trifle nervous'! Strange that the delicate nerves, God-strung, do not quiver and shrink and snap when called on to do such acts of cruelty and debasement. But so fearfully and wonderfully are we made that the murderer's hand obeys his will and nerves consent to their own eternal undoing. May God strengthen the nerves and hearts and hands of women everywhere to such heroic resolve that they shall leave no task undone that may tend to the restoration of man to his glory as the 'image of god'!"

[When Robert Burns, the poet, tuned his voice lugubriously, not to say whiningly, and sang that "Man's inhumanity to man makes countless thousands mourn," he, according to the more refined, modern, thinkers, should have substituted the name of pigeon for that of man. "Oh, it was pitiful!" And yet those pigeons no doubt were made into some very excellent potpie, and people of sad features and somber thoughts have been known to eat pigeon potpie with a reasonable degree of relish, without any over-curious questions as to whether the contents therein were killed with a shotgun or the firm grip and twist of the cook. It might be hinted that in respect to veal, mutton, beef, chickens, etc., the same apathy is manifested as between the stomach and meat as food, or even as between the meat and the killer. Also it may be suggested as food for thought that the thousands of men who acquire skill at the traps serve their country in good stead in time of war.]

The West Virginia State Sportsmen's Association.

SISTERSVILLE, W. Va., March 9.—At a meeting of the West Virginia State Sportsmen's Association, held at St. Marys to-day, it was decided to change the dates for our fifth annual State tournament from June 11 and 12 and July 17 and 18. The tournament will be held at St. Marys, W. Va., under the auspices of the West Virginia Gun Club, on above dates, and programme telling all about it will be ready for the mail in due time. Besides a number of valuable merchandise prizes, there will be $250 in cash added to the purses.

If you will kindly give us the usual notice under coming events we shall be greatly obliged. ED O. BOWER, Sec'y.

National vs. Garden City.

Milwaukee, March 6.—The long-talked-of match at live birds between the National Gun Club, of Milwaukee, and the Garden City Gun Club, of Chicago, took place at National Park, Milwaukee, on March 2, and was one of the most interesting events in live-bird shooting had in Milwaukee in some time.

There were fifteen men on each side, and each shot at 15 birds. From the time this match was first talked of, nearly a year ago, the Milwaukee shooters seemed reticent to undertake anything of the kind, knowing that the Garden City Club possessed some of the best marksmen in the country, and that ten or twelve of them were better than 90 per cent. men, so that the Nationals went into the match feeling that the chances were against them. Chicago was unfortunate in not being able to send all of her best men. Milwaukee was also unfortunate in not being able to produce all of the men that were expected to shoot on the team, yet the Nationals were on their mettle from start to finish, as will appear from the score, no man on the team falling below 10 birds out of the possible 15, and three men making straight scores—Rogers, Crane and Williamson killing all of the birds.

It may seem a hard thing for the Nationals to treat their company in such a manner, but it was birds we were after from start to finish.

Chicago took their defeat good-naturedly, as every man who came here—not alone the shooters, but the visitors—was a gentleman, and knew how to take defeat, although it is something uncommon with them.

It is understood that a return match will be shot at Chicago very soon, and Chicago has the same privileges to do up the Nationals at that time.

It is possible that there may be some changes made in the makeup of the respective teams, each endeavoring to strengthen weak points, if there are any, but it will be substantially the same as the one at Milwaukee. Should the Nationals be defeated at Chicago, then it is proposed that a third match be shot on some neutral grounds—prabably at Racine. The Nationals propose to do their best, so that a third match will not be necessary.

Following are the scores:

Chicago.

IN NEW JERSEY

Cannibal Gun Club.

Trenton, N. J., March 6.—The shoot of the Cannibal Gun Club, at Trenton Driving Park to-day, was well attended. The Bechtel medal was won by Lanning. It was a handicap event at 25 targets, in which out of fourteen contestants but three qualified. In the March shoot for the gold and silver medals, a club event, C. Allen won the gold and J. R. Taylor won the silver medal. The scores:

Bechtel medal shoot: Allen (5) 25, W. Talor (7) 26, Lanning (8) 25, Ruelius (6) 24, Williams (8) 24, Vialcovitch (5) 23, Dirk (10) 23, Fell (7) 22, J. R. Taylor (5) 20, Williams (10) 19, Johnson (10) 18, Emmons (61 17, Fox (6) 16, Garry (8) 12.

Shoot-off of tie, 15 targets: W. Taylor (3) 16, Lanning (4) 15, Allen (2) 14.

Second shoot-off, 10 targets: Lanning (2) 10, W. Taylor (2) 9.

Lanning won medal and 50 per cent. of net purse.

Shoot-off for second money: Ruelius (2) 8, T. Hillman (2) 6.

Ruelius won second money, 40 per cent. of net purse.

Club event, for gold and silver club medals. None but club members eligible to compete. Fifteen targets each. Ten or better qualifies for gold medal. Under 10 for silver medal: Vialcovitch 15, Allen 12, Ruelius 11, W. Taylor 9, Howell 8, J. R. Taylor 8, T. Hillman 8, Howell 8, Dirk 7, Johnson 6, Emmons 11, Vialcovitch 11, Allen 11, T. Hillman 10, Ruelius 10.

Shoot-off of tie, 10 targets: Allen 9, Vialcovitch 4,

For silver medal: J. R. Taylor 13, Dirk 10, W. Taylor 10, Howell 6, Johnson 5. J. R. Taylor won silver medal.

Trap at Guttenberg.

March 6.—At the Guttenberg race track to-day, the contestants all stood at 28yds., and made the following scores, at 14 live birds:

H C West	11111110111111—13	Dr Griswold	10100001011010— 6

Intercity Shooting Park.

Minneapolis, Minn.—The shoot for the Hirschy trophy, on the grounds of the Intercity Shooting Park, on the 2d inst., was the largest event of the year, the number of entries being sixteen. The trophy was brought into competition by Fish, of Eau Claire, challenging A. H. Kribbe, of Grand Rapids, Minn. This crowd from Itasca county seem to have the proper thing tucked up their sleeves, Ed Bergen winning out in the race to-day. The shoot began at 1:30, and at the end of the 16th round it was decided to postpone the race until the following day at 10:30 A. M. Three of the shooters could not stay over, so were permitted to shoot out. This sort of thing should never be permitted, as it is bound to give some one the worst of the deal.

When the shooters reached the grounds on the following morning they discovered that they were up against the real thing, as there was a gale blowing across the traps. The shooting on this day was of the very hardest; some of the birds that were killed in good time would be carried out by the wind.

The good thing about the race lies in the fact that Ed Bergen, of Grand Rapids, Minn., who won the trophy, had never shot at live birds from a trap before; in fact he never saw a bird trapped until a half hour before the race. His shooting was of the very best, some of his second barrel kills being exceptionally good. Fish, of Eau Claire (Kabo), made some very good kills, this being especially true of his 10th and 21st birds. Bull was centering his better than any of the shooters; his 21st and 24th were corkers, both falling dead out. Parker missed a very easy one, his 24th. The wind was too strong for Hirschy; he has not the proper kind of steering gear for shooting in a gale. The balance of the bunch also ran.

The next race for this cup will be pulled off at Grand Rapids, Minn. I will make mention of the dates as soon as I can positively.

Kribbe, Grand Rapids	21222100202122122*222222—21

Roof Garden Tournament.

Tuesday, March 5.

The weather was windy, and good scores were difficult to make. The performances were good under the circumstances, as the following will show:

Continuous match:

Fanning ... 2 1 25 7 11 0 0 1 12 7 30 35 .. ..
Parmelee ... 3 6 1 4 1 3 8 14 0 1 0 2 1 0 6 .. ..
Dixey ..... 2 1 0 2 5 1 1 .. ..
Fox 0 0 12 1 12 8 17 2 3 6 4 36 55 0 10 3 7 17 0 5

*Re-entries.

Wednesday, March 6.

The weather was again of the blustering kind. Crosby, Heikes and Gilbert tied on 91, which in the following day's competition was shot off, and was won by Gilbert.

Parmelee	23 22 20 19—82	G Mott	15 20 17 11—63
Crosby	25 22 21 23—91	*Watson	20 20 19 16—75

H S Welles	17 18 w		

*Re-entries.

Thursday, March 7.

The shooting was stopped at 11:15, and was resumed at Interstate Park on the following day.

Continuous match:

Parmelee ... 8 11 33 3 11 .. .. Fox 3 0 41 5 7 5 14
Fanning .... 3 11 4 4 0 4 .. McAlpin .... 0 5 .. ..
Gilbert ..... 33 2 5 40 34 .. .. Le Roy...... 5 .. ..
Heikes ...... 11 9 9 9 .. .. .. Vilas .... 0 .. ..
Crosby ...... 5 14 1 9 0 27 ..

*Re-entries.

Friday, March 8.

There was a good attendance, considering the disturbing circumstances and sudden readjustments. Good scores were made by several of the contestants, Fox being high man. The scores:

Fanning .... 5 25 46 19 10 3 1 20 18 12 5 12 ..
Heikes. .... 71 25 25 56 .. ..

*Watson	21 23 19 19—82		

*Re-entries.

Saturday, March 9.

The weather was cloudy and foggy, with a stiff fluky wind blowing during the continuous match. In the afternoon the wind subsided, the thin fog made a good background, and the contestants began to smash targets in earnest. Jack Fanning made a run of 114, which looked like the pinnacle of the day, but Fred Gilbert joined in the running and punched out 139, which proved sufficient unto the day. In the championship shooting event Crosby, Fanning and Banks tied on 99. The scores:

Heikes .... 25 0 35 46 12 .. .. ..
Gilbert 0 7 5 0 7 9 42 139
Fanning .... 1 1 31 1 9 114 .. ..
Parmelee 7 7 40 15 1 6 9 18
Le Roy .... 2 0 0 15 .. ..
Crosby .... 65 20 0 13 27 .. .. ..
Banks .... 0 5 4 24 7 .. .. ..
Fox .... 29 11 .. ..

Association championship:

*Re-entry.

Monte Carlo.

Friday, Feb. 15.—The contest for the seventh triennial championship has occupied the best part of this week, and has brought together more competitors than the Grand Prix du Casino, though this was due to the fact that none of the English competed for the latter. There were only eighty-three competitors for that, as against ninety-three on the present occasion, and as will be seen, the English had the finish to themselves. The intention was that the contest should be concluded in two days, but this never seemed probable, as at the close of the first afternoon's shooting only four rounds out of twenty-five had been completed. With a strong wind blowing on the second day, rather more progress was made, but for all that the contest was a long way from being finished. It is true that only three—Messrs. Beresford, Robinson and M. Faure—had killed all their 8 birds, but seventeen others had accounted for 7 out of 8, while nineteen more had missed only 2. The shooting on the second day was, however, a pretty clear indication as to how it would end, for while Mr. Beresford, after two successive misses, made 12 successive kills, and won first prize with 23 out of 25, Mr. Robinson found himself on a level with Mr. Mackintosh and Mr. Vernon Barker, who, like himself, had accounted for 22 out of 25. Mr. Harold Barker, Mr. Watson, Mr. Chase, Mr. Hannam, Capt. Fielden, Mr. Hill and the Hon. F. Erskine also did credit to the English division, and it was eminently satisfactory that Messrs. Robinson and Mackintosh, who had behaved so well in regard to shooting, or, rather, not shooting, for the Prix du Casino, should have had their reward by sharing the place money with Mr. Vernon Barker, who also shot in good form. Of the six previous winners of this important prize, Mr. W. Blake, 1889, and Signor Galetti, 1892, were alone in the field, the former not being able to get beyond the seventh round, as he had made 5 misses to 2 kills, while the Italian, though he made a better score than this, had to retire in the twelfth round. Another veteran of the Monte Carlo stand, Signor Guidicini, the only man who has won the Grand Prix du Casino three times, was in the field, but he did not kill more than 3 birds, and he has not been shooting in his customary form this season. Scores:

Prix du Grand Championship Triennal; £400 and a gold medal, added to a sweepstakes of £4 each; second received 35 per cent. of the entries; third, 25 per cent.; fourth, 15 per cent.; 25 birds at 27 meters; previous winners of the championship to stand back a meter; 5 misses to put out; 93 subs: Hon. R. Beresford, E C, first of £474, 23; Mr. Vernon Barker, E C, divided second, third and fourth of £277, 22; Mr. Robinson, L. C. Smith, Schultze, divided second, third and fourth of £277, 22; Mr. Mackintosh, Greener, Schultze, divided second, third and fourth of £277, 22; M. Léon de Lunden 18, Signor Marconcini 17, Signor Fadini 17, M. Postans 17, Mr. H. Barker 17, Mr. Watson 16, M. Paul Lunden 16, Count O'Brien 16, M. M. Faure 16, M. Riols 16, M. Stephane 15, Signor de la Torre 14, M. Chase 13, Signor Gallardo 13, Mr. Hannam 13, Signor Pederzoli 13, Capt. Fielden 13, Mr. Hill 12, Hon. F. Erskine 12, Signor Queirolo 12, Mr. Hodgson 12, Signor Grégorini 11, Signor Carrara 11, M. Marghiloman 11, Mr. W. Eales 11, Mr. Ker 10, Mr. Roberts 10, M. Thomé 10, M. Teissière 10, Signor de Paratico 10, M. Poizat 10, Count de Robiano 10, Señor C. del Camino 10, Mr. Asplen 10, Herr Hans Marsch 10, M. Van den Bosch 9, Herr Langhendonck 9, Count Gajoli 8, Sir John Willoughby 8, Signor Catenacci 8, M. Journu 8, Signor J. Grasselli 8, M. Decauville 8, Mr. Green 8, Prince Potenziani 8, Mr. Haydon 7, Capt. Dancourt 7, M. Stephane 7, Signor Galetti 7, Herr von Elsner 6, Mr. Liebert 6, M. del Camino 5, M. Pellerin 5, M. Demonts 5, M. Paccard 5, M. de Maubenge 5, Signor Fortunio 5, M. de Tiele 5, M. R. Gourgaud 5, M. Wilheredit 5, Prince de Croy 5, Signor Sani 5, Signor Radelli 5, M. de Pape 4, Signor Fiachette 4, Mr. Harrison 4, Mr. R. Sievier 4, Baron de Langen 4, Mr. Roth 4, Signor Faraselli 4, Signor C. Tassara 4, M. Lambert 3, Count Siersorff 3, Signor Guidicini 3, Signor Mossa 3, M. le Bertre 3, Mr. W. Blake 2, Signor Benvenuti 2, Mr. Cross 2, the Duke of Braganza 1, M. Luzzani 1, Prince Poniatowski 1, Mr. Walters 1, M. Constantin 1, Tassara 1, Count Trutti 1. Mr. Chetwynd, Mr. Spalding, Signor Sozzi missed their first 5 birds.—London Field.

Mississippi Valley Notes.

East Alton boasts a new trapshooting club, self styled the Novices, the members of which expect to do regular practice work during the ensuing season. The first meet was held on the afternoon of March 3, and while the scores in the main will befit the club name, the degree of enthusiasm manifested is shown, however, in the number of participants, there being just thirty entries. The programme consisted of 60 targets per man, shot in blocks of 5, with the exception that events 9 and 10 consisted of 5 pairs doubles. Summary follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
James	1	1	0	3	4	1	3	3	2	4	5	4
White	2	2	3	2	4	1	4	5	2	1	1	1

F. C. Riehl.

WESTERN TRAPS.

CHICAGO, Ill., March 5.—No one can be found in Chicago who knows anything about the team race of last Saturday at Milwaukee between Garden City Gun Club, of this city, and the National Gun Club, of Milwaukee. The Cream City boys only beat the Chicago representatives 18 birds. One or two men on the Chicago team fell down very hard, and it was an easy thing for Milwaukee all along the line. The team total, fifteen men, each 15 live birds, stood, Garden City 172, National Gun Club 190. There has been so much talk about this race, and it has been pulled off after so many difficulties, that it is to be regretted that the finish was no closer.

Anglo-American Team Race.

Subscription books have been opened in Chicago for the fund to send an American team of trapshooters to England. One such book is placed at the booth of Montgomery Ward & Co. at the sportsmen's show. A few contributions have been received, and it is to be hoped that the outcome of this experiment will be satisfactory. Capt. Tom Marshall was in town this week and spent considerable time at the show. He did not care to express himself definitely as to the probability of success in the team arrangements, but was optimistic, as usual.

Illinois State Association.

President Van Cleave, of the State Association, has appointed his committees, including one on publicity and promotion, the latter including representatives of the sporting press, with Mr. John E. Vaughn, of the State Journal, Springfield, and Mr. M. D. Hurley, of the Peoria Star.

George Roll Looses the Race.

George Roll, the well-known Chicago trapshooter, caught a burglar at his house Tuesday evening, chased him down the porch pillar, and some distance up the street. He likewise fired a few shots at him, but failed to score, and lost the race as well as $210.

Grand Rapids Shoot.

March 9.—Away up at Grand Rapids, Minn., which is a splendid place to go if one wants a moose or muscallunge, they go in for trapshooting as ardently as they do anywhere, and the local club bears the significant name of the Itasca gun. The Itasca Gun Club will hold a rattling good shoot at live birds and targets March 16-17, the second day being devoted to targets altogether.

The attractive part of the programme will be the race for the Hirschy trophy, emblematic of the championship of the Northwest, at 25 live birds, $10, birds extra. The target programme will consist of ten events of 15 birds each, $1.50. The club has added $60 for averages in the target programme.

Shooters of the Twin Cities who wish to make this trip are referred to W. P. Brown for railroad rates, which will be at a good reduction.

The committee on arrangements have planned a good time for the shooters, and assure the best time ever had at any shoot of this kind.

The hotel accommodations are equal to the best in the State. "What more do you want?" asks A. E. Kribs, Sec'y.

Peters Amateur at Asheville.

The programme of the amateur tournament of the Peters Cartridge Company, at Asheville, N. C., is one of the prettiest pieces of book making one is apt to see. A beautiful picture of the valley of the French Broad River is shown, along with a bit of the Savannah River, and there is an illustration of the Biltmore palace of George Vanderbilt. This latter, I presume, is simply thrown in to show the kind of house that every amateur trapshooter may hope to own some time, if he is industrious enough. The programme indicates magautrap, Rose system, $300 added, targets 2 cents, and manufacturers' agents entered for price of targets only. Asheville is a nice place to go to, and it is worth the price of admission to see the kind of house you can have if you are industrious.

Calumet Heights Club.

Calumet Heights Club held its annual meeting at the Sherman House, March 6, and elected the following officers: President, George S. Haskell; Vice-President, James R. Bruner; Secretary and Treasurer, Walter Metcalfe; Directors, E. H. Gold, A. W. Harlan, J. H. Morgan and A. E. Coon. The club will hold weekly target contests during the summer and occasional live-bird events.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Garden City Gun Club.

Watson's Park, Burnside Crossing, Ill., March 9.—There were twenty-nine entries in the club event of the Garden City Gun Club, and high scores were the rule, though in some instances the bird allowance in this respect was of material assistance. The figures after the names denote extra birds to shoot at. The scores:

Palmer, 1	1121002111210112 —13

RAVELRIGG.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Boston Gun Club.

BOSTON, March 6.—At the Boston Gun Club's eighth serial prize shoot on their grounds at Wellington to-day it was unanimously decided that whoever had the trapshooting fever enough to come out to-day was indeed a great friend of the sport. Overhead it was all that could be desired, but the wind at times, though not as strong as at previous shoots, rendered some of the birds impossible breaks. Woodruff was a welcome visitor, it being his first appearance on the grounds in the present series. Although just now getting used to a new gun and loads, he handled it well, and it certainly looks as though when thoroughly used to it the number of breaks will be well up on his side of the ledger, as in former series. Spencer secured high score in the prize match with 25, though the redoubtable Baker pushed him to the limit, forcing him to a straight score in the end to gain the coveted position.

Scores below, all shooting being handicap distance, all events 10 unknown:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Stearns vs. Hammond.

RICHMOND, Va., March 7.—Mr. W. A. Hammond and Franklin Stearns faced the traps yesterday evening at Broad Street Ball Park, in two live-pigeon races of 100 birds each. The first was for the State live-bird medal, which has been successfully held by Mr. Hammond for some time. A number of the boys both from this city and elsewhere through the State have endeavored to win this medal from Mr. Hammond, but up to this time without success. The day was perfect, and the birds took wing at the fall of the traps. Mr. Hammond shot in good form, but drew some corkers, which preferred to get outside the boundary before stopping. In the race for the city medal he made some excellent kills with his first barrel.

Mr. Stearns also shot in good form, and seemed to catch his birds quick and in the center of the charge. In the match for the State medal he made a run of 24 straight.

The match for the city medal was a tie, and will be shot off on March 13.

The birds were a good strong lot. Referee, T. M. Tignor. Scorer, Mr. Odell.

First race, for State medal:

W A Hammond	22202222221222222*222*22—22 *222222*22222222222222*02—21—43
F Stearns	*022*22222222222*22222—21 022222122212222222222222—24—45

Second race, for championship of Richmond city, of which a gold medal is the emblem, which was held by Mr. Hammond since 1899. Fifty pigeons each. As the supply of pigeons and shells was exhausted, the shoot-off was necessarily postponed:

W A Hammond	11111212212222*2222*20222—22 121202210210222*222022*22—19—41
F Stearns	22022220202222222202*222—20 202222*01222*2222222222222—21—41

Shoot-off of tie:

Stearns .....2121222222 Hammond 2212121222

Rifle Range and Gallery.

Fixtures.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Offhand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading road, March 3. Conditions, 200yds., offhand, at the standard target. Strickmeier was declared champion for the day with the good score of 86. Weather fair; thermometer 70 wind 2 to 7 o'clock, very strong:

Strickmeier	7	9	9	8	10	7	9	9	10	8—86

Columbia Pistol and Rifle Club.

SAN FRANCISCO, March 3.—Columbia Pistol and Rifle Club enjoyed the most beautiful day of the year. Lots of shooters were on hand and much shooting and good work was done by the younger element. Barley, Hoadley and Mannel each beat their rifle records. Hoffman took first honors, with Mannel close on his heels. The light was too bright for the best work. Young caught 36 on his first score, with pistol, making best group (3½in.) ever made in club on clean targets. Hovey was close behind with 38, showing that the old shots are yet in the swim. Both Hovey and Young had but one shot out of the 5 ring, thus losing the much-coveted Cosgrove medal, which was in their grasp but for one shot. Dorrell has been sick, but put up a good .22 score, and Capt. Kuhnle changed to a .25 rim-fire and could not shoot as well as with the Winchester, .22-7-45, and using Peters cartridges for that rifle.

Among the many visitors was Mr. C. C. Ford, of the Denver Rifle Club, who enjoyed the sport keenly.

Best scores, 10 shots, Columbia target, re-entry matches:

Rifle, 200yds.:

W G Hoffman, .38 Winchester	2	4	10	12	4	3	3	3	5	2—48
	7	1	13	8	3	6	1	5	6	3—53

Dr W A Smith	13	17	..	..	..
T Keller, Jr	19	21	..	..	..

Rifle at Shell Mound.

SAN FRANCISCO, March 4.—Yesterday was an ideal day, and the rifle ranges were crowded. The chief event at Shell Mound was the annual opening of the park for picnic purposes. About 5,000 people were present. A few days ago the main dancing pavilion was destroyed by fire; yet, notwithstanding, dancing space was accorded the visitors. The riflemen were busy all day, as the North German club held a public shoot. The main event was the man target contest at 200yds. F. P. Schuster won first prize with 77 out of a possible 80.

At Schuetzen Park the regular club shoots were held, but no scores of special note were made. The rifleman's atmosphere is full of buzz and stir, as the approaching Schuetzen Bund festival is not far away.

ROEEL.

A meeting of the United States Revolver Association was held in Madison Square Garden on Monday of this week. Officers were elected as follows: Dr. R. H. Sayre, New York, President; Dr. W. G. Hudson, Manhattan Rifle and Revolver Association, New York, Vice-President; A. L. A. Himmelwright, New York, Secretary and Treasurer; E. L. Harpham, Chicago, and J. B. Crabtree, Springfield, Mass, other members of the Executive Committee. It was decided that the annual championship contest for pistol, revolver and military revolver shooting would take place at Sea Girt during the international tournament next fall. In the revolver contest an innovation will be introduced in the shape of disappearing targets.

PUBLISHERS' DEPARTMENT.

Washington.

THREE-DAY PERSONALLY CONDUCTED TOUR VIA PENNSYLVANIA RAILROAD.

FEW short journeys are as interesting as a trip to Washington, the Nation's Capital; and such a trip can be made most satisfactorily by participating in the three-day personally conducted tours of the Pennsylvania Railroad. The next tour of the season leaves Thursday, March 21. Round-trip rate, covering railroad transportation for the round trip, meals en route, transfer of passenger and ordinary baggage to hotel, hotel accommodations and guides, services of experienced touist agent and chaperon, in short every item of necessary expense, $14.50 from New York, $13 from Trenton, and $11.50 from Philadelphia, with proportionate rates from other points. These rates cover accommodations for two days at the Arlington, Normandie, Riggs, or Ebbit House. For accommodations at Willard's, Regent, Metropolitan or National Hotel, $2.50 less. Side trips to Mount Vernon, Richmond, Old Point Comfort, and Norfolk at greatly reduced rates.

All tickets good for ten days, with special hoetl rates after expiration of hotel coupons.

For itineraries and full information apply to ticket agents; Tourist Agent, 1196 Broadway, New York; 4 Court street, Brooklyn; or address Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—*Adv.*

Dr. A. A. Webber won the Dewar trophy five consecutive times, standing at 30 and 31yds., and making the following fine record: First, open shoot, 30yds., 25 straight; second, open shoot, 30yds., 24 (1 dead out); third, open shoot, 30yds., 24 (1 dead out); fourth, challenge shoot, 31yds., 23 (2 dead out); fifth, challenge shoot, 30yds., 23 (2 dead out), with his Chas. Daly gun.—*Adv.*

Yachtsmen who have known the discomfort of leaky decks and bulkheads will be interested in a waterproof glue recently put on the market by the Casein Company of America. This glue can also be used to advantage in hollow spars, and in applying canvas to boats' decks and bottoms.

Elsewhere in these columns will be found the announcement of Augustus V. Evans, who offers a full line of launches and motors, descriptive circular of which he will be pleased to send on request.—*Adv.*

FOREST RESERVES AS GAME PRESERVES.

THE letter from Mr. Wm. Wells, printed this week, is an intelligent exposition of the conditions which prevail south of the Yellowstone Park, in and near the two forest reserves there. Mr. Wells is thoroughly familiar with the region and states clearly the existing conditions. One point, however, that he does not mention is that a very large proportion of the elk killed for winter meat are cows and heifers, since, after the month of September, no man in the mountains is likely to kill bulls to eat.

The country about the Yellowstone Park included in the Teton and the Yellowstone Park Forest Reserves is most of it high land and cannot serve for winter range. If the former reservation were extended southward, as suggested, it would take in a great deal of winter range and would be of great benefit. On the other hand, a considerable portion of that winter range having been fed over by domestic stock during the previous summer, will not support as much game now as formerly. The desert to the southward, which used to be a great winter range for game, has, we are told, already been destroyed for this purpose by the domestic sheep.

Such an extension of the reservation could be made without injury to any interests, it being understood that permanent settlers would retain their rights, and would have the use of timber according to the regulations laid down by the Department of the Interior. The hunting on this and on other reservations would be governed by State laws, and the forest rangers in the employ of the Department of Agriculture should be commissioned as State Game Wardens. On the other hand, the character of these foresters—and game wardens—needs to be carefully looked after. The position offers great opportunities and temptations for the levying of blackmail, and not a few reports have come to us recently showing that, in certain States, wardens by threatening the arrest of hunters have obliged them to pay sums of money for immunity, or in other cases on receiving from visiting hunters a few dollars, to which they were in no way entitled, have given such visitors permission to kill all the game they wanted to, promising that they should not be interfered with.

Mr. Wells' letter refers to one district only, and it is not likely that identical conditions prevail near all, or even many, of the other forest reservations. The character of the country included in these reservations varies greatly, and rules suitable for one may not apply to all. One thing, however, is clear. In each reservation there should be a considerable area, where hunting should be absolutely prohibited, which should be an actual and absolute refuge for game, where it could never be disturbed. To the country which surrounds them, such refuges would be, in a less degree, what the Yellowstone Park is to the forest reserves which adjoin it; they would be game reservoirs which would annually pour forth a surplus of wild animals to stock the surrounding territory.

These forest reservations, if wisely and reasonably administered, would not only be attractive places of resort to people from all parts of the country, but would be for all time sources of considerable and growing revenue to the States within which they lie, and to the communities situated on their borders, and no class of people in the whole country are so much interested in having the reservations made the most of as those who dwell nearest to them. The difficulty of carrying through such a wholesome change of policy is to make the very people who are to be most benefited comprehend the advantages that they will gain by a proper guardianship of the reservations as to timber and game.

For the public at large does not usually take the trouble to think for itself. No better example of this has recently been seen than the hysterical talk and writing indulged in when the great forest reservations were established by President Cleveland. For a time the newspapers—and among them FOREST AND STREAM—were full of moanings, howlings and denunciations from people who feared something—they knew not what. But the reservations were established, their purposes patiently explained and the fears of the timid set at rest; and now practically everybody in the whole country believes in forest preservation and the setting aside of forest reserves as large as practicable.

Within comparatively few years we expect to see the forest reserves set aside as game refuges on some such plan as FOREST AND STREAM has already outlined. Only by such action can our North American big game be preserved from extinction.

MASSACHUSETTS WOLVES AND PARTRIDGES.

IN his "New England Prospects," written in 1634, William Wood relates of the wolves in Massachusetts, "They be the greatest inconveniency the Countrey hath, both for matter of dammage to private men in particular, and the whole Countrey in generall"; and he thought that though the wolves were "killed dayly in some place or other, either by the English, or the Indian, who have a certaine rate for every head, yet is there little hope of their utter destruction, the Countrey being so spacious, and they so numerous, traveling in the swamps by Kennels, sometimes ten or twelve are of a company." Those were the days when the wild pigeons darkened the New England sky; and when the wild turkey was found, "forty, threescore, and a hundred of a flocke, sometimes more and sometimes lesse," so that after a fall of snow "some have killed ten or a dozen in halfe a day." Then, too, heathcocks and partridges were so common that "he that is a husband, and will be stirring betime, may kill halfe a dozen in a morning." And so of all the other kinds of game of the uplands and the waters, he relates the wonderful abundance—of the geese, of which some have killed a hundred in a week, fifty ducks at a shot and forty teal at another; of the shore birds "which one may drive into a heape like so many sheepe, and seeing a fit time shoote them—I my selfe have killed twelve score at two shootes," he tells us.

Taking it all together, it was an enticing picture of a well stocked game country, and the description is one which we may well believe appealed very strongly to the Englishmen whose thoughts were turning to America. As for any one who might be disposed to question whether the abundant game supply would continue, Wood gives the reassuring testimony, "I have seene more living and dead the last yeare than I have done in former yeares." In his simplicity he believed that there was little hope of the utter destruction of the wolves, and he had as little fear of the disappearance of the game. He thought it would last forever. This may readily enough be forgiven the New Englander of 1634; he would have had prevision beyond his day and generation who should have dreamed otherwise. But the pity of it is that from that mid-century to the last the people of New England went along with the same simple confiding faith in the inexhaustibleness of the game supply. The wolves they banished long ago and no mourning attended the departure; but the wild pigeon, the wild turkey and the heathcock were killed off as well, and they should not have been. The partridge was fast following the others to extinction, when the sportsmen of Massachusetts rallied to its protection with the enactment of the law to keep it out of the market stalls.

From the day of William Wood to the present the people of New England and of the rest of the country appear to have acted upon the belief that they had only to take as much game as they would—"to drive it in a heape like so many sheepe and seeing fit time shoote them"—and that with all the destruction, and in spite of it all, they would, as did our ancient author, see more living than dead the last year than ever before. And such, if we may judge from the common every-day attitude and conduct of the community at large, is the simple faith held to-day. It was the sportsman who was first to realize the truth and to perceive that the reckless and unthinking killing should not go on unchecked, and could not so go on without annihilation as the result. It is to the sportsman with his intelligent recognition of the need of protection that we are indebted for the game which remains to us to-day.

There is profit in going back to the old chronicles of things as they were in the primitive days, for in the review we learn of the advantages we have lost and are led to value more highly those which have been preserved to us. We should be prompted also to a wiser use of our own resources of field and stream, and to hand them down unimpaired to those who shall follow us.

NON-GAME BIRD PROTECTION.

GOVERNOR ODELL of New York signed last week the non-game bird protective bill (Senate 222) which had been introduced by Senator W. McKinney, of Suffolk. This bill amends the game laws of New York in these respects: In Sections 20 and 21 of Article II. the words web-footed wildfowl are struck out, and for them are substituted the words ducks, geese, brant and swan. This amendment is merely carrying out the spirit of the law, which was to protect what are universally understood as wildfowl. A decision by the chief protector of this State has been that as grebes and terns were wild and web-footed, they had the same protection as the true wildfowl, and no more.

Section 30 is amended by striking out the words grebe and bittern. These are in no sense game birds, and should never have been included with plover, snipe, rails, etc. This change relegates grebe and bittern to Section 33, certain wild birds protected, and includes them in the list of protected species. The sections relating to wildfowl on Long Island are amended in like manner, the changes being made in Sections 103 and 104, while from Section 105 the word grebe is stricken out, and from Section 108 the word bittern.

The effect of these amendments therefore is to protect gulls, terns, grebes and bitterns, a most desirable result to have attained.

In New Jersey, Senate Bill No. 7, which is really the old bill of the American Ornithologist Union, defining what are game birds, and fixing seasons for them and protecting all other birds, has passed the Senate, but is hung up in the Assembly.

In the State of Delaware the old A. O. U. bill was passed at 10:30 on the last night of the session.

In Michigan, a modification of the A. O. U. law has been attached as amendment to the new bill before the Legislature, and there is hope that it will be favorably acted on.

In New Hampshire the A. O. U. law has just passed the Legislature.

In all these cases it will be seen that the effort has been made to have the law-making body define the terms "game birds" and "water fowl," and then to throw all the other birds into the protected class. Legislation for game birds and for water fowl is left to the sportsman, while the ornithologists and the Audubon Society members are caring for the other species.

The Audubon Society movement, which was the first definite and concerted effort to protect our non-game birds, was set on foot by FOREST AND STREAM in 1886, and much time, effort and money were expended in educating the public—and especially the children—as to the usefulness of birds. Within the last few years these efforts have begun to bring forth an abundant fruit, and the future looks bright.

The proposal to forbid carrying firearms into the Maine woods in close time has not met with favor in the Maine Legislature. The measure is considered to be too radical and its enforcement would be difficult.

The Sportsman Tourist.

Some Boyhood Memories.

I.—In Close Quarters.

IT had been my first day's experience at one end of a crosscut saw in the woods. The day had been a long one. We were cutting beech timber. The party I was working with "had been there before" and had allowed me to "push" as well as "draw" the saw all day, while he was fairly "riding" and laughing inwardly.

By nightfall this would tire out almost any one, and as for me, a sixteen-year-old boy—well, I was done up. To make matters worse, I had poisoned myself with poison ivy (*Rhus toxicodendron*) during the day and was suffering severely.

We were stopping at a log house, the owner of which, an old bachelor, was away, leaving us two boys to do our own cooking and run the place ourselves. Boy-like, we lived on fried eggs, fried bacon and bread which the bachelor had left.

Since my early childhood it had been my unfortunate luck, whenever greatly overheated or exhausted, to break out with nettle rash or Urticaria, as we doctors call it. The day's work in the woods, the food we had eaten, the poison ivy and all brought on me during the night the worst attack I had ever had. Face, hands and entire body were swollen and puffed up frightfully. Getting out of bed in the middle of the night, I lighted our home-made candle and awakened my friend, Saxon, by my grunting and scratching.

He advised me to go down stairs and rub myself with flour, and, as I was ready for suggestions, I went at once, dressed in nothing but an undershirt.

The house we were in consisted of but two rooms down stairs—a sitting room and a kitchen; the stairs came down between the two; to the right there was a door into the sitting room, while to the left the stairway opened directly into the kitchen. As I came down the stairs, candle in hand, rather a spooky looking, long-legged and half-naked boy, I glanced into the sitting room and saw the bachelor's bulldog lying on the floor. This dog was a large white bulldog, covered with scars, one eye gone, no ears, no tail and was the only dog I have ever met that I did not make friends with. We had taken a dislike to each other from the first, he growling and snapping, and I kicking and abusing him at every opportunity.

As I saw him through the open door, however, having no use for him in my then negligee attire I quietly reached in and closed the door. All would have been well had this door been secure. As it happened, however, some one had kicked a lower panel out of the door, and later had nailed a thin piece of board, such as cloth comes wrapped around, vertically over the opening, leaving a crack 2 inches wide on either side.

The kitchen was one of those old-fashioned affairs with big fireplace, barred door, overhead rafters and everything imaginable hanging on the walls and ceiling. The flour was kept in a large bin about 8 or 10 feet long by 2½ wide and 3 deep, with a good lid, this lid being on hinges and raising back against the wall.

I placed my candle on the floor, opened the bin, secured some flour, removed my shirt and had barely commenced to rub the flour on my itching skin when I heard the dog at the door. Having no idea he could get in, boy-like, I commenced to "sic" him on. The more he growled and bit at the edges of the crack, the more I angered him, until finally, after he had worked himself into a fury, I noticed that the board over the hole was not securely fastened. I quickly decided to give a final rub and make for upstairs. Grabbing up the candle, I saw the board give way at the lower end, his ugly head already through the opening, his one red eye gleaming hatred at me, his tongue out, mouth frothing and already bleeding from rough contact with the door.

Knowing that I must go right by his door to get upstairs, I realized instantly that I could never make it. One swift glance around the room and I likewise realized that I could not get out, the door and window being barred.

There was nothing in the room that I could get on to except where he could easily reach me. I might hang from the ceiling from some of the plunder there, but the ceiling was low, and it was a poor place at best. All this and more went through my brain in a flash. There I was stark naked, unable to get away and with nothing with which to defend myself.

He was coming rapidly through the hole now, madder than ever, and I saw in a moment he would be on me. What was I to do? There was only one thing to do—I jumped into the flour bin, and as he bounded across the room I closed the lid down above me.

Mad! Well, wasn't he mad!

He evidently thought he had me in fine shape, too. He fairly roared in his anger. He jumped on top of the bin, and then, horrors of horrors, he began raising up the lid by standing on the floor and pushing upward against the overhanging edge. Several times he raised it up an inch or two. I felt his hot breath on my face, and say, didn't I get hot and cold by turns, until the perspiration stood out all over me. As I floundered in the flour I came across an iron hook about 18 inches long, which had evidently been used for stirring up the flour. With this I struck at him every time he raised up the lid, being powerless to hold the lid down, as I had nothing to hold on to. Every time I struck at him his fury increased, and as his fury increased my terror became greater.

I gouged him in the tongue, tore his lips, prodded his eye, and all I accomplished was to make him worse. He was crazy—he was a devil incarnate!

I called loudly for help, but how could Saxon hear when I was buried in a flour bin? The racket, however, finally awakened him, and when I heard him coming and calling to the dog, my terror was greater than ever. I was afraid he would open the bin.

Again I called as loudly as I could and when he realized that I was in the flour bin he fairly rolled on the floor and yelled, hissing the dog on, laughing and laughing, as though it was something to laugh at.

My condition by this time had become desperate. What with the close quarters, poor ventilation, perspiration and flour, I was covered with dough and could scarcely see or hear, and breathing was becoming almost impossible.

Saxon finally drove the dog out of the house and helped me out. I was covered with dough. Eyes, ears, nose and mouth were all plugged, while a layer half an inch thick was all over my body. Saxon scraped me with a shingle and later used the broom on me as I lay under the pump. There was dough in my hair for days.

I have never had nettle rash since! C. P. A.

ASHEVILLE, N. C.

II.—Old Sanger's Boat.

Editor Forest and Stream:

In taking a retrospect of one's life and calling to mind some of the good times had in boyhood days, one cannot help but observe what a deal of pleasure he derived from sports then, even with very crude materials; and it sometimes seems to me that none of the modern appliances used by sportsmen, which he may now use, will produce near as much downright, first-class enjoyment for him as did that old-fashioned rifle or shotgun, or that rough, home-made boat which he used away back in the long ago.

And in looking over my own life I often think of the good times had with three companions, all of us neighbors and schoolmates then, in a boat owned by a man named Sanger, and called by us as well as by many others, Old Sanger, who lived near a pond nestled among the big hills up in northeastern Connecticut. He was the owner of a scow about half as wide as it was long, built of rough inch pine boards, unpainted, and the thwarts, or seats, as we called them, nailed on the top of the sides, and propelled by paddles worked out of chestnut planks and having very thick blades. That craft was the only one on the pond, consequently it was in great demand. The whole boating affair was about as ungainly as any one could imagine.

The price for the use of the whole business—scow, paddles and rope with stone attached for anchor—was 12 cents per day; for half a day or less, 6 cents, and if either of the paddles were lost or broken, which sometimes happened, 10 cents extra. Not much of a sum, but it seemed big to us then, but by dividing up the expense it made it quite light for each.

The pond, or lake, as it is now called, is a beautiful sheet of water, having sandy or gravelly shores, then mostly surrounded with forests of both hardwood and pine. Along its western shore has been laid out an extensive park, where, during summers past at popular gatherings, many noted men of the country did each his share of the customary speech making and hand shaking.

Among the many notables that I have seen there during my vacations were two of the Presidents; the present incumbent, then a United States Senator, was also there.

On the opposite or east shore of the lake, where there used to be an almost unbroken wildwood, are now many handsome and costly summer residences, with grounds to match, and now on the lake, instead of Sanger's lone scow, are to be seen many craft—yachts, rowboats and canoes, the greater portion of them of the latest design; also boathouses and bathing houses are there, thus making the place a well-known summer resort.

Although in recent years I have on several occasions got good catches of bass from the lake with rod and reel, as it was stocked with them several years ago and now affords good bass fishing, somehow the sport, although of a much higher order, didn't seem to bring such really unalloyed enjoyment as that I had when, in company with my three companions, without ceremony I yanked pouts, kivers and perch out from among the lilypads and into the scow with a worm-baited hook and a coarse line attached to an alder pole.

Of our gang who nearly fifty years ago patronized that boat and pond, one, George, is now a noted stock raiser, an M. D., and is also surgeon-general in one of the Eastern States; another, Jim, is an eminent divine in Pawtucket, R. I.; another, Little John, is a capitalist in the city of Providence, and the writer—well, he is down in Jersey. But no doubt each of the others, as well as myself, when taking a retrospect of life, will occasionally call to mind the jolly good times we had together on the pond away back in our boyhood days, while paddling in or fishing from or diving off the seats of Old Sanger's boat. A. L. L.

MILLHURST, N. J.

III.—Another First Trout.

Editor Forest and Stream:

I ran across a pile of back numbers of FOREST AND STREAM a short time ago, and noticed several articles entitled "My First Trout." They reminded me of a youthful experience of my own, which I think was extraordinary. The first trout I killed was literally killed, and in a way that I believe never was duplicated. He did not die for want of water.

I have not told a fish story for many years. It is painful for me to listen to the thrilling fancies that are usually served up under this head, "The Grand Rush," "The Music of the Reel," "Giving Him the Butt," etc. Nevertheless the spirit moves me to drop you a line.

At this harsh and inclement period of the year, which in our northern climate is a close season, without any law to make it so, we will sometimes indulge in what Neighbor Cheney calls "winter fishing." Our thoughts turn longingly to the time when

"The green grass grows all around,"

and nature with lavish hand spreads before us a thousand charms.

Then we can be happy and grow strong in mind and body, whether the fish will bite or not.

But I started to tell you of "my first trout," and you are probably ready to call me to order for not talking to the question.

More than fifty years ago I was a small boy in New England, and before it took two figures to indicate my age I acquired the habit of following the brook and sitting on the grassy bank waiting for a bite. I guess I was born so and couldn't help it. My earniest recollections are that I went to school and went fishing. You can imagine which I enjoyed most.

I remember one occasion when I was instructed to come right home as soon as school was out, but some of the boys were going fishing that afternoon and asked me to go along. My moral sense being very slightly developed, I yielded to the temptation. Unfortunately I fell into the brook, and if the water had been a little deeper perhaps my brief career would have ended then and a modest fisherman been lost to the world. About dusk I sneaked home, went in the back way, told mother I didn't want any supper, wasn't hungry, guess'd I'd go to bed. At this moment my father laid down his pipe and took a hand in the game. Can you imagine a more wretched spectacle than I presented as I stood there with head down, wet and dirty, before my stern parent? My cross examination began. I made a very poor witness at that time (and always have since). I had not heard of the statute that protects a man from criminating himself. I was convicted and sentenced in short order and the penalty applied at once. Father took me by the hand, we went upstairs over the woodshed, where I took my first lesson as to respect for law, and it was a good one.

I used to think there were tyrants in those days.

I might relate many other incidents of my early days of equal interest and importance if it were not for the fact that I am fully determined to tell you about "my first trout."

Shortly after I gave up wearing of girls' clothes and the dignity of pantaloons was on my mind, I was allowed to fish in the shallow stream that ran through the meadow a few rods back of our house. I did not commence with a bent pin, a piece of sheep twine and an alder branch, as most all distinguished Waltonians have done. I got a nice, straight birch pole in the woods (there were no rods in our section then), trimmed it carefully and peeled the bark half-way up from the butt. I secured a good linen line, a real fish hook and a bit of tea lead for sinker. My worms were not carried in a tomato can, as is the universal custom now. Tomatoes, as well as the cans, were unknown so long ago. I had a flat tin box with a hinged cover (old style tobacco box), that would slip in my pocket, and to complete the outfit my mother presented me with a small covered basket with a handle over the top. My rig was rather neat for a boy in those ancient days.

The denizens or aborigines of the little stream where I began to learn the gentle art were dace, redfins, shiners and occasionally a small rock bass. Twice a week during the open season I carried home an assortment of brain food for the family. I had seen trout that were caught by the big boys who went away up in the mountains for them, but my nerves had never danced with excitement over the tug of a trout. Ambition, however, kept my blood warm, and at last opportunity knocked at my door.

We usually had school every day in the week, but one memorable Saturday there was no session, so I had the whole day to myself. I started early and planned to fish up the brook half the day and then turn and work toward home.

About noon I was at least a mile and a half above where I had ever fished before. My basket was two-thirds full of the usual small fry, but no trout. I had hoped to get one, but was disapopinted. I sat down and ate my lunch and then resolved to try once more a little further up. I soon came to a considerable pool that looked promising. It had a sandy bottom, which shelved off gradually into a deep, swift current toward the other bank. I was about to cast into the deep water when I noticed a small boulder about 2 feet from the shore and a fish lying on the opposite side of it, head up stream, of course. I could only see his head and tail where they projected above and below the stone. I felt sure that that was a trout. I put on a fresh worm, dropped in above him and let it float slowly down. It almost touched his head, when he made a rush for deep water. I fished for him a long time, but it was no use—he would not bite. I went up stream a few steps and then turned toward home. When I came to the pool again there was my fish at his old place. I said to myself if you won't bite I will try another way. I wound my line around the pole, put the butt over the stone about the middle, and when I had it just right gave a grand shove. My fish turned on his side and floated down stream, wiggling his tail feebly. I dropped my pole, rushed into the water and grabbed my prize. It was a half-pound trout. I sat down on the bank and studied him.

The supreme satisfaction of that moment I think has never been equaled during my life.

Mr. Kipling, in the story of his "first salmon," indulges in a fine frenzy. "His three feet of living silver quivering in the air," and "The remorseless reel, gathering in the thread of life, inch by inch," are in his choicest vein, but the emotions of a young enthusiast with his first trout are indescribable and cannot be communicated. No more fishing for me that day. I made tracks for home by the shortest cut.

When I dressed the fish I found his backbone broken about two inches below the head. S. D. R.

IV.—A Hunt in the Backwoods of Tennessee.

IT was a night in autumn; after the colored leaves had fallen, all the trees were freshly bare, save the pines, which stood in verdant splendor amidst the wreck of summer's foliage. The moon shone brightly, outlining even the frost on the long worm fence, and on the huge dead chestnut in the east.

The dogs were in trim for a raid, and the great wildcat of the laurel swamp was known to be stirring, for his weird cry had been heard, just after nightfall, far away on the pine-lined ridge which leads into the south from the valley.

In our party of three, one carried an axe, one the old oxhorn, and I the long rifle, freshly primed. We soon left the valley and began to climb the ridge at the upper end of the swamp. Then the dogs were urged to go. With much excited waving of tails they took to the scrub oak which covered the point. After a few moments' suspense, with wild and thrilling bay, the trail of the great cat was found. It was warm, and soon the lonely pine-clad hills were reverberating the thunderous notes from the throats of nine of the best cat hounds in all that region. With the old hunting yell we drove them on. For the first two miles they swept forward with the speed and roar of an avalanche, then in a basin formed by surrounding hills, the trail turned backward, the hounds came round like nine men-of-war at sea, and we cried frantically and joyfully, "He's circling." Soon the barbaric music

sounded through the laurel, where the wildcat made his home, telling us that the giant had sought the winding paths and darkness where it would be easier to elude the agile dogs, but they were trained, and as pups had chased the wily swamp rabbit, where now they followed fast the monster cat.

The run was to be a long one, and we waited near the border of the laurel for the unraveling of the many tortuous stretches of the trail through the windings of the stream and thorn-bordered paths. After a time the whining notes of perplexity broke again into the blood-thrilling battle cry of the hound, in close pursuit of the game. While we listened to this renewing of the chase there was a rustling in the laurel, and almost instantly the great grim whiskered head of our forest monarch peered from the bank of green where the moonlight fell, not fifty yards away. The four-foot barrel of the long rifle swept up to the range as if by instinct; the very bullet in its grooved bed seemed trembling with eagerness, as with muscles tense as steel I "darkened" on the gray brow between the eyes of fire. Just as I touched the trigger, the huge furred thing stepped out, with head held high, into the brightness. The flash and sharp report came too late. I had missed, and I was glad, for no man could rejoice at the death of such a thing of forest glory In every line of his lithe body could be seen a wilderness of strength and a world of pride. In truth he was the king of the valley. The curved rifle breech struck the log by my side, and with nose in air and long swinging trot the cat was gone on his old trail, over the hills to the south. Then came the hounds with frantic leap and cry, following the quarry, with their brute hearts aflame.

A few moments gone and their voices mellowed by the distance took on that strange, wild note known as the "tree bay," telling us that the yellow-eyed king had sought refuge amid the great limestone caves on the river, miles away. Thus we listened, while the oxhorn's braying broke the intervals of silence, echoing sadly through the lonely gorges and the tall pine trees.

The hunt was over; yet, though it happened years ago, my blood speeds faster from the memory of it.

B. M. S.

Frank Forester.

Editor Forest and Stream:

The first copy of his "Field Sports" which I ever owned was given to me thirty-one years ago. It was the 1868 edition. This has not, like many works on sport, been laid aside, because I thought it old fashioned and not up to date, for I own no sporting work in which I take more solid comfort and satisfaction in reading over and over again than these writings of Henry Wm. Herbert. This does not only apply to the "Field Sports," but to his "Sporting Scenes and Characters," "American Game in Its Seasons," "Fish and Fishing" and "Fugitive Sporting Sketchings," so ably edited by Fred E. Pond (Will Wildwood). I have recently been investigating as to the likenesses which we know of Forester and find that very few exist. There may be others which some of your readers know of, and if so I hope they will communicate through your columns.

I have seen no works of Forester's which contain any likeness except in the "Field Sports," but there was none in the first edition of 1848. The 1858 edition contains the profile wood cut, which also appears in later editions. There seems to be a difference of opinion as to the accuracy of this likeness. Fred. E. Pond in his "Fugitive Sporting Sketches of Frank Forester," published in 1879, says: "The portrait of H. W. Herbert in the first column of his 'Field Sports of the United States and British Provinces' is little better than a caricature. It has been pronounced by his acquaintances a base libel upon his manly features, and the gifted 'Acorn' asserts: 'It is no more like Herbert than is a horse to horse chestnut.' The most accurate likeness of 'our Frank' is the photograph by Zimmerman Bros., St. Paul, Minn—reproduced from a portrait by Meade, the last for which Mr. Herbert ever sat. This is a faithful and finely executed likeness of Frank Forester, a 'counterfeit presentment' which it is a delight to gaze upon."

The likeness which Mr. Pond styles as a caricature appeared in an illustrated article in the "International Magazine," June 1, 1851, Vol. 3, No. 3, and referring to the cut, says: "We doubt whether the wood engravers of this country have ever produced a finer portrait than the above of the author of 'The Brothers,' 'Cromwell,' etc. It is from one of the most successful daguerreotypes of Brady." I have recently secured this same likeness, an etching on vellum, signed by S. Hollyer. For the Zimmerman photograph from the Meade portrait I am indebted to Mr. Charles Hallock, who generously presented me with his only copy, and it was from this one that the likeness appeared in his famous article on "Pioneer American Sportsman" in "Outing" for January, 1901. This article has been most enthusiastically received and made all the more interesting and valuable by the twenty-one illustrations of the old-time lovers of the rod and gun, most of whom have now passed on. Mr. Henry Thorpe of Brooklyn, N. Y., to whom I am indebted for information regarding Forester's likeness, writes me that there are two portraits taken from oil paintings and that one of the originals is in his possession. It was painted by an artist named Roberts, who lived in Newark, N. J., and was probably done during Forester's lifetime. It represents Herbert seated in his library, in shooting costume, with shooting implements on the walls. Size of canvas 15 by 18 inches. A woodcut of this same portrait was given in the New York Herald, Nov. 26, 1893, in connection with an illustrated article on Herbert.

John H. Blackford gives his recollection of Herbert in "Game Land." November, 1893, in these words: "His appearance was remarkable. He stooped slightly; was prematurely aged; clothed in fustian or corduroy hunting coat and breeches, with leather leggings buttoned up above his knees; a heavy dark-gray shawl about his waist, crossed behind and passing over his shoulders and under the part in front, similar to the old Scotch fashion; an odd cap (probably Scotch) on his head; eyes downcast, oblivious to passers-by; followed closely by a couple of hounds. That is the picture of him in my mind as I saw him often, over forty years ago."

Some months ago a very interesting letter of Forester's, of early date, appeared in your paper, and under date of Jan. 19, 1901, the Sportsmen's Review published another in possession of Mr. Henry Thorpe, written in 1845 from "The Cedars." If any of your readers are fortunate in possessing autograph letters of the "mentor and coach of the Rising Sportsmen of America," I hope they will publish them. Any sportsman would read such literature with a keen relish. I recently picked up in New York a short autograph letter which reads as follows:

My Dear Colonel:

I am sick—neuralgia in the head. Get along with "The Sachem" this week. I will bring you two columns on Saturday for next week, and we will then start fair. Ever yours,

Henry Wm. Herbert.

The Cedars, Jan. 27, 1853.

Referring to the "Field Sports," edition of 1868, page 28 of the Memoirs, you will see: "In 1850 he gave much time to a paper called The Sunday Era, and in 1851 to another called The Sachem, both published in New York." I have recently received from the family of the late Jacob Pentz the following note of Forester's, addressed to Col. Isaac Andrus, Jr., but not dated:

My Dear Colonel:

I cannot say how much I am distressed about this cursed matter. I was confident of getting it yesterday morning, but in vain. I can only add that I have an article finished to send to the Democratic Review on Monday morning, which always pays me ready money, and that item I can certainly repay you.

Ever yours, Henry Wm. Herbert.

Some twenty editions of the "Field Sports" have been published, but the early issues are now scarce. I secured from the family of the late Jacob Pentz his copy, which was the first edition presented to him by his father, Dec. 25, 1848. Also the "Fish and Fishing" first edition with the supplement bound separately, presented to him by his brother, Dec. 25, 1850.

"American Game in Its Seasons" published in 1853, is written in his usual attractive style, nineteen chapters on different game, most of which originally appeared in "Graham's Magazine." Each article is prefaced by an illustration, and what gives it peculiar interest is the fact that all of these, with the exception of two, were designed and drawn on wood from nature by Herbert himself. Fred. E. Pond says in his Memoirs that the most complete record of Frank Forester's literary career is that published under the title of "Foresterian Bibliography," by the late W. I. Faddis, who wrote under the nom de plume of "Toxophilus." This serial appeared in fourteen numbers of volumes 6 and 7 of the "Chicago Field." Many of us who have not the early files of this paper would like to see this matter collected and reprinted in pamphlet form.

RUTHVEN DEANE.

Natural History.

A Peculiar Incident.

A PECULIAR incident happened to me while hunting red deer in the county of Beauce, about forty-five miles from the city of Quebec. It was on a fine day toward the end of December, at about 5 in the afternoon, and the sun had just disappeared in the west, leaving a peculiar reddish twilight known only to the Canadian woods in winter. We were very tired, as it was after a day of hard tramping—the snow being very deep we were, of course, obliged to wear snowshoes. We were homeward bound, feeling rather blue, as our luck with the deer had not been very good. We suddenly came upon a large clearing sloping toward the center, where ran a small stream, now covered with 6 feet of snow, above which appeared, like a tangled fisherman's net, a thick elder bush. At about 100 yards off I noticed something which appeared to be either foxes or hares scuffling in the snow, when suddenly a large bird rose in the air, carrying with it a struggling animal. The bird rose, only to fall again, and the scuffling was renewed. I ran up to within a few yards of the combatants, and then I saw that the bird was a large owl, which had evidently captured a hare, which was so heavy that the bird was only able to fly a few yards with it, and the owl had its talons so firmly gripped in the hare's skin that it was unable to release its hold.

At first I thought that I would end the fight by putting a bullet into one of the combatants, but upon second thought I said, "No, I may be able to capture the owl alive." I accordingly inspected them as closely as the owl would permit, for he was looking at me with very wicked eyes, and hissing like a tomcat when a fox terrier runs up to bid him good morning. The hare shoved his head deep into the snow, as if he thought I could not harm him so long as he could not see me, which I have often noticed is a very common behavior among our Northern hares.

I borrowed my companion's mits and put them on over mine, grabbed the owl by the wings and the hare between my knees, and was obliged to cut the hare's skin to release the owl's talons. As the poor hare could not live, his injuries being too severe, I put an end to his sufferings, and the next morning for breakfast we enjoyed some very good fried hare with onions.

I tied up the owl's wings and got him safely to camp and eventually to Quebec. One of the leading furriers in the city, Messrs. Holt, Renfrew & Co., requested me to loan them the bird to exhibit in their window, which I did. He sat very stately in the window, eyeing the crowd of spectators in the street, looking very wise, and now and again giving a wink to a pretty girl who might happen to be looking at him, and she would go away quite flattered at such a compliment from the king of the midnight forest. He created quite a sensation in the window, as he was probably the largest Western horned owl seen in this part of the country for a long time. He had still his fall suit on, but had adopted a white collar and white buttons to his waistcoat and also small dots of white on the tips of his wings. Notwithstanding that he was surrounded by some of the finest furs in the dominion, I think he had quite a right to believe that he was the central attraction. I brought him home, where I kept him for a week, but as he would eat nothing and had a fancy for settling on the back of Jack, my Irish setter, and was very fond of trying to break into the parrot's cage, which scared poor Polly nearly to death, I thought better to let him go; so one night I released him. He rose very high in the air and shot south, apparently in the direction of his residence, and with one long, cat-like shriek disappeared from sight.

MARK O'MEARA.

QUEBEC, Feb. 19.

Experience with Wild Animals.

YUMA, Ariz.—*Editor Forest and Stream:* My observations of "dangerous wild animals and others matters" are to the end that no two men see such things alike. The temper and disposition of animals are in nowise different from those of men. I have seen some of the grandest specimens of "dangerous wild animals" scamper like frightened sheep, and again some mangy looking brute of the same breed stand his ground and tear the life out of everything getatable. Based on an experience scattered over a wide range of country, I have long believed that dangerous wild animals are like Indians—bad till their good character is proven, a something that occasionally is a little slow in showing up. Although the most ferocious brute on earth is liable to bolt on sight, there is no beforehand assurance that it is going to do so. Salvation comes more surely through steady nerves and good guns than it does through the bolting qualities of dangerous animals. It can never be foretold what the individual animal is going to do, nor is it what the majority will do that concerns the average man, but it is what the minority does do.

So far as my observations go, the common black bear is the most harmless of all dangerous animals, but at the same time the aphorism "a good Indian is a dead Indian" is applicable to him and his kind.

A partner of mine in the long ago, by the name of Leroy, while prospecting in British Columbia, saw a black bear drop to the ground and deliberately lie in wait for him. He was following a trail through timber and at some distance ahead he saw a black bear standing at right angles with it, but looking along it in the opposite direction. He walked on, expecting it to scamper the moment it caught sight of him, but it did no such thing. Apparently thinking itself unobserved, it dropped flat and lay with its nose against the lower edge of the trail, evidently intending to jump on him as he went by. The would-be biter was bit with a pistol bullet in its head. Now, I did not see this thing actually occur, but there has never been a shadow of doubt in my mind as to the absolute truth of this statement.

Again, I knew a prospector to be badly bitten and scratched by a younger bear of the black kind. It was lying behind a log and as the man stepped over it rose up and tried to hug him. Of course there can be a doubt as to this attack being premeditated, but that need not be argued here.

In the spring of 1872, in a logging camp on the Truckee River, California, a couple of grizzly cubs afforded much amusement. They were little fellows and could be held at arm's length like kittens, if taken by the back of the neck, but they were ever ready to get in a bite when the opportunity offered, and this was given by nearly every stranger that struck camp. They would cunningly stand near the post to which they were fastened and pretend to be looking elsewhere, but the moment a leg stood within limit of their chain it was not quick enough to get away without being nipped. This trick was deliberately planned and carried out. For some time it formed the standard amusement for both bystanders and bears. In my own mind, I am fully convinced that bears will not only not run at all times, but that they will deliberately lie in wait for the unwary and unsuspecting.

I once saw an adult brown bear, or a young cinnamon, I could not then tell which, deliberately stalk a man, but the moment it believed itself discovered it stood still, and bolted the instant the man again turned his head from it.

I know that many animal mothers will abandon their young at the first scent of danger, but there is still that uncertain minority to be considered. With a companion I once chanced on an old grizzly with one cub. We were on horseback and she saw us quite a distance away. She made not the slightest attempt to escape, but sat up and swung her head from tide to side, uttering "Whuf! Whuf!" as she did so. It is possible that we could have ridden off without interference had we wished, but it was plainly evident that she held the right of way in her direction and proposed to keep it. In the mixup that followed, the cub would get between her legs for protection, but she would knock it end over end without the least compunction. She was thin in flesh, but she was the longest bodied brute of her kind I ever saw.

When employed at the Plumas Eureka Mine, in the Sierra Nevadas, I knew of two miners finding a prize of young cubs as they were crossing the country from one mining camp to another. The mother shortly afterward found them and mauled one of them so badly that for a long time he was expected to die. Later another cub was brought to camp, and the man who brought it in told me that he had seen nothing of the mother, although he had been expecting her with fear and trembling.

Early in the eighties two soldiers from Fort Huachuca were hunting in the range south of the post. They found two cubs of a brown bear and were returning with them when they were overtaken and attacked by the mother. The one nearest to her dropped cub and gun and headed for a neighboring tree. As he was unable to climb he spung around it with the old bear a close second. While so engaged, his companion got in a lucky shot and killed her.

Hon. A. F. Banta, well known throughout Arizona, was, in days agone, in the employ of the Government as an Indian scout. One day he chanced on an old cinnamon bear and cubs. Without a moment's hesitation she rushed him and he killed her by discharging his gun down her open mouth. He stated to the writer that the attack was wholly unprovoked and his call for a mauling exceedingly close.

About ten years ago a Mexican returning to Tucson from a placer camp in the Santa Ritas met a bear on the trail, and was instantly attacked. When the trouble was over the bear was dead and the man nearly so. The former had twenty-nine knife wounds on its body and the latter was minus one eye, had a broken arm and shoulder and was otherwise badly used up. When found the next day, he was more dead than alive, but he eventually recovered.

Now one little story of a bear that did run and then I am done with Mr. Bear. Probably, if I did not have to write of myself I could tell a better story. In 1877 I was one of a party of prospectors in the mountains of northern Mexico. At the time in question we were camped near the mouth of a rather narrow and deep cañon, through a portion of which ran a beautiful little stream of water. It was during the rainy season, and the country thereabouts was as pretty as a picture. Turkey and deer were plentiful, and of bear sign there was no end. Every foot of the cañon was wild and grand. The intersecting cañons, of which there were many, were nothing more than great cracks in the earth, through which the stars could be seen in midday, and in which the shadows hung heavy and dark at all times. Once, when exploring it alone, I was overtaken by night while still several miles from camp. So long as I held to the cañon I could not go astray, and by keeping to the stream I was sure to strike camp. The darkness of a deep cañon on a stormy night can be felt but not seen. It had been raining pretty much all afternoon, and with the exception of short intervals it fell steadily through the night. Considering the intense darkness, I experienced but little difficulty till I reached a belt of cottonwood timber, every tree of which had been uprooted by a furious storm of apparently the year before. Shortly after entering this I was obliged to leave the water, and was slowly feeling my way over and between the prostrate trees, when I was brought to a standstill by the breaking of some sticks, apparently 15 or 20 feet in front of me. I rightly surmised that I was facing a bear, and, although I could not see it, I imagined the spot in front of me to be a little darker than the surrounding blackness. Just how long we stood and faced each other I cannot say, but on a hasty sizing up of the situation I decided to try the straight goods and go ahead. I held the muzzle of my rifle (Sharps) well in front of me, with the intention of discharging it the moment it came in contact with the bear's body, and then trust to my knife. I had, however, not taken more than a half-dozen steps when with a frightened snort it broke and ran. It was absolutely panic stricken, and in its frantic efforts to get away it crashed through a dead tree top with as much noise as a runaway team. Here, then, was clearly a case of scare, but had I done differently it is impossible to tell what the result would have been, but it could not stand the pressure of being bumped into by a stranger on a dark night. I have already been too long winded on the one subject, but I wanted to show that while the great majority of brutes will perhaps run at the first sign of alarm, there are others.

Of wolves I know but little. Although quite plentifully scattered about the country, I never had the pleasure of killing one. The theory of their pacific intentions finds no favor with Hon. M. F. Shaw, ex-sheriff of Pima county. Some years since, when driving in a buckboard between Pantano, on the Southern Pacific, and the Empire ranch, he was attacked by a big timber wolf. It ran alongside of the wagon, snapping and snarling, and but for the fact that he was driving a spirited pair of animals it would, he thinks, have been in the wagon with him.

Some three years ago I saw a fine litter of six wolf whelps. They were about a month or six weeks old, and had been brought in by a scalp hunter. He told me that although the mother was a large animal, she made no attempt to defend her young, but got away.

Last summer a statement was published in the Phœnix papers to the end that a young man of that place had been badly bitten by a mountain lion. With a brother, he was prospecting in the Superstition Mountains. One evening, while they were sitting outside their tent, they saw several large animals prowling about, and as they came uncomfortably near, a stick was thrown in their direction. Instantly one turned, sprang on the younger brother and inflicted several ugly and dangerous wounds before it could be driven off.

About four months since a Mexican rancher near this place reported that he had been attacked by a mountain lion, but that he had killed it. The animal had, however, been previously shot, the bullet having entered the left eye, ranged downward and out under the lower jaw on the opposite side of the head. By whom this bullet was fired is not known, but the animal was probably more dead than alive when met with in the Gila bottom.

Dr. H. W. Cotter, a well-known physician and a prominent citizen of this place, stated to the writer that he had once been followed by a mountain lion. In company with another gentleman, he had been visiting a piece of mining property a few miles up the Colorado, and was returning in the dusk of the evening at the time the attack was made. I do not now remember how he said the affair started, but he told me that it bounded alongside of the buggy, making one great leap after another, but made no attempt to spring in. It finally fell behind.

Once, when in the hills, I was conscious of being followed by something, and presently saw the head of a mountain lion rise from behind a rock. I walked toward the place and it ran back, but when I stopped it stopped, and when I turned from it it stood for a time and then came sneaking back. Not caring to be followed by even so cowardly a brute, I chased it with rocks, and it made no further attempt to follow me. It carried its tail low to the ground, with something like a half-curl in the end.

On another occasion, when camped in a sandy bottom, one of these same individuals walked repeatedly around us, but without daring to come in. The nearest approach, as shown by the footprints in the sand, was to within about 30 feet.

A shepherd dog we once had with us ran a lion up a mesquite tree. When I first saw it it was lying on a limb not more than 10 feet from the ground, contentedly watching the dog and slowly waving its tail from side to side. When shot it ran directly along the limb and then sprang to the ground.

In the Santa Catalina Mountains I saw a man shoot at a red lion as it stood with its head exposed from behind a thicket of brush. The bullet cut too low and knocked dirt in its face. It sprang forward and disappeared like a flash among the rocks.

When a boy in West Virginia, we had for a neighbor a very old lady by the name of Northumberland. Her people had been among the early settlers of that section of the country, and she spoke frequently of the dangers that surrounded her early life. It appears that then, as now, the natives thereabouts gathered ginseng for the market. This ginseng, as many of your readers well know, is indigenous to the woods of that State. It is, or rather used to be, gathered by women and girls, and the act of going to collect it was known as "sanging." For the purpose they used a small light hoe with a narrow blade on one side and a sort of fork on the other. An implement similar to this appears to have been long used, for Mrs. Northumberland often told of going "sanging" with such hoe when a girl, and of being once overtaken by darkness and of getting lost in the woods. As a protection against wild animals, she climbed a tree and took her "sang" hoe with her. In the night a panther came and repeatedly climbed to where she was, and every time it did so she struck it on the head with her hoe and knocked it down. In the morning it lay dead at the foot of the tree, with the skin of its head and face hacked into ribbons. It may have had pacific intentions when it climbed the tree, but if it did she failed to appreciate them.

I remember also her telling of a mare and colt that belonged to her father being driven from the woods, where they were feeding, by a panther. The colt had been badly torn by the animal. Her father and two brothers followed the trail of blood and presently met the panther, engaged in a like occupation and licking the blood from the leaves as it came along. It was supposed that when it sprang on the colt the mother attacked it and drove it away. This class of animals have always had a weakness for colts, and I merely mention the above because it is a tale of the long ago. Among the mountains of West Virginia these "varmints" were known by the name of "painters."

Now for a couple of deer notes and then adios. Deer are dangerous at both ends. I once received a kick in the pit of the stomach from one, and "subsequent proceedings interested me no more," so far as that deer was concerned.

Two acquaintances of the writer—John Dowdle and Jeff—were hunting deer near old Camp Cameron. They were in a cañon, and according to arrangements Jeff had entered the cañon lower down and was to drive the deer in the direction of John, who stood behind a bush and was to do the killing. The latter allowed two does to pass unmolested, but the third deer, a handsome young buck, he decided to kill, and stepped out for that purpose, but was instantly knocked down by it. His gun went one way, he another and the deer with him. He caught it by the horns, but was unable to protect himself from the horns and hoofs of the infuriated animal. Fortunately his shouting apparatus was in good condition, and it brought Jeff to his assistance, otherwise he would most surely have been killed.

One morning a Mexican vaquero was gathering cattle almost in the neighborhood of the above occurrence. He was attracted by the barking of his dog a short distance away, and rode to see what the trouble was. The dog had a white-tailed buck at bay, or rather the deer had the dog in that predicament. Urging the dog on, he rode up with the intention of roping the deer, but was charged on sight. He saved himself by slipping from his horse on the opposite side, and then to a tree a short distance away. The deer struck the horse just back of the left fore leg and dropped him dead. Although the skirt of the saddle did much to protect the horse, it failed to save him, as one prong struck it squarely on the heart. The horse was subsequently opened, and although the heart itself had not been broken, the point of the horn had been pressed deep into it. I was told by one of the parties who examined it that the hole in the heart was more than a half-inch deep. Kindly bear in mind that this is no cock-and-bull story, but that of an actual occurrence.

PAPAGO.

Ducks Breeding in Maine.

Editor Forest and Stream:

On page 161 of FOREST AND STREAM for March 2 you ask for information about ducks breeding in the United States. I will say that they regularly breed in many of the ponds in the settled portion of Maine. Lake Pennesseewassee, here at Norway, is in latitude 44° 13′ to 44° 15′, and in pleasant summer morning or evenings cottagers and boating parties are frequently entertained by the sight of wood ducks and their young disporting themselves in the water.

The lake is six miles long, has good shores partially wooded. About half a hundred cottages or camps, one small village and several farmhouses are close to the water. The islands are inhabited during warm weather. At the foot of the lake are two villages containing 3,500 inhabitants.

A healthy public sentiment protects the birds till the young are fully grown and they have learned to come out in sight of folks fearlessly. This is only one instance, and there are plenty of others.

Quoting from Knight's "Birds of Maine," I find that of the Order Anseres family Anatidæ, that species of this class of birds are known to breed in Maine. (The numbers are those of the American Ornithological Union.)

129.—American merganser. Breeds in the lakes of the great Northern forest.

130.—Red-breasted merganser. Breeds commonly along the Eastern coast and some in the interior.

131.—Hooded merganser. Breeds in the lakes of the great woods.

The three preceding species are called geese. The next three are river ducks.

133.—Black duck. Known to breed in fifteen of Maine's sixteen counties.

140.—Blue-winged teal. Breeds in limited numbers in eastern and northern Maine.

144.—Wood duck. Common summer resident in fourteen counties and occasionally seen in the other two.

The next few are called sea ducks.

146.—Redhead. Breeds rarely.

151.—American golden-eye. Breeds in some of the Northern lakes.

153.—Buffle-head. Breeds in the forests.

160.—American eider. Breeds in a few places on the coast.

167.—Ruddy duck. Breeds in limited numbers in northeastern Maine.

Of these birds, No. 144 and several species ought to breed quite commonly in New York State, especially in the Adirondacks.

Mr. Ora W. Knight of Orono, Me., is the recognized authority on Maine ornithology, and could doubtless give you exhaustive information on the subject at issue.

Wishing you success in the campaign for bird protection.

D. C. CLARK.

Ducks Breeding in Illinois.

INDIANAPOLIS, Ill., March 16.—Just a thought—that my information regarding the breeding of wild ducks might be appreciated by you and your many readers, I will contribute my limited experience.

From the spring of 1865 to the summer of 1870 I spent on the prairies of central Illinois. During these years ducks were very plentiful, especially in the spring season. But with the prairies becoming more thickly settled, and the draining and tiling of the lands, they are few now compared with a third of a century ago.

In the early summer of 1865 I knew of three pair of ducks that hatched on these prairies near a few small ponds, and these ponds were not particularly isolated ones either. I knew the location of two of these nests while hatching.

Again, in the spring of 1870 I had occasion to pass a pond daily, just at the edge where prairie and timber met, and my passing often disturbed a male mallard. Occasionally a female was with him and rising from the pond. They together would fly away out on the prairie. To my surprise one day there were not only one or two ducks on this pond, but there were eleven. Nine of them I thought the prettiest, downiest and sprightliest little ducks I ever met. After seeing the young, I had no doubt but that they were hatched in close proximity to this pond, but I could not find the vacated nest. I saw these ducks almost daily for a period of three or four weeks, when all suddenly disappeared.

Ducks have bred in this latitude, and if undisturbed would do so again.

J. C. L.

Birds and Lighthouses.

A FEW years ago an official order was promulgated by the Lighthouse Board calling for the assistance of lighthouse keepers in the work of bird protection, and recently an order to similar effect was sent out by the General Superintendent of the U. S. Life Saving Service as follows:

CONCERNING THE UNLAWFUL KILLING OF BIRDS.

Treasury Department.—Office of the General Superintendent U. S. Life Saving Service, Washington, D. C., Feb. 26.—To Officers and Crews of the United States Life Saving Service: The attention of all officers and crews of this service is called to Section 3 of an Act of Congress, approved May 25, 1900, as follows:

Sec. 3. That it shall be unlawful for any person or persons to deliver to any common carrier, or for any common carrier to transport from one State or Territory to another State or Territoy, or from the District of Columbia or Alaska to any State or Territory, or from any State or Territory to the District of Columbia or Alaska, any foreign animals or birds the importation of which is prohibited, or the dead bodies or parts thereof of any wild animals or birds, where such animals or birds have been killed in violation of the laws of the State, Territory or District in which the same were killed: Provided, That nothing herein shall prevent the transportation of any dead birds or animals killed during the season when the same may be lawfully captured, and the export of which is not prohibited by law in the State, Territory or District in which the same are killed.

It has been brought to the attention of this Department that a great number of sea and shore birds that breed or live in the vicinity of the several life saving stations of the United States are being killed for various purposes, in many cases contrary to State laws for the protection of birds.

The attention of keepers and crews of such stations is, therefore, called to the matter, and they are hereby cautioned against killing birds in violation of the game laws and the laws protecting birds which have been enacted by the States having jurisdiction, and are still in force; also against aiding or abetting in any way the killing of birds in violation of law. The keeper will report to the General Superintendent of the life saving service any member of a live saving crew whom he may know to be guilty of killing birds thus protected, and all members of life-saving crews, as far as they consistently can without interfering with their other duties, will give information and aid to the local authorities who are endeavoring to suppress such unlawful killing.

District officers will give their aid to the enforcement of the foregoing instructions and promptly report to the General Superintendent any neglect to comply therewith.

S. I. KIMBALL, General Superintendent.

Approved:

L. J. GAGE, Secretary of the Treasury.

Wolves Attacking Human Beings.

THE remarks about wolves in your Natural History column of Feb. 9 reminded me of an incident related by a professional hunter in the bush of western Canada, with whom I lived for nearly two months about 1865.

There were many Indians in the neighborhood, and the hunter told me that one of them, when traveling alone in winter, and armed only with a tomahawk, was attacked by a pack of wolves. (I think he said nine in number.) The Indian placed his back against a tree and killed several, but one, in whose body the head of the tomahawk was buried, made a spring, which snatched the handle from the man's grasp. The other wolves then killed and devoured him. All this was plainly discernible from the marks in the snow and the remains of the carcasses lying about.

I cannot, of course, vouch for the truth of this narrative, but the hunter always appeared to me to be very truthful and without the slightest tendency to exaggeration.

J. J. MEYRICK.

DEVONSHIRE, England.

St. Augustine Mockingbirds.

THE trees are alive to-day with mockingbirds, and the air is filled with their happy caroling. Since the enforcement of the law for the protection of song birds, our welcome little visitors are returning from the woods, whither they were driven. The law cannot be too rigidly enforced in this particular. We want the birds, and they should be as sacred as the buzzards, if we expect to prevent their extermination.—St. Augustine Record, March 9.

The hunting dagger which belonged to Col. James Bowie, and which has served as the pattern of all subsequent bowie knives, is a formidable double-edged weapon, with a horn handle and a curved blade 15 inches long and 1¼ inches wide at the hilt. Like Dr. Guillotin, Col. Bowie unwittingly gave his name to an invention that has earned for itself a rather unfortunate reputation.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Notice.

Forest Reserves as Game Preserves.

Editor Forest and Stream:

I have been asked to give my opinion on the question of using the forest reserves as game preserves. This question has already been brought out by FOREST AND STREAM.

It is very plain to all who are familiar with big-game conditions in the Rocky Mountains that if something is not done to provide refuges for the elk, deer and antelope still left, the greater part of these animals will soon cease to exist. Passing protective laws by the States does not protect the game. I have already in a previous letter to FOREST AND STREAM shown why this is so. I will in this letter take up the situation here in northwest Wyoming, which section now contains the last of the great elk herds of the West, and also large numbers of antelope, deer and mountain sheep.

In the Yellowstone Park, which takes up a tract of about fifty miles wide by seventy miles long, in the northwest corner of the State, the game finds a haven where it is absolutely protected at all times. The Park provides both summer and winter range for the deer, antelope and sheep within its boundary, and of them nothing more need be said.

With the elk it is different. I suppose that at least 10,000 elk stay in the Park summer and winter. But there are at least 60,000 elk in northwestern Wyoming, including the Park, and of these about half summer in the Park, the rest outside, on the headwaters of the Snake, Green and Wind rivers, and all that cannot find winter range in the Park come south to winter, probably 50,000 in all.

The great problem is to find winter range for these elk without interfering with the live stock interests of the State. The increase of these herds must be at least 10,000 each year. The settlers who kill elk from the herds for meat number less than 1,000 all told, and only about 150 non-resident sportsmen hunt each year in the State. Thus, if each settler—man, woman or child—used three elk a year, which is a fair average, and the sportsmen killed their full allowance, the herds would increase.

As a matter of fact, the herds are fully holding their own, and I think are slowly increasing. I estimate that fully as many elk are killed by wild animals and die of starvation as are shot.

The deer outside of the Park are just about holding their own. They are so wild and shy that they are not much hunted for meat by the settlers, and sportsmen only kill the bucks. Their main enemy is the cougar, which kills great numbers. The same is true of the mountain sheep. The antelope are slowly decreasing, more through the killing of the young by coyotes than anything else. The settlers kill very few and the sportsmen kill only bucks.

Thus, if present conditions could be maintained, game would hold its own here forever. What is going to close out the game is the settlement of the game ranges and the destruction will be from two causes—starvation during the winter from lack of food, and shooting by settlers and sportsmen. By a proper system of forest reserves, it is possible to preserve the greater part of the elk herds, and to keep the deer and sheep at their present numbers.

The chance for the antelope is practically hopeless. Their range is in the open country, and nothing can prevent their being counted out of existence by the herds and flocks of cattle and sheep.

A few of the antelope even now take to the timber during the summer, but an antelope is perfectly helpless in snow that does not bother an elk or deer in the least, and for this reason cannot winter in the mountains. And what game cannot winter in the high mountain valleys must perish.

Now as regards using the forest reserves as game preserves. In the first place, the present Teton Forest Reserve, which lies south of and adjoining the Yellowstone Park Timber Reserve, should be extended eighteen miles east and forty-eight miles south, thus taking in the great bodies of timber on the Wind River, Gros Ventre and Hoback mountains. All the agricultural land of any value that would be inside of this reserve is already settled upon, and it should be provided that no vested rights held by settlers should be invaded. If this should be done, the enlarged reserve properly patrolled and the forest rangers, as at present, instructed to enforce the State game laws, the future of the game in northwestern Wyoming would be assured. Suitable regulations should govern the grazing of stock on the reserve, and only actual residents on the reserve should be allowed to graze stock thereon.

It must be remembered that the altitude of northwestern Wyoming is such that hay is the only crop that can be raised with certainty. The ranchmen are dependent upon stock growing, and without the use of the outside range the ranches are valueless, as enough stock cannot be kept on 320 acres the year round to support a family. The wild game can winter in much deeper snow than can cattle, and the proposed reserve contains winter range enough for all the game at present upon it, without encroaching on the range needed for what stock would belong to the ranchman upon the reserve. It is the tramp herds of stock belonging to men who own not a dollar's worth of real estate that are destroying the public range. The free range is no longer large enough to support all the stock upon it, and a distinction should be made in favor of the men who are improving ranches and building up the country.

It would not be necessary to absolutely protect the game upon the reserve.

The Yellowstone Park is a case in point. Neither in the Park nor in the Yellowstone and Teton reserves can the elk which summer in the Park find winter food. Three-fourths of the elk in Wyoming are now south of the Teton Reserve, on the tract which I propose should be added to the reserve. On the Big Gros Ventre and on Green River for miles the foothills are black with them, thousands being in sight at once. At Lloyd's cattle ranch, on the Big Gros Ventre, which is in the center of the winter range, it has been impossible to keep the elk out of the hay corrals this winter, and a large quantity of hay has been destroyed by them.

Northwestern Wyoming now contains as many head of game as can possibly find food during the winter, and to protect at all times the game, or to prohibit shooting on the present forest reserves, or on any which may be created hereafter, would only extend the conditions now prevailing in the Yellowstone Park—viz., not enough winter food within the reserve for the game. If the east, west and south boundaries of the Park were fenced and the elk prevented from coming out to winter, three-fourths of the elk that summer in the Park would starve the first winter. The present Teton Forest Reserve contains very little winter range, and the bulk of the elk winter on the tract which I suggest be added to it. A few elk go onto the desert between Green River and Big Sandy to winter, but less and less go every year, as the domestic sheep are cleaning out the grass, and many of the elk starve.

The proposed reserve consists mainly of high, rough country and heavy bodies of timber, though there is much park land and the valleys of the streams are more or less open. The farming land lies, with a few exceptions, in three compact bodies. The largest is in Jackson's Hole, the next largest along the Green River, and the smallest in the Hoback Basin. There would be a dozen large lakes and numberless small ones within the reserve; the waters all swarm with trout, and as a camping and pleasure ground the entire tract, including the Teton Reserve, is fully equal to the Park. The main sources of the Green River and the headwaters of some important tributaries of the Snake and Wind rivers, and the great forests which supply these streams, would be within its boundary, and if it is to be the policy of the Government to protect the forests at the heads of the streams, this reserve should be established without delay. The Teton Reserve covers comparatively little of the forests of northwestern Wyoming, and the protection of the game would be only a part of the benefit to be derived from the establishment of this reserve.

To sum up, the forest reserves, as game preserves, should not be absolutely protected, as is the Yellowstone Park, but only reasonable restrictions, such as the State laws on shooting, should be enforced. When possible, the reserves should be enlarged to take in all mountain country and bodies of timber lying on the headwaters of streams. No restrictions should be placed on the reasonable use of the range, or on cutting timber for ranch use by settlers. Any agricultural land within the reserve should be left open to settlement.

By so doing the object for which the reserves were established, the protection of the timber and the streams, would be fulfilled. And what is important, though in a lesser degree, the protection of the game and fish would also be accomplished, without interfering with the proper development of the stock growing interests of the West.

WM. WELLS.

WELLS, Wyo.

Mr. Tilden's Deer.

SCHENECTADY, N. Y., March 13.—In your issue of March 2 you were appealed to by Mr. S. W. Tilden to concede him the privilege of a statement so that you might have both sides of a question in which he was interested. Inasmuch as the other side has not been given you, and inasmuch as Mr. Tilden's statement so far is entirely ex parte, would it not be well to publish the other side as viewed from Mr. Tilden's own statement published with the very praiseworthy motive of "contradicting and correcting the garbled reports that have appeared in various newspapers"? This portion of the statement refers, of course, to an event which is known far and wide owing to the importance of the matter and of the persons interested.

Statement.

Two gentlemen have a successful expedition to Maine. They bring home to Schenectady four deer obtained in four days' hunting, shipping the same by American Express to Schenectady, where the deer arrived after Nov. 15. It not being clear that it is lawful to possess venison after Nov. 15, the gentlemen consult two of the "best lawyers" in the city, who, with that intimate knowledge of the law which two of the best lawyers of any city of the size of Schenectady are supposed to possess, told them that such possession after Nov. 15 was not unlawful. Of course, such advice ought to be an excuse for all violations of the law committed by the gentlemen in having the venison in their possession.

They then generously distributed their game among their friends.

Suddenly, without warning, they are called upon by the Chief Game Protector to explain, which they say they did, but the benighted Protector evidently failed to understand that two of the "best lawyers" in this city ought to know the law better than himself. As a result, he says that they were each fined $100 by the Protector, which afterward was changed to $50, but fails to state by whom—due, one would gather, from the statement, to their threats to contest the case, which, of course, would have jeopardized the existence of the commission and the security of the State. It is not often that one meets with such enthusiastic advocates of stringent game laws, with "such various and sundry ideas" in regard to the phraseology and enforcement thereof, so that the promise of an explanation of their views awakens our curiosity and interest and makes us anxious to have these views more fully ventilated and set forth.

Under the new and economic administration of this State, it seems that the retention in office of Protector Scott with his avaricious and grasping methods could easily be prevented, with the facts as published by you in Mr. Tilden's communication presented to the Governor. One is led to inquire however, why a penalty which could have been $100 per deer was reduced to $25 or $50 from each gentleman, and ask whether or not some kind friend of the gentlemen did not make some representation to the Protector as to the circumstances, whether or not some influence was not used before the judge who imposed the fine by which extreme leniency was shown to the gentlemen and not objected to by Protector Scott, the author of and villain in the "legal holdup." Of course, being a public servant, if S. W. Tilden is to be believed the game protector cannot be honest and his action in this case was prompted by spite and envy, it not falling often to his lot to deal with such successful sportsmen.

Let us all join in an attempt to secure the passage of a law based on Mr. Tilden's ideas, abolishing the office of game protector, taking away from all officials the discretion to be lenient and rid this State of this disgraceful system, which follows up and punishes those who have in their possession game after the time prohibited by law.

And, yet, Mr. Editor, the members of the game protective associations here approve Protector Scott's position in the matter, and that of the police justice who imposed the fine, while those who aided Mr. S. W. Tilden in getting off so easily regret that they were induced to help him, for his statement misleads as to the law and its application and puts the State Game Commission in a false light as well as others here to whom he appealed for assistance.

W. J. O.

Smooth Bore and Rifle.

Editor Forest and Stream:

Your correspondent Sydney G. Fisher, whose letter advocating the use of smooth bores for large game shooting appeared in your paper of Jan. 26, is not quite correct in thinking that Sir Samuel Baker was the first to introduce rifles for African shooting.

That great hunter stated that when he first went to Ceylon in 1845 he found smooth bores invariably used, and he believed himself to have been the first to introduce rifles into that island. In India they were used by some British sportsmen as early, certainly, as 1836, and probably before then.

Gordon Cumming took rifles to South Africa in 1843, and when starting on his first expedition to the interior he had one single and three double barrels, besides three double smooth bores which he stated were for rough work on horseback when quick loading was required. He seems to have rarely or never used these except for shooting feathered game. Sir Samuel Baker did not begin shooting in Africa till about 1861.

An Englishman named G. Nicholson (whose opinions as to the best weapons I mentioned in a letter to FOREST AND STREAM last April) was personally acquainted with Gordon Cumming, and attributed his want of success in killing elephants with a few shots to the fact of his not using smooth bores, because the rifles of that period had such sharp twists in the grooves that charges of powder giving sufficient penetration for efficiency against the pachydermata could not be employed without causing the bullets to strip.

It is remarkable that, although smooth bores of ordinary caliber were habitually and very successfully loaded with heavy charges for that special purpose, no one appears to have adopted rifles for such loads by the American plan of having a slower turn in the grooves, until the late Captain Forsythe, conservator of forests in central India, had a double muzzleloader made on that principle about 1860. It carried round balls fifteen to the pound, was accurate with five drams of powder and as easy to load as a smooth bore. The grooves had one turn in 8 feet 8 inches.

Some years before this Sir Samuel Baker had partially solved the problem of combining accuracy with great muzzle velocity. One of his rifles for Ceylon shooting was made to order, carrying a round belted ball of 3 ounces weight with 16 drams of powder. It had two grooves, in which the belt fitted mechanically, and thus prevented stripping, although they had the absurd rate of twist of once in 3 feet.

Two grooved rifles were invented, I think, in Germany, and, according to my experience, were equal in accuracy to the very best of those which carried round balls. Their only disadvantage was that loading was rather slow, owing to the necessity of pushing the belt carefully quite straight into the grooves.

The proper charge for the old-fashioned rifles was considered to be the bullet mould full of powder. This gave only 1½ drams for a 16-bore, 2 drams for a 12 and 2½ drams for a 10-bore. They shot with great accuracy, but had a very high trajectory and poor penetration in proportion to the weight of lead. When of very large bore, they acted well upon thin-skinned animals. For instance, General Shakespear, in his book on Indian wild sports, mentions that one of his rifles carrying ten balls to the pound with 2½ drams of powder, penetrated completely through a bear at 250 yards.

On the other hand, Colonel Campbell, in his "Old Forest Ranger," and also in his "Indian Journal," states that a bullet from his 12-bore rifle flattened against the forehead of a charging bison, only knocking down the animal for a moment.

Since then it has been proved that a ball of sixteen to the pound, if driven by 3 drams of powder, will certainly penetrate a bison's brain when striking the forehead at any distance up to 40 yards.

One reason why the majority of African hunters, in the first half of the nineteenth century, used smooth bores is that they were far easier to load on horseback than rifles before breechloading was adopted; but it is also evident that individual weapons, specially made for ball shooting, had a much longer accurate range than ordinary shotguns.

An old African hunter writing some years ago to the leading English sporting paper, after mentioning a large number of rifles which he had used (including some by the best London, Birmingham and Dublin makers, together with some by the Winchester and Remington companies), added this remarkable statement: "For my own part, I have followed the example of many of the first-rate game shots I have seen at work, and have killed most of my game with specially built smooth bore guns, varying from 6 to 16 bore, and among these I cannot remember one which shot badly. I found I could account

very well for the biggest game with a 10-bore double, weighing 10½ pounds, or even with a 12-bore weighing 8½ pounds.

"The late Mr. Oswell was certainly one of the best big-game shots who ever pulled a trigger in Africa, and he always used a heavy smooth bore Purdey of 10 bore; and several of the very best Boer hunters, whose performances I have witnessed, more than held their own with smooth bores at all sorts and sizes of game against their comrades armed with rifles. One of these used an old Manton duck gun cut down to convenient length. Another, named Knootze, who was the best game shot I ever saw, never carried any other weapon than one composed of a Brown Bess musket barrel of the 1845 issue, fitted with a rough but well-bent home-made stock, and a hair trigger. The accuracy of good smooth bores seems to depend very much on the fit and perfect rotundity of the hardest possible bullet, seated on a thick, soft wad. With a soft lead, good shooting is unobtainable.

"Most sportsmen who have tried bustard stalking know the difficulty of getting within 80 or 100 yards of them. I have, however, killed a goodly number with my favorite weapon, and in one month, some years ago, fifty-four fell to bullets of my smooth bore, with much other and bigger game to boot. When a miss occurred I believe I was personally responsible, and not the gun."

I imagine that few, if any, of the specially built smooth bores above alluded to would quite equal, in long range accuracy, the guns built on what is generally called the "Paradox" principle. Some of these are rifled for about 3 inches from the muzzle, and others have "invisible" rifling the whole length of the barrel. In the Badminton Library work on "Shooting," a diagram is given of targets made by one of these guns in 1886. Six shots from a rest at 50 yards made a group 1½ inches wide by 2¼ inches deep; and six at 100 yards a group 1½ inches deep by 4½ inches wide, all in the center of the bullseyes. The patterns with small shot were evenly distributed and equal to those of a modified choke bore.

Several makers in this country advertise guns on this principle as equal to express rifles in accuracy at 100 yards, and the reports of trials, made in presence of the editors of our sporting papers, prove this to be correct. The only drawback they have is that when of ordinary weight and 12 bore the trajectory is rather high, owing to the impossibility of using a sufficient quantity of powder without violent recoil. This defect could be remedied by increasing the weight of a 12-bore to 8½ or a 16-bore to 8 pounds. The latter would, I think, be a delightful weapon for all-round sport in the American bush.

One gunmaker in this country states that his rifled shotguns perform as well with spherical as with conical bullets. This would allow of an increased powder charge and consequent flatter trajectory without extra recoil.

DEVONSHIRE, England.

CHICAGO AND THE WEST.

The Indiana Game Law.

CHICAGO, Ill., March 14.—There are dozens of Chicago shooters anxiously inquiring to-day whether or not Gov. Mount of Indiana has signed the game bill known as Senate Bill No. 73, which was printed in FOREST AND STREAM last week with the qualifying telegram sent late last Tuesday, that the Governor had vetoed the bill. The confusion is owing to diverse information sent out from the office of the authorities of Indianapolis. I am in receipt of a telegram from Secretary of State Hunt saying that the game bill became law by Governor's signature March 11. As it has an emergency clause, it is a law which takes immemediate effect. Hence if you are going shooting in Indiana this spring go prepared to pay $25 license or to run up against the stiffest penalties which have ever been attached to any Western game law.

The ffect of this Indiana measure has been instantaneous so far as the Chicago shooters are concerned. A number of members of shooting clubs with grounds in Indiana to-day expressed their intention of forfeiting their membership. Another evidence of the effect of the law is in the drift of the spring shooting travel. The time-honored trails to the Kankankee are to-day practically abandoned, and every one is going to the Illinois River or to Fox Lake. There is especially heavy travel this spring to the Illinois River.

The Flight.

The spring shooters have something to induce them to go afield this week. For the past four days there has been a tremendous flight all over this latitude. The Kankankee marshes have been full of ducks and the flight yesterday was in on Fox Lake and Grass Lake, following up the Fox River Valley.

The heaviest shooting has been on the Illinois River marshes, especially near Chillicothe. A railway conductor who came through there this morning says he has never in his life seen more ducks than he did on the cornfields near the latter point. These birds were principally mallards and pintails. One gun yesterday bagged thirty-seven mallards near Chillicothe, and I have heard from another bag of thirty-six ducks at that point. Yet another man to meet good shooting there is Mr. W. G. McCarthy, who reports good sport, and says that on Tuesday last a local gunner killed thirty-four big ducks.

There reports are sending numbers of shooters down into the lucky country. One party to start to-night will be a band of hardy newspaper men including Mr. W. L. Wells of the Tribune, Mr. William Schmergten of the Record, Mr. H. Billman of the News, and Mr. H. Field of the Tribune. These gentlemen expect to wreak great havoc upon the wastrel wildfowl of the Illinois marshes. They have advices that a considerable body of birds are in to-day on that country. Some numbers of shooters will take the night train for Fox Lake to the north of here.

The burning down of the Swan Lake Club house on Lake Senachwine last week came at an inopportune time for those of the club who wished spring shooting, and who will have no accommodations at the old quarters for a while. It is the intention to rebuild the club house at an early date. The insurance only partially covered the loss.

Cause of the Stir.

One immediate cause of this stir in the Indiana Legislature this spring was the activity shown by non-resident shooters in acquiring leases on shooting properties. The widely heralded action of the Tonti Club in attempting to get hold of the John Brown tract on the Kankakee marsh near Shelby was perhaps the most immediate cause of the Indiana revolt against shooting preserves. What the action of the members of the proposed club may be, now that there has been established a $25 shooting license, is something which remains to be seen. The Tonti Club option on this tract does not expire until July 1, after which date the club may or may not go on. The general opinion seems to be that $25 is too much to pay for the sort of shooting a city man can get in Indiana. It is not a bad prophecy to predict that this gun license will be cut down to $10 at the next session of the Legislature. The non-resident license has come to stay, but $25 seems to be considered too much for a bird license, when Wisconsin asks only $10 for such license.

Minnesota Law.

Minnesota is also taking a heavy fall out of the game laws this spring. A bill this week has passed both houses of the Legislature which absolutely prohibits the sale of all feathered game and requires that any game killed by a shooter can only be taken out in actual company with such shooter. Minnesota is getting tired of having her game shipped to Chicago. This bill was not signed by the Governor at last accounts, but his signature was expected, and the result will be reported as soon as accurately known.

All these complications in our Western game laws have one very desirable effect. They stir up, agitate and advertise the question of game protection. The old difficulty was simply one of apathy and indifference. Poke up these Western men and get them to thinking about the matter, and they will wind up by passing sensible and efficient game laws. One Chicago shooter wants the sporting press to take up the question of getting a uniform non-residence license law for all these Western States. This would be a highly desirable thing, but the sporting press is too wise to undertake any quest of that sort. We may see uniform game laws when the millennium comes. A wild rumor is out to-day that the Arkansas Legislature is going to establish a $500 non-resident license. Doubtless this is a canard, but it shows the tendency of legislation in the West this year. At last it seems that our people are waking up to the value of their game and they intend to do something to preserve it. If they would, all of these States, pass a law stopping spring shooting, and if Texas would pass a law stopping shooting at Jan. 1, we would have abundance of wildfowl all over the United States, and this might once more become a shooter's country.

Michigan's Attitude.

A well-known sportsman of Saginaw, Mich., takes up the question of spring shooting in the following form, writing in a personal communication:

"About this spring shooting business in Michigan, I wish you would, right off, write me a letter that I can use, giving just what the conditions are in adjoining States. The argument that these pon-hunters use—and it is no argument at all—is that adjoining States allow shooting in the spring, consequently Michigan should do the same. It is the same old story that we have heard before. Most of them admit that spring shooting ought to be stopped, but their selfishness gets the better of them; they would be willing to see spring shooting stopped if the other States would do the same thing. I do not take much stock in this, for as I understand it, an agreement was entered into with Illinois, Wisconsin and Michigan some four years ago. Michigan kept her promise, and I think some of the other States did, and two years ago went back on it and repealed the law. I want to be sure I am right in this thing. Now, I understand that the Ontario government has recently passed a law prohibiting spring shooting; New York State is making a strong fight to do the same thing. What is the condition in Ohio, Indiana, Illinois and Wisconsin? I hope you can give me something definite and encouraging quickly."

There was a quasi-agreement about four years ago at the meeting held in Chicago by representatives of different States for the purposes of drafting a uniform game law. The movement came to general grief, as such movements seem always to do, though the result was on the whole beneficial. Reference to the Game Laws in Brief shows that the opening season on wildfowl in Ohio is March 10 to April 10, and Nov. 10 to Dec. 1. Indiana's open season is now Sept. 1 to Oct. 1, and Nov. 10 to April 15. Illinois has an open season about Sept. 1 to April 15. Wisconsin's open season is from Sept. 1 to Jan. 1, except that wild geese have no protection. Minnesota's open season is Sept. 1 to Jan. 1. It may be seen that Minnesota and Wisconsin stand in line for good game laws. Michigan adways has this fight at every session of the Legislature. I hope she will keep in line with our two upper States and ntario. Ohio does not make so much difference, but Indiana and Illinois are important States in the wildfowl proposition, and they ought to be closed in the spring. As to the old dog-in-the-manger idea, it is the same idea so long entertained by Wisconsin, but now happily and intelligently abandoned by that progressive State. It is no excuse for burglary to argue that your neighbor burgles.

Wishininne Entertains.

On last Tuesday evening the Wishininne Club of Chicago sportsmen entertained some of the visitors at the Sportsmen's Exposition. The guests present were Joe Kipp of **Kipp, Mont., Billy Hofer of Gardiner, Mont.,** Jim Paul of New Brunswick, Henry Braithwaite, Adam Moore, and Arthur Pringle of the New Brunswick guides, who have been present at the Sportsmen's Show. Mr. W. T. Chestnut of the latter party had already left for home at the time of the meeting. The entertaining sportsmen were Messrs. Hempstead Washburne, J. V. Clarke, Graham H. Harris, W. L. Wells, C. S. Dennis, R. B. Organ, H. G. Maratta, William Sheahan. Every hunter and guide present was compelled by the president, Mr. Wells, to tell a hunting story. The little dinner was one of the pleasantest affairs connected with the Sportsmen's Show.

The Sportsmen's Show.

The popular inpression regarding the Sportsmen's Show here is that it was on the whole successful. The attendance ran just back of 100,000. The show was a very expensive one. Barring inevitable little hitches in the management due to short notice, hurry and occasional inadequacies, the enterprise moved off well, and Chicago is pleased enough with the affair to want another show next year.

The Peace River Buffalo Herd.

Mr. J. H. McIllree, assistant commissioner of the Northwest Mounted Police, Regina, N. W. T., writes entertainingly and instructively in a personal communication dated March 7, regarding the Peace River buffalo herd and other matters in the for Northwest. It is enough to make an American blush to see how they enforce the game laws in that remote and trackless country. We are all the time complaining that we cannot catch the violators of our law in our little, thickly settled communities. They do things better across the line in this respect. If we could get an executive arm in some of our State governments similar to those dinky-hatted, long-legged Northwest police, we would not be putting up our hands and hollering all the time about not being able to catch the law breakers. They catch them up there, no matter where they go, just the way our own United States marshalls used to catch the bad men out in the Rockies. This is what Mr. McIllree says:

"I saw in issue of FOREST AND STREAM, Feb. 23 last, a mention by Mr. Macrea, who was up in the Peace River country last summer, of the buffalo ranging in that section, and I sincerely trust that there are as many as he states. We have a detachment stationed at Chippenwyan which visits the country as far north as Resolution. In the winter of 1899-1900 Dr. McKay, in charge of Hudson's Bay Company in the district in which the buffalo range, estimated their numbers at 400, and two well-known traders estimated their numbers at 300 and 150 respectively. So you see there is much diversity of opinion. The increase has not been great as the country is badly infested with wolves which destroy the calves. The H. B. Co. turned out six horses near Hay River to winter and the wolves gathered them all in. From information received a few days ago from Corporal Trotter, who had been up to Resolution and returned to Chippenwyan, the buffalo have increased in the past year, though the wolves are still very bad.

"The fur catch this winter has been very poor. Large game, rabbits and fish plentiful. As you may know, the buffalo are absolutely protected, but the Indians kill a few, but our men hear of every such case and haul the offenders up and have them punished. Our government gave a permit to a man last year to capture two young bulls to bring new blood into the small herd that is now in the Bauff Park and that came originally from Winnipeg, but I have not heard of the capture.

"Two of the bulls in the Bauff Park some weeks ago had a misunderstanding about something, with the result that the herd lost one of its brightest ornaments and the other chap was badly crippled. Sorry to see that the herd in the Yellowstone Park has dwindled to such insignificant numbers, and it appears queer to be keeping track of the miserable remnant after having seen the plains covered with them in former years. I send you this meager information, as I know you are interested in the subject. I am one of the early subscribers to FOREST AND STREAM and I have always taken a great interest in the paper."

Some Bear.

Arthur Pringle, of New Brunswick, told me this week that he and two trapping companions, one of whom I think was Henry Braithwaite, got eighty-four bear in the course of twenty-seven months up in New Brunswick. This covered the best part of three seasons, and it is a pretty good trapping record.

Henry Braithwaite—"Uncle Henry," most of the boys here got to calling him before he went away—told us that when he was out trapping bear he never bothered to take along a gun, but always killed his bear with an axe. "The best way to hold your bear," he said, "is to get a long pole, and stick it through the jaws of the trap. If you get one end of the pole fast in the brush or roots, you have your bear practically helpless, and it is an easy thing to break his skull if you hit him just between the ears." Adam Moore says that he once tried to kill a big bear with a club in that way, but he found it a pretty hard proposition, as the bear could take a good stiff whack on the side of the head and always turned up his head in such a way that a good blow could not be landed square.

I have as yet heard no better bear story than that told by Joe Kipp of how he and an Indian once killed a grizzly bear with rocks. This bear was old and nearly toothless. Unable to kill anything to eat, it was prowling round an Indian camp and had nearly swallowed a raw hide rope. It was too helpless to run very much and Joe and his friend actually stoned it too death.

No Home.

I saw Charlie Willard here this week and asked him where he made his home. He said he didn't have any home, and was out on the road pretty steadily now for the H. & R. Arms Co. He is just in from an extended trip in the South and is working East again.

From Aztecland.

The long-time FOREST AND STREAM contributor, Aztec, writes me from Santone, Texas, regarding the pugilistic habits of an antiquated bird which lives in the good old smuggling town of Eagle Pass.

"Mrs. S., of Eagle Pass, Texas," he says, "has a pet thrasher (*H. longirostris sennetti?*) which was captured full grown by flying into the postoffice, then in charge of her husband, over eighteen years ago. 'Tom' is a rather crabbed old bachelor now. He rarely sings, though he was once a famous vocalist. He is not amiable even with the mistress who has cared for him so long, but nips her fingers rudely. When a stranger comes about, he ruffles his feathers in a way he believes to be warlike, but which is merely ridiculous. I thought he was sick, he looked so woebegone. His plumage was unkempt, his tail drooped, and he moved mopingly about the floor of his cage. But he kept his head toward me, and from time to time picked up imaginary straws and grain, after the manner of a fighting cock. When I found he was challenging me, I was greatly amused. He was the most lackadaisical looking warrior I ever saw. Only ladies live in the house, and in the röle of protector of the fair, Tom is simply irresistible."

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

To Save the Big Game.

DENVER, Colo., March 9.—*Editor Forest and Stream:* To many of us in the West the game question is a subject of more than ordinary interest.

For years the Governor of Colorado has had more or less complaint of the Indians, who were said to be slaughtering the large game such as elk and deer. When the Ute Indians were removed from White River, the treaty which was made with them provided that every fall they were to be allowed to hunt and kill game for a winter food supply. The Indians use every part of an animal, even to the entrails, which they roll on a stick and eat with great relish. They leave the horns only. They crack the bones for the marrow and make buckskin from the hides.

There is more game destroyed by pot-hunters and men who have the wherewithal to buy a repeating rifle than by all the Indians on earth. Men such as I speak of get into a band of elk or deer and blaze away right and left, losing their heads completely. It is a wonder to me they do not kill each other. The result is quantities of game are wounded and hide away to die, thereby feeding the wild beasts. Many a noble buck is left to rot, the head and horns only being taken to grace some gentleman's dining room or library.

In the years 1890-1895, at San Juan, Hinsdale county, Colo., on the headwaters of the Rio Grande, the Texas Club had its headquarters. Its members adopted a set of rules and regulations, providing for the payment of a heavy fine if more game or fish were killed than could be eaten. The result was that they had plenty of sport with no wantonness.

My friend, Mr. Chas. Christy, formerly a Government scout of more than thirty years' experience, had a talk on this question while at the Ute Indian agency with Ignacio, Cervaro, Buckskin Charlie and Nanice. He spent Christmas week of last year, 1900, with them. Mr. Christy speaks their language fluently, and brought back some interesting stories.

I do not wish to give the impression that the Indian is above reproach, but he is not half as destructive to game as many of these white so-called sportsmen I have before mentioned. Now for the remedy. Form a national game protective association that will come down to business.

Allow no man to go into a game country with anything but a single loading rifle. He will then become a better shot and liable to kill rather than wound the game.

Do away with pump guns and repeating rifles. They are well enough for war, but not for a true sportsman.

Have men appointed game wardens who are interested in game matters, with a salary large enough to warrant men of ability accepting the position.

Have these men appointed by the Government on the civil service plan, to hold the position during good behavior. Where men are appointed for two years only, or during the term of a Governor, the temptation is too great to make all the money they can, even to accepting bribes.

Make it a penitentiary offense to accept a bribe. Now is the time to strike or the history of the buffalo will be repeated.

FRANK DANA BARTLETT.

One Phase of Spring Shooting.

Editor Forest and Stream:

While this question of spring duck shooting is being discussed, I believe that we ought to show to the sportsmen of the State, as clearly as possible, who are the most formidable opponents to any bill stopping spring shooting of wildfowl. I do not know the conditions prevailing in the other counties of the State, but I can tell you what they are in Jefferson and Oswego counties. The strongest opposition in these counties comes not from the sportsman or market-hunter, but from a few persons who wield great political influence and who own or control by lease certain waters in Jefferson and Oswego counties that are open very early, or if the ice doesn't go out quick enough it is cut and shoved under to make an open water hole.

This is heavily baited, and when the ducks first come in the spring they congregate at these places in immense numbers. The sportsmen are wired and the so-called sport begins, and continues until the last duck is killed or driven from our waters, and four-fifths or more of the ducks killed are the black ducks, which if unmolested would stay and breed in this State. It seems incredible that any persons owning a game preserve should be so short-sighted as to refuse to allow the birds to remain and rear their young, or that they should prefer an old, lean and hungry duck in the spring to a young, fat and well fed one in the fall. I had a short conversation with one of the principal spring duck shooting sportsmen of Oswego county last fall, and during our conversation suggested that we compromise the matter and pass a law stopping the shooting in the spring of such ducks as we knew would breed in this State vs. black duck, mallard, teal and wood duck. He very quickly informed me that the black duck was the only duck he cared to kill in the spring, that he could kill more of them in the spring and kill them quicker at the open water hole than he could in the fall when they flew around so much; and from what I have learned since, I am inclined to believe that he can. Now I may be entirely wrong in my theory, but I honestly believe that these gentlemen are opposing their own best interests, and that the passage of a law stopping spring shooting in this State would be of greater benefit to them than to the larger and less fortunate class of shooters who have to depend upon the open waters for their shooting. And I believe also that if they would consent to try the experiment and pass a law stopping the spring shooting of wildfowl for three years, it would convince them that three months of good shooting in the fall, when the birds can be killed in a fair and sportsmanlike manner, are better than a few days in the spring, shooting mated birds in an open water hole.

W. H. TALLETT, Pres. J. C. S. A.

WATERTOWN, N. Y.

Editor Forest and Stream:

I see in your editorial of March 2 you mention Massachusetts as one of the States where spring shooting is still allowed. Our Legislature passed a law last year prohibiting the shooting of wildfowl from March 1 to Sept. 1, thus adding another to those States already in line on the right side of the fence.

This law will protect those ducks which frequent our fresh-water ponds and streams for breeding purposes from being molested in the spring. These include the black duck, wood or summer duck and teal, all of which will breed here if not disturbed during their breeding season. Superintendent Brackett, of the Fish and Game Commission, tells me that the wood and black ducks breed near the ponds and streams in the State reservation, where they have been protected for a number of years. I know of the nesting places of both the wood and black duck not very far away from Boston, where the birds continued to breed until destroyed by the brute who shoots in the spring the pair of ducks whose flesh is unfit for food, and thus destroys what would, under natural conditions, produce quite a flock of birds of great food value in the fall.

I am glad to learn that New York has a bill before the Legislature for the protection of these birds in their breeding season, and sincerely hope it will pass and thus add another State to those who have turned from barbarism to civilization. I would like to learn through your correspondents how many States in the Union are still slaughtering these valuable food birds in their breeding season. Let us have the roll call and oblige,

G. L. B.

BOSTON, Mass., March 4.

Ways of Fox Hunting.

I.—In West Virginia.

ALBERT, W. Va.—*Editor Forest and Stream:* I will try to observe your advice and not sling mud at those who do not agree with me, but I must say that I seriously disapprove of the manner in which several contributors to FOREST AND STREAM do their fox hunting. I was much surprised in reading an article entitled "The Wellman Fox," a short time ago, to find that the author was hunting foxes with a gun. In Moorefield, Hardy county, this State, where most of my fox hunting was done, one would almost as soon think of shooting a man as a fox. I have seen a good deal of fox hunting, and I never saw any one go out with a gun. Indeed, any one attempting it would decidedly lose caste as a sportsman. I suppose the Wellman incident was an isolated case, but in the last two numbers of FOREST AND STREAM I find several similar ones.

Now I contend that this is not sportsmanlike. It requires very little, if any, skill to shoot a fox by those who understand fox hunting. I cannot help but think that those who think otherwise are but amateur hunters. Indeed, the author of the first mentioned article very clearly showed that he was an amateur when he confessed that he did not know that fox hunting could be done at night. As a matter of fact, they run better by night, do their running over a smaller territory, and during dry weather the dogs can scent them much better.

In our country we leave it all to the dogs. If the fox gets away, well and good; he has shown his superiority for the time, and we will chase him another day.

With some of our packs this happens very seldom when the ground is in proper condition for running. Hiram Kuykendall, for one, has a pack from which a fox very seldom escapes. Old Hi knows fox hunting from Alpha to Omega, and I have yet to see the man who could give him a point. If the fox happens to be a gray or a bastard and he holes or trees near the home of the hunter, he is often left to be chased another day. If a good distance off, he is shaken off or dug out, given a start and the dogs put on again. A red will seldom take to a hole, but will generally die game on the ground.

I have given you my views of fox hunting; now I will give you two celebrated fox hunts in Hardy county, and my readers can judge as to which way is the more sportsmanlike. One is spoken of as the Old Fields' Hunt, and the other as the Bunker Hill Hunt.

Some years ago in February in the Old Fields, Hardy county, John Van Meter, Hiram Kuykendall, Will Harness, Arthur Cunningham, Joseph Cunningham and John Newhouse started a red fox about 7 A. M. Thirty hounds entered. It was a beautiful chase, being almost entirely through large upland pasture fields. Three times the fox went to Patterson's Creek, a distance of twelve miles. The dogs never lost him for an instant, and at 8 P. M. in the same field from which he had started thirteen hours before, John Van Meter's bitch Flash caught him. Eight hounds were in at the death—three of John Van Meter's, three of Will Harness' and two of Hiram Kuykendall's.

Now we come to the most celebrated hunt I know of—one that has been told for the last fifty-three years in Moorefield, and will be told as long as the town exists.

At daybreak one Saturday morning in 1848 John G. Harness, Sr., started a red fox in Parson's Thicket, four miles northeast of Moorefield. The pack consisted of three hounds—a bitch and her two offspring. They ran the entire day, and soon after dark went out of hearing. The next day, Sunday, about sundown, three hunters at Bunker Hill, Berkeley county, seventy-five miles away, heard some hounds running. Knowing from their tongue that they did not belong in that neighborhood, they agreed to go out and meet them. They found them on their last pegs. However, upon cheering, the dogs quickened up a bit and caught the fox. All fell in a heap and could not be persuaded to move a step. The hunters picked them up and carried them to a house. Now if any of my readers wish to verify this, there are three, perhaps more, men yet living in Moorefield who personally know the facts—John Harness, Sr., Wm. Wirt Harness and Pat Turley. A letter addressed to the sheriff or clerk of Hardy county or any business man in Moorefield could give you any information as to their veracity.

A. P. BUTT.

II.—In New Hampshire.

DUNBARTON, N. H., March 9.—*Editor Forest and Stream:* While foxes are much scarcer in this section than in years past, some seasons there are a fair number. It has been, however, during the present winter a very poor time for hunting. During December there were some good days; since there has hardly been a day when it was at all fit to run a dog—very cold, rough weather, with a continuous crust, which would just bear up a fox. During the first part of the winter I saw just six foxes, which my dog was after, and I killed the six. My old dog is the most remarkable fox hound I ever owned. He is thirteen years old and seems nearly as good as ever. I have had him out three days in succession, and he would run from four to six hours.

In years past when foxes were not hunted in this vicinity as they are now, I usually killed from twelve to sixteen during the winter. I killed that number myself, not counting those killed by companions hunting with me. In those days I killed fully two-thirds of my foxes in the woods, usually in swamps or sprout land. Foxes then with the dogs I used would play about in such places, keeping a short distance ahead of the dog. Now I seldom get one to run in such a manner. They keep a long distance ahead and seldom run over the same ground a second time. Some of those I shot this winter were fully half a mile ahead of the dog.

I was told recently by one of the Fish and Game Commissioners that foxes in what we call the north country (that is northern New Hampshire) were increasing. A good many hounds in that region have been killed on account of chasing deer, and the foxes, as my informant said, were getting to be a nuisance. Usually in places in the back woods, where I have been when hunting deer, foxes, judging by tracks, have been scarce. Aroostook county, Me., was an exception. From Patten to Atkins' camps, above Oxbow, I saw a great many signs of foxes. The dead waters around the above camps were covered with fox tracks. Over on the other side of Maine, around Parmachenee Lake, there were but few signs.

I have never tried to trap foxes, but I am told that it is very hard to trap one in the woods. John Danforth, of Parmachenee, told me that he could trap a fox pretty well out on the ice or in a clearing, but that traps set in the same manner in the woods were a failure. Foxes would walk around such traps, but seldom, if ever, get caught. I saw one fox, however, which he had caught in the woods. We were following a line of sable traps from Parmachenee to Arnold's Bog. A light sprinkle of snow had fallen, just enough to see a track in the trail we were on. A fox had gone along the line, springing every trap he came to, and taking the bait. He kept this up for some miles, but evidently grew careless, as in trying to poke the trap out of the hole in the tree, he put his foot in and we found him there. This was the only fox track we had seen, and yet within half a mile of where the fox was caught a second fox had taken the trail and followed the line, springing every trap he came to.

When hunting foxes I have seldom found it necessary to be out of sight of the fox. Many a time have I stood in plain sight (keeping perfectly still) in an open pasture and had my dog drive a fox to within easy shooting distance. Also many a time have I called up a fox my dog was after when the former was a long distance out of gun shot by squeaking like a mouse. In doing so I had to be behind something, entirely out of sight of the fox. Recently I heard of an instance where a fox was called up in a peculiar manner. Two men were crossing a lake on the ice, when they saw a fox come out a long distance away. The men stood perfectly still, and one of them called. The fox started toward them, stopped and turned to one side. The call was repeated and the fox came on. This was kept up until the fox was near enough, when he was shot.

C. M. STARK.

III.—Still-Hunting in Ohio.

NEWARK, O.—I read in FOREST AND STREAM of Dr. E. H. Niles and his partner shooting foxes in New England with their hounds driving the fox to them. But this is my way to shoot the fox: When the snow is good tracking I go out, find a trail, follow this trail with care until I find the fox lying asleep, and a shot from the old gun kills it where it lies. The gun I use is an old muzzle-loader double barrel of fine material, 11 gauge, 8½ pounds, 30-inch barrels. I also carry a Smith & Wesson revolver, which sometimes is needed. I have shot a great number of foxes in my time so far.

The first day I went out to shoot a fox the tracks were so plentiful I could not follow one far till it was mixed with others, so I gave that up. I walked down a big hollow in the woods, watching carefully, and presently I saw a nice fox lying on a log, and only 50 yards away. I drew up the gun and took a look at it lying there. It looked so pretty I hated to kill it. All at once it looked up the way which it had come from. "The next glance you will see me," and the trigger was pressed. Sharp and loud cracked the gun. The fox dropped his head. It was his only move. The BB's had done their work.

In all the FOREST AND STREAM numbers I have read so far I don't see where any hunter hunts the fox as I do. I love this sport above anything on earth.

This winter so far I have shot five large foxes. The first was shot the 26th day of December. There was not much snow, and this made the chances against me. It lay in a bad place to get at; after I saw it I tried to get close enough to kill it, but it was away down the hill, and the hill was awfully steep. I stepped as quietly and easily as possible, using my gun to help me walk. I come to a stump and some brush; it is 80 yards yet. Can't get closer. I now think of a good rifle. According to the condition of the ground, it is apt to come up the hill, the creek being below it, so I held about a foot above the fox. The gun was loaded with 4 drams of best black powder, 1¼ ounces BB shot. At the crack of the gun the fox came up the hill on time. It got about 40 yards from me. I covered it and was pressing the trigger when it fell stone dead. When I skinned it I found one shot had entered back of the short ribs, passed through and come out near the shoulder.

On Jan. 25 I went out and hunted till noon and didn't see a track. After a while, heading for home, I crossed a hog run on a walnut tree which had fallen across the creek. Somewhere here I routed a fox. The trail showed it was not much alarmed. I followed across a field, and it showed signs of lying. I got ready, and soon I saw it lying. I gave it the old reliable right barrel. This fox being an extra nice one in every way and tipped with white, I started to take it home, carcass and all, to make a fur out of it for my girl to wear around her neck. I was

lugging my fox and gun home through the big woods, when I stopped to listen to something (a bird, I guess). I looked up the hill, and there lay a monster big fox watching me. I dropped my dead fox, pulled off my mittens, cocked the gun, took sight, and the thought that came to me was, "Don't shoot; it is too far." We eyed each other. I did not move. The fox got up and started off on a walk. Now I skinned my dead fox, leaving the skull in the skin (which the girl is wearing to-day; the head looks as if it were alive, with its teeth and glass eyes, and she is proud of it).

After giving the old fox some time to get settled, I started on the trail. I routed it in a weed field, and here a chance offered for a long shot, and I would not chance it. I then watched him till he lay down in a field. There he could see far in all directions. "Now get him if you can," thought I. I crept out of sight easy as possible and went out around and came in on him on the opposite side. A bank protected me. I walked up within 40 yards of him and gave him a dead shot while he lay asleep. He was very old and large and awfully cunning. His weight was 17 pounds; length, 4 feet from tip to tip; his tusks were worn down to the jaw bone.

On the following Monday another fox hunt took place. I went east in the hills and could not find a track where I had shot three nice ones last winter and had left others. At noon I ate my lunch and was about to turn for home, when I saw a large fox cross a hollow. I followed the trail slowly to give it time to lie down. Soon a big boy came through the underbrush as though hunting cattle, "Did you see him?" he called out, loud enough to be heard a hundred yards. "Keep quiet. Are you after it?" "Yes; I shot at it once, but did not hurt it much." "You can't get it; you are following too close. It has to keep going. Do you care if I help you get it?" "No, I don't care, just so we get it."

We followed. Not far it stopped in a field and saw us and went up the opposite hill. I thought when it had come to the fence it would stop to look back; and I told Mr. Loafman to sit down. We did; but when the fox came to the fence it didn't look back, but leaped clear over the top. My hope was poor for a shot. We followed slowly two miles and came in a wood. The boy kept back a distance. The fox slowed up and I turned to the boy. "He is in rifle shot of here." "How can you tell?" I showed him the track on a log. "Now look out." Soon I saw him go out of a thicket of briers and underbrush. Turning to the boy, I said, "We can't get it this way." "Well, any way, so we get it." Again I think I have it located. "Now, boy, you follow the track and I will go in the far end of that old orchard. Give me time to get there." I got in the end of the orchard and watched the boy come. I saw him throw up his hand to indicate its coming. Presently it came near to me. Again the old gun did its prompt work. I gave the boy a dollar and took the fox, and he was satisfied.

On Saturday, Feb. 2, I took my last fox hunt. I soon found a nice trail of a large dog fox. I saw him lying asleep up on a hill, and I went around and came in behind him. The first shot did not kill him. He came toward me and the old left barrel did the work.

I will not kill the female fox if I can find a dog fox to follow. This sort of hunting takes lots of skill and experience.

F. W. PHERSON.

IV.—Also the Trap.

MINNEAPOLIS, Minn., March 12.—*Editor Forest and Stream:* For the benefit of Mr. Ames, who asks in your issue of March 2 for information about fox scent, I will say that the farmer was right to a certain extent. The perfume from the skunk is good "medicine" for a fox if nothing better is to be had. Mephitis himself is considered a great delicacy by the fox, and the scent not only attracts the attention of Reynard to what may mean a breakfast for himself, but it serves to cover up the human taint which may be on the trap. Of course, one who is "up to fox" will leave no taint or smell of man upon the trap; and I do not myself use any scent whatever on either trap or bait, but I carry in a closely corked vial the musk from a female fox or dog (it matters very little which), and a few drops of this is sprinkled near the trap—in water if possible, as it is not desirable that the fox should be able to exactly locate the (to him) wonderful fragrance.

Many people suppose the fox depends for his living upon the poultry yard; but such is far from being the case. Br'er Fox will thankfuly accept a chicken or a goose if opportunity presents itself, but it is only an incident with him, his main dependence being the skunks, woodchucks, rabbits, mice and feathered wild game. He will also go to very great trouble to capture the family cat (wild ones he has no use for), of which he is exceedingly fond. Many times have I found in a fox den the remains of some poor tabby whose owner will remark to her callers that she had a nice cat, "But she has gone off somewhere." In fact, I always use the meat of the house cat as bait when trapping foxes, and I may add, at the risk of being considered boastful, that I nearly always get the fox.

Yes, the fox walking into a bear trap was certainly an accident (for the fox at least), and would not happen often, although if the trap had been covered by a light fall of snow after the trapper had left, it would not be a strange occurrance.

If Mr. Ames has any foxes running loose that he really wants to catch, he might write me, and I will be pleased to tell him a lot of things about trapping this wisest of animals, or if FOREST AND STREAM would care for it, I would write up the result of my observations on the prince of poachers. I have caught and shot hundreds of them, and it is like most everything else—easy enough when you know how.

TRAPPER.

Death of Charles B. Lapham.

CANANDAIGUA, N. Y., March 16.—Charles B. Lapham, Esq., of this place, Chairman of the Law Committee of the State Association for the Protection of Fish and Game, died suddenly last evening. Mr. Lapham was a son of Hon. E. G. Lapham, formerly U. S. Senator, and has been for years deeply interested in fish and game protection. He will be greatly missed by many friends.

F. A. C.

Mr. Fullerton Seizes Some Baggage.

EXECUTIVE AGENT SAM F. FULLERTON made a seizure of 100 white grouse yesterday morning at the Union Depot. They were shipped as baggage and came from the northern part of the State. The shipment was confiscated and will be sold for the benefit of the State.

Mr. Fullerton was elated yesterday at the ease with which the seizure was made. He received a message early in the morning advising him to watch for a shipment of grouse which had been checked as baggage. The number of the check was given in the telegram, and obviated all difficulty of identification.

The executive agent did not waste any time in hunting up a deputy. He decided to have the job well done, and went in person. Besides, there was no time to be wasted. The box arrived at the depot on schedule time, shortly before noon. It had evidently been timed so that it would reach here on Sunday. It was thought that the executive agent's deputies would not be on duty at that time.

The grouse were packed away carefully in a pine box with handles attached. The baggageman was informed that it was contraband goods, and in order that there might be no question, Mr. Fullerton tore the paper away from a hole in the box and exposed the feathers of a bird. The package was taken into the station and pried open. It contained an even hundred white grouse in splendid condition.

Mr. Fullerton left last night for Crookston to be present at the preliminary hearing of the men who were arrested several days ago on the charge of killing deer and caribou. He was unable to ascertain, before his departure, the point from which the grouse were shipped, but he will make further investigation.—St. Paul Pioneer Press, March 11.

The Man and the Weapon.

A SICK man lay on a big brass bed in a beautiful room. Between the two-hour intervals of the little white tablets he mostly slept. When he awoke, his lung felt as if it were in a bear-trap. Twice a day the doctor came, and listened through a machine like a little telephone. Once the man heard him tell the nurse that the infusion was spreading. Everything seemed so far away. It was tiresome to breathe. The bear-trap never let go.

The man's wife came noiselessly into the room, as women come in dreams. The man opened his eyes and smiled faintly.

"Dearie," said the woman, "see what has come for you. George Havens says you admired his new rifle so much that he ordered one just like it for you."

And there it was. The man said nothing, but looked. The fancy walnut stock seemed to shine of its own light, and to give out little phosphorescent waves. The short barrel looked dull and soft, and the man thought it reminded him of a tailor-made gown. The flat place on the side was engraved with curly lines, framing an impudent bear. The ivory fore-sight was like a puppy's tooth. The man put out his hand and patted the stock.

The woman opened and shut the action a few times, to show how smoothly it worked. She knew about rifles, too. Placing a pillow by the man's side she laid the gun where he could see it. Then she kissed the man, and went away.

Fifteen minutes later she looked in. The man was fast asleep with his hand lying on the walnut stock.

FREDERIC IRLAND.

Deer in Connecticut.

NEW HAVEN, Conn., March 16.—A deer was recently captured within four miles of the center of this city. It was caught while swimming in the water, at Morris Cove—a rendezvous of the yachts of the New York Yacht Club, on their annual cruise through the Sound. The capture has occasioned considerable stir among sportsmen; as there have been rumors of an intention on the part of the captors of compelling the State to prove its property before they will release the deer; but it is now said that the captors will release it.

But, then, another question arises—what right had these persons to capture the deer when the law distinctly protects deer until Oct. 1, 1903? Why are they not liable to a penalty of $100, which the law, if it amounts to anything at all, is supposed to impose for hunting deer out of season?

The claim is made by some cranks who are antagonistic to all game laws, and who can give no rational or faintly intelligent reason for being so, that the deer may be a tame one, escaped from some preserve. On these grounds they argue that the State has no right to interfere. Some of us are looking on interestedly to see whose argument will prove the heaviest, that of people of such caliber or that of the State. And we are banking our lucre on the latter!

WILLIAM H. AVIS.

Vancouver Island Notes.

CUMBERLAND, B. C., March 6.—*Editor Forest and Stream:* An effort is being made to induce Mr. Mounce, our member of the provincial Parliament, to introduce a game law amendment at this session to prohibit the sale of all game birds. The prohibition of the sale of ruffed grouse was a wise step, and has resulted in the perceptible increase of these grand game birds. The blue grouse, once so numerous on Denman and Hornby islands, are now nearly exterminated on those islands, owing to persistent shooting, for sale, in season and out, by a few loafers who are too lazy to work. The amendment will meet with the approval of every fair minded man, and will certainly be popular in this district. Such few as would oppose it are those who make a practice of shooting game for sale, and are not worth considering—worthless plugs, lower than the Indians whose ancient rights they are usurping.

The Cumberland Game Association have sent to Wichita, Kan., for six dozen Virginia quail, which they expect to arrive in a short time, and which, should they do well, will prove a great acquisition to our game birds. It is to be hoped that Mrs. Carrie Nation will not take it into her head to smash the crates.

W. B. A.

Weights of Game.

Editor Forest and Stream:

When camping at what was then Smiths Lake, now Lake Lila, in the Adirondacks, during the fall of 1886, I took a stroll to a bay where ducks could occasionally be found, taking with me my Winchester .38, and accompanied by March, a favorite spaniel. As I neared the shore I saw four black ducks on the water about thirty rods away. Calling the dog to heel, I approached somewhat nearer, and selecting the largest as a target, aimed at its head and cut loose. The others flew away, but this one, having the top of its head shaved off, gyrated about until captured by March, who, after its struggles ceased, brought it to shore, and I at once cut its throat to allow it to bleed freely. I was struck with its weight as unusual, and having a spring scale in my pocket I weighed it, and it was even 3¾ pounds after having bled profusely. I am sure that 4 to 4¼ pounds would have been the "live weight."

I wish to express my pleasure in the perusal of the spicy articles from the pen of your correspondent, Fayette Durlin, Jr. Long may he continue.

E. S. WHITAKER.

Sea and River Fishing.

Camp-Fire Stories from Canadian Woods.—II.

Scoop-Netting on the Trent.

THE pickerel or saudre is one of our most valuable food fish, and is only inferior to the lake trout on account of its inferior numbers. It shares the habit of other lacustrine species of retreating to deep waters in the heat of summer, but swarms to the rapids and shallow water when it spawns. It is at this time of the year that a great many are caught with scoop nets, in spite of the fishery inspectors. In the lake or deep waters the trick is to catch a female fish and trail her behind the boat. The other fish follow and are easily picked up. Of course, a good many are taken with the jacklight and spear, but this is too conspicuous and therefore too risky business. But in the rapids, in shallow water, in the rivers, are the more favorite localities, because it is impossible for the inspector to be almost everywhere, and, moreover, the netting can be plied during the dark hours of night.

The River Trent is a large volume of water, draining a large portion of central Ontario on the southern watershed lying between Lake Ontario and the Ottawa waters. From a mile above its junction with the Bay of Quinte there is a continuous rapid for the distance of seven miles to Frankford. This river, affording unlimited water power the year round, is the seat of many large manufacturing interests.

A few years ago two farmer's sons, Marsh and Milton V., along with one K., went one evening to the rapids above mentioned to catch pickerel. They were just below the raceway of a large mill. It was just dusk. Marsh was handling the net in about two feet of water. Suddenly the hoop of the net, as he supposed, caught on a large log, and the force of the current was dragging him out in the stream. He called to his brother, "Come quick. A log is drawing me out." Milton rushed to his brother's assistance, and by the time he got to him the water was up to their armpits. (K. was only a spectator, not daring to go into the water.) Both being sturdy young men, they tugged the object in near shore and found it to be a very lively log indeed. When in about a foot and a half of water, Marsh grabbed him in the gills, While Milton attempted to stand astride of him, and, as he endeavored to raise him, Marsh pulled. Marsh's hands were bleeding, but he never thought of letting go. Their cries for help brought a dozen or so men out of the mill, whose excitement was, perhaps, intensified when they found the boys struggling with a monster fish instead of the treacherous waters. But, with all this help, the work was not easy. Four or five would throw themselves on to grapple with the fish, no sooner than to be thrown yards away, when their places were taken by others, only to receive like treatment. The hoop of the net just nicely fitted over the gills of the monster, and this circumstance assisted to crown their efforts. They finally landed him safely, high and dry upon the bank.

By this time a large crowd had gathered to swell the excitement. After taking a long breath, and when assured of their capture, a ringing cheer went up, which was caught up and echoed and re-echoed from the surrounding hills, such as was never heard here since the days when the Indian war whoop disturbed the wild solitudes of this river valley. The writer has often thought what would he not give to have witnessed this scene. The next day the monster sturgeon was exhibited in Trenton and brought to the city of Belleville. He measured over seven feet in length, and weighed 170 pounds—the king of all fish ever caught in the Bay of Quinte waters.

The catching of this large sturgeon revived a story related by the "oldest inhabitant," but discredited by the younger generation. It appears that in the early days of the settlement at the foot of the rapids lived an old man named Simmons. The story goes that he was seen one morning out in his canoe spearing fish, and shortly afterward the settlers along the river were startled by the old man's cries for help. He was floating down stream, apparently astride of a log, while his canoe was gliding over the water some distance away. Parties went out to his rescue and found the old man astride of a very large fish. The old man had struck his spear into the back of the fish. A sudden movement of the sturgeon threw the old man off his balance and out of his canoe. Having hold of the spear handle, there was nothing for it but to jump on the fish's back. The fish having the spear into him and the old man on his back could do nothing, and they floated down with the current. The old man was rescued and the fish towed to the shore and captured. This relation of the former generation, like all other fish stories, whether true or false, was discredited, but the sight of the large sturgeon, caught by the two farmer's boys, afforded a reasonable possibility of the truth of the Simmons narrative.

EDISON B. FRALECK.

The Massachusetts Association.

THE twenty-seventh annual dinner of the Massachusetts Fish and Game Protective Association was held at the New Algonquin Club in Boston on Thursday evening, March 14. President James Russell Reed presided and the members and guests present were:

Speaker James J. Myers, Col. Curtis Guild, Jr., Fish and Game Commissioner Joseph W. Collins, Bird Commissioner Alex. O'D. Taylor of Rhode Island, Representatives H. D. Hunt and James E. Odlin, President A. B. F. Kinney of the Central Committee, Secretary H. H. Kimball, William M. Kimball, Charles E. Whiting, Samuel M. Goodrich, Addison M. Thayer, S. F. Johnson, Clarence A. Barney, A. P. Brown, Maurice H. Richardson, A. D. S. Bell, Louis K. Harlow, W. S. Hinman, George S. Perry, James W. Hitchings, William A. Smith, George Nichols, A. C. Risteen, Dr. H. H. Hartung, Dr. Heber Bishop, Charles C. Williams, Dr. Charles W. Galloupe, Charles E. Dresser, Edward W. Branigan, William Ferguson, Waldon B. Hastings, Benjamin T. Hall, Thomas H. Hall, G. R. C. Deane, Dr. M. J. Hall, Dr. M. A. Morris, William L. Davis, Sewall W. Rich, John H. Woodman, George J. Richmond, J. Otis Wardwell, F. B. Rice, W. R. Bateman, H. L. Rice, A. O. Davidson, William O. Blake, M. F. Whiton, Granville H. Norcross, George A. Dary, Horace E. Ware, James H. Young, E. C. Bumpus, H. T. Rockwell, E. B. Parker, D. T. Curtis, William W. Morse, Horace S. Dodd, George O. Sears, E. L. Osgood, H. W. Dodd, Robert S. Gray, H. F. Colburn, J. N. Roberts, John C. Roberts, Isidore G. Sternberger, Nathaniel LeRoy, O. R. Dickey, C. W. Dimick, Frederic L. Japp, F. H. Warner, Charles W. Parker, Edmund M. Wood, George S. Baker, William R. Randall, William B. Phinney, C. J. H. Woodbury and Charles B. Reynolds.

In his address following the dinner, President Reed said:

"It is an ancient custom in our Association that once each year we meet for pleasure, not for business. At these annual meetings we have some friends interested in our cause who speak to us words of encouragement and possibly of congratulation. It is, however, a part of that ancient custom that the president should give to our members and our friends a résumé of the work of the past year.

"I doubt if many of our members, and I am quite sure that few others, know how much hard work is done by us. We work almost entirely through committees, and at our ordinary business meetings we hear and usually indorse the reports of these committees without perhaps knowing how much labor they have caused, so that it may be well to specify here somewhat in detail what we have done, and what we are doing now.

"We are, I believe, the oldest Association of the kind in the whole country, and we have been the largest factor in getting together all the various associations in this State who are interested in open air life, through whose help legislation suited to our wishes has been attained.

"Since our last annual dinner we have secured the passage of the bill which limits the shooting season to the months of October and November, and closes the markets of this State to the sale of partridge and woodcock at any time of the year. This is the heaviest blow ever given to the market and to the pot hunter. We have this present season successfully resisted all attempts to change this law, and it stands in full force and effect. We have this year caused to be enacted a law for the further protection of gulls and tern. We have caused to be passed a bill which gives Massachusetts the lead among civilized countries in preventing the taking of shellfish from waters contaminated by sewers or otherwise. A similar measure is under consideration in the British Parliament, and in the legislative chambers of France. It has been mentioned in other countries and in other States in the Union, but to Massachusetts, and to us, belongs the credit of being the first community in the world to adopt legislation on this most important subject. Under the direction of our State Board of Health, and under the charge of our State Commissioners of Fisheries and Game, it will no longer be possible for typhoid-breeding oysters, or for clams from the mouths of sewers, to be sold in open market.

"Unfortunately, legislation does not always go our way. A few benighted citizens of Marblehead have captured the great sea serpent, tamed him and induced him to bend his colossal energies to the extinction of the lobster. A few antediluvian inhabitants of Martha's Vineyard have brought sufficient pressure to bear upon their representative to induce him to take similar grounds. This latter gentleman is the chairman on the part of the House of the Committee on Fisheries and Game. One might suppose that holding that position he would be interested in protecting fish and game. Well, this good man, through some mistaken notion, has himself introduced this year three bills in the House—one of them to legalize the robbing of birds' nests; another one to practically, as we believe, exterminate the lobster, and the third one to cut away from our Commissioners much of their power to enforce any existing laws. Those Martha's Vineyard people are mighty nice, but they have always been a little queer in their views about legislation, and as a member from New Bedford once expressed it, 'The only way to satisfy those fellows is to make Martha's Vineyard a separate State, with power to pass its own laws and to tax anybody that lands upon it.'

"As a club we are also very active workers in other matters. During the past ten years we have purchased, at our own expense and liberated in this commonwealth some 4,000 live quail to restock our depleted covers. We have now 500 promised us which we shall liberate in the course of the next few weeks. We have spent some time and some money in experimenting with other game birds, but with little success. The experiment, however, was worth trying and we were the ones to do it. We were, I think, the pioneers in this work, though others have since taken it up somewhat. We print each year correct copies of the existing game laws and circulate several thousand of them throughout the State. We have at times also taken an active part in the prosecution of offenders against the game laws. At present, thanks to the energetic work of our Commissioners and their deputies, that work is taken up by them and no longer actively devolves upon us. We are the volunteer forces who support these regulars. We work to-day together. We stand behind them in the fight. We trust that we give them the ammunition of public support. We educate the people and form public opinion.

"Brothers, we are practical men who love the brooks, the streams, the lakes and rivers; we love the fields and woods; we love the mountains and the sea, and all wild creatures whom God has placed therein. We know full well from our own experience the benefits given by open air life to us and we realize the pleasure as well as the profit we have derived therefrom. Let me quote a word from our good friend, the Hon. John F. Lacey, of Iowa, who has done more than any other Congressman in our cause. He says, 'I have always been a lover of the birds, and I have always been a hunter as well, for to-day there is no friend that the birds have like the true sportsman—the man who enjoys the legitimate sport.'

PRESIDENT JAMES RUSSELL REED.

"Brothers, we have enjoyed legitimate sport; it is our aim that this legitimate sport may continue, and that for generations to come, birds and fish may thrive in Massachusetts and our people have the same pleasure, the same health-giving rest, that we have had ourselves."

A quartette under the leadership of Mr. Thomas H. Hall enlivened the evening with music, and this song, composed by Mr. Hall for the occasion, was received with great enthusiasm:

Just One Bite.

I'LL wager you've all been a-fishing,
Ev'ry one, ev'ry one,
And kept up your courage with wishing,
Ev'ry one, ev'ry one,
That something would rise every minute,
Something choice, something rare;
But somehow you never were in it,
For nothing seemed swimming there.

Chorus:

Just one bite, only just one bite;
All day fishing, and only have just one bite:
But, alas! 'tis as sure as fate,
Fish won't rise to a man who has brought no bait.

There is nothing in sport so deceiving—
Don't you know it is so?—
As to ever indulge in believing
Fish are slow, fish are slow.
For at knowing they're awfully clever,
'Mong us all, small and great,
The cranks and the kickers who never
Have even a drop of bait.

Col. Curtis Guild, Jr., having taken the company into his confidence by protesting that he had never shot at anything but targets, read some entertaining passages from William Wood's "New England Prospects," a book published in 1634 setting forth the natural resources and attractions of the Massachusetts of that day. By the courtesy of Col. Guild the FOREST AND STREAM is enabled to give a transcript of some of the quaint descriptions.

"Concerning Lyons," writes Wood, "I will not say that I ever saw any my selfe, but some affirme that they have seene a Lyon at Cape Anne which is not above sixe leagues from Boston; some likewise being lost in woods, have heard such terrible roarings, as have made them much agast; which must eyther be Devills or Lyons; there being no other creatures which use to roare saving Beares, which have not such a terrible kind of roaring;

"The Beares never prey upon the English cattle or offer to assault the person of any man, unless being vexed with a shot, and a man run upon them before they be dead, in which case they will stand in their own defence, as may appeare by this instance. Two men going a fowling appointed at evening to meete at a certaine pond side, to share equally, and to returne home; one of these Gunners having killed a Seale or Sea calfe, brought it to the side of the pond where hee was to meete his comrade, afterwards returning to the Sea side for more gaine; and having loaded himselfe with more Geese and Duckes, he repaired to the pond, where hee saw a great Beare feeding on his Seale, which caused him to throw downe his loade, and give the Beare a salute, which though it was with but Goose shot, yet tumbled him over and over, whereupon the man supposed him to be in a manner dead, ran and beate him with the hand of his Gunne; The Beare perceiving him to be such a coward to strike him when he was down, scrambled up, standing at defiance with him, scratching his legges, tearing his cloathes and face, who stood it out till his six foot Gunne was broken in the middle, then being deprived of his weapon, hee ran up to the shoulders into the pond, where hee remained till the Beare was gone, and his mate come in, who accompanied him home.

"The beast called a Moose, is not much unlike red Deare, this beast is as bigge as an Oxe; slow of foote, headed like a Bucke, with a broade beame, some being two yards wide in the head, their flesh is as good as Beefe, their hides good for clothing. The English have some thoughts of keeping them tame, and to accustom them to the yoake, which will be a great commoditie: First because they are so fruitful, bringing forth three at a time, being likewise very uberous. Secondly, because they will live in winter without any fodder. There be not many of these in the Massachusetts bay, but forty miles to the Northeast there be great store of them.

"The Ounce, or the Wilde Cat, is as big as a mungrell dogge, this creature is by nature feirce, and more dangerous to bee met than any other creature, not fearing eyther dogge or man; hee useth to kill Deare, which hee thus effecteth; Knowing the Deare's tracts, hee will lye lurking in long weedes, the Deare passing by hee suddenly leapes upon his backe, from thence gets to his necke, and scratcheth out his throate; he hath likewise a devise to Geese, for being much of the colour of a Goose he will place himselfe close to the water, holding up his bob taile, which is like a Goose's neck; the Geese seeing this counterfeit Goose, approach nigh to visit him, who with a Suddaine jerke apprehends his mistrustlesse prey.

"The Woolves care no more for an ordinary Mastiffe, than an ordinary Mastiffe cares for a Curre; many good dogges have been spoyled with them. Once a faire Grayhound hearing them at their howlings run out to chide them, who was torne in pieces before he could be rescued. One of them makes no more bones to runne away with a Pigge, than a Dogge to runne away with a Marrow bone. It is observed that they have no joynts from the head to the tayle, which prevents them from leaping, or suddaine turning, as may appeare by what I shall shew you. A certaine man having shot a Woolfe as he was feeding upon a Swine, breaking his legge onely, he knew not how to devise his death, on a suddaine, the Woolfe being a blacke one, he was loath to spoyle his furre with a second shot, his skinne being worth five or six pounds Sterling; wherefore, hee resolved to get him by the tayle, and thrust him into the River that was hard by; which effected, the Woolfe being not able to turne his joyntlesse body to bite him, was taken."

Col. Guild spoke eloquently of the rod and the gun, not as ends in themselves, but as means by which men might go back to nature, and, as the hero of old, by touch with the earth renew their strength.

Speaker Myers declared his hearty sympathy with the purposes and work of the Association, and pledged his co-operation as Speaker of the House in every way consistent with the proprieties of his position. No one, he said, who had once come under the charm of the Maine woods could fail to have a deep and abiding concern for the preservation of the forests and streams and fish and game. Fish and Game Commissioner J. W. Collins paid a tribute to the influence and achievements of the Association and the Central Committee, and deplored the backward step just taken by the Legislature with respect to lobster protection, by the reduction of the lawful length of lobsters from 10½ inches to 9 inches. Bird Commissioner Taylor, of Rhode Island, spoke of the bird protective work of the Association. Representative James E. Odlin, of Lynn, paid an eloquent tribute to the late ex-President Harrison as a patriot, statesman and sportsman. Hon. J. Otis Wardwell made a plea for the abrogation of the law which forbids shooting on Sunday, and declared his conviction that the statute forbidding the sale of woodcock and partridge was the most efficient protective measure ever adopted in Massachusetts. Col. H. T. Rockwell spoke on the short lobster law, declaring that Massachusetts by reducing the legal length of lobsters that might be taken was wantonly throwing away a resource of great value. Then some quizzical remarks by Judge Bumpus brought to a conclusion what had proved to be one of the most enjoyable of all the reunions of the Massachusetts Association.

A Day's Ice Fishing.

THE first I knew anything about it was on the morning of the day we took the trip. I was awakened about light by a loud pounding on the door, and sticking my head out of the window I found Fred there to see if Ned and I didn't want to go fishing. And he wanted to know in a hurry, too.

About 9 o'clock we were ready for the start. Fred had his brother's horse, which animal, his brother assured him, was a good roader "if you would only ply him well with the club," and Fred said that if that was the only thing lacking for fast time, he'd guarantee to supply that.

But as it proved, this sort of talk was all nonsense. The horse, we found, was right after his business, without the need of any stimulus of the club. In twenty-five minutes we were at Kezar Falls, 4½ miles, where we stopped to get bait, and soon after 10 o'clock had covered the 9 miles to the pond we had decided to strike. Finding a chance for the team at a convenient farmhouse, we were soon on the pond ready to begin cutting the holes.

In this work—which is hardly the most enjoyable feature in winter—Fred went ahead with the chisel, I followed dishing out the ice chips with the cover to the lunch box, and Ned came behind sounding and setting the lines. I thought it was kind of selfish in Fred, keeping all the fun to himself of handling the chisel, but being of a modest turn I kept my thoughts to myself.

Five holes were cut and rigged, and then Fred and Ned thought it best to go to another pond which they knew of but a few rods distant, and set some lines there, leaving me to look after those already in position. This was agreeable to me, and after the boys' departure, I began pacing expectantly up and down the line of holes, which extended across the mouth of a small cove, seeing that the lines were in working order, shaking up the "tommies" occasionally, and all the time keeping a sharp eye out for "flags."

There was one hole in particular that seemed somehow to claim my closest atention—the last one cut, away out to one end of the line. I liked the location of that hole from the first. It was offshore a little further than the rest, the water was black and deep, and I could seem to see the big fellows lying sleepily around down there in the dark depths, waiting for their appetites to notify them that they must be looking around for a meal.

"If a big one is caught to-day, it will be there," I said to myself, and I spent the greater part of my time fussing around at that end of the line. The flags were rising quite briskly all along, but it generally proved to be the work of perch, which have a provoking way of dropping the bait, and at the end of a half hour I had but two small pickerel.

After a time a boy came down from the house with his skates. He was a decidedly agreeable sort of boy, who courteously replied to the numerous questions I put to him, chiefly regarding the best fishing grounds and the character of the shooting there in season; but I didn't wholly enjoy his visit for fear he'd be where he could grab hold and haul out that big fellow I was expecting every minute to have a scrap with, although by sharp maneuvering I managed to keep myself for the most part of the time between him and the favorite hole. The perch were bothering some at the other lines all the while, and meantime I caught another pickerel. It was small, like the others, but I kept up courage by thinking that when I heard from the upper end of the line it would be different.

Well, it was soon after the boy left that the expected happened. I was at the opposite end of the line, of course, when the flag went up, but it took me only about three seconds to get on the spot. My fingers trembled as they grasped the line, which was running out rapidly, and my heart was thumping loudly. I didn't let him have it long—big ones are apt to spit out the hooks, you know, if you do—but as soon as I had my feet well settled among the ice chips, began pulling in—slowly at first, but as there was little resistance the idea seized me that he was coming the old trick of following on with the line, and fearing to give him slack I put more strength into every pull. I felt as though I was exerting about 10 horse-power, when suddenly something gave way, and the rest of the line went flying over my shoulder. The hook had lost hold, but he was still floundering around in the hole, and into it I went, both arms to the elbows and fingers going like snapping turtles. I don't know how many times I closed on him and lost hold again, before I saw his actual size—not a bit over eight inches. When I realized the fact, I discontinued operations in a hurry, and it was so still round there for the next few minutes you could hear the squirrels chattering half a mile away.

Soon after this Ned came down, on his way to the house for water. He and Fred had out nine lines, but had caught nothing yet. I had caught nothing more at noon, when Fred came down for more bait and the box of dinner. He had pulled out a pretty good one just before he left, and some of the other baits had been chewed up badly, so I decided to leave my lines and go up to eat dinner with them.

It was only about five minutes' walk. They had a fire midway their line, and looked as cozy as could be. Fred's pickerel was still flopping on the ice—a good 2-pounder, and so plump and pretty that it just made me hanker for more.

After getting all the lines in shape, we piled more wood on the fire, fixed up some seats round it, and drew up for dinner. We didn't have anything very nice to eat, but there was plenty of what we did have, and somehow everything tasted terribly good, out there in the open air, and washed down by plenty of the water Ned had brought from the house.

And right here I want to say to the uninitiated, "Don't drink dirty pond water when you go fishing." There's not a bit of need of it, for plenty of drinking water can always be had at the nearest house. And such water—why, it's almost worth while going fishing, even if you don't catch any fish—to get a few drinks of such water as you find back here among these hills. In the case of the house we resorted to on this occasion, the well was in the cellar, after a practice quite common in this section, and the water must have flown through some sort of mineral deposit at some stage, for it was of a slight reddish tinge; but this did not detract from its quality in the least, as all agreed that better water was never drunk.

Of course, we kept watch of the lines as we ate. After a few false alarms Fred landed a pickerel, and Ned got a good one almost into the hole, but lost it. Then came more unaccountables, and finally Ned captured a perch. We were not getting many fish, but what with the fine weather, the fire, the dinner—and the water—we were enjoying ourselves hugely, especially Fred, who hadn't had a day out before for months. I quite forgot about the lines I had left, in the fun we were having, but it was just as well, for on calling for them on the way back not a flag was up.

It was late when we finished dinner, and after two hours' more fishing, during which Fred and Ned each caught a pickerel, we packed up and started for home; Fred beguiling the return trip with stories of certain eccentric characters with which he had become acquainted in a sojourn in the great West.

It was dark when we reached home. We had but eight pickerel and a perch, but all three declared that it had been a great day's fishing.

TEMPLAR.

CORNISH, Me.

On Eels.

Editor Forest and Stream:

Did you in the days of your older boyhood ever live in the country near some stream full or ordinary fish the very nearness of which made you unhappy unless you could steal away on Saturday afternoon for a half day's sport, or unless you could try your luck at night after the work of the day was over? And if so, do you remember that when you started out equipped with a bamboo pole, and a home-made line on which you had put a hook bought at the country store at the rate of two for a cent and a piece of cork for a float, and then brought home a string of fish on a long twig with a crotch at the lower end, you were happier than you ever have been in your more mature years as an angler?

To be sure you did not catch fish which you would look at to-day. They consisted of shiners, sun-fish, perhaps a few yellow perch and chubs and possibly a pickerel or two, and it may be you snared a few suckers. And perhaps at night you bobbed for eels or took them with a spear or in a spirit of laziness fished for catfish.

And has it ever occurred to you that if you and I were young again those happy days could never return? And yet it is only too true.

There are very few streams now in this State in which the native fish have not been largely or wholly destroyed through the introduction of black bass furnished by the State, for as fish sharks they are tenfold worse than pickerel.

There is only one fish which they do not and cannot destroy—that is the eel; and now our fish law says to the country lad that he shall not even take an eel either with a bob of worms or with a spear.

Is it not a little hard to destroy the fish natural to the stream and then say to the country lad that he shall not even take an eel from the stream which perhaps runs through his father's farm, except by angling with a hook? Yet that is the law of this State to-day.

There is not much pleasure, and certainly no skill, in taking eels with a bob, but it is certain that no other fish could be taken with it, but taking eels in running water at night with a small spear by the aid of a torch or a light held in the hand requires as much experience and skill as taking trout with a fly, and it is quite as enjoyable, and those who have never had the opportunity to enjoy this sport have certainly missed a great pleasure.

In wading a stream of swift running water by the aid of an artificial light, to be successful requires a very quick eye, a steady hand and an accurate aim. In fact it requires nights of practice before success is assured.

Is there any reason why this privilege and sport should not be restored to our farmers' boys in streams not abounding in trout? And supposing that those trying to spear eels should take a few suckers or carp, what harm could it possibly do? They are both spawn eaters and it would be well if our streams could be rid of them.

In my boyhood days I had a large experience in spearing eels and I know the skill required and the pleasure this sport affords, and the only things we ever could take were eels and suckers, water snakes and snapping turtles, but the latter two are not protected by the humane provisions of the Fish and Game law.

A section should be added to our present fish law substantially as follows:

Eels and suckers.—Eels may be taken with a bob in any of the waters of this State between the 1st day of May and the 30th day of September, inclusive. Eels and suckers may be taken with a spear in any of the streams of this State not inhabited by trout between the 1st day of May and the 30th day of September, inclusive.

J. S. VAN CLEEF.

POUGHKEEPSIE, N. Y.

Anglers' Association of Onondaga.

SYRACUSE, N. Y., March 12.—A large number of enthusiastic anglers braved the unpleasant weather last night and attended the annual meeting of the Anglers' Association of Onondaga held at its rooms in the Betts Block. The reports show the work of the Association during the past year to have been very successful and satisfactory and indicate that it will be continued during the coming season with all the interest and aggressiveness which has obtained for the Anglers' Association of this city a reputation that is almost national.

The report of the treasurer showed the receipts during the past year to have been $764.09. The expenditures were $717.80, leaving a balance on hand of $46.29. Of the receipts $200 came from the county through the Board of Supervisors, the balance from the members.

The expenditures were chiefly for salary and expenses of the protectors and for planting fish and fry in the public waters of the county.

The fact was emphasized that this Association is not a private fishing club, has no preserved waters and does no work on private streams. All of its labors are in public waters and all of its money is expended for the benefit of all the people, and the good that it has accomplished is almost incalculable.

It was also said that the provisions of the game laws are better known and more generally observed in this vicinity than in almost any other portion of the State and the fishing in the waters of this county is second to that of no other settled locality, and there is little doubt that it is due to the work of the Anglers' Association of Onondaga.

The following officers were elected for the coming year: President, John H. Forey; Vice-President, M. H. Schwartz; Treasurer, Charles H. Mowry; Secretary, J. E. Bierhardt; Members of the Executive Committee, Riley V. Miller, De Forest Candee and S. T. Betts.

President Wood on retiring from office, said: "I am proud to be the president of such a successful organization as this one is, especially so on this its eleventh anniversary. From its birth in the year 1890 I have had the pleasure of being in an executive capacity. We have had our struggles, but have maintained our noble and beneficent organization.

"Our labors the past year have been crowned with greater results than ever before in our history. We should at this period launch out and pull for the point of increased membership, and with the encouraging assistance received from so many sources retain our local and national reputation and achieve still further progress.

"A constant supply of food fish for all the people can only be maintained through the efforts of true anglers like the members of this Association, yet it behooves every person having an interest in such work to give those who are in the front of the battle against fish pirates and general indifference to the preservation of fish their earnest support. With the Anglers' Association out of existence, how long would it be before every stream and lake in central New York would be barren? A part of our work should be to educate the public up to its importance. The masses of the people are with us, yet there are many good citizens whose support we need, and which let us secure."

THE INDIAN CAMP AT THE NEW YORK SPORTSMEN'S SHOW.

Wall-Eyed Perch?

Editor Forest and Stream:

In some of the very pleasant chats which you and I have had in the past few years, you have, as I recollect, expressed a very strong wish that we should have a correct nomenclature of our fishes, but your hopes have never been realized, and I fear that they never will be so long as everybody who may be in a little brief authority undertakes in his ignorance to classify our fishes, and yet it has been done and is being done to a lamentable extent.

I refer particularly to the pike (*Esox lucius*), known to our ancestors over a hundred years ago and known to us.

I will refer to only two authorities. In 1770 R. Brooks, M. D., published a book in which he refers to this fish as being then known by the name of "pike," "luce" or "pickerel," and Sir William Jardine in his book No. 3 on fishes, published in 1854, referring to the *Esox lucius*, simply calls it the common "pike," that is the generic name, and whatever distinctions are sought to be made a pike is a pike and nothing but a pike.

Last summer I received a circular from a noted fishing resort in the upper part of the State, saying that there was fine fishing for bass and pike; and when I reached there I found that there were very few pike (*Esox lucius*), and that the term pike meant wall-eyed pike, which had to be fished for in water about 100 feet deep. To me it made no difference, as I fished only for bass, but many others were sadly misled, as they hoped to catch the common pike.

If you will turn to the reports of the Fish Commissioners of this State, you will find that a large number of "pike-perch" have been, or will be, distributed in this State.

Why this name should have been applied to this fish can be easily understood, for although according to the United States authorities the wall-eyed pike is a pure perch, yet the resemblance to the pike family is so great that ignorant persons may have regarded it as belonging to that family, but why our Fish Commissioners should adopt the name of pike-perch is past comprehension.

In Lake Champlain this fish is called a pike, in the St. Lawrence and in Canada a wall-eyed pike, on the Ohio River a jack salmon, and by our Fish Commissioners a pike-perch, a name by which it has never been known in many parts of this State or Canada. It would not be a misnomer to call this fish a wall-eyed perch.

POUGHKEEPSIE, N. Y., March 8.

The Sale of Fish in Close Season.

CANANDAIGUA, N. Y., March 16.—Our Fish and Game Protector showed me to-day three fish that he had purchased in this village. They were exposed for sale at a meat market. If I am not very much mistaken they were small-mouth bass. They did not look to me precisely like our small-mouths, but I have never been a close observer, and as they were not in first class condition and as I have never seen bass from other waters, I dislike to be too positive.

However, I feel safe in saying that they were black bass. They were between ten and eleven inches long and were evidently full of spawn.

The protector said that a large number of the fish were on sale and that the dealer told him that they were sent to him from Baltimore, Md., which statement we have no good reason to doubt.

But whether they came from Maryland or whether they came from the waters of this State, it seems to me to be the logical and inevitable result of the decision of our Court of Appeals in the case of the People vs. Buffalo Fish Co., in which the majority of a divided Court construes the word "possessed" as referring only to fish taken from the waters of this State.

If large numbers of these bass, full of spawn, are sent from Baltimore into a village of this size, the numbers that are being sent into larger villages and cities can only be guessed at. And what protection are our game fish to derive from laws that make our State a dumping ground for similar fish of another State, whether they be taken by fair means or foul, and regardless of the approach of their spawning season?

And what have the anglers of Baltimore and vicinity to say about this wholesale sacrifice of this fine fish?

Or is it possible that these fish have been taken in nearby waters of this State and that the aforesaid decision is now bearing its fruit in this no less logical and inevitable way? Who can say?

Judge O'Brien's opinion, vigorous and admirable though it be in many respects, and for anything I can say in all respects, has been, I believe, a blow to fish and game protection here and elsewhere from which it can never recover until the Legislature has passed a law making the word "possessed," or whatever word is made use of, refer to fish and game of certain kinds the world over and until it has been decided once for all that such a law does not in any way interfere with interstate commerce.

F. A. C.

Pike and Pickerel.

PATERSON, N. J., March 12.—*Editor Forest and Stream:* Will you kindly decide the following question:

What is the difference between a pickerel and a pike? A claims that one is overshot and the other is undershot. B claims that they are one and the same fish. B. S.

[The claim made by A is wrong. Both fish are undershot. The claim made by B is wrong. The two fish are distinct.

An unfailing method of determining whether a fish is a pike or a pickerel is found in the scales on the gill covers of the fish. The gill covers, of course, lie immediately behind the head and over the gills of the fish. In the pike, small scales are found on these gill covers reaching about half-way down the uppermost and deepest of them. In the pickerel, the whole of this uppermost and deep gill cover and the whole of the narrow one next below it is covered with scales. If you remember this distinction you will never go wrong on the fish. The pike sometimes grows to weigh about fifty pounds, and often weighs 7, 10, 12 or more. A pickerel is much smaller, averaging perhaps from 1½ to 2½ pounds, and one of 5 pounds is a large fish. If you refer to the first annual report of the Commissioners of Fisheries, Game and Forest of the State of New York, for the year ending Sept. 30, 1895, you will find on page 121 an article by A. N. Cheney, with figures, showing the differences in the gill covers of mascalonge, pike and pickerel. See also our next week's issue.]

The Kennel.

Training the Hunting Dog.

By B. Waters, Author of "Fetch and Carry: A Treatise on Retrieving."

XIV.—Dropping to Shot and Wing.

DROPPING to shot or wing are terms which denote that, at the rise of the bird or birds or the report of the gun, the dog drops instantly to the ground. It is much more ornamental than useful, and besides has some distinct disadvantages. There are many sportsmen who set an exaggerated value on what may be termed the embellishments of training, such as quartering, dropping to shot and wing, toho, etc., and who profess to take more pleasure from the manner in which the dog performs than in the material results of his efforts. The main purpose of the dog's service, however, is one of utility; the embellishments, though desirable, hold a secondary place. Living pictures, while not unpleasant to look upon, are not the main purpose of a man with a gun. If, therefore, the dog is a good and useful servant, and yet possessed of little style, he is far superior to a stylish nonentity.

While it is a matter of constant recurrence that the shooter finds it necessary to order the dog to lie down on certain occasions in the hunting field or at home, so as to prevent his interference, to stop his prowling, or to make him cease hunting, yet it is not desirable that he be made to drop in a machine-like manner when there is no real occasion for it. The contention that it puts a more artistic finish to the dog's work and is a deterrent to breaking shot and chasing and breaking in is a matter of pure fancy. It comes under the head of a trick performance, much as if the dog were to turn a summersault at the report of the gun, and is almost as irrelevant.

There is nothing in the rise of the bird or the report of the gun that can be usefully supplemented by the drop of the dog, nor is the act of special importance as a preventive of shot breaking, breaking in or chasing. If the dog is unsteady, he does not drop to wing in practice, whatever he may do in theory.

The enforcement of steadiness to shot and wind is one of the easiest parts of the dog's training to compass, and it is infinitely much easier to teach than it is to teach the dog to drop to shot or wing.

The disadvantages encountered in teaching it and after it is taught, are that, some punishment being necessary in its enforcement, there is danger that the dog unwittingly may be taught to blink or to be gunshy, or both.

The punishment, being directly associated with the report of the gun and the rise of the bird, at a juncture when the mind of the dog is intensely concentrated on the birds and his every desire centered in their capture, is by him likely to be interpreted erroneously. He may consider that he has won the disapproval of his master, and has been punished for meddling with the birds at all.

If at the report of the gun he is punished for failing to lie down, he is quite likely to consider the report as a signal for punishment for some cause of which he is entirely ignorant, or for no cause at all.

In cold rainy weather, when the ground is muddy or saturated with cold water, or when there is ice and snow, no sportsman who has a right heart would care to force his dog to lie down merely to gratify a fancy.

In briers and thorns it is often painful for the dog to drop.

Sometimes, if the dog flushes in cover, or at a distance from the shooter, where he is out of sight, he will lie a long time in the dropped position waiting for the order to go on.

Not infrequently it happens that the dog, after a time of rigid schooling to dropping to wing, anticipates the rise of the bird from every noise which he happens to hear, or from the act of the shooter in walking up to flush, and therefore drops before the bird takes wing. By degrees he becomes more deferential, dropping safely before the bird rises at all, and in time dropping to wing in anticipation degenerates into dropping on point, a most undesirable manner of pointing.

Dropping to point adds greatly to the difficulties of the shooter in reference to the dog, for the latter must then be watched unceasingly. If he happens to drop when the shooter does not see him, a long search to find him may thereby be entailed, and indeed he may not be found on point at all, it being necessary to whistle or call him from it. A little cover suffices to conceal a dog when he is lying down.

When dropped to shot, it is impossible for a dog, lying down, to mark the flight of live birds or the whereabouts of dead birds with the precision that he can do so when standing up. The marking of birds is an accomplishment which all dogs do not possess, it is true, but nevertheless it is a most useful accomplishment, and much to be desired.

The manner of teaching the dog to drop to shot and wing must be governed much by his disposition. If he is exceedingly timid, intelligent care should be exercised. In any event, he should be taught to drop promptly and cheerfully to order, apart from any considerations of dropping to wing or shot. The yard training in this respect should be specially thorough when the trainer contemplates making it a part of the work on game.

Dropping to shot should be made a part of the yard training. It is taught in precisely the same manner that the oral command and signal are taught. In teaching the dog to drop to command, with the aid of the whip, the trainer should observe the greatest care to hit the dog in the same place each time, as on the shoulder. When he feels his shoulder thus hit, he will drop instantly, after he is schooled properly. Indeed, after a time he will drop when his shoulder is merely touched. It in its way is recognized as an imperative command, for the threat of the whip closely supplements it.

Heavy charges of powder are unnecessary in the lessons. An old pistol using percussion caps is quite sufficient. The trainer, with a checkcord five or six feet long, leads the dog about, snaps a cap at a favorable juncture, taps the dog on the shoulder as aforementiond, and enforces obedience to the report in the same manner as if it were an oral order. This is repeated, lesson after lesson, till the dog will drop promptly to the report. The lesson should be given kindly and pleasantly. It can be conducted without filling the dog with terror, and the consequent desire to escape or fear of the gun. Common sense on the part of the teacher is essential to determine how the lessons should be conducted. Under no circumstances should the trainer attempt this part of the dog's education, if he shows the least degree of gun shyness, nor is it wise to attempt enforcing it in the field, if he has any faults which require punishment to correct them.

Dropping to wing should be kept in abeyance till the latter part of the dog's field education; in the early part there are complications enough without importing any unnecessary extra ones.

It is taught at first by ordering the dog to drop every time that a bird is flushed within his sight or hearing, whether he pointed it or not. The trainer endeavors also to take advantage of every opportunity which presents itself in the furtherance of his purpose, such as, for instance, walking up beside the dog when he is on point, flushing the bird then, and at the same time giving him a cut on the shoulder with the whip, as when teaching him to drop in the yard lessons. The trainer, however, should avoid the extreme of making himself too much of a factor in the rise of the bird, else the dog will drop when he is approached, in anticipation of being forced to drop a moment or two later. By many impressive repetitions of the act in conjunction with the rise of the bird, the dog in time comes to recognize the first sound of wings as an order to drop.

Patience and careful progres should be observed in giving these lessons. If there is too much hurry or violence, it is quite an easy matter to injure the dog's work in other respect.

When a dog is over fatigued it is not wise to enforce dropping to shot or wing too strictly. He may find it such a comfortable position that it is to his liking. When greatly fatigued, dogs, when standing on point for a long while, learn to drop on their intitiative, and from this as a beginning they may learn to drop on their points habitually. Once acquired, there is no way of remedying the fault.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

48

A press dispatch from Shamokin, Pa., dated March 8, 1901, reports that hunters while returning home to Treverton were passing Line Mountain when they saw a half-naked man run into a cave. They tried to get him out, but he would not leave his lair. The men pursued their journey and notified a lot of farmers, who visited the cave this morning and built a fire at the entrance to smoke the stranger out. In a short time the man crawled from the entrance. He was half naked. His face was covered with a thick bunch of hair, making him look more like a beast than a human being. He is insane. The Overseers of Washington Township took him in charge and will send him to the Danville asylum. There was nothing in the cave to indicate who he is. It is thought that in crossing the mountains he lost his way and grew insane from cold and hunger.

49

An old salt of New Bedford says that once when he was one of the crew of the revenue cutter Dobbin, stationed at Castine, Me., the Hon. Hannibal Hamlin, with a party of friends, was taken on a cod fishing trip off Mount Desert. The venerable Senator was inexperienced in hauling the fish on board, and they invariably jerked the hook out of their mouths before he could get them over the side of the vessel. He complained to the captain, who ordered the old salt to get a file of the carpenter and put a better point on the hook. As the sailor was returning aft, a large cod, which had just been landed, opened wide its jaws, and the sailor stuck the file in his mouth to see him bite. The cod closed his jaws on the man's hand, who let go, and the file slipped into the fish's stomach. Half an hour afterward the steward, in cleaning the fish, brought to light the old file. His exclamation of surprise sent Mr. Hamlin to his side, who called his friends and all the officers to see what had been discovered. "That old file must have been there for years," he said. "How much will you take for it?" he inquired of the steward. Being assured that he was welcome ot it, he gave the steward a dollar for the curiosity.

50

While John Cronan and Joseph Flynn, of Belleville, N. J., were hunting for 'possums in Crane's woods at Forest Hill, they tracked one of the animals to a hollow tree trunk. They set to work to make the opening larger, and in doing so pulled out a quantity of silverware. It included a solid silver cake plate, a long-handled soup ladle and ten teaspoons, all of which were wrapped in a brown paper and rewrapped in a newspaper dated last November. They took the articles to their homes and notified the authorities. The hollow trunk lay near the Morris Canal.

51

About an ounce of pure gold was found in the crop of a quail killed near San Diego, Cal. It was in small pieces, mixed in with a lot of sand and gravel.

Yachting.

Our Boston Letter.

BOSTON, March 16.—There seems to be no end to the troubles of the Boston cup defender, Independence. The latest thing to confront her builders is the prospect of a possible lawsuit over the hollow trough keel. It seems that James McIntyre, of Neponset, a prominent builder, and the builder of patent skylights for yachts and other vessels, has a patent on a hollow keel cast in one piece, in which lead is stowed. John A. Stetson, formerly Commodore of the Boston Yacht Club, is a part owner in the patent.

When it became known that the keel of Independence was certainly to be a hollow one, in which the lead was to be stowed or poured afterward, Mr. McIntyre visited the Lawley plant, at City Point, and asked to see the pattern of the casting, which was then being made ready to be sent to the Victor Metal Works, at East Braintree. After looking at the pattern he informed Mr. Lawley that it was an infringement upon his patent. Notwithstanding this claim, the pattern of the bottom of the keel was sent to the foundry, and the casting is now on the bottom of the boat.

From the time of Mr. McIntyre's visit to Lawley's nothing further was heard of the claims of the keel patent, until Friday, when there was a conference between Geo. F. Lawley and Thomas Hibbard, of the Lawley corporation, and James McIntyre and John A. Stetson. Nothing was settled to the satisfaction of either party at that meeting, and there will be another one at Lawley's Wednesday, March 20.

James McIntyre and Geo. F. Lawley were both seen by your correspondent in regard to the matter. Mr. McIntyre said that the matter was now in the hands of his lawyer, and that he had nothing to say in regard to his claims. He did say that he did not want to do anything that would hurt the chances of Independence, and that he hoped she would be successful in the trial races and also successfully defend the cup. This thing, he said, was simply a matter of business.

Geo. F. Lawley did not seem to be much bothered about the prospects of a possible lawsuit. Mr. Lawley said that the Volunteer was built with a hollow keel, in which the lead was stowed, before the patent of Mr. McIntyre was issued. He said that there is no doubt that many vesels were built with hollow keels before that time. This, it is said, may have a serious effect upon the strength of Mr. McIntyre's claim.

The claim in question is one of three which were issued under one patent to James McIntyre and John A. Stetson, half owner, on Aug. 9, 1888. The application for the patent was filed on Feb. 8, 1887. It is claimed that every separate clause in a patent is as much protected as the whole. The specifications of the invention, which is listed as claim No. 2 in the patent, is for a hollow keel in which lead can be stowed, cast in one piece, in which there are cross pieces, cast with the keel or in any other manner secured to it.

It is claimed that the casting on the bottom of Independence is an infringement on this patent, it being cast in one piece. It is not likely that there will be any delay in the construction of the boat on account of a possible lawsuit, but it will be interesting to know what the outcome will be, as it will affect all future yachts built in this manner. The claim that the idea was old when Mr. McIntyre had it patented may count for something, and there is another phase which may affect the issue. It distinctly states in the patent that the claim is on a hollow keel cast in one piece. Now the casting in question is on the bottom of the keel of Independence, and there are many plates above it that are riveted, and inside of which the lead is stowed.

The work of constructing Independence is proceeding quite smoothly at the Atlantic Works. There are over 60 plates now in position, many of which have been all riveted. About thirty-five tons of lead have been put into the keel up to date. When the boat was first laid out it was arranged that the lead would be poured into the hollow trough after sufficient plating had been put in place. It was afterward thought that there would be a strong probability of the molten metal causing the plates and frames to become twisted out of shape, if this were done. Geo. F. Lawley did not think it was best to take any chances in this direction, and it was decided to stow the lead instead of running it.

It was decided to stow the pigs as closely together as possible and then run in fine shot around them, thus filling up every crevice. The first attempt at stowing proved a failure, the pigs being placed in every position. They were all taken out, and the work started over again. The pigs are now stowed lengthwise in the trough, while many have been cut up to fill up as much of the space as possible. Fine shot is poured in around the pigs and the upper layers of the lead are hammered to make them fit closely together.

Thirty tons of shot have arrived at the works for the purpose of filling in. In the after part of the keel, where the plating is on both sides of the boat, shot will be used exclusively, it being the only thing that can be got in there. The shot will be run through the holes in the floor plates. A line has been drawn around the port side of the boat, which shows the height to which the lead will be stowed. This line, at its highest point, is 50 inches from the bottom of the keel, and from it tapers to 44 inches.

All of the deck beams have been put in place, and the deck stringers are being fitted. The plating of the deck will be partly steel and the rest aluminum, the whole covered with canvas. The brackets, bracing the frames and deck beams, have commenced to go on. These are 3-16 of an inch thick and are 6 inches wide. There is a 2-inch flange on the under side. They will be perforated for lightness. Several of the steel plates, the stringer plates, have been put in position on the deck.

A meeting of the Yacht Racing Association of Massachusetts will be held at Young's hotel, Thursday evening, March 21, at 7:30. This will be the annual meeting at which the officers for the coming year will be elected and the dates of the different clubs for races to be held under the rules of the Association will be given out. There will also be two important amendments acted upon.

The first of these is to add to the rules on scantlings, that no adjustable or movable truss or other device for shortening or changing the measurements of a boat will be allowed. This law is sorely needed. It is well known that there are many boats which have been equipped with trusses, whose waterline length could be shortened or lengthened at will. There has been some severe comment upon this condition, whether just or unjust, and it seems that the only way to be sure that everything will be all right is to frame a law which will bar such trusses. This rule will apply to the open classes as well as to the restricted classes and on this account there may be some opposition on the grounds that the association is putting restrictions upon classes which are supposed to be unrestricted. This may be true, but the law is needed, nevertheless.

The other amendment will be in regard to protests, in which it is proposed to raise the sum which a protesting yachtsman who contests the length of another yacht deposits with the measurer, from $2 to $4. This is done to decrease the number of unnecessary protests. The Association allows that any man has the right to protest, but offers this law that the dissatisfied one will consider well before he enters such a protest.

JOHN B. KILLEEN.

CARTOON. Designed by Messrs. Gardner & Cox for Mr. H. L. Parker. Photo by Jackson, Marblehead.

A 23ft. Cruising Yawl.

THE prejudice against yawl rig for both large and small boats among yachtsmen in this country a few years ago was decidedly strong, but the very general adoption of the rig in cruising boats is quite noticeable. With a yawl rig, sail can be shortened very readily and boats can be handled with greater ease and comfort and with a smaller crew without great loss of speed. Racing between boats with yawl rig in the large and small classes in England has had its effect in America, as is shown by the importation of Ailsa and the change in Vigilant's and Navahoe's rigs to that of a yawl. It is generally conceded that the yawl rig is the best for cruising boats up to 40 or 50ft. waterline length. The many requests that the publishers have had from readers of FOREST AND STREAM for designs of small yawls have led them to secure plans of this type of boat from well-known designers. Last week we published plans of a 20ft. waterline centerboard yawl that was designed by Small Brothers. This week we reproduce plans of a 23ft. waterline cruising yawl from designs by Mr. William H. Hand, Jr. In a short time will appear plans of two 28ft. waterline cruising yawls, one a keel boat from designs of Mr. W. Starling Burgess, and the other a centerboard boat from designs by Small Brothers.

The plans that appear this week show a very wholesome little boat of comparatively shoal draft that should be fast under ordinary conditions. Her small size and large accommodations would recommend her to amateurs who do not wish to carry a paid hand. The boat has ample room for four persons in the cabin and there is 5ft. headroom under beams. The boat was designed by Mr. William H. Hand, Jr., of New Bedford, Mass., for Dr. W. C. Lambert, of Wyandotte, Mich., and will replace a boat designed by Mr. Hand for Dr. Lambert in 1897. The boat is not built to fill any class, but was intended for day sailing and cruising, and not for racing.

Her dimensions are as follows:

Lnegth—		
Over all	38ft.	2 in.
L.W.L.	23ft.	7 in.
Overhang—		
Bow	6ft.	7 in.
Stern	8ft.	
Beam—		
Extreme	10ft.	7 in.
L.W.L.	10ft.	
Draft—		
To rabbet	1ft.	8¼in.
Extreme	3ft.	6 in.
Board down	6ft.	6 in.
Freeboard—		
Bow	3ft.	4 in.
Taffrail	2ft.	5¼in.
Least	2ft.	2½in.
Sail Area—		
Mainsail	560	sq. ft.
Mizzen	140	sq. ft.
Jib	156	sq. ft.
Total	856	sq. ft.
Displacement	10,800	lbs.
Ballast outside	3,500	lbs.

The entire frame is of white oak and the planking is of ⅞in. pine.

Vanderbilt Wins a Lawsuit.

JUDGE BRADFORD handed down an opinion affirming the decision of Judge McPherson of the local District Court in the admiralty suit brought by William K. Vanderbilt, Jr., against Robert L. Forrest. The litigation involved the ownership of a naphtha launch. In his libel Mr. Vanderbilt said that he was formerly the owner of the yacht Carmita, which he sold through his agents, Messrs. Gardner & Cox, to Mr. Forrest for $4,000. The yacht was at the Newport ship yard, Newport, R. I., and near it in the custody of a man named Biven floated the launch, also belonging to Mr. Vanderbilt. No mention was made of the launch at the time the sale was consummated, but when Mr. Forrest took possession of the yacht he claimed that the launch was appurtenant to it. Mr. Forrest maintained that he had understood that the launch went with the yacht and that it was included in the receipt which he gave to Mr. Vanderbilt's agents. Judge McPherson decided on June 31 last that Mr. Vanderbilt was entitled to the launch, whereupon Mr. Forrest appealed. After reviewing the testimony in the case, Judge Bradford concurs in the ruling of Judge McPherson. The launch is 21ft. long and is built of cedar. It was built in 1899 and is valued at $2,000.

Cartoon.

CARTOON was designed for Mr. H. L. Parker by Messrs. Gardner & Cox and built at Wood's yard, City Island, during the winter of 1897-8. She is 25ft. on the waterline, 45ft. 3in. over all, 10ft. extreme beam and 7ft. draft. The draft of the hull alone is 12in. Her overhang forward is 10ft. 9in. and 9ft. 6in. overhang aft. The least freeboard is 1ft. 9in., and she carries 1,065 sq. ft. of sail.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

What Sailors Read.

"I RECEIVED a mighty queer present to-day," said a newsdealer on lower Canal street, "and the story connected with it is about as quaint as anything you would run across in a month of Sundays. I make a specialty of handling cheap fiction of the blood and thunder variety," he continued, "and, being rather convenient to the water front, I sell a good deal of the stuff to sailors who want to lay in something to read before starting on a long voyage. It's a curious fact that the fo'castles of nine merchantmen out of ten are full of sentimental novels and tales of the Old Sleuth brand, and when strange sailormen happen to fall together in the shop I've noticed that those dizzy romances form their only point of contact. Instead of speaking about some of the wonderful things they have both seen while voyaging around the world, the chances are that one of them will scratch his head and ask the other fellow whether he has ever read 'Demon Dick, the Terror of Dead Man's Gulch.' If he has, both become instantly engrossed; they go over the yarn in detail, exchange opinions on this and that episode and discuss the preposterous characters exactly as if they were people they had met in real life. However, all this is prefatory to what I set out to tell you, and I mention it merely to show what an important rôle trashy fiction plays in the life of the average seafaring man.

"About a year ago, to come to the point, a little English sailor wandered into the shop and told me, with considerable embarrassment, that he was looking for a novel that a bunkmate had been reading aloud to him during his last voyage. Unluckily the bunkmate had deserted at Rio and taken his book with him, and the little Englishman, who was unable to read himself, was consumed with curiosity to know how the tale ended. He had never learned the title, but he had a very distinct recollection of the plot, and thought possibly I might be familiar with the work and give him a clue. 'The 'ero was Sir Rupert Harden,' he remarked, mournfully, and, strange to say, I at once recalled the exact piece of rubbish he had in mind. I had been looking over it and chuckling at its absurdities only a few nights before, and I pulled it out immediately from the stock of cheap fiction on the shelf. 'The heroine is the beautiful Lady Claribel, isn't she?' I asked, to clinch the case. 'That's her!' said the little Englishman in great excitement, and when I put the book in his hands he recognized it at once by the design on the cover. He wanted me to allow him to pay a fancy price for the treasure, and when I positively declined to accept more than two bits he took my card and said I should hear from him. This morning, much to my surprise, a big Danish seaman came in with an inlaid workbox, which my English friend had made with his own hands and sent me clear from Durban, South Africa. On the inside of the lid is a picture in colored ink of Sir Rupert Arden and the beauteous Lady Claribel, copied from the title page of the novel. It is a striking piece of work. Sir Rupert resembles an Italian barber and Lady Claribel looks like a vaudeville ballad mangler. All the same, I prize the box highly. I shall preserve it as a unique souvenir of literature and art."—New Orleans Times-Democrat.

KATONAH. Designed by A. Cary Smith. Photo by Jackson, Marblehead.

Katonah.

KATONAH was designed by Mr. A. Cary Smith, and was built by the George Lawley & Sons Corp., of South Boston, in 1896. She is 53ft. 6in. over all, 35ft. long on the waterline, 13ft. beam and draws 8ft.

Address all communications to the Forest and Stream Publishing Company.

Yacht Club Notes.

The racing fixtures of the Seawanhaka Y. C. for the coming season are as follows:

Thursday, May 30 (Decoration Day)—Races for raceabouts, Seawanhaka knockabouts and club catboats; open to club members only.

Saturday, June 15—First series race for the Centre Island cup. The races in this series are open to Seawanhaka knockabouts owned by club members.

Saturday, June 22—Second series race for the Centre Island cup.

Thursday, June 27—First of three days open races; classes to be announced later.

Friday, June 28—Second of three days open races; classes to be announced later.

Saturday, June 29—Third of three days open races, annual race for all classes; the Leland Corinthian Challenge cup will be sailed for by raceabouts owned by club members.

Thursday, July 4—Special club races; classes to be announced later.

Saturday, July 6—Third series race for the Centre Island cup.

Saturday, July 13—Roosevelt Memorial cups; open to all yachts owned by club members in the 30ft. class and under, sailing with arbitrary handicaps to be fixed by the Race Committee.

Saturday, July 20—Fourth series race for the Centre Island cup.

Saturday, July 27—Fifth series race for the Centre Island cup.

Saturday, Aug. 3—Robert Center Memorial prizes; open to raceabouts and Seawanhaka knockabouts owned by club members.

Saturday, Aug. 10—Sixth series race for the Centre Island cup.

Saturday, Aug. 17—Seventh series race for the Centre Island cup.

Monday, Sept. 2 (Labor Day)—Special club races; classes to be announced later.

Thursday, Sept. 5—Open races for special classes to be announced later.

Friday, Sept. 6—Open races for special classes to be announced later.

Saturday, Sept. 7—Annual fall races for all classes; races with Corinthian crews.

The Race Committee of the club is composed of C. W. Wetmore, chairman; Walter C. Kerr, Charles A. Sherman, Clinton H. Crane and Johnston De Forest, Sec'y.

* * *

The Larchmont Y. C. held a special meeting at Delmonico's, Fifth avenue and Forty-fourth street, March 13, to pass upon certain amendments to the club racing rules. Com. Adams presided. The principal change under consideration was that of measurement. The new system proposed was the same that was recently adopted by the Seawanhaka Y. C. The amendment passed unanimously, but will not go into effect until Jan. 1, 1902, during which time the committee in charge of the matter is continued. Changing the dates of "race week" was also considered, and the proposition to begin the week's racing of the season on Saturday, July 13, instead of Saturday, July 20, met with no opposition.

* * *

The Ravenswood Boat Club, of Long Island City, at a meeting held at Astoria, appointed a committee for a reception after Easter. The club has been in recent years as much of a yachting club as a boating organization. It has sixteen yachts, and a committee was appointed at the above meeting to organize a yachting department with separate officers to govern the yachting affairs of the club. The club adopted as its burgee for the yachting fleet a triangular flag with blue ground and large arrow head of white extending across the middle of the flag.

* * *

The Interlake Yacht Racing Association has been strengthened by the admission of the Canandaigua Y. C. As the Association races will take place on Cayuga Lake, it will be necessary for the Canandaigua yachtsmen to transport their boats by rail. The Seneca Lake Y. C. is on the point of connecting itself with this Association. Geneva yachts may be taken to Cayuga Lake via the Erie Canal and the Seneca River.

* * *

The Stuyvesant Y. C. met March 13 and elected the following officers for the season: Com., W. J. Hoag; Vice-Com., A. W. Strong; Rear-Com., S. Wright; Treas., J. H. Smith; Fleet Surgeon, F. L. Dowe, M. D.; Sec'y, C. S. Ogden; Steward, G. Wagner; Sergeant-at-Arms, G. Liginger. The Board of Directors consists of ex-Com. G. W. Ritter, A. W. Smith, A. J. McKenzie and H. Beach. On the House Committee are J. A. Miller, J. Krauss, H. P. Hough, T. Young, A. Ostinger, R. Start and Charles Yost. Com. Hoag owns the sloop Pirate and the Vice-Commodore the sloop Yankee. A report was received from a committee appointed to consider plans for a new club house, which it is hoped to have erected before the close of the season.

* * *

The Gloucester Y. C. held its annual meeting at Gloucester City March 3. The following officers were elected: Com., Benjamin Wilson; Vice-Com., John Minihan; Rear-Com., Gilbert Taylor; Treas., John Casnet; Sec'y, Frank Smith; Ass't Sec'y, Americus Brinton; Steward, George Benchert; Trustees, Robert Murray, Robert McDonald, George Kurtz; Measurers, Robert Murray, George Kurtz and John Minihan. The club is in a good financial condition and now has a membership of nearly 100. The members are actively preparing for their spring regatta on the lower Delaware.

* * *

At the regular meeting of the Pavonia Y. C. on Tuesday evening, March 12, it was resolved formally to open the new club house at Bayonne with the annual planked-shad dinner on May 5.

It was reported that the new building in process of erection there, containing lockers, workshop, sail and spar lofts, would be ready for occupancy during the coming week, and the club will take informal possession before April 1. Arrangements were completed for special races, open to club yachts only, over the new course on Memorial Day.

The Regatta Committee was instructed to arrange the annual regatta on June 17. Special races for the Commodore and McInnes cups, July 4; fall regatta on Labor Day. In addition to these there will be races for the smaller classes over the short course on each Saturday.

YACHTING NEWS NOTES.

The sloop yacht Shylock, owned by Mr. E. M. Mound, of Jersey City, was damaged to the extent of $1,500, on March 16, by the explosion of a gasoline stove, while in her winter quarters at City Island. Capt. Dannigan, who was in charge of the boat, was cooking his supper when the explosion occurred; he was badly but not seriously burned. Owing to the prompt work of the caretakers on yachts lying close by, a bucket brigade was formed and the fire extinguished. None of the other yachts in the yard was damaged.

* * *

Mr. P. M. Inglis, a prominent English yachtsman, is having built from designs of Mr. C. F. Herreshoff, 2d., a 65ft. linear rater, at the yard of Mr. Inglis' cousins, Messrs. A. & J. Inglis, Pointhouse, Glasgow. She was designed under the English Y. R. A. measurement rule and is 54ft. on the waterline and about 85ft. over all. The midship is of moderate girth, and she will carry a large sail plan. The frames are of nickel steel, and it is said she is to be planked with mahogany. The sails will be made by Lapthorn & Ratsey. Mr. Inglis has long been a racing yachtsman. He built the cutter Astrild, now in America, from designs by Mr. G. L. Watson, and is the owner of the cutter Carina, designed by the same man, while the yawl Caress, when a cutter, was his property. William Hogarth, the brother of the skipper of Shamrock I. when she met Columbia, will be the captain of the new Inglis boat.

* * *

Mr. A. Howard Hinkle's 65ft. racing cutter Senta, from Southampton, England, for Greenport, L. I., arrived at Bermuda, March 15, after a passage of 41 days. When Senta first sailed from Southampton for America, she went ashore on Pennington Spit, in the Solent, and was compelled to put back for examination. Her hull was found to be uninjured, and she resumed her voyage on Feb. 2. Mr. Hinkle purchased Senta in December. She was designed by Mr. Fife, and was built at Fairlie in 1898.

* * *

The contract for the construction of a large steel steam yacht for Mr. H. Clay Pierce, of St. Louis, from designs by Messrs. Gardner & Cox, has been secured by Mr. Lewis Nixon, and will be built at the Crescent Shipyard, Elizabethport, N. J. She will have twin screws, and will be fast. The yacht will be named Orizaba, and her dimensions are—length over all, 256ft.; beam, 30ft.; depth, 20ft.; and draft, 14ft.

* * *

The London Yachtsman devotes much space in its current issue to "Notes from the States."

It is understood that the ex-owner of one of the exported 65-footers intends to build a new vessel of the same class. Apropos of the export trade in yachts, we have often expressed surprise at the ineffectiveness of the Payne law. An explanation of this has been given us by a citizen of the United States, who tells us that it is technically known as a hayseed law. Hayseed laws are the result of bills promulgated by representatives from Central and Western States, the interests of which are agricultural, and who therefore try to get the greatest

TWENTY-THREE-FOOT CRUISING YAWL—SAIL PLAN.

possible portion of the revenue out of the manufacturing and shipping industries of the Eastern coast. These bills are placidly allowed to pass by the Eastern representatives when, as in the Payne case, they contain no penalty or means of enforcement. That is the whole secret—the Payne law is hayseed. Another coming hayseed law will enact that every auxiliary, a canoe yacht even, shall have a certificated engineer to drive her. There is no objection to this, because there will be no penalty for infringement. It is a very simple way of managing affairs.

There is now building at Messrs. T. A. Crane's Sons' yard, Erie Basin, Brooklyn, a small steam yacht for Mr. Edward M. Brown, formerly Commodore of the New York Y. C. She will be 60ft. 7in. over all, 60ft. on the waterline, 10ft. 9in. beam, and 2ft. 4in. draft. The yacht was designed by Mr. H. J. Gielow. The plans show a comfortable cabin, toilet room, galley, etc., and a large open cockpit aft. The power will be steam, consisting of a triple-expansion engine, with cylinders 4¼, 6½ and 11in. in diameter, with a common stroke of piston of 7½in. with a Roberts water-tube boiler. Being intended for shoal water in the Great South Bay, the bottom of the hull is concaved over the screw.

Capt. A. M. Sheppard, U. S. N., stationed at Staten Island, has assured Mr. David Barrie, who is looking after the interests of Shamrock II. over here, that all the courtesies extended to Sir. Thomas Lipton two years ago will be willingly accorded him during his coming visit. A number of buoys have have been placed at his disposal, and the Shamrock, the steam yacht Erin and attending craft will anchor off the Government dock at Sandy Hook.

John Harvard Biles, professor of naval architecture at the University of Glasgow, in the course of a lecture, said: "Great Britain has always been several years behind America in yacht construction. The problem is to reduce weight without reducing strength. The plea that British yachts have to cross the Atlantic has done duty as an excuse too long. Development has been steadily in the direction of lighter hulls and more sail, but we are yet behind the Americans. The veil of secrecy surrounding the conception and construction of British challengers is perhaps necessary to prevent the abstraction of secrets, but they are secrets which, if another knew them, he would only regard as things to avoid."

Mr. R. H. McCormick has bought from Mr. Frederick Conde, of Oswego, N. Y., the yacht Catherine C., which was formerly owned by Mr. M. Cudahy, of Chicago. The boat, which is now at Oswego, will be taken at once to Toronto to be put in shape for salt water uses. Then she will sail for Bar Harbor, Me.

The schooner yacht Nokomis is being altered at the foot of Twenty-third street, South Brooklyn. A 40 horsepower engine is being put into her and a new wheel house is being placed forward. The interior is also being overhauled, and when finished she will cruise in the West Indies.

Mr. Frank Tilford's steam yacht Norman, which has been lying at the docks of the W. & A. Fletcher Co., of Hoboken, N. J., since January last, is having new engines put in which are expected to give her a speed of eighteen knots an hour. She will return to Manning's Basin next week for a general overhauling preparatory to going into commission.

Com. Frederick T. Adams' schooner yacht Sachem, flagship of the Larchmont Y. C., which has been in winter quarters at Port Jefferson, L. I., is now in the hands of Messrs. Gardner & Cox for minor changes in her cabins and deck fittings.

The steam yacht Cosette, recently bought by Mr. W. S. Compton, of New London, Conn., has begun overhauling preparatory to going into commission at the Jacob yard, City Island. The yacht will cruise in Southern waters in the early spring.

Mr. Frederick G. Bourne's steam yacht Colonia is at Tebo's Basin, South Brooklyn, being overhauled and refitted for the coming season. Mr. Bourne is a member of the syndicate that owns the Cup yacht building at Bristol, R. I.

Dr. E. M. Culver, New York, who now flies the Vice-Commodore flag of the Biscayne Bay Y. C., the most southerly yacht club in the United States, has just ordered a still larger yacht from the Cero designer and builder, Mr. Ralph M. Munroe, formerly of Staten Island, N. Y., now of Biscayne Bay, Fla. The new boat will be larger than the Cero, but like her in every other way.

"The steam yacht Lady Beatrice, formerly owned by Lord Rendell," says the Field, Feb. 23, "has been sold to an American yachtsman. She has been docked by Messrs. Hamilton & Co., Port Glasgow, and will have an overhaul."

The Southampton correspondent of the Field says: "Ailsa, yawl, has been dry docked by Fay & Co., and is now fitting out in the docks for her voyage across the Atlantic." Ailsa is the property of Mr. Henry S. Redmond, N. Y. Y. C.

The question of mildew in sails is at present agitating British yachtsmen to the full extent which this subject should have aroused among yachtsmen in this country. For some months the Yachtsman has given up its columns to discussions and suggestions of yachtsmen who have experimented with various compounds and patent preparations intended to overcome this destructive nuisance. The latest suggestion, said to have proved satisfactory, is composed and applied as follows: Dissolve 2lbs. acetate of lead and 6lbs. powdered alum in 10 or 12gals. of warm water. An old-fashioned washtub is sufficiently large to hold this amount of water and the immersed mainsail of a small yacht (say up to 5 tons). Do not, however, put the sail in until the water has cooled. Keep it there for two or three hours, frequently stirring the water. Afterward dry the sail in the open air. The wind will soon blow the superfluous powdery stuff off. The correspondent states that despite the fact that it is claimed that the preparation will discolor sail, his experience has been that the claim is groundless. The experience is based on a suit of sails that were treated three years ago, and are still white and free from the mildew and sound in texture.

If the cutter Iverna, owned by Mr. J. Jameson, is not put afloat this season, the Field, Feb. 23, says, "C.

Biffiin, who has been her mate for years, will go as second hand in Sir Thomas Lipton's Cup challenger Shamrock."

'Mid Reef and Rapid.—IV.

BY F. R. WEBB.

WE slipped easily through the big break in the old Rippetoe Dam—now fast going to pieces, much to our satisfaction, for it was always a particularly mean dam to portage—and for the first time in our experience had to wade down the two or three hundred yards of swift rapids below it, with our canoes, lightened of our weight, drifting ahead of us at the length of their stern painters, and at about 5 o'clock in the evening we made a landing at our old camp ground under the rocky bluff at the big spring, half a mile below the dam, and never were canoeists more glad to reach camp than were we, for our unusually arduous day's cruise had about used us up. The first day out on a cruise is generally fatiguing; the unaccustomed exercise and the unusual exposure to the hot sun are very exhausting to even the most robust, and our day's cruise had been particularly fatiguing, owing to the unusual amount of hard work we had to do in order to cruise at all.

We all scrambled hastily ashore, dragging our canoes after us half up on the rocks, and, taking off the hatches, began removing their cargoes, which were piled —each man's camp duffle—near the spot he had selected for his canoe.

The now nearly empty canoes were easily carried up the bank by the four of us and placed in position on the beautiful, rocky shelf below the bluff for the night, after which the last remaining drops of water in them were carefully sponged out, the rubber sheets spread in them to keep all possible dampness from reaching the bedding, the mattresses drawn from their oiled canvas envelopes and placed in the canoes.

The Colonel, with his constitutional indisposition toward anything in the nature of superfluous exertion, also because it saved time—the Colonel is great on saving time; he is always the first man to have his canoe ready at night or packed in the morning—I say the Colonel had last year insisted that it was a work of supererogation to pull the matresses out of the bags, and that they slept just as well in the bags as out, but two or three nights' experience with the cold, rough, unsympathetic oiled canvas between his blankets and the soft hair mattress did more to convince him of the fallacy of his theory than all the logic at my command—the Colonel has frequent gleams of excellent sense—he can see a thing and learn a fact or two, as well as anybody—when he bumps his head against it real hard.

The beds of blankets were then made up on the mattress and the air pillows inflated and placed at the head, after which the tents were erected over the 8ft. open cockpits, and the fore and aft hatches replaced and folded back, leaving a little shelf some 12 or 14in. wide at each end of the tent, upon which to place things, and the camp was in order.

"Where will you have the camp stove, Commodore?" said Lacy, as he approached with the sheet iron box containing the culinary outfit of the expedition, which, in cruising, is assigned to his canoe.

"Right by the spring there," said I, as I approached with the mess chest which belonged to my canoe.

"Here's the mess table, too," said the Colonel, taking from the Mary Lou two thin pieces of poplar 4ft. long by 14in. wide, which in transit were carried flat on the floor of his canoe.

"Well, it will go alongside of the camp stove by the spring, also," I replied.

"You can't drive pins in this rock," objected the Colonel, as he laid the boards down in the place indicated.

"No; but you can pile up a few rocks and place the table on them," I replied.

The well-regulated canoeist generally tries to make a fairly early camp, and always makes it a point to first get his bedding fixed and tent up for the night, with things fixed snug and shipshape about his camp. His wet clothes are then removed and dry ones put on. If the evening is chilly and if he is particularly wet and fatigued, the dry clothes matter is attended to first and the tent and camp next, after which he sets about preparing supper.

Our camp being duly fixed, we proceeded to invest ourselves in warm, dry clothing, the which being done we set about our supper preparations in our usual systematic manner, each man having certain recognized duties to perform. George took the axe and at once climbed the bluff in search of firewood for the camp stove. Lacy proceeded to fill the expeditionary tin pails and tea kettle with water from the spring close by, and placed them close to my hand. The Colonel spread out the table and placed it securely at a convenient elevation on stones gathered and piled for the purpose by himself and Lacy, while I placed the camp stove in position and fitted the pipe to it, measured the proper quantity of water into the coffee pot and wetted up the spoonful of coffee for each man, with one for the pot, in a tin cup, ready to pour into the pot when the water should boil, prepared the ham, and George having by this time returned with an armful of wood, which he threw down alongside of the stove and then went back for a further supply with which to get breakfast, I started the fire in the camp stove with the assistance of a little coal oil judiciously applied, and put my coffee pot and tea kettle on to boil, while I went on with my preparations for a bountiful supper, assisted by the Colonel, who broke and beat the eggs and chopped up the cheese for an omelette, while I fried the ham, and in a short time, after a good, refreshing washing of our hands and faces and sousing of our heads in the river, we were seated on our camp stools around the board, doing justice to a royal supper, for we were very hungry as well as tired.

Supper over, George and Lacy—whose duty it is to "clean up"—took care of the supper utensils, while I put things to rights around the camp for the night. Returning the oiled canvas bread bag to my canoe and placing the mess chest, egg bucket and bags containing vegetables high up on the rocks, well out of reach of predatory pigs, with which we have had some experience at this camp, I lighted the lanterns, which were placed one at each end of the camp, after which our evening smoke was in order.

The evening was a beautiful one as viewed from our unusually beautiful camp. Seated upon our camp stools upon the solid rock floor with the river rippling placidly in front of us, its gentle murmur as it caressingly played around and over the big boulders of an old broken-down fish dam a short distance above, falling on our ears in a soothing lullaby, while the nearly full moon riding high overhead in a cloudless sky shed a soft, silvery radiance on all around, which was reflected in countless points of light from the ripples below and fell in curious and beautiful little patches of lights and shades on the rocks around us, and on our tented canoes, through the leafy boughs of the overhanging trees, which climbed in somber wall of dense shadow high up on the side of the steep bluff behind us. No sound broke the quiet of the night but the musical murmur of the water and the gentle rustle of the breeze.

We were tired out, however, and did not sit long to enjoy the tranquil beauty of the night. We quietly and without much conversation finished our smoke, and by half past eight were all snugly ensconced in our little cabins, and the only signs of life about the camp were the dim gleams of light from the lanterns, placed on the rocks at each end of the camp; the dull twinkle of the coals of dying fire through the door of the camp stove and the gentle sigh of the kettle on the stove.

[TO BE CONTINUED.]

There will be a meeting of the Executive Committee of the Atlantic Division, A. C. A., at the Astor House, New York city, on the evening of Saturday, March 23, 1901, at 8 o'clock P. M.

Ducks and Geese in Patagonia.

On either side of the long straggling settlement spreads the uninhabitated desert—uninhabitable, in fact, for it is waterless, with a sterile, gravelly soil that only produces a thorny vegetation of drawf trees. It serves, however, as a breeding place for myriads of winged creatures; and never a season passes but it sends down its hungry legions of one kind or another into the valley. During my stay pigeons, ducks, and geese were the greatest foes to the farmer. When the sowing season commenced the pigeons came in myriads to devour the grain, which is here sown broadcast. Shooting and poisoning them was practiced on some farms, while on others dogs were trained to hunt the birds from the ground; but notwithstanding all these measures half the seed committed to the earth was devoured. When the corn was fully ripe and ready to be harvested then came the brown duck in millions to feast on the grain. Early in winter the arrival of the migratory upland geese was dreaded. It is scarcely possible to keep them from the fields when the wheat is young or just beginning to sprout; and I have frequently seen flocks of these birds quietly feeding under the very shadow of the fluttering scarecrows set up to frighten them. They do even greater injury to the pasture lands, where they are often so numerous as to denude the earth of the tender young clover, thus depriving the sheep of their only food. On some estates mounted boys were kept scouring the plains and driving up the flocks with loud shouts, but their labors were quite profitless; fresh armies of geese on their way north were continually pouring in, making a vast camping ground of the valley, till scarcely a blade of grass remained for the perishing cattle.—The Gentleman's Magazine.

Near the south end of Lake Welokennebacook is a sort of sea wall, built many years ago to facilitate the operations of the lumber men. A Massachusetts lady who came down to the lakes on a fishing excursion went home and told her friends that one of the most curious things she saw was a wall in one of the lakes for the purpose of keeping the bullfrogs from jumping out and frightening the deer! Some wicked guide had imposed on the dear.—Lewiston (Me.) Journal.

Trapshooting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for a quarter-century.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

March 21.—Newell, Ia.—Newell Gun Club's target and live-bird shoot. Henry G. Hall, Sec'y.
March 25-26.—Tunkhannock, Pa.—Two days' amateur tournament of the Tunkhannock Rod and Gun Club; targets and live birds. Spencer D. Reed, Sec'y.
April 1-2.—Houston, Tex.—Two days' tournament of the Peters Cartridge Company.
April 1:—Cleveland, O.—April shoot of the Cleveland Gun Club Company.
April 9-12.—Baltimore, Md.—Seventh annual spring tournament of the Baltimore Shooting Association; two days targets, $100 per day added; two days live birds, $500 guaranteed. J. M. Hawkins, Sec'y.
April 10.—St. Louis, Mo.—Contest for Dupont trophy at Dupont Park.
April 12-13.—Newark, N. J.—Forester Gun Club's tournament. J. J. Fleming, Sec'y.
April 16-18.—Leavenworth, Kan.—Annual tournament of the Kansas Sportsmen's Association. W. H. Koehler, Sec'y.
April 18.—Newell, Ia.—Newell Gun Club's target shoot. Henry G. Hall, Sec'y.
April 23-25.—Spirit Lake, Ia.—Klein-Barmeister's third annual target tournament; $50 added each day.
April 24-25.—Binghamton, N. Y.—Amateur tournament of the Peters Cartridge Co.; $150 added money. H. W. Brown, Sec'y. John Parker, Mgr.
April 26-28.—Chicago.—Annual spring tournament of the Crescent Gun Club. John S. Boa, Mgr.
May 7-9.—Peru, Ind.—Fifth annual amateur tournament of the Peru Gun Club; two days at targets for amateurs; one day at live birds. Chas. Bruck, Sec'y.
May 7-10.—Tournament of the New Jersey State Sportsmen's Association. C. W. Feigenspan, Sec'y.
May 7-10.—Lincoln, Neb.—Twenty-fifth annual tournament of the Nebraska State Sportsmen's Association, under the auspices of the Lincoln Gun Club. W. D. Bain, Sec'y.
May 14-17.—Allentown, Pa.—State shoot of Pennsylvania State Sportsmen's Association. C. F. Kamlich, Cor. Sec'y. Elmer E. Shaner, Mgr.
May 1-3.—Newell, Ia.—Newell Gun Club's annual tournament; targets and live birds. Henry G. Hall, Sec'y.
May 14-16.—Elwood, Ind.—Tournament of the Zoo Rod and Gun Club.
May 14-17.—Newton, Ia.—Annual tournament of the Iowa State Sportsmen's Association, under auspices of the Newton Gun Club. D. R. Tripp, Sec'y.
May 21-25.—Springfield, Ill.—Twenty-seventh annual tournament and convention of the Illinois State Sportsmen's Association. Chas. T. Stickle, Sec'y.
May 22-23.—Mechanicsburg, O.—Ninth annual tournament of the Mechanicsburg Gun Club. C. W. Phellis, Sec'y.
May 28-30.—London, O.—Tournament of the London Gun Club.
May 28-30.—Saginaw, Mich.—Tournament of the Michigan Trapshooters' League, under auspices of the East Side Gun Club. John Parker, Mgr.
May 28-June 1.—St. Louis, Mo.—Twenty-fourth annual tournament of the Missouri State Game and Fish Protective Association. Herbert Taylor, Sec'y.
May 30.—Canajoharie, N. Y.—Tournament of the Canajoharie Gun Club. C. Weeks, Sec'y.
May 30.—Auburn, Me.—Annual shoot of the Auburn Gun Club.
June 5-7.—Circleville, O.—Under auspices of the Pickaway Rod and Gun Club, annual tournament of the Ohio Trapshooters' League. G. R. Haswell, Sec'y.
June 11-13.—Sioux City, Ia.—Seventh annual amateur tournament of the Soo Gun Club. W. F. Duncan, Sec'y.
June 13-14.—Bellefontaine, O.—Fourth annual tournament of the Silver Lake Gun Club. B. G. Cushman, Sec'y.
June 17-20.—Warm Springs, Ga.—Southern Interstate tournament; two days targets, two days live birds. Chas. L. Davis, Mgr.
June 25-27.—Walla Walla, Wash.—Seventh annual tournament of the Sportsmen's Association of the Northwest. W. G. Campbell, Sec'y.
June —.—Columbus, Wis.—Tournament of the Trapshooters' League of Wisconsin. First week in June.
July 17-18.—St. Marys, W. Va.—Fifth annual tournament of the West Virginia State Sportsmen's Association, under auspices of West Virginia Gun Club. Mallory Brothers, Mgrs.
July 30.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.
Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.
Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.
April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap Tournament at Live Birds.
Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds; $5 entrance. First contest took place June 20, 1900.
Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

April 1-5.—Interstate Park, Queens, L. I.—The Interstate Association's ninth annual Grand American Handicap tournament at live birds. Edward Banks, Sec'y-Treas., 318 Broadway, New York.
April 17-18.—Jacksonville, Fla.—The Interstate Association's tournament, under the auspices of the Jacksonville Gun Club. B. W. Sperry, Sec'y.
May 8-10.—Memphis, Tenn.—The Interstate Association's tournament, under the auspices of the Memphis Gun Club.
June 19-21.—Cleveland, O.—The Interstate Association's tournament under the auspices of the Cleveland Gun Club.
July 1-2.—Sherbrooke, P. Q., Can.—The Interstate Association's tournament under the auspices of the Sherbrooke Gun Club. C. H. Foss, Sec'y.
July 10-11.—Jamestown, N. Y.—The Interstate Association's tournament, under the auspices of the Jamestown Gun Club. Dr. C. Rawson, Sec'y.

July 23-26.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York.

Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament under the auspices of the Providence Gun Club. R. C. Root, Sec'y.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Under date of March 13 Mr. Herbert Taylor, of St. Louis, Mo., writes us as follows: "The Missouri State Game and Fish Preserve Association will hold its twenty-fourth annual tournament in St. Louis, on May 28, 29, 30, 31 and June 1." The following clipping is taken from the Globe-Democrat of even date: "The St. Louis Shooting Association held a meeting last night for the purpose of discussing the coming tournament of the Missouri State Game and Fish Protective Association, which is to be held under the auspices of the former organization again this year. The most important business transacted at the meeting was the claiming of the dates from May 28 to June 21, inclusive, for the tournament. Outside of this, the plans for the tournament came in for a general overhauling. The Association will make an attempt this season to make the tournament more attractive to the purely amateur shooters than has been the case heretofore, and less attention will be paid to the professionals who represent the gun and ammunition companies. If this plan is carried out, the amateurs will get a chance and the number of shooters present should be larger than ever before. The principal events to be shot at the coming tournament are the Interstate, State and State team shoots, all three of these being under the auspices of the State Association. At least one other live-bird trophy shoot will be held during the week, and probably two. A full programme of target events will be provided. The added money in the events will total about $1,000. This will be the third successive year in which the State shoot has been held in St. Louis, and if the indications go for anything it should be the most successful of the lot. Another meeting will be held next Tuesday, at which a programme will be arranged."

Mr. J. L. Head, special passenger agent of the Wabash R. R., calls our attention to his purpose in respect to conducting a special party to the forthcoming Grand American Handicap. He says: "I have devoted considerable time for the past five or six months in endeavoring to secure for every shooter in the United States, regardless of his location or over what route he intends to travel, a reduced rate for the Grand American Handicap of 1901, but this is a thing which cannot be accomplished. However, if you contemplate going to New York, and will travel in my party, you will be able to save something from the regular rate, as we will have a party rate of $16.75 from Chicago to New York and vice versa. Our train, the Continental, Limited, by way of the Wabash Line, will leave Chicago at 11 A. M. Saturday, March 30, going by way of Detroit, Niagara Falls, Buffalo, Rochester and Utica, and will reach New York Sunday afternoon at 3:30 P. M. This train, in point of equipment, dining car service, etc., is unexcelled. I have been connected with the Wabash Railroad Company for a number of years, and have perhaps devoted as much time to shooting as any amateur shooter in this country since I have taken up the sport, and think I am in every way fitted to care for a party made up of America's representative sportsmen. It is true I am a member of the handicap committee, but this will in no wise interfere with my party, as I expect to return to Chicago in time to go with the train. While I am in New York on the 27th inst., I will be pleased to reserve any hotel accommodations you may direct me to secure for you, whether you travel via our line or not. If there is any further information or particulars in regard to this trip you desire, please address me at Room 310, Marquette Building, Chicago; or Peru, Ind."

The programme of the Binghamton Gun Club's amateur tournament, April 24 and 25, is ready for distribution. This tournament is given with the assistance of the Peters Cartridge Company, of Cincinnati and New York. There are ten events for each day, at 15, 20 and 25 targets, entrance based on 10 cents per target. Extra events will be shot if time will permit. Added money, $1.50. The following information is also contained in the programme: "John Parker, manager. A handsome gold charm will be given for highest average for two days' target shoot. Any profit accruing from this tournament will be added to an extra event at close of the second day's programme for those who have shot the entire programme. Targets will be thrown at 2 cents apiece. Two sets of traps will be used—the magautrap and Sergeant system. All even events will be shot over the magautrap, and the odd events over the Sergeant system. Target purses will be divided Rose system—5, 3, 2 and 1 in the 15-bird races, 7, 5, 3, 2 and 1 in the 20 and 25-bird races. The referee's decision will be final, except in case of doubt, when he may appeal to contestants in squad. American Association rules in connection with magautrap rules will govern all target events. Manufacturers' agents barred from contesting for the purses, but can shoot for price of targets. Guns and ammunition shipped to H. W. Brown will be delivered to the grounds free of charge." The grounds are located at Exposition Park, only five minutes from hotels. For programme or information, address H. W. Brown, Binghamton, N. Y., or The Peters Cartridge Company, 80 Chambers street, New York.

The Cleveland Gun Club Company has issued its programme for its shoot on April 1, to be held on its grounds on Kershaw street. This shoot is the first of the kind it has ever given and it will strive to make the event specially agreeable to all. Every one is invited; no one is barred. There are four events. Nos. 1 and 2 are at 40 targets, 75 cents entrance, ten merchandise prizes. No. 3 is at 40 targets, 75 cents entrance, ten prizes. Prizes and conditions remain secret, but the competitors are advised to shoot the best they can. No. 4 is at 40 targets, 75 cents entrance, ten prizes for handicap point winners. There are four general average prizes. The programme presents further information as follows: "Any kind of a gun may be used. Lunch for sale in the club house. Targets will be thrown dead easy. Any kind of powder may be used. Any amount of powder may be used. Ammunition for sale on the grounds. Any amount and size of shot may be used. No one shooter can win more than one prize in any one event. You may enter any time during the day if you have the price. Shooting will commence at 9 A. M., and will continue until programme is complete. You may stand at any distance you please, provided it is considered safe by the captain. You may figure average any way you please, provided you break one or more targets in any event. Any man making a perfect score will be fined a suitable amount to fit the crime." For programme, address Mr. J. L. Decker.

The recent contests at Interstate Park, technically known as the Roof Garden tournament, accentuate what has been repeatedly demonstrated before, namely, that the 16yd. mark is too near the traps for the modern ammunition, modern guns and modern shooters. Scores of 100, 99, 98, etc., out of a possible 100 were so common that anything less was looked upon with indifference. But long habit governs most of us in our thought and action. It is difficult to make new departures from the established order of things, which has always been an explanation of why progress is made slowly. It is likely that shooting will continue at the 16yd. mark for a long time to come, if for no other reason than that somebody's daddy stood at that mark, and thereby made it the standard for all time.

On March 13 Mr. W. R. Crosby, in the continuous match, made the sensational run of 345 breaks, thus surpassing all prior records of the shotgun. His nearest competitior was Mr. J. S. Fanning, who on March 15 scored 225, an excellent performance in itself. The feat of either is a great test of skill as well as endurance, for few men could handle a gun accurately after using the left arm so continuously even if they had the skill. Mr. Crosby's record in all probability will stand many a year before it is equaled. The longest previous continuous run, 175, was made last year by Mr. Fanning, on the roof of Madison Square Garden, on the thirteenth day of the Roof Garden tournament.

The New York State shoot will be held in connection with the Pan-American Exposition, at Buffalo. The present purpose is to hold it with the tournament to be held under the auspices of the Exposition. The committee in charge of the sporting interests has guaranteed $2,000 in cash to be applied as added money. This, in addition to other valuable prizes, will be of keen interest to shooters. Under the advantages which will accrue to the Association by the change President W. A. Sykes, of the New Utrecht Gun Club, will submit a proposition to the other members, which will authorize him to make the change.

The Tunkhannock Rod and Gun Club, of Tunkhannock, Pa., has issued the programme for its tournament on March 25 and 26. There are ten events each day, of which nine are at targets and one at live birds. Each live bird event is at 5 birds, $5, birds extra. The target events are at 10, 15 and 20, entrance based on 10 cents per target. Bluerocks at 1½ cents each. Purses divided 50, 30 and 20. Manufacturers' agents may shoot for targets. Gun and ammunition shipped to the manager, Mr. Spencer D. Reed, will be delivered on the grounds free of charge.

The Forester Gun Club, of Newark, N. J., desires that its friends will endeavor to be present at its tournament April 12 and 13, as it has made special arrangements to give its patrons an enjoyable time. There will be no delays in the programme. A good lunch and comfortable quarters will be provided, and good fellowship will dominate. Programmes will be ready for distribution on March 25, and can be obtained of the secretary, Mr. J. J. Fleming, 21 Waverly avenue, Newark, N. J.

The interesting letter of Mr. Paul North, which treats of the International trapshooting team match, and which is published elsewhere in our trap columns, is worthy of earnest consideration. The preliminaries have been arranged to the stage where it is a matter now of ways and means. If each shooter and each gun club contributes his and its mite, there will be no delay. Do not wait to see what the other fellow does; set the example for the other fellow by deeds.

Keep in mind that Saturday of this week is the day on which the Grand American Handicap entries close. Send in your $10 forfeit to the secretary, Mr. Edward Banks, 318 Broadway, New York, if you intend to participate in America's greatest trapshooting event. Penalty entries may be made after March 23 and before the last contestant fires at his second bird by the payment of $10 extra, a total of $35.

Mr. C. C. Nauman, Jr., of San Francisco, Cal., who has shot in previous Grand American Handicaps with all the grace of a drum major, and with much more accuracy, and Mr. Tod Sloan, who knows something about horse ballistics, will wend their way hitherward from San Francisco in a few days to participate in the greatest of America's scientific expositions, the Grand American Handicap.

On Wednesday of last week, at Philadelphia, James Cowan defeated J. W. Orth in a match at 50 live birds by a score of 43 to 37. Orth stood at 25yds., Cowan at 28. Orth shot at pigeons, Cowan at sparrows. Orth was not in his u. g. f. On the 11th inst. he defeated C. Johnson in two 50-live-bird matches, winning the first by a score of 44 to 39, and the second by a score of 46 to 40.

The amateur championship of North America, originally fixed to be held under the auspices of the New Utrecht Gun Club at Interstate Park on March 30, has been postponed to some date after the Grand American Handicap. The conditions are 25 live birds, 28yds.; entrance, price of birds; open to all except paid professionals, for a valuable trophy, which is donated by the N. U. G. C.

Mr. Elmer E. Shaner took flight to Pittsburg on Monday of this week to take a much-needed rest after two weeks and more of strenuous work managing the Roof Garden tournament. He will return on Monday of next week to prepare the way for the Grand American Handicap, which, under his thorough organization, is as pleasing and consecutive as a panorama of beautiful pictures.

The Trenton Shooting Association shot a team race with the White Hill Gun Club, March 13, on the grounds of the former. There were six men on a side, 25 targets per man. Score, 102 to 76 in favor of the Trenton team. A return match will be shot March 23, on the White Hill Gun Club's grounds.

On Monday of this week at Interstate Park, L. I., a match, which has been pending several weeks, between Messrs. T. W. Morfey and C. W. Feigenspan, Jr., of Newark, was shot. The conditions were 100 live birds each, $100 a side, 30yds. The scores were Feigenspan 95, Morfey 90.

Under date of March 16 Mr. L. H. Schortemeier informs us that the annual inanimate merchandise handicap and clam bake of the Hell Gate Gun Club will take place July 30 at Dexter Park, Brooklyn, instead of July 23, the Interstate Association having fixed upon the latter date also.

The fifteen-men team race between the New Utrecht Rod and Gun Club and the Riverton Gun Club, fixed to take place on March 22, has been postponed for a few days.

The Ambler and Lansdale gun clubs shot a ten-men team race at Ambler, Pa., on March 13, 25 targets per man. Lansdale won by a score of 169 to 156.

In an event at 17 live birds, eight contestants, at Fort Worth, recently, Captain A. W. du Bray killed straight, his nearest competitor being two less.

The programme of the Baltimore Shooting Association's tournament is published in full elsewhere in our trap columns this week.

BERNARD WATERS.

Florists' Gun Club.

WISSINOMING, Pa., March 12.—The final shoot for the Dorp prizes took place to-day at the shoot of the Florists' Gun Club. The first prize was won by E. A. Massey; second by J. Burton. The weather was pleasant, though windy. The scores:

	Known.	Unknown.	Hdcp.	Total.
Westcott	21	18	20	59
Massey	20	20	15	55
Whitaker	16	20	19	55
Anderson	22	22	8	52
McKaraher	18	16	18	52
Umholtz	13	16	20	49
Haywood	21	16	12	49
Sheeler	16	13	19	48
Coleman	19	20	8	47
Pechin	13	14	20	47
Hallowell	20	22	4	46
Parsons	19	16	10	45
Dorp	14	16	13	43
Bell	12	16	14	42
Brown	14	8	20	42
Moffett	20	22	..	42
Burton	16	14	9	39
Campbell	14	17	..	31
Hause	7	3	20	30
Reichman	12	8	..	20
Eisenlohr	23	21	9	53

The points scored in the series of shoots for the Dorp prizes: Massey 8, Burton 7, McKaraher 6, Westcott 6, Dorp 5, Anderson 5, Sheeler 4, Coleman 3, Parsons 3, Barrett 3, Whitaker 3, Smith 3, Eisenlohr 3, Haywood 2, Umholtz 2, Clark 1.

ON LONG ISLAND.

New Utrecht Gun Club.

Interstate Park, L. I., March 16.—Good weather and good sport were enjoyed by the members of the New Utrecht Gun Club who participated in the competition to-day.

Sweepstakes, 7 birds: Jack 7, Lockwood 7, Weightman 7, Feigenspan 6, Edey 6, Henry 5, Reynolds 3, Hallowell 3.

Trophy event, 7 birds: Feigenspan 7, Weightman 7, Hallowell 7, Waters 7, Jack 6, Lockwood 6, Edey 6, Henry 6, Reynolds 5, Jack 5, Hamilton 4. The ties in this event were shot off miss-and-out as a part of the following event.

Club shoot, 10 live birds: W. S. Edey 10, M. R. Weightman 10, John J. Hallowell 10, Ben Waters 10, Cornelius Furgueson 10, John Gaughen 10, J. P. Kay 10, C. W. Feigenspan 9, H. M. Brigham 9, F. B. Stephenson 9, W. T. Hamilton 9, Captain Jack 8. The tie was then shot off between Hallowell and Waters, miss-and-out, the latter winning.

Sweepstakes, 7 live birds: Furgueson 7, Brigham 7, Jack 7, Gaughen 7, Stephenson 7, Brooks 7, Hallowell 7, Reynolds 7, Kay 6, Henry 5.

Shoot-off, miss-and-out: Furgueson 6, Gaughen 5, Jack 2, Hallowell 2, Reynolds 1, Brigham 1, Brooks 0.

Sweepstake, 10 birds, $5 entrance: J. A. R. Elliott, 30yds., 10; S. M. Van Allen, 30yds., 10; F. Gilbert, 30yds., 10; J. S. Fanning, 30yds., 10; E. C. Griffith, 30yds., 10; F. Parmelee, 30yds., 10; B. Le Roy, 28yds., 10; A. H. Fox, 30yds., 9, E. Banks, 29yds., 9; B. H. Norton, 29yds., 9; Ralph Parker, 28yds., 8; A. E. Hull, 28yds., 7, withdrew; Watson, 29yds., 6, withdrew; Root, 29yds., 6, withdrew.

Sweepstake, 7 birds, $2 entrance: Norton 7, Griffith 7, Banks 7, Fox 6, Root 5.

Sweepstake, 10 birds, $5 entrance: Van Allen 10, Morfey 10, Crosby 9, Fanning 9, Hopkins 9, Gilbert 8, Parker 8, Wood 6, Watson 5.

Sweepstake, miss-and-out: Morfey 7, Van Allen 7, Parker 6.

Richmond Pigeon Club.

RICHMOND, Va., March 15.—The Richmond Pigeon Club held their monthly handicap shoot at the baseball park on Wednesday, March 13. There was a very fair attendance, and a goodly show of spectators. The weather was fine, but a little warm for some of the birds. The majority of them, however, were very good ones.

Before the club shoot the tie for the city championship medal between Messrs. W. A. Hammond and Franklin Stearns was decided. This was held over from the previous week. Mr. Hammond has been the holder for several years, but Mr. Stearns on this occasion proved the victor by a score of 23 to 22:

Hammond vs. Stearns for city championship medal:

Trap score type—Copyright, 1901, by Forest and Stream Pub. Co.

	4	1	2	5	3	2	5	4	1	1	5	3	4	5	4	5	3	2	2	1	1	4	1	1	2
Hammond	0	2	*	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	0	2	2	2	2—22
	3	5	3	3	1	4	2	1	4	4	4	5	4	2	2	5	2	3	1	1	5	4	5	3	5
Stearns	2	2	2	2	2	2	2	0	2	2	2	2	2	2	2	2	2	2	*	2	2	2	2	2	2—28

In the club handicap the shooting was very good as a rule, and the light was fast failing ere the last bird was trapped.

Club shoot, handicap, 20 pigeons per man:

Hammond, 30	22022222202222222222—18
Colquitt, 30	0221222*222222111212—18

R. F. BANKS.

Keystone Shooting League.

HOLMESBURG JUNCTION, March 16.—The regular weekly shoot of the Keystone Shooting League had fine weather and good birds to favor the competition. Mr. F. B. McCoy distinguished himself by some exceptionally skillful shooting. His first effort was a match for $25 against specially trained birds, of which he had to kill 12 out of 15 to win. He scored 13 out of 15. The main events, scores, etc., were as follows:

Challenge cup shoot, 10 birds, 29yds. rise, open sweepstake, entrance $2.50:

Henry	*111212111— 9	Morris	2101221002— 7
Anderson	2*22022022— 7	Schenck	0012021202— 6
Hobbs	0202022220— 6	Russell	012120202*— 6
Harrison	1101010*01— 5	Orth	1212021222— 9

Anderson	*022221222— 8	Leedom	2202221012— 8

Fort Worth Gun Club.

FORT WORTH, Tex., March 9.—The Fort Worth Gun Club had a shoot on the North Side grounds to-day. Among the guests of the club who participated in the shoot were Messrs. Du Bray, of New York, and Dargan, of Dallas. There were several interesting events, the results being as follows:

First event, 17 live birds:

V C	122012122111022222—15
Du Bray	22222222222222222—17
Starling	01102012102222222—13
Howe	101*2211110*022 —10
McDowell	22*11221000122222—13
Packsaddle	22202201021100122—13
Bicknell	22022222201 2*2012—13
Moore	20111*111211**121—13

Second event, 17 live birds:

Bicknell	22022222201 2*2012—13
Moore	20111*111211**121—13

Bluerock shoot, 20 targets: V. C. 17, Starling 11, Moore 11, McDowell 11.

The International Trapshooting Match.

CLEVELAND, O., March 16.—*Editor Forest and Stream:* I have received word from the committee handling the London end of the team match that they will not be able to make the match for $5,000 a side, but can make it at $2,500, and we are willing to accept the match for the smaller sum in order to have a chance to compare our shooters with theirs. They also write that the pigeon shooters are all very anxious to have the American team come over, and will arrange some individual and team matches at live English bluerocks.

Every shooter in America is anxious to know how our best shots will compare with the best in England on the famous English bluerock pigeons, and while I did not have much opportunity to see live pigeon shooting while in England, I saw enough of their pigeons and of their best shots to feel that our best shots can render the best possible account of themselves in a match at anything that flies.

The shooting of live pigeons as well as targets on this trip will make it all the more interesting, and all that now remains is to finance the American team as far as expenses are concerned. There is no doubt but that the shooting public will come to the rescue and make the popular subscription now being made up fully large enough to cover the expenses of the team.

PAUL NORTH.

The Roof Garden Tournament.

WHILE the change to Interstate Park from Madison Square Garden stripped the title of its significance as a shoot on the roof of Madison Square Garden, it nevertheless is its correct technical designation. On the fifth day, March 7, at 11:15, the shooting on the roof was stopped, and resumed at Interstate Park the next day, March 8.

The competition was under the management of Mr. Elmer E. Shaner, the efficient manager of the Interstate Association, and it is hardly necessary to add that it was conducted with the ease and smoothness which are characteristic of his management. The staff of assistants were pre-eminently skilful and efficient. Mr. J. K. Starr, of Philadelphia, was cashier, and managed his office with perfect efficiency. Mr. F. C. Snyder made a most painstaking and efficient referee, and Mr. J. H. W. Fleming kept his eye and mind on the scoring, and therefore was accurate and trustworthy. The other members of the staff were: Blackboard man, John Wright, of Pittsburg; trap puller, Harry A. Kerr; trappers, Frank Keating and Max Dugas; shell man, Alphonse La Vigne. Mr. Wright's writing was as clear and regular as print, and therefore easily read. In fact, as Mr. Shaner remarked, the staff was excellent in every respect.

The following is a list of the shooters who qualified for the finals: Fred Gilbert 100, F. S. Parmelee 100, Edward Banks 99, W. R. Crosby 99, J. S. Fanning 99, E. C. Griffith 98, R. O. Heikes 98, H. C. Watson 98, H. M. Martin 97, J. A. R. Elliott 96, A. H. Fox 96, B. Le Roy 96, H. S. Welles 96, J. R. Hull 94, J. H. Cornwall 94, P. Brinton 92, C. Dudley 92, J. J. Hallowell 92, L. B. Smull 92, H. W. Bain 88, F. W. Getchell 88, J. R. Malone 88, C. Von Lengerke 88, S. M. Van Allen 86, F. B. Stephenson 84.

The following is a list of the loads, guns, etc, taken by the management and used by the competitors who shot in the final:

Guns and Loads.

Gilbert, Parker, 38 Dupont, 1¼ 7½, Leader.
Heikes, Parker, 3¼ E. C, 1¼ 7½, Smokeless.
Fox, Winchester, 3 Dupont, 1¼ 7½, Leader.
Crosby, Smith, 12 E. C, 1¼ 7½, Leader.
Fanning, Smith, 10 L. & K., 1¼ 7½, Acme and Leader.
Parmelee, Parker, 39 S. G. K., 1¼ 7½, Acme.
Elliott, Winchester, 10 Hazard, 1¼ 7½, Leader.
Griffith, Parker, 10 L. & K., 1¼ 7½, Leader.
Banks, Winchester, 3 E. C No. 2, 1⅛ 7½, Smokeless.
Martin, Daly, 12 Troisdorf, 1¼ 7½, Leader.
Le Roy, Remington, 3 Dupont, 1¼ 7½, Smokeless.
Watson, Scott, 3¼ Dupont, 1¼ 7½, Smokeless.
F. H. Brinton, Parker, 3¼ Schultze, 1¼ 7½, Smokeless.
C. Dudley, Parker, Rifle, 1¼ 7½, Leader.
J. J. Hallowell, Smith E. C, L. & K. and Dupont, 1¼ 7½, Smokeless and Acme.
F. B. Stephenson, Daly, 3¼ Dupont, 1¼ 7½, Smokeless.
H. S. Welles, Winchester, 24 Ballistite, 1⅛ 7½, Leader and Acme.
J. Hull, Parker.

The general averages, date and scores, out of a possible 1,100 of the Continuous match follow:

March:	4	5	6	8	9	11	12	13	14	15	16	
F S Parmelee	87	83	82	90	91	91	91	100	98	94	93	—1000
F Gilbert	92	94	93	93	97	100	88	100	100	98	98	—1053
W R Crosby	94	86	91	91	99	98	92	96	99	99	96	—1041
R O Heikes	92	88	91	91	97	93	88	98	96	93	90	—1017
J S Fanning	96	81	77	93	99	94	90	98	98	96	97	—1019
B Le Roy	89	83	88	89	95	90	86	96	96	93	92	— 997

March 12, Ninth Day.

Continuous Match.—The weather was windy, the wind being about 12 o'clock. In this match no large runs were made:

Gilbert	87	..	..	..	..	..	..
Fanning	1	9	3	9	1	1	3
Crosby	3	63	19	1	..	..	..
Heikes	1	4	5	..	..	..	..
Parmelee	7	3	2	18	19	16	11
Le Roy	1	42	..	..	..	..	..
Banks	1	7	3	10	..	..	..
Griffith	7	1	2	1	..	..	..
Watson	2	8	6	..	..	..	..

Association championship:

Parmelee	23	25	21	22	—91	J Delaney	15	23	22	16	—76

*Re-entries.

March 13, Tenth Day.

The day was calm and perfect for good scores. The sensation of the day was Crosby's run of 345:

Continuous match:

Crosby	53	76	345	..	..	..	..	..	..
Fox	2	2	4	2	1	50	0	1	11
Parmelee	12	6	1	..	..	..	..	..	..
Martin	1	5	4	..	..	..	..	..	..
Heikes	40	44	2	68	12	..	..	..	..
Gilbert	30	158	..	..	..	..	..	..	..
Fanning	99	1	92	52	..	..	..	..	..
Watson	3	11	..	..	..	..	..	..	..
Griffith	35	..	..	..	..	..	..	..	..
Le Roy	16	41	..	..	..	..	..	..	..

Association Championship.—Parmelee and Gilbert made the possible to-day, thus doing perfect shooting:

Parmelee	25	25	25	25	—100	Martin	23	22	24	25	— 94
Crosby	23	25	24	24	— 96	Bain	23	20	22	23	— 88
Gilbert	25	25	25	25	—100	Brinton	24	23	23	22	— 92
Heikes	24	25	24	25	— 98	*Martin	24	25	23	23	— 95
Fanning	25	24	25	24	— 98	T W Morfey	17	21	w		
Watson	24	24	25	23	— 96	*Martin	25	23	24	22	— 94

Le Roy	23	23	25	25	— 96	J H Carey	16	20	19	23	— 78
Fox	23	25	24	21	— 93						

*Re-entries.

March 14, Eleventh Day.

Continuous Match.—Fox was high man with a run of 125. The weather was calm, with bright sunshine:

Heikes	36	7	82	107	..	..	..
Fox	8	5	6	43	5	7	125
Parmelee	4	36	3	28	60	..	..
Fanning	24	53	4	52	102	..	..
Crosby	98	1	..	..	..	..	..
Gilbert	108	..	..	..	..	..	..
Griffith	32	58	..	..	..	..	..
Keller	0	2	..	..	..	..	..
Le Roy	0	20	..	..	..	..	..
Hallowell	0	..	..	..	..	..	..

Association Championship.—Gilbert again scored the possible, while Crosby and Banks were but 1 less, 99:

Parmelee	25	25	25	23	— 98	Everett	17	18	17	17	— 69
Crosby	25	25	24	25	— 99	Keller, Jr.	18	16	17	22	— 73
Gilbert	25	25	25	25	—100	Wanda	21	18	15	19	— 73
Heikes	24	23	25	24	— 96	H S Welles	25	24	24	23	— 96
Fanning	25	24	24	25	— 98	H W Blair	21	20	20	23	— 84
Watson	23	25	25	25	— 98	F W Getchel	23	22	23	20	— 88
Banks	25	25	24	25	— 99	Martin	23	24	25	25	— 97
Griffith	25	25	23	25	— 98	B Waters	18	21	22	20	— 81

Fox	24	25	24	22	— 95	*Hallowell	22	23	21	22	— 88
Hallowell	23	24	22	23	— 92	*Dorp	20	21	19	20	— 80
V V Dorp	13	14	18	19	— 64	*Sheeler	21	18	21	21	— 81
J G McKaraher	21	20	22	19	— 82	*McKaraher	23	23	21	16	— 83
Sheeler	17	19	23	20	— 79						

*Re-entries.

March 15, Twelfth Day.

Continuous Match.—Fanning made the extraordinary run of 225. The weather was cold and raw, with spits of snow:

Fanning	25	225	..	..	..	Elliott	40	2	46	..	..
Gilbert	107	..	..	..	..	Parmelee	12	14	6	5	..
Heikes	51	6	39	82	..	Le Roy	87	..	..	..	..
Crosby	37	66	2	..	..	Griffith	19	28	..	..	..
Fox	16	27	24	8	70						

Association Championship.—Crosby was high for the day with 99:

Parmelee	24	24	21	25	—94	Brinton	19	23	21	22	—85
Crosby	24	25	25	25	—99	G G Stephenson	23	20	22	16	—81
Gilbert	24	24	25	25	—98	J H Carey	20	21	18	20	—79
Heikes	24	22	24	23	—93	J H Cornell	23	23	20	23	—89
Fanning	23	25	24	24	—96	L B Smull	20	23	22	25	—99
Watson	22	22	21	23	—88	*Fox	21	22	23	w	
Elliott	23	25	24	24	—96	Hendrickson	20	10	18	16	—64

Le Roy	24	23	22	24	—93	*Smull	23	22	23	24	—92
Fox	18	w				*Carey	19	23	21	21	—84
*Fox	19	23	w			*Cornwall	24	22	23	25	—94
Root	15	20	21	15	—71						

*Re-entries.

March 16, Thirteenth Day.

There was a large crowd present to witness the finals in the Association championship, and there was exceeding close competition up to the last, as the appended scores will show. Gilbert drew ahead at the finish and won. The scores:

Parmelee	22	24	24	23	—93	Fox	23	21	25	22	—91
Crosby	24	23	25	24	—96	Elliott	21	23	24	22	—90
Gilbert	25	24	25	24	—98	Martin	22	19	19	17	—77
Heikes	21	24	23	22	—90	F B Stephenson	20	19	21	18	—78
Fanning	25	24	24	24	—97	H S Welles	21	17	18	w	
Watson	17	23	16	w		P Brinton	22	16	18	19	—75
Griffith	21	21	24	24	—90	Hallowell	20	21	22	22	—85
Banks	23	24	23	22	—92	Hull	17	20	24	18	—79
Le Roy	23	22	24	23	—92	Dudley	20	20	19	17	—76

The Cleveland Gun Club Co.

CLEVELAND, O., March 7.—Some of our members who go East to find hot company will find it warm enough to take care of the boys in their own town. Mr. Ralph Worthington, a man of 59 years of age, who always shoots under the name of Red Wing, is the best pigeon and target shot in Cleveland. Any one thinking to the contrary can prove same by competing against Red Wing in the regular club shoot where he can always be found. We will bet that nobody will find time to beat Red Wing, if you listen to their tale of woe. He is a little man. He is an old man, but he can give you all cards and spades. He is the daddy of them all in this city. You can't beat him nohow.

Red Wing won first prize. Hopkins won second prize.

Steele, 31	0220000222222—10	Red Wing, 31	1111222222122211—15
Johns, 30	1221101212222012—13	Drake, 28	2022100102101101— 9
Latham, 30	2212022221221120—12	Johns, 30	1222122021202222—13
Hopkins, 27	1002120221121102—13	Hopkins, 27	1222020222202222—14
North, 29	1121001211202212—12	Dale, 31	22022— 4
Franklin, 28	1221110001100020— 9	Red Wing, 31	11222— 5
Dale, 31	2222222222222212—15		

Hopkins allowed 2. Drake allowed 1.

March 14.—Regular semi-monthly club shoot of the Cleveland Gun Club Company resulted as follows:

Brown	0000111110110110000011001111110101100010—21

Aquidneck Gun Club.

NEWPORT, R. I., March 11.—The Aquidneck Gun Club held its initial shoot at its new club house in Middletown yesterday afternoon. A cold rain and fog did not deter ten members from coming out to try their hands, or, rather, their guns, showing that we make up in enthusiasm what we lack in experience. No regular programme of events was shot, simply a practice shoot at 50 targets. The scores:

Clarke	1100101000101001110011000010001010111000010000111—21

Mullen	..	..	..	..	..	..	..	..	2

C. G. B., Capt. O. G. Club.

IN NEW JERSEY.

Forester Gun Club.

March 9.—Regular monthly shoot at bluerocks was held to-day. Drizzling rain and a heavy fog; small attendance; 10-bird events; sweeps could hardly see the targets, as in the edge of the meadows the fog is like a veil. The club has arranged to give every one a good time April 12 and 13, with a warm club house; no delay in shooting and a good lunch at noon. Programmes can be had by March 25 by addressing J. J. Fleming, secretary, 21 Waverly avenue, Newark, N. J.

D. Fleming	8	8	8	7	6	4	7	8	7	8
Jamson	5	6	4	6	5	2	7	8	9	3
Krohel	..	5	7	6	7	8	4	7	6	5

	11100111111010111111110101—19—40

Trenton Shooting Association.

Trenton, N. J., March 13.—The attendance to-day was good, in spite of the threatening weather. The morning broke in dull fashion, but about 9 o'clock the sun came out in glorious splendor and the indications promised fine weather; but before noon Old Sol hid his face behind a bank of clouds and refused to smile for the rest of the day. Besides the regular badge shoot the programme provided two merchandise sweeps with turkeys as the prizes, and also a team race with members of the White Hill Gun Club. Six men on a side, 25 targets per man. The visiting team made a plucky effort, but circumstances were against them, and they went down with the score of 76 to T. S. A.'s 102. A return match will be shot on the White Hill grounds March 23. C. Jaques distinguished himself by winning both turkeys and the gold badge in the medal shoot. Billie Widmann dropped in without bringing his gun and tried the experiment of making scores with a borrowed gun. After it was all over Billie said either the guns that he tried were no good or else his eyesight played him tricks. He got satisfaction, however, in locking the door on the crowd inside the house and regaling them with the tale of how he won the piano at Freehold with 100 straight:

Turkey shoot:

Jaques	1111101111101110—12	J Thropp	1111101101011101—11
Thomas	1001110111000000— 7	Cochran	0000000001000001— 2
Cole	1010111111001111—11	Cockerell	1101001110111100— 9

Baltimore Shooting Association.

BALTIMORE, Md., March 17.—We are expecting to have the largest tournament yet given by our club, and hope those shooters who can remain over week after the big handicap in New York will stop over and give us a trial.

Our programme is as follows:

Tournament will be held on grounds of the Baltimore Shooting Association, on Pimlico road, opposite Halstead's Hotel and about twenty-five minutes' ride from center of the city. Take either the Druid Hill avenue, Carey or Gilmor line of cars, and transfer to Pikesville, or West Arlington cars at Fulton avenue.

No one barred. Shooting to commence at 9:30 A. M. sharp. All shooters will be handicapped by distance. Amateurs, 14yds. Semi-experts, 16yds. Experts, 18yds. The management reserves the right to change handicaps at any time during tournament. In the live-bird events, first and second event, high guns. All shooting from 30yd. mark. In the 15-bird race, Pimlico handicap, all shooters will be handicapped according to their records, from 25 to 32yds. Purse divided 50, 30 and 20 per cent., birds included. All target events will be at known traps, unknown angles. Old system of four moneys, 40, 30, 20 and 10 per cent. Tournament will be under the management of Messrs. James R. Malone, L. D. Thomas and J. M. Hawkins. Ship your shells in care of Alford Sporting Goods Company, 212 E. Baltimore street, who will see to delivering them on the grounds. Black powder barred.

The first and second days, April 9 and 10, will have $100 added each day. Programme each day: Four 15-targets events, entrance $1.50; seven 20-target events, entrance $2. Dropping for place will not be tolerated, and any one detected in so doing will have his entrance money refunded and be debarred from remainder of tournament.

Third Day, April 11.—Baltimore Introductory, 7 birds, $5 entrance, birds included; 30yds. rise; three moneys, 50, 30 and 20 per cent.; high guns, not class shooting.

Suburban Sweepstakes, 10 birds, $7 entrance, birds included; 30yds. rise; three moneys, 50, 30 and 20 per cent.; high guns, not class shooting.

Pimlico Handicap, 15 birds, $15 entrance, birds included; handicaps 25 to 32yds; three moneys, 50, 30 and 20 per cent.; class shooting.

Fourth Day, April 12.—Maryland Handicap, 25 birds, $25 entrance, birds included; handicaps 25 to 32yds.; class shooting; three moneys, 50, 30 and 20 per cent. A handsome gold medal, suitably engraved, will be given the winner of this event. $400 guaranteed and all surplus money added. Regular entries in this race must be made on Thursday, April 11, by 12 o'clock noon, accompanied by $5 forfeit. The remaining $20 may be paid up to the time the last man fires at his third bird. Post entries $5 additional.

J. R. MALONE.

WESTERN TRAPS.

Spirit Lake Shoot.

Chicago, Ill., March 16.—Russell Klein and John Burmeister claim April 23, 24 and 25 for their third annual target tournament at Spirit Lake, Ia. There will be seven 15-target events at $1.50, and five 20-bird events at $2. The first events are for amateurs, the second events being open, $50 a day added money. This should be a clinking little shoot.

Peters Shoot at Houston.

The Peters Cartridge Company will give a two days' tournament at Houston, Tex., April 1. Particulars from C. L. and Theo. Bering, Jr., 614 Main street. Trapshooting is picking up a good deal in Houston, and there will be a lively season. Mr. Bering writes that there have been a great many visiting sportsmen in Houston this season after snipe and ducks, and that snipe have been especially abundant. He says he can put any visitors on to where the best shooting can be found in season. The South is a good place to keep in mind all the time.

The most important live-bird race show at Houston recently was that between Alf Gardner, of Brenham, Tex., and A. W. Daniels, of Houston, a 100-bird event, which was conceded by Daniels at the 87th round, the score being then 72 to 67 in favor of Gardner. Mr. Gardner will be among the entries at the Grand American Handicap.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

CHICAGO, March 16.—The appended scores were made on our grounds to-day on the occasion of the twelfth trophy shoot of the season. Dr. Shaw carried off the honors of the day and most of the filthy lucre by going straight in the main event. The birds were in the main a very fast lot, mostly left-quartering outgoers, aided in their flight by a stiff southwest wind:

R Kaiser, 31	2220122222— 9	2*2212—5	122222—6
Dr Shaw, 31	2111122122—10	2202*0—5	222222—6

Barto wins high gun.

Miss-and-out, $2 entrance, birds extra:

Amberg	22121122222	Barto	21212210
Odell	11122111220	White	22220

RAVELRIGG.

Boston Gun Club.

BOSTON, March 13.—While only twelve shooters attended the ninth serial prize match of the Boston Gun Club to-day it did not prevent some of those twelve from taking full advantage of as good a trapshooting day as has been experienced in this vicinity for some time. It was no use to make anything but 9s and 10s or you were nowhere near in it. To be sure we had a welcome tutor in Mrs. Park, who had favored us with her presence for this afternoon, some taking advantage of the tutoring and others not, though one and all were more than pleased to again see her on the old grounds in the same position as in former shoots. High totals were made in the prize match, Mrs. Park and Spencer placing a 27 to their credit, which comes within one of tieing Leroy's high score of two weeks ago. Baker was a good second with 26, though it needed a straight score in the end to get it.

Scores below, all shooting handicap distance. All events 10 unknown except Nos. 9 and 13, which were at 5 pairs:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

New Haven Gun Club.

NEW HAVEN, Conn., March 13.—Fine weather favored the regular monthly shoot of the New Haven Gun Club to-day.

The first 25-bird race was the club race, to which the club donates $4, which is divided into five moneys. Capt. Bartlett, of the Marlin Fire Arms Company, took first money alone with 24 kills.

During the shoot a monstrous hen hawk came floating over the grounds, seemingly about 80yds. high. Mr. Frank Potter stepped out just in time to get the first crack, and scored a most beautiful kill. It is said that this hawk has ruined a number of hen families and pigeon lofts, and a short time ago carried away a young pig. The community is grateful to Mr. Potter.

R.

Keystone Shooting League Programme.

HOLMESBURG JUNCTION, Philadelphia, Pa.—In presenting the following programme, the Keystone Shooting League trusts it will meet the approval of all shooters as well as the members of the league. It is the desire of the league to encourage the sport of inanimate target shooting. By doing away with all entrance fees and sweepstakes it hopes to bring out and develop new shooters, as well as to stimulate to renewed activity those who now or heretofore have derived pleasure from the sport. Intercity matches in this branch of the sport, on a scale befitting our city, are looked forward to. State championships, at Allentown, during May, and National championships, at Interstate Park, Long Island, during July, are to be battled for, and what better preparation could be had than is herein offered? Come out prepared to shoot, as we are sure you will have a pleasant afternoon's sport.

Programme—Three Series of Semi-monthly Inanimate Target Contests.—Season of 1901:

First series: March 20, April 3 and 17, May 1 and 22, June 5. Prize for series, handsome gun case to total highest number of points for series.

Second series: June 19, July 10 and 31, Aug. 7 and 21, Sept. 4. Prize for series, fine shell case and 100 hand-loaded shells to total highest number of points for series.

Third series: Sept. 18, Oct. 2 and 16, Nov. 6 and 20, Dec. 4 and 18. Prize for series, fine dress suit case to total highest number of points for series.

Additional prize: Total highest number of points for entire season of three series, gold watch charm, emblematic of target championship of Philadelphia, donated by A. B. Cartledge. Points awarded as follows: High score, 5 points; next highest, 3 points; third highest, 2 points. All contests will be at 50 targets—20 known angles from expert traps, 20 unknown angles from magautrap, 5 pairs of doubles from magautrap. Contests and prizes open to all members of organized gun clubs in Philadelphia. No entrance fee. No sweeps. Targets 1½ cents. Members of league 1 cent. Distance handicap system. Committee on handicaps: H. L. David, Howard Ridge, A. B. Cartledge. Shooting to commence on arrival of 1:50 P. M. train from Broad Street Station.

KEYSTONE SHOOTING LEAGUE.

Union Gun Club.

SAN FRANCISCO, Cal.—Grand open to all handicap live-bird shoot, Sunday, March 31; Sunday, June 30, and Sunday Sept. 29; to be held on the San Francisco Trapshooting Association grounds at Ingleside. Take Mission street electric cars for Ingleside. Shoot commences at 9 A. M. sharp. Six-bird race, high guns to win; entrance $1.50, birds extra. Club shoot at 12 birds; handicaps from 26 to 33yds. Club cuff buttons for members only. Gold cuff buttons, over 75 per cent; silver cuff buttons, 75 per cent. or less. Prizes awarded at final shoot, Sept. 29. Ties decided by lot or shooters' option. Entrance $3, including price of birds. Side pool entrance $2. Three moneys, class shooting.

Six-bird race: Class shooting; entrance $1.50, birds extra.

On April 7, May 5, June 2, July 7, Aug. 4, Sept. 1, this club will hold their regular bluerock shoots at Ingleside.

UNION GUN CLUB.

Winchester Gun Club.

DETROIT, Mich., March 9.—Owing to a high head wind no very good scores were made in the Winchester Gun Club's shoot at their Highland Park grounds yesterday. Dr. Gibbes, who used a light charge, was especially handicapped. Reid and Shiell tied for the medal in Class A, each making 20. In the shoot-off Reid won. Lewis won Class B with 23 birds, and Dr. Gibbes took Class C with 8. The scores:

Targets:	10	10	10	10	10	25	Targets:	10	10	10	10	10	25

Warner	6	6	6	..	8	20							

Rifle Range and Gallery.

Fixtures.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Offhand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Revolver and Pistol Tournament.

THE revolver and pistol shooting tournament of the Sportsmen's Association's show, Madison Square Garden, New York, March 2 to 16, given by the Colt's Patent Fire Arms Company and represented by Mr. C. F. Small, who was manager, was a success both in respect to the support and the excellence of the competition.

Capt. W. E. Petty broke the record with a score of 908, beating the previous record of 905 points in the 100-shot indoor revolver match, and won the gold medal. The minimum trigger pull on pistol or revolver was 2½lbs. The gallery was open from 10 A. M. to 11 P. M.

One-hundred-shot Indoor Record Revolver Match.—Conditions: 100 consecutive shots with any revolver; distance 20yds., standard American target with bullseye (count 8, 9, 10) 2¾in. in diameter. To be shot in series of 5 shots on a target, the 20 targets counted in order to constitute a score. Entrance $5, re-entries permitted. Prizes: 1. The competitor scoring the highest count, if breaking the present 100-shot record of 905 points, will receive a handsome gold medal, suitably inscribed, to be held permanently; or, if preferred, a Colt New Service target revolver, suitably engraved and handsomely mounted. 2. A Colt New Service target revolver, adjustable sights, checked stocks, etc., value $25. In case the record is not broken the medal will not be awarded, but the revolver becomes the first prize, and is awarded to the competitor making the highest score. In case of ties, each to receive the prize above designated:

W E Petty	46 44 43 48 45 46 45 45 45 44	
	48 43 47 38 49 45 47 46 46 48	—908

—Breaking the record of 905.

Dr R H Sayre	44 44 47 43 46 46 47 47 43 44	
	47 47 46 36 42 47 42 44 46 44	—892

Indoor Pistol Championship, 1901.—Conditions: Fifty consecutive shots with any pistol, in series of 5 shots at a target; distance, 20yds.; standard American target with 2¾in. bullseye; entrance $5. Prizes; First, the championship and a championship cup to be shot for annually and a gold medal for the winner, to be held permanently; second, a silver medal; third, a bronze medal. Time limit, one hour: Dr. R. H. Sayre 433, J. A. Dietz, Jr., 429, J. B. Crabtree 427, A. L. A. Himmelwright 426.

Perfect scores with revolver: J. T. Humphrey one of 50 (five shots), Dr. R. H. Sayre one of 50 (five shots).

With pistol: J. B. Crabtree one of 50 (five shots).

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House and Reading road, March 17. Conditions: 200yds., off-hand, at the standard target. Strickmeier was declared champion for the day with the fine score of 91. Weather clear. Thermometer 72. Wind light 4 to 6 o'clock:

Strickmeier	9	10	10	10	8	8	9	7	10	10	—91

At a recent meeting of the Schuetzenbund, at San Francisco, the committee reported that the burning of the pavilion at Shell Mound would not in the least interfere with the forthcoming bundesfest, to be held July 14 to 23. Numerous additional special prizes have been received, notably a solid silver dinner service, donated by Claus Spreckels. Many associations throughout the East and West have signified their intention to participate. The San Jose sharpshooters recently joined the bund.

The Metropolitan Shooting Club has extended the Gastinne Renette medal contest to midnight of April 11, to enable out-of-town revolver shooters to compete for this prize. Additional prizes have been added.

PUBLISHERS' DEPARTMENT.

Old Point Comfort, Richmond and Washington.

SIX-DAYS TOUR VIA PENNSYLVANIA RAILROAD.

The third of the present series of personally-conducted tours to Old Point Comfort, Richmond and Washington, via the Pennsylvania Railroad, will leave New York and Philadelphia on Saturday, March 23. Tourists will find these three places of great interest and at the height of their Lenten season, Old Point Comfort especially being sought by those wishing to enjoy the early Spring season.

Tickets, including transportation, meals en route in both directions, transfers of passengers and baggage, hotel accommodations at Old Point Comfort, Richmond and Washington, and carriage ride about Richmond—in fact, every necessary expense for a period of six days—will be sold at rate of $34.00 from New York, Brooklyn and Newark; $32.50 from Trenton; $31.00 from Philadelphia, and proportionate rates from other stations.

OLD POINT COMFORT ONLY.

Tickets to Old Point Comfort only, including luncheon on going trip, one and three-fourths days' board at that place, and good to return direct by regular trains within six days, will be sold in connection with this tour at rate of $15.00 from New York; $13.50 from Trenton; $12.50 from Philadelphia, and proportionate rates from other points.

For itineraries and full information apply to ticket agents; Tourist Agent, 1196 Broadway, New York; 4 Court street, Brooklyn; 789 Broad street, Newark, N. J.; or George W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.—*Adv.*

Puttee Leggings have proved their usefulness in Europe, Asia, Africa and America, and for riding, shooting and walking in general there is nothing better. Within the past few years these leggings have been quite generally adopted in this country by upland shooters and golf players, as well as by riding men, and they are likely to reach a wider popularity. Stohwasser & Winter declare that their legging is the ideal one.—*Adv.*

Every one who has shot much knows what gun headache is. When suffering from this, decent shooting cannot be done. Mr. J. R. Winter's pneumatic recoil pad promises freedom from this and other ills the gunner is heir to.—*Adv.*

This is the age of combinations, but the Conley Combination is different from most others. It enables the camper to carry about with him in a single piece a coat, vest, hammock, sleeping bag and rain coat. Just what this is, and how it works, may be learned by sending to the Conley Manufacturing Company for their illustrated booklet describing it. Their advertisement, with a cut, is found in another column.—*Adv.*

Some people care more about the way in which they catch their fish than about the fish they catch. On the other hand most anglers go fishing for fish. The "Expert" Wooden Minnow is said to be more attractive to fish than live bait.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MARCH 30, 1901.

VOL. LVI.—No. 13. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1901.—No. II.

NEW HAMPSHIRE.

Act of March 20, 1901.—Sec. 4. If any person shall at any time within this State buy, sell, offer or expose for sale any woodcock, partridge or ruffed grouse, he shall for each bird . . . be fined . . . or imprisoned.

Atte the least the angler hath his wholesome walke, and is mery at his ease; he hath a swete aiyre of the swete savoure of the meede flowers that makyth him hungry; he hereth the melodious armoury of fowles, swannes, duckes and cotes; surely thenne no man is merier in his spryte than he.—Dame Juliana Berners.

NOT SO BLACK AS PAINTED.

Now that the snows have gone and the frost has left the ground, and under the sodden brown herbage that still clothes the fields is springing the tender verdure of another summer, an active harbinger of spring thrusts himself on our notice. From his hue we might take him for a mourner still attendant on the death that for months that has reigned over the landscape. Yet at this season his actions are not that of a mute at a funeral, for of all the creatures of early spring time none is more noisy, boisterous and good humored than he.

Early in the morning, from their home in the cedars or in the thick dark wood that clothes some rough hillside, the crows sally forth by little companies to their favorite feeding grounds, and there for hours forage busily, keeping up meanwhile a constant flow of conversation, debate and oratory. Such a tumult is never heard in a well-conducted American club, though from accounts of the proceedings of certain legislative bodies of Europe we may gain some idea of the order prevailing at one of these crow assemblages.

A month or two ago, when the land was covered with snow and the waters sealed by frost, the crows resorted daily to the mud flats, where at low tide they lived on the fish and clams and winkles and worms left bare by the retreating waters; but now they are searching the still neglected grain fields and grass lands. If the farmer has failed to garner some part of his crop, or, overtaken by the winter, has left a few shocks of corn in the field, we may be sure that the crows have found it, have burrowed their way into the deepest recesses of the store and have stripped the husks from the ears and the grains from the cob. Rejected nubbins and ears dropped from the wagon on its way to the barn have been detected and used. They have found too the little patches of buckwheat which the thoughtful sportsman, anxious for the well-being of the quail and ruffed grouse which winter in his swamp, has sowed along the fence rows and by the edges of the wood and left standing as food for the game birds. To this buckwheat the sable crew resort and glean with care the three-cornered grains which the fall and winter winds have shaken from their loose panicles.

After the first warm rains have come, removing the last of the frost and tempting surfaceward the thoughtless angleworm, the crows are busy and happy. Full well they know this storm, and what it means, and no matter how hard the rain may pour nor how blustering the wind, the crow is early abroad and feeds fat on the lucious worms which rashly emerge from among the swelling grass roots.

After their hunger is satisfied the dark multitude resorts to the topmost branches of some nearby piece of woods and there holds a council, in which, no doubt, the oldest and wisest of the crows give much good advice to their younger brethren. Before long now these conventions will break up, the crows will pair and build their nests and then suddenly it will appear to the casual observer as if all the crows had disappeared. From being the noisiest and most obtrusive of the dwellers in our fields, they become shy and secretive, going quietly to and fro, without calling or in any way attracting attention—intent on the safety of their nests.

His color and some of his habits have given our friend the crow a bad name which he does not altogether deserve. He does not profess to be more perfect than the rest of us, yet for him we may well have the same charity that we should like others to feel for us. He wishes to earn a livelihood, as honest as may be, and perhaps in his way he does as little harm as most others. If he eats a few quarts of grain during the year, they are not worth much, and if he were not here, the increasing horde of field mice, whose young he unearths from their snug nests of dried grass, would eat as much or more.

Give the crow a chance; he is not all bad.

ETHICS AND ORACLES.

WHILE the ethics of sportsmanship have certain well-defined principles which have been established by experience and common usage, there are certain interests which, being debatable, are still in the realm of opinion. As a general proposition, each man has a more or less accurate knowledge of matters which directly concern his vocation. He knows that certain causes will produce certain effects. His theory and practice are in accord as a result of long experience. All his fellow craftsmen will in their vocation in the main agree on matters of practice. But, on matters outside of their own knowledge, there are many men who, with the merest superficial knowledge, arrogate to themselves the full power of censorship over their fellows and their fellows' doings. Religion, politics, the justice or injustice of foreign or domestic wars, etc., all come within their self-constituted purview.

The ethics of sportsmanship to the ego authority is a matter to be settled quickly out of hand. It consists chiefly in denouncing the beliefs or doings of all who think differently or act differently. The arbitrary personal standard of the self-constituted authority is paraded as the only true ethical one, while all others are of the "game hog," the game butcher or the man who is other than a sportsman. Even men, otherwise of sound judgment, are prone to believe that, in matters of sportsmanship their opinions are laws. They are not conscious that their ideas are opinions; they feel that they are in possession of knowledge, and that their words flow therefrom. On the other hand, they are keenly alive and assertive concerning that the other fellows possess opinions only. For himself, the self-constituted authority waives all consideration of his personal prejudices, his different environment, his limited point of view, his absence of experience or thorough investigation, while yet for others he lays down hard and fast lines for the government of his fellows, with all the abandon which comes from ideas based on superficial examination and the freedom which comes from irresponsibility. Sentiment, prejudices, personal idiosyncrasies and theory are many times by the individual mistaken for true ethics.

From this source many times come ex cathedra utterances in respect to how much game one may kill in a day, or whether one may justly kill any at all, or may kill it in certain ways. The man who in his own community may be a failure, an impertinent upstart, or an example of worthlessness in general, feels free to anathematize men whose doings are at variance with his opinions, or whose doings are opposed to his own selfish interests. Often it is a combination of the selfishness and demagogism. At a distance of a few hundred miles, the man whose existence may be law in the social, business and mental scale does not hesitate to hurl disapproval at the man who may be infinitely his superior, and in whose presence he would be overwhelmingly abashed.

It is not to be understood that there are not men who are sound in their knowledge and their advocacy of sportsmanship, and who discuss all matters pertaining to it with fairness. Such a class exists. But there is a class which is intolerant in opinion and arrogant in its assertiveness, which does not hesitate to denounce all who go contrary to its opinions in matters of sportsmanship, while reserving to itself freedom to act for itself regardless of the opinions of others.

The true principle of action should be tolerance and consideration. The opinions which a man has to-day may not be the opinions which he will have ten years hence, nor may not be those which he had ten years ago. The opinions which a man holds may be good for his own environment, and utterly bad for the man who lives a thousand miles away in another environment. Also in matters of sportsmanship as in politics, law, etc., there are men who like to hear their own voices, or see their names in the public prints, or hold the center of the stage regardless of the merits at issue if their egotistical craving for notority can in any way be satisfied.

MOIETIES.

THERE is a well-defined prejudice against any police system which rewards an officer by a part of the penalties recovered for law violations. This prejudice sometimes works against the prosecution in a game law case, where half of the fine goes to the warden, and on occasion a jury will feel so strongly on the subject that it will find for the defendant when the evidence, no matter how strong and clear it may be, rests upon the testimony of an officer whose zeal they think to be prompted by a regard for his pocket. We know of game protectors in New York who have repeatedly found this prejudice a serious obstacle to securing convictions which otherwise would readily have been obtained, and they have declared that they would gladly see the moiety system abolished. Such protectors, however, are the exception; the average warden or protector or constable will work harder and accomplish more because of the reward a successful prosecution will bring to him.

It is quite unlikely that the cases lost because of this prejudice of juries against the moiety system amount to enough to constitute an argument against its retention. On the other hand, the fact that each specific piece of detective work will be rewarded if successfully carried through has a direct effect not only as a stimulus to the warden but as a deterrent of the law violater. As Mr. A. B. F. Kinney said the other day in a hearing before the Massachusetts Legislature, under the moiety system if a shooter who is potting partridge out of season sees a game warden in the neighborhood, he will say to himself, "That man will get something if he catches me, and he's going to catch me if he can." But, on the contrary, if there were no reward, a poacher would reason that as there was nothing in it for the warden, he would much rather take things easy and not bother to make an arrest.

Considering the imperfections of human nature as constituted in the twentieth century, a system of game law enforcement which carries with it the moiety feature is wise and expedient.

SNAP SHOTS.

Governor Odell of New York last week named De Witt C. Middleton, of Watertown, as the Forest, Fish and Game Commissioner, and appointed Messrs. Woodruff and Babcock, of the old Forest Preserve Board, to serve for two years as associate commissioners. At the expiration of that term Mr. Middleton will be the single commissioner; as a member of the former commission he has proved himself capable and efficient, and his appointment to the new position is regarded with satisfaction by those who are familiar with his record. In thus reducing the two boards of eight members to what in time will be a single-headed commission, Governor Odell has performed a public service of very great value.

Among the unpublished manuscripts left by Rowland E. Robinson was the chapter of Danvis life which we print to-day. It is marked by the clear and sympathetic insight into human nature that marks all of Mr. Robinson's writings, and it goes without saying that this new glimpse of the Danvis folks will be extremely welcome.

They are making a strong fight in Michigan against spring shooting. We are glad to print the letter from Dr. MacCallum, of the Ontario Commission, correcting a misapprehension of the attitude of that Province as to the protection of wildfowl.

The Cincinnati Cuvier Club is sending around to the game dealers of that city a circular containing the full text of the Lacey Act, and thus is adding to many ways it has found for promoting the game interests of Ohio.

The Sportsman Tourist.

The Buttles Gals.

of the Danvis Folks.

THE failure of Bascom, the new store keeper at the Forge Village, fell upon none of his victims more heavily than those ripened spinsters who pronounced their name as it was spelled—Buttolph—but were known to all their townfolk as the "Buttles gals." They were tailoresses, who made the clothes of half the male inhabitants of Danvis, sometimes at their own home and sometimes at that of their employer, as was the declining custom of the shoemakers.

A few Danvis people who had become tainted with aristocratic ideas had their clothes made by a tailor in Vergennes. A larger number, who were free from such high notions, had theirs made entirely by their own women folks, who treasured almost as heirlooms paper patterns of trousers, waistcoats and coats, by which the various garments were cut, with occasional variations to conform somewhat to the changes of fashion.

When Mrs. Gove lost the pattern of her husband's trousers she put him to that use, laying him down on the cloth spread out on the floor and marking around his legs with a bit of chalk, but the completed result was not a sartorial triumph, and the innovation was not followed.

Exclusive of the few who employed the fashionable tailor and the many who employed no tailor, the Buttolphs found customers enough to give them a comfortable living and something to lay by for a rainy day.

Now, through confidence in an unscrupulous adventurer, these savings were all gone as utterly and hopelessly as if consumed by fire.

It was two months or more since the blow had fallen but the two women still felt stunned by it. They went mechanically about their work as if in a dream, with a dull, hopeless expectancy of awakening to a less hard reality.

"I don't see what makes folks want to be so wicked," said Lyddy, the elder sister, as she ran the hissing goose along a seam. She was a thin little woman, so short of stature that she had to stand on tiptoe to reach the shoulders of her tall customers when she measured them. The flush of youth had faded from her wrinkled cheeks, but there was an afterglow of kindly light shining in her gray eyes that warmed one's heart more than the brighter glances of her sister's black eyes, though the embers of youth still shone beside the corkscrew curls that dangled from each of Nancy's temples.

"What makes folks want to be sech fools?" said Nancy, tossing her curls and twitching at the needle which came reluctantly through the stout full cloth.

"You mean us?" Lyddy asked.

"Yes, or anybody that'll go an' trus' anybody that they don't know no more about 'an we did about that Bascom."

Lyddy considered in silence while she moistened the seam with a bit of sponge wet in a convenient cup of water, and set the goose to more vigorous hissing before she answered.

"I s'pose we was fools, but we hed comp'ny. There's Samuel Lovel, which he'd ha' ben wus off 'an we be if that ore bed hedn't turned up just as it did—I wish 't we could find one in our garden—an' there's Mis' Purin't'n, she trusted him some, she says, herself, an' has tewed more abaout it 'an what we hev, an' that 'ere Jones boy put in nigh a hundred dollars, an' young Varney, he owns up to losin' all his father left him in the bank, an—wal, I do' know who all, but the's enough of 'em besides us."

"It don't make us aout no less fools 'cause other folks was jest as big ones."

"An' he was a candid 'pearin' man, the' can't nobody deny," Lyddy continued in extenuation of the fools and their folly. "I do' know as I ever see a nicer 'pearin' young man."

"Han'some is 'at han'some does, I say," Nancy declared, with a desperate twitch at the reluctant needle. "There! There goes another o' his needles—jest as onreliable as he is! I sh'd like tu feed 'em to him."

"Nancy Buttolph!" her sister exclaimed in mild reproof. "You know it'd kill him, an' we're tol' tu fugive aour enemies."

"Scissors! You can yourn if you're a'min' tu; I shan't."

"If your looks didn't deceive you, you didn't allus feel so hard toward him," said Lyddy, bearing down on the goose with both hands, while the steam wreathed up about her face and intensified the odor of hot woolen stuff that pervaded the room.

"Puh!" Nancy's scornful ejaculation rose above the sound of her sister's implement, and she dropped the broken needle into the black depths of a crack in the window casing. "It's a pity if folks can't treat folks 'decent' 'thaout a-hevin' it flung in' the' face!"

"You can't deny 't he wa'n't more'n common takin' tu you, Nancy."

"Is the' anythin' cur'us abaout that?" Nancy asked. She did not finish threading the new needle before she studied the effect of the black eyes and the curls in the looking glass in the door of the Seth Thomas clock.

"No, indeed, the' hain't, Lyddy assented, heartily, pausing a moment as she lugged the heavy goose to the stove to let her eyes follow her sister's and glance at her now unadorned image. She had given up the fight against the inevitable conquerer of youth, and wore a plain white cap like a flag of truce over her thin grizzled locks and time-scored cheeks, and her dark gown was like a garment of mourning for hopes dead and departed.

Nancy smoothed the hair upon her side combs with a moistened needle-worn finger, and gazed out the window, seeing only the visions of a day dream.

"Wal, that hain't neither here nor there," Lyddy sighed, "but what I sh'd like to know is what's goin' tu become of us?"

"I shan't go tu Middlebury tu visit Cousin Seliny, that's one thing 'at 'll become o' me," said Nancy, resuming her sewing.

"I'm dreffle sorry," and Lyddy sighed again, "You'd ha' seen so much s'ciety."

The younger woman looked in the glass again and shut her lips tightly while the other continued:

"I was cal'latin' 'at we'd hev this floor painted an' the walls whitewashed, now the flies is gone." She looked over the yellow floor to the white wood in the most exposed places, and sighed again.

The scrupulously neat room, warmed by a polished cook stove, was kitchen, sewing room and sitting room. In front of it was the bed room of the sisters and the "square room," always dark in the day time, with its green window curtains down not only for the full display of the remarkable landscapes painted on them, beyond comparison with anything in the outer world, but also to keep the rag carpet from fading, for in those days a rag carpet was an article of elegant luxury.

"I be turrible glad, though, 'at we got that carpet done an' them curtains whilst we could afford tu," Lyddy said, looking at the door and speaking as if she saw through it. "They make it pleasant for young folks. It don't make much odds tu me, but it's diff'ent with you." She took a snuff box from her pocket and regaled herself with a pinch, whereupon Nancy laid down her work and retired to the bed room, whence she presently came forth returning a handkerchief to the pocket of her apron and with her nostrils all a-bloom. Snuff taking did not comport with youth.

"I do' know haow nor where we're a-goin' tu git aour winter's wood, ner yet aour pertaters, since aour gardin dried up so an' didn't du nothin'. I was cal'latin' on the intres' money for your goin' tu Middlebury an' tu git the wood an' pertaters; we c'n git along wi'aout much meat. Oh, hum a day! The Lord giveth an' the Lord taketh away."

"He took away more'n he give, seem 's if. Jest look at Bascom an' aour money, an' the gardin a-failin' up so, an' not skeerce any work a-comin' in; seems 's 'ough men folks hed gi'n up wearin' clo's," said Nancy, looking out of the window to a world that at a casual glance seemed clad in universal whiteness by the first available snow of the season. But as the eye dwelt on it farmsteads asserted their places in gray dots, roofed with deeper blue of shadow and brighter silver of sunlight; gray patches of deciduous woods bordered and jutted into the white fields; thin gray lines of fences severed farm from farm and field from field, and beyond all these rose the mountain barrier of darker hue, with grizzled black growth, rugged with ridges and ravines that leafy summer never revealed.

"If brother James hadn't acted so," said Lyddy, returning to her troubles, "an' gone off. Bein' a man, he wouldn't ha' be'n took in by that Bascom, nor yet ha' let us. The fust Buttolph 'at ever took tu drinkin' as fur as I ever heard—an' him as good a cooper as ever drove a hoop. An' naow he's goin' back sailin' tu the eend o' the airth on that turrible canawl, an' I can't sleep o' nights fur thinkin' of him a-perilin' his life on the deep. An' he might be safe on land a-makin' pork berrils an' cheese casks, which everybody is a-wantin,' for they say 'at Uncle Rus'ell Raymond has got most past duin' any sort of a job o' cooperin'."

"It's jest another case o' takin' away," said Nancy, and she made further expression of her rebellious thoughts in the quick, spiteful jerks of her needle.

For a considerable time the sisters preserved a silence that seemed the more intensified by the faint click of the thimbles on the needles, the drawing of the thread through the thick cloth, the tick of the clock and the snapping of the fire in the stove.

At length Lyddy broke the long silence by frugally replenishing the fire, saying as she came from the shed with a few sticks of wood, "When Darkter Stun pays us for turnin' this 'ere overcoat, we shall hev tu git us some wood; there hain't no tew ways abaout it." Then glancing out of the little window over the sink, she exclaimed, "There's a snag o' teams a-comin' up the hill. It looks like a percession."

"You don't s'pose the' 's a fun'al an' we hain't heard on't?" asked Nancy. "It's jest what anybody might expect, holed up in the winter like woo'chucks."

The women fluttered to the bed room window, which commanded a better view of the road.

"'Tain't no fun'al," Nancy declared. "It's a string o' wood teams a-goin' tu the village."

Relieved that a funeral had not escaped their attendance, they returned to their work, which was hardly resumed when they heard the creaking of the snow under many pairs of feet, and heavy-laden runners and the long drawn shout of five teamsters halting as many yokes of oxen, each with its full sled load of stove wood crowned by a plethoric two-bushel bag.

"What on airth!" exclaimed Lyddy, peeping out of the small window with but one eye exposed to the outer world, while Nancy took as guarded an observation at the opposite side. "Why, it's all Danvis turned loose. There's that gre't, awful John Dart 'mongst 'em. Be they all crazy, or what ails 'em?"

"Come, go in, some of ye and find aout where the ol' gals want these 'taters dumped and this wood onloaded," Dart called in a tone of cheerful impatience, as he came up from the rear to join the group that stood in bashful hesitation beside the front team. They looked from one to another, each hoping that some one would volunteer for the duty of spokesman.

"You go, Joel," Sam said, when it appeared that no one would offer. "You're uster speakin' in meetin'."

Joel Bartlett slowly shook his head, crowned with a broad-brimmed hat over a woolen cap of sanguinary and most un-Quakerly hue.

"I don't feel clear, Samwel. It is thy place, seein' thee was the fust tu stir in the matter."

"No, I only happened tu speak fust; you was all fast enough tu come. Let Solon go in; he can' allus find suthin' tu say."

"I hain't legible tu the office," Solon objected; "but here's Mr. Dart, he'd ort tu be oudagious enough not tu be embarrasted."

"You don't ketch me in there alone," said the giant. "I hain't acquainted an' I'm afraid of ol' maids, an' more'n all that, Sary Ann's l'arnt me not tu speak tu no womern but her. We'll send in Jozeff. Come, Jozeff, you hyper in."

After much urging and many excuses and an elaborate clearing of his boots of snow upon the plank doorstep, Joseph Hill knocked and was bidden to enter.

"Good mornin', gals," he said, with great volubility. "Be ye well? An' the chil—I mean your fam'ly, be they well?"

"We are tol'able well, Mr. Hill," said Lyddy, hoping he might be a customer, and while she spoke mentally measuring the broad figure before her. "Take a cheer an' set up tu the fire."

"I'm 'bleeged tu ye, I don't care 'baout settin' arter ridin' all the way over here—that is to say, I might ha' rid, only I'd ruther go afoot. I jest run in of an arrent. The fact on't is—the way on't was, you see, Samwel kinder thought mebby—we didn't know but what you a-hevin' sech tormentin' luck wi' that 'ere plagued Bascom, you might be kinder short on't for your winter's wood—not hev quite so much, you know, as you might ha' hed if you'd hed a leetle mite more, you see, an' so, as we-all happened tu be a-goin' over tu the village, we jest, each on us, hove on a leetle jag, an' whilst we was abaout it we kinder flung on a bag o' 'taters, jest tu stiddy the load, an' we don't want tu kerry 'em back, 'cause we all got more'n we want, an' naow if you'll show us where tu empty 'em we'll onload the wood jist where you say."

When he stopped speaking for want of breath, he was still more disconcerted to perceive that his message was not received in a kindly spirit. Lyddy's mouth was pressed so tightly that it was scarcely distinguishable from the wrinkles which surrounded it, and she regarded him with a stare made colder by the glitter of her spectacles, while Nancy's black eyes flashed and each separate ringlet shook with indignation.

"We're turribly obleeged tu ye," Lyddy said, "but we hain't objecks o' charity."

"When we be," Nancy interjected, "we'll send you word. You can take your wood an' pertaters right stret home ag'in."

Joseph was so taken back by these rebuffs that he could not find a word to offer in apology, but made a precipitate retreat, gasping in a frightened undertone as he joined his companions:

"Sam Hill! the 'tarnal critters is drif'l pudchiky—madder'n tew settin' hens! You can't tech 'em wi' a ten-foot pole, not scarcely, an' they won't hev the wood nor nothin, an' say we c'n take it hum again! Think we're insultin' of 'em. My land!"

"Dum their stinkin' pride," John Dart growled. "What be we goin' tu do? We can't turn 'raound here loaded, an' if we could I wouldn't haul my load back over these cajullucks for it. Le's 's fling it off, an' if they don't like it they can lump it."

"An' what'll we du with the 'taters?" Joseph queried. "Jes' 's like 's not they'll let 'em stay aout here an' freeze. An' anyways, they don't look 's if any one on 'em could wrestle tew bushel o' 'taters, nor both on 'em tugether."

"Oh, we can take the 'taters back an' give 'em tu Antwine. He won't turn up his nose at nothin' you give him," said John Dart.

"Perhaps we can persuade Lyddy and Nancy to buy the wood for a small consideration," Joel Bartlett suggested. "They've got a worldly pride nat'ral tu the old Adam, ag'in takin' charity, an' we've got tu consider it. If you'll all fall in with the idea I feel free tu go in an' talk with the gals."

"I've got the idee. See here," said Sam Lovel, "let's go in an' git measured for some clo's 'at we're agoin' tu hev made an' let the wood go toward the pay."

"It looks sort o' decaitful," said Joel, but I do' know but it's kinder accordin' tu what was said by one formerly abaout not lettin' the left hand know what the right hand dueth. Aour women folks do' know."

"If I was 'quainted with these 'ere idgits, I'd go in an' spank 'em," John Dart declared. "But I don't know 'em. Go ahead, Lovel."

"I do' know what M'ri'll say," said Joseph. "I hain't said nothin' tu her 'baout hevin' of me any clo's."

"We hain't got tu hev 'em cut till we git ready, only git measured," Sam whispered loudly. Thereupon he made for the door and entered without ceremony, followed by the others crowding upon his heels, except Joseph, who kept well in the rear.

"Good mornin', Lyddy. Good mornin', Nancy," Sam said, heartily, and then without waiting for a return of the salutation, "I'm afeared Jozeff here didn't du aour arrent plain. The idee is, we all on us got tu hev us some clo's, an' we hain't got no money, so we cal'lated you'd be wantin' some wood an' 'taters, mebby, an' we could pay ye, part in barter in advance, an' the rest on't bimeby in cash or in barter, if that kind of a dicker will be agreeable."

"Why, land sakes!" exclaimed Lyddy, her countenance changing its severe expression to one of surprise. "He never said one word abaout clo's. He kerried the idee 'at you was a-givin' it all tu us as if we was a couple o' poppers."

"Well, ye see, it kinder slipped my mind. I tol' M'ri 'fore I started 'at I'd got tu hev me some trowsers, an' she said she'd lost the partern an' I'd hafter git measured. Sam Hill! I do' know haow I came tu fergit."

"I darsay we can use the wood an' the pertaters," said Lydia, "if we can agree on the price. Haow much du you gentlemen think they're wuth?"

"Wal, it's all body wood—beech an' maple—an' all ready fer the stove, an' I cal'late it's wuth tew dollars a cord, an' each on us has got a good half cord on, shouldn't you think the' was?" he inquired of his companions, while he winked very hard at them.

"Not no more'n that," said big John Dart, and Solon thought "That was a estimatin' on't liberal," while Joel, whose conscience wouldn't permit him to assent to such a glaring deception, coughed and made his mouth so round that it almost whistled a note of surprise.

"I shan't be able tu fetch ye the cloth for a hul suit ontil I git my sheep shore nex' summer an' kerry the wool tu the fact'ry an' git it made up; but if you're a min' tu measure me naow, I guess I shan't grow no more," said Dart.

"An' I want thee to cut me a plain coat," said Joel, single-breasted an' stan'in' collar—thee knows, Nancy—an' skirts not tew full."

"You put crows' feet tu the corners of every pocket o' mine an' three pairs o' buttons on the tails," resumed

Dart, "an' if you're a-goin' tu measure me, you might as well git out a cheer an' begin at the top, or shall I gid daown on all fours?"

"While you're a-measurin' him an' Joel, Jozeff an' Solon an' me'll fetch in the 'taters an' put 'em in the suller. They're Buckeyes an' Long Johns an' English Mutes, an'll be ninepence a bushil. You light a light, Nancy, an' show us the way daown suller."

With that Sam went out, followed by Solon and Joseph, while Lydia brought her tape line and book and began the measurement of her huge customer, and Nancy handed a lighted tallow candle in its shining iron candlestick to Sam as he passed down the cellar stairs.

"Wal, their 'tater bin's pooty nigh cleaned aout," said Joseph, as he carried his full bag down the narrow stairs and emptied it on the bare boards.

"Some time we've got tu bring them gals some cloth an' let 'em work it up. They'll feel 'nough better," said Sam, laying a brown paper roll on top of the potatoes and going up the stairs.

"I'm a'goin' tu see if this 'ere pork berril corroberates, so to speak," said Solon, hanging his emptied bag on his left arm, taking off the damp cover and holding the candle down inside the cask. "The' 's a leetle layer o' salt left, but not no nutrigotious food tu eat. Wal, I shall be killin' nex' week if it keeps col'."

"It 'most seems 'ough them ol' gals 'd ruther work 'an tu set still. What critters!" said Joseph.

"What was 't Samwel depositoried here?" said Solon.

"Feels like sa'ssiges, er mebby it's lean meat fer fryin' er suthin' else," said Joseph, trying the roll with his thumb and finger. "They won't heave it away if they hain't porpers. I don't scarcely b'lieve they will."

With the cellar somewhat replenished and ten cords of wood under the shed, which Pelatiah had told Sam he should like no better fun than to pile up in good shape evenings, "bein' he couldn't be spared no other time," the kindly neighbors departed, leaving something better than food and fuel in the little brown house.

As the sisters watched the slow ox teams going down the hill, Nancy admitted, "Arter all's said an' done, folks hain't all Bascoms, an' it does seem 's if men folks 'ould hev 'em clo's a while longer."

ROWLAND E. ROBINSON.

The Appalachian Park.

CONSIDERING the fact that Congress has approved the bill establishing the National Appalachian Park, and that it is only a question of time when its formation will be completed, it may be of interest to all concerned, who are really every man, woman and child,

"Who loves to lie with me
Under the greenwood tree;
And tune his merry note
Unto the sweet bird's throat;

to know something of this most interesting region. So we may stand on the top of Satula Mountain, at the foot of which, on the plain, lies the picturesque village of Highlands; but this plain is 4,000 feet above sea level, which gives a height of something under 5,000 feet to this picturesque, even charming, mountain. And from its top can be seen an almost uninterrupted ocean of verdure, surging in colossal waves of forest, against the numerous crests of other mountains, the whole view appearing to one who has crossed the ocean very much like the lines of billows, with their intervening hollows, rolling in vastness until sight reaches them no longer, and the blue sky meets the horizon.

Rising from this undulating ocean are seen the outlines of the highest points of the Blue Ridge and the Smoky mountains, some of which tower over 6,000 feet above sea level, and many over 5,000 feet, while the plateau on which Highlands stands is something over 4,500 feet. In every direction from the point of view lie these rolling waves, on the south closed in by the blue horizon, on which on a clear day the smoke of the Southern Railroad is seen forty miles distant; on the other sides by this undulating ocean, with here and there, only, a small clearing on which the isolated settler has made a solitary home, and lives and rears his numerous children on the familiar sour-dough corn bread and the milk of his cow, sometimes getting a feast of hog meat enlivened by a string of speckled trout or a few of the abundant pheasants, and in the season a turkey, which he captures in the inwardly sloping rail pen baited with an ear of corn. It is true that these men are numerously addicted to the so-called moonshine business, and the solitary stranger is not always received with the traditionary welcome, but is viewed with cold suspicion. These mountains are covered with timber to the top, except in the case of some of the highest "balds," as they are called, the smooth tops of which are covered with rich black soil and abundant grass, this being pastured by cattle ranged in the woods by owners living at a distance or nearer, who hire a resident to attend to the salting of the stock at regular intervals. And this being done by each one at some fixed place, the herds all become under easy control.

Of course, the fine timber of the region is as yet without actual value, on account of the impossibility of getting it out of the country. Every tree known to North America on the East grows here, except the live oak, and there are two specially indigenous here. These are a distinct variety of the hemlock, which is distinguished by its doubled leaves, that grow in clusters, and not singly or in pairs, as the leaves of the common hemlock do; and one other very rare tree, only found naturally here, a variety of the camellia family, *Stuartia pentagyna*, a specimen of which is growing in Fairmount Park in Philadelphia, and was carried from this locality.

I send an illustration of this flower (*Stuartia pentagyna*), which has thick fleshy cream-colored leaves, and is three inches across. It much resembles the common dogwood in habit, excepting that the flowers have five petals, while the dogwood has only four. The dogwood is exceedingly abundant, covering the hillsides in the spring with its bloom, so that one might think he might be viewing a dense orchard.

The rhododendron and all its tribe of evergreen shrubs fill the woods; this shrub, or tree, as it is here, grows 25 feet high, and a specimen, of which I have a photograph, had over two thousand of its large conspicuous panicles of flowers on it. The woods in June blaze with the azalea blooms of all colors, from pale lemon yellow to the deepest scarlet; whole hillsides are thus covered quite frequently, while the beautiful kalmia (with its six-sided cups and recurved stamens, each bent into a small niche in the petal, and at maturity springing back suddenly with a jerk, thus automatically scattering the pollen on the pistils) grows in equal abundance, in company with its more modest but exceedingly sweet-odored azalea viscosa (the clammy azalea), so called from the stickiness of its tubular, creamy-white bunched flowers. This is a dwarfed variety of this family, and completely covers whole acres under the towering forest over it. This variety of azalea has the odor of the tuberose, and on the calm summer evenings the sweet scent fills the air everywhere. Why it is not very common in gardens is a surprise. The white fringe *Chionanthus virginica* is common along river banks, which in places are wholly bordered with this and the beautiful *Philadelphus grandiflorus*, both of which are popular flowering shrubs on Northern lawns. Indeed, from the first appearance of the white flowers of the service tree—here a timber tree—in the spring, all through the year until the sour wood hangs its sweet flower clusters early in the fall, and the witch hazel shows its curious blooms in November, after its leaves have fallen, the woods are gorgeous with continual bloom. I should not forget the grand tulip tree (*Lyriodendron tulipifera*) with its sweet cup-like flowers, and the cucumber tree (*Magnolia acuminata*), with its conspicuous creamy blossoms, followed by its scarlet fruit,

STUARTIA PENTAGYNA.

shaped like a cucumber—whence its common name. These two trees furnish the most valuable timber, commonly called poplar, and grow to enormous size. The butt log of some trees has at times cut into a thousand feet of boards. I have measured one tree over 7 feet in diameter at the stump, and 132 feet to the first limb, where the trunk was still 3 feet in diameter. The chestnut grows to this size. I have measured sassafras trees 3 feet through, and the common black cherry larger still. All other trees are in equivalent proportion.

The mountain laurel, so called (the *Kalmia latifolia*, botanically), has enormous roots, the grain of which is gnarled, curled and colored in a beautiful manner, and furnishes material for the finest finishing work for railroad cars and houses; also for ornamental turned work: the rhododendron also furnishes beautiful wood for similar work. Indeed there is not a tree growing in these vast woods but has a high value for use as soon as transportation is provided for its removal or manufacture.

Under scientific arboriculture these forests will be self-sustaining from the first, and a reasonable estimate which I venture to make, after nearly twenty years' residence here, and during which I have been engaged in preserving and improving the forests on my tract of 4,000 acres, is that ten dollars an acre may be made from fully one-third of this territory (which is nearly all virgin forest, such as I have described) as a permanent income from the timber alone, most of which may be sold to manufacturers, who will cut and remove the selected trees and preserve the young growth for future use. And in the meantime, indeed for all time, these woods may remain in a resting and breathing place for the overtired business men who love to carry a rod or a gun and seek real and actual recreation, either in the summer or the winter. For while the summers are cool, averaging from 60 to 80 degrees at noonday, and under 60 at nights in the summer, these being the extremes, the average in the winter ranging from occasional drops for a few hours to zero, up to 60, with but little snow that lies on the ground, may tempt strangers who would avoid the severity of the Northern winters, but yet, too, the too warm more Southern localities, to seek here one of the most pleasant resorts between the two extremes, where the air is the purest possible, being above the reach of injurious germs, and the water is as it is distilled from the clouds, and flows from the clean subsoil in myriads of clear springs, pure and fresh, forming innumerable rills, which grow into rivulets, which supply the streams, and every drop is washed and washed by the pure air as the water tumbles over the innumerable rocks and cliffs, making beautiful views (and music, too) everywhere as one rides along the roads, or to be seen by glimpses through the woods.

There is nothing which may be called magnificent here. It is all beauty—scenery that charms one, that quiets the worn, weary nerves and fills one up with restfulness. The climate is a specific for all lung and throat diseases; the poisonous mosquito is a rarity; one rests during the cool summer days, and sleeps under the needed blankets at night, enjoying the rest of the satisfied mind and body. This is a mere sketch of what this Appalachian park will be, and may be easily so made to be. The whole must be seen to be realized in full.

HENRY STEWART.

HIGHLANDS, N. C.

Natural History.

Experience with Wild Animals.

Editor Forest and Stream:

It seems to me that Juvenal's letter in FOREST AND STREAM of Feb. 23 requires an answer. It is not right to ridicule a statement made in good faith, but there is no reason why one should accept such statements without question.

It is of course unsafe to generalize from a limited personal experience, but my acquaintance with *Felis concolor* extends over so many years and covers so many hundreds of instances that several volumes of FOREST AND STREAM would be required to publish them.

Both the cougar and the big gray wolf are common everyday animals to us here in the Rockies. How common and how destructive to stock the following items from a State paper show: "Wolves are so thick on the New Forks that all stock must be corraled at night." "The bill for the destruction of predatory wild animals which has just passed the legislature carries with it an appropriation of $40,000."

For fifteen years I have made a close study of the cougar. For two months each year for four years, Mr. A. G. Wallihan and myself spent our entire time photographing cougars under all circumstances, and we have a large collection of fine negatives. I have followed on foot the trails in the snow of dozens of the animals where every move, every step, that the cougar took for days was as plain as if I had walked alongside. I know how the cougar lives, what he eats, how he catches his game, and what he does with it after he catches it. I followed one big male cougar for seven days before coming up with him. I have followed numbers for forty-eight hours, and I know cougar nature as well as I know my own.

Not only this, but I have talked with men who have hunted the animal wherever he is found. All agreed with me in what I had noticed as to the habits of the brute.

North and South, East and West, *Felis concolor* is the same.

Let us take up the case of the man on horseback who was chased by the panther. Nothing is more likely than that a panther would jump at a horse. Thousands of horses are killed by them every year in the West, horse flesh being a favorite food. As to the chase and repeated jumps, I do not believe it. The cougar can move with wonderful speed for a hundred yards. On level ground any horse can outrun one in a quarter of a mile. The cougar simply has not the lung-power to run any distance. Time after time I have jumped a cougar out of a tree into the midst of the dogs. Before the dogs got started the cougar would be fifty feet away. He would run a hundred yards while the dogs ran twenty-five. If the cougar was fat the dogs would have him before he was two hundred yards from the starting place; if the animal was thin it might go four hundred yards before being overtaken. If the cougar was lucky enough to get into a tree before being pulled down its sides would be going like a pair of bellows, and if promptly poked out of the tree it could not get away from the dogs. We used to try to get a photograph of a cougar during the first dash. As an illustration of the cougar's speed, the camera that would show every detail of a horse or dog crossing at full speed fifty feet away would show nothing but a blurred object for the cougar. In the case referred to by your correspondent, the panther probably jumped at the horse. Finding a man on its back it let go and slid off, scratching the horse's rump and tearing the man's coat. No panther, after making its dash and leap, has wind enough left to catch any animal as fast as a horse.

I have seen repeated instances where a cougar has missed its rush, and it never attempted to pursue its prey, but went on hunting something else.

As far as a cougar following a man is concerned, that is a common thing—they are forever at it. So is a wolf, a coyote or a fox, for that matter. A number of times I have trailed a cougar all day, and had it turn right around and trail me back to camp after dark. When a cougar is being closely followed it barely keeps out of sight ahead of its pursuer, and will often, double around and drop in behind. No one that knows cougar nature ever thinks twice of danger when being followed by one.

For instance, ten years ago I was staying alone at a place I had in the mountains, looking after some cattle. I had a haystack and corral a mile and a half down the creek from the cabin, and kept my saddle horses there, walking back and forth morning and evening. One day it snowed a couple of inches, clearing up at sunset, and as it happened it was after dark before I got my horses taken care of. The next morning the snow showed the following: A she cougar and three full-grown cubs came down the creek early in the evening. They were very hungry and were hunting. Coming to the cabin they prowled around for some time, going into the stable, and making quite an effort to get into the store house, where several deer were hanging. Failing in this they went on down the creek, and met me half a mile below. Going off the trail thirty feet or so they crouched down until I had passed, then followed me home. Then they went down the creek to a bunch of cattle, but the cattle were nearly all big steers, and bunching up kept the cougars off. At daylight the cougars left the cattle and went on down the creek. A little way below they saw a deer up in some scrub oak and went up and killed it. They were so hungry that they nearly cleaned up the deer, a full-grown doe. When I went down in the morning I saw magpies and knew what was up, as I had seen the cougar tracks. Going a little closer I saw that the cougars were still at the carcass, so went back, and getting a rifle killed the old one; the cubs bolting into the brush. Then I went back and got a lot of No. 4 traps, which I set all around what was left of the deer, and next morning had

all three cubs. Now, why did not those four hungry cougars tackle me when they had every chance in the world? And this is only one of many like instances.

Is there a case on record of a grown man having been killed by a panther? A panther is no bigger and no stronger than a man, and what is there to be afraid of? I have killed several by cracking them over the head with a six-shooter, and one blow did the business. An active man with a club, a knife or even a stone in his fist can kill any panther or wolf that ever walked. One heavy blow on the head, one rip with the knife, and the job is done. I had a cougar hook his claws into my hand once, and not having any weapon I kicked all his ribs loose and made him let go. If the man told of by your correspondent, who was a captain in rank, had gathered him a club and gone after that panther he would not have been followed any more that night.

Now as to the men who heard the wolves howl and thought the horse saved them. Wolves like horse flesh, they often follow people, and they are very fond of howling. If a pack of wolves were hungry they would follow a horse and would howl like blazes. If they saw that a man was with the horse, they would howl some more, but they would not think of taking hold of that horse as long as a man was along. If the horse was alone it would probably be good-by horse.

When a wolf is hungry and lean it is a pretty fast animal. It takes a good fast greyhound to outrun a wolf in that condition, though when a wolf is fat and gorged with food a good horse can beat one. When the men with the fleet horse ran away the wolves naturally followed in the hope that the men would climb a tree or otherwise desert the horse, and according to wolf nature when hunting in packs they howled. If they had wanted to catch the horse it is very likely that they could have done so, because a hungry wolf can outrun a horse in harness.

Whenever anyone brings forward an undoubted case of a man in America being killed by either wolf or panther, I will believe that they will make an unprovoked attack on man, not before.

The truth of the matter is, our forefathers came to this country loaded up with all the old world tales of wolves and were-wolves, and finding in the panther a sly, bloodthirsty beast and a great killer of game and stock, they at once concluded that the beast was a man-killer also.

And so the fireside tales, without any real foundation in fact, went down from generation to generation, until the bloodthirsty wolf and ferocious panther are so firmly implanted in American folk-lore that they can never be eradicated.

And all this in face of the fact that there is not on record the death of a man by either one.

My people have fought Indians and wild animals on the frontier for a hundred and fifty years, and in all the family tales there is not one that even indicates that either wolf or panther is to be feared. Now let us hear from the other side. WM. WELLS.

WELLS, Wyo.

MONROE, Neb., March 13.—One day, while marching in the Big Horn country, in 1865, one of our scouts jumped off his horse and ran into some chokecherry bushes to get some of the cherries. He disappeared in the bushes, but almost immediately reappeared, running, with a big grizzly after him.

He came out of the brush on the edge of a steep cañon, and just then the bear overtook him and made a stroke at him with her paw. She caught the Indian on the side of his head and took his ear off as clean as you could cut it with a knife.

Both bear and Indian disappeared over the bank into the cañon, and by the time we got to the edge of the cañon the bear was climbing up the opposite side and the Indian was lying at the bottom insensible, with the muscles all torn out of one arm. He got well, but was minus one ear and had a badly crippled arm.

He said the bear was about 40 feet from him when he first saw it, and it immediately charged him without any provocation.

We killed the bear before it got out of the cañon. It was a large female, and I think the editor of FOREST AND STREAM has seen the skin in my brother's (Maj. Frank North) house. L. H. NORTH.

A Singing Mouse.

ELVERSON, Pa.—*Editor Forest and Stream:* For more than a month we have had a singing mouse with us. Our house is an old-fashioned stone building 108 years old, and is not drummed, although it is, of course, plastered and papered within. It has, however, the common washboard in all the rooms. Behind the washboard in the north wall of the library lives our singing mouse. He sings only at night and at rare intervals. This evening while I was reading, one of the ladies called my attention to him. I am rather deaf, but easily heard the mouse at least 10 feet away. Then several of us collected around the place and the little fellow seemed to realize his audience, for he gave us a selection of beautiful songs with all manner of trills imaginable. Once by keeping my eyes on the musical spot in the wall where there was a slight opening between the washboard and paper, I got a bare glimpse of him. Even then, when he was again out of sight, the song kept up. A door was opened and we walked around, but our fearless songster kept it up for some minutes longer. OCTAVIUS BULL.

There is a well attested story about Daniel Webster and a Marshfield farmer. Mr. Webster was out shooting, and in his rambles came to a deep creek. Seeing a skiff moored to a stake and the farmer cutting salt hay near by, he begged to be paddled across. The farmer dropped his scythe, unhitched the skiff and took Mr. Webster over, and then, after declining a proffer of payment, lingered a moment to hold this dialogue: "This is Daniel Webster, I believe." "That is my name," Mr. Webster replied. "Well," said the farmer, "it seems to me that if I could earn my living by pleading cases up in Boston I wouldn't be trying to get it by wading through these marshes in hot weather shooting little birds."

Ducks Breeding in New York.

PENN YAN, N. Y., March 23.—*Editor Forest and Stream:* I have read with interest the articles lately printed in FOREST AND STREAM on the breeding of ducks in the United States, and have thought that it might be of interest to relate a little incident that I observed while on a trout fishing trip to the North Woods last season—1900. I think it was the 20th day of June that I was fishing down the Jordan River, a very narrow and tortuous stream that empties into the Raquette, at the head of the Upper Hollywood Stillwater. I was fishing from a canoe, as it is impossible, except in a very few places, to fish from the shore or wade. The veteran Norm La Roe was paddling me.

We had dropped down the river quite a distance, when, rounding a bend, we ran on a brood of duck quite close to us. Away they went, skittering down stream, and we saw no more of them till we had drifted down perhaps a half-mile further, when we came on them again. This time they did not act nearly so shy, and only went down stream a short distance and dropped in a little cove where a stream from a spring opened in the river. The river at that point was not six yards wide.

Paddling as close as we could to the opposite shore, we kept as motionless as possible till we were nearly opposite them, when Norm held the canoe stationary, and we watched them for several minutes. It was a flock of redheads, the little ones only a little larger than a robin. There were thirteen of them. I counted them over two or three times to be sure. They scarcely acted more shy than domestic ducks, and were the cunningest little things I ever saw.

To me it was worth the trip there to see them. They would dive, splash the water and play just like their tame relatives, while we were but little more than a rod from them. Oh, for a kodak! but none was at hand. It was a beautiful sight and one that I shall not soon forget.

E. P. S.

SYRACUSE, N. Y., March 18.—*Editor Forest and Stream:* I have interviewed a sportsman of my acquaintance on the subject of ducks breeding in this State. When I told him that there was a question as to whether they did breed in this State, he said, "Mallards, black duck, teal and all that class of birds used to breed on the west side of Onondaga Lake until a few years ago, when they had to clear out on account of the advance of the city. One day last spring when I was out snipe shooting west of this city a big mallard flew up from under a bush, and before I thought I let drive and dropped her. When I went to pick her up I saw that under the bush there was a nest with three eggs in it. In a tree near my cottage on Lake Ontario a wood duck has bred for several years, and time and again I have seen these little wild ducks all covered with yellow down out around the islands, where no one disturbs them.

"If Long Island wants spring duck shooting, let her have it, but we want a law for the inland part of the State to stop this spring duck shooting. I am decidedly of the opinion that if the ducks are let alone they will breed here in numbers and we will have an increase in the fall. This everlasting banging is enough to drive anything to the North Pole."

The gentleman who told me this is well known in this vicinity, and anything that he says may be accepted as the truth. W. M. F.

A Thrilling Experience.

STATE COLLEGE, Pa., March 11.—*Editor Forest and Stream:* During the past three weeks the press of this State has been giving prominence to the following hair-raising story, with apparently no attempt to discover the truth:

MAN HAS THRILLING FIGHT WITH WILDCAT.—Bellefonte, Pa., Feb. 10.—O. H. Holmes, a young man of State College, had a thrilling experience with a wildcat recently, and it was only after a terrific fight that he succeeded in getting the better of the animal. Holmes was attacked by the animal when he had nothing to defend himself with and was badly bitten before he could secure a club. Homes' flesh was badly lacerated, and when speaking about the affair he said that he thought for a time that he was done for. He is just now recovering from the effects of his encounter.—Philadelphia Inquirer, Feb. 20.

With the above was published a photograph of O. H. Homles, of this place, and of a man holding a gun and of an animal in crouching attitude, which was doubtless intended to convey to the mind of a reader the impression of a wildcat, but as it more resembles a common raccoon than a wildcat, we must conclude that either it was with a coon with which Holmes had his "terrific fight" or that the "newspaper artist" had never seen a wildcat, and to him "all coons look alike."

It is the serious duty of all persons who are in position to learn the truth in such circumstances to do what they can to prevent such travesties on nature from going unchallenged before the public. While naturalists are earnestly striving to establish the truth concerning our native animals, such published falsehoods as the above will do much toward tearing down the work of years of careful study and keeping us in the realm of darkness, superstition and unnecessary fears.

As the undersigned lives at State College and has ascertained the facts of the above occurrence, he feels it his duty to make them known in order that nervous women and timid children may not be afraid to go abroad in our woods and fields and enjoy their beauties with the sense of full security, whether it be by day or by night.

The morning after this bloody (?) encounter Mr. Holmes came to the museum of the Pennsylvania State College to have his wildcat mounted. He appeared as "calm as a May morning" with no evidences of nervous prostration and not a scratch upon his body. The element of truth in the yarn from which the cloth was fabricated is as follows:

On Feb. 16 Mr. Holmes was hunting, and although that looks suspicious in this State, as it is "out of season" for all kinds of "game," he was "only after foxes and wildcats, of course." He related the occurrence: "I was hunting foxes, and my dogs treed something in a brush pile. They went in under the brush from opposite sides and soon commenced to fight some animal. I laid my gun down in the snow and got down on my hands and kees to see what was going on. One of the dogs had a wildcat by the back and was shaking it. As I was there in the stooping position he threw it with force and it happened that it struck me in the breast. As its back was broken and it could not use its hind legs, and as I did not have time to pick up my gun, I grabbed it by the back of the neck and pressed it down in the snow and choked it to death."

The writer identified the animal as a fine specimen of the American wildcat (*Lynx rufus*), which is really not very rare in central Pennsylvania. There have been many instances reported of this animal attacking mankind, but we have never seen it possible to find one authenticated, and we do not believe there is one true case on record where either the wildcat or the lynx has attacked man, woman or child, either in self-defense or through extreme hunger. It is a shy retiring animal, and we recently saw one flee away with all possible speed the moment it sighted a person, even at some distance.

There is quite a difference between strangling a wounded and consequently defenseless animal and being attacked and forced into an open-handed encounter with a bloodthirsty brute. We hope readers of this article will help circulate the truth about similar misstatements concerning our harmless animals—as are nearly all of those which are left in America.

H. A. SURFACE,
Professor of Zoology, the Pennsylvania State College.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

An Adirondack Deer Hunt.

IT was on the afternoon of Nov. 6, 1900, that a party of hunters, answering to the names of Ted, Fred, George, Frank and the writer—five of us—packed up our camp tackle, consisting of tents, sheet iron stoves, blankets and catables, such as bacon, beans, potatoes, onions, coffee, milk and a dozen loaves of bread, and boarding a train on the Auburn branch of the New York Central R. R., started for a week's hunt among the deer of the Adirondacks. At 4 o'clock in the morning of the next day we reached our destination, a point on the Adirondack division of the New York Central R. R., about ninety miles north of Utica. Arriving there in a cold drizzling rain storm, securing a hand car, we pushed our baggage up the track about a mile, and at once proceeded to put up our tents and make our camp comfortable for the week's stay. As soon as the camp was completed we partook of a good breakfast of fried bacon, potatoes and hot coffee, then we were ready for hunting.

Ted, Frank, George and the writer were all armed with Winchester rifles, model '92, .44-40, weight 6¾ pounds. Fred carried a Savage .30-30 of about 8 pounds. Ted, Frank and George had never hunted deer before, nor had they ever seen deer running in the woods. Fred and the writer had hunted deer for several years in Michigan, Pennsylvania and New York State, and we considered ourselves fairly successful as deer hunters. So much for the personnel of our party. We employed no guides. Each man carried a good compass, and no trouble was experienced by getting lost.

It was about 10 o'clock in the forenoon of Nov. 7 when we struck out in the woods for game, each man taking the direction which he fancied was the best, and hunting from a mile to five miles from camp. The first day all the party saw from one to three deer, each getting running shots at them. The writer succeeded in wounding two deer, but failed to get them, as it came on to rain hard soon after we got in the woods. I am satisfied that these two deer were shot too far back, so as to fail of striking a vital place, but the shots were difficult, and it would have been better that I had not taken them. So the day ended in a cold driving rain storm, with no deer taken.

A good hot supper was eaten and then when the pipes were filled we settled down to the hunter's happy hour, and then filling our stoves up full of wood and wrapping ourselves in our blankets, we fell into such sleep as only the hunter knows about.

The next day was a bad day in the woods. Fred killed a young buck—saw him as he got up out of his bed and put a .30-30 through his neck, which was instant death. No other deer was seen by the party that day.

The morning of the 9th found it snowing hard, and it continued to snow all day. Nothing seen.

The 10th George shot a fine yearling buck—his first deer. He saw him standing in a clump of bushes. Got him through the neck.

The 11th nothing was done.

The 12th was cold and clear, and found us in the woods at daylight. Frank got a nice young buck this day, which was his first deer. Several others were seen by the party and a few shots were fired, but without results.

The 13th was cold—9 degrees below zero. This was Ted's day. He secured a large doe, which was his first deer.

The writer also crawled up on to two deer lying down. They were about three rods away when seen. Killed one and the other was away before I could get a shot at him, it being in a very thick swamp where the deer were. All the party sighted game that day.

The 14th and last day of our hunt opened cold and clear. George got a standing shot at a doe and killed her instantly. The writer started a buck, which he did not see until the deer was twenty rods away. He put in a couple of shots in quick succession, one of them shattering the hind leg at the gambel joint. It was 9:30 when the deer was wounded, and I put the final shot into him at 11:30. This proved to be an eight-prong buck, weight 175 pounds. Fred got a standing shot at a doe this day, but made a clean miss, and so ended our hunt for the fall of 1900, this having proved one of the most enjoyable and successful hunts that the writer ever took part in. It is needless to say that all parties voted to make our next hunt on the same grounds in the fall of 1901.

EZRA G. SMITH.

CHICAGO AND THE WEST.

Excitement Over Indiana Game Law.

CHICAGO, Ill., March 23.—According to the proverb it is a long lane which knows no turning, and the adage seems to be verified in the history of game laws in the West. Ten or twelve years ago this part of the West was practically lawless so far as the protection of game was concerned. We had laws, but they were not observed. The great bulk of the people were either absolutely ignorant or absolutely indifferent in regard to what game laws might or might not be on the statute books. In those days the sporting papers and the sportsmen's associations were almost the only sources of any protest or agitation regarding better laws or better enforcement of the laws. Puerile enough were the methods of those days in the organized bodies of sportsmen. We "unanimously resolved," and we let it go at that. We passed resolutions condemning spring shooting, and then we went out and killed as many birds in the spring as we knew how. We believed in protecting the game, but we believed then, as a good many of us do now, that it was fit and seemly for protection to begin with the other fellow. We wanted all the other States to agree to keep their fingers out of the game pie before we would agree to do so ourselves. In short, we gave to the observant world, so far as the observant world cared a copper about it, a very fine example of what human nature can do when it moveth itself aright.

That was ten years ago, and game protection then surely seemed a forlorn hope. Yet the sporting press kept dinging away at the matter, and naturally had a great deal of influence, for I presume no sort of journal printed has more influence among its readers than a good sporting paper. No doubt the sporting press did very much to start the ball rolling, and perhaps even the sportsmen's associations, with their solemn annual enactments of "We do solemnly resolve," had a certain influence in their way. Meantime there went on all over this Western country the changes incident to continually spreading civilization, encroaching always upon the natural resorts of the game, and continually cutting down its numbers. The people in general began to take an interest in matters which had before interested but a few. The leaven of good principles began to work, the preachments of the sporting press began to make converts. We heard more and more about game laws, about localities for wild game, about the scarcity of game where once it was abundant. Then, a few years ago, there came up the idea that it would be a good thing to protect this game, and to do so at the expense of those who got the most enjoyment or benefit out of it. Herein lay the origin of the idea, fallacious, but very human, that it would be a good thing to establish a shooting license for the purpose of raising a fund for game protection. The idea of charging a free born American a sum of money to shoot in a country where once every man had been at liberty to shoot, excited first the surprise and then the anger of the American shooting public. Yet the effect of this sentiment was not to remove the non-resident license from the State where it first got its hold, but to establish other non-resident licenses in adjoining States. Thus a system of retaliation grew up among all the Western States, one after the other putting on a non-resident license as a matter of self protection. It is yet to be proved that the non-residence license has really come to stay, for a system of mere retaliation may break down as rapidly as it builds up. Yet it is no doubt true that the non-resident license has come to stay at least for the time in practically all the Western States which have any game. With it has come a code of game laws of increasing severity in all the Western States. The long lane has had its turn. We have been wanting protection, and now we have got it—more of it than a good many care to have.

There is more excitement in Chicago shooting circles over this Indiana game law than has ever been seen here over any question pertaining to sportsmanship. Heretofore we have always looked upon game laws as being more or less vague and remote things, good for the other fellow but really not coming very close home to ourselves. Just to raise a fund for game protection, as the theory goes, we put on a $10 non-resident license in Illinois at the last session of Legislature. Wisconsin also had a $10 license, and Michigan threatens one. In order to show that there was no coldness, and to prove that she was not behind the times, Indiana tucked on a $25 non-resident license. Hence these tears.

The immediate origin of the movement which led to the passage of this Indiana law is differently assigned in different quarters. It is stated that the members of a couple of sporting clubs of Rensselaer, and of Indianapolis, which had grounds near the Kankakee River, were the first to raise the protest which led to the enactment of this law by the Indiana Legislature. Yet others say that the first movement for the present law originated at Gilman. Still others state that the story about the preserving of the John Brown tract near Shelby was the cause of the uprising across the line in Indiana. There may be truth in each of these stories, but no one locality can make a State law, and it is likely that the Illinois statute asking a $10 non-resident license was the determining factor when the question came up before the Indiana Legislature.

This week much confusion still existed in Illinois regarding the law, and regarding the question whether the authorities in Indiana intended to enforce the law. Some Chicago men have been shooting in Indiana without a license, and yet others have taken out their licenses, though the latter are but few in number. All around Shelby, Water Valley, Roselawn and other towns near the Kankakee a number of Indiana wardens have gathered in. They are watching each other, and incidentally watching for Chicago shooters. Tolleston Club has been one of the early victims. The son-in-law of Otto Young, a member, is reported arrested for not having a license. The old Lake George Club, which had quarters at Water Valley, on the Kankakee, has practically pulled up stakes and quit. Mr. Hempstead Washburne, who secured the lease from John Brown on the big tract near Shelby with the intention of forming the Tonti Shooting Club, this week surrendered his option to Mr. Brown. The grounds near Shelby, therefore, remain open as before.

As before indicated, one immediate result of the Indiana law has been the turning of the tide of Chicago shooting to Illinois points. All the shooting places along the Illinois River and around Fox Lake to the north of here are fuller of shooters than they have been in a dozen years. The price of every share in an Illinois shooting club has been marked up nearly double. Thus E. M. Steck, of this city, who this week went down to the Lone Tree Club on the Illinois River, at once bought a share in that club. He killed 30 birds one day, 15 on the next, and 17 on the day following. A great many other Chicago men will take up membership in Illinois clubs and resign their Indiana shooting.

One result, perhaps still some distance in the future, is now nearer to being a possibility than ever before. This throng of shooters crowded into the Illinois regions will surely cut down the supply of game, so that eventually self-interest may look toward the stopping of spring shooting in this State. It would be unwise therefore to decry this action of the Indiana Legislature, or to call it anything but beneficial to the cause of game protection. We have wanted game protection, and now we have got it, and the probability is we are going to have still more of it. It was stated confidently many years ago that the West would never protect its game until it had nearly disappeared and hence attained great value. All this question of more stringent game laws in the West simply bases itself on the disappearance of our game.

Great Abundance of Ducks.

And yet, in apparent contradiction of the latter statement, arises the fact that this spring, without any doubt or question, we have more ducks in Indiana and Illinois than we have had stop with us for the past ten years. We hear again the old cry that there are "just as many ducks as there ever were." The unthinking cannot realize that we simply have a large proportion of the flight, stopping with us for a little while, and that soon the flight will pass on beyond us, compactly and not strung out. On the face of the facts, however, every spring shooter of Chicago is gnashing his teeth over the thought that the Kankakee marshes are alive with ducks and that it costs $25 to go and shoot them.

There can be no doubt as to the temporary abundance of wildfowl in all our shooting country, for every shooter comes back with practically the same story. Mr. T. A. Hagerty on Thursday a week ago was down at Shelby, and he said that he saw what seemed to him literally millions of ducks. They were all over the flats in such numbers that they literally blackened the air when they arose.

From Cumberland Club, Maksawba Club and from all the pushers around Water Valley come the same stories of thousands of ducks all along the Kankakee. A large proportion of these birds are mallards, with a good many pintails, and they are feeding out on the cornfields to a great extent.

Along the Illinois River the shooting has been superb. Mr. Hempstead Washburne, who has just returned from Swan Lake Club, got about forty birds in two days, and reports fine mallard shooting in the timber. At the Undercliff, on Lake Senachwine, there are a number of shooters stopping now, and most of these are having good sport. The best flight that can be located at this writing is now in at Havana. Along the Mississippi marshes and the lower Illinois River, near Monmouth, New Boston, etc., there are still thousands of birds, but it is thouhgt the flight is beginning to get past those lower points.

At Fox Lake the ice is not yet out, but the river is open and there is a heavy body of birds reported there today. Billy Wells is at Fox Lake for a week, and should meet this flight. His friend, Eddie Pope, may join him within the next forty-eight hours. There will be some heavy bags turn up from that locality this coming week. On all the mashes west of here, at Mineral, Sheffield, etc., there is a heavy flight at present. Indeed, on every hand one hears stories of good shooting.

Among bags reported this week are John Burmeister and two sons, 75 mallards in two days, at Shelby, Ind.; John Hood, 50 in one day, at Havana. At Hennepin on last Friday Frank Willard killed 57, and on the day following 33, and on the second day after that again 33. Mr. Meine at the same club on three days of this week killed respectively 8, 22 and 62; Mr. Warder on Monday, Tuesday and Wednesday killed 26, 15 and 50. Mr. Trail killed 25 ducks at Hennepin Club on last Wednesday. There were 166 ducks killed at Hennepin on last Wednesday, and the shooting since then has probably been still better.

There will be a big exodus of shooters to-night for different points in Illinois. Mr. H. M. Van Hoesen has left for Round Lake, Ill., with his friend, Mr. Buckmeister. Mr. E. A. Bournique goes to-day up to Fox Lake. Mr. William Werner, who is just in from Knox, Ind., says that the prairies and marshes near that place are literally alive with ducks; he wants friends to join him.

Now, whether all this big flight is in because of the advanced attitude of game protection in Indiana may perhaps be an open question, yet we surely have the Indiana law and we have this unparalleled spring flight.

New Game Warden.

It was reported that Mr. A. J. Lovejoy, of Roscoe, is slated for the office of Game and Fish Commissioner, vice Harry W. Loveday, who was appointed by Governor Tanner. Governor Yates has not yet sent any commission to an appointee, but there is likelihood of a change in the office.

Champion Pot Shots.

Mr. H. K. Kuhn, of Nevada, Mo., gives some interesting stories about championship pot shots which some of his neighbors made in the early times. He says:

"I owned the first reel ever made by Mr. W. H. Talbot, of Nevada. Mr. Talbot is a friend of mine, and very well knows my hero, William Warden, a market shooter who used to kill duck where the Union Depot of St. Louis now stands. Mr. Warden was in the habit of crawling on a bunch of ducks and discharging both barrels of a No. 10 heavily loaded at the same time. At one time he made this performance, and by some means he broke his collarbone, and to show you the nerve of the man, he gathered all of his ducks off of the water—twenty-eight in number—mounted his horse, which he had tied in the timber, and arrived home, some four miles distant, but he shot no more for six weeks. At another time Mr. Warden, his son, Arthur, and Jess Lowe were out, and they made the sneak on to a vast flock of mallards. They fired five barrels, three at them sitting and two as they rose—one of Arthur's barrels failed. Result: 148 dead mallards that they got.

"At another time Mr. Warden, his son, John, and Jess Lowe were out one calm, beautiful November day, and had killed some ducks going from lake to lake, but it was comparatively dull, and finally about 3 o'clock they came to Back Bone Lake. At the south end they saw a small bunch of ducks in the north end. Mr. Warden told John to make a wide circuit and see if he could not get a pot shot, while he and Mr. Lowe would remain hid and try to get a wing shot as they came by. John made the rounds and the first thing he did, after getting as close as he could, was to divest himself of all clothing. There had been a heavy frost in the morning and some ice; the water was cold. It was shallow at the banks and muddy. John crawled to the bank on his stomach with his gun held in one hand above the water, keeping some bushes between himself and the ducks, and finally got within forty yards of them. He was in about 3½ feet of water. With his first barrel he killed sixteen. One flew, and, of course, he got it with the remaining charge. You can imagine what the men at the other end thought. I will state that Mr. Warden is now an earnest advocate of game protection, and what laws we have (which are too limited) he obeys strictly."

A New Sporting Country.

Mr. H. H. Marks, of Sault Ste. Marie, Mich., gives me a tip on some new sporting country, regarding which FOREST AND STREAM is probably the first sporting paper to print any notice. There is a new railroad now going straight north from Sault Ste. Marie to the icy shores of the Hudson Bay, the whole course of which will lie through an ancient and untouched wilderness. Forty miles of this road is now constructed out of the total length of 490 miles. This road is the result of the energy of Mr. F. H. Clerg, who promoted the enterprise in England. The company will develop the copper and iron mines and put up saw mills and pulp mills. In short, this ancient country of the Indian woods tribes, over which the early French made their perilous way more than 200 years ago to attack the feeble English trading posts on Hudson Bay, will now be put under the hammer and axe and forced to conform to the ways of civilization. Between that time and now there will be some splendid hunting and fishing along the new line. If you wish to find out about it, watch the columns of the FOREST AND STREAM.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Along the Rivers Ossipee and Saco.

OUR sportsmen have been pretty quiet through the winter, except for a little rabbit hunting and fishing through the ice. The latter sport has been actually good, numerous heavy strings of pickerel being taken, and not a few handsome trout—our law allowing the taking of these by citizens of the State after Feb. 1. On a pond but a few miles from this village a man and his boy, in a few hours' fishing, captured four speckled beauties that weighed 8 pounds, and several 3-pounders have been taken this season from the same pond.

Fox hunting, once so popular in this section, has been practically ruined by the trappers' deadly work. Once you had only to step outside the village any day with favoring conditions to hear the cry of the fox hound resounding among the hills. Now one will rarely come upon sly Reynard's footprints if he tramp across country for miles. The former followers of the hounds bitterly decry the trappers for robbing them of their favorite sport, and in spite of all that has been said in these columns in the latter's defense, I am emphatically of the opinion that it is one of the most unsportsmanlike of practices (as relating to the fox), and should be promptly stopped. Nothing is more absurd than the principal argument of the trapper, that the fox should be exterminated for the war he wages on other game, for now, when his numbers are so sadly depleted that a specimen is rarely to be seen, we find that the ruffed grouse, among which he is alleged to make such havoc, instead of increasing are actually scarcer than ever before, which shows clearly that the gun and not Reynard is responsible for the decrease of this game.

And in relation to the alarming scarcity of grouse, squirrels, etc., I may say that most of our sportsmen have come to the conclusion that there is not enough of such game left to make it worth one's while to hunt for it, and many are exchanging their shotguns for rifles to take advantage of the bit of deer hunting afforded each season in Oxford county, adjoining. There are probably a dozen good repeaters owned right here in the village, and moreover, the owners of these arms are trying to perfect themselves in their use by frequent work at the target. Much speculation has arisen as to the best shot in town, and I should not be surprised to see a rifle club organized in the near future.

As to the brook trout, we are all looking ahead with considerable anxiety to the coming season because of the terrible drought that prevailed last summer. Many of our best brooks went completely dry for long distances from their mouths, and in some cases, I am informed, hundreds of dead fingerlings were to be found on the dry beds of these vanished streams. I saw nothing like this, but on the other hand was encouraged to find a goodly number of trout in brooks which I visited while hunting in the fall, and which I knew to have gone dry as above described; so I am inclined to think that in such cases instinct teaches the fish to work up to the head of the stream, where it is largely fed by unfailing springs, and thus find enough pure water to tide the great majority of them over the period. Of course the quality of the fishing, when the time comes, will tell the story, but meantime I should appreciate advices from any of your readers who may have had experience in the matter.

TEMPLAR.

CORNISH, Me., March 9.

Spring Shooting.

Editor Forest and Stream

In my article in FOREST AND STREAM of Saturday, March 9, I made the statement that in 1892 a law was passed making the close season March 1 to Sept. 1, excepting Long Island, and that one year convinced the sportsmen of this county that ducks would breed here. Better black duck, mallard, teal and wood duck shooting was had that fall than was ever had before or since. Not only this, but the fall ducks—broadbills, bluebills, redhead, whistler, etc—came earlier and stayed longer, etc. In looking over FOREST AND STREAM of that year, 1893, I find in No. 25, Dec. 23, an article, entitled "Niagara County Duck Shooting," by M. H., which shows that in the fall of the only year that the ducks were ever permitted to pass through our State unmolested by the spring butcher the sportsmen of Niagara county were also repaid for their self-denial in the spring.

Doubtless Long Island, Oswego, Erie and other counties were benefited to the same extent. It would be interesting at the present time to hear from the sportsmen of these counties in regard to the shooting in the fall of 1893. I take the liberty to quote as follows:

> At 5 o'clock the hunters started for home, reaching the city of Locks two hours later, tired, it is true, but with a happy weariness. The day's sport had been uninterruptedly fine, and they felt well repaid for their trip in every respect.
>
> After a hearty dinner Metropolis took up the New York papers, which had left the presses at 4:30 A. M. and reached the State's remotest city twelve hours later, with a gratified air.
>
> "Well," said he, "this is all like a fairy tale. I have spent the day on a most romantic steamer, enjoyed the invigorating breezes of the lake, and at the climax found myself surrounded with as many aquatic birds as the coasts of Labrador could afford. After a day of superior pleasure such as only a sportsman may know, I return to find in my friend's house the New York papers of the day at my service. All this within twelve hours' ride of my home. Astonishing!"
>
> In a measure, old residents of the country this year, however, can share the New Yorker's astonishment at the plentifulness of wild ducks and geese. They seem to visit this section this fall in countless numbers. Burt Green, of Lockport, and Will Windsor, United States plumber at Fort Niagara, one day this week secured eleven large Canadian geese in Niagara River. A Wilson hotel keeper, whose place is charmingly located on Wilson Harbor and overlooking the mouth of the creek and Lake Ontario, writes that on Monday morning of this week, rising at daybreak, he went outdoors to attend to his chores. He looked out upon the stream and rubbed his eyes with astonishment. He could not believe what his optics told him. The water as far as he could see was covered with ducks. That day he and a local attorney secured fifty-seven plump birds. The lawyer employed no legal entanglements with which to ensnare the game, either, but he says he used a very superior smokeless powder. No. 3 shot did the business.
>
> A Wheatfield farmer sent word to a Lockport friend on Tuesday that the ducks were so thick on Tonawanda Creek his young boys were trying to knock them down with poles as they flew back and forth to the lake. Never within the memory of the present generation have the different varieties of waterfowl been so plentiful in Niagara county. This section is happily located any how as relates to the migratory game birds.

It's a kind of funny happening that in the only year that we ever stopped spring shooting in New York State Niagara and Jefferson should have had more ducks than the oldest inhabitant ever saw or dreamed of, and that Long Island, Oswego, Onondaga and the other counties shouldn't have noticed anything unusual. If you want spring shooting stopped, get after your representatives. If you don't want it stopped, just drive what birds you don't kill up into Jefferson county. We want them, for we are going to stop spring shooting of wildfowl in this county for three years, and I hope forever.

W. H. TALLETT, Pres't J. C. S. A.

WATERTOWN, March 18.

Editor Forest and Stream:

I wish to say that I was somewhat surprised to read in one of your late editorials that "Ontario has recently passed an act prohibiting spring shooting," and then again last week Mr. Hough, who ought also to be up in the game laws of Ontario, allows a correspondent to make the same statement without comment. If there is one thing we in Ontario are proud of, it is the fair treatment we give the migratory birds. We have had an act in force continuously for the last ten or twelve years prohibiting spring shooting of all migratory birds except geese and swans, and it should include these. We give FOREST AND STREAM credit for advocating so ably the prohibition of shooting birds when they are mated and about to make their nests, for it is no credit to the Americans to allow their destruction then, especially as all varieties of bird life are showing a marked decrease. It is true that Quebec allows spring shooting of some birds, but Quebec has always been slow to adopt improvements. However, now she has a Premier in the Hon. Mr. Parent who is thoroughly with us in this, and he will amend their law and prevent spring shooting. I wish as much could be said for New York and some other States—wish they were so advanced as Quebec.

Why, sir! the ducks themselves are beginning to take the matter into their own hands and will not only not stop to breed in such States, but thousands of them of their own instinct did not go south at all last fall, but stayed all winter on our open waters. Such birds as canvasbacks, bluebills and redheads could be seen any day during the whole winter in the lake near Toronto. Of course any one who has hunted these birds will give them credit for knowing a thing or two, and no doubt they have reasoned that if they went south among a people who have no kindly feeling for them except when roasted, it was to their interest to stay where they are unmolested and treated decently.

It is true that we have in Ontario a class of men who grumble against our law, which only allows wildfowl to be taken between Sept. 1 and Dec. 15 in each year. They say we are only protecting the birds for the Americans, especially such birds as wood duck and teal, which go south in September, and are not protected at all by the Americans, but the law is inexorable, for we consider that these birds especially are fast becoming very scarce, and possibly should be protected for a term of years. Instead of doing this, however, our friends across the border shoot them during at least eight months of the year, for after they have killed all they can in their own neighborhood, it is quite the proper thing to do to take a trip to the birds' southern winter home and there continue the slaughter until the birds come north again, shot at all the way, until they reach the Canadian border, where they are safe until Sept. 1. As soon as the birds reach our southern border they begin to nest in all suitable places, and in the southern tier of counties along Lake Erie may be found breeding such birds as black duck, mallard, blue-winged teal, wood duck, bluebills, shovelers, etc. It may be safely said that all of these birds would breed in any of the States on the way north if they were allowed to do so.

G. A. MACCALLUM.

Maine Legislation.

BOSTON, March 23.—The Maine September deer shooting license law is no more. It will be remembered that the timber land owners of that State bitterly assailed that law early in the session of the Legislature just closed, both by petition and argument. They claimed that it subjected their lands to great danger from forest fires. They were much opposed to the letting loose of irresponsible persons in the guise of hunters, to roam unrestrained over their wild lands in the month of September, one of the worst months in the year for forest fires. Their arguments were met by the theory that hunters, in charge of registered guides, were a source of protection against fires. But this did not satisfy them. The proposition to repeal the September law came before the Committee on Fisheries and Game. That committee was equally divided—five for the repeal and five against it. Hence two reports were made. The House on Tuesday voted to repeal by a very large majority. Just before the matter came to a final vote, Mr. Carleton, Chairman of the Fish and Game Commission, also a member of the House, got in the following amendment to the bill to repeal the September law:

Section 2. It shall be unlawful for non-residents of the State to enter upon the wild lands of the State with intent to camp and kindle fires thereon, while engaged in hunting or fishing, without being in charge of a registered guide during the months of May, June, July, August, September, October and November; provided, that the provisions of this section so far as entering upon the wild lands in this State with intent to camp and kindle fires thereon while engaged in hunting or fishing, stop at any hunting or fishing camp which is owned or under the control of any registered guide or registered camp owner.

Whoever shall catch or kill any deer, or enter upon the wild lands in this State with intent to camp and kindle fires thereon while engaged in hunting or fishing, without being in charge of a registered guide during the months of May, June, July, August, September, October and November, in violation of the provisions herein contained, shall be fined forty dollars and costs of prosecution for each offense and be subject to imprisonment for thirty days.

This amendment went through with the bill to repeal the September law without dissension, and since the measure has passed both branches of the Legislature it is a part of the statutes of the State. The reading of the amendment, as above, may not be entirely correct, though it is all the text I have at this writing, since there is some obscurity concerning the meaning of words "Provided * * * stop at any hunting or fishing camp which is owned or under the control of a registered guide or camp owner." It is evident that the meaning of the amendment is that hunters and fishermen stopping at hunting camps, or the owners of such camps, are not subject to the fines or other penalties of the law. I have seen one of the Maine Fish and Game Commissioners today, and he says that it is not the intention of the law to interfere with camp owners or their guests, but to stop transient hunters and fishermen from entering upon the wild lands of the State without being accompanied by registered guides. Several Boston sportsmen that I have seen since the passage of the above bill are glad that the September license law is repealed, and they fully agree with the Commissioners that hunters and fishermen ought to be in charge of careful guides when entering upon the wild lands of Maine.

BOSTON, March 25.—The Maine Legislature has positively adjourned without date, and there is now no danger of further fish and game legislation in that State for two years. No license laws now exist there, the September license law having been repealed at the last moments of the session. The bill to make moose hunters take out a license costing $25 passed through a good deal of discussion, the principal reason given for such a measure by its friends, being revenue. But it was assailed by the interests of the camp owners and guides, as well as hotel and railroad interests. It was amended but finally referred to the next Legislature. The measure, referred from the preceding Legislature, to make all non-resident hunters going into Maine take out a license came up several times, but was finally indefinitely postponed. The resolve to establish a fish hatchery and nursery on a large scale at Moosehead Lake failed of a final passage, through a desire for great economy. The Fish and Game Commissioners were shorn of none of their powers, although it was proposed early in the session to take away their power to prevent any and all hunting and fishing in any part of the State, if they deem expedient. Neither were the Fish and Game Commissioners required to prepare and forward to the Governor and Council an itemized statement of all that the Commission has cost the State for a series of years, as was proposed early in the session by the enemies of the Commission. They got no extra appropriations, since the Legislature was "in for economy."

The bill repealing the September law was finally passed in a form, as far as I am able to learn at this writing, that simply requires a non-resident to be accompanied by a registered guide when entering upon the wild lands of the State with intent to hunt, fish, camp and build fires.

SPECIAL.

Scent to Attract Foxes.

WELLS, Wyo.—In the issue for March 2 Mr. C. H. Ames asks about a scent for attracting foxes. In the spring take the musk sacs of muskrat, the same of skunk, and beaver castor; put them in a tightly corked bottle and hang the botttle up in the sun until fall. When you want to catch a fox dip a twig into the mixture and stick it in the ground near the bait. If a fox gets wind of it half a mile away he will come to investigate, but if the trapper lives with other folks I advise him to change his clothes before going home.

WM. WELLS.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

New York's Forests.

From the Poughkeepsie Eagle.

ONE of the recommendations of Governor Odell in his annual message was that a radical change should be made in the State control of forests, fish and game, abolishing the two present commissions and committing their duties to a single head. A measure embodying this change has just passed the Legislature, and in connection with it we copy a letter from President Wadsworth, of the present Commission, to the FOREST AND STREAM, which sets forth his views as to the policy that should be adopted.

Undoubtedly, though it was put there for a praiseworthy purpose, the constitutional provision which holds the State forests in such a way that nothing can be done with them whatever has already become a serious obstacle to proper management, and will rapidly become still worse in its effects as time goes on. Mr. Wadsworth states that there are 5,974 separate lots of land owned by the State covered by this provision of the Constitution. Many of them are too small to be valuable for game, timber or water supply, but are surrounded by hotels and settlements, and valuable for lease, sale or exchange. The Commission, or Commissioner, whichever it may be in the future, should certainly have power to dispose of these isolated lots, and to provide for the rational care and culture of the big remaining tracts, including the clearing away of all dead and decaying timber, and the cutting and disposal of such mature and valuable trees as can be removed without injury. Before this can be done, however, there must be a constitutional amendment, which will require four years to get through and put in operation. In our opinion, the Legislature ought to take the first steps toward such amendment without delay.

Canvasbacks in Central New York.

SAYRE, Pa., March 4.—Robins, bluebirds, song sparrows and numerous other varieties of migratory bird life have returned. I hear bluebirds reported as returning in larger numbers than usual, an item of information especially pleasant to contemplate. The scarcity of bluebirds has been remarked for several years, and it is to be hoped that FOREST AND STREAM contributors will make particular note of the presence of these inspiring migrants and report accordingly.

Great numbers of wildfowl have been moving northward over the central New York lake country during the past fortnight. The presence of canvasback ducks upon Cayuga Lake during the past fall and winter has been the subject of lively discussion among sportsmen generally. In some instances canvasbacks were found to outnumber any other variety on Cayuga Lake waters, a fact all the more remarkable when it is remembered that for a number of years canvasbacks were practically unheard of as pausing even briefly upon these waters.

If spring shooting could be abolished for a term of years, or, better still, permanently, a good proportion of the old-time wildfowl shooting might be in due time restored.

Meantime the sportsman may put aside his breechloader for the fly-rod and otherwise prepare to face the unrelaxing business cares which must shortly prove the white man's burden.

M. CHILL.

Ducks on Long Island.

EAST QUOGUE, L. I., March 23.—*Editor Forest and Stream:* Never in years as at the present time have so many ducks been in this bay. I have at present eleven geese hanging under my piazza, and they weigh on an average of 12 pounds each. And as for the black ducks, I never knew them to be in better condition. They are as fat as can be.

I certainly would like to have writers like Mr. W. H. Tallett give proof of the statements they make in regard to the poor lean ducks. There are things that men who write such pieces to the FOREST AND STREAM do not know what they are writing about. They have no knowledge of the condition of ducks or they have a theory to advance, and so eager are they to advance that theory that they are willing to jump at a conclusion. Never are ducks in better condition than they are in the spring, and I can prove my statements at any time.

E. A. JACKSON.

Deer in Orange County, New York.

IT was reported on Sunday that a deer had been killed by a West Shore train on Saturday near the New Windsor brickyards. The report could not be verified. Railroad men said, however, that there had been a deer for some time in the vicinity of the brickyards. One day last week it swam from the trestle of Hedges' brickyard to Plum Point. There are quite a number of wild deer in Orange county now, and any person who kills one is sure of a good deal of trouble. The open season is from Sept. 1 to Nov. 15. The penalty for killing a deer is $100.

A week or two ago dogs dragged down a deer on the farm of J. G. Holbert between Sugar Loaf and Wickham Pond. The curs were driven off and the deer was taken to Mr. Holbert's barn, where it died of its injuries. Game Protector Kidd was informed and has learned the names of the owners of the dogs.—Newburgh Journal, March 18.

Dr. Franklin used to observe that, of all the amusements which the ingenuity of man had ever devised for the purpose of recreation, none required the exercise of most patient attention so much as angling—a remark which he frequently illustrated by the following:

"About 6 o'clock one fine morning in the summer," said the doctor, "I set out from Philadelphia, on a visit to a friend, at the distance of fifteen miles, and, passing a brook where a gentleman was angling, I inquired if he had caught anything. 'No, sir,' said he; 'I have not been here long—only two hours.' I wished him a good morning, and pursued my journey. On my return in the evening I found him fixed to the identical spot where I had left him, and again inquired if he had had any sport. 'Very good, sir,' says he. 'Caught a great many fish?' 'None at all.' 'Had a great many bites, though, I suppose?' 'Not one,' was the answer, 'but I had a most glorious nibble!'"

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Far Rockaway.

When spring revives frost-buried hopes,
And Arctic storms have fled our shores;
When beaming skies from fecund slopes
Coax forth the flow'rs the bee explores;
When swallows twit a glad return,
And bluebirds pipe their vernal lay,
Beyond the meadow road's brisk turn
I see thee rise, Far Rockaway.

Enthroned upon a gentle swell,
The ocean hymning at thy feet,
Skirts into bays whose islets tell
Of secret nooks where shore birds meet.
From distant shores come finny tribes,
That cleave the seas to tribute pay
To waters mirroring thy skies—
Thy glorious skies, Far Rockaway!

How grand was once thy country 'round!
Thy woods and fields a dream of dreams!
Where, now, like then, can there be found
Such woods, and glades, and forest streams?
Thy meadows, though, remain as when
I trod their mazes to the bay,
In quest of hern and meadow hen,
In hopeful days, Far Rockaway.

Alas! that nature's face should hide,
And leave no trace save mem'ry's shade!
The march of greed, of vice, and pride,
Has stormed thy fields, thy swamps invade!
Civilization's vandal hand
Shall shroud them in the nearby day—
May thy loss sorrow's tears command,
From me for aye, Far Rockaway!

ABEL ROSTEY.

The Striped Bass.

"A prophet is not without honor save in his own country."

THIS is not a story of a prophet, nor is it a prophecy. It but sings the praises of a noble fish, the king of the North Atlantic coast. I think that outside a limited circle of enthusiasts there is less general knowledge of the habits and qualities of the *Roccos lineatus* than any game fish of this part of the country.

Everybody is familiar with the beautiful brook trout and the vigorous black or small-mouth bass; but the striped bass, or rockfish, coasts along our rocky shores in all his beauty and strength, sought by comparatively few and known more as an article of food than for his sterling game qualities. We find in the "Natural History of the State of New York" and "Commission of Fish and Fisheries of the United States" some interesting, if rather antequated, accounts of this fish, from which a few brief extracts may not be out of place:

"The striped bass occurs in all the waters of our coasts from Florida to New Brunswick. In the North it is called striped bass and in the South rockfish or rock. Large sea-going individuals are sometimes known as greenhead or squid-hound. They are not migratory, but are found at all seasons along our coasts. They are voracious in their habits, preying upon small fish, and frequent the rocky shores of the bays and sounds at high tide in search of crabs, shrimps and squids, and they are said to feed upon clams and mussels, which they obtain by delving with their snouts.

"The largest striped bass on record is said to have weighed 112 pounds. Fish taken in traps and seines frequently weigh from 35 to 60 pounds. Twenty years ago striped bass were taken in large numbers by heaving and hauling with a hand line from rocks and steep beaches all along the coast from the Delaware capes to Cape Cod. In the early days of the colonies this fish formed a principal source of food supply, being caught in great numbers and very large. Captain John Smith saw so many in a river that he fancied he might have walked across on their backs.

"Eight thousand fish were caught in less than a week by three fishing gangs from Bridgehampton in 1874. One man took on one set of a seine 1,672 bass, weighing three and one-half tons. They breed in fresh water in the spring, and in the cold weather are believed to hibernate in the mud when left in shallow tide ponds."

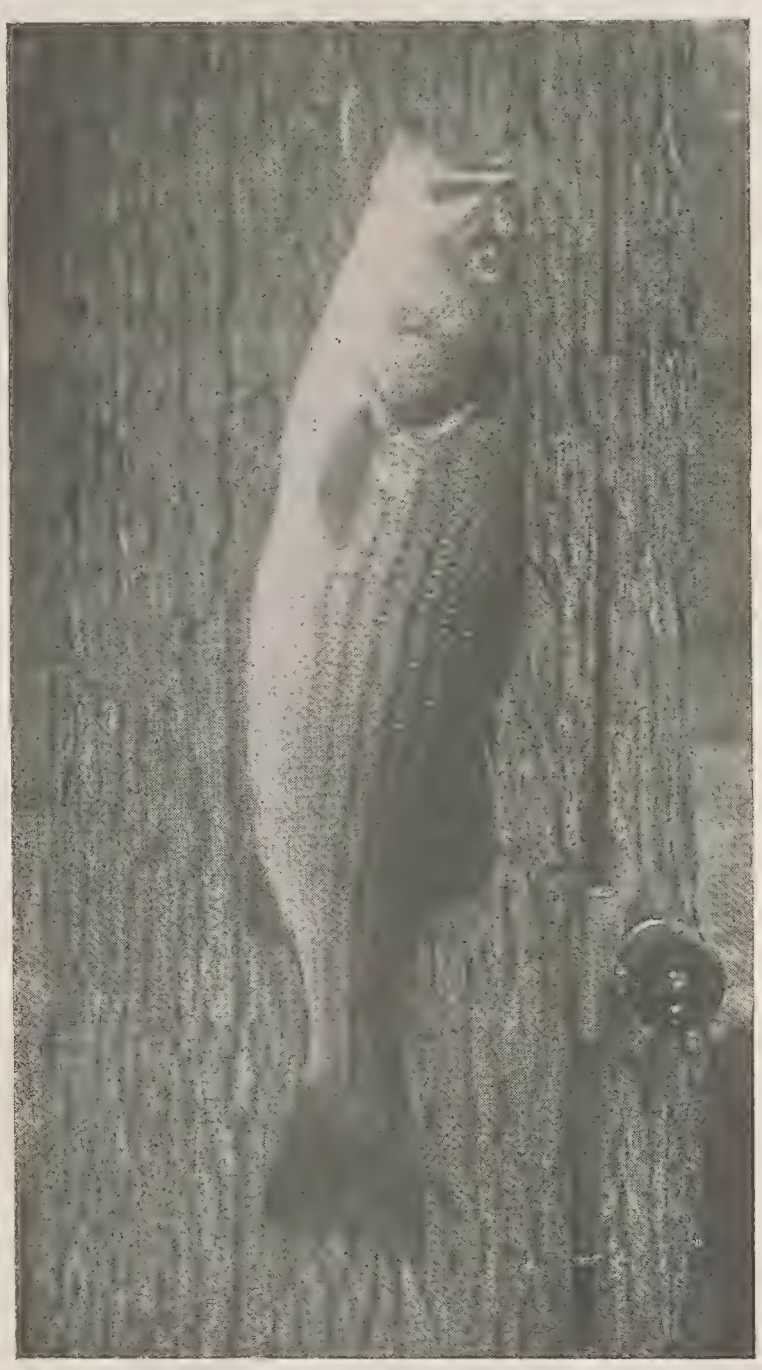
It has been my good fortune this summer for the first time to know of and learn a sport which lies at my door, and which has repaid a patient study. Locating on the shore of Long Island Sound not many miles from New York city, I happened to fall in with a little coterie of fishermen, amateur and professional, who excited my interest with tales of monster fish taken trolling with rod and line. Although it was early in the summer, I started out one day to try my luck. All day long, until the rising wind became too heavy for further attempts, I pulled along the shores with no results, but a fisherman who was also out showed me a 4-pounder.

Subsequent attempts brought fair returns in small fish, until one day, after a slight thunder shower, while pulling in rough water in a rocky cove, my wife had a strike which set the reel singing with that shrill note which sends the thrills through every nerve. Out went the line, until, the click happening to slip on the reel, the line overran and knotted, catching her thumb in the crank. I at once took her rod, slacked off until the line went free and began work in earnest. Meantime my boatman had pulled directly off shore to clear all rocks, and as the fish was well hooked I could feel reasonably sure of success. For twenty minutes he bored and surged about, but in this instance, probably because of the hot weather, made few rushes. Meanwhile the problem presented itself as to how to save him, as our net was too small to be of any use, and we had no gaff; but necessity suggested that we improvise a gaff by means of a large cod hook, luckily in my kit, lashed to the handle of an ancient umbrella.

As soon as the demand for quick work with the oars was somewhat relaxed, Jerry deftly lashed the weapon, and when by a steady rise and sweep I swung our beauty toward the bow, a quick snatch set the hook into the throat and a heave brought him aboard before a flap could be made. He thrashed then all right, but was quickly quieted. The scales showed just 12 pounds and the tape 31 inches in length and 17 inches girth. He was heavy and fat and as handsome a fish as swims. Then came days of non-success and small school bass. We knew that big bass were about, for they were frequently seen by the eel jackers feeding in the coves at night.

"Why, there's one old bumper that I seen twice last moon in Clam Cove that is more'n four foot long and must weigh over 50 pounds," said Jim Stone, one of the fraternity. "I was skeered to jab him with my spear."

So we fished after dark and in heavy weather, in season and out of season, with only moderate luck. Then came a day when weeping skies combined with a light fog to wrap the sea in a soft wet blanket. There was little wind, and the constant drizzle called for rain coats and rubbers. Pulling boldly out to the islands, not accessible



STRIPED BASS.
Nineteen pounds. Length 32 inches, girth 18 inches.

in heavy weather, we got a few bass off a sedgy point, but they were small and not plenty. Then we went further on to a lonely islet, and landed on a half-moon beach in a quiet cove for luncheon. Just at top of tide we again started, pulled around the rocky point and back into the cove, when "Whir-r-r!" came the magic note, and this time it was no sulker. He had my hook, so not a second was lost.

Away went the boat for the open, dangerous rocks being all about. First one way and then another went the bulldog rushes, every atom of resistance that I dared use being held against him, but with it all the line constantly escaped. Further and further from the shore we moved, until good bottom was assured, and then we slackened speed a bit. In a moment, nearly 200 feet away, a big body surged into view with a foaming splash and again the reel sang. We began rowing slowly, as it was evident that he must be tired out as rapidly as possible or he might escape by a sudden rush or tackle parting.

And so began a fight as fierce and stubborn as can well be conceived. For nearly an hour every attempt to get him anywhere near the boat was met by sudden rushes and powerful tugs, which kept the nerves on edge for fear of accident.

We towed him and he towed us nearly two miles. Then inch by inch I began to recover line, until he was within 40 feet. Here he balked and nothing could induce him to come closer. My arms were getting tired with the constant strain of the pole spring kept full on. I made a bold try and raised him so we could see that his mouth was open. Then the wonder grew why he didn't drown—but not he.

Inch by inch he came in, until he was only about 10 feet from the boat under water astern. Then I set to "pumping" him, raising my rod at full spring as high as my arms would go, then letting him settle. This is moderately severe on both man and beast. As my wife was wild with apprehension over the constant chance of a breakaway and as I detected just a shade less ambition in the captive, I determined to make one strong attempt to bring him to gaff.

Standing up and slowly but strongly lifting him, I got a chance to swing him to the boatman, who gaffed him neatly.

It was a noble fight. The rod was a light split bamboo trolling rod with a fine spring, the hook a 0000 and an ordinary Skinner spoon. I had about 400 feet of line. Bloodworms were used for bait.

This fish weighed 13 pounds and measured 32 inches in length and 18 inches in girth, just 1 pound heavier and 1 inch each way larger than our first.

ROBERT N. CURTIS.

NEW YORK CITY.

ANGLING NOTES.

Black Bass as Butchers.

A CORRESPONDENT writes to FOREST AND STREAM as follows: "I have been a reader of your paper, off and on, for more than twenty-five years, and am an ardent advocate of the black bass as a game fish, a fish for the multitudes, and have caught him in all legitimate ways in New York, New Jersey, Pennsylvania, New Hampshire and Maine. I have watched them early and late, and I know they are game, pugnacious, etc.; but I have heard so many stories about the black bass being regular 'saw bellies,' ripping pickerel fore and aft and letting out their entrails as easily as if the pickerel were in a vise, and the bass took his time to hack and cut away as he chose with those terrible fins of his, that I have lost sleep trying to think how it was done, unless on the Christian Science principle of thought. Will you tell us in FOREST AND STREAM if there is any record of a black bass cutting a pickerel open in the way it has been credited with doing?"

Perhaps the easiest way to answer this would be to say, "No," and stop; but perhaps I ought to explain why I say no.

More than one man has told me that a black bass could rip a pickerel open with its dorsal spines, and they had seen such circumstantial evidence of it that it could not be questioned. One case always stands out conspicuously in my mind, for the man saw the bass do the slashing, and later caught the pickerel on his baited hook with its entrails hanging out.

The reason I say no is because I have tried it myself by holding a pike in one hand and trying to cut its belly open with the spines of a black bass held in the other hand, and this is something any man can try for himself when he can secure the two fishes. A black bass will fight a pickerel or pike by darting under it repeatedly, and after one or two such attacks the pike seems to realize that it cannot cope with the bass, but the only marks that I have seen made by the dorsal of the bass is a red line across the belly of the pike, as though the blood had settled there, but the skin was not broken. In the case of the man who caught the pickerel after the bass had practically disemboweled it, cross examination developed that he did not actually see the cutting done. He did see the bass dash at the pickerel repeatedly and later believed that he caught the identical pickerel as described. Some years ago, after seeing a black bass charge into a school of yellow perch of large size and charge several times, I caught some of the perch with the blood red line on the belly, as though the line had been made by the dorsal fin of the bass. I still think this was a fact, but I cannot give positive evidence of it. Before and after I caught in the same lake yellow perch with a similar blood line on the belly, and charged it to the black bass, though it may have been done in the ordinary course of securing a meal; but I never have seen or known of a bass cutting another open, and am convinced from the experiment mentioned that it is a physical impossibility, for the dorsal fin of a black bass to do the act with which it is charged. It requires a sharp knife and some force to slit the belly of a pickerel in eviscerating it, and the spines in the dorsal of a bass will not do the trick.

Trout Fry at Sportsmen's Show.

One of the tanks at the sportsmen's show in Madison Square Garden contained 10,000 brook trout fry, and I considered it one of the best exhibits in the fish tanks, and yet it attracted far less attention generally than the larger fish in the other tanks. On several occasions I watched the people as they passed along the line of tanks. The first tank contained brook trout four years old (one man, by the way, who was explaining to a friend about the kinds of fish, looked at the brook trout and said they were rainbow trout, and the descriptive card was wrong. What explanation he offered when he came to the rainbows I did not hear), and they would hold the attention of the people, but the fry in the next tank evoked scarcely more than a glance. They were well distributed through the water, and were strong and in good condition, so that I did not discover a single dead one in five days. Those which had completely absorbed the yolk sac "swam up" and displayed themselves to best advantage, and those which still had traces of the sac hung to the bottom, so that the characteristics of the fish at this age were plainly marked, and once in a while a fisherman apparently would stop long enough to examine them, while the great majority moved on to bigger fish. In planting fish it is necessary to plant more of fry than older, such as fingerlings or yearlings, and this exhibit showed just what fry were, and how they conducted themselves. In the next tank were yearling trout, and the contrast was marked, though they were not the largest of yearlings. If the people who receive trout for planting would take the trouble to plant fry where they should be planted, good results would be obtained; but too often they are turned into a stream at the point most convenient to reach instead of taking them to the very source of the stream it is desired to stock, and all the labor savers naturally ask for fingerling fish, and it is impossible for lack of water and food to rear all fry to fingerlings.

Planting Fry.

Fry are often sent out just before the yolk sac is completely absorbed, and sometimes an applicant objects to this, thinking it injurious to the fish to be sent out in this condition, while the reverse is true, and if it were possible all fry would be sent to the waters for which they are destined before the sac is entirely gone, as the young fish feed through the mouth in part before the sac is

completely absorbed. They become accustomed to their new homes and know where and how to seek food when the time comes, far better, in my opinion, than fish that have been fed for a few weeks in the hatching troughs and then suddenly planted to shift for themselves. Some people object to planting fish fry when there is ice in the streams. This is fact, not fancy. It seems to be overlooked that trout hatched naturally in a stream would suffer far more if cold water was injurious, for the eggs are deposited in the autumn and remain in the ice cold water all winter, and the embryo does not appear until spirng. As a matter of fact the water in the hatchery from which the young trout are sent is fully as cold as the water in the brooks in which the trout are planted, and cold water does not kill or injure trout, no matter how cold the water may be. The great objection—and the only valid one—to planting fry is that too often they are not properly planted, but are turned into the main stream, where other and larger fish may prey upon them, instead of planting them in the tributary rivulets. Naturally fingerling fish are better than fry, for they are larger and less likely to be eaten; but fry properly planted will give good results.

Mascalonge.

The report of the State Fishculturist, made to the Board of Forest, Fish and Game Commissioners, gives the distribution of fish for the month of February as 17,698,600; 17,000,000 of this number were whitefish fry, distributed in Otsego Lake, Canandaigua and Hemlock lakes and Lake Ontario. The balance are brook, brown and rainbow trout, fingerlings and fry.

A number of letters and newspaper articles, which complain of the injury that the spearing law is doing to mascalonge in Chautauqua Lake, were embodied as part of the report, and it was shown that the operations at Chautauqua Lake in hatching mascalonge, which began in 1896 at an expenditure of $670.34, had increased annually until in 1900 the expenditure was $1,034.72. The increase of fry was from 1,248,000 in 1895 up to 4,860,000 in 1899.

In view of this exhibit instructions regarding the future work of the Commission at Chautauqua Lake were asked for. The Commission, after discussing the matter, passed the following resolution:

"Resolved, That it is the opinion of this Commission that so long as the law allowing spearing of mascalonge in Chautauqua Lake is in operation, it is not advisable to continue the work of propagating mascalonge in those waters."

The report further shows that contracts have been let for building four fishways in Salmon River, at Pulaski, where the salmon made their appearance last year and the year before, in sufficient numbers to warrant considerable outlay in opening the river for them.

A. N. CHENEY.

Talks to Boys.

XIII.—Bass Fishing.

APPROACHING the subject of bass fishing, I would ask my young readers to do just as they should do in entering any line of activity not familiar to them. I would ask them first to sit down and think about it.

If you are going to undertake the capture of any animal, bird or fish, and if you wish to do this in the most successful way, the best thing you can do is to sit down and study the habits of that particular animal. Therefore, before you go out fishing for bass, I would suggest that you first study the habits of that fish.

You will find that the black bass, known in pretty much all the States east of the Rocky Mountains, comprises two species—the large-mouth and the small-mouth. Generally speaking, the small-mouth bass will be found in clear and cold waters, and over sand or rock bottom. It is found in lakes as well as streams, but it prefers cold and fresh water to water of high temperature and little movement. The large-mouth bass, upon the other hand, will live in warmer waters, is often found in the shallower parts of lakes, and over muddy bottom. It lives much among the bullrushes and weeds. This species grows heavier than the small-mouth bass, and weights of 6, 8, 10 and even 12 pounds have been reached in States north of the Ohio River, and in some of the Southern States it has been taken weighing as much as 20 pounds. Although this speices grows larger than the others, it is hardly so bold a fighter on the average. Sometimes both species are taken in the same waters, as in the lakes and streams of Illinois, Indiana, Michigan, Wisconsin, Iowa and Minnesota. If both fishes are living under practically the same conditions, the one species will fight pretty nearly as well as the other, though if you compare a warm-water big-mouth with a cold-water small-mouth, or even a cold-water big-mouth, you cannot fail to note a superiority in the gameness of the latter over the former. Either fish is a grand game fish, and we have no better in America. Neither have we one more widely distributed or easier to get at, hence we may call the black bass one of our most valuable game fishes, and we may regard its study as very well worth while.

Now this is where you will find the black bass. If you know some clear deep stream, tributary to the Mississippi waters, which runs full the year round, and which is not cut off from the lower and larger waters by dams or obstructions, you will probably find that it holds black bass. There are thouasands of other waters not tributary to the Mississippi or its branches which also hold bass, but nearly all of the thousands of streams which eventually run into the Mississippi have, or have had, a supply of black bass, if they offer food and water enough to hold a stock of that fish. If a stream is too shallow or too muddy or too small, the bass will not go into it. They like a good bold water where they can move around and get plenty of food. The upper part of the Mississippi River is a favorite home of the black bass of both species. There are thousands of lakes in Minnesota and Wisconsin which are, or have been, alive with these splendid fish. Some of these lakes have outlets, and some of them seem to have been stocked by bass long ago, in some way unknown to us, although they are landlocked, so that no fish can run up into them from streams.

If you are fishing a bass stream you should expect to find your fish, ordinarily speaking, in the deepest and best hidden parts of the stream. The bass is a very shy fish, and is fond of keeping out of sight. If there is a deep cut bank with a cave or hole in it, he will get back into that hole where you could never see him. He will push back into a washout under a root or a log, where he will be quite out of sight. In the morning or evening you might see him splashing around, but though you passed his den a hundred times you might never know he was there. In the spring, when the bass are moving up stream, they are more often to be seen in shallow water, where the bass of a pound or two in weight sometimes feed on flies. Sometimes in the evening the bigger bass will also feed on the riffles of the stream, but usually speaking the biggest bass will be found in the deepest water, unless it be during the spawning season, or in some good frog country, where the bass are out chasing the frogs in the edge of the shallow water.

If you will open the gullet of a bass you will find that he has been feeding on crawfish, minnows, frogs, perhaps on little mice, sometimes on insects, sometimes on little snakes, or perhaps on helgramites—indeed on almost anything which moves and which he can swallow. This will give you an idea as to the proper bait for him. The minnow and the crawfish are very good baits for the small-mouth bass. The frog or the minnow will be good for the big-mouth bass, though either species will at times feed on almost any of the baits above mentioned.

If you will watch the movements of a bass while it is feeding you will get a good notion of how to present a bait to it. If a dead minnow comes floating through a pool, a bass will move out and look at it, but perhaps will never strike it. If a crippled minnow or frog comes through the same pool and all at once begins to move or struggle to get away, you will see the same bass rush at it at once. The moral is plain. Always keep your bait moving when you are fishing for bass. Never allow it to be still for a moment. A bass will strike at almost anything which is moving. Thus it is well known that the bass can often be taken on an unbaited spoon hook. In the fall of the year the bass drop back down stream and all of them gather in the deep holes. Sometimes numbers of them can be taken out of one hole in that season by a spoon hook, or on a live minnow moved through the hole. In wild and little fished waters a piece of red flannel will sometimes kill a bass. In the South a great many bass are taken by means of what is called a bob. The latter is nothing but a bunch of deer hair and red flannel tied about three big hooks, yet when it is pulled along the surface of the water at the end of a long pole the bass will jump at it as though they could not get along without it. This method of fishing is called skittering.

In stream fishing for bass you will do well to study the feeding times of the fish. Usually this will be in the morning and in the evening, though as the weather grows cooler the fish feed more in the middle of the day. If you are fishing in May or June you will do better to fish close to the bank, moving your bait up and down from the bottom to near the surface. Use a frog or a minnow. For stream fishing the minnow will probably be better. A good chub is the best minnow. Bait it through the lips, as you should also bait a frog. Imitate the swimming movements of your bait as well as you can, and never let it lie still. Raise it up and down, and move it along in front of any bank, and into any hole under a log or root where you think an old bass may be lying. For this sort of fishing you may use a rod of 10 ounces or more in weight and 10 to 11 feet in length, as you are not going to do much casting of the bait. You must not use any float or bob on your line, though probably you will find it easier to handle the bait if you have a lead sinker on your line heavy enough to pull the bait down into the water. Your theory is here that the fish is lying deep and is hid, and you want to take the bait to him so he can see it. If you see a little deep and dark pocket among the weeds, drop your bait down into that. In the evening, if your stream is shallow, so that you can wade, get out into the middle of it and let your bait swim down on a long line ahead of you. A bass can see you further than you think, and you will notice that you get most of your strikes after your bait is out of sight. If your stream is too big to wade, and you cannot fish it well from the shore, you will want a boat and some one to row it. In boat fishing you will need the short casting rod, of which I will speak later in describing lake fishing for bass.

Of course it is very nice to have good fishing tackle, but not all boys can afford costly rods and reels for bait casting. I would be far from discouraging any boy from the use of the cane or bamboo rod, such as he can buy in the country stores, but I would suggest that he try not to get the biggest rod he can, but the smallest and slimmest. A reel will cost him but little, and he can tie his own guides on his rod. Thus rigged up, he can have a lot of fun walking along the bank of a bass stream and working his bait up and down the likely looking places. I say that he should use the smallest rod he can get, meaning by that that such a rod will give him the most pleasure and be most apt to save him his fish. He should never try to throw the fish out on the bank with the strength of the rod. This will lose a great many bass.

When a bass strikes it does so with the savage rush, and if you snub him up at once he is apt to break something. When you feel a bite, do not strike at once, especially if you are fishing with a frog bait. A bass will strike a frog or sometimes a minnow and then move off with it a little way before it swallows the bait. After this first run of 10 or 20 feet it will lie for a moment, and then like a flash turn the bait in its mouth and swallow it, head first. Then is your time to strike, when the hook is inside the bass' mouth, and not outside.

I have very often seen a big bass hold a frog by the middle, both ends sticking out its mouth for some moments. This was when the fish was not very hungry. Yet a bass has a kind of bulldog way of hanging on to a bait sometimes. Shy as they are, I have often pulled them up within a few feet of a boat, grimly holding on to the frog and only letting go at the last moment. This happened, too, at a time when the bass were not very hungry and seemed to be striking more for fun than anything else.

You will observe this creature, as, indeed, any other wild creature, doing strange things at times. At times black bass will strike in plain sight and close to a boat, apparently showing no fear whatever. For the most part, however, he is one of the very shyest of fishes, I think even more shy than the brook trout, and in going after him you must remember the one great rule of keeping out of his sight until after you have hooked him. There is no fish which fights more boldly for liberty. A trout will try to roll over on the line, but the favorite trick of the bass is to spring out of the water and try to shake the hook out of his mouth. I have known small-mouth bass to jump six times in this way before they were brought to the landing net. The big-mouth bass will also jump, but not so often as the small-mouth. His favorite trick is to bore down into the roots or weeds, where he can get a wrap of the line about something and so tear free from the hook.
